GUIDE INFORMATION FOR CANADIAN CERTIFIED EQUIPMENT THE CANADIAN WHITE BOOK 2013

UL's and ULC's General Guide Information is updated daily. To confirm the current status of any UL or ULC record, consult UL's Online Certifications Directory at www.ul.com / database and ULC's Online Directories at www.ulc.ca.

www.ulc.ca

www.ul.com

Underwriters Laboratories of Canada (ULC) was established in 1920 by letters patent issued by the Canadian Government. It maintains and operates laboratories and certification services for the examination, testing and certification of appliances, equipment, materials, constructions and systems to determine their relation to life, fire and property hazards as well providing inspection services.

Underwriters Laboratories of Canada is accredited by the Standards Council of Canada as a Certification Organization, a Testing Organization, and an Inspection Body under the National Standards System of Canada.

ULC Standards is a not-for-profit organization and is accredited by the Standards Council of Canada as a Standards Development Organization.

ULC Standards are prepared using the consensus principle by individuals who provide a balanced representation of interests relevant to the subject area on a national basis."

Founded in 1894, UL is an independent, not-for-profit organization dedicated to working for a safer world. UL and its affiliates operate facilities throughout the world for the testing, certification and quality assessment of products, systems and services. With an unwavering commitment to public safety and societal well-being, UL provides the highest level of conformity assessment services to its global clients.

UL is accredited by the Standards Council of Canada (SCC) as both a Certification Organization (CO) and a Testing Organization (TO). With its SCC accreditations, UL certifies products with the UL Mark for Canada for the Canadian marketplace in accordance with Canadian standards and codes. UL's CO accreditation for Canada encompasses all UL global testing facilities, services, product categories and programs.

Guide Information for Canadian Certified Equipment THE CANADIAN WHITE BOOK

Table of Contents

Introduction

Indexes:

ULC DIRECTORIES AND STANDARDS

Other UL Services

UL Information Services

Introduction

The Canadian White Book contains all the product categories for all ULC and cUL Certifications, that are applicable to any discipline Canadian Code inspector so that they can access the General Guide Information for any ULC or cUL Certification by cross-referencing the product identity on the Listing Mark to the indexes in this book.

The Canadian White Book contains the General Guide Information for all the product categories in ULC's Building Materials, Burglar and Fire Alarm Systems and Components, Fire Protection Equipment, Fire Resistance, Firestop Systems and Components, and Heating and Ventilating Equipment and Flammable Liquids and Gases Equipment Directories. In addition, this book contains all the product categories Certified for Canada applicable to an inspector from following UL directories: UL's Electrical Construction Equipment, Hazardous Locations Equipment, Electrical Appliance and Utilization Equipment, Fire Protection Equipment, Fire Resistance, Building Materials, Heating, Cooling, Ventilating and Cooking Equipment, Mechanical Equipment and Associated Products, Flammable and Combustible Liquids and Gases Equipment, Marine Products and Plumbing and Associated Products. Attention is directed specifically to the General Guide Information following the product category headings that describe limitations of the Listings, such as current, voltage and horsepower and installation provisions. The scope and sizes and ratings specified in the General Guide Information is intended to indicate the current range of Listings, and is not necessarily indicative of the limitations for Listing.

The White Book does not contain the names of companies authorized to use the ULC or cUL Mark, nor does it contain specific identification of products authorized to bear the ULC or cUL Mark. Such information appears in the appropriate ULC or UL directory as tabulated above.

Only those products bearing the appropriate ULC or Canadian UL Mark and the company's name, trade name, trademark or other authorized identification should be considered as being covered by ULC or UL's Listing or Classification and Follow-Up Service. The ULC or Canadian UL Mark provides evidence of listing or labeling, which may be required by installation codes or standards.

Many of the products bearing the UL Mark for Canada incorporate components that bear the UL Recognized Component Mark for Canada c𝑹𝑼. The Recognized Component Mark is applicable to components that are incomplete in construction features or limited in performance capabilities. **The Recognized Component Mark does not provide evidence of approval, listing or labeling which may be required by installation codes or standards.**

The Canadian White Book contains General Guide Information in effect as of May 24, 2013. Information on new or revised product categories established after the effective date will be found in UL's Online Certifications Directory at www.ul.com/database and ULC's Online Directories at www.ulc.ca and will appear in the next annual Canadian White Book.

Look for the ULC or UL Mark for Canada
Identification of Products Certified to Canadian Requirements

The symbols (ULC) and c(UL) are registered in Canada. Subject to the terms of ULC's or UL's Follow-Up Service Agreement, companies are permitted to use the symbol (ULC) or c(UL) on products which are Listed or Classified for Canada and which comply with applicable Canadian requirements. for Canada and which comply with applicable Canadian requirements.

ULC and UL provide a service for the Listing or Classification of products that have been determined to meet the appropriate Canadian requirements. For those products which comply with the Canadian requirements, the ULC Mark or UL Mark for Canada may be applied to products.

The product name as indicated in this Directory under each of the product categories is generally included as part of the ULC Mark or UL Mark for Canada text, but may be omitted when, in ULC's or UL's opinion, the use of the name is unnecessary and the ULC Mark or the UL Mark for Canada is directly and permanently applied to the product by stamping, molding, ink-stamping, silk screening or similar processes.

A separable ULC Mark or UL Mark for Canada (not part of a nameplate and in the form of decals, stickers or labels) will always include the following four elements: ULC's symbol or UL's symbol , the word "LISTED"" or "CLASSIFIED", the product or category name, and a control or issue number assigned by ULC or UL.

The complete ULC Mark or UL Mark for Canada will appear on the product unless otherwise indicated in the General Guide Information for a specific product category.

When a ULC or Canadian UL Listed product is of such a size, shape, material or surface texture that, in ULC's or UL's opinion, it is impossible to apply legibly the complete marking to the product, the complete ULC Mark or UL Listing Mark for Canada will appear on the smallest unit container in which the product is packaged. In these cases ULC or UL may authorize the use of the ULC symbol or the UL symbol on the product in addition to the complete ULC Mark or UL Mark for Canada on the package.

When a ULC or UL Classified product is of such a size, shape, material or surface texture that, in ULC's or UL's opinion, it is impossible to apply legibly the complete marking to the product, the complete ULC or UL Classification Mark for Canada will appear on the smallest unit container in which the product is packaged. In these cases there shall be no reference to ULC or UL on the product.

Refer to the General Guide Information for each product category for additional information on the specific UL Mark for Canada for the products in the category.

ULC Certification Services and Marks

Identification of ULC Listed Products
Identification des produits inscrits ULC

A separable Listing Mark (not part of a nameplate and in the form of decals, stickers or labels) will always include these four elements:

Une marque d'inscription distincte (ne faisant pas partie d'une plaque signalétique et sous forme de décalques, d'autocollants ou de labels) comprendra toujours les quatre éléments suivants:

- **ULC's symbol**

  le symbole ULC;

- **the word "LISTED",**

  le mot "INSCRIT";

LISTED

- **the product or category name,**

  and control, issue or serial number assigned by ULC

  e nom du produit ou de la catégorie;

  et le numéro de contrôle, d'émission ou de série assigné par ULC.

The complete Listing Mark will appear on the smallest unit container in which the product is packaged when the product is of such a size that only the symbol can be applied to the product, or when the product size, shape, material or surface texture makes it impossible to apply any legible marking to the product.

La marque d'inscription complète figurera sur la plus petite unité de contenant dans lequel le produit est emballé lorsqu'il est d'une dimension telle que seul le symbole peut y être appliqué, ou lorsque la taille, la forme, le matériau ou la texture superficielle rend impossible l'application d'une marque lisible sur le produit.

Only those devices and materials which actually bear the label are covered by the Label Service.

Seuls les dispositifs et les matériaux qui sont vraiment porteurs du label ULC sont couverts par le Service Label.

Special Inspection (SI) Service
Service d'inspection (SI) spéciale

This service is conducted by ULC, which offers on site safety evaluations of installed products conducted by ULC technical staff for compliance with the Model Code for Field Evaluations, CSA SPE 1000. ULC's Special Inspection label (above) can be applied to the product in the field if the product complies with CSA SPE 1000.

Ce service est effectué par le personnel technique ULC qui offre des évaluations de sécurité sur place de produits installés, aux fins de conformité avec le code type des évaluations en situations opérationnelles, CSA SPE 1000. Le label ULC d'inspection spéciale (ci après) peut être appliqué au produit sur place si le produit est conforme au code type CSA SPE 1000.

ULC Certificate Services
Services de Certificat

Under the Burglar and Fire Alarm System Certificate Service, Underwriters Laboratories of Canada authorizes the issuance of the Laboratories' certificates to installations which the listed installing/ monitoring company represents to be in compliance with requirements established for the class. The certificate indicates the classification, extent, location of equipment, period covered by the certificate, and name of the installing/monitoring or service company.

Le service de certificat de système d'alarme antivol et de réseau avertisseur d'incendie des Laboratoires des assureurs du Canada autorise l'émission de certificats des Laboratoires à des installations que les entreprises d'installation et de surveillance inscrites déclarent être conformes aux exigences établies pour la catégorie. Le certificat indique la classification, la portée, l'emplacement de l'équipement, la période couverte par le certificat et le nom de l'entreprise d'installation, de surveillance ou de service.

Underwriters Laboratories of Canada conducts countercheck field examinations of representative installations of each listed installing company. If installations not in compliance with the Laboratories' requirements are found as a result of field examinations, they are subject to correction by the listed installing company or cancellation of the certificate.

Les Laboratoires des assureurs du Canada effectuent sur place des contre vérifications des installations représentatives de chaque entreprise d'installation inscrite. S'il appert que des installations ne sont pas en conformité avec les exigences des Laboratoires à la suite de ces vérifications sur place, elles pourront faire l'objet d'une correction de la part de l'entreprise d'installation ou d'une annulation de leur certificat.

Only those field installations which actually bear the certificate are covered by the Certificate Service Program.

Seules les installations sur place, porteuses du certificat, sont couvertes par le programme du service de certificat.

Reference should be made to the sections covering Burglary Protection Equipment and Systems along with Fire and Alarm Equipment and Systems listings for a description of the applicable Certificate Service.

On devra se référer aux sections couvrant les inscriptions de l'équipement et des systèmes antivol de même que de l'équipement et des systèmes de lutte contre les incendies et d'alarme incendie pour une description du service de certificat applicable.

UL Certification Services
Services et marques de certification UL

Listing Service
Service d'inscription

UL's Listing Service is the most familiar form of UL's product safety certification programs. The UL Listing Mark on a product means that the manufacturer has demonstrated the ability to produce a product that complies with appropriate requirements regarding reasonably foreseeable risks associated with the product. The UL Listing Mark for Canada is applied to products for use in Canada that have been investigated to Canadian safety requirements. The UL Listing Mark for Canada and the U.S. is applied to products for use in the U.S. and Canada that have been investigated to the requirements of both countries. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the product with UL's requirements.

Le service d'inscription UL est la forme la plus connue des programmes UL de certification de la sécurité des produits. La marque d'inscription UL sur un produit signifie que le fabricant a fait preuve de compétence pour fabriquer un produit qui tient compte des exigences essentielles relativement aux risques raisonnablement prévisibles liés au produit. La marque d'inscription UL pour le Canada est appliquée sur des produits destinés au marché canadien et ayant fait l'objet d'une étude quant aux exigences canadiennes en matière de sécurité. La marque d'inscription UL pour le Canada et les États Unis est appliquée sur les produits destinés au Canada et aux États Unis et ayant fait l'objet d'une étude respectant les exigences de ces deux pays. UL effectue un service de suivi comme vérification des moyens que le fabricant prend pour assurer la conformité continue du produit avec les exigences UL.

UL Listing Mark
Marque d'inscription UL

UL Listing Mark for Canada and the United States
Marque d'inscription UL pour le Canada et les États Unis

UL Listing Mark for Canada
Marque d'inscription UL pour le Canada

Identification of cUL Listed Gas-Fired Products
Identification des produits alimentés au gaz inscrits cUL

The UL Listing Mark for Canada for gas-fired products certified to Canadian standards includes: (1) the UL symbol with the words "GAS-FIRED" above the UL symbol as shown below; (2) the word "LISTED" below the UL symbol; (3) the appropriate Canadian standard used to evaluate the product (i.e., CSA, CGA, CAN); and (4) a control number assigned by UL.

Au Canada, la marque d'inscription UL pour les produits alimentés au gaz certifiés selon les normes du Canada comprend : (1) le symbole UL avec les mots ''GAS-FIRED'' (alimenté au gaz) au-dessus du symbole UL tel qu'il est illustré ci-après; (2) le mot ''LISTED'' (inscrit) au-dessous du symbole UL; (3) la norme canadienne (c.-à-d. CSA, CGA, CAN) ayant servi à évaluer le produit; et (4) un numéro de contrôle assigné par UL.

Classification Service
Service de classification

With UL's Classification Service, UL determines that a manufacturer has demonstrated the ability to produce a product that complies with its requirements for the purpose of classification or evaluation regarding one or more of the following: (1) specific risks only, such as casualty, fire or shock; (2) performance under specified conditions; (3) regulatory codes; (4) other standards, including interna-

tional or regional standards; or (5) other conditions UL may consider desirable. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the product with UL's requirements.

Avec son Service de classification, UL indique qu'un fabricant a prouvé qu'il peut fabriquer un produit qui soit conforme à ses exigences aux fins de la classification ou de l'évaluation en ce qui a trait à au moins un des éléments suivants : (1) risques spécifiques seulement, tels qu'accidents, incendies ou chocs; (2) le rendement dans des conditions précises; (3) les codes réglementaires; (4) les autres normes, y compris les normes internationales et régionales; ou (5) d'autres conditions que UL peut juger souhaitables. UL assure un service de suivi comme vérification des moyens que le fabricant prend pour établir la conformité continue du produit avec les exigences UL. L.

UL Classification Mark
Marque de classification UL

UL Classification Mark for Canada and the United States
Marque de classification UL pour le Canada et les États Unis

UL Classification Mark for Canada
Marque de classification UL pour le Canada

UL's Classification Mark includes a qualifying statement designated by UL. A UL Classification Mark for Canada is used for products intended for the Canadian marketplace. It indicates that UL has used Canadian standards to investigate the product for specific hazards or properties. A UL Classification Mark for Canada and the U.S. is used for products intended for the Canadian and U.S. marketplaces. This Mark indicates that UL has used the requirements of both countries to investigate the product for specific hazards or properties.

La marque de classification UL comprend une attestation d'admissibilité définie par UL. Une marque de classification UL pour le Canada est utilisée pour les produits destinés au marché canadien. Elle indique que UL a pris en compte les normes canadiennes pour étudier les produits relativement à leurs dangers ou à leurs propriétés spécifiques. Une marque de classification UL pour le Canada et les États Unis est utilisée pour les produits destinés aux marchés canadien et américain. Cette marque indique que UL a pris en compte les exigences des deux pays pour étudier le produit quant à ses dangers et à ses propriétés spécifiques.

Component Recognition Service
Service de reconnaissance des composants

Many UL investigations of equipment involve an evaluation of the suitability of components such as relays, thermostats, switches, etc. for specific applications. Where such components are designed to comply with all the construction and performance requirements of the category, they are eligible for UL Listing and suitable for either field or factory installation.

In some situations, components of special design may be incomplete in construction or restricted in performance capabilities and not Recognized for use as field-installed components. These components may be entirely suitable for factory installation on other equipment where the limitations of use are known to the manufacturer and where their use within such limitations may be investigated by UL.

With UL's Component Recognition Service, UL determines that a manufacturer has demonstrated the ability to produce a component for use in an end product that complies with UL's requirements. This type of investigation takes into account the performance and construction characteristics of the end product and how the component will be used in that product. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the component with UL's requirements.

De nombreuses études sur les équipements menées par UL comprennent une évaluation de la pertinence des composants tels que les relais, les thermostats, les commutateurs, etc., en ce qui a trait à des applications spécifiques. Lorsque de tels composants sont conçus pour se conformer à toutes les normes de fabrication et aux exigences de rendement de la catégorie, ils sont admissibles à l'inscription UL et indiqués pour être installés sur place ou en usine.

Dans certaines circonstances, des composants spéciaux peuvent être incomplets pour ce qui est de la fabrication, ou limités en capacité de rendement, et donc non Reconnus pour être utilisés comme composants installés sur place. Ces composants peuvent convenir parfaitement pour une installation en usine sur d'autres équipements, lorsque les restrictions d'utilisation sont connues du fabricant et que leur utilisation dans les limites de ces restrictions peut être étudiée par UL.

Avec son Service de reconnaissance de composants, UL définit qu'un fabricant a fait preuve de compétence pour produire un composant pouvant être utilisé comme produit final qui satisfait aux exigences UL. Ce type d'examen prend en compte le rendement et les caractéristiques de fabrication du produit final et la façon dont le composant sera utilisé dans ce produit. UL effectue un service de suivi comme vérification des moyens que le fabricant prend pour assurer la conformité continue du composant avec les exigences UL.

UL Recognized Component Mark
Marque de composant reconnu UL

UL Recognized Component Mark for Canada and the United States
Marque de composant reconnu UL pour le Canada et les États Unis

UL Recognized Component Mark for Canada
Marque de composant reconnu UL pour le Canada

UL Recognized Components, or their packaging, are eligible to bear the UL Recognized Component Mark, the UL Recognized Component Mark for Canada, or the UL Recognized Component Mark for Canada and the U.S. The Recognized Component Mark does not provide evidence of listing or labeling, which may be required by installation codes or standards.

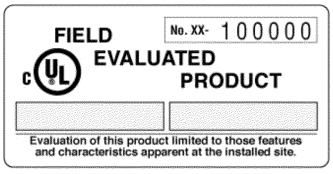
Les composants reconnus UL ou leur emballage sont admissibles à porter la marque de composant reconnu UL, la marque de composant reconnu UL pour le Canada ou la marque de composant reconnu UL pour le Canada et les États Unis. La marque de composant reconnu ne fournit cependant pas la preuve d'une inscription ou d'un label, laquelle peut être exigée par les codes ou les normes d'installation.

Field Evaluation Service

Service d'évaluation en conditions opérationnelles

This service covers on-site safety evaluations of installed products or systems, conducted by UL technical staff. UL's Field Evaluated Product Mark (below) can be applied to the product in the field if the product complies with UL's safety requirements.

Ce service couvre les évaluations de sécurité effectuées sur place par le personnel technique UL des produits ou des systèmes installés. La marque UL d'un produit évalué dans des conditions opérationnelles (voir ci après) peut être appliquée sur le produit sur place s'il satisfait aux exigences de sécurité UL.



cUL Field Evaluated Product Mark

Installation and Use of Products Bearing the UL Mark

AHJs should be consulted in all cases as to the particular requirements covering the installation and use of UL Listed or Classified products, equipment, systems, devices and materials.

Use of the White Book

The Canadian White Book includes the following:

- A compilation of all product categories applicable to an inspector arranged alphabetically by category code
- General Guide Information for each product category that includes references to the requirements used for the investigation of the products and the ULC or Canadian UL Mark to be used on the product
  - •Information relating to limitations or special conditions applying to the product
  - •The titles and designations of standards or requirements that have been used for the investigation of products in a specific product category
- Index of ULC Product Categories and Industry Terms
- Index of cUL Product Categories and Industry Terms
- ULC's Online Directories Quick Guide
- UL's Online Certifications Directory Quick Guide (to assist in finding General Guide Information and Listings online)

ULC and cUL Listing and Classification information is arranged alphabetically in the Canadian White Book by product category code. Within each part of the White Book, Part 1 – ULC Product Categories, Part 2 – cUL Product Categories.

The five-letter code (shown in parentheses) following each category title is the product category code designation.

Practical Application of the White Book in the Field

Application pratique du Livre blanc dans des conditions opérationnelles

Using the White Book in the field to help identify the intended use of a Listed product to assist in determining compliance with the applicable Canadian Model Codes.

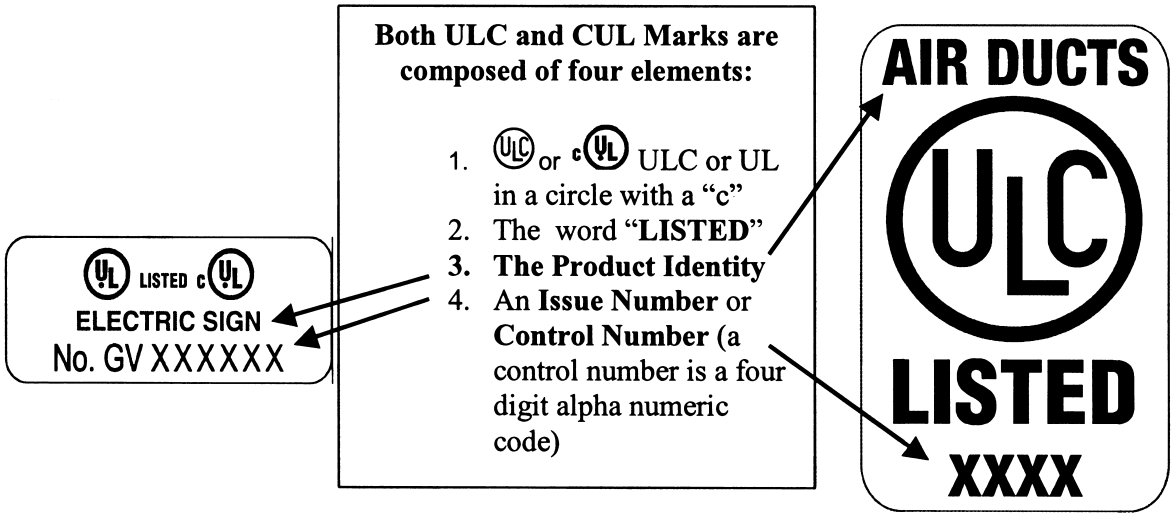
L'utilisation du Livre blanc dans des conditions opérationnelles aide à préciser l'utilisation prévue d'un produit inscrit afin d'établir s'il est en conformité avec les Codes du modèle canadien applicable.

This is a three step process detailed below:

Les trois étapes du processus sont décrites ci dessous:

1. **Determine the Product Identity from the cUL and ULC Listing Mark.**
   Établir l'identité du produit en utilisant la marque d'inscription cUL et ULC.

Step 1
Étape 1



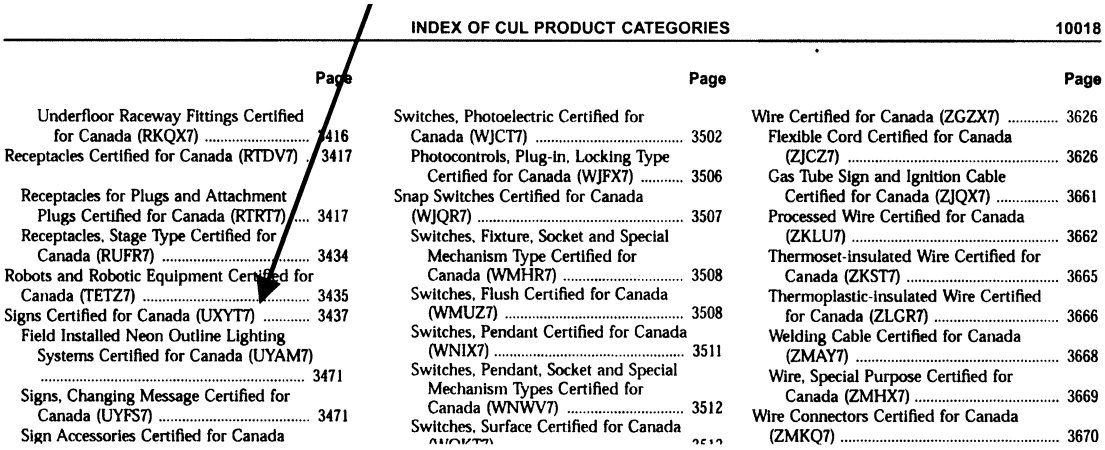
Once you locate the ULC or cUL Listing Mark on the product, Note the Product Identity, that is the key to using the White Book effectively (typically the product identity is the product category title).

Une fois que vous avez localisé la marque d'inscription UL sur le produit, notez l'identité du produit, c'est la clé pour utiliser efficacement le Livre blanc (généralement, l'identité du produit correspond au titre de catégorie de produit).

Step 2
Étape 2

Locate the Product Identity in the Index of ULC or cUL Product Categories and Industry Terms located in the back of the Canadian White Book.Once you have located the product identity, use the Index of ULC Product Categories and Industry Terms for a ULC Listing in the back of the Canadian White Book starting on page 679. For a cUL Listed product, use the Index of cUL Product Categories and Industry Terms in the back of the Canadian White Book starting on page 695 to find the product category. The index will identify the product category and the page number for the product category Guide Information.

Localisez l'identité du produit dans l'index des catégories de produits ULC ou cUL à la fin du Livre blanc canadien. Une fois que vous avez localisé l'identité du produit, utilisez l'index des catégories de produits ULC pour trouver une inscription ULC à la fin du Livre blanc canadien en commençant à la page 679. En ce qui concerne un produit inscrit cUL, utilisez l'index des catégories de produits cUL à la fin du Livre blanc canadien en commençant à la page 695 pour trouver la catégorie de produit. L'index identifiera la catégorie de produit et le numéro de page pour le Guide d'information de la catégorie de produit.



INDEX OF CUL PRODUCT CATEGORIES 10018

Step 3
Étape 3

Access the product category Guide Information page identified in the Index of ULC or cUL Product Categories and Industry Terms. Once you locate the page, you will be able to find the Guide Information for the product category, in this case Signs (UXYT7). See the Guide Information for Signs (UXYT7) below.

Accéder à la page du Guide information pour la catégorie de produit indiquée dans l'index des catégories de produits ULC ou cUL. Une fois que vous avez trouvé la page, vous pourrez trouver le Guide information pour la catégorie de produit; dans le présent cas, il s'agit de « Signs » (panneau réclame) (UXYT7). Voir le Guide information pour "Signs" (UXYT7) ci dessous.

Guide Information for Signs, Certified for Canada (UXYT7)

Anatomy of UL Guide Information

- **Product Category Title**
- **Product Category Code**

This 5 letter alpha-numeric code that appears in parenthesis is assigned to each specific product category for cataloging in ULC's and UL's directories. The product categories in the Canadian White Book as well as all ULC and UL directories are organized alphabetically by this code. (The Category Code is not an acronym for anything, they are created and assigned by mathematic process.)

- **General Information** relating to intended use and installation, scope of Listing, product markings and requirements used for Listing the product.

- **ULC or UL Mark**
The last paragraph of all Guide Information explains how to identify products Listed under the product category. **Please remember, the ULC or CUL Listing Mark on the product is the only way to identify a Listed product certified for Canada. Always consult this section of the Guide Information to identify the Listing Mark requirements for the product.**

SIGNS CERTIFIED FOR CANADA (UXYT7)

USE AND INSTALLATION

This category covers electric portable and stationary signs and displays employing incandescent lamps, LEDs (light emitting diodes), electroluminescent panels, neon tubing, fluorescent lamps, high intensity discharge lamps or combinations thereof for installation in accordance with the "Canadian Electrical Code, Part I."

Signs or sections of a sign forming a complete enclosure intended for permanent connection to a source of supply are provided with permanent means for attachment to a building, to a support or to a hanging rig. The mounting hardware, poles and other structural components of a sign have not been evaluated with respect to local variable conditions such as wind and snow loading or soil conditions.

Electric signs, of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each major subassembly bears an "Electric Sign Section" Listing Mark. Sign faces, trim and mounting hardware are not considered major subassemblies. Each sign will have suitable installation instructions describing or illustrating the proper assembly, mounting and connection of the numbered sign sections. The acceptability of the assembled sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

Signs intended for permanent installation and which have been investigated for indoor use only are so marked. Cord-connected signs investigated for outdoor use are marked "Outdoor." Signs for outline lighting are marked "Outdoor Sign for Outline Lighting."

REBUILT PRODUCTS

This category also covers signs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt signs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt signs are subject to the same requirements as new signs.

RELATED PRODUCTS

Accessories intended for use in Listed signs are covered under Sign Accessories Certified for Canada (UYMR7).

Retrofit conversions intended to be field installed in Listed electric signs are covered under Sign Conversions, Retrofit Certified for Canada (UYWU7).

Changing message center signs may contain integral controllers or may be intended for use with externally connected controllers. Externally connected controllers are covered under Sign Controllers, Message Centers Certified for Canada (UYTQ7).

This category does not cover billboard illumination, exit lights, skeletal neon tubing for show windows, or illuminated clocks rated 600 V or less.

Field-assembled neon systems used in display windows, outline lighting, or skeletal neon signs are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled Certified for Canada (UZBL7).

Field-assembled cold cathode electric discharge lighting systems that provide general illumination are covered under Electric Discharge Lighting Systems, Cold Cathode Certified for Canada (IFAY7).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field Installed Neon Outline Lighting Systems Certified for Canada (UYAM7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA C22.2 No. 207-M89, "Portable and Stationary Electric Signs and Displays."

Electric signs that comply with the requirements in CAN/CSA C-22.2 No. 12, "Portable Luminaires" may also be Listed as Portable Luminaires Certified for Canada (QOWZ7).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate "Indoor Electric Sign," "Electric Sign" or "Electric Sign Section." For rebuilt signs the word "Rebuilt" precedes the product name.

Field Modifications

What happens to the Listing if a ULC or cUL-Listed product is modified in the field?

An authorized use of the ULC or cUL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements when it was shipped from the factory. When a ULC or cUL-Listed product is modified after it leaves the factory, UL has no way to determine if the product continues to comply with the safety requirements used to certify the product without investigating the modified product. UL can neither indicate that such modifications ''void'' the ULC or cUL Mark, nor that the product continues to meet UL's safety requirements, unless the field modifications have been specifically investigated by UL. It is the responsibility of the Authority Having Jurisdiction (AHJ) to determine the acceptability of the modification or if the modifications are significant enough to require one of ULC's or UL's Field Engineering Services staff members to evaluate the modified product. UL can assist the AHJ in making this determination.

An exception for a field modification authorized by ULC or cUL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the marking on the product have been investigated for use in that product.

If a party wishes ULC or UL to determine if the modifications made to a ULC or cUL Listed product comply with UL requirements, the appropriate Field Engineering Service can be initiated to investigate the modifications. This investigation will only be conducted after ULC or cUL consults with the AHJ to ensure that UL's investigation addresses all areas of concern and meets all of the AHJ's needs.

If you have any questions or would like to inquire about a field evaluation, contact Field Services at +1-877-UL-HELPS, prompt #2 (+1-877-854-3577) or visit http://www.ul.com/field/.

Field Labeling

Is it permissible to apply a UL Mark in the field?

The application of a ULC or cUL Mark in the field is only permitted when an inspection is conducted under one of ULC's or UL's Field Engineering Services in the presence of a UL representative.

CE Marking Information

A CE Marking is a European marking of conformity that indicates that a product complies with the essential requirements of the applicable European laws or Directives with respect to safety, health, environment and consumer protection. Generally, this conformity to the applicable directives is done through self-declaration. The CE Marking is required on products in the countries of the European Economic Area (EEA) to facilitate trade between the member countries. The manufacturer or his authorized representative established in the EEA is responsible for affixing the CE Marking to his product. The CE Marking provides a means for a manufacturer to demonstrate that his product complies with a common set of laws required by all of the countries in the EEA to allow free movement of trade within the EEA countries.

CE

Unlike the ULC or cUL Mark, the CE Marking:

- Is not a safety certification mark,
- Is generally based on self-declaration rather than third-party certification, and
- Does not demonstrate compliance to North American safety standards or installation codes.

A product that bears a CE Marking may also bear a certification mark, such as ULC's or UL's Listing Mark; however, the CE Marking and the ULC or cUL Mark have no association. The ULC or cUL Mark indicates compliance with the applicable safety requirements in effect in North America and is evidence of ULC or cUL certification, which is accepted by model North American installation codes, such as the *National Electrical Code*® and the *Canadian Electrical Code*®.

The CE Marking on products is not a certification mark. AHJs should continue to look for the ULC or cUL Mark on products in order to determine if a product complies with applicable safety requirements for North America.

AIR-CONDITIONING SYSTEMS (AIXZC)

This category covers devices intended for use in the construction of air duct systems for air conditioning of rooms and buildings. The devices are divided into the following categories:

Air Duct Systems (ALJXC)
Connectors (ALNRC)
Air Ducts (ALLUC)
Air Duct Components (ALLZC)
Filter Units, Air (AJZVC)
Dampers (EMMEC)
Fire Dampers (EMNOC)
Leakage-Rated Dampers (EMQIC)

FILTER UNITS, AIR (AJZVC)

GENERAL

This category covers air filter units of both washable and throw-away types intended for the removal of dust and other airborne particles from air circulated mechanically in equipment and systems installed in accordance with the ''National Building Code of Canada.''

Air filters are classified as follows:

- **Class 1** filters are units which, when clean, do not contribute fuel when attacked by flame and which emit only negligible amounts of smoke.
- **Class 2** filters are units which, when clean, burn moderately when attacked by flame or emit moderate amounts of smoke or both.

The toxicity of products of combustion resulting from exposure to flame and the use of these filters for removal of flammable vapours and residues has not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S111, ''Standard Method of Fire Tests for Air Filter Units.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Air Filter'' or ''Air Filter Unit.''

AIR DUCT SYSTEMS (ALJXC)

This category covers air duct systems, which include connectors and air ducts made from materials consistent with and for use indoors in accordance with the ''National Building Code of Canada.''

In accordance with CAN/ULC-S110, ''Standard Methods of Test for Air Ducts,'' air ducts are classified as follows:

- **Class 1** air ducts have a flame spread rating of not over 25 without evidence of continued progressive combustion and a smoke developed rating of not over 50.
- **Class 2** air ducts have a flame spread rating of not over 50 without evidence of continued progressive combustion and a smoke developed rating of not over 50 for interior surfaces and not over 100 for exterior surfaces.

Air Ducts (ALLUC)

GENERAL

This category covers air ducts identified as Class 1 or Class 2 in accordance with the information in Air Duct Systems (ALJXC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S110, ''Standard Methods of Test for Air Ducts.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Air Duct.''

Air Duct Components (ALLZC)

GENERAL

This category covers devices that are incomplete in certain constructional features or restricted in performance capabilities and intended for use as components of air ducts and/or connectors which are submitted for investigation rather than for direct, separate installation in the field. The final acceptance of the component is dependent upon its installation and use in complete assemblies of air ducts and/or connectors submitted for examination and tests to Underwriters Laboratories of Canada.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S110, ''Standard Methods of Test for Air Ducts.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Air Duct Component.''

Connectors (ALNRC)

GENERAL

This category covers connectors identified as Class 1 or Class 2 in accordance with the information in Air Duct Systems (ALJXC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S110, ''Standard Methods of Test for Air Ducts.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Connector.''

DAMPERS (EMMEC)

GENERAL

This category covers fire dampers and leakage-rated dampers.

Fire dampers are designed for the protection of openings in fire separations against fire when installed in ducts that connect two fire compartments or penetrate a fire separation.

The basic design of the dampers has been established as a result of representative dampers being subjected to a fire, hose stream and other tests in accordance with CAN/ULC-S112, ''Standard Method of Fire Test of Fire-Damper Assemblies.'' For additional information, see Fire Dampers (EMNOC).

Leakage-rated dampers are designed to restrict the spread of smoke through HVAC systems and control the movement of smoke within a building.

Leakage-rated dampers are investigated with respect to a maximum air leakage when exposed to selected conditions of air temperature and pressure in accordance with CAN/ULC-S112.1, ''Leakage Rated Dampers for Use in Smoke Control Systems.'' For additional information, see Leakage-Rated Dampers (EMQIC).

Dampers certified under one category are not appropriate for use in the others. However, in cases where dampers are tested to satisfy both the fire and leakage-rating requirements, they may be used in either function. In such cases, dampers are identified by a combination label indicating the fire and leakage ratings.

Fire dampers may require expansion allowances as indicated in the individual manufacturer's installation instructions. Leakage-rated dampers are investigated for leakage through the plane of the damper only and do not include the leakage that may occur through expansion gaps around the damper.

Authorities Having Jurisdiction should be consulted before installation.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Damper.''

Fire Dampers (EMNOC)

GENERAL

This category covers fire dampers designed for installation in air-conditioning ducts in accordance with the ''National Building Code of Canada.''

The rating of 3 h, 2 h, 1-1/2 h, 1 h or 3/4 h indicates the duration of fire exposure which is established as a result of the basic design being subjected to a fire and hose stream test. In addition, the performance of each damper is investigated when subjected to various simulated environmental conditions.

Fire Dampers (EMNOC)−*Continued*

Unless indicated in the individual certifications, fire damper assemblies have not been investigated for their ability to close under airflow conditions.

These fire dampers are intended for installation in drywall and/or masonry construction as noted in the individual certifications, which specify the maximum permissible dimensions applicable for each type of construction.

In accordance with CAN/ULC-S112, ''Standard Method of Fire Test of Fire-Damper Assemblies,'' the fusible links used in the fire-damper assemblies submitted for test are generally rated at 70 to 75°C. Fusible links with temperature ratings up to 100°C may be used in these assemblies without further testing.

Fire dampers are of the single-blade, multi-blade or curtain types.

Curtain-type dampers are of the interlocking blade or folded blade type.

When so qualified, fire dampers are intended for installation in air conditioning and ventilating ducts or openings (without ducts), piercing or terminating at vertical or horizontal fire separations where the fire separation is required to have a fire-resistance rating of up to and including 4 h.

Installation requires the use of wall or floor sleeves (excepting instances where fire-damper frames are of sufficient width) with perimeter mounting angles attached to the sleeve on both sides of the wall or floor opening. Expansion allowances are in the order of 3 mm for each 300 mm of damper width and length, except where indicated in the individual manufacturers' installation instructions.

Detailed installation instructions, including illustrations and adequate information for attaining proper and safe installation of the product, are provided with each fire-damper assembly by the manufacturer.

These fire dampers are not appropriate for use in place of the firestop flaps illustrated in the various floor or roof and ceiling assembly designs in the Fire Resistance Ratings section. For additional information, see Ceiling Firestop Flap Assemblies (CABSC).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Dampers (EMMEC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S112, ''Standard Method of Fire Test of Fire-Damper Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fire Damper.''

Fire Dampers, Marine Type (EMNUC)

GENERAL

This category covers marine-type fire dampers of the single-blade, multi-blade or curtain types. Each damper assembly includes a casing which may be attached by welding or mechanical fastening to a duct penetrating an A or B class marine bulkhead or deck.

These damper assemblies are rated in terms of the time taken for duct temperatures on the unexposed side of the division to rise 180°C above the ambient temperature at the start of the test. Ratings may be for 0, 15, 30 or 60 minutes.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Dampers (EMMEC).

REQUIREMENTS

The basic standards used to investigate products in this category are TP 439, ''Structural Fire Protection Standards: Testing and Approval Procedures,'' and International Code for Application of Fire Test Procedures (FTP Code), Resolution A.754(18), ''Recommendation on Fire Resistance Tests for 'A', 'B' and 'F' Class Divisions'' (requirements of Transport Canada).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fire Damper, Marine Type.''

Leakage-rated Dampers (EMQIC)

GENERAL

This category covers leakage-rated dampers of the single-blade, double-blade, multi-blade or curtain types. These dampers are designed for use in smoke control systems. They are intended to restrict the spread of smoke in HVAC systems, which are designed to be automatically shut down in

Leakage-rated Dampers (EMQIC)−*Continued*

the event of a fire, and also to control the movement of smoke within a building when the HVAC system is operational in engineered smoke control systems.

Leakage-rated dampers are identified by Class Designations 0, I, II, III or IV as shown in the following table as to maximum air leakage permitted for the Class for static pressure of 0.249 kPa and 0.995 kPa. Leakage rates may be determined at an extended static range of 1.992 kPa and 2.988 kPa as shown in the individual certifications.

Leakage rates may be determined at ambient temperature or at ambient temperature after exposing the dampers to temperature degradation at elevated temperatures where the selected temperatures are in increments of 55.6°C with the minimum degradation temperature being 121°C. The degradation test temperatures are not intended to reflect fire conditions, and the Leakage Class is not intended to provide data on dampers that are directly exposed to a fire or to heated air in excess of the indicated temperature.

These dampers are identified with respect to both the Leakage Class and ambient or degradation test temperature.

	Max Leakage Cubic Metre/Second/Square Metre			
	Normal Operating Static Range		Extended Operating Static Range	
Class	0.249 kPa	0.995 kPa	1.99 kPa	2.99 kPa
0	0	0	0	0
I	0.20	0.041	0.056	0.071
II	0.051	0.102	0.143	0.179
III	0.204	0.408	0.571	0.714
IV	0.306	0.612	0.857	1.071

TEMPERATURE DEGRADATION
Exposure Temperature, Degree C
A (Ambient)
121 or any temperature in excess of
121 in increments of 55.6

Detailed installation instructions, including illustrations and adequate information for attaining proper and safe installation of the product, are provided with each damper assembly by the manufacturer.

These dampers are not intended for use in place of fire dampers.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Dampers (EMMEC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S112.1, ''Leakage Rated Dampers for Use in Smoke Control System.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Leakage Rated Damper.''

ALARM SYSTEM UNITS (ALOZC)

ACCESS CONTROL SYSTEM UNITS (ALVYC)

USE

This category covers units for access control systems, providing a means of regulating or controlling entry into an area, or the use of a device, by electrical or mechanical means. Accessories covered under this category include keypads, token card readers, biometric readers, request-to-exit devices, access-point sensors and access-point actuators.

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 294, ''Access Control System Units,'' and CAN/ULC-S319, ''Electronic Access Control Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Access Control System Unit,'' ''Security Equipment,'' ''Security Subassembly,'' ''Fire Alarm and Security Equipment,'' ''Fire Alarm and Security Subassembly,'' or other appropriate product name as shown in the individual Listings.

CENTRAL AND MONITORING STATION BURGLAR ALARM SYSTEM UNITS (AMCXC)

USE

This category covers burglar alarm signal receiving, recording and automated station units or systems intended for use within a central or monitoring station or satellite station, and associated signal transmitters, subscribers' control units and the like, which are installed within protected premises.

These units are either of the individual line type or multiplex system type as indicated in the individual certifications.

The units are suitable for use with active communication channel security levels A1 through A4 and passive communication channel security levels P1 through P3 as indicated in the individual certifications. For further information, see Financial Type Signal Receiving Centres, Full and Shared Service (CRXXC) and Commercial Type Signal Receiving Centres, Full and Shared Service (CPVXC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S304, "Signal Receiving Centre and Premise Burglar Alarm Control Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Central and Monitoring Station Alarm Unit," "Central Station System Unit, Fire Alarm," "Security Equipment," "Security Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

CONTACTS AND SWITCHES (AMQVC)

USE

This category covers devices intended for use with central station, local or monitoring station burglar alarm systems. Switches suitable for central station and monitoring station service are designed to open and cross the protective circuit when operated. For local systems, the cross contact is not required.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C634, "Guide for the Investigation of Connectors and Switches for Use with Burglar Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Contact and Switch."

INTRUSION DETECTION UNITS (ANSRC)

GENERAL

This category covers floor traps, vibration detectors, and various electronic devices that may be used to form a protective system for either residential or commercial use.

Electronic units include those which utilize low visibility or invisible rays (photoelectric), passive infrared, electromagnetic waves, ultrasonic radiation, vibration or other electronic principles to signal intrusion or movement within residential or mercantile premises or approaches to safes, stockrooms, etc. Electronic units are recognized in combination with or instead of conventional forms of wiring on walls, floors, ceilings and openings to the extent indicated in the individual certifications.

The individual certifications determine the suitability for connection to commercial, financial or residential systems by specifications of range, coverage, contact type, tamper switches, or other features of the unit.

These electronic units have been investigated for fire and electrical shock hazards and for reliability of operation. The effect of radiation on radio communication or radio navigation has not been investigated.

The Department of Transport (Ottawa, Canada) should be consulted for regulations governing the use and operation of radiation devices.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S306, "Intrusion Detection Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Intrusion Detection Unit."

LOCAL ALARM UNITS (AOTXC)

GENERAL

This category covers control units, outside alarm housings, power supplies and remote station units.

For further information, see Financial Type Signal Receiving Centres, Full and Shared Service (CRXXC) and Commercial Type Signal Receiving Centres, Full and Shared Service (CPVXC).

Components or modules of the control unit with modular construction that may be shipped separately to the site, or are eligible for field replacement are identified by component labels (see ULC Mark below).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S303, "Local Burglar Alarm Units and Systems," and CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Local Alarm Unit," "Component for Local Alarm Unit," "Security Equipment," "Security Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

MISCELLANEOUS DEVICES, BURGLAR ALARM (AOUAC)

GENERAL

This category covers miscellaneous equipment, such as repeaters and modems, intended for use with central and monitoring station burglar alarm units.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S304, "Signal Receiving Centre and Premise Burglar Alarm Control Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Miscellaneous Device, Burglar Alarm," or other appropriate product name as shown in the individual Listings.

Intrusion Detection Unit Components (AOUGC)

GENERAL

This category covers devices that are incomplete in certain constructional features or restricted in performance capabilities and intended for use as components of intrusion detection units which are submitted for investigation rather than for direct, separate installation in the field. The final acceptance of the component is dependent upon its installation and use in complete assemblies of intrusion detection units submitted for examination and tests to Underwriters Laboratories of Canada.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S306, "Intrusion Detection Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Intrusion Detection Unit Component."

POWER SUPPLY UNITS (APHZC)

USE

This category covers power-supply units intended for application as components of burglary protection signalling systems. Some power-supply units, as identified in the individual certifications, may utilize certified accessories to supplement power-supply application.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S318, "Power Supplies for Burglar Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply Unit."

PROPRIETARY BURGLAR ALARM SYSTEM UNITS (APOUC)

GENERAL

This category covers proprietary burglar alarm signal receiving, recording and automated station units or systems intended for use within a central signal-receiving station or satellite station and associated signal transmitters, subscribers' control units and the like, which are installed within protected proprietary premises.

These units are either of the individual-line type or multiplex-system type as indicated in the individual Listings.

The units are suitable for use with line security levels AA and BB, (which may also be referred to as levels 1, 2, 3) as indicated in the individual Listings.

A proprietary burglar alarm system is an alarm system in which alarm-initiating circuits and devices are connected directly or indirectly to constantly monitored receiving equipment at a central supervising station located at the protected property and operated by competent and experienced personnel responsible to the owner of the protected property. The system is arranged so that a predetermined change in the alarm-initiating circuits or devices automatically causes transmission of an alarm signal over a supervised signalling channel to the central supervising station. An installation wiring diagram attached to the control unit of the system, or reference in the control unit marking, indicates the device and circuits which are acceptable for connection to the control unit in the field.

Proprietary burglar alarm units and systems are specially designated as to their suitability for use on mercantile premises, mercantile safes and vaults, and bank safes and vaults.

The protection circuits of these systems normally operate within the Limits of Class 2 remote-control and signal circuits as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Components or modules of the control unit with modular construction that may be shipped separately to the site or that are eligible for field replacement are identified by component labels (see **ULC MARK** below).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1076, "Proprietary Burglar Alarm Units and Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Proprietary Burglar Alarm System Unit," "Component for Proprietary Burglar Alarm System Unit," "Security Equipment," "Security Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

SOUNDING DEVICES (AQJRC)

USE

This category covers devices intended for installation in certified alarm housings to provide audible alarm indication in local burglary alarm systems. In this capacity, and when installed on exposed building surfaces, the devices are required to operate in an acceptable manner under the normally encountered temperature variation to which they may be subject.

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories," and CAN/ULC-S303, "Local Burglar Alarm Units and Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sounding Device."

HEAT DETECTORS (SZGUC)

USE

This category covers devices intended to be used for certificated bank vault alarm installations for central station, monitoring station or local connection. They are intended to be mounted on the vault door or the vestibule of the vault. These heat detectors are of the combination rate-of-rise and fixed-temperature type.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530, "Heat Actuated Fire Detectors for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these

Heat Detectors (SZGUC)−*Continued*

products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Detector."

MOTORIZED FIRE FIGHTING APPARATUS (AZYDC)

PUMPERS, FIRE DEPARTMENT (AZYFC)

GENERAL

This category covers fire department pumpers, tankers, light-attack fire fighting apparatus (mini pumpers), and special-purpose apparatus.

Pumpers are normally supplied in recommended standard capacities of 2000, 3000, 4000, 5000, 6000, 7000 and 8000 L/min and are intended for use by municipal fire departments and other organized fire brigades. Mini pumpers are supplied in capacities of 950 to 2000 L/min.

REBUILT PRODUCTS

This category also covers fire department pumpers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt fire department pumpers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt fire department pumpers are subject to the same requirements as new fire department pumpers.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S515, "Automobile Fire Fighting Apparatus."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pumper, Fire Department."

AERIAL DEVICES FOR FIRE FIGHTING APPARATUS (AZYPC)

GENERAL

This category covers aerial devices, such as aerial ladders and elevating platforms, for motorized fire fighting apparatus and ladder trucks. Aerial ladders are manufactured and used in lengths of 20, 23, 26, 30, 38 and 45 m. The length of an aerial ladder is measured by the length of a plumb line from the top rung of the ladder to ground with the ladder raised to its maximum angle of elevation and fully extended. Aerial devices are intended for use by municipal fire departments and other organized fire brigades.

REQUIREMENTS

The basic standard used to conduct routine performance tests at the factory on aerial devices is CAN/ULC-S515, "Automobile Fire Fighting Apparatus."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Aerial Device for Fire Fighting Apparatus."

CHASSIS COMPONENTS FOR FIRE FIGHTING APPARATUS (AZYRC)

GENERAL

This category covers chassis components for motorized fire fighting apparatus, such as fire department pumpers, light-attack fire fighting apparatus (mini pumpers), tankers, aerial ladders and platforms, and special service apparatus.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S515, "Automobile Fire Fighting Apparatus."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Chassis Component for Fire Fighting Apparatus."

MECHANICAL EQUIPMENT (BDCNC)

BLOWPIPES AND TORCHES (BDCTC)

USE

This category covers blowpipes or torches intended for oxy-fuel welding and cutting operations. Torches may be designed to utilize acetylene, methylacetylene propadiene, natural gas or propane at low or medium pressures. Torches intended for use with acetylene are designed to operate at a pressure of not more than 100 kPa supplied from low- or medium-pressure acetylene generators or from high-pressure acetylene cylinders employing suitable reducing valves.

REBUILT PRODUCTS

This category also covers blowpipes and torches that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt blowpipes and torches are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt blowpipes and torches are subject to the same requirements as new blowpipes and torches.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C123, ''Oxy-Fuel Gas Torches.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Blowpipe and Torch.''

BUILDING MATERIALS (BHWVC)

This category covers materials classified as to their surface burning characteristics and/or their combustibility.

CLASSIFICATION OF MATERIALS AS TO COMBUSTIBILITY (BHYAC)

This category covers materials investigated to determine their combustibility.

Heat Release and Smoke Extinction Area of Building Materials (BIAYC)

GENERAL

This category covers elementary or composite building materials.

The thermal conductivity, vapour resistance, washability, structural and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before application.

RELATED PRODUCTS

Materials classified as noncombustible in accordance with CAN/ULC-S114, ''Standard Method of Test for Determination of Non-Combustibility in Building Materials,'' are covered under Noncombustible Materials (BICWC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S135, ''Standard Test Method for the Determination of Combustibility Parameters of Building Materials Using an Oxygen Consumption Calorimeter (Cone Calorimeter),'' at a heat flux of 50 kW/m^2 to determine the total heat release and total smoke extinction area as indicated in the individual certifications. The heat release and smoke extinction area of discrete layers of composite materials are indicated in the individual certifications, together with the total heat release and total smoke extinction area of the material determined from the cumulative emissions from all layers.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Heat Release and Smoke Extinction Area of Building Materials.''

Noncombustible Materials (BICWC)

GENERAL

This category covers elementary building materials that meet the criteria for noncombustibility and that are intended for use as building materials in noncombustible construction, and where the ''National Building Code of Canada'' stipulates noncombustible materials. The intended use of the product (e.g., insulation) is specified in the individual certifications.

The thermal conductivity, vapour resistance, washability, structural and other properties have not been investigated.

Noncombustible Materials (BICWC)−*Continued*

Authorities Having Jurisdiction should be consulted before application.

RELATED PRODUCTS

Materials classified for total heat release and smoke extinction area in accordance with ULC-S135, ''Standard Test Method for the Determination of Combustibility Parameters of Building Materials Using an Oxygen Consumption Calorimeter (Cone Calorimeter),'' are covered under Heat Release and Smoke Extinction Area of Building Materials (BIAYC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S114, ''Standard Method of Determination of Non-Combustibility in Building Materials.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Non-Combustible Material.''

CLASSIFICATION OF MATERIALS AS TO SURFACE BURNING CHARACTERISTICS (BIKTC)

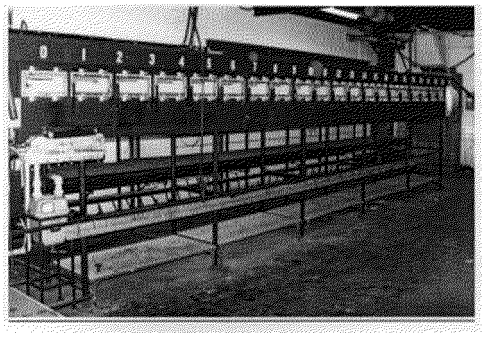
This category covers the surface burning characteristics of materials, which are expressed in terms of a classification or rating, and provide data with regard to (1) flame spread (FSC) and (2) smoke developed (SD) during fire exposure of the classified materials in comparison with inorganic reinforced cement board and untreated red oak lumber as 100 when exposed to fire under similar conditions.

The fire tests on which classification of materials that, by their own structural qualities or the manner in which they are applied, are capable of supporting themselves in position or may be supported in the test furnace to a thickness comparable to their recommended use are based, are conducted in accordance with CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

The fire tests on which classification of flooring, floor covering materials and materials that are not self-supporting, such as thermoplastics and loose fill materials are based, are conducted in accordance with CAN/ULC-S102.2, ''Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies.''

Except where noted, properties other than the surface burning characteristics of the materials covered under this section have not been investigated.

The ''Tunnel Furnace'' Test Apparatus used in the classification of



materials as to their Surface Burning Characteristics.

Acoustical Materials (BIYRC)

GENERAL

This category covers acoustical materials certified as to their surface burning characteristics under the specific conditions indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The certification of these products does not anticipate a possible change in performance should the products be subjected to repainting or other surface treatment following installation.

The certifications are confined to the materials themselves and to the methods of application indicated and do not pertain to structures in which the materials may be installed.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

Acoustical Materials (BIYRC)−*Continued*

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Acoustical Material.''

Air Duct Sealant (BLISC)

GENERAL

This category covers air duct sealants classified as to the surface burning characteristics of the ''combination'' of the air duct sealant and the specific (noncombustible) surface to which it is applied at the specific coverages indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The flash points (closed cup) of the air duct sealants also appear in the individual certifications. The publication of the flash point data is not intended to establish a relative flammability classification of the liquid air duct sealants, but to indicate the flashing characteristics of the liquid air duct sealants under a standard test procedure. Where ''no flash'' is indicated, the coating has no flash point in the closed cup tester.

The compatibility of the air duct sealant with other surfaces and the ability of the air duct sealant to perform its function in a product, assembly, or construction have not been determined.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Air Duct Sealant.''

Adhesives (BJLZC)

GENERAL

This category covers adhesives, certified as to the surface burning characteristics of the ''combination'' of the adhesive and the specific surface to which it is applied in longitudinal beads or strips at the specific percentages of exposed area or at full coverage at the specific m2/L as indicated in the individual certifications.

The Surface Burning Characteristics are derived in comparison with untreated red oak as 100.

The flash point of the adhesive also appears in the individual certifications, and is determined in accordance with the Standard, ASTM D 93. The publication of the flash point data is not intended to establish a relative flammability classification of the adhesive, but to indicate the flashing characteristics of the adhesive under a standard test procedure. Where ″no flash″ is indicated, the product has no flash point in the closed cup tester. Where ''not determined'' is indicated, the product is ineligible for testing in accordance with the Standard, ASTM D 93 due to its limited cure time or restrictions on handling the uncured material.

The Flame Spread Rating and Smoke Developed Classification of the adhesive with other surfaces and the ability of the adhesive to perform its function in a product, assembly, or construction have not been determined.

Authorities Having Jurisdiction should be consulted before application.

RELATED PRODUCTS

For adhesives intended for use in assemblies that have been assigned Fire Resistance Ratings, see Adhesives (BYWRC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

Adhesives (BJLZC)−*Continued*

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED'', a control number, and the product name ''Adhesive.''

Batts and Blankets (BKNVC)

GENERAL

This category covers batts and blankets certified as to their surface burning characteristics, smoulder resistance, or both, under the specific conditions indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The certifications or ratings are confined to the materials themselves and do not pertain to the structures in which the materials are installed.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate the surface burning characteristics of products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

The basic standard used to investigate the smoulder resistance of products in this category is ULC-S129, ''Standard Method of Test for Smoulder Resistance of Insulation (Basket Method).''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Batts and Blankets.''

Building Panels (BKRHC)

This category covers panels intended for use as internal or external cladding for walls or ceilings or as acoustical and/or decorative partitions in interior spaces. The panels are divided into two categories:

1. Composite Panels (BKRQC), consisting of organic and/or inorganic core materials with surface finishes which are not laminous.
2. Laminated Panels (BKRZC), consisting of organic and/or inorganic core materials with laminated facings.

Products or devices that are constructed primarily of panels (composite or laminated) that have demonstrated flame spread and smoke developed values of not greater than 25 and 50, respectively, are covered under Panels, Special Purpose (BKSIC).

Composite Panels (BKRQC)

GENERAL

This category covers composite panels classified as to their surface-burning characteristics as indicated in the individual certifications.

The surface-burning characteristics are derived in comparison with untreated red oak as 100.

The panels are tested in a horizontal configuration and incorporate a centreline longitudinal joint.

The nature of the test specimens is such that the longest unfastened length of panel joints is 7315 mm, unless otherwise specified in the individual certifications.

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

The insulating, acoustical, structural and other properties of these products have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Factory-assembled exterior wall panels that have demonstrated the ability to remain in place for at least 10 minutes when investigated to CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials,'' are covered under Factory-Assembled Exterior Wall Panels (CBZZC).

Insulated building units investigated to CAN/ULC-S138, ''Method of Test for Fire Growth of Insulated Building Panels in a Full-Scale Room Configuration'' (supersedes ULC/ORD-C376), are covered under Insulated Building Panels (OERQC).

Foamed plastic insulated garage doors investigated to ULC/ORD-C263.7, ''Room Fire Test Method for Garage Doors Using Foamed Plastic Insulation,'' are covered under Foamed Plastic Insulated Garage Doors (JGPWC).

Composite Panels (BKRQC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Composite Panel.''

Laminated Panels (BKRZC)

GENERAL

This category covers laminated panels classified as to their surface burning characteristics as indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

For laminated panels provided with a facing, the effect of the adhesive is determined by testing the sample with the butt joint seam, by slitting the facing, or by using a factory or field joint (if applicable).

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

The insulating, acoustical, structural and other properties of these products have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Laminated Panel.''

Panels, Special Purpose (BKSIC)

GENERAL

This category covers devices constructed primarily of panels that have demonstrated flame-spread and smoke-developed values of not greater than 25 and 50, respectively. The nature of the device is described in the individual certifications.

The insulating, acoustical, structural and other properties of these products have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Panel, Special Purpose.''

Cables (BLEHC)

GENERAL

This category covers power or communication cable classified as to its surface-burning characteristics as indicated in the individual certifications.

A ladder-type cable tray fabricated from steel, 7000 mm long and 420 mm wide, is used for full-fill, single-layer parallel mounting of thermoplastic cable using bare copper wire to tie the cable to the rungs. The open cable test assembly is then positioned on the floor of the tunnel over asbestos paper with an area density of 0.68 F6 0.1 kg/m^2.

Unless otherwise indicated, the cable, when tested, is mounted side by side on a noncombustible (asbestos-cement board) surface, so as to completely cover the exposed test sample area.

Cables (BLEHC)−*Continued*

The surface-burning characteristics are derived in comparison with untreated red oak as 100.

The electrical properties of the cable have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For fire-resistance ratings of electrical cable, see Fire-resistant Cable (FHJRC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate cable with thermoplastic-type jackets and/or insulation in this category is ULC-S102.4, ''Standard Method of Test for Fire and Smoke Characteristics of Electrical Wiring and Cable.''

The basic standard used to investigate other cable types not containing thermoplastic components in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Cable,'' and the flame spread and smoke developed values applicable to the product.

Caulking and Sealants, General Purpose (BLEZC)

GENERAL

This category covers general-purpose caulkings and sealants, certified as to the surface-burning characteristics of the ''combination'' of the caulking or sealant and the specific surface to which it is applied in longitudinal beads or strips at the specific percentages of exposed area or at full coverage at the specific m^2/L as indicated in the individual certifications.

The surface-burning characteristics are derived in comparison with untreated red oak as 100.

The flash point of the caulking or sealant also appears in the individual certifications, and is determined in accordance with ASTM D93, ''Standard Test Methods for Flash Point by Pensky-Martens Closed Cup Tester.'' The publication of the flash-point data is not intended to establish a relative flammability classification of the caulking or sealant, but to indicate the flashing characteristics of the caulking or sealant under a standard test procedure. Where ''no flash'' is indicated, the product has no flash point in the closed-cup tester. Where ''not determined'' is indicated, the product is ineligible for testing in accordance ASTM D93 due to its limited cure time or restrictions on handling the uncured material.

The flame-spread rating and smoke-developed classification of the caulking or sealant with other surfaces and the ability of the sealant to perform its function in a product, assembly, or construction have not been determined.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

RELATED PRODUCTS

For sealant materials intended for use in air duct assemblies, classified as to Surface Burning Characteristics, see Air Duct Sealants (BLISC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''General Purpose Caulking and Sealant.''

Cementitious Mixtures (BLPRC)

GENERAL

This category covers cementitious mixtures certified as to their surface burning characteristics when applied in accordance with the instructions supplied with the material, as indicated in the individual certifications.

These cementitious mixtures are proprietary mixes prepared at the factory, which require only the addition of water for application to interior building surfaces in the field.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

Cementitious Mixtures (BLPRC)−*Continued*

The certifications are confined to the materials themselves and do not pertain to the structures to which the materials are applied.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Cementitious Mixture.''

Coating Materials (BMCZC)

This category covers coating materials intended for application to building surfaces. The materials are divided into two categories:

1. Coatings, Fire Retardant (BMQXC), intended for application to interior combustible surfaces for the purpose of reducing the flammability of those surfaces.
2. Coatings, General Purpose (BNEVC), intended for various purposes, such as to provide resistance to wear, and to provide information concerning the surface burning characteristics of the coating when applied to noncombustible or other designated surfaces.

The flash points (closed cup) of these coatings (including primers, base and top coats) also appear in the individual Listings. The publication of the flash point data is not intended to establish a relative flammability classification of the liquid coatings, but to indicate the flashing characteristics of the liquid coatings under a standard test procedure. Where ''no flash'' is indicated, the coating has no flash point in the closed cup tester.

Coatings, Fire Retardant (BMQXC)

GENERAL

This category covers fire-retardant coating materials classified as to the surface burning characteristics of the ''combination'' of single coatings or single-coating systems and the specific surfaces to which they are applied at the specific coverages indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

To be eligible for classification, the coating or system must reduce the flame spread of Douglas Fir and all other tested interior combustible surfaces (having flame spreads of 100 or greater by test) to which it is applied, by at least 50% or to a flame spread of 50 or less, whichever represents the lesser spread of flame.

The surface burning characteristics indicated in the individual certifications are only applicable when the coating is applied at the rates of coverage and to the type of surfaces indicated, when the coating is applied in accordance with the directions supplied with the container, and when the coating is maintained.

The useful life of these coating materials has not been investigated; however, the coatings should be maintained for continued effectiveness.

Typical combustible surfaces indicated in the individual certifications, to which fire-retardant coatings or coating systems have been applied, when assessing the surface burning characteristics of the combination, are Douglas Fir, cellulose acoustical tile and cellulose board.

The Douglas Fir substrates consist of 17 by 89 mm finished tongue-and-groove flooring. (The flame spread ratings of these uncoated Douglas Fir substrates are normally between 80 and 100.)

The cellulose acoustical tile substrates consist of nominal 300 by 300 by 13 mm tongue-and-groove ''Factory Finish'' perforated tiles. (The flame spread ratings of these cellulose tile substrates are normally in excess of 150.)

The cellulose board substrates consist of nominal 250 by 1200 by 13 mm square edge ''Factory Finish'' unperforated boards. (The flame spread ratings of these cellulose boards are normally in excess of 75.)

Unless otherwise indicated in the individual certifications, cellulose board and cellulose tile substrates are supported for the tests attached to wood furring strip frames.

Typical noncombustible surfaces indicated in the individual certifications are asbestos-cement board (flame spread zero) and gypsum wallboard (flame spread 15).

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Coating Materials (BMCZC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

Coatings, Fire Retardant (BMQXC)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Coating, Fire Retardant.''

Coatings, General Purpose (BNEVC)

GENERAL

This category covers general-purpose coating materials classified as to the surface burning characteristics of the ''combination'' of single coatings or single-coating systems and the specific surfaces to which they are applied at the specific coverages indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

To be eligible for classification, the coating or system must initially be investigated as applied to asbestos-cement board. It should be noted that this has the effect of assessing the surface burning characteristics of the coating or system in comparison to other certified coatings and does not provide information concerning its possible performance in retarding surface burning characteristics, such as spread of flame, in combinations other than those tested. Coating materials investigated in this manner are covered under Fire Retardant Coatings (BMQXC).

The coating system may also be investigated on other surfaces or substrates, in which case the performance of the combination is indicated in the individual certifications, together with information concerning the performance of the substrate, without the coating application, for the purposes of comparison. Substrates identified as ''asbestos-cement board,'' ''concrete blocks'' and ''unpainted plaster'' are considered to have flame spread and smoke developed values of zero. Substrates identified as ''calcium silicate-asbestos board'' may have readings slightly in excess of zero, but for the purposes of comparison in the performance of applied coating systems are considered to have zero surface burning characteristics.

The weatherability, durability and useful life of these coatings has not been investigated unless otherwise indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Coating Materials (BMCZC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''General Purpose Coating.''

Fibre, Sprayed (BNSTC)

GENERAL

This category covers sprayed fibre materials certified as to their surface burning characteristics when applied in the manner indicated in the individual certifications. The materials consist of proprietary mixes of fibres and binders, with or without fire-retardant chemicals, that are premixed at the factory.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The incorporated fire-retardant chemicals may be affected by repeated exposure to humid conditions.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

Authorities Having Jurisdiction should be consulted before application.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

Fibre, Sprayed (BNSTC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fibre, Sprayed.''

Flooring and Floor Covering Materials (BNTVC)

GENERAL

This category covers flooring and floor-covering materials classified as to surface burning characteristics under the specific conditions indicated in the individual certifications.

Floor-covering materials may or may not include an underlay or integral backing and may be tested unbonded or bonded using adhesive suggested by the manufacturer and in accordance with application instructions supplied with the adhesive.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The classifications are confined to the materials themselves when applied to the specific surfaces indicated in accordance with directions supplied with the materials, and do not pertain to the structures in which the materials may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102.2, ''Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Flooring'' or ''Floor Covering Material.''

Floor Panels (BNUHC)

GENERAL

This category covers floor panels classified as to their surface burning characteristics as indicated in the individual certifications. The panels consist of treated or untreated wood cores covered with sheet metal, in various sizes and thicknesses.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The effect of the adhesive is determined by testing the sample with a butt joint seam, by cutting the metal covering, or by using a factory or field joint (if applicable).

The classifications are confined to the materials themselves and do not apply to the floor-covering materials that may be provided on the normally exposed surfaces of these panels. The classifications do not pertain to the structures on which these panels may be installed.

The insulating, acoustical, structural and other properties of these products have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102.2, ''Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Floor Panel.''

Insulation, Thermal (BOYAC)

This category covers products classified specifically for instances in which ratings or classifications were supplemented from fire testing with an investigation and Listing of the physical properties of the materials (such as thermal conductivity, flexural strength, water absorption, etc.) in accordance with requirements established for these materials in the appropriate National Standards of Canada.

Mineral Fibre Thermal Insulation (BOYNC)

GENERAL

Mineral Fibre Thermal Insulation (BOYNC)−*Continued*

This category covers mineral fibre insulation in the form of batts, blankets, boards, sheets with or without membranes, and loose fill material.

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Insulation, Thermal (BOYAC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate the surface burning characteristics of products in this category is CAN/ULC-S702, ''Mineral Fibre Thermal Insulation for Buildings.''

The basic standard used to investigate the smoulder resistance of products in this category is ULC-S129, ''Standard Method of Test for Smoulder Resistance of Insulation (Basket Method).''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Mineral Fibre Thermal Insulation.''

Polyisocyanurate Foam Board Insulation (BOYWC)

GENERAL

This category covers polyisocyanurate foam board insulation intended for use behind an interior protective finish appropriate to the use and occupancy, unless otherwise indicated in the individual certifications.

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Insulation, Thermal (BOYAC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate the surface burning characteristics of products in this category is CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

The basic standard used to investigate the physical properties of products in this category, including dimensions, compressive, tensile and flexural strength, water absorption, dimensional stability, thermal resistance, and water vapour permeance, is CAN/ULC-S704, ''Standard for Thermal Insulation, Polyurethane and Polyisocyanurate, Boards, Faced'' (supersedes CAN/CGSB-51.26).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Polyisocyanurate Foam Board Insulation.''

Polystyrene Insulation (BOZCC)

GENERAL

This category covers polystyrene insulation (expanded or extruded types) classified as to its physical properties, including surface burning characteristics, thermal conductivity, compressive strength, water absorption, water vapour presences and dimensional stability.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Insulation, Thermal (BOYAC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S107, ''Method of Fire Tests for Roof Coverings,'' CAN/ULC-S102.2, ''Method of Test for Surface Burning Characteristics of Flooring, Floor Coverings and Miscellaneous Materials and Assemblies,'' and CAN/ULC-S701, ''Thermal Insulation, Polystyrene, Boards and Pipe Covering'' (supercedes CAN/CGSB-51.20).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Polystyrene Insulation.''

Loose Fill Insulation (BPHXC)

GENERAL

This category covers loose-fill-insulation materials certified as to their surface burning characteristics under the specific conditions indicated in

Loose Fill Insulation (BPHXC)−*Continued*

the individual certifications. The material is installed on the floor of the tunnel furnace at the specified blown density and tested without screening in a 50 mm thick layer.

Loose-fill-insulation materials are intended to be poured or blown into joist spaces of ceilings or attics for thermal insulation purposes. Those materials which have been chemically treated to reduce combustibility incorporate treatments consisting of water soluble salts, which may be affected by repeated exposure to high-humidity conditions.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The certifications refer to the materials themselves and do not pertain to the structures in which the materials may be installed.

The settling of the material and toxicity of the products of combustion have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate the surface burning characteristics of products in this category is CAN/ULC-S102.2, ''Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies.''

Cellulose-fibre-based loose-fill insulation where indicated, is additionally investigated as to its smouldering tendency in accordance with ULC-S129, ''Standard Method of Test for Smoulder Resistance of Insulation (Basket Method)''.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Loose Fill Insulation.''

Mineral Composition Units (BQJTC)

GENERAL

This category covers mineral composition units, consisting of proprietary mixes of predominately inorganic materials formed into rigid blocks or sheets of various sizes and thicknesses, classified as to their surface burning characteristics.

The classifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Mineral Composition Unit.''

Mineral and Fibre Boards (BQXRC)

GENERAL

This category covers mineral and fibre boards consisting of proprietary mixes of organic or inorganic fibres, or both, and binders formed into various sizes and thicknesses, and supplied with or without surface coatings, classified as to their surface burning characteristics or smoulder resistance, or both, as indicated in the individual certifications.

Thermally-thin materials, whose surface burning characteristics may be affected by the nature of the materials against which they are mounted, are classified as to the surface burning characteristics of the ''combination'' of the mineral and fibre board and the backing material used in the test.

Where a backing material is identified in the individual certifications, use of other backing materials of greater density in the field may be considered acceptable.

Thermally-thick materials or materials whose surface burning characteristics are not sensitive to the nature of their substrate are classified without reference to a substrate.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

Mineral and Fibre Boards (BQXRC)−*Continued*

With mineral and fibre boards that are provided with a facing, the effect of the adhesive is determined by testing the sample with a butt joint seam, by slitting or by using a factory or field joint (if applicable).

The classifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate the surface burning characteristics of products in this category is CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

The basic standard used to investigate the smoulder resistance of products in this category is ULC-S129, ''Standard Method of Test for Smoulder Resistance of Insulation (Basket Method).''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Mineral and Fibre Board.''

Pipe and Equipment Covering (BRERC)

This category covers pipe and equipment covering classified as to its surface burning characteristics.

The classification of pipe and equipment covering is divided into two sections:

1. Pipe and equipment covering materials, containing classifications of individual coverings with or without facings and joint treatments, and
2. Pipe and equipment covering systems, containing those classifications which include all parts required to form a system: covering, facings, joint treatment, surface coatings (for elbows, tees, valves, etc.) and accessories.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

When a covering material is provided with an adhered facing, the effect of the adhesive is determined by testing the sample with a butt joint seam, by slitting the facing or by using a factory or field joint (if applicable). For material employing a field joint covering treatment, the facing is provided with a seam (as above) prior to application of the joint covering treatment.

Materials that would not be self-supporting during the CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies,'' test are supported with metal rods or bars, or 50,000 B7m sieve size wire mesh with metal bars or rods.

The classifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The thermal conductivity, vapour resistance, wash ability, toxicity of products of combustion, structural, and other properties have not been investigated.

Pipe and Equipment Covering Materials (BRGUC)

GENERAL

This category covers pipe and equipment covering materials consisting of proprietary mixes of organic and/or inorganic materials and binders formed into rectangular or circular cross sections, and supplied with or without facings and joint treatments. The covering materials are classified as to surface burning characteristics and maximum service temperature exposure, as indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Pipe and Equipment Covering (BRERC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S102, ''Method of Test for Surface Burning Characteristics of Building Materials and Assemblies,'' and ASTM C411, ''Standard Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of

Pipe and Equipment Covering Materials (BRGUC)−*Continued*

this Directory) together with the word "LISTED," a control number, and the product name "Pipe and Equipment Covering Material."

Plastic Materials (BTLIC)

GENERAL

This category covers various types of plastic materials classified as to their surface burning characteristics as indicated in the individual certifications.

Where ULC certification is promulgated for an intermediate product (such as a plastic resin) which has been investigated as a sheet material, the label will identify that the material is supplied in a particular form (bead, pellet, etc.) and is intended for use only by manufacturers of ULC certified products, and not as a finished product.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate thermosetting plastic materials in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

The basic standard used to investigate thermoplastic plastic materials in this category is CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies."

In special instances where thermoplastic sheets with a maximum thickness of 1 mm are intended for use over materials required to be investigated to CAN/ULC-S102, the thermoplastic sheets, together with the backing material, may be investigated to CAN/ULC-S102. Refer to the individual certifications for details.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plastic Material."

Plastic Fittings and Valves (BTLBC)

GENERAL

This category covers fittings and valves injection-moulded from thermoplastic materials and classified as to their surface burning characteristics as indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

Fittings and valves are tested when solvent-cemented to ULC certified plastic pipe at specified intervals. Unless otherwise indicated in the individual certifications, a single piping system is positioned along the centreline of the tunnel floor.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Plastic Materials (BTLIC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plastic Fitting and Valve."

Plastic Lighting Diffusers (BTLFC)

GENERAL

This category covers plastic lighting diffusers or lenses intended for use with lighting fixtures installed in accordance with the "National Building Code of Canada."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Plastic Materials (BTLIC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

Plastic Lighting Diffusers (BTLFC)−*Continued*

The basic standard used to investigate products in this category is ULC-S102.3, "Standard Method of Fire Test of Light Diffusers and Lenses." Plastic lighting diffusers are required to exhibit the characteristic of falling from their mountings before igniting.

The basic standard used to investigate the surface burning characteristics of products in this category is CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies." The lighting diffuser material is required to have a flame spread rating of not more than 250 and a smoke developed rating of not more than 600.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plastic Lighting Diffuser."

Plastic Pipe and Tubing (BTLPC)

GENERAL

This category covers pipe and tubing extruded from plastic materials and classified as to their surface burning characteristics as indicated in the individual certifications.

The various sizes of pipe and tubing are tested in longitudinal lengths attached to noncombustible boards and spaced as indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Plastic Materials (BTLIC) and Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate pipe and tubing manufactured from thermosetting plastic materials in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

The basic standard used to investigate pipe and tubing extruded from thermoplastic plastic materials in this category is CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plastic Pipe and Tubing."

Plywood (BUBZC)

GENERAL

This category covers plywood treated either by pressure impregnation or a surface coating and classified as to its surface burning characteristics as indicated in the individual certifications.

Thermally-thin materials, whose surface burning characteristics may be affected by the nature of the materials against which they are mounted, are classified as to the surface burning characteristics of the "combination" of the plywood and the backing material used in the test.

Where a backing material is identified in the individual certifications, use of other backing materials of greater density in the field may be considered acceptable.

Thermally-thick materials or materials whose surface burning characteristics are not sensitive to the nature of their substrate are classified without reference to a substrate.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

Plywood identified in the individual certifications as having displayed no evidence of significant progressive combustion in tests of 30 minutes' duration have been subject to the exposure conditions described in CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies," for a period of 30 minutes without propagating a flame front more than 3.20 m beyond the centreline of the test burners.

When the treatment consists of pressure impregnation with water-soluble salts, it will be affected by repeated exposure to water or to conditions that may result in the condensation of water.

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

Authorities Having Jurisdiction should be consulted before installation.

Plywood (BUBZC)−*Continued*

RELATED PRODUCTS

Plywood intended for use as a roof deck construction material is covered under Roof Deck Construction Materials (TGYVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plywood."

Roof Drains (BVBYC)

GENERAL

This category covers roof drains classified as to surface burning characteristics and/or noncombustibility, as well as to their physical properties, including tensile strength, impact strength, resistance to accelerated weathering, resistance to heat, aging, leakage, freeze-thaw resistance, strainer dome impact, peel strength, corrosion, and low-temperature drop impact.

The classifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies," and ULC/ORD-C790.4, "Roof Drains."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Roof Drain," and the flame spread and smoke developed values applicable to the product.

Sheathing Materials (BVDVC)

GENERAL

This category covers sheathing materials, single or laminated, rigid or flexible, of various types and thicknesses, certified as to their surface burning characteristics as indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The certifications are confined to the materials themselves when attached to various building elements with adhesives or noncombustible mechanical fasteners and do not pertain to the structures of which they may be a part.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies," or CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sheathing Material."

Structural Cement-fibre Units (BVRTC)

GENERAL

This category covers structural cement-fibre units consisting of proprietary mixes of processed wood fibres and cementitious binder, formed into slabs or boards of various sizes, shapes and thicknesses, classified as to their surface burning characteristics as indicated in the individual certifications.

Structural Cement-fibre Units (BVRTC)−*Continued*

The surface burning characteristics are derived in comparison with untreated red oak as 100.

With structural cement-fibre units that are provided with a facing, the effect of the adhesive is determined by testing the sample with a butt joint seam, by slitting or by using a factory or field joint (if applicable).

The classifications are confined to the materials themselves and do not pertain to structures in which the materials may be installed.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Structural Cement-Fibre Unit."

Tapes, General Use (BVYSC)

GENERAL

This category covers tapes classified as to their surface burning characteristics when applied to a noncombustible (asbestos-cement board) surface in longitudinal strips at the specific percentages of exposed areas as shown in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The classifications are confined to the materials themselves and do not pertain to their anticipated performance when applied to other than noncombustible surfaces.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Use Tape."

Wallboard, Gypsum (BWFRC)

GENERAL

This category covers wallboard of various thicknesses consisting of cores of various compositions, certified as to its surface burning characteristics as indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials are installed.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of

Wallboard, Gypsum (BWFRC)−*Continued*

this Directory) together with the word "LISTED," a control number, and the product name "Wallboard, Gypsum."

Wall Coverings (BWSZC)

GENERAL

This category covers wall coverings classified as to their surface burning characteristics as indicated in the individual certifications.

The surface burning characteristics are derived in comparison with untreated red oak as 100.

The classifications are confined to the materials themselves when applied to the specific surfaces indicated in accordance with directions supplied with the package and do not pertain to the structures in which the materials may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Classification of Materials as to Surface Burning Characteristics (BIKTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wall Covering."

FIRE-RESISTANCE RATINGS (BXUVC)

This category covers fire-resistance ratings assigned to the assemblies of construction materials as illustrated in the individual certifications, which have been established on the basis of the performance of test samples representative of the design of such assemblies when subjected to a fire-endurance test conducted in accordance with the specified standard for the following categories:

1. General Building Construction and Materials. The specimens are tested in accordance with the CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials," and are subjected to a fire exposure defined by the temperature-versus-time relationship depicted by the curve in Figure 1, "Time-Temperature Curve for Controlling Furnace Operation During Fire-Resistance Classification Tests – Standard Exposures."

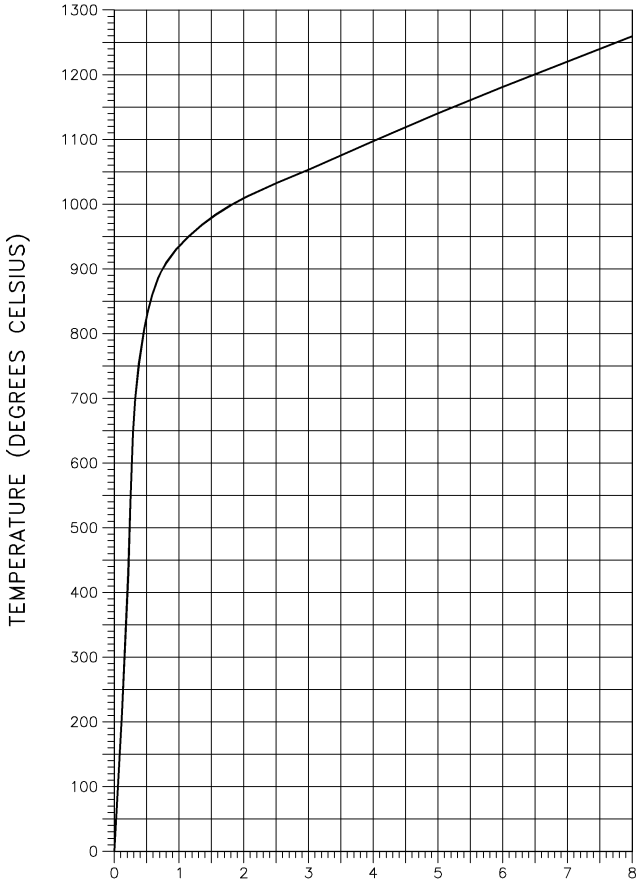


Figure 1
Time-Temperature Curve for Controlling Furnace Operation During Fire-resistance Classification Tests – Standard Exposures

2. Structural Steel Members used in the petrochemical industry or similar environment where a rapid rise in fire temperature is anticipated. The specimens are tested in accordance with ANSI/UL 1709, "Rapid Rise Fire Test of Protection Materials for Structural Steel," and are subjected to a fire exposure defined by the temperature-versus-time relationship depicted by the curve in Figure 2, "Time-Temperature Curve for Controlling Furnace Operation During Fire-Resistance Classification Tests

– Rapid-Rise Fire Exposures.'' Design numbers established as a result of such tests are identified by the notation **"Rapid-Rise Fire Test"** on the design illustration.

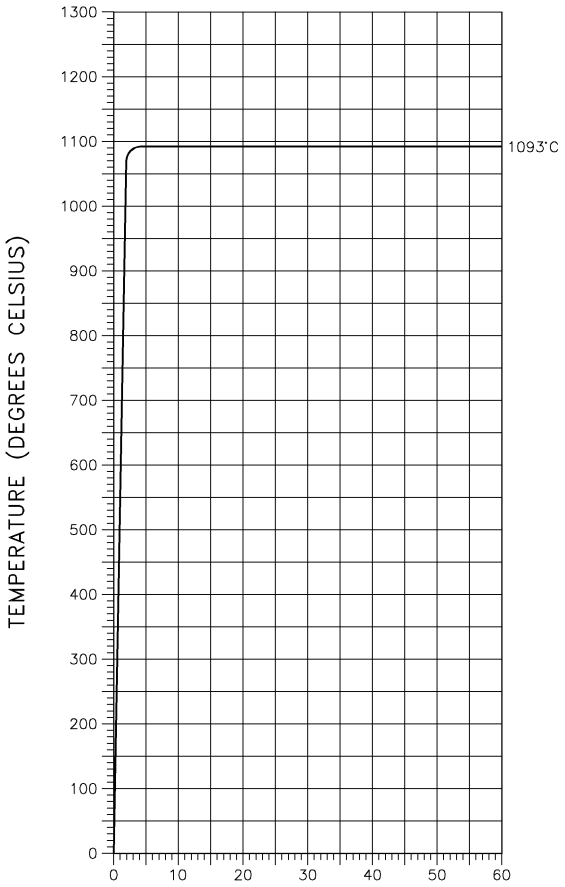

Figure 2
Time-Temperature Curve for Controlling Furnace Operation During Fire-resistance Classification Tests – Rapid-rise Fire Exposures

Essentially, the illustrated designs reflect the precise dimensions and condition of the sample assembly subjected to the fire-endurance test. Within practical limits, and with the exception of the items covered by the sections offering guidance in the variations which may be permitted in actual building construction in order that the anticipated performance of the assembly will not be impaired, a construction must duplicate the illustrated design and the details included in the associated text in order to achieve the indicated fire-resistance rating.

Authorities Having Jurisdiction should be consulted before installation.

Numbered items refer to the descriptive text below each drawing. Individual components of a proprietary nature or over which it is necessary to exercise control at the manufacturing location are certified under the Label Service or other Follow-Up Program of Underwriters Laboratories of Canada. Such items are identified in the text by a black dot thus •. Under these Services, periodic examinations and tests are conducted on samples selected at random from current production and stock. Each certified product bears the label or other identification of Underwriters Laboratories of Canada from which it may be determined that a product is suitable for use as a component in a particular design(s). Components intended for use with these assemblies are covered under Thermal Barrier Components (XCLZC).

It should be noted that the fire-resistance ratings assigned to these designs apply to assemblies in their entirety. Individual components are not assigned a fire-resistance rating but rather are designated for use in a design(s) in order that the assigned fire-resistance rating of the complete assembly may be achieved.

All ratings assigned to floor and ceiling assembly designs, roof and ceiling assembly designs, wall and partition designs and column designs, are based on the assumption that the stability of any structural member supporting these designs is not impaired by the effects of fire on these supports.

Unless specifically described in the individual designs, penetrations through all or a portion of the assembly for piping, electrical access, air distribution, etc., can significantly affect the rating.

As supplementary information, in addition to the requirements of CAN/ULC-S101, a finish rating is established for assemblies containing combustible supports. The finish rating is the time at which the wood stud or joist reaches an average temperature rise of 139°C or an individual temperature rise of 181°C as measured on the plane of the wood nearest the fire.

Illustrated designs are identified by a design number with a letter prefix. The prefix letter designates a type of construction and the first number which follows designates the particular method of protection illustrated by the design with the final two numbers identifying a particular design.

The prefix letters representing the various groups of constructions are:

Prefix Letters	Type of Construction
A, B or C	Floor & Ceiling Designs – Concrete and Cellular Steel Deck
D, E or F	Floor & Ceiling Designs – Concrete and Steel Floor Units
G, H or I	Floor & Ceiling Designs – Concrete and Steel Joists
J or K	Floor & Ceiling Designs – Concrete
L or M	Floor & Ceiling Designs – Wood Joist
N or O	Beam Designs for Floor & Ceiling Assemblies
P, Q or R	Roof & Ceiling Designs
S or T	Beam Designs for Roof & Ceiling Assemblies
U, V or W	Wall & Partition Designs
X, Y or Z	Column Designs

The type of protection employed is allocated to one of three main groups depending upon whether it is employed in the form of a shielding membrane, or directly applied, or the assembly, or components of the assembly are left unprotected. These groups are further subdivided, where appropriate, as follows:

NUMBERING SYSTEM FOR FIRE-RATED ASSEMBLIES

The numbers indicated as ''Spare'' in the above table are for future expansion and to accommodate new types of systems developed in the future.

RESTRICTED-LOAD USE CONDITIONS

When a test assembly complies with the acceptance criteria, a detailed description of the assembly, its performance in the fire test and other pertinent details, such as specifications of materials, certifications coverage and alternate assembly details, are included in a report for the test sponsor. Sponsors may provide copies of the complete test report upon request. The report also contains a summary of important features of the rated assembly.

A complete description of each rated fire-resistive assembly can be found in the ULC Fire Resistance Directory.

CAN/ULC-S101 requires loads applied to test samples be calculated using the limit states design method specified in the ''National Building Code of Canada'' (NBCC). CAN/ULC-S101 also requires fire-resistive assemblies with ratings obtained from samples tested with applied loads less than the maximum calculated value be identified. Load restriction due to the sponsor of the test electing to test the assembly under load less than specified by the limit states design methods are identified as ''Load Restricted.'' Assemblies investigated with loading computed in accordance with working stress design methods are identified as ''Load Restricted – Assembly evaluated in accordance with Working Stress methods, for use under Limit States Design methods refer to information under BXUVC.''

The percent load reductions for typical assemblies in Table 1 are based upon loading calculated in accordance with the working stress design method as compared to loading calculated in accordance with the limit states design method. The calculations were performed for assemblies representing spans and member sizes of typical fire-test assemblies. The esenting spans and member sizes of typical fire-test assemblies. The loads were calculated assuming a span of 4 m for floors and roofs and 3 m for walls.

The NBCC requires that buildings and their structural components be designed to have sufficient strength and stability so that the factored resistance (ϕR) is greater than or equal to the effects of factored loads. The value for ϕ and R are specified in the applicable limit state design methods, for concrete, masonry, steel and timber.

Some fire-resistive designs are specified with a Load Restricted Factor. When using fire-resistive designs with a Load Restricted Factor, the factored resistance (ϕR) of the structural members or components should be reduced by multiplying the factored resistance (ϕR) by the Load Restricted Factor specified in the individual ULC fire-resistance designs.

The Load Restricted Factor should be applied to the factored resistance (ϕR) of all structural members or components, including but not limited

NUMBERING SYSTEM FOR FIRE RATED ASSEMBLIES

TYPES OF PROTECTION										
	Membrane Protection				Direct Applied Protection					Unprotected
Types of Construction	000-099	100-199	200-299	300-399	400-499	500-599	600-699	700-799	800-899	900-999

to, factored moment resistance (M_r), factored shear resistance (V_r), factored tensile resistance (T_r), and factored compressive resistance (C_r).

Table 1

Type of Assembly	Percent Load Reduction (LSD-WSD) / LSD	Load Restricted Factor
W200x42 noncomposite steel beam	12%	0.88
W200x42 composite steel beam	29%	0.71
Floor / Roof supported by open web steel joists	4%	0.96
Floor supported by cold formed steel channels	4%	0.96
Floor supported by 38 by 235 mm wood joists	35%	0.65
Wall supported by 38 by 89 mm wood studs	18%	0.82
Steel columns	0%	None

The ratings for steel columns do not have a "Load Restricted Factor" as these ratings are based on temperature limitations. No loading is applied to steel columns during the fire test.

The engineer of record should be consulted whenever fire-resistive assemblies with "Load Restricted Factors" are selected. The indicated load reductions are based upon Factored Load effects that are governed by the reduced Factored Resistance of the structural elements. The selection of structural elements is, at times, based upon service limits, such as deflection and vibration. These factors and others, such as the change in material strength properties as a function of temperature, should be considered when selecting fire-resistive assemblies with Load Restricted ratings.

The Load Restricted Factors in Table 1 are intended to be used as a guide and are applicable to the specific structural members specified in Table 1.

FLOOR AND ROOF AND CEILING CONSTRUCTIONS AND BEAM PROTECTION

Unless otherwise stated in the individual designs, the load capacity of wide-flange-shaped steel beams assumes that the beams are manufactured from steel with yield strength of 250 MPa.

The time ratings assigned to each illustrated design are given in terms of a restrained or an unrestrained condition, or both. A restrained condition in a fire test is considered to be one in which the expansion at the supports of a load-carrying element resulting from the effects of the fire is resisted by forces external to the element. An unrestrained condition is one in which the load-carrying element is free to expand and rotate at its supports.

Restrained ratings are intended for application to assemblies and structural members considered suitable for use in building construction where the structural members are designed with continuity, or where the construction is otherwise expected to be restrained against thermal expansion under fire conditions. An unrestrained rating is applied to assemblies and structural members considered suitable for use in building construction where the structural members are simply supported and unrestrained against thermal expansion.

Restrained assembly ratings, unrestrained assembly ratings, and unrestrained beam ratings have been assigned to each assembly where appropriate.

The unrestrained beam rating associated with a particular design is applicable to beams protected in the manner described by the design

when used with a floor or roof construction having a comparable or greater capacity of heat dissipation than the floor or roof with which it was tested.

Unless specifically described in the designs, openings penetrating the floor, roof or ceiling for piping, electrical access or air distribution can adversely affect the indicated rating.

WALLS AND PARTITIONS

The wall and partition designs illustrated are identified by a design number and an hourly rating.

In accordance with CAN/ULC-S101, the minimum size of wall fire tested is 9.3 m^2 and the height of the wall is 3050 mm. In the field when walls greater than 3050 mm in height are constructed, the slenderness of the wall constructed in the field should not be less than the slenderness of the 3050 mm high wall specified in the ULC Design. For calculation of slenderness, reference should be made to the material specific structural design standard.

With the exception of support (e.g., studs) and fastener (e.g., nails, screws) spacings, the dimensions indicated in the following designs are intended to be construed as the minimum allowable for each rated assembly. Support and fastener spacings stated are the maximum allowable.

Additional layers of gypsum board are permitted to be added to any design.

Certified and labelled mineral fibre thermal building insulation processed from rock, slag and glass only may be used in ULC nonload-bearing wall assembly designs consisting of wallboard and steel or wood studs with a fire-resistance rating not exceeding two hours when illustrated without insulation, without detracting from the rating assigned to the assembly.

Note: This applies to ULC nonload-bearing wall assemblies that utilize proprietary (certified) gypsum wallboards as specified in the individual designs.

Where reference is made to a specific type of screw for attaching gypsum wallboard, the following specifications apply:

Screw Type	Length	Shaft Dia., mm	Head Dia., mm Min	Head Dia., mm Max
Type S	Nominal length shall be min length	3.6 - 3.9	8.0	9.3
Type G	Nominal length shall be min length	5.3 - 5.5	7.6	9.3
Type W	Nominal length shall be min length	3.6 - 3.9	8.0	9.3

These screws are self-drilling, self-tapping steel screws with a case-hardened surface, corrosion-resistant treated, flat-top head and No. 2 Phillips design driving recess, 2.6 mm minimum depth.

Wood Studs — The size of studs are minimum unless otherwise stated in a design. The spacing of studs is a maximum unless otherwise stated in a design. Spacing between parallel rows of studs are minimums unless otherwise stated in a design.

Steel Studs — The dimensions and gauge of steel studs are minimums. The hourly ratings apply when the steel studs are of a heavier gauge and/or larger dimensions than specified in a design. Spacing between parallel rows of studs are minimums unless otherwise stated in a design.

The superimposed load of bearing walls utilizing steel studs should be based on the capacity of the studs as determined by CSA-S136 (2007), "North American Specification for the Design of Cold-Formed Steel Structural Members."

Where lateral support of studs (by means of straps, channels or similar steel members) is required in the design, the loads applied to steel studs should be based on the steel-braced design. The loads based on sheathing bracing should not be assumed, unless otherwise stated in the design.

The loads applied to steel studs having a yield stress higher than the stated minimum should be based upon the specified minimum yield stress stated in the design.

Non-load-bearing steel studs are produced in accordance with ANSI/AISI S201 (2007), "North American Standard for Cold-Formed Steel Framing – Product Data." In accordance with ANSI/AISI S201, the minimum flange width should be 31.8 mm and the minimum return lip should be 4.8 mm.

EQUIVALENT OPENING FACTOR (F_{EO})

Fire-resistance ratings of wall assemblies can be assigned on the basis of the performance of the assembly when tested and investigated in accordance with CAN/ULC-S101. However, the NBCC allows for an exception from the unexposed surface temperature rise requirements for exterior wall assemblies having a limiting distance of 1.2 m or more, provided correction is made for radiation from the unexposed surface at the desired duration of exposure.

Where the surface temperature on the unexposed surface of an exterior wall assembly exceeds the limitations of the CAN/ULC-S101 test, an allowance can be made for radiation from the hot unexposed wall surface by adding an equivalent area of unprotected opening to the area of actual openings. In order to calculate this equivalent area, an equivalent opening factor (F_{EO}) must be calculated as shown below:

$$F_{EO}=\frac{(T_u+273)^4}{(T_e+273)^4}$$

Where:

T_u = Average temperature in degrees Celsius of the unexposed wall surface at the time the required fire-resistance rating is reached under test conditions, and

T_e = 892°C for a fire-resistance rating of not less than 45 minutes; 927°C for a fire-resistance rating of not less than 1 h, and 1010°C for a fire-resistance rating of not less than 2 h.

F_{EO} = An equivalent opening factor derived from test data.

Where this information is available, it has been provided in the individual designs.

COLUMN PROTECTION

The column designs illustrated are identified by a design number and an hourly rating. The dimensions given in the following designs are intended to be constructed as the minimum allowable for each rated assembly. Where the material applied to the column is likely to be damaged by moving vehicles, handling of merchandise and other sources, the applied material is intended to be protected against such possible damage.

METRIC CONVERSION

This metric edition has been "hard" converted where possible. However, many dimensions were "soft" converted as metric equivalents do not exist.

In floor/ceiling and roof/ceiling designs, the spacings of the structural members have been soft converted (e.g., 48 in. becomes 1220 mm). For walls and partitions, the stud spacings which were most often specified as 16 or 24 in. have been converted to 400 and 600 mm, respectively.

Manufacturers of some certified products, such as gypsum wallboard, acoustical material and steel framing members, are able to provide both metric and yard/pound sizes or modules of the products that are referenced in the illustrated designs. Care should be taken to employ compatible modules, such as in the case of lay-in panels and associated steel framing members. Also, in the case of designs employing gypsum wallboard, particular attention should be given to the location and staggering of joints, as specified in the particular design. Nominal fastener spacings should not be exceeded.

AIR-HANDLING SYSTEMS

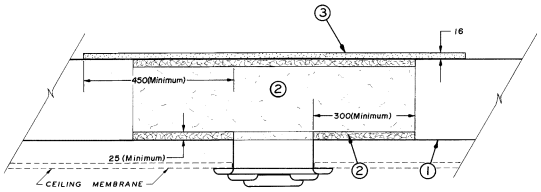
The fire tests are conducted without air movement and, therefore, fire-resistance ratings that have been assigned to floor or roof and ceiling assemblies incorporating provision for such air movement are contingent upon the inclusion of means of effectively stopping the air flow in the event of fire.

Where firestop flaps are specified, it is necessary that they be equipped with spring catches and corrosion-resistant hinges and that flaps designed to close by gravity be installed so as to close in the direction of the airflow. Air duct throat diameters are considered to be the maximum individual diameters appropriate for the design and its assigned fire-resistance ratings and the maximum area of duct given in the designs refers to the aggregate area of supply and return duct openings for each 10 m^2 of ceiling area. Alternative duct outlet protection may be provided by the following illustrated systems when specified in the individual designs. These systems have only been investigated for their comparable effectiveness in retarding the transfer of heat into the plenum area.

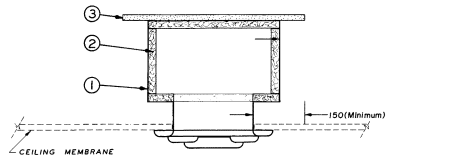
Except where noted, the air diffusers used in the test assemblies were of the surface-mounted type, which also support the surrounding acoustical material by a flange at least 25 mm wide. The use of a lay-in-type air diffuser or return-air grille as an alternative to the surface-mounted type is permitted, provided that, when larger than its associated duct drop, the diffuser or grille pan is of welded or bolted steel construction and is supported on all four sides by steel framing members. The members are supported at their intersection points by hanger wires and the exposed back of the lay-in diffuser or grille pan is protected by labelled batts and blankets specifically certified for that purpose. See Batts and Blankets (BZJZC).

In lieu of ceiling firestop flaps, air-terminal units may be used for the protection of duct outlets in the fire-rated floor and roof and ceiling assemblies. These air-terminal units include the linear slot type, ceiling air diffuser types using flexible Class 1 air duct materials or connectors, and ductless return air grille types. See Air Terminal Units (BZGUC).

Duct Outlet Protection System A



CROSS-SECTION THROUGH LONGITUDINAL CENTERLINE OF DUCT

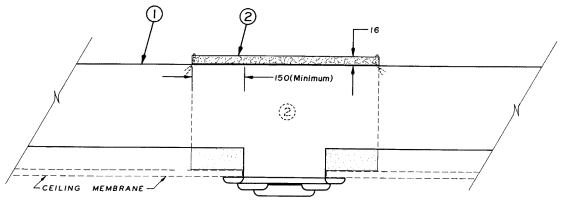


CROSS-SECTION THROUGH TRANSVERSE CENTERLINE OF DUCT OUTLET

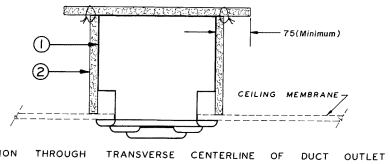
Note: All dimensions are in millimetres.

1. **Steel Air Duct** — Construction and support provisions are specified by the individual fire-resistance designs. Duct outlet intended to be provided with a louvered steel air diffuser, secured with steel fasteners.
2. **Glass-Fibre Duct Lining** — Minimum 25 mm thick, 48 to 80 kg/m^3 density, unfaced or faced with paper, foil, plastic film or asphalt emulsion. Affixed to inside or outside of duct with adhesive or steel fasteners or both. Lining is intended to cover the full perimeter of the duct, extending at least 300 mm beyond the edges of the duct outlet. Lining in bottom of duct is intended to be cut flush with the edges of the duct outlet. The lining is intended to comply with the NBCC for interior linings. Materials that accommodate these requirements are covered under Air Duct Materials (ALLZC) or Mineral and Fibre Boards (BQXRC).
3. **Acoustical Material** — Nominal 16 mm acoustical lay-in panel certified by ULC for use in fire-resistance designs and which has been assigned an appropriate surface burning characteristic. Laid on top of duct, extending at least 75 mm beyond the sides of the duct and 150 mm beyond sides of duct outlet along the width of duct, and extending at least 450 mm beyond sides of duct outlet along length of duct. More than one panel may be butted together to form a panel of the required dimensions. The acoustical material is intended to comply with the requirements of the NBCC for duct outlet coverings. Materials that accommodate these requirements are covered under Acoustical Materials (BIYRC) and Acoustical Materials (BYITC).

Duct Outlet Protection System B
Floor and Ceiling and Beam Assemblies



CROSS-SECTION THROUGH LONGITUDINAL CENTERLINE OF DUCT



CROSS-SECTION THROUGH TRANSVERSE CENTERLINE OF DUCT OUTLET

Note: All dimensions are in millimetres.

1. **Steel Air Duct** — Construction and support provisions as specified in the individual designs. Outlet intended to be provided with a louvered steel diffuser, fastened securely with steel fasteners.
2. **Mineral Wool Batts** — 32 mm thick mineral wool batts, 56 to 88 kg/m^3 density. Top piece extends at least 75 mm beyond the sides of the duct and 150 mm beyond the edges of the duct outlet. Side pieces extend from the lower face of the top piece to the upper face of the ceiling membrane along the entire length of the top piece. Side pieces tied to top piece with 1.2 mm galvanized steel wire, 450 mm OC. The mineral wool batts are intended to comply with the NBCC for duct outer coverings. Materials that accommodate these requirements are covered under Batts and Blankets (BKNVC) and Batts and Blankets (BZJZC).

Light Fixtures

Light-fixture bodies and associated hardware are required to be of steel in order that the assigned fire-resistance rating may not be impaired. It is also necessary that the installed fixtures be without openings into the plenum. Unless otherwise stated in the individual designs, recessed light fixtures are not intended to serve as an outlet and/or inlet for heated ventilating and/or cooled air to a duct, air passage or plenum.

Unless otherwise stated in the section which discusses permissible variations from tested designs and the text related to a particular design, the opening indicated in the individual designs refers to the maximum area of the light fixture for use in each 10 m^2 of ceiling area.

Protection — It is necessary that light fixtures be protected in the precise manner indicated in the illustrated designs with respect to material and form in order that the performance associated with the fire-resistance rating assigned to a design may not be impaired.

Fixtures which do not permit the specified systems of protection and associated suspension details may also impair the fire-resistance rating implied by the design.

Floor and roof and ceiling constructions are tested with a recessed light fixture with sloping sides, 0.68 mm thick painted steel housing, and 0.55 mm thick painted steel ballast cover unless specified otherwise. However, the fire-resistance rating assigned to the assembly is applicable when light fixtures and their corresponding protection systems as specified under Recessed Light Fixtures (CDGAC) are substituted (refer to this category for further information on the requirements for recessed light fixtures and light-fixture protection). In designs where there is no protection box, or a three-sided box, or top protection only is used, the construction of the box specified in the design may be used in lieu of the protection system specified under CDGAC.

Fasteners

In those assemblies employing gypsum wallboard membranes, where reference is made to a specific type of screw for attaching the gypsum wallboard, the following specifications apply:

Screw Type	Length	Shaft Dia., mm	Head Dia., mm Min	Head Dia., mm Max
Type S	Nominal length shall be min length	3.6 - 3.9	8.0	9.3
Type G	Nominal length shall be min length	5.3 - 5.5	7.6	9.3
Type W	Nominal length shall be min length	3.6 - 3.9	8.0	9.3

These screws are self-drilling, self-tapping steel screws with a case-hardened surface, corrosion-resistant treated, flat-top head and No. 2 Phillips design driving recess, 2.6 mm minimum depth.

Steel Floor Units

A small number of designs have two assigned ratings for the unrestrained assembly. This is in consideration of the requirements of CAN/ULC-S101 which, when considering the unrestrained assembly condition, imposes a temperature limit on spans other than those employed in the test assembly. Therefore, there is one unrestrained assembly rating for the tested (or shorter) span, and a lower unrestrained assembly rating for longer spans.

Steel Framing Member Systems

In those assemblies employing steel framing member systems suspended below the structural members, provision for the expansion of the systems under fire conditions is necessary. Such provision may take the form of an expansion joint in each length of main tee, by providing clearance at the ends of each main tee or may be built into the joint design of modular system. When such a condition existed in a fire test, it is indicated in the text of each certified design. In actual building construction the provisions for expansion must be included, even though the length of the main tees may be shorter or longer than that specified by the design.

Roof and Ceiling Constructions

Roof and ceiling constructions are tested with Class C, 3-ply saturated Type 15 felt roof covering applied with hot-mopping asphalt, unless specified otherwise. However, the fire-resistance rating assigned the assembly is applicable when Class A or B built-up roof coverings consisting of alternative layers of felt and asphalt are substituted. See Built-Up Roof Covering Materials (TGFUC) for further information on the requirements for built-up roof coverings.

CONSIDERATION OF VARIATIONS FROM TESTED DESIGNS

This section provides supplementary information that may assist users in relating forms of building construction that are intended to follow the specifications associated with a certified design, but which may, for various reasons, deviate from those specifications.

Size of Assembly and Assembly Components

The fire-resistance ratings established as a result of the application of the test method on structural components protected with materials other than thin-film intumescent and mastic coatings are appropriate for use in building constructions employing structural components having greater size (mass per metre, cross-sectional area or section modulus for lumber or concrete elements) or greater M/D ratios for steel elements; where M is the mass in kilograms per metre and D is the heated perimeter of the steel structural component in metres, than those illustrated in the established designs, thus permitting the extension of test data to structures incorporating spans in excess of those tested. Where an equation is shown, other limitations specific to the individual design are also applicable.

For structural steel elements protected by a thin-film intumescent and mastic coating, the fire-resistance ratings are applicable to structural steel components of the same shape having greater M/D ratios; where M is the mass in kilograms per metre and D is the heated perimeter of the structural component in metres. Where an equation is shown, other limitations specific to the individual design are also applicable.

Where assemblies employ structural members located on more than 1220 mm centres, the data obtained from the fire test and the provisions of the test method accommodate unlimited spacing of the structural members, provided that structural requirements are met, except that, in the case of membrane-protected roof-ceiling assemblies incorporating conventionally designed bridging, the spacing of the structural members is not intended to exceed that employed in the test.

Spacing and Application of Structural Members

Beams (and joists) forming part of an assembly and which are located on more than 1220 mm centres while exposed to standard fire conditions within the limits prescribed by the test method are considered as structural members for the purpose of assigning fire-resistance ratings. Such fire-resistance ratings appear as unrestrained beam ratings in the designs. Where beam designs have been assigned fire-resistance ratings on the basis of their performance when tested together with a section of a representative floor or roof construction rather than as a part of a floor or roof assembly, similar considerations apply with regard to the applicability of the assigned ratings.

Where assemblies employ multiple joists, such that the joists are spaced less than 1220 mm on centres, the temperature and structural performance data obtained from the fire test and the provisions of the test method accommodate spacing of joists in actual building construction up to a maximum of 1220 mm, provided that the structural requirements arising from the increased floor span are met.

Coating Materials

Coating materials include products identified as: 1) Spray-applied Fire-resistive Materials and 2) Thin-film Intumescent and Mastic Coating.

Unless specifically detailed in a design or in the product certification information, the interaction of dissimilar fireproofing materials on the same structural element or at the intersection of structural members, and the adherence of one product to the other, has not been investigated under fire-test conditions.

Unless specifically detailed in a design or in the product certification information, the impact of galvanization applied to structural steel members has not been investigated under fire-test conditions. Galvanization may impact the adhesion of spray-applied fire-resistive materials or mastic and intumescent coatings.

Sprayed-Applied Fire-Resistive Materials

The type of material is specified in each design. Materials that have been investigated for exterior applications are so indicated in the individual designs.

The surfaces on to which the material is intended to be applied must be free of dirt, oil and scale. Mixing and spraying instructions are printed on each bag of material.

The densities shown in the illustrated designs are intended to be considered as the minimum average densities of the material that will provide the performance indicated by the design.

Dry-density measurements may be determined by removing sections of at least 150 x 150 mm randomly selected from the building, subjecting them to 50°C in an oven until constant mass is obtained, followed by accurate weighing, measuring and calculation of the density in kg/m^3. Constant mass is usually obtained after 24 to 48 h exposure within a 50°C oven.

The sprayed-applied fire-resistive material thickness specification given in a design may be considered the minimum average thickness of the individual thickness readings measured in accordance with ANSI/ASTM E605, "Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members." Individual measured thickness, which exceeds the thickness specified in a design by 6 mm or more, is intended to be recorded as the thickness specified in the design plus 6 mm. No individual measured thickness should be more than 6 mm less than the thickness specified in a design.

The thickness of the sprayed-applied fire-resistive material should be corrected by applying additional material at any location where: (1) the calculated average thickness of the material is less than that required by the design, or (2) an individual measured thickness reading is more than 6 mm less than the specified thickness required by the design.

Selected areas of the structural frame and/or floor area are intended to be chosen to obtain representative average thicknesses. Thickness readings on floor or wall areas are intended to be taken symmetrically over the selected area. The average of all measurements should be considered the average thickness of the area. Thickness measurements on beams and/or columns are intended to be made around the member at sections within 300 mm of each other. The average thickness should be considered the average of the readings taken at both sections.

New Requirements for the Use of Sprayed-Applied Fire-Resistive Materials on Primed Steel Surfaces

The surfaces on which the material is intended to be applied must be free of dirt, oil and loose scale. Surfaces may be primed with UL certified primers/paints covered under Primers for Structural Steel (CGJM).

The following method of determining the bond strength of the spray-applied materials only applies to primers or paints not covered under Primers for Structural Steel (CGJM). Unless specifically prohibited in a design, materials identified as Spray-applied Fire-resistive Materials (CHPXC) may be applied to primed or similarly painted wide-flange steel shapes and pipe and tube-shaped columns, provided: (A) the beam flange width does not exceed 305 mm; (B) the column flange width does not exceed 406 mm; (C) the beam or column web depth does not exceed 406 mm; (D) the pipe outer diameter or tube width does not exceed 305 mm; (E) bond tests conducted in accordance with ANSI/ASTM E736, "Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials (SFRM) Applied to Structural Members," should indicate a minimum average bond strength of 80% and a minimum individual bond strength of 50% when compared to the bond strength of the fire-resistive coating as applied to clean uncoated 3.2 mm thick steel plate. The average and minimum bond strength values should be determined based upon a minimum of five bond tests conducted in accordance with ANSI/ASTM E736.

The bond tests need only be conducted when the fire-resistive coating is applied to a primed or similarly painted surface for which acceptable bond strength performance between the primer or other similar material and the fire-resistive coating has not been measured. A bonding agent may be applied to the primed or similarly painted surface to obtain the minimum required bond strength where the bond strengths are found to be below the minimum acceptable values.

As an alternative to the bond test conducted on control samples applied to an uncoated steel plate, the following method may be used for unknown coatings in existing structures. Sections of painted steel are to be coated with a bonding agent compatible with the sprayed material being used on the project. The treated and untreated substrates should be coated with material, cured and subjected to five bond tests each, in accordance with ANSI/ASTM E736. If the failure mode of the sections treated with the bonding agent is 100% cohesive in nature, it will be acceptable to use this bond test value as the control bond strength. The value obtained on the untreated painted section should be compared to the control value using the minimum 80% average, 50% individual bond strength acceptance criteria established in ANSI/ASTM E736.

If condition (E) is not met, a mechanical bond may be obtained by wrapping the structural member with expanded metal lath (minimum 0.927 kg/m^2).

If any of the conditions specified in (A), (B), (C) or (D) are not met, a mechanical break should be provided. A mechanical break may be provided by mechanically fastening one or more minimum 0.927 Kg/m^2 metal lath strips to the flange, web or tube and pipe surface either by weld, screw, or powder-actuated fasteners, on maximum 305 mm centers, on each longitudinal edge of the strip, so that the clear spans do not exceed the limits established in conditions (A), (B), (C) or (D) as appropriate. No less than 25% of the width of the oversize flange or web element should be covered by the metal lath. No strip of metal lath should be less than 90 mm wide.

As an alternative to metal lath, the mechanical break may be provided by the use of minimum 2.5 mm steel studs with minimum 0.36 mm galvanized steel disks if such a system is described in a specific design (usually bottomless trench in an electrified floor design) for the fire-resistive coating being applied. The studs should be welded to the oversize element in rows such that the maximum clear span conforms to conditions (A), (B), (C) or (D) as appropriate. The spacing of studs along each row should not exceed 610 mm and a minimum one stud per 0.165 m^2 should be provided.

Where metal lath strips or steel studs and disks are used, acceptable bond strength as described in item (E) should also be provided. A bonding agent may be applied to the painted surface to obtain the required minimum bond strength where bond strengths to a painted surface are found to be below minimum acceptable values.

Cavities, if any, between the upper beam flanges and open web steel joist (OWSJ) flanges, and the steel floor or roof units are intended to be filled with the fire-resistive coating material applied to the beam and OWSJ flanges, unless specified otherwise in the individual designs.

Adjustment of Thickness of Sprayed-Applied Fire-Resistive Material for Beams of Alternate Size

Alternate-size, W-shape steel beams may be substituted in designs that have been assigned beam ratings and employ sprayed-applied fire-resistive material (700-799, 800-899 and 900-999 designs), provided the thickness of sprayed protection is adjusted accordingly by the following equation: $T_2 = T_1 \times \frac{(M/D)_1 + 38.2}{(M/D)_2 + 38.2}$

Where:

T = Thickness (mm) of spray-applied material

M = Mass of steel beam (kg/m)

D = Heated perimeter of steel section in metres (m), equal to 2d + 3b where d = depth of section and b = flange width

Subscript 1 refers to given beam size and protection thickness specified in the individual designs.

Subscript 2 refers to desired beam size and required protection thickness.

and:

M/D values are not less than 23

T_2 values are not less than 10 mm

Thickness for Thin-Film Intumescent and Mastic Coating

The dry-film thickness of thin-film intumescents and mastic coatings noted in the individual designs should be considered the minimum average thickness of the individual thickness readings measured in accordance with AWCI Technical Manual 12-B, ''Standard Practice for the Testing and Inspection of Field Applied Thin Film Intumescent Fire-Resistive Materials; an Annotated Guide.'' The maximum average dry-film thickness of thin-film intumescents and mastic coatings should not exceed by more than 10% the thickness stated in the established design.

In individual designs consisting of steel columns protected with thin-film intumescent and mastic coatings where such designs include equations for the computation of the fire-resistance ratings or the required dry-film thicknesses of the coatings, the equations are only valid within the limitations specified in the designs. Extrapolation of data outside the specified limitations will invalidate the fire-resistance ratings associated with the designs.

Suspended Membrane Protection

In those assemblies employing membrane protection suspended below the structural members, the depth of the plenum space between the underside of the floor and the top of the ceiling protection may be increased to accommodate deeper structural members without detracting from the indicated performance of the design. However, the minimum dimension between the bottom flange (chord) of the structural member and the protective membrane should be maintained.

Where the spacing of the joists has been increased in a field application beyond that indicated in the illustrated design, and within the 1220 mm limitation referred to above, it may be necessary to provide intermediate suspension points. Such intermediate suspension points are provided by 1.6 mm cold-formed steel channels 51 mm deep with 13 mm flanges, or two 1.2 mm cold-formed steel channels 38 mm deep with 13 mm flanges nested and placed perpendicular to and on top of the lower chords of the joists, and secured to each joist with three loops of 1.2 mm galvanized soft-steel wire. Hanger wire at the intermediate suspension points should be selected on the basis of the requirements in the text of the particular design under consideration.

It should be noted that a ceiling board size or range of sizes is indicated in each design employing suspended membrane protection. The use of ceiling board sizes and suspension system module sizes not covered by the design may impair the performance suggested by the fire-resistance rating assigned to the design.

Steel Floor or Roof Units

In assemblies employing steel floor or roof units in fluted, cellular or blended systems, the variations accommodated by the design have been established on the basis of performance during the fire test. The considerations include structural performance, retention of applied protection or shielding membrane protection and temperature transmission through the units to the unexposed surface of the test assembly. The individual designs provide for a specific type or combination of types of floor or roof units, as well as specifying the minimum depth of section appropriate to the particular design; see the individual certifications under Steel Floor Units (CHWXC) for a detailed breakdown.

The thickness of material specified in the individual designs reflects the actual thickness used in the fire test. Variations other than those provided for in the individual designs or certifications may detract from the indicated fire-resistance rating. Deeper sections consistent with structural requirements may be used as indicated in the individual certifications of floor units.

For constructions that have been subjected to a fire test with steel floor units designed for composite action and loaded so as to develop the theoretical stress contemplated by the design, the list of components associated with the design provides for the use of composite or noncomposite floor units. Conversely, the fire-resistance rating associated with a design may not be maintained if composite units are employed in building construction intended to duplicate the details of an assembly which has been assigned a fire-resistance rating on the basis of its performance when tested with noncomposite floor units.

The connection of the steel floor or roof units to the supporting steel structure is specified in the individual design. For steel floor and roof units when puddle welded connections to the supporting steel beam is specified in the individual design, the puddle welds may be substituted with Power Driven Fasteners that provide equivalent strength capacity.

Roof Insulation

The performance of roof and ceiling assemblies can be significantly affected by the type and thickness of roof insulation employed in the test assembly; a reduction in thickness could lead to prematurely reaching higher temperatures on the unexposed surface, whereas an increase in the thickness could cause early structural failure.

Accordingly, variations from the types and thicknesses of roof insulations provided for in the designs may be expected to detract from the indicated fire-resistance ratings.

Where floor and ceiling assemblies incorporating a concrete topping of 50 mm or more are used as roof constructions, the use of any certified rigid roof insulation and Class A, B or C built-up roof covering on top of the concrete slab would not detract from the assigned fire-resistance ratings.

Transfer of Components from One Design to Another

Structural Members — The standard test method provides for the transfer of structural members from one assembly to another (when selecting a design intended to accommodate the requirements of a particular form of building construction), where:

A. The unrestrained rating of the structural member being transferred is equal to or greater than that of the structural member being replaced.

B. The restrained rating of the structural member being transferred or of the assembly in which that member was tested is equal to or greater than that of the assembly into which the member is being transferred.

C. The capacity for heat dissipation from the structural member in the assembly to which it is being transferred is equal to or greater than that of the assembly in which it was tested.

D. The capacity for heat transfer to the structural member in the assembly to which it is being transferred is equal to or less than that in the assembly in which it was tested.

E. The load deflection characteristics of the assembly to which the structural member is being transferred is equal to or lower than that of the assembly in which it was tested.

In order to transfer structural members, all of the above conditions must be met.

Examples of the specific conditions:

A. **Unrestrained Beam and Restrained Assembly Rating Conditions —** Given an assembly having a 3 h restrained assembly rating and a 2 h unrestrained beam rating, in order to transfer a beam tested as a loaded restrained beam (N and O Series designs), it is necessary to apply the thickness of fire-resistive material sufficient for a 2 h unrestrained beam rating or a 3 h restrained beam rating, whichever is greater. A beam from a ''beam only'' design which does not have a restrained beam rating may only be transferred into assemblies having Restrained Assembly ratings equal to or less than the assembly rating for which that beam is qualified.

In order to transfer a beam tested in another assembly, it is necessary to select an assembly having a 3 h restrained rating and including a 2 h unrestrained beam.

B. **Heat Dissipation Condition —**

Structural members may be transferred into assemblies having an equivalent or greater volume of concrete per unit of floor area.

Structural members may be transferred from an assembly incorporating structural low-density concrete into an assembly incorporating normal-density concrete.

Structural members may be transferred from a roof assembly comprising a metal deck, insulation, and built-up roofing into a protected or unprotected floor assembly utilizing concrete topping.

C. **Heat Transfer Condition —**

Structural members may be transferred from assemblies tested with all cellular or blends of cellular and fluted units into assemblies with all fluted or an equal or lower ratio of cellular to fluted floor units.

Structural members may be transferred from unprotected deck assemblies into protected deck assemblies.

Structural members may be transferred from protected deck assemblies into unprotected deck assemblies, provided that the fire-resistive material is not a thin-film intumescent coating or mastic coating, and the fire-resistive material of the same thickness as is used on the protected deck is applied to the floor construction for a width of 300 mm either side of the top flange.

Structural members may be transferred from protected or unprotected steel deck assemblies into assemblies incorporating soffits of exposed concrete, provided that the fire-resistive material is not a thin-film intumes-

cent coating or mastic coating, and the fire-resistive material is applied to the floor construction to a minimum thickness of 10 mm and for a width of 300 mm either side of the top flange. This requirement is intended to minimize the risk of disruption of the protection to the structural member as a result of spallation of the concrete.

Structural members are not intended to be transferred from protected or unprotected steel deck assemblies into assemblies incorporating soffits of exposed concrete where the fire-resistive material is thin-film intumescent coating or mastic coating.

D. **Load Deflection Condition —**

Noncomposite or composite structural members may be transferred into designs rated with composite structural members.

Only noncomposite structural members may be transferred into designs rated with noncomposite structural members.

It should be noted that these provisions exclude the transfer of structural members tested with floor assemblies to a building construction in the form of a roof construction. The performance of structural members, protected in the same manner, when tested under a floor assembly, is significantly different when tested under an insulated roof assembly, the roof deck assembly representing the more severe test condition upon the structural member.

The foregoing provisions are essentially intended for application to structural members employing directly-applied protection. In floor or roof and ceiling assemblies which incorporate structural members protected with a suspended-ceiling membrane, it is not appropriate to transfer the members to other designs, and a separate fire-resistance rating for the beam is given for information purposes only.

Membrane Protection — The performance and compatibility of certain combinations of components employed in suspended-membrane protection systems have been investigated in connection with the establishment of the designs. Unless specifically indicated in the list of components associated with a design, interchange of components, such as acoustical material employed in the form of ceiling board or tiles and steel framing member suspension systems with those components associated with other certified designs can detract from the indicated fire endurance of the assembly.

The established ratings are not intended to accommodate variations in the design, such as a change of opening sizes per unit area in the ceiling associated with the installation of air ducts, lighting fixtures, etc., on the basis of the apparent performance of these components in assemblies other than the assembly with which they were tested.

Applied Protection — Interchange of forms of applied protection with regard to type, thickness or condition, from one certified assembly to another, may impair the fire-resistance rating implied by the design.

Concrete

Strength — The nominal compressive strength specified in the individual designs may be reduced by 3.5 MPa as a minimum. The maximum compressive strength is not limited. Variations in the strength of the concrete employed in actual building construction will alter the fire endurance of an assembly. The extent of this effect depends on the type of construction and the strength of the concrete.

Thickness — An increase in the thickness of concrete topping will add to the fire endurance of an assembly. Variations in the type of aggregate employed will affect the insulating characteristics of the concrete topping. Where specific data is available concerning such variations, it is usually possible that changes in the fire-resistance rating assigned to a design may be accommodated following engineering studies conducted by ULC during which all factors pertaining to the effect of such changes on the anticipated performance of an assembly can be taken into consideration.

Structural Low-density Versus Normal-density Concrete — Unless specifically noted in a design, the interchange of structural low-density and normal-density concrete is not provided for in certified assemblies. In those cases where provision is made for use of structural low-density and normal-density concrete, such designs have been established on the basis of data obtained from fire tests of specimens employing structural low-density concrete, supplemented by further engineering studies by ULC.

ACOUSTICAL MATERIALS (BYITC)

GENERAL

This category covers acoustical materials intended for use in building assemblies. The fire resistance of these materials relates to the designs covered under Fire Resistance Ratings (BXUVC).

The sound-absorbing qualities, light reflectance, washability and other properties of the materials have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on surface burning characteristics, see Acoustical Materials (BIYRC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

Acoustical Materials (BYITC)−*Continued*

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Acoustical Material."

ADHESIVES (BYWRC)

GENERAL

This category covers adhesives intended for use in building assemblies. The fire resistance of these adhesives relates to the designs covered under Fire Resistance Ratings (BXUVC).

The compatibility of the adhesives with other surfaces and the ability of the adhesives to perform their function in a product, assembly or construction has not been investigated.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Adhesive."

AIR TERMINAL UNITS (BZGUC)

GENERAL

This category covers air terminal units classified as the linear slot type, ceiling air diffuser type, or return air grille type.

Air terminal units are designed to monitor the flow of air through suspended-membrane ceilings and serve as a barrier to heat transmission under fire conditions.

These units may be used for the protection of duct outlets in lieu of ceiling firestop flaps in the fire-rated floor or roof and ceiling assemblies covered under Fire Resistance Ratings (BXUVC). Flexible or rigid duct connectors may be used to affix the units to air-supply or air-return ducts. Where indicated, these units may be eligible for use without ducts.

All air terminal units are intended for installation in accordance with the installation instructions accompanying each unit.

Properties of the units other than those related to fire resistance have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Terminal Unit."

BATTS AND BLANKETS (BZJZC)

GENERAL

This category covers batts and blankets intended for use in building assemblies. The fire resistance of these batts and blankets relates to the designs covered under Fire Resistance Ratings (BXUVC).

The thermal conductivity, vapour resistance and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on surface burning characteristics, see Batts and Blankets (BKNVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

Batts and Blankets (BZJZC)−*Continued*

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Batts and Blankets."

BUILDING UNITS (BZXXC)

GENERAL

This category covers building units investigated for use in fire resistance designs as detailed in Fire Resistance Ratings (BXUVC). The building units are composed of proprietary mixes of materials processed into the form of rigid boards, blocks, planks, sheets or slabs and are formed in various sizes, shapes and thickness.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Building Unit."

CAULKING AND SEALANTS (BZYWC)

GENERAL

This category covers caulking and sealants, which are proprietary products used in fire-resistive assemblies. The methods and rates of application are noted in the design illustration and on the container in which the product is furnished.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Caulking and Sealant."

CEILING FIRESTOP FLAP ASSEMBLIES (CABSC)

GENERAL

This category covers ceiling firestop flap assemblies, which may be used for the protection of air-duct openings in lieu of the protection specified in the floor or roof and ceiling construction designs covered under Fire Resistance Ratings (BXUVC) when:

1. Those assemblies incorporate sheet metal air ducts.
2. The individual and total areas of air-outlet openings do not exceed those specified in the individual designs.
3. The ceiling firestop flaps are installed in accordance with the installation instructions accompanying each unit.

RELATED PRODUCTS

The ceiling firestop flaps covered under this category are not intended for use in place of fire dampers. For additional information, see Dampers (EMMEC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S112, "Standard Method of Fire Test of Fire-Damper Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of

Ceiling Firestop Flap Assemblies (CABSC)−*Continued*

this Directory) together with the word "LISTED," a control number, and the product name "Ceiling Firestop Flap Assembly."

COATINGS (CATXC)

This category covers protective, mastic and thin-film intumescent coatings intended for application to steel structural elements and other substrates as indicated in the individual Listings.

Intumescent Coatings, Thin-film (CAVCC)

GENERAL

This category covers thin-film intumescent coatings factory formulated for direct application to building elements utilizing a variety of conventional applications means. The coatings can be either single- or multi-layered, having a total thickness generally within the range of 0.5 mm to 5.0 mm.

The fire resistance of building assemblies using such intumescent coatings relates to the designs covered under Fire Resistance Ratings (BXUVC). Authorities Having Jurisdiction should be consulted before use.

Requirements for Investigation of Environments on Fire-resistive Properties of Intumescent Coatings (These requirements are mandatory as of September 1, 2005)

The influence of various environments on the fire-resistive properties of the coatings has been investigated. These tests were conducted to evaluate the influence of the environments on the intumescent properties of the coatings.

To investigate the influences of environments, the coating material is applied to either steel plates or structural steel shapes and a selected number of samples are subjected to the environments. After the environmental exposures, samples are subjected to the fire exposure defined in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials." The ability of the coating to retain its fire-resistive properties is determined on the basis of a comparative analysis of the fire test data obtained from fire tests on samples that were exposed and fire tests on samples that were not exposed to the simulated environments.

EXTERIOR

Coatings certified in accordance with CAN/ULC-S101 for exterior use are investigated to the following standardized environments: aging, high humidity, carbon dioxide and sulfur dioxide air mixture, ultraviolet light, salt spray, and wet-freeze-dry cycling.

INTERIOR

Coatings certified in accordance with CAN/ULC-S101 for interior use are investigated to the following standardized environments: aging and high humidity. These coatings may be investigated to other environments and the certification information will include the additional environments. Coating certified in accordance with CAN/ULC-S101 for interior use are certified as either Interior General Purpose or for Conditioned Interior Space Purpose.

Interior General Purpose

Coatings certified for Interior General Purpose are subjected to a 180-day high-humidity exposure. For coatings certified as Interior General Purpose, protection of the coating during the application and curing, the construction and the occupancy of the building are intended to be as specified by the manufacturer but limited to interior service.

Conditioned Interior Space Purpose

Coatings certified for Conditioned Interior Space Purpose are subjected to a 250-hour (10-day) high-humidity exposure. Coatings certified for Conditioned Interior Space Purpose are limited to interior climate-controlled spaces having no exposure to condensation, and where the relative humidity and temperature are controlled according to the manufacturer's recommendations or to not more than 75%, whichever is less, during the application and curing of the coating, the construction and the occupancy of the building. Dehumidification or other environmental control equipment or protection may be required to satisfy this condition.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Intumescent Coating, Thin-Film."

Mastic Coatings (CAVNC)

GENERAL

This category covers intumescent mastic coatings that are mixed at the factory and require only the necessary pumping equipment for the application of the materials to building structures. The coatings can be either single- or multi-layered, having a total thickness generally greater than 5.0 mm.

The fire resistance of building assemblies using such intumescent coatings relates to the designs covered under Fire Resistance Ratings (BXUVC).

Authorities Having Jurisdiction should be consulted before use.

Requirements for Investigation of Environments on Fire-resistive Properties of Intumescent Coatings (These requirements are mandatory as of September 1, 2005)

The influence of various environments on the fire resistive properties of the coatings has been investigated. These tests were conducted to evaluate the influence of the environments on the intumescent properties of the coating.

To investigate the influences of environments, the coating material is applied to either steel plates or structural steel shapes and a selected number of samples are subjected to the environments. After the environmental exposures, samples are subjected to the fire exposure defined in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials." The ability of the coating to retain its fire-resistive properties is determined on the basis of a comparative analysis of the fire test data obtained from fire tests on samples that were exposed and fire tests on samples that were not exposed to the simulated environments.

EXTERIOR

Coatings certified in accordance with CAN/ULC-S101 for exterior use are investigated to the following standardized environments: aging, high humidity, carbon dioxide and sulfur dioxide air mixture, ultraviolet light, salt spray, and wet-freeze-dry cycling.

INTERIOR

Coatings certified in accordance with CAN/ULC-S101 for interior use are investigated to the following standardized environments: aging and high humidity. These coatings may be investigated to other environments and the certification information will include the additional environments. Coatings certified in accordance with CAN/ULC-S101 for interior use are certified as either Interior General Purpose or for Conditioned Interior Space Purpose.

Interior General Purpose

Coatings certified for Interior General Purpose are subjected to a 180-day high-humidity exposure. For coatings certified as Interior General Purpose, protection of the coating during the application and curing, the construction and the occupancy of the building are intended to be as specified by the manufacturer but limited to interior service.

Conditioned Interior Space Purpose

Coatings certified for Conditioned Interior Space Purpose are subjected to a 250-hour (10-day) high-humidity exposure. Coatings certified for Conditioned Interior Space Purpose are limited to interior climate-controlled spaces having no exposure to condensation, and where the relative humidity and temperature are controlled according to the manufacturer's recommendations or to not more than 75%, whichever is less, during the application and curing of the coating, the construction and the occupancy of the building. Dehumidification or other environmental control equipment or protection may be required to satisfy this condition.

VAPOUR HAZARD CLASSIFICATION

Mastic coatings may also be classified with respect to vapour hazard due to the presence of solvent or other volatiles. These classifications are based on the following scale:

Ether Rates	100
Gasoline Rates	90 - 100
Alcohol Rates	60 - 70
Kerosene (37.8°C Flash) Rates	30 - 40
Paraffin Oil Rates	10 - 20

In addition, flash point values (closed cup) are given. Where no flash point values appear in the individual certifications, the product shows no flash point in the individual tests.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mastic Coating."

Mastic Coatings (CAVNC)−*Continued*

Protective Coatings (CAWCC)

GENERAL

This category covers protective coatings intended for use as a means of weather protection when applied to the substrates designated in the individual certifications.

Where indicated in the individual certifications, these coatings have been investigated to determine their resistance to accelerated weathering exposures and to determine their suitability for use as components in fire-rated assemblies.

The fire-rated resistance of building assembly designations incorporating exterior claddings protected by these coatings relates to the designs covered under Fire Resistance Ratings (BXUVC).

Authorities Having Jurisdiction should be consulted before use.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Protective Coating."

Protective Coverings for Foamed Plastic (CAWOC)

GENERAL

This category covers protective coverings for foamed plastic investigated to CAN/ULC-S124, "Standard Method of Evaluation of Protective Coverings for Foamed Plastics."

In order to investigate the effectiveness of these materials for use as protective coverings, the required performance of protective coverings has been related to their insulating capability when exposed to a fire condition represented by the first 10 to 15 minutes of the standard time-temperature curve employed in the conduct of a typical fire endurance test of fire separations for use in buildings as specified in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

The CAN/ULC-S124 test method was developed to respond to the need for a small-scale test to enable the investigation of these protective coverings. It should be noted that no relationship is intended between the performance of samples subjected to this test method and samples subjected to the test described in CAN/ULC-S101 and Listed as Thermal Barriers (XCLAC). Some performance characteristics, such as membrane stability, may differ significantly between these two methods.

Directly-applied protective coverings most often involve the protection of spray-applied thermosetting materials (urethane). The individual Listings restrict their use to these types of plastic unless otherwise indicated.

The following classifications have been included in the current edition of CAN/ULC-S124 in order to accommodate the present requirements of the Authorities Having Jurisdiction, and are not intended to limit the acceptance conditions as they may be specified from time to time by those authorities.

CLASSIFICATION A — If the temperature rise at the interface of the protective cover and the foamed plastic at the end of 15 minutes has not exceeded 140°C average or 180°C at any one thermocouple, the protective cover is accorded a Classification of A.

CLASSIFICATION B — If the temperature rise at the interface of the protective cover and the foamed plastic at the end of 10 minutes has not exceeded 140°C average or 180°C at any one thermocouple, the protective cover is accorded a Classification of B.

CLASSIFICATION C — If the temperature rise at the interface of the protective cover and the foamed plastic at the end of 15 minutes has not exceeded 195°C average or 250°C at any one thermocouple, the protective cover is accorded a Classification of C.

CLASSIFICATION D — If the temperature rise at the interface of the protective cover and the foamed plastic at the end of 10 minutes has not exceeded 195°C average or 250°C at any one thermocouple, the protective cover is accorded a Classification of D.

Authorities Having Jurisdiction should be consulted before use.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufac-

Protective Coverings for Foamed Plastic (CAWOC)−*Continued*

tured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Protective Covering for Foamed Plastic.''

Accessories for Coatings (CAZCC)

GENERAL

This category covers coating accessories intended for installation with certified fire-resistance building assemblies incorporating coatings and as identified in the individual certifications. The accessories have been investigated to determine that, when installed in accordance with the manufacturer's instructions, the accessories do not adversely affect the fire rating of the building assemblies.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Accessory for Coatings.''

CONCRETE BLOCKS (CAZTC)

GENERAL

This category covers solid and hollow concrete blocks intended for use in walls and partitions, constructed of portland cement, fine and coarse aggregates including sand and gravel, cinders, blast furnace slag, burned shale, pumice, etc., using definite cement-aggregate proportions, and of specified compressive strength. They are subject to dimension limitations and are intended for use in bearing and nonbearing walls and partitions.

The fire resistance of building assemblies using concrete blocks relates to the designs covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S120, ''Concrete Masonry Units,'' and CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Concrete Block.''

FIBRE REINFORCEMENT AND CONCRETE ADDITIVES (CBXQC)

GENERAL

This category covers fibre reinforcement and concrete additives investigated for use in fire-resistance designs as detailed in the individual certifications.

Fibre reinforcement is intended to control temperature and shrinkage cracking of structural concrete when proportioned and mixed as specified in the individual certifications. The fibres may be used as an alternative to the welded wire fabric shown in the individual designs. The fibres have not been investigated to increase the structural capacity of the concrete/fibre mixture. The fibres may be used in normal weight or lightweight concrete in the individual designs or series of designs identified in the individual certifications.

For continuous floor spans, CSA A23.3, ''Design of Concrete Structures'', should be consulted if reinforcement is required over the supports for moment loads.

Concrete additives are intended to control temperature and thermal transmission of structural concrete when the mix is proportioned as specified in the individual certifications. The additives have not been investigated to increase the structural capacity of the concrete.

Concrete additives may be added as specified in the individual certifications. CSA A23.3 should be consulted regarding structural design requirements.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

Fibre Reinforcement and Concrete Additives (CBXQC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fibre Reinforcement'' or ''Concrete Additives.''

FACTORY-ASSEMBLED EXTERIOR WALL PANELS (CBZZC)

GENERAL

This category covers factory-assembled exterior wall panels intended to be installed in accordance with the requirements of the ''National Building Code of Canada'' (NBCC), regarding the use of foamed plastics in noncombustible constructions.

These panels do not incorporate an air space and consist of a thermosetting foamed plastic core having a flame spread rating not more than 500, protected on both sides by sheet steel with a thickness of at least 0.38 mm.

The panels are tested in a 3050 mm wide by 3050 mm high wall configuration in accordance with CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.'' These panels have demonstrated the ability to remain in place for a least 10 minutes as required by the NBCC.

The nature of the test specimens is such that:

1. The longest unsupported span of panel joints is 3050 mm, unless otherwise specified in the individual certifications.
2. The minimum spacing between panel joints is 610 mm, unless otherwise specified in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Insulated building units investigated to CAN/ULC-S138, ''Method of Test for Fire Growth of Insulated Building Panels in a Full-Scale Room Configuration,'' are covered under Insulating Building Panels (OERQC).

For information on surface burning characteristics, see Composite Panels (BKRQC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Factory-Assembled Exterior Wall Panels.''

FIRE RESISTANT GLAZING MATERIALS (CCETC)

GENERAL

This category covers fire resistant glazing materials investigated for installation in interior fire resistive wall or partition assemblies as detailed in Fire Resistance Ratings (BXUVC).

The glazing materials have been investigated for use in specified fire resistive wall or partition constructions and information with respect to:

(1) wall construction details and
(2) maximum size of individual glazing panels.

The Standard Test Method does not contain requirements for the aggregate area of glazing panels per of wall unit area or the spatial and structural properties of the dividers between glazing panels. Authorities Having Jurisdiction should be consulted as to the size of the fire resistance glazing that will be acceptable in a given location.

The glazing material provides the insulation properties for compliance with the temperature rise requirement of the Standard Test Method.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Method for Fire Endurance Tests of Building Construction and Materials.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fire Resistant Glazing Materials.''

FLOOR ACCESS DOORS (CCJVC)

GENERAL

This category covers floor access doors intended for installation in concrete or concrete and steel floors to provide service access to areas under the floor, and are intended to be installed in accordance with the installation instructions provided with each floor access door.

Floor access doors are designed for the protection of openings in floors against fire when installed in accordance with ANSI/NFPA 80, "Fire Doors and Other Opening Protectives."

The rating of 1, 1-1/2, 2, 3 or 4 h indicates the duration of exposure to fire. The hourly fire ratings are derived with a superimposed load applied to the door assembly as indicated in the individual certifications.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a serial number or issue number, and the following additional information:

FLOOR ACCESS DOOR
FIRE RESISTANCE RATING: ___ h
No. _____

FLOOR-TOPPING MIXTURES (CCOXC)

USE

This category covers proprietary materials that are factory-blended and require the addition of water and other materials to be mixed at the job site in accordance with the manufacturer's instructions shown on the bags. The materials are mixed, placed, and trowelled similar to a concrete topping and are used as nonstructural floor-leveling medium.

Authorities Having Jurisdiction should be consulted before use.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Floor Topping Mixture."

FLOOR MAT MATERIALS (CCQUC)

GENERAL

This category covers floor mat materials used as an underlayment for floor-topping mixtures. These mat materials are intended for use with the floor-topping mixtures identified on the product packaging.

Authorities Having Jurisdiction should be consulted before use.

RELATED PRODUCTS

See Floor-Topping Mixtures (CCOXC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Floor Mat Material."

FOAMED PLASTIC (CCVWC)

GENERAL

This category covers materials in the form of rigid boards, formed units or ingredients for use in forming foamed plastics in the field and intended for use in roof-ceiling or wall and partition designs. The fire resistance of

building assemblies using foamed plastic relates to the designs covered under Fire Resistance Ratings (BXUVC).

The thermal conductivity, vapour resistance and other properties have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Foamed Plastic."

INSULATED CONCRETE FORMS (CDELC)

GENERAL

This category covers insulated concrete forms intended for use in bearing and nonbearing walls and partitions. They are comprised of stackable four-sided foamed plastic shells and integral plastic or metal webs. The webs horizontally span the short dimension of the form at regular intervals. The forms are laid down in multiple courses to create a continuous hollow wall form. The forms are intended to retain freshly mixed concrete with or without reinforcing rods and subsequently to serve as a substrate for various interior and exterior claddings once the concrete core has cured.

The forms have not been investigated for use with cores other than concrete and reinforcing rod (where applicable) as specified in the individual certifications.

Properties of the units other than those relating to fire resistance have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on surface burning characteristics, see Plastic Materials (BTLIC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulated Concrete Form."

INSULATION, RIGID ROOF (CDETC)

GENERAL

This category covers rigid board intended for use as insulation material in roof construction.

These materials have been found acceptable for use in hourly-rated, fire-resistant assemblies as detailed in the designs covered under Fire Resistance Ratings (BXUVC).

Properties of the boards other than those related to fire resistance have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials"

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rigid Roof Insulation."

JOINT COMPOUND (CDFJC)

GENERAL

This category covers joint compounds intended for use in building assemblies. The fire resistance of these compounds relates to the designs covered under Fire Resistance Ratings (BXUVC).

The compatibility of the joint compound with other surfaces and the ability of the joint compound to perform its function in a product, assembly or construction has not been investigated.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Joint Compound."

LIGHT FIXTURES, RECESSED (CDGAC)

GENERAL

This category covers recessed-type light fixtures and their associated protection systems intended for use in membrane-protected, fire-rated assemblies as specified in Fire Resistance Ratings (BXUVC).

There are three groups of light fixtures covered under this category:

1. Those which meet all requirements of the "standard" light fixture and protection system which were actually used in the fire-resistant design.
2. Those light fixtures and associated protection systems which have been tested as specified in "Guide for Tests of Recessed Light Fixtures in Fire Rated Membrane Ceiling Assemblies," and have been found to perform at least as well as the "standard" light fixture and protection system under both Fire Endurance and Normal Operation Test conditions.
3. Those light fixtures peculiar to modular systems, which were actually used in the fire-resistant design.

These light fixtures are suitable for use in fire-resistant assemblies only when installed as specified in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Light Fixture, Recessed."

MAT MATERIALS (CEAVC)

GENERAL

This category covers mat materials investigated for use in fire-resistance designs as detailed in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials." The mat materials are of proprietary composition and intended for use in systems for structural steel members.

Unless specified in the individual designs and certifications as being suitable for exterior-use application, mat materials investigated to CAN/ULC-S101 are intended for interior-use application only.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

The particular test method used to investigate each mat material is specified in the design information.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mat Material."

MINERAL AND FIBRE BOARDS (CERZC)

GENERAL

This category covers mineral and fibre boards consisting of proprietary mixes of organic and/or inorganic fibres and binders formed into various sizes and thicknesses. The fire resistance of building assemblies using these boards relates to the designs covered under Fire Resistance Ratings (BXUVC).

Properties of the boards other than those related to fire resistance have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on surface burning characteristics, see Mineral and Fibre Boards (BQXRC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral and Fibre Board."

NONCOMBUSTIBLE MATERIALS (CEWAC)

GENERAL

This category covers elementary building materials intended for use as building materials in noncombustible construction, and where the "National Building Code of Canada" stipulates noncombustible materials. The intended use of the product (e.g., insulation) is specified in the individual certifications.

The thermal conductivity, vapour resistance, washability, structural and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S114, "Standard Method of Determination of Non-Combustibility in Building Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Noncombustible Material."

OUTLET BOXES AND FITTINGS CLASSIFIED FOR FIRE RESISTANCE (CEYYC)

GENERAL

This category covers outlet boxes and fittings intended for service penetrations and investigated (1) to determine if their use in already established designs will reduce the fire-resistance rating of the designs covered under Fire Resistance Ratings (BXUVC), or (2) to determine if their use in specific floor or wall constructions will meet the requirements for flame occurrence and temperature rise on the unexposed surface of the assembly when tested in accordance with the time-temperature curve of CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials." When tested in this manner, a fire-resistance rating is assigned to the assembly tested.

Outlet boxes and fittings for service penetrations include those intended for installation in holes drilled in concrete floors to connect to electrical circuits below the floor, and preset inserts which are installed on cellular steel floor units prior to placement of the concrete topping to connect with electrical or telecommunications circuits within the cells of the steel floor units.

Fittings for service penetrations include two types:

(a) Poke-through fittings and cover plates for installation in holes drilled in concrete floors to seal openings when outlet boxes, as described above, are no longer required, or poke-through fittings supplied without proprietary outlet boxes that can be used with generic-type outlet boxes. Fittings also include cover plates, activating rings, grommets, abandonment plates, etc., intended for use with present inserts as described above, to activate the insert or to seal the opening in the event that the outlet is no longer required.

(b) Outlet boxes and fittings only, with no provisions for abandonment.

Outlet Boxes and Fittings Classified for Fire Resistance (CEYYC)−*Continued*

Generally, these outlet boxes and/or fittings are tested in small-scale tests that do not conform with the sample size and loading requirements specified in CAN/ULC-S101. However, the temperatures developed in the furnace and the temperature limits applied to the outlet boxes and/or fittings and the concrete floors are as specified in CAN/ULC-S101. Alternatively, outlet boxes and/or fittings may be tested as part of a full-scale loaded assembly in accordance with CAN/ULC-S101 and, as such, will be restricted for use with those published designs indicated in the specified certifications.

When fittings and/or outlet boxes are tested as described in (2) above, the systems tested are identified by system numbers that begin with the prefix "FOB." These systems are generally intended for installation in floor or wall assemblies as specified in the illustrated systems.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials," and CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Fittings and Outlet Box for Service Penetration," and the statement "For Use in Unprotected and Membrane Protected Concrete Floor Assemblies."

PRECAST AUTOCLAVED AERATED CONCRETE (CFMWC)

GENERAL

This category covers autoclaved aerated concrete units, blocks or panels intended for use in floor, roof and wall assemblies. The precast autoclaved aerated concrete is a lightweight, precast building material with a uniform cellular structure. The units are cast at the plant and consist of portland cement, sand or fly ash, lime, gypsum or anhydrite, and a gas-forming agent. The floor and roof units and wall panels are reinforced with corrosion-resistant steel.

The fire resistance of building assemblies using precast autoclaved aerated concrete products relate to the designs covered under Fire Resistance Ratings (BXUVC).

The long-term structural performance of the units has not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Precast Autoclaved Aerated Concrete Block."

PRECAST CONCRETE UNITS (CFTVC)

GENERAL

This category covers precast concrete slabs and planks, hollow or solid, intended for use in bearing walls and floor or roof assemblies of the type indicated in the individual certifications. The units are cast at the plant and consist of portland cement and fine and coarse natural or processed aggregates. The reinforcement may be wire fabric, deformed bars, and/or high tensile strength wire strand. The fire resistance of buildings using precast concrete units relates to the designs covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Precast Concrete Unit."

Precast Concrete Units (CFTVC)−*Continued*

SHEATHING MATERIALS (CHIZC)

GENERAL

This category covers single or laminated materials, rigid or flexible, of various types and thicknesses. The fire resistance of building assemblies using sheathing materials relates to the designs covered under Fire Resistance Ratings (BXUVC).

Properties of the sheathing materials other than those related to fire resistance have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on surface burning characteristics, see Sheathing Materials (BVDVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sheathing Material."

SPRAY-APPLIED FIRE RESISTIVE MATERIAL (CHPXC)

GENERAL

This category covers spray-applied fire-resistive material consisting of proprietary mixes of cementitious materials and fibre or insulative aggregate that are mixed at the factory and require only the addition of water in the field for application of the material to building structures.

Cementitious mixture is spray-applied by mixing the dry formula with water in the correct proportions, whereas sprayed fibre introduces fibre strands during the blending process.

The fire resistance of building assemblies using spray-applied fire-resistive material relates to the designs covered under Fire-resistance Ratings (BXUVC).

Authorities Having Jurisdiction should be consulted before application.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spray-Applied Fire Resistive Material."

STEEL FLOOR UNITS (CHWXC)

GENERAL

This category covers steel floor units of two types: 1) composite units designed to carry the floor loading in combination with concrete topping, and 2) noncomposite which are, by themselves, designed to carry the floor loading. These units are fabricated at the manufacturer's plant to the proper length and unit design as specified by the purchaser for specific loadings.

These products relate to the designs covered under Fire-resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Steel Floor Unit."

STEEL FRAMING MEMBERS (CIKVC)

GENERAL

This category covers steel framing members designed to function as supporting members for surfacing materials and glazing. The members may be either load-bearing or nonload-bearing. They may be fabricated at the manufacturer's plant to proper length as specified by the purchaser for particular requirements, or cut to length at the construction site.

RELATED PRODUCTS

These products relate to the designs covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Steel Framing Member."

STRUCTURAL CEMENT-FIBRE UNITS (CIYTC)

GENERAL

This category covers structural cement-fibre units consisting of proprietary mixes of processed wood fibres and a cementitious binder molded into forms of various shapes and sizes. The fire resistance of building assemblies using structural cement-fibre units relate to the designs covered under Fire Resistance Ratings (BXUVC).

Properties of the structural cement-fibre units other than those related to fire resistance have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on surface burning characteristics, see Structural Cement-Fibre Units (BVRTC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Structural Cement-Fibre Unit."

STRUCTURAL CONCRETE FIBRE-REINFORCED COMPOSITE SYSTEMS (CIZQC)

GENERAL

This category covers fibre-reinforced composite systems intended for use in conjunction with Mastic Coatings (CAVNC), Intumescent Coatings (CAVCC) and Spray-Applied Fire Resistive Material (CHPXC) in fire-resistive column and beam assemblies. The systems may be used to increase the structural integrity of concrete members in accordance with CAN/CSA-S806, "Design and Construction of Building Components with Fibre-Reinforced Polymers."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Structural Concrete Fibre-Reinforced Composite System."

STRUCTURAL COMPONENTS (CIZTC)

GENERAL

Structural Components (CIZTC)–*Continued*

This category covers units intended for use in fire-rated assemblies which incorporate proprietary designs of structural components. These units are fabricated at the manufacturer's plant to the proper length and unit design as specified by the purchaser for specific loadings.

These products relate to the designs covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Structural Component."

STRUCTURAL INSULATED PANELS (CIZZC)

GENERAL

This category covers factory-assembled panels consisting of top and bottom skins of oriented-strand board with solid-wood webs and foamed-plastic core material.

Panel thicknesses above the minimum specified in the individual certifications are selected in accordance with the most current edition of CAN/CSA-O86, "Engineering Design in Wood," depending on the span and loading conditions pertinent to the application.

Properties of the structural insulated panels other than those related to fire resistance have not been investigated.

These products relate to the designs covered under Fire Resistance Ratings (BXUVC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Structural Insulated Panel."

UNITS, PARTITION PANEL (CJMRC)

GENERAL

This category covers prefabricated panels consisting of steel facing and framing containing factory or field-applied insulation and gypsum board, or gypsum panels on wood framing with factory or field-applied insulation. These partition panel units are field erected to form interior or exterior bearing or nonbearing walls as shown in the designs in the individual certifications.

See the designs covered under Fire Resistance Ratings (BXUVC).

Properties of the partition panel units other than those related to fire resistance have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Partition Panel Unit."

VERMICULITE AGGREGATE (CJZZC)

GENERAL

This category covers vermiculite aggregate, which is a laminated, micaceous mineral produced by expanding the ore at elevated temperatures, forming a lightweight, laminated, flaky structure predominantly gold in colour.

Upon the addition of water, this aggregate, when proportioned and mixed with the material or materials as specified in the individual designs, forms a plastic mass for use in building structures.

Vermiculite Aggregate (CJZZC)−*Continued*

The finish rating, where indicated in the individual designs, is established on the basis of the length of time that the aggregate affords protection to one face of the combustible studs or joists.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vermiculite Aggregate."

WALLBOARD (CKNXC)

GENERAL

This category covers wallboard made with cores of various compositions, and intended to be applied to steel or wood joists to form the interior ceilings, and to wood or steel studs to form the finish on interior bearing or nonbearing walls as shown in the individual designs.

See the designs covered under Fire Resistance Ratings (BXUVC).

The finish rating indicated in the individual designs is established on the basis of the length of time that the material affords protection to the face of the combustible joists or studs.

RELATED PRODUCTS

For information on surface burning characteristics, see Wallboard, Gypsum (BWFRC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wallboard."

WALL AND PARTITION FACINGS AND ACCESSORIES (CLBVC)

GENERAL

This category covers facings and accessories intended for use in walls and partitions.

The fire resistance of building assemblies using wall and partition facings and accessories relates to the designs covered under Fire Resistance Ratings (BXUVC).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wall and Partition Facings and Accessories."

THERMAL BARRIERS (XCLAC)

GENERAL

This category covers thermal barriers intended to delay the involvement of foamed plastic in a fire and to protect it from stray ignition sources in accordance with the "National Building Code of Canada," regarding the use of foamed plastics in noncombustible constructions.

In order to investigate the effectiveness of these materials, their performance has been related to their insulating capability and ability to resist falloff and disintegration when a representative assembly is exposed to a condition of fire exposure represented by the standard time-temperature curve, as specified in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

Thermal Barriers (XCLAC)−*Continued*

The requirements for certification are such that when an assembly of the size specified by CAN/ULC-S101 is exposed to the standard test fire, temperatures on the unexposed side of the thermal barrier material should not exceed an average rise of 140°C and individual of 180°C after a period of 10 minutes, and there should be no evidence of falloff or disintegration.

For assemblies that do not exceed an average temperature rise of 140°C and individual of 180°C for a duration greater than 10 minutes with no evidence of falloff or disintegration for the test duration, the individual certifications show the appropriate duration.

Assemblies tested under thermal barriers are also deemed to meet the requirements of Classification B, when tested in accordance with CAN/ULC-S124, "Standard Method of Test for the Evaluation of Protective Coverings for Foamed Plastic."

Directly-applied thermal barriers most often involve the protection of spray-applied thermosetting materials (urethane). The individual certifications restrict their use to these types of plastic unless otherwise indicated.

Unless otherwise indicated in the individual certifications, thermal barriers are eligible for use in both vertical and horizontal applications and have been qualified accordingly on the basis of their test performance in the horizontal position.

Authorities Having Jurisdiction should be consulted before use.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermal Barrier."

THERMAL BARRIER ASSEMBLIES (XCLFC)

GENERAL

This category covers assemblies of materials intended to delay the involvement of foamed plastic in a fire and to protect it from stray ignition sources in accordance with the "National Building Code of Canada," regarding the use of foamed plastics in noncombustible construction.

In order to investigate the effectiveness of these assemblies of materials, their performance has been related to their insulating capability and ability to resist falloff and disintegration when a representative assembly is exposed to a condition of fire exposure represented by the standard time-temperature curve, as specified in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

The requirements for certification are such that when an assembly of the size specified by CAN/ULC-S101 is exposed to the standard test fire, temperatures on the unexposed side of the thermal barrier material should not exceed an average rise of 139°C during the rating period, and there should be no evidence of falloff or disintegration.

Essentially, the illustrated designs reflect the precise dimensions and condition of the sample assembly which has been subjected to the fire endurance test. Within practical limits, a construction must duplicate the illustrated design and the details included in the associated text in order to achieve the indicated fire-resistance rating.

Unless otherwise indicated in the individual certifications, thermal barrier assemblies are suitable for use in the position indicated in the designs (i.e., horizontal or vertical).

Authorities Having Jurisdiction should be consulted before installation.

Numbered items refer to the descriptive text below each drawing. Individual components of a proprietary nature or over which it is necessary to exercise control at the manufacturing location are certified under the Listing and Follow-Up Service of Underwriters Laboratories of Canada. Such items are identified in the text by a black dot thus •. Under these Services, periodic examination and tests are conducted on samples selected at random from current production and stock. Each certified product bears the label or other identification of ULC from which it may be determined that a product is suitable for use as a material in a particular assembly or assemblies.

RELATED PRODUCTS

Components intended for use with thermal barriers are covered under Thermal Barrier Components (XCLZC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

Thermal Barrier Assemblies (XCLFC)−*Continued*

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. LUMINAIRES AND LUMINAIRE ASSEMBLIES LISTED FOR FIRE RESISTANCE (CDHWC)

USE

This category covers luminaires and luminaire assemblies investigated for use in fire-resistance designs. The fire resistance of building assemblies using luminaires covered by the following certifications relates to the design illustrations under Fire-resistance Ratings (BXUVC). The luminaires and luminaires assemblies are intended for recessed installation in ceilings in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' They have been shown to provide a degree of fire resistance with the floor or roof assemblies with which they have been tested.

These luminaires and luminaire assemblies have been separately investigated and found to comply with applicable electrical requirements and are so labeled.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on a product is the only evidence provided by ULC to identify products that have been produced or serviced under its Listing and Follow-Up Service. The Listing Mark of these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product or service name.

NONMETALLIC PLUMBING SYSTEM COMPONENTS LISTED FOR FIRE RESISTANCE (CEYDC)

GENERAL

This category covers nonmetallic tubing intended for use in fire-resistive assemblies. Certified products and materials are intended to be used and installed in accordance with the applicable Canadian plumbing codes.

The fire resistance of building assemblies using nonmetallic tubing relates to the designs covered under Fire Resistance Ratings (BXUVC).

Physical and other properties of the nonmetallic tubing have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Nonmetallic Plumbing System Component Listed for Fire Resistance.''

BURGLAR ALARM SYSTEMS (CPHZC)

This category covers burglar alarm systems classified as to the type of facility in which they are installed: Financial, Commercial or Residential. They are further grouped according to the type of service provided: Central Station, Monitoring Station or Local. Each central station, monitoring station or local burglar alarm system is also identified as to the type of installation as a premises, safe or vault. The function of these types of burglar alarm systems and the level of service provided are:

CENTRAL STATION SYSTEMS

A central station system is one in which the operations of electrical protection circuits and devices are signalled automatically to, recorded in, maintained and supervised from a central station having trained operators and guards in attendance at all times. Guards are dispatched to make immediate investigation of unauthorized entry or opening of protected properties from which signals are received.

Unless otherwise specified on the certificate issued to a protected property, the central station holds all keys necessary to permit entrance and search of the interior of the property by guards responding to alarms and troubles. The operating force is required to be adequate to allow a two-guard response to all alarms. It is intended that one guard be an employee of the operating company or the local police.

Central station systems may be of the dedicated-line type or multiplex type and the line security may be Level I, Level II or Level III depending on the equipment provided. See CAN/ULC-S304, ''Central and Monitoring Station Burglar Alarm Units,'' for the definition of levels of line security.

The service response time for central station systems may be specified as Level I (1 hour), Level II (2 hours) or Level III (3 hours) and the guard response time may be specified as Level I (15 minutes), Level II (20 minutes) or Level III (30 minutes). See CAN/ULC-S304 for additional information concerning these service response and guard response levels.

MONITORING STATION SYSTEMS

A monitoring station system is one in which the operations of electrical protection circuits and devices are signalled automatically to, recorded in, maintained and supervised from a monitoring station having trained operators in attendance at all times. Operators notify police headquarters to make immediate investigation of unauthorized entry or opening of protected properties from which signals are received.

Monitoring station systems may be of the dedicated-line type or multiplex type and the line security may be Level I, Level II or Level III depending on the equipment provided. See CAN/ULC-S304 for the definition of levels of line security.

The service response time for monitoring station systems may be specified as Level I (2 hours), Level II (4 hours) or Level III (8 hours). See CAN/ULC-S301, ''Central and Monitoring Station Burglar Alarm Systems,'' for additional information concerning these service response levels.

LOCAL ALARM SYSTEMS

A local alarm system is one in which the protective circuits and devices are connected to an enclosed tamper-protected loud-sounding device attached to an outside wall of the building in which the property is situated. Disturbance of the protective devices or unauthorized entry through wired portions of the property automatically causes the sounding device to operate until it is stopped by key control in the possession of the owner, by exhaustion of the power supply, or by a timing element set for a definite period of operation.

Local burglar alarm systems for financial and high-risk commercial institutions may be connected by means of a dedicated line to a remote station facility, such as a local police station for remote registration of an alarm condition. Low-risk commercial institutions and residential systems may be connected to a remote signal-receiving station by means of a digital communicator that may provide opening and closing signals as well as alarm signals for commercial systems.

The installing company is required to respond to troubles or calls for service no later than the business day following the report of trouble by the user for financial and commercial systems and not less than two business days for residential systems. The operation of a local alarm system is under the control of the owner or others interested in the protected property. It is required, however, that certificated local systems be maintained under the care and inspection service of the installing company. Inspections are made at intervals of one year or less for financial and commercial systems and two years or less for residential systems depending on power requirements of the local alarm gong. It is the responsibility of the owner to switch the protection on and off and to report improper functioning of the systems to the installing company.

Representative burglar alarm systems are investigated to determine the suitability of design and construction, circuit arrangements, installation methods, and maintenance service, as these several items have a bearing upon reliability of operation and protection against tampering and/or compromise.

Extent of Protection — Regardless of their class or type, burglar alarm systems installed on individual properties may vary according to the extent of protection provided. The definitions covering the extent of protection available for premises, vaults and safes are given under the respective classification headings.

Property owners should consult underwriting authorities or others having jurisdiction regarding the type of system, line security level and extent of protection recommended for a given hazard or locality.

ALARM RESPONSE GUARD COMPANIES (CPVAC)

GENERAL

This category covers guard companies that process alarm signals and take appropriate action in response to the type of signals received.

Under ULC's Burglar Alarm Service Certificate Program, burglar alarm system installations are certified to provide evidence that the alarm system has been installed, monitored and maintained in accordance with CAN/ULC-S301, "Central and Monitoring Station Burglar Alarm Systems." In addition, these certified systems can be provided with an alarm response certificate from a ULC Listed Alarm Response (Guard) Service Company.

Alarm Response (Guard) Service companies are Listed under the Certificate Service of Underwriters Laboratories of Canada. Under this Service, ULC's representative conducts periodic examinations of the service centres of the Listed guard companies to verify the handling of subscribers' keys, the adequacy of the centre's personnel, and records in accordance with CAN/ULC-S301. Records at each service centre are reviewed for representative periods on certificated systems with respect to items such as elapsed time in responding to alarms, the number of guards dispatched, and any other irregularities occurring on certificated systems.

The alarm response levels for certified alarm systems range from Level 1 to Level 4, with Level 4 being the highest.

Reference should be made to CAN/ULC-S301 for a more detailed description of these response levels.

The locations at which the guard companies maintain service centres are shown in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Burglar Alarm Systems (CPHZC).

REQUIREMENTS

The basic standard used to investigate the services in this category is CAN/ULC-S301, "Central and Monitoring Station Burglar Alarm Systems."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

COMMERCIAL TYPE SIGNAL RECEIVING CENTRES, FULL AND SHARED SERVICE (CPVXC)

GENERAL

This category covers full and shared service commercial-type signal receiving centres.

Burglar alarm systems classified as commercial type are installed in the premises, vaults or safes of commercial institutions, such as jewellery stores and warehouses. The main function of such systems is to protect the contents of the premises, vaults or safes from burglarious attack. The contents vary over a wide range of materials, such as jewellery, antiques, furniture, appliances, clothes, tires, and general merchandise. A hold-up alarm function may also be incorporated as part of the burglar alarm system.

Commercial signal receiving centre companies are Listed under the Certificate Service of Underwriters Laboratories of Canada. Under this Service, ULC's representative conducts periodic examinations and tests on representative installations in the field to determine the correctness of installations of protective devices and wiring, quality of workmanship, operability of circuits, maintenance, and extent of protection provided in accordance with CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults."

In addition to the above, ULC's representative conducts periodic examinations and tests at signal receiving centres to verify the condition, adjustment and operability of electrical equipment, the handling of subscribers' keys, and the adequacy of the centre's personnel and records in accordance with CAN/ULC-S301, "Central and Monitoring Station Burglar

Commercial Type Signal Receiving Centres, Full and Shared Service (CPVXC)–*Continued*

Alarm Systems." Records at each signal receiving centre are reviewed for representative periods on certificated installations with respect to items such as elapsed time in responding to alarms, and for central station systems, the number of guards dispatched, supervision of subscribers' daily openings and closings, re-openings, and any other irregularities occurring on certificated installations.

The extent of protection provided for premises ranges from Installation Level 1 to Installation Level 4, with Level 4 being the highest. Vaults and safes are provided with Complete Protection. Reference should be made to CAN/ULC-S302 for a more detailed description of these protection levels.

Commercial-type burglar alarm systems fall into one of four categories depending on the type of service provided by the Listed signal receiving centre on behalf of the owner or tenant. The type of service is noted on the Certificate that is issued by the Listed signal receiving centre and may be either Central Station, Full Service Monitoring Station, Shared Service Monitoring Station or Local.

Where a Listed signal receiving centre issues a "Full Service Monitoring Station Certificate" to a commercial-type burglar alarm system installation, the Listed signal receiving centre is expected to provide the installation, maintenance and signal monitoring service associated with the particular installation.

Where a Listed signal receiving centre issues a "Shared Service Monitoring Station Certificate" to a commercial-type burglar alarm system that has been installed by a Listed alarm installing company, a contract exists between the two companies to share the installation, maintenance and monitoring services associated with the particular installation. It is the responsibility of the Listed signal receiving centre to cancel any certificate where the contracted obligations of the Listed alarm installing company are not upheld.

Companies Listed as providing commercial-type central station service are eligible to provide commercial-type monitoring station service (full or shared) and commercial-type local alarm service, and may issue certificates on each of these types of systems.

Companies Listed as providing commercial-type full monitoring station service are also eligible to provide commercial-type shared monitoring station service and commercial-type local alarm service, and may issue certificates on each of these types of systems.

Where commercial-type monitoring station service is shared between two companies, the Listed signal receiving centre is eligible to issue the certificate and both company names are indicated on the certificate.

The locations at which signal receiving equipment and facilities are maintained by Listed alarm companies are shown in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Burglar Alarm Systems (CPHZC).

REQUIREMENTS

The basic standards used to investigate the services in this category are CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults," and CAN/ULC-S301, "Central and Monitoring Station Burglar Alarm Systems."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

COMMERCIAL TYPE INSTALLATION COMPANIES, SHARED AND LOCAL SERVICE (CPWFC)

GENERAL

This category covers local and shared service installation companies of commercial-type burglar alarm systems.

Burglar alarm systems that are installed in the premises, vaults or safes of commercial institutions, such as jewellery stores and warehouses are classified as commercial-type systems. The main function of such systems is to protect the contents of the premises, vaults or safes from burglarious attack. The contents vary over a wide range of materials, such as jewellery, antiques, furniture, appliances, clothes, tires, and general merchandise. A hold-up alarm function may also be incorporated as part of the burglar alarm system.

Commercial installation companies are Listed under the Certificate Service of Underwriters Laboratories of Canada. Under this Service, ULC's representative conducts periodic examinations and tests on representative installations in the field to determine the correctness of installations of protective devices and wiring, quality of workmanship, operability of circuits, maintenance, and extent of protection provided in accordance with CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults."

Commercial Type Installation Companies, Shared and Local Service (CPWFC)−*Continued*

The extent of protection provided for premises ranges from Installation Level 1 to Installation Level 4, with Level 4 being the highest. Vaults and safes are provided with Complete Protection. Reference should be made to CAN/ULC-S302 for a more detailed description of these protection levels.

Shared commercial-type burglar alarm systems fall into two categories, depending on the type of service provided by the Listed alarm company on behalf of the owner or tenant. The type of service is noted on the Certificate that is issued by the Listed signal receiving centre (for Shared Service Monitoring Station) or by the installation company (for Local Systems).

Where a Listed signal receiving centre issues a "Shared Service Monitoring Station Certificate" to a commercial-type burglar alarm system that has been installed by a Listed alarm installing company, a contract exists between the two companies to share the installation, maintenance and monitoring services associated with the particular installation. It is the responsibility of the Listed signal receiving centre to cancel any certificate where the contracted obligations of the Listed alarm installing company are not upheld.

Where commercial-type monitoring station service is shared between two companies, the Listed signal receiving centre is eligible to issue the certificate and both company names are indicated on the certificate.

Companies Listed as providing commercial-type local alarm service are only eligible to issue certificates on this type of system.

The locations at which the installing companies maintain service centres are shown in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Burglar Alarm Systems (CPHZC).

REQUIREMENTS

The basic standard used to investigate the services in this category is CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

FINANCIAL TYPE SIGNAL RECEIVING CENTRES, FULL AND SHARED SERVICE (CRXXC)

GENERAL

This category covers full and shared service financial-type signal receiving centres.

Burglar alarm systems classified as financial type are installed in the premises, vaults and safes of financial institutions, such as banks, credit unions or trust companies. The primary function of such systems is to protect the monetary or safety deposit box contents of the vaults or safes from burglarious attack. In many installations, a hold-up alarm function is also provided as part of the burglar alarm system.

Financial signal receiving centre companies are Listed under the Certificate Service of Underwriters Laboratories of Canada. Under this Service, ULC's representative conducts periodic examinations and tests on representative installations in the field to determine the correctness of installations of protective devices and wiring, quality of workmanship, operability of circuits, maintenance, and extent of protection provided in accordance with CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults."

In addition to the above, ULC's representative conducts periodic examinations and tests at signal receiving centres to verify the condition, adjustment, and operability of electrical equipment, the handling of subscribers' keys, and the adequacy of the centre's personnel and records in accordance with CAN/ULC-S301, "Central and Monitoring Station Burglar Alarm Systems." Records at each signal receiving centre are reviewed for representative periods on certificated installations with respect to items such as elapsed time in responding to alarms, and for central station systems, the number of guards dispatched, supervision of subscribers' daily openings and closings, re-openings, and any other irregularities occurring on certificated installations.

The extent of protection provided for premises ranges from Installation Level 1 to Installation Level 4, with Level 4 being the highest. Vaults and safes are provided with Complete Protection. Reference should be made to CAN/ULC-S302 for a more detailed description of these protection levels.

Financial-type burglar alarm systems fall into one of four categories depending on the type of service provided by the Listed signal receiving centre on behalf of the owner or tenant. The type of service is noted on the Certificate that is issued by the Listed signal receiving centre and may be Central Station, Full Service Monitoring Station, Shared Service Monitoring Station or Local. Where a Listed signal receiving centre issues a "Central Station Certificate" or a "Full Service Monitoring Station Certificate" to a financial-type burglar alarm system installation, the Listed signal receiving centre is expected to provide the installation, maintenance and signal monitoring service associated with the particular installation.

Financial Type Signal Receiving Centres, Full and Shared Service (CRXXC)−*Continued*

Where a Listed signal receiving centre issues a "Shared Service Monitoring Station Certificate" to a financial-type burglar alarm system that has been installed by a Listed alarm installing company, a contract exists between the two companies to share the installation, maintenance and monitoring services associated with the particular installation. It is the responsibility of the Listed signal receiving centre to cancel any certificate where the contracted obligations of the Listed alarm installing company are not upheld.

Companies Listed as providing financial-type central station service are eligible to provide financial-type monitoring station service (full or shared) and financial-type local alarm service, and may issue certificates on each of these types of systems.

Companies Listed as providing financial-type monitoring station service (full or shared) are also eligible to provide financial-type local alarm service, and may issue certificates on each of these types of systems.

The locations at which signal receiving equipment and facilities are maintained by Listed alarm companies are shown in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Burglar Alarm Systems (CPHZC).

REQUIREMENTS

The basic standards used to investigate the services in this category are CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults," and CAN/ULC-S301, "Central and Monitoring Station Burglar Alarm Systems."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

FINANCIAL TYPE INSTALLATION COMPANIES, SHARED AND LOCAL SERVICE (CRYHC)

GENERAL

This category covers local and shared service installation companies of financial-type burglar alarm systems.

Burglar alarm systems that are installed in the premises, vaults and safes of financial institutions such as banks, credit unions or trust companies are classified as financial-type systems. The primary function of such systems is to protect the monetary or safety deposit box contents of the vaults or safes from burglarious attack. In many installations, a hold-up alarm function is also provided as part of the burglar alarm system.

Financial installation companies are Listed under the Certificate Service of Underwriters Laboratories of Canada. Under this Service, ULC's representative conducts periodic examinations and tests on representative installations in the field to determine the correctness of installations of protective devices and wiring, quality of workmanship, operability of circuits, maintenance, and extent of protection provided in accordance with CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults."

The extent of protection provided for premises ranges from Installation Level 1 to Installation Level 4, with Level 4 being the highest. Vaults and safes are provided with Complete Protection. Reference should be made to CAN/ULC-S302 for a more detailed description of these protection levels.

Shared financial-type burglar alarm systems fall into two categories, depending on the type of service provided by the Listed alarm company on behalf of the owner or tenant. The type of service is noted on the Certificate that is issued by the Listed signal receiving centre (for Shared Service Monitoring Station) or by the installation company (for Local Systems).

Where a Listed signal receiving centre issues a "Shared Service Monitoring Station Certificate" to a financial-type burglar alarm system that has been installed by a Listed alarm installing company, a contract exists between the two companies to share the installation, maintenance and monitoring services associated with the particular installation. It is the responsibility of the Listed signal receiving centre to cancel any certificate where the contracted obligations of the Listed alarm installing company are not upheld.

Where financial-type monitoring station service is shared between two companies, the Listed signal receiving centre is eligible to issue the certificate and both company names are indicated on the certificate.

Financial Type Installation Companies, Shared and Local Service (CRYHC)−*Continued*

Companies Listed as providing financial-type local alarm service are only eligible to issue certificates on this type of system.

The locations at which the installing companies maintain service centres are shown in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Burglar Alarm Systems (CPHZC).

REQUIREMENTS

The basic standard used to investigate the services in this category is CAN/ULC-S302, "Installation and Classification of Burglar Alarm Systems for Financial and Commercial Premises, Safes and Vaults."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

BURGLARY-RESISTING GLAZING MATERIAL (CVYUC)

GENERAL

This category covers burglary-resisting glazing material intended for use principally as a substitute for, or in combination with, plate-glass show-window panels.

The material, as indicated in the individual certifications, may be a factory-produced clear or translucent laminated assembly of glass and plastic; a manufactured plastic panel; or a plastic film intended for field installation to form a laminated assembly of glass and plastic.

When applied and installed in accordance with the manufacturer's instructions, the material is designed to resist burglary attacks of the hit-and-run type.

Burglary-resisting glazing material is suitable for indoor, outdoor, or indoor/outdoor use as indicated in the individual certifications.

Indoor use is defined as installation of the glazing material where both sides of the panel are in the interior of a climate-controlled area.

Outdoor use is defined as installation of the glazing material where one or both sides of the panel are exposed to the exterior ambient conditions.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S332, "Burglary Resisting Glazing Material."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Burglary-Resisting Glazing Material."

GAS DETECTORS (CZHAC)

GAS ALARMS AND ACCESSORIES (CZHFC)

GENERAL

This category covers gas alarms intended for use in ordinary indoor locations, mobile homes or recreational vehicles. Some gas alarms, as identified in the individual certifications, may utilize certified accessories to supplement the unit's application. The individual certifications identify the type of gas each unit detects.

Each unit incorporates means for both detection and alarm sounding and may be single-station type or multiple-station type as identified in the individual certifications. A single-station type device is a self-contained unit not arranged for interconnection with other units. A multiple-station type device is a self-contained unit designed for interconnection with other units of the same model designation or other compatible devices within an individual dwelling unit, and functionally arranged so that actuation of one results in alarm sounding by all interconnected units.

Gas alarms are not intended for use in a fire alarm system. In addition, the acceptability of units equipped with ancillary features or interconnections is subject to approval by the Authority Having Jurisdiction.

REQUIREMENTS

The basic standard used to investigate products in this category is CSA 6.19, "Residential Carbon Monoxide Alarming Devices."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas Alarm and Accessory."

Gas Alarms and Accessories (CZHFC)−*Continued*

FIRE PROTECTIVE SIGNALLING SYSTEMS, SIGNAL RECEIVING CENTRES, FULL AND SHARED SERVICE (DAYIC)

GENERAL

This category covers signal receiving centres that provide fire protective signalling services.

A fire protective signalling system is one in which the operations of electrical fire protection circuits and devices are signalled to, recorded in, maintained and supervised from a fire signal receiving centre having trained operators in attendance at all times whose duty it is, upon receipt of a signal, to notify the subscriber and the local fire department in the event a fire alarm signal is received.

Fire protective signalling system signal receiving centre companies are Listed under the Certificate Service of Underwriters Laboratories of Canada. Under this Service, periodic inspections are made at the signal receiving centres and at certificated installations to determine compliance with CAN/ULC-S561, "Installation and Services for Fire Signal Receiving Centres and Systems."

Where a Listed fire protective signalling system signal receiving centre issues a "Full Service Central Station Fire Protective Signalling System Certificate," the Listed company is expected to provide the installation, maintenance and signal monitoring service associated with the particular installation.

Where a Listed fire protective signalling system signal receiving centre issues a "Shared Service Central Station Fire Protective Signalling System Certificate" to a system that has been installed by a Listed fire protective signalling system installation company, a contract exists between the two companies to share the installation, maintenance and signal monitoring services associated with the particular installation.

The locations at which signal receiving centre companies provide fire protective signalling services are shown in the individual Listings.

REQUIREMENTS

The basic standard used to investigate the services in this category is CAN/ULC-S561, "Installation and Services for Fire Signal Receiving Centres and Systems."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

CENTRAL STATION FIRE ALARM SYSTEM UNITS (DAYRC)

GENERAL

This category covers fire alarm signal receiving, recording and automated station units or systems intended for use within a central signal receiving station or satellite station and associated signal transmitters, subscribers' control units and the like, to be installed within protected premises.

These units are either of the individual-line type, multiplex system type, or are for connection over McCulloh loop circuits for code transmitter operation and are suitable for central station systems for signalling service.

ADDITIONAL INFORMATION

For additional information, see Fire Protective Signalling Systems, Signal Receiving Centres (DAYIC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S559, "Equipment for Fire Signal Receiving Centres and Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Central Station Fire Alarm System Unit," "Fire Alarm Equipment," "Fire Alarm Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

FIRE PROTECTIVE SIGNALLING SYSTEMS, INSTALLATION COMPANIES, SHARED SERVICE (DAYYC)

GENERAL

This category covers signal receiving centres that provide shared service fire protective signalling services.

A fire protective signalling system is one in which the operations of electrical fire protection circuits and devices are signalled to, recorded in, maintained and supervised from a signal receiving centre having trained operators in attendance at all times whose duty it is, upon receipt of a signal, to notify the subscriber and the local fire department in the event a fire alarm signal is received.

Fire protective signalling system installation companies are Listed under the Certificate Service of Underwriters Laboratories of Canada. Under this Service, periodic inspections are made at the signal receiving centres and at certificated installations to determine compliance with CAN/ULC-S561-2003, ''Central Station Fire Protective Signalling Systems and Services.''

Where a Listed signal receiving centre company issues a ''Shared Service Fire Protective Signalling System Certificate'' to a system that has been installed by a Listed fire protective signalling service installation company, a contract exists between the two companies to share the installation, maintenance and signal monitoring services associated with the particular installation.

The locations at which the installation companies maintain service centres are shown in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Fire Protective Signalling Systems, Signal Receiving Centres (DAYIC).

REQUIREMENTS

The basic standard used to investigate the services in this category is CAN/ULC-S561-2003, ''Installation and Services for Fire Signal Receiving Centres and Systems.''

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

FIRE ALARM SYSTEMS (UWJJC)

This category covers alarm service companies authorized to issue ULC certificates with respect to installed fire alarm systems classified as to type or principle of operation as Central Station, Local, Auxiliary, Remote Station or Proprietary.

The Underwriters Laboratories of Canada Certificate Service for Fire Alarm Systems, which entails a periodic audit of an alarm service company's certification practices, applies only to those systems that are covered by an active unexpired certificate. Systems not covered by a certificate do not necessarily comply with ULC's requirements for certification, and are not subject to ULC audit.

Certificated fire alarm installations are required to be maintained under the care and inspection service of the issuing alarm service company.

Listed companies maintain specially trained personnel and have demonstrated their ability to inspect and test installed fire alarm systems in accordance with CAN/ULC-S536, ''Inspection and Testing of Fire Alarm Systems.''

MISCELLANEOUS DEVICES, FIRE ALARM (UXKVC)

GENERAL

This category covers miscellaneous devices, such as remote alarm relay modules, directional sounders, cellular control channel signal transceiver units, etc., intended for use in fire alarm service equipment.

ADDITIONAL INFORMATION

For additional information, see Fire Protective Signalling Systems, Signal Receiving Centres (DAYIC).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/ULC-S525, ''Audible Signal Devices for Fire Alarm Systems, Including Accessories''

CAN/ULC-S526, ''Visible Signal Devices for Fire Alarm Systems, Including Accessories''

ULC-S527, ''Fire Alarm Control Units''

CAN/ULC-S541, ''Speakers for Fire Alarm Systems, Including Accessories''

CAN/ULC-S559, ''Equipment for Fire Signal Receiving Centres and Systems''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Fire Alarm Device, Miscellaneous,'' ''Fire Alarm Equipment,'' ''Fire Alarm Subassembly,'' ''Fire Alarm and Security Equipment,'' ''Fire Alarm and Security Subassembly,'' or other appropriate product name as shown in the individual Listings.

Miscellaneous Devices, Fire Alarm (UXKVC)−*Continued*

CHIMNEYS, VENTS, FIREPLACES, SPACE HEATERS AND ASSOCIATED EQUIPMENT (DCBRC)

This category covers only those products of the factory-made type not requiring field fabrication, and intended for installation in accordance with the ''National Building Code of Canada.''

These products are investigated to determine the suitability of their construction and performance for the service for which they are intended. It is determined that combustible walls and surfaces adjacent to or in contact with the assembly will not attain unsafe temperatures when the product is installed and used as directed.

CHIMNEYS (DCOZC)

This category covers chimneys consisting entirely of factory-made parts. The parts of each model of chimney are designed to be assembled only with the other parts of that model without requiring field fabrication.

Industrial Chimneys (DCPKC)

GENERAL

This category covers industrial chimneys intended for use in venting industrial process equipment and building heating equipment where the flue gas temperatures do not normally exceed the temperature indicated in the individual certifications and shown on the label. They are also suitable for venting appliances requiring a low-heat-appliance chimney where acceptable to the Authority Having Jurisdiction (AHJ).

Industrial chimneys consist of a factory-furnished support assembly, a number of chimney sections, and wall, ceiling or floor guides or additional supports.

Industrial chimneys are not intended to be enclosed with combustible material, but a chimney that extends through any storey of a building above that on which the connected appliance is located is intended to be enclosed in a noncombustible shaft having a fire-resistant rating of not less than one hour or as required by the AHJ.

ADDITIONAL INFORMATION

For additional information, see Chimneys (DCOZC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C959, ''540°C and 760°C Industrial Chimneys.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Industrial Chimney.''

Medium-heat Type Chimneys (DDQVC)

GENERAL

This category covers factory-built, medium-heat-type chimneys intended for use in venting medium-heat and low-heat appliances.

Medium-heat appliances normally include devices such as alabaster gypsum kilns, annealing furnaces (glass or metal), charcoal furnaces, cold-stirring furnaces, feed driers (direct-fire heated), fertilizer furnaces (cherry to pale red), lehrs and glory holes, lime kilns, linseed oil-boiling furnaces, porcelain biscuit kilns, pulp driers (direct-fire heated), steam boilers operating at over 340 kPa except pressing machine boilers, water-glass kilns, wood distilling furnaces, and wood gas retorts. Medium-heat-type chimneys are also suitable for industrial and commercial-type incinerators.

Each chimney assembly consists of one or more chimney sections and factory-furnished base plates and guy bands for use if needed. Chimney sections are intended to be supported on foundations of masonry or reinforced concrete or other noncombustible material.

These chimneys are intended to be installed with clearance from walls of wood frame construction and from any combustible material as specified on each chimney section and in the individual certifications.

These chimneys are not intended to be enclosed within combustible construction, but an interior chimney is intended to be enclosed in a fire-resistive or noncombustible shaft of appropriate size where the chimney extends through any storey of a building above that on which the connected appliance is located.

Medium-heat Type Chimneys (DDQVC)−*Continued*

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Chimneys (DCOZC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C959, "540°C and 760°C Industrial Chimneys."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium-heat Type Chimney."

650 Degree-celsius Factory-built Chimneys (DDTZC)

GENERAL

This category covers 650°C chimneys suitable for use with gas, oil and solid-fuel-fired residential appliances and building heating equipment. When so specified in individual certifications, these chimneys may be used with masonry fireplaces.

Residential appliances include cook ranges, space heaters, warm air furnaces, water heaters, hot water heating boilers, low-pressure steam heating boilers (not over 100 kPa), and domestic incinerators. Building heating equipment includes steam boilers operating at not over 340 kPa, and boilers operating at any pressure over 340 kPa if not over 28 m^3 in size.

Except for installation in single- and two-family dwellings, 650°C chimneys that extend through any storey above that on which the connected appliance is located should be provided with enclosures having a fire-resistance rating equal to or greater than that of the floor or roof assemblies through which they pass.

Each 650°C chimney consists of one or more chimney sections, one or more support assemblies to be employed if the chimney is supported by roof, floor or ceiling joists, a clean-out tee, firestop spacers (where required) to be employed at each floor and ceiling penetrated if a support is not installed at that location, and a roof assembly. Chimneys certified as suitable for masonry fireplaces are intended to employ, when so used, the appropriate fireplace adapter specified in the individual certifications.

Certification of a 650°C chimney is based on the use of ULC labelled components specifically certified for the particular chimney and manufacturer. The performance of the assembly may be affected if the combination of these parts is not used in actual building construction.

These chimneys are intended to be installed to provide clearances to combustible material not less than specified in the individual certifications, on the master label, and in the installation instructions. Clearances at floors, joists and ceilings are intended to be those established by the installation of factory-furnished support and firestop spacers. Unless otherwise indicated in the individual certifications, these chimneys may extend from the basement or first floor through the floors, ceilings, and roof of the building. Portions of the chimney that may extend through accessible spaces should be enclosed in all cases to avoid personal contact with, and damage to, the chimney. Installation instructions are provided with each assembly.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Chimneys (DCOZC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S629, "650°C Factory-Built Chimneys."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "650 Degree-Celsius Factory-built Chimney."

Chimney Connectors and Accessories (DDCYC)

GENERAL

This category covers chimney connectors consisting entirely of factory-made parts designed to be assembled without field fabrication.

These connectors are suitable for use with gas, oil or solid-fuel-fired appliances normally producing flue gases of 650°C or less. Chimney connectors should not penetrate combustible walls or ceilings and are not intended to be enclosed.

Chimney connector wall thimbles consist of a metal flue gas conveying conduit section, protected insulation and/or radiation shields. These wall thimbles are suitable for completion of connections through a combustible wall to a masonry chimney inlet. They are suitable for use with gas, oil and solid-fuel-fired residential appliances.

Chimney Connectors and Accessories (DDCYC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Chimneys (DCOZC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S641, "Factory-Built Chimney Connectors and Wall Pass-Through Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Chimney Connectors and Accessories."

Low-heat Appliance Chimneys (DDXUC)

GENERAL

This category covers low-heat appliance chimneys suitable for use with residential appliances and building heating equipment which burn liquid fuel, natural gas or propane. They may also be used where Type B gas vents are permitted.

Residential appliances include ranges, space heaters, warm air furnaces, water heaters, hot water heating boilers and low-pressure steam heating boilers (not over 100 kPa). Building heating equipment includes steam boilers operating at not over 340 kPa, and boilers operating on any pressure over 340 kPa if not over 28 m^3 in size.

Except for installation in single- and two-family dwellings, factory-built chimneys that extend through any storey above that on which the connected appliance is located should be provided with enclosures having a fire-resistance rating equal to or greater than that of the floor or roof assemblies through which they pass.

Each chimney consists of one or more chimney sections, one or more support assemblies to be employed if the chimney is supported by roof, floor or ceiling joists, a clean-out tee, firestop spacers (where required) to be employed at each floor and ceiling penetrated if a support is not installed at that location, and a roof assembly.

Certification of a factory-built chimney is based on the use of ULC labelled components specifically certified for the particular chimney and manufacturer. The performance of the assembly may be affected if the combination of these parts is not used in actual building construction.

These chimneys are intended to be installed to provide clearances to combustible material not less than that specified in the individual certifications, on the Master label, and in the installation instructions. Clearances at floors, joists and ceilings are intended to be those established by the installation of factory-furnished support and firestop spacers. Unless otherwise indicated in the individual certifications, these chimneys may extend from the basement or first floor through the floors, ceilings, and roof of the building. Portions of the chimney that may extend through accessible spaces should be enclosed in all cases to avoid personal contact with, and damage to, the chimney. Installation instructions are provided with each assembly.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Chimneys (DCOZC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S604, "Factory-Built Type A Chimneys."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low-heat Appliance Chimney."

Lining Systems for Masonry Chimneys, Factory-built Chimneys and Vents (DDZRC)

GENERAL

This category covers lining systems for installation in new or existing masonry chimneys, factory-built chimneys and vents as indicated in the individual certifications. Chimneys and vents equipped with these lining systems are suitable for the venting of combustion products from residential appliances burning gas, oil, or solid fuel as indicated in the individual certifications.

Residential appliances include fireplaces, space heaters, and central-heating furnaces and boilers.

Each lining system consists of a conduit, either continuous or in sections, designed to be installed as an integral part of a new chimney, or to be

Lining Systems for Masonry Chimneys, Factory-built Chimneys and Vents (DDZRC)−*Continued*

inserted as a retrofit in an existing chimney together with components such as inlet tees, roof flashings and raincaps, as indicated in the individual certifications.

Certification of the lining system is based on the use of ULC labelled components specifically certified for the particular lining system and manufacturer. The performance of the assembly may be affected if the combination of these parts is not used. Installation instructions are provided with each assembly. Installation of lining systems designed for new chimney use should be performed only by skilled masons in chimneys conforming to the requirements of the ''National Building Code of Canada.''

ADDITIONAL INFORMATION

For additional information, see Chimneys (DCOZC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S635, ''Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents,'' and CAN/ULC-S640, ''Lining Systems for New Masonry Chimneys.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lining System for Masonry Chimneys, Factory-built Chimneys and Vents.''

FIREPLACES (DEETC)

GENERAL

This category covers factory-built fireplaces, which consist of a fire chamber assembly, chimney sections, a roof assembly, and other parts, such as 15 and 30° elbows, as designated in the individual certifications. The label on the fire chamber identifies the chimney and other parts which are certified for use with that unit. The use of other chimneys or parts, whether certified or not, may be hazardous and automatically voids the certification. Firestops or firestop spacers are included and are intended to be employed at joist areas where the fireplace chimney extends through floors and ceilings. These parts are designed to be assembled with their companion parts of the same make and model or as certified. Fireplaces are intended for installation in buildings to burn solid fuels commonly used in fireplaces.

Each factory-built fireplace which, in addition, is designed for installation in mobile homes, is similar to an assembly for use in conventional construction with the addition of means for securing to the mobile home structure and for obtaining combustion air from outside of the living space. Such fireplaces are supplied with doors or screens which can effectively close the fireplace opening.

These fireplaces are intended for installation at the clearances indicated in the individual certifications and may be located at any floor level (with the exception of mobile homes) with the chimney extending essentially vertically upward through the floors, ceilings and roof to a height not greater than that indicated in the individual certifications. Elbows (offsets) are intended to be used only as shown in the individual certifications. The minimum height of the chimney outlet above the base of the fireplace for installation in conventional construction should not be less than 4.5 m and for mobile home installation not less than 3.2 m unless otherwise indicated in the individual certifications.

The fire chamber assembly is designed to be installed directly upon and adjacent to combustible building construction. Unless installed with labelled wall shields, the minimum distance from the edge of the fireplace opening to any adjacent combustible wall at right angles to the face of the fireplace should not be less than 900 mm. Where the floor in front of the fireplace is of combustible construction, labelled hearth extensions supplied by the manufacturer are intended to be employed unless exempted in the individual certifications. Noncombustible surface materials may be installed over the hearth extensions. The chimney sections are to be installed to provide clearance to combustible material not less than that specified in the individual certifications and on the chimney sections. If the fireplace chimney is designed to extend through floors and ceilings, the clearances to the floor and ceiling constructions are intended to be those established by the installation of the designated factory-furnished firestops or firestop spacers. Portions of the chimney that may extend through spaces used for living quarters or storage should be enclosed to avoid personal contact with, and damage to, the chimney.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

Fireplaces (DEETC)−*Continued*

The basic standard used to investigate products in this category is CAN/ULC-S610, ''Factory-Built Fireplaces.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fireplace.''

Fireplace Inserts (DEAZC)

GENERAL

This category covers fireplace inserts, which are appliances intended for installation within the fire chamber spaces of masonry fireplaces. They may incorporate complete fire chambers or utilize parts of the fireplace chamber.

These inserts are intended to be installed only in fireplaces complying with the ''National Building Code of Canada,'' and vented by masonry chimneys or 650°C factory-built chimneys. Modifications to the fireplace may be required to achieve the necessary hearth extension and clearances to combustible material specified in the individual certifications.

Optional blowers and glazed screens may be fitted as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Fireplaces (DEETC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S628, ''Fireplace Inserts.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fireplace Insert.''

Liners for Masonry Fireplaces (DEHXC)

GENERAL

This category covers liners intended for use in masonry fireplaces. Each completed liner consists of a back wall, side walls and dome to form the interior portion of a masonry fireplace. A damper, if incorporated, is intended to be a part of the liner. Where air circulation is used to cool the fire chamber, inlet and outlet grilles form part of the certified product. A label on the fire chamber describes the chimney and other parts that are required to complete the installation. The use of parts other than those indicated on the label may be hazardous and will void the certification. Fireplace liners are intended for installation in buildings to burn solid fuels commonly used in fireplaces.

The minimum height of the chimney outlet above the base of the fireplace should not be less than 4.5 m unless otherwise indicated in the individual certifications.

The steel liner assembly is designed for inclusion only in masonry fireplaces conforming to the ''National Building Code of Canada.'' The chimney may be of either conventional tile-lined masonry or a suitable factory-built chimney. Unless installed with labelled wall shields, the minimum distance from the edge of the fireplace opening to any adjacent combustible wall at right angles to the face of the fireplace should not be less than 900 mm. Where the floor in front of the fireplace is of combustible construction, labelled hearth extensions supplied by the manufacturer are to be employed unless exempted in the individual certifications. Noncombustible surface materials may be installed over the hearth extensions.

ADDITIONAL INFORMATION

For additional information, see Fireplaces (DEETC) and Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S639, ''Steel Liner Assemblies for Solid-Fuel Burning Masonry Fireplaces.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Liner for Masonry Fireplaces.''

GAS VENTS (DFFZC)

GENERAL

This category covers vents consisting entirely of factory-made parts. The parts of each model of vent are designed to be assembled with other parts of that model without requiring field fabrication.

Except for installation in single- and two-family dwellings, gas vents that extend through any storey above that on which the connected appliance is located should be provided with enclosures having a fire-resistance rating equal to or greater than that of the floor or roof assembly through which they pass.

Each vent consists of one or more vent sections, a support assembly, firestop spacers to be employed as indicated below, and a roof or termination assembly. Draft hood adapters, elbows and other special fittings may also be provided.

Certification of a gas vent is based on the use of ULC labelled components specifically certified for that particular vent and manufacturer. The performance of the assembly may be affected if the combination of these parts is not used in actual building construction.

Unless otherwise indicated in the individual certifications, these vents are certified only for installation within buildings where they may extend from the basement or first floor through the floors, ceilings, and roof of the building. Portions of the vent that may extend through accessible spaces should be enclosed to avoid personal contact with, and damage to, the vent. That part of the vent which extends above the roof line and those vents certified for exterior use are inherently corrosion resistant or specially coated to resist corrosion. Installation instructions are provided with each assembly.

Vent Types

Gas vents are classified as ''Type B,'' ''Type BW'' or ''Type BH,'' and are so marked on the ULC Master and Material labels.

Type B gas vents are only for venting approved gas appliances with draft hoods as permitted by the Authority Having Jurisdiction, but are not intended for venting recessed heaters, incinerators and appliances required to be connected to chimneys. Unless otherwise indicated in the individual certifications, Type B gas vents are for single- and multi-storey buildings.

Type B gas vents are intended for installation with clearances to combustible construction not less than that specified in the individual certifications and on the ULC Master label and installation instructions. Also, oval Type B gas vents may be installed centrally within a wall space between 50 mm by 100 mm or 50 mm by 150 mm studs, spaced at 400 mm centres. When so installed, the clearance, when less than 25 mm, is intended to be as established by the integral spacers at each vent pipe joint and by the firestop spacers furnished with the vent. The firestop spacers should be placed at the level of each ceiling or floor penetrated by the vent.

Type BW gas vents are only for venting approved vented recessed heaters having inputs not greater than that specified in the individual certifications. These vents are intended to be installed with a solid header plate to serve as a firestop at that point. These vents include provision for direct attachment to the header plate flue outlet of the heater and are suitable for installation in walls and partitions of buildings when the vents are centrally located directly above vented recessed heaters within the space between two studs, 50 mm by 100 mm or larger, and 400 mm on centres. The clearance between the vent and interior surfaces of the wall or partition should not be less than that determined by the header plate, ceiling plate-spacers, firestop spacers, and the integral spacers at each vent pipe joint. The stud space in which the vent is installed should be ventilated at the first ceiling level penetrated by the vent by installation of the ceiling plate-spacers furnished with vent.

Firestop spacers are intended to be placed at each subsequent ceiling or floor level penetrated by the vent. Type BW gas vents should be installed only in the vertical plane. Elbows and horizontal runs are prohibited. Type BW gas vents may be continued through the roof by properly installed Type B gas vents or may be connected to chimneys.

Type BH gas vents are only for venting approved gas appliances intended for negative or positive pressure venting producing flue gases having temperatures specified below.

Class I venting systems are suitable for gas-fired appliances producing flue gas temperatures of more than 135°C but not more than 245°C.

Class II venting systems are suitable for gas-fired appliances producing flue gas temperatures of 135°C, or less, and are classified into four temperature ratings:

A – Up to and including 65°C
B – Up to and including 90°C
C – Up to and including 110°C
D – Up to and including 135°C

Type BH gas vents are intended for installation with clearances to combustible construction not less than that specified in the individual certifications and on the ULC label and installation instructions.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

CHIMNEYS, VENTS, FIREPLACES, SPACE HEATERS AND ASSOCIATED EQUIPMENT (DCBRC)

Gas Vents (DFFZC)−*Continued*

The basic standards used to investigate products in this category are CAN/ULC-S605, ''Gas Vents,'' and ULC-S636, ''Type BH Gas Venting Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas Vent.''

LOW-TEMPERATURE TYPE L VENTS (DFTXC)

GENERAL

This category covers low-temperature Type L vents, which consist entirely of factory-made parts. The parts of each model of each vent are designed to be assembled with the other parts of that model without requiring field fabrication.

Each Type L vent consists of one or more sections, a support assembly, a cleanout tee, firestop spacers to be employed at each floor and ceiling penetrated if a support assembly is not provided at that location, and a roof assembly.

Certification of a Type L vent is based on the use of ULC labelled components specifically certified for the particular system and manufacturer. The performance of the assembly may be affected if the combination of these parts is not used in actual building construction.

Type L vents are intended for use with gas and oil appliances certified as suitable for venting with Type L vents. They may also be used where Type B gas vents are permitted.

Unless otherwise indicated in the individual certifications, these vents may extend from the basement or first floor through the floors, ceilings and roof of the building. Portions of the vent that may extend through accessible spaces should be enclosed in all cases to avoid personal contact with, and damage to, the vent. Except for installation in single- and two-family dwellings, Type L vents that extend through any storey above that on which the connected appliance is located should be provided with enclosures having a fire-resistance rating equal or greater than that of the floor and roof assemblies through which they pass. Installation instructions are provided with each assembly.

Type L vents should be installed to provide clearances to combustible construction not less than that specified in the individual certifications, on the ULC Master label and on the installation instructions. Clearances at floors, joists and ceilings are intended to be those established by the installation of factory-furnished support and firestop spacers.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S609, ''Low Temperature Type L Vents.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Low-temperature Type L Vent.''

PELLET VENTS (DFVAC)

GENERAL

This category covers pellet vents suitable for connection to ULC certified automatically fuelled, particulate-solid-fuel-burning residential appliances where the flue gas temperatures do not exceed 300°C.

Except for installation in single- and two-family dwellings, pellet vents that extend through any storey above that on which the connected appliance is located should be provided with enclosures having a fire-resistance rating equal to or greater than that of the floor or roof assemblies through which they pass.

Each pellet vent consists of one or more vent sections, one or more support assemblies to be employed if the vent is supported by roof, floor or ceiling joists, a clean-out tee, firestop spaces (where required) to be employed at each floor and ceiling penetrated if a support is not installed at that location, and a roof assembly.

Pellet vents certified as suitable for penetration of a combustible exterior wall incorporate a specific use labelled wall thimble assembly.

Certification of a pellet vent is based on the use of ULC labelled components specifically certified for the particular vent and manufacturer. The performance of the assembly may be affected if the combination of these parts is not used in actual building construction.

These pellet vents should be installed to provide clearances to combustible material not less than specified in the individual certifications, on the

Pellet Vents (DFVAC)−*Continued*

master label, and in the installation instructions. Clearances at floors, joists and ceilings are intended to be those established by the installation of factory-furnished support and firestop spacers. Unless otherwise indicated in the individual certifications, these pellet vents may extend from the basement or first floor through the floors, ceilings and roof of the building. Portions of the vent that may extend through accessible spaces should be enclosed to avoid personal contact with and damage to the vent. Installation instructions are provided with each assembly.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C441, ''Pellet Vents.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Pellet Vent.''

MISCELLANEOUS EQUIPMENT (DFVMC)

Heat Shields for Heat-producing Appliances (DFVTC)

USE AND INSTALLATION

This category covers heat shields intended for use with heat-producing appliances and flue connectors for the reduction of required clearances to combustible construction.

Heat shields are intended to be attached to the combustible construction or to the flue connector, as indicated in the individual certifications.

Floor protectors are intended to provide an alternate to 9 mm-thick noncombustible material (or 6 mm covered with sheet metal), as required for ember protection beneath appliances certified for installation on combustible floors.

If indicated in the individual certifications, heat shields may also be employed as floor protectors.

Heat shields and floor protectors are intended to be installed in accordance with the instructions provided with each product.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S632, ''Heat Shields.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Heat Shield for Heat Producing Appliances.''

Solid-fuel-burning-appliance Accessories (DGOUC)

USE AND INSTALLATION

This category covers solid-fuel-burning-appliance accessories consisting of factory-made parts, components or products designed to be assembled, installed or used without field fabrication or modification.

These accessories are intended for use with designated solid-fuel-fired appliances, such as space heaters and fireplaces, as indicated in the individual certifications. The accessories are intended to be installed or used in accordance with the installation or use instructions provided with the product.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C127, ''Composite Fire-Logs.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Solid Fuel Burning Appliance Accessory.''

SPACE HEATERS (DGPVC)

Solid-fuel-fired Space Heaters (DGQBC)

GENERAL

This category covers solid-fuel-fired space heaters, which encompass a variety of freestanding appliances designed for heating their immediate surroundings by radiation and convection without the use of ducting or other supplementary distribution equipment. Those appliances also designed for cooking purposes may be designated in the individual certifications as stoves.

These heaters are designed to operate with their combustion zone normally enclosed. They are designed to burn wood, coal or other solid fuels and may be provided with accessories for the burning of liquid or gaseous fuels as indicated in the individual certifications. They are intended to be connected to separately installed factory-built chimneys or masonry chimneys. Unless otherwise indicated in the individual certifications, the overall chimney height, from the base of the heater, should not be less than 4.5 m. These heaters are suitable for installation at any floor level and are to intended be placed on noncombustible floors or combustible floors provided with noncombustible pads of a type and size described in the individual certifications. The clearances to combustible construction are as indicated for each heater in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Vents, Fireplaces, Space Heaters and Associated Equipment (DCBRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S627, ''Space Heaters for Use with Solid Fuels.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Solid Fuel Fired Space Heater.''

PROTECTIVE COATINGS (DSMZC)

PROTECTIVE COATINGS FOR UNDERGROUND STEEL TANKS (DSNQC)

USE

This category covers paint-like compounds for application, as indicated in the individual certifications, to the exterior surfaces of new steel tanks for the storage of flammable and combustible liquids. They are intended for application to specially prepared surfaces in accordance with the manufacturer's instructions. The use of these coatings is intended to reduce corrosion of the tanks to a low level and, in consequence, reduce the potential fire and environmental hazards associated with the seepage of flammable liquids into the surrounding soil. Coatings certified for application to exterior surfaces of underground tanks are used in conjunction with cathodic protection.

REQUIREMENTS

The basic standard used to investigate products in this category is Part 1 of CAN/ULC-S603.1, ''External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Protective Coating for Underground Steel Tanks.''

COMPUTER PROGRAMS (DVQAC)

SIGNAL RECEIVING CENTRE AUTOMATION SOFTWARE (DAXWC)

GENERAL

This category covers signal receiving centre automation computer programs used by Listed fire and burglar alarm signal-receiving centres to automate the processing of various types of signals received from certificated fire and burglar alarm installations.

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S301, ''Central and Monitoring Station Burglar Alarm Systems,'' and CAN/ULC-S561, ''Installation and Services for Fire Signal Receiving Centres and Systems.''

Signal Receiving Centre Automation Software (DAXWC)−*Continued*

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

CONTAINMENT PRODUCTS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS (ECPRC)

This category covers specially designed receptacles intended for flammable liquids, hazardous waste, etc.

BULK CONTAINERS, NONMETALLIC, FOR COMBUSTIBLE AND NON-COMBUSTIBLE LIQUIDS (ECQQC)

USE AND INSTALLATION

This category covers nonmetallic containers of the non-pressure type intended to bulk store and dispense combustible (such as new lubricating oil) or non-combustible (such as windshield washer, anti-freeze, etc.) liquids. These containers may be of single-wall construction or with secondary containment that dispense liquids by means of gravity or by a non-pressure hand or air-operated pump.

The containers are intended for aboveground stationary installation only and may be covered under Part 4 of the ''National Fire Code of Canada,'' or the regulations of the Authority Having Jurisdiction.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C142.14, ''Nonmetallic Bulk Containers for the Storage and Dispensing of Combustible and Non-Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Nonmetallic Bulk Container for Combustible and Non-Combustible Liquids.''

CARGO TANKS, FLAMMABLE LIQUID (ECSTC)

Accessories, Cargo Tank, Flammable Liquid (ECSWC)

Emergency Valves (ECSZC)

USE

This category covers valves intended for use in product discharge piping of flammable liquid cargo tanks to prevent accidental escape of the tank contents when the piping is subjected to impact. A shear section located outboard of the emergency valve seat is designed to break away, leaving the valve closed or, if it is open, resulting in its closure and containment of the product.

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-B621, ''Selection and Use of Highway Tanks, Portable Tanks, Cargo Compartments, and Containers for the Transportation of Dangerous Goods, Classes 3, 4, 5, 6.1, 8, and 9.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Emergency Valve.''

Emergency Vents (ECTEC)

USE

This category covers closures for road transport cargo tanks designed to provide positive venting of a tank compartment during underbody loading and discharging. They also serve as emergency vents in the event of upset and external fire exposure.

Emergency Vents (ECTEC)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-B620, ''Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Emergency Vent.''

Manhole Cover and Vent Assemblies (ECTLC)

USE

This category covers closures for the compartments of flammable and combustible liquid cargo tanks. Primarily, they afford access to the tank compartment for filling, cleaning and inspection operations. When closed, they provide venting of the compartment to accommodate changes in temperature and barometric pressure. In the event of vehicle upset, they are intended to prevent excess spillage of the product; but, should the compartment become involved in a fire, they are capable of venting the compartment contents at pressures between 21 and 35 kPa at the maximum flow rate indicated in the individual certifications.

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-B620, ''Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Manhole Cover and Vent Assembly.''

PORTABLE TANKS, CONTAINERS AND CANS (ECTXC)

This category covers metallic and nonmetallic portable cans, containers and tanks, typically of smaller size and intended for the short-term storage and transport of fuels, chemicals, or similar flammable and/or combustible liquids. Reusable types are intended for continuous fill/withdraw cycles with the general liquids as indicated in the individual Listings.

Portable tanks are typically in a capacity range of 60 – 660 gal (228 – 2500 L), are not transportable without the use of equipment, and may have integral wheels, hand pumps or other accessories. Portable tanks are primarily intended to store and/or transfer flammable and combustible liquids in commercial applications, and are reusable.

Portable containers are typically in a capacity range of 8.0 – 60 gal (30 – 228 L), are transportable without the use of equipment, and may have integral wheels, handles, or other accessories. Containers are primarily intended to store and/or transfer flammable and combustible liquids in commercial applications, and are reusable.

Portable cans are typically in a capacity range of 1.0 – 8.0 gal (3.8 – 30 L) and are hand-held products with integral closures and spouts. Cans are primarily intended to transport fuel between a supply source and point of use, may be for general consumer use or special commercial use.

This category does not cover bulk containers, portable tanks or similar products intended for the commercial transport of liquid commodities by truck, rail or ship (as defined by Section 4.2.3 of the ''National Fire Code of Canada,'' in accordance with TC SOR/2008-34, ''Transportation of Dangerous Goods Regulations (TDGR),'' CSA B620, ''Highway Tanks and TC Portable Tanks for the Transportation of Dangerous Goods,'' or the ''UN Recommendations on the Transport of Dangerous Goods,'' Part 6, ''Requirements for the Construction and Testing of Packagings, Intermediate Bulk Containers (IBCs), Large Packagings, Tanks and Bulk Containers'').

This category does not cover intermediate bulk containers (IBCs) or similar products Classified for fire resistance and intended for storage in flammable liquid storage warehouses with fire-suppression systems.

Consumer-use Fuel Cans (ECYTC)

GENERAL

This category covers portable, reusable, metal and plastic consumer-use cans intended for the containment and handling (filling, temporary transport, protected storage and dispensing) of up to 25 L (6.6 gal) of general-use fuels for consumer-type motor vehicles, equipment powered by small engines, and portable heaters.

The basic product construction consists of a single- or dual-compartment body with integral handle, openings, and removable closures/spout. Dual-compartment cans are intended to store fuel in the larger compartment, and oil in the smaller compartment.

Consumer-use Fuel Cans (ECYTC)−*Continued*

These products are intended only for CAN/CGSB fuels dispensed at commercial fueling stations as identified under **TYPES AND RATINGS** below, and where filled in accordance with Part 4 of the "National Fire Code of Canada," the regulations of the Authority Having Jurisdiction, and the manufacturer's instructions.

These products have not been investigated for hazards associated with vehicle transport between fueling stations and point of use. These products have also not been investigated for effectiveness of child-resistant closures, or measured for vapor-permeation rates associated with air-quality regulations.

These products are not intended for regular transport, outdoor storage, or for use as marine fuel cans, special-purpose cans or safety cans that may have different applications and/or liquid ratings.

TYPES AND RATINGS

Petroleum fuel (red) — Investigated to CSA B376, "Portable Containers for Gasoline and Other Petroleum Fuels," and intended for one of the following petroleum fuel Class and Types.

Flammable-spark-ignition automotive fuels such as gasoline and low-blend ethanol (max E10) compliant with CAN/CGSB 3.511, "Oxygenated Automotive Gasoline Containing Ethanol," and gas/oil mixtures for 2-cycle engines. Dual-compartment cans are intended for separate storage of gas and oil.

Combustible-compression-ignition automotive fuels such as diesel and low-blend biodiesel (max B5) compliant with CAN/CGSB 3.517, "Automotive (On-Road) Diesel Fuel," CAN/CGSB 3.520, "Automotive Diesel Fuel Containing Low Levels of Biodiesel (B1 – B5)," or CAN/CGSB 3.6, "Off-Road Diesel Fuel." Dual-compartment cans are intended for separate storage of diesel and oil.

Kerosene (blue) — Investigated to CSA B376 and intended only for combustible heating-appliance fuels such as K1 or K2 compliant with CAN/CGSB 3.3, "Kerosene."

RELATED PRODUCTS

Safety-type flammable and combustible liquids cans investigated to ULC/ORD-C30, "Safety Containers," are covered under Safety Cans (EDBYC).

ADDITIONAL INFORMATION

For additional information, see Portable Tanks, Containers and Cans (ECTXC) and Containment Products for Flammable and Combustible Liquids (ECPRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B376 (1980), "Portable Containers for Gasoline and Other Petroleum Fuels."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Metal Container for Petroleum Fuels" or "Portable Plastic Container for Petroleum Fuels."

Portable Plastic Containers for Petroleum Fuels (EDOWC)

GENERAL

This category covers portable plastic or metal containers up to 25 L capacity, intended for the storage and handling of small quantities of petroleum fuels. These containers are not intended to be used as a substitute for metal safety cans.

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-B376, "Portable Containers for Gasoline and Other Petroleum Fuels."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Plastic Container for Petroleum Fuels."

Manual Pumps for Use with Portable Containers for Petroleum Fuels (EDOZC)

USE

This category covers manual pumps for use with portable containers intended to be used with liquid petroleum fuels, such as gasoline, diesel or kerosene. The intended use of this pump is to transfer petroleum fuel from a certified portable container, with a maximum capacity of 25 L, to equipment such as chain saws, lawn mowers, lawn tractors and yard maintenance equipment that would normally be refueled from a portable gasoline container.

Manual Pumps for Use with Portable Containers for Petroleum Fuels (EDOZC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Portable Plastic Containers for Petroleum Fuels (EDOZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C79.1-04, "Manual Pumps for Use with Liquid Petroleum Fuels."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manual Pump for Use with Portable Containers for Petroleum Fuels."

Aboveground Nonmetallic Tanks for Combustible and Noncombustible Liquids (EDXWC)

GENERAL

This category covers stationary nonmetallic, atmospheric-type tanks intended for the indoor aboveground storage of up to 2500 L (660 gal) of Class IIIB combustible liquids or noncombustible liquids (as identified under **TYPES AND RATINGS** below) typically used in commercial or industrial applications.

The basic product construction consists of a plastic single-compartment vessel provided with openings (fill, vent, dispensing, etc.), dispensing system (hand- or air-operated pump, or gravity-feed valve/hose) and other optional accessories (supports, gauges, filters, drip pan, transfer can, etc.) as identified in the individual Listings.

These products are intended to be used in accordance with Part 4 of the "National Fire Code of Canada," regulations of the Authority Having Jurisdiction, and the manufacturer's instructions.

These products are not intended for use as process vessels, bulk shipping containers or portable transfer tanks that have different applications and/or liquid ratings.

TYPES AND RATINGS

($) Gravity-flow Type — Tank provided with a shutoff valve with hose or nozzle to control dispensing of combustible liquids[#] or noncombustible liquids* from the bottom of the tank.

($) Hand- or Air-pump Type — Tank provided with a hand- or air-operated pump with hose or nozzle to control dispensing of combustible liquids[#] or noncombustible liquids* from the top of the tank.

($) Containment Type — "Primary" or "Secondary" as applicable, where:

Primary = Single-wall construction that provides primary containment of, and emergency venting for, the stored liquid.

Secondary = Double-wall construction (primary within an additional shell) that provides secondary containment of, emergency venting for, and monitoring of any leaks from the primary into the interstitial space.

[#] Combustible liquids = Limited to Class IIIB combustible liquids such as processed petroleum oils (new or used lube, hydraulic, machine, or similar oils), processed plant oils (new or used soy, canola, palm, or similar oils), or other oils chemically similar to the representative test liquids.

* Noncombustible liquids = Limited to noncombustible liquids that were specifically investigated under the individual Listings. These can include, but are not limited to, windshield washer fluid, diesel exhaust fluid, detergent solutions, brine solutions, or antifreeze.

RELATED PRODUCTS

Medium-size plastic and composite nonmetallic tanks for oil-burner fuels and other combustible liquids are covered under Aboveground Nonmetallic Tanks for Oil Fuel (EFNIC).

ADDITIONAL INFORMATION

For additional information, see Portable Tanks, Containers and Cans (ECTXC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C142.14, "Nonmetallic Bulk Containers for the Storage and Dispensing of Combustible and Non-Combustible Liquids."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Bulk Container for Combustible and Noncombustible Liquids."

SAFETY CANS (EDBYC)

GENERAL

This category covers portable, reusable metal or plastic safety cans intended for containment and handling (filling, temporary transport, protected storage and dispensing) of up to 25.0 L (6.6 gal) or hazardous liquids (as identified under **TYPES AND RATINGS** below), typically used in commercial applications. The basic product construction consists of a single-compartment body with integral handle, pressure relief, openings, lids, spouts, strainers, and other features identified under **TYPES AND RATINGS** below.

These products are intended for filling and use in accordance with Part 4 of the ''National Fire Code of Canada,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' regulations of the Authority Having Jurisdiction, and the manufacturer's instructions.

These products have not been investigated for hazards associated with vehicle transport and commercial operations or processes. These products have also not been investigated for effectiveness of child-resistant closures, or measured for vapor-permeation rates associated with air-quality regulations.

These products are not intended for regular transport, outdoor storage, or use as TC safety cans, consumer fuel cans, marine fuel cans or special-purpose cans that may have different applications and/or liquid ratings.

TYPES AND RATINGS

Type I — Cans from 0.5 L to 25 L provided with a single combined opening with short-valved spout and self-closing cap adapted for both pour and fill operations.

Type II — Cans from 5.0 L to 25 L provided with separate openings for fill (with self-closing vent cap) and pour (with self-closing nozzle) operations.

Plastic — Intended only for general-use fuels[#] for motor vehicles, equipment powered by engines, and portable heaters.

Metal — Intended for general-use fuels[#] and similar liquids* used in commercial applications.

[#] General-use fuels = Commercially available fuels covered by and compliant with CAN/CGSB fuel specifications for general-purpose commercial engines (SI or CI) and heating/burning appliances, including CAN/CGSB 3.511 gasoline and gasohol blends (max E10); CAN/CGSB 3.517 on-road diesel, CAN/CGSB 3.520 low-sulfur diesel or CAN/CGSB 3.520 low-sulfur diesel with biodiesel (max B5); CAN/CGSB 3.2 heating oil; and CAN/CGSB 3.3 kerosene.

* Similar liquids = Any stable flammable or combustible liquid with chemical properties similar to the general-use fuels described and having generally accepted chemical compatibility with the metals used in the product, such as heptane, naptha, turpentine, acetone, ketone, etc.

RELATED PRODUCTS

General-use fuel cans investigated to CSA B376, ''Portable Containers for Gasoline and Other Petroleum Products,'' are covered under Consumer-use Fuel Cans (ECYTC).

ADDITIONAL INFORMATION

For additional information, see Portable Tanks, Containers and Cans (ECTXC) and Containment Products for Flammable and Combustible Liquids (ECPRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C30, ''Safety Containers.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Safety Can.''

Lighting Devices, Decorative (EDOAC)

USE

This category covers liquid- and solid-fuelled illuminating products, such as oil lamps and candles.

The lamps are typically designed to operate on oil contained in a pressureless can supplied with each lamp. Unless otherwise indicated in the individual certifications, such containers are nonrefillable. These lamps are intended for installation in public places as a decorative fixture.

The fuel containers are intended for storage in accordance with Part 10 of the ''National Fire Code of Canada.'' The candles, which are intended for outdoor use only, have been investigated for tip-over hazard only.

ADDITIONAL INFORMATION

For additional information, see Safety Cans (EDBYC).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lighting Device, Decorative.''

PORTABLE CONTAINERS (EDOQC)

TANKS FOR FLAMMABLE LIQUIDS (EDQXC)

Aboveground Tanks (EEEVC)

GENERAL

This category covers steel containers of the nonpressure type intended for the aboveground storage of flammable and combustible liquids, such as gasoline, fuel oil, and similar products. These tanks may be of single- or double-wall construction.

The following types of aboveground tanks are covered in this category:

- Horizontal Cylindrical
- Vertical Cylindrical
- Rectangular

Rectangular tanks include ''Workbench Tanks'' for the combined use as a working surface and storage of lubricating oils, and ''Generator Base Tanks'' incorporated into the support structure of diesel engine generators for the storage of the generator's fuel supply.

Provision is made for monitoring the interstitial space of double-wall tanks by vacuum or mechanical (sump) means, and for emergency relief of excess pressure in the interstitial space.

These tanks are intended for aboveground stationary installation only. Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S601, ''Shop Fabricated Steel Aboveground Tanks for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Aboveground Tank.''

Contained Aboveground Tank Assemblies (EEFLC)

GENERAL

This category covers contained and integral contained aboveground tank assemblies consisting of steel aboveground primary tanks intended for the storage of flammable and combustible liquids within steel secondary containments.

This category also covers secondary containments for aboveground primary tanks for the storage of flammable and combustible liquids intended as retrofit assemblies for existing tanks having maximum 5000 L capacities. They consist of vented steel enclosures having capacities of not less than 110% of the total capacities of the primary storage tanks, maximum 5000 L, for which they are designed.

The design of the contained and integral contained-tank assemblies and secondary containment are such that they are capable of accommodating most forms of leakage from the tanks. The use of such a tank assembly or secondary containment to substitute for conventional dyking requirements is dependent on the appropriate installation code and the Authority Having Jurisdiction.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Aboveground Tanks (EEEVC).

REQUIREMENTS

The basic standard used to investigate contained tank assemblies in this category is CAN/ULC-S653, '' Aboveground Steel Contained Tank Assemblies for Flammable and Combustible Liquids.''

The basic standard used to investigate integral contained tank assemblies in this category is CAN/ULC-S601, ''Standard for Shop Fabricated Steel Aboveground Tanks for Flammable and Combustible Liquids.''

The basic standard used to investigate secondary containments for aboveground primary tanks in this category is ULC/ORD-C142.20, ''Secondary Containments for Aboveground Flammable and Combustible Liquid Storage Tanks.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Contained Aboveground Tank Assembly.''

Encased Aboveground Tank Assemblies (EEFQC)

USE

Encased Aboveground Tank Assemblies (EEFQC)−*Continued*

This category covers concrete-encased aboveground tank assemblies intended for the outdoor storage of flammable and combustible liquids. The design provides a containment that is capable of accommodating most forms of leakage from the tanks and, in addition, affords a degree of protection against impact, vandalism and external fire. The use of such an assembly to substitute for conventional dyking requirements is dependent on the appropriate installation code and the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Aboveground Tanks (EEEVC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C142.5, ''Aboveground Concrete Encased Tank Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Encased Aboveground Tank Assembly.''

Protected Aboveground Tank Assemblies (EEGLC)

GENERAL

This category covers protected aboveground tank assemblies intended for the outdoor storage of flammable and combustible liquids. The design provides a secondary containment that is capable of containing most forms of leakage from the tanks and, in addition, an encasement that affords a degree of protection against vehicle impact, small arms attack, and external fire.

In assessing resistance to fire, tests are conducted in a furnace environment where the temperatures are controlled on either a standard time temperature curve (1010°C after 2 h) or a rapid rise temperature curve (1093°C after 3 minutes). Compliance is indicated in the individual Listings.

The use of such an assembly to substitute for conventional dyking requirements is dependent on the appropriate installation code and the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Aboveground Tanks (EEEVC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S655 (1998), ''Aboveground Protected Tank Assemblies for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Protected Aboveground Tank Assembly.''

Special-purpose Aboveground Tanks (EFVTC)

USE

This category covers tanks intended for specific applications as described in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Aboveground Tanks (EEEVC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C142.17, ''Special Purpose Relocatable Aboveground Vertical Tanks for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Special Purpose Aboveground Tank.''

Oil-water Separators, Aboveground (EGZIC)

GENERAL

This category covers oil/water separators intended to separate oil and other liquid and solid hydrocarbons from water by the influence of gravity screens and baffles. The devices are similar in materials and methods of construction to tanks and are intended for aboveground installations in accordance with the requirements of the Authority Having Jurisdiction.

Oil/water separators are coated internally with a ULC labelled corrosion retardant and fuel-resistant coating.

The effectiveness of the oil/water separation function has not been investigated except when specifically referenced in the individual certifications.

Oil-water Separators, Aboveground (EGZIC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Aboveground Tanks (EEEVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S656, ''Oil-Water Separators.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Oil-Water Separator, Aboveground.''

Utility Tanks, Aboveground (EEGXC)

GENERAL

This category covers steel tanks of the nonpressure type that are intended for the aboveground storage of flammable and combustible liquids, such as gasoline, fuel oil and similar products. These tanks are designed to allow for relocation as required by their intended service. They have individual capacities up to 5000 L.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S601, ''Shop Fabricated Steel Abveground Tanks for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Utility Tank, Aboveground.''

Tanks for Used Oil (EEINC)

GENERAL

This category covers tanks intended for the storage, collection and removal of used oil and other similar products. These tanks may be of single, double wall, contained or integral construction. They may be provided with means for manual filling and incorporate lockable fill openings.

These tanks are of a nonpressure type and are intended for stationary installation in accordance with the requirements specified by the Authority Having Jurisdiction.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S652, ''Tank Assemblies for the Collection, Storage and Removal of Used Oil.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Tank for Used Oil.''

Tanks for Fuel Oil and Lubricating Oil, Aboveground Steel (EFGRC)

USE AND INSTALLATION

This category covers aboveground steel tanks of the nonpressure type having capacities not exceeding 2,500 L, intended for the storage of fuel oil and lubricating oil.

These tanks are intended for installation inside or outside buildings. Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S602, ''Aboveground Steel Tanks for Fuel Oil and Lubricating Oil.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Aboveground Steel Tank for Fuel Oil and Lubricating Oil.''

Aboveground Nonmetallic Tanks for Oil Fuel (EFNIC)

GENERAL

Aboveground Nonmetallic Tanks for Oil Fuel (EFNIC)−*Continued*

This category covers aboveground nonmetallic tanks of the nonpressure type intended for installation inside or outside buildings for the storage and supply of fuel oil. They are intended for stationary installations and use in accordance with Part 4 of the ''National Fire Code of Canada,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' and regulations of the Authority Having Jurisdiction.

They may be constructed either as single wall or tanks with secondary containment.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C80.1, ''Aboveground Non-Metallic Tanks for Fuel Oil.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Aboveground Non-Metallic Tank for Oil Fuel.''

Underground Tanks (EGHXC)

GENERAL

This category covers shop-fabricated horizontal cylindrical tanks intended for the fixed underground storage of noncorrosive, stable, flammable and combustible liquids at atmospheric pressure in capacities of up to 250,000 L (66,045 U.S. gal) and diameters of up to 4.0 m (13.1 ft). The combinations of construction materials, containment types, designs, options and liquid ratings are described under **TYPES AND RATINGS** below.

These tanks are intended for installation and use in accordance with Part 4 of the ''National Fire Code of Canada,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' API 1615, ''Installation of Underground Petroleum Storage Systems,'' ''CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products,'' and/or other requirements of the Authority Having Jurisdiction, and the manufacturer's instructions.

These tanks are provided with one or more containment shells and/or compartments, top openings for pipe connections (for fill, withdraw, monitor, etc.), striker plates, and may optionally be provided with manway openings, connecting rings and lift lugs. Access risers, sumps, piping and other accessories that may be connected to the tank are not covered under this category.

These tanks are not provided with an internal-corrosion-protection, upgrade or lining system investigated by UL, and do not cover field erected or refurbished types, pressure vessels or processing applications that may occur in tanks.

TYPES AND RATINGS

The tank materials, containment types, designs, options and liquid ratings, as indicated in the individual Listings, are defined as follows:

(+) ''Steel'' or ''Fiberglass'' tank material identification as applicable, and

(++) ''Secondary Containment'' or ''Double Wall'' as applicable per the appropriate standard's engineering markings.

Steel Tanks

These are all-steel tanks constructed and investigated to ULC-S603, ''Steel Underground Tanks for Flammable and Combustible Liquids,'' and are not provided with an external corrosion-protection system investigated by UL. These tank constructions may be primary (single wall) or secondary (double wall) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the **(*)** liquid ratings:

(+) underground tank for (*) — A steel primary-containment (single wall) tank with one or more compartments.

(+) (++) underground tank for (*) — A steel primary-containment tank directly (in contact with primary) or indirectly (separated by standoffs from primary) wrapped in a secondary-containment (double wall) steel shell to at least 300° and 100% of the heads. The external shell provides both secondary containment and interstitial monitoring.

Fiberglass Tanks

These are all-fiberglass tanks constructed and investigated to ULC-S615, ''Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids.'' These tank constructions may be primary (single wall) or secondary (double wall) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the **(#)** liquid ratings:

(+) underground tank for (#) — A fiberglass primary-containment (single wall) tank with one or more compartments.

(+) (++) underground tank for (#) — A fiberglass primary-containment tank directly (in contact with primary) or indirectly (separated by standoffs from primary) wrapped in a secondary-containment (double wall) fiberglass shell to at least 300° and 100% of the heads. The external shell provides both secondary containment and interstitial monitoring.

Underground Tanks (EGHXC)−*Continued*

Corrosion-resistant Tanks

These are base steel tanks (ULC-S603 primary or secondary types) provided with an external corrosion-protection system constructed and investigated in accordance with CAN/ULC-S603.1, ''External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids.'' These tank constructions may be Cathodic (Section 5), Composite (Section 6), Jacketed (Section 7) or Coated (Section 8) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the **(*)** liquid ratings:

Cathodically protected underground tank for (*) — A steel primary (single wall) tank with a pre-engineered, galvanic-type cathodic protection system (anode pack with connecting wires and dielectric coating and bushings) that provides external corrosion protection.

Cathodically protected (++) underground tank for (*) — A steel secondary containment (double wall) tank with a pre-engineered, galvanic-type cathodic protection system (anode pack with connecting wires and dielectric coating and bushings) that provides external corrosion protection.

Coated underground tank for (*) — A steel primary (single wall) tank covered directly (bonded) with a thin nonmetallic cladding (min 1.8 mm PUR) which provides external corrosion protection.

Coated (++) underground tank for (*) — A steel secondary-containment (double wall) tank covered directly (bonded) with a thin nonmetallic cladding (min 1.8 PUR) which provides external corrosion protection.

Composite underground tank for (*) — A steel primary (single wall) tank covered directly (bonded) with a thick nonmetallic cladding (min 2.5 FRP) which provides external corrosion protection.

Composite (++) underground tank for (*) — A steel secondary-containment (double wall) tank covered directly (bonded) with a thick nonmetallic cladding (min 2.5 FRP) which provides external corrosion protection.

Jacketed underground tank for (*) — A steel single-wall primary tank completely contained within a nonmetallic external tank jacket (min 2.5 mm FRP, PUR, PE or Polyurea) which provides secondary containment, interstitial leak monitoring and external corrosion protection.

Liquid Ratings

The above tank types are additionally rated in the individual Listings for either one or more general fuel blend ranges, or flammable liquids as follows:

(#) Petroleum Products, Oxygenated Fuel Blends and Oxygenates — Combines all of the following ratings for commercially available fuels covered by CGSB fuel regulations and compliant with CGSB fuel specifications for general-purpose commercial engines (SI or CI) and heating/burning appliances:

Petroleum Products — Includes petroleum hydrocarbon fuels without bio-blends CGSB 3.511 gasoline (E0), CGSB 3.517 diesel (B0), CGSB 3.2 fuel oil (B0), CGSB 3.3 kerosene (K1 and K2); and similar flammable or combustible liquid petroleum derivatives, such as fuel components (cetane, hexane, heptane, iso-octane, etc.), and oils (lube, hydraulic, machine, etc.).

Oxygenated Fuel Blends — Includes all ''Petroleum Products'' liquids; plus petroleum hydrocarbon fuels with low-biofuels blends, such as CGSB 3.511 gasoline and ethanol blends (max E10), CGSB 3.520 diesel and biodiesel blends (max B5), CGSB 3.2 fuel oil and bioheat blends (max B5).

Oxygenates — Includes all ''Oxygenated Fuel Blends'' liquids; plus higher-blend oxygenated fuels mixing CGSB 3.511 gasoline and ethanol, such as E85, and common-fuel-blend stocks and components, such as pure or denatured methanol and ethanol.

(*) Flammable Liquids — Includes all liquids in the three ''General Fuels'' ratings above; plus other stable flammable or combustible liquids with chemical properties similar to the general fuels and liquids described above having generally accepted chemical compatibility with the materials used in the product, such as other alcohols and solvents (pentane, hexanol, acetone, ketone, etc.), or other petroleum derivatives (xylene, toluene, naphtha, turpentine, etc.).

RELATED PRODUCTS

See Underground Tank Lining Systems (EGAYC) for nonmetallic internal tank lining and coating systems.

See Underground Tank Upgrade Systems (EGSJC) for nonmetallic internal tank containment and rating upgrade systems.

REQUIREMENTS

The basic standard used to investigate products in this category is one or more of the following:

Steel tanks: ULC-S603, ''Steel Underground Tanks for Flammable and Combustible Liquids''

Fiberglass tanks: ULC-S615, ''Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids''

Corrosion-resistant tanks: CAN/ULC-S603.1, ''External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids,'' with specific requirements for:

Cathodic systems per Section 5, ''Cathodically Protected Tanks''

Coated tanks per Section 8, ''Coated Tanks''

Composite tanks per Section 6, ''Composite Tanks (Clad)''

Underground Tanks (EGHXC)−*Continued*

Jacketed tanks per Section 7, ''Jacketed Tanks''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate tank construction for the individual Listings as indicated in **TYPES AND RATINGS** above.

The standard number(s) for the applicable tank type as indicated under **REQUIREMENTS** above may also be identified in the ULC Mark.

Underground Tank Upgrade Systems (EGSJC)

GENERAL

This category covers nonmetallic pre-engineered secondary containment upgrade systems intended to be field installed inside of existing atmospheric-type underground horizontal cylindrical fuel storage tanks. These upgrade systems form an internal structural shell that is bonded directly to the existing tank, provide both secondary containment and interstitial monitoring, and may provide additional features, such as minor repairs of the core tank. The combinations of system types, materials and liquids ratings are described under **TYPES AND RATINGS** below.

Upgraded tanks are intended for installation and use in accordance with Part 4 of the ''National Fire Code of Canada,'' ANSI/NFPA 30, ''Flammable and Combustible Liquid Code,''CSA B139, ''Installation Code for Oil-Burning Equipment,'' API 1615, ''Installation of Underground Petroleum Storage Systems,'' ''CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products,'' and/or other requirements of the Authority Having Jurisdiction, and the manufacturer's instructions.

Since upgrade systems are intended for field installations that require special equipment, training and procedures not covered by ULC's normal Follow-Up Service inspections at a factory, these products are Listed by Report. The factory Follow-Up Service only includes inspection of the component liner material(s), and markings and instructions packaged with each field lining kit.

Under this form of Listing, a ULC Report is prepared which describes the complete upgrade system process and detailed instructions for proper installation including but not limited to the minimum core tank design and condition criteria, cleaning and internal surface preparation, upgrade application and curing, and upgrade property and leak testing. Copies of the Report are available from the Listee.

TYPES AND RATINGS

The tank upgrade system types, materials, features and liquid ratings, as indicated in the individual Listings, are defined as follows:

(*) Underground Tank Upgrade System Suitable for (#) — Nonmetallic upgrade systems of thick composite layers or panels directly applied (bonded) to the internal wall of an underground tank that provides secondary containment and interstitial monitoring. Upgrade systems additionally provide internal corrosion protection for steel tanks.

(*) Underground Storage Tank Type — Investigated for use in steel, fiberglass, or steel and fiberglass underground tanks.

(#) Petroleum Products, Oxygenated Fuel Blends and Oxygenates — Combines all of the following ratings for commercially available fuels covered by CGSB fuel regulations and compliant with CGSB fuel specifications for general-purpose commercial engines (SI or CI) and heating/burning appliances:

Petroleum Products — Includes petroleum hydrocarbon fuels without bio-blends CGSB 3.511 gasoline (E0), CGSB 3.517 diesel (B0), CGSB 3.2 fuel oil (B0), CGSB 3.3 kerosene (K1 and K2); and similar flammable or combustible liquid petroleum derivatives, such as fuel components (cetane, hexane, heptane, iso-octane, etc.), and oils (lube, hydraulic, machine, etc.).

Oxygenated Fuel Blends — Includes all ''Petroleum Products'' liquids; plus petroleum hydrocarbon fuels with low-biofuels blends, such as CGSB 3.511 gasoline and ethanol blends (max E10), CGSB 3.520 diesel and biodiesel blends (max B5), CGSB 3.2 fuel oil and bioheat blends (max B5).

Oxygenates — Includes all ''Oxygenated Fuel Blends'' liquids; plus higher-blend oxygenated fuels mixing CGSB 3.511 gasoline and ethanol, such as E85, and common-fuel-blend stocks and components, such as pure or denatured methanol and ethanol.

FACTORS NOT INVESTIGATED

This category is not intended to evaluate or cover the manufacturer's installation instructions pertaining to the safety of the applicator (the person who applies the tank upgrade materials) for compliance with worker safety regulations, such as the Provincial Health and Safety Acts, nor any environmental emissions or disposal regulations, such as the Canadian Environmental Protection Act.

These tank upgrade materials have not been investigated for their physiological effects, if any, nor the manufacturer's specifications for the safety of the applicator during the upgrade process and the potential risks associated with the opening, entering, purging, cleaning, inspecting, sandblasting, upgrading, closing and testing of a tank that has been used to store flammable liquids. Questions concerning these and other safety, environmental or other regulatory issues should be referred to the manufacturer.

Underground Tank Upgrade Systems (EGSJC)−*Continued*

RELATED PRODUCTS

Nonmetallic internal lining systems for underground tanks are covered under Underground Tank Lining Systems (EGAYC).

Steel, fiberglass, and external corrosion-resistant underground tanks are covered under Underground Tanks (EGHXC).

REQUIREMENTS

The requirements used to investigate products in this category are based on:

Steel underground tank upgrade systems — UL 1746, ''External Corrosion Protection Systems for Steel Underground Storage Tanks,'' and ULC/ORD-C58.4, ''Double Containment Fibre Reinforced Plastic Linings for Flammable and Combustible Liquid Storage Tanks''

Fiberglass underground tank upgrade systems — UL 1316, ''Glass-Fiber-Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures,'' and ULC/ORD-C58.4

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate upgrade system type and liquid rating for the individual Listings as indicated under **TYPES AND RATINGS** above followed by the statement ''When Installed and Used in Accordance with ULC Report, Reference No. ____, Dated ____.''

The Listing Mark is affixed to a component of the tank upgrade system (typically around the tank-entry manway or collar).

Accessories, Flammable Liquid Tank (EGVVC)

This category covers accessories intended for use with tanks for flammable liquids, such as gasoline, naphtha, kerosene, fuel oils, etc.

Anode Assemblies, Underground Tank Assemblies (EEJAC)

GENERAL

This category covers anode assemblies, which consist of zinc or magnesium plates or other forms, packaged with gypsum moisture-absorbing encasement. They are used as sacrificial anodes in conjunction with coated steel underground tanks, constructed in accordance with CAN/ULC-S603.1, ''External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids.''

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S618, ''Magnesium and Zinc Anodes and Zinc and Copper/Copper Sulfate Reference Electrodes.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Anode Assembly, Underground Tank Protection.''

Buoyant Decks for Flammable and Combustible Liquid Tanks (EGWDC)

USE AND INSTALLATION

This category covers decks intended to be installed in aboveground bulk storage tanks containing petroleum products at temperatures not above ambient (maximum 50°C), for purposes of fuel conservation and reduction of fire hazards.

Authorities Having Jurisdiction should be consulted before installation.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Buoyant Deck for Flammable and Combustible Liquid Tanks.''

Emergency Vents (EGWXC)

GENERAL

This category covers tank vents and interstitial-space vents intended for installation in steel aboveground tanks.

Emergency Vents (EGWXC)−*Continued*

Emergency aboveground tank vents are designed to provide adequate venting should the vapour pressure inside the tank exceed the atmospheric pressure. Such vents may also incorporate normal venting features.

Emergency interstitial space vents for double-wall aboveground tanks are designed to provide adequate venting of that space in the event that such tanks be exposed to an external fire.

Emergency interstitial-space vents are suitable for the relief of pressure in the interstice of aboveground double-wall tanks up to 125,000 L capacities.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Emergency Vent."

Galvanic Corrosion Monitoring Devices (EGXDC)

GENERAL

This category covers devices designed for use in monitoring the cathodic protection of underground storage tanks and pipelines for flammable and combustible liquids.

These devices consist of a monitoring unit and may incorporate warning lights and an audible alarm and are supplied as a completely assembled system. Some remote monitoring equipment may be connected to a PC computer by the use of telephone lines.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S603, "Steel Underground Tanks for Flammable and Combustible Liquids," and CAN/ULC-S603.1, "External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Galvanic Corrosion Monitoring Device."

Isolating Bushings (EGXHC)

USE

This category covers bushings intended for installation in protected underground tanks for the purpose of isolating the tank from its associated piping to preserve the integrity of the corrosion-protection system.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S631, "Isolating Bushings for Steel Underground Tanks Protected with External Corrosion Protection Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolating Bushing, Flammable Liquid Tanks."

Miscellaneous Tank Accessories for Flammable and Combustible Liquid Tanks (EGXPC)

USE AND INSTALLATION

This category covers accessories consisting of factory-made parts, components, or products designed to be assembled, installed, or used with aboveground or underground storage tanks for flammable and combustible liquids.

These accessories are intended to be installed or used in accordance with the installation or use instructions provided with the product.

PRODUCT TYPES AND REQUIREMENTS

The basic standards used to investigate fill adapters, vapor adapters, float-valve extractors and monitoring-well manholes in this category are CAN/ULC-S601, "Shop Fabricated Steel Aboveground Tanks for Flammable and/or Combustible Liquids," and ULC-S603, "Steel Underground Tanks for Flammable and Combustible Liquids."

The basic standard used to investigate oil-supply pipe in this category is CAN/ULC-S660, "Nonmetallic Underground Piping for Flammable and Combustible Liquids."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of

Miscellaneous Tank Accessories for Flammable and Combustible Liquid Tanks (EGXPC)−*Continued*

this Directory) together with the word "LISTED," a control number, and the product name "Miscellaneous Tank Accessory for Flammable and Combustible Liquid Tanks."

Overfill Protection Devices (EGXYC)

GENERAL

This category covers devices intended to prevent overfilling during normal filling operations of aboveground or underground flammable liquid storage tanks. They are of the following categories as described in ULC/ORD-C58.15, "Overfill Protection Devices for Flammable Liquid Storage Tanks."

A. Automatic Sensing Device — A device for interconnection with shut-off equipment at the supply vehicle. It will result in termination of delivery, at a maximum level of 95% of the tank contents.
B. Automatic Overfill Shutoff Device — An in-tank device of a float valve or other mechanical type providing shutoff of the fill pipe at a maximum level of 95% of the tank contents.
C. Vent Restriction Device — At a 95% or lower tank capacity level, a device that will cause flow to be reduced by at least 99% of the flow rate from a delivery vehicle.
D. Alarm Device — This may be of the audible or visual type. An overfill alarm device signals an overfill condition at 90% of the tank capacity.

Note: Type B devices are also designated for pressure or gravity fill. Pressure-fill devices may be used in aboveground and underground applications, whereas gravity-fill devices are typically only used in underground storage tanks.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C58.15, "Overfill Protection Devices for Flammable Liquid Storage Tanks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Overfill Protection Device."

Secondary Containment Liners (EGYCC)

GENERAL

This category covers secondary containment liners for use below and around underground and aboveground flammable and combustible liquid and specific chemical storage tanks facilities, intended to contain overflow or spills of stored product for a long enough period to allow removal and clean-up without release of spilled material to the environment.

These liners are of the following designations as described in ULC/ORD-C58.9, "Secondary Containment Liners for Underground and Aboveground Flammable and Combustible Liquid Tanks," having suffix "A" for aboveground tank use, having a minimum tensile strength of 500 N, and "B" for below ground (underground) tank applications, having a minimum tensile strength of 1000 N, where:

Class I Liners — Suitable for use as the secondary containment of underground tanks or earthen dikes surrounding aboveground tanks containing petroleum-derived flammable or combustible liquids, including oxygenated fuels.

Class IIP Liners — Suitable for use as the secondary containment of underground tanks or earthen dikes surrounding aboveground tanks containing petroleum-derived flammable and combustible liquids only (excluding oxygenated fuels).

Class II Liners — Suitable for use as the secondary containment of underground tanks or earthen dikes surrounding aboveground tanks containing petroleum-derived combustible liquids only.

Class III Liners — Suitable for use as the secondary containment of underground tanks or the lining of earthen dikes surrounding aboveground tanks containing specific chemicals.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C58.9, "Secondary Containment Liners for Underground and Aboveground Flammable and Combustible Liquid Tanks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Secondary Containment Liner."

Spill Containment Devices for Flammable Liquid Storage Tanks (EGYHC)

USE

This category covers containment devices intended to capture the small amount of product that may spill around the fill opening during normal filling operations of aboveground and underground storage tanks. Spill-containment devices for underground tanks may be of the grade or guarded installation type.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C58.19, "Spill Containment Devices for Underground Flammable Liquid Storage Tanks," and ULC/ORD-C142.19, "Spill Containment Devices for Aboveground Flammable and Combustible Liquid Storage Tanks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spill Containment Device for Flammable Liquid Storage Tanks."

Under-dispenser Sumps and Underground Tank Risers (EGYIC)

USE

This category covers nonmetallic and metallic under-dispenser sumps and underground tank risers intended for the containment of any possible leakage from dispensing devices or submersible pumps for flammable liquids or their connections.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C107.21, "Under-Dispenser Sumps."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Under-Dispenser Sump" or "Underground Tank Riser."

Leak Detection Equipment (EQXXC)

GENERAL

This category covers devices, assemblies or systems that measure product leak rates utilizing in-tank or in-piping methods to measure changes in contained product volumetrically or nonvolumetrically by acoustical or other means, and equipment and methods exterior to the tank or piping that detect product leakage in liquid or vapour form.

As the repeatability of leak detection can be affected by a number of ambient variables, the stated minimum leak-detection rates have been determined as being accurate with a 95% probability, and with a corresponding probability of error or false alarm of 5% under specific conditions of application.

The performance of leak-detection equipment is further classified using the following categories as defined in the "CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products":

PRECISION — Capable of detecting a tank or pipe leak rate of 0.38 L/h within a period of 24 hours.

LEVEL 1 — Identical to **PRECISION** but in a time period that may exceed 24 hours.

LEVEL 2 — Capable of detecting a tank leak rate of 0.76 L/h.

LEVEL 3 — Capable of detecting a leak rate of 12 L/h in pressure piping, and that will operate when the product pump starts.

LEVEL 4 — Capable of detecting a contained tank interstice or sump leak (a) before the monitoring sump or interstitial space fills to 50% of its capacity by volume, or (b) before 600 L has leaked, whichever occurs first.

REQUIREMENTS

The basic standard used to investigate leak-detection equipment in this category is ULC/ORD-C58.12, "Leak Detection Devices (Volumetric Type) for Underground Flammable Liquid Storage Tanks," or ULC/ORD-C58.14, "Leak Detection Devices (Non-Volumetric Type) for Underground Flammable Liquid Storage Tanks."

The basic standard used to investigate line-leak-detection equipment in this category is ULC/ORD-C107.12, "Line Leak Detection Devices for Flammable Liquid Piping."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Leak Detection Equipment."

Leak Detection Equipment (EQXXC)−*Continued*

products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Leak Detection Equipment."

Detonation Flame Arresters (IIBLC)

GENERAL

This category covers in-line devices intended to prevent transmission of a detonation or deflagration that may arise within a piping system.

These devices are intended to arrest the passage of flame fronts in piping systems associated with processes such as the recovery of vapour from flammable liquid storage tanks. They are intended to arrest flame fronts travelling at sub- and supersonic speeds. They are intended to be used only with chemicals of the group specified.

Authorities Having Jurisdiction should be consulted before installation.

Chemical Groups

The chemical groups referenced in the individual certifications are as follows:

Group A	Group B	Group C
acetylene	butadiene	acetaldehyde
	ethylene oxide	cyclopropane
	hydrogen	diethyl ether
	manufactured gases containing more than 30% hydrogen (by volume)	ethylene
	propylene oxide	unsymmetrical dimethyl hydrazine

Group D		
acetone	gasoline	petroleum naptha
acrylonitrile	heptanes	octanes
ammonia	hexanes	pentanes
benzene	isoprene	1-pentanol (amyl alcohol)
butane	methane (natural gas)	propane
1-butanol (butyl alcohol)	methanol (methyl alcohol)	1-propanol (propyl alcohol)
2-butanol (secondary butyl alcohol)	3-methyl-1-butanol	2-propanol (isopropyl alcohol)
n-butyl acetate	(isoamyl alcohol)	propylene
isobutyl acetate	methol isobutyl ketone	styrene
ethane	2-methyl-1 propanol	toluene
ethanol (ethyl alcohol)	(isobutyl alcohol)	vinyl acetate
ethyl acetate	2-methyl-2 propanol	vinyl chloride
ethylene dichloride	(tertiary butyl alcohol)	xylenes

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 525, "Flame Arresters."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Detonation Flame Arrester."

Combustible Liquid-level Gauges and Tank-filling Signals (JYJZC)

USE

This category covers devices intended for use primarily in small fuel and lubricating oil tanks for indicating the liquid level and to signal an approaching full condition during filling.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C180, "Liquid Level Gauges and Indicators for Fuel Oil and Lubricating Oil Tanks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flammable Liquid, Liquid-Level Gauge," "Combustible Liquid-Level Gauge" or "Tank Filling Signal."

Miscellaneous Components for Underground Tanks (EGXQC)

Oil-water Separators, Underground (EEJEC)

GENERAL

This category covers underground oil-water separators intended to collect and separate nonsoluble, nonemulsified hydrocarbons from water by gravity separation. The containment portion of these devices is similar in materials and methods of assembly to underground storage tanks.

These oil-water separators and are intended for underground installations in accordance with requirements of the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Underground Tanks (EGHXC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S656, ''Oil-Water Separators.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Oil-Water Separator, Underground.''

Resin Systems Used with Underground Tanks for Flammable and Combustible Liquids (EGXRC)

GENERAL

This category covers systems that are incomplete in certain constructional features or restricted in performance capabilities, and intended for use as components of complete products submitted for investigation rather than for direct separate installation and use. The final acceptance of the component is dependent upon its application and use in complete assemblies of underground tanks submitted for examination and tests to Underwriters Laboratories of Canada.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S615, ''Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Resin System Used with Underground Tanks for Flammable and Combustible Liquids.''

Jacketed Underground Tanks (EGYJC)

USE AND INSTALLATION

This category covers tanks that incorporate steel underground tanks constructed in accordance with ULC-S603 (2000), ''Steel Underground Tanks for Flammable and Combustible Liquids,'' with a nonmetallic outer jacket providing corrosion protection and a means of secondary containment.

These tanks are intended for installation underground in accordance with requirements specified by the Authority Having Jurisdiction.

REQUIREMENTS

The basic standard used to investigate products in this category is Part 3 of CAN/ULC-S603.1, ''External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Jacketed Underground Tank.''

Storage Vaults (EHMBC)

GENERAL

This category covers specifically designed buildings used for the storage, collection and dispensing of small quantities of the stored product in and from containers and portable tanks, as permitted by the relevant sections of the ''National Fire Code of Canada,'' and ''National Building Code of Canada.''

These are secondary-containment buildings intended for outdoor installation that are capable of containing most forms of leakage from the stored containers and portable tanks. They are not more than one story in height and not greater than 100 m^2 in floor area.

The storage vaults are tested to determine ability to withstand a small controlled explosion of the stored containers, followed by a 30-minute fire, without releasing spilled product into the environment.

Storage Vaults (EHMBC)−*Continued*

The storage vaults covered under this category are likely to constitute a Group F Division 1 Occupancy.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C142.6, ''Storage Vaults.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Storage Vault.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STORAGE CABINETS FOR FLAMMABLE LIQUID CONTAINERS (EHCUC)

GENERAL

This category covers cabinets intended for the storage of flammable liquid as permitted by the relevant sections of the ''National Fire Code of Canada.'' The cabinets are tested to determine their ability to withstand a 10-minute standard fire exposure without developing an internal temperature rise in excess of 139°C above ambient.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1275, ''Storage Cabinets for Flammable Liquid Containers.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Storage Cabinet for Flammable Liquid Containers.''

DISPENSING DEVICES (EPWRC)

This category covers dispensing devices and accessories intended for use with flammable liquids. Flammable liquids include the common gasoline and diesel engine fuels and the lighter heating oils, but not LP-gas.

These devices are intended for use in accordance with ANSI/NFPA 30, ''Flammable and Combustible Liquids Code.''

DISPENSING DEVICE ACCESSORIES (EQJZC)

This category covers accessories designed specifically for use in conjunction with dispensing devices.

Hose Connectors (ERZAC)

GENERAL

This category covers hose connectors, including those for use in vapour-recovery systems, designed to connect the gasoline hose with the automatic valves, and the dispensing device with the gasoline hose. The connectors may be of a straight, swivel, or breakaway type.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices (EPWRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S634, ''Hose Swivel Connectors for Flammable and Combustible Liquids,'' or ULC-S644, ''Emergency Breakaway Fittings for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Hose Connector.''

Valves (ERZTC)

Hose Nozzle Valves (ESNRC)

Flammable Liquid Hose Nozzle Valves (ETAZC)

GENERAL

This category covers flammable liquid hose nozzle valves of the self-closing type, intended for use with dispensing devices for flammable liquids.

Hose nozzle valves are designated in the individual certifications as "automatic-closing type with latch-open device" or "automatic-closing type without latch-open device."

The automatic-closing type with latch-open device are intended for use in service stations where the dispensing of flammable liquids is only done by the service-station attendant.

The automatic-closing type without latch-open device are intended for use in self-service stations where the dispensing of flammable liquids is done by a person other than the service-station attendant.

REBUILT PRODUCTS

This category also covers hose nozzle valves that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt hose nozzle valves are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt hose nozzle valves are subject to the same requirements as new hose nozzle valves.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices (EPWRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S620, "Hose Nozzle Valves for Flammable and Combustible Liquids."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flammable Liquid Hose Nozzle Valve."

For rebuilt products, the word "Rebuilt" precedes the product name.

Shut-off Valves, Emergency and Emergency Shut-off Valve Containment Assemblies (EUCVC)

GENERAL

This category covers emergency shutoff valves intended for use with power-operated dispensing devices handling flammable liquids (other than LP-gas). Unless otherwise indicated in the individual certifications, they are designed to safeguard against discharge of liquid under both fire exposure and accident conditions.

Emergency shutoff valve containment assemblies are intended for installation under the flammable liquid dispensing devices to collect any product leakage and, upon its accumulation, to shut down the dispensing device. Provision may be made to simultaneously initiate an alarm.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices (EPWRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S651, "Emergency Valves for Flammable and Combustible Liquids."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shut-Off Valve, Emergency and Emergency Shut-Off Valve Containment."

Dispensing Device Accessories, Miscellaneous (EUQTC)

USE

This category covers miscellaneous devices intended for use in conjunction with dispensing devices for flammable liquids, such as gasoline.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices (EPWRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S634, "Hose Swivel Connectors for Flammable and Combustible Liquids."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED, "a control number, and the product name "Dispensing Device Accessory, Miscellaneous."

ELECTRICAL CIRCUIT INTEGRITY SYSTEMS (FHITC)

GENERAL

This category covers electrical circuit integrity systems consisting of components and materials intended for installation as protection for specific electrical wiring systems, with respect to the disruption of electrical circuit integrity upon exterior fire exposure.

Ratings apply only to the entire system assembly, constructed using the combination of components and materials specified in the individual system. Components and materials are designated for use in a specific individual system for which corresponding ratings have been developed, and are not intended to be interchanged between systems. Ratings are not assigned to individual system components or materials.

Electrical circuit integrity systems are intended to be fastened to a concrete or masonry wall or a concrete floor-ceiling assembly. The fire rating of the wall or floor-ceiling assembly is intended to be equal to or greater than the rating of the electrical circuit integrity system. This is to ensure that the complete electrical circuit integrity system will survive during fire and hose stream exposure. At the option of the manufacturer, the samples may be subjected to an optional hose stream test following fire exposure, after which circuit integrity is reconfirmed.

SYSTEMS CONSTRUCTED WITH FIRE-RESISTIVE CABLE

These electrical circuit integrity systems are investigated with respect to fire exposure and water hose stream performance. Performance criteria are based on functionality of the cable during the fire and after the water hose stream (if the hose stream test is conducted).

These systems are intended to be installed in accordance with all provisions of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and as amended by the details of each individual system (such as type of supports).

Authorities Having Jurisdiction should be consulted as to the specific requirements covering the installation and use of these systems.

RELATED PRODUCTS

See Fire-resistive Cable (FHJRC).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate systems constructed with fire-resistive cable in this category is CAN/ULC-S139, "Standard Method of Fire Test for Evaluation of Integrity of Electrical Power, Data and Optical Fibre Cables."

ULC MARK

System components identified by an (*) in the description text are Listed under the Listing and Follow-Up Service of ULC. Such components and names of manufacturers who are authorized to apply the Listing Mark are identified under the specific product category.

FIRE-RESISTIVE CABLE (FHJRC)

GENERAL

This category covers fire-resistive cable, which is insulated electrical cable intended for installation as specified in the individual electrical circuit integrity systems. This cable has been investigated for its ability to remain electrically functional during a fire exposure and, as indicated in the individual Listings, after the impact, erosion and cooling effect of a water hose stream test (in the event the optional hose stream test is conducted).

This cable is required to comply with Canadian national requirements for electrical safety in addition to requirements related to its continued operation under fire exposure.

The cable, as used in the specified systems, has been investigated and found to comply with applicable electrical requirements.

The cable is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," where indicated in the system, and the manufacturer's installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Circuit Integrity Systems (FHITC) and Fire-resistance Ratings (BXUVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S139, "Standard Method of Fire Test for Evaluation of Integrity of Electrical Power, Data and Optical Fibre Cables."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," and the following additional information:

Fire-resistive Cable (FHJRC)−*Continued*

Control No.

EXITS AND EXIT APPLIANCES (FUDQC)

CONTROLLED EXIT TYPE PANIC HARDWARE (FULAC)

GENERAL

This category covers devices that comply with the requirements for panic hardware but are modified by the addition of an electrically operated mechanism that may be engaged to inhibit the egress function of the device for up to 15 seconds. The conditions of operation are similar to those noted under Egress Door Securing and Releasing Devices (FUPLC); however, these devices are not designed to be functionally integrated with a fire-alarm system.

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S132, "Standard Method of Tests for Emergency Exit and Emergency Fire Exit Hardware," and CAN/ULC-S533, "Egress Door Securing and Releasing Devices."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Controlled Exit Type Panic Hardware."

EGRESS DOOR SECURING AND RELEASING DEVICES (FUPLC)

GENERAL

This category covers devices intended for use on exit doors for the purpose of locking these doors against unauthorized egress under non-emergency conditions.

Where such devices are functionally integrated with a fire alarm system, they are intended to be installed in accordance with CAN/ULC-S524, "Installation of Fire Alarm Systems."

The use of these devices is limited to buildings having supervisory staff in attendance at all times the building is occupied. These devices are intended for installation in accordance with the "National Building Code of Canada." The conditions of operation are as follows:

(a) The locking device releases immediately
  (i) upon activation of a fire alarm signal,
  (ii) in the event of a power failure, and
  (iii) upon actuation of a manually-operated switch accessible only to authorized personnel;
(b) A force of not more than 90 N applied to the door-opening hardware initiates an irreversible process that will release the locking device within 15 s and not relock until the door has been opened;
(c) Upon release, the locking device must be activated manually by the actuation of the switch in Subclause (a) (iii); and
(d) A legible sign is permanently mounted on the exit door to indicate that the locking device will release within 15 s of applying pressure to the door-opening hardware.

These devices include door frame mounting hardware and control units.

RELATED PRODUCTS

Assemblies intended to facilitate safe egress of persons in case of emergency are covered under Controlled Exit Type Panic Hardware (FULAC) and Panic Hardware (FVSRC).

These assemblies have not been investigated with reference to fire protection classification. Devices so classified are covered under Fire Exit Hardware (GXHXC).

These assemblies have not been investigated with reference to burglary protection classifications. Devices so classified are included in the Burglary Protection Equipment List of Equipment and Materials.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S533, "Egress Door Securing and Releasing Devices."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Egress Door Securing and Releasing Device."

Egress Door Securing and Releasing Devices (FUPLC)−*Continued*

Subassemblies, Egress Door Securing and Releasing Device (FUPPC)

USE

This category covers electromagnets, power supplies, annunciators, primary releasing devices and keyswitch/controls intended for use on outward-swinging exit doors, security doors and fire doors, when so tested, and, if needed, to be installed in addition to the primary latching mechanism. The devices are not intended to be functionally integrated with a fire alarm system.

The power supply may also be used with exit devices or electric strikes.

The electromagnets are intended for use only with compatible certified power supplies.

ADDITIONAL INFORMATION

For additional information, see Egress Door Securing and Releasing Devices (FUPLC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S533, "Egress Door Securing and Releasing Devices."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Subassembly, Egress Door Securing and Releasing Device."

EXIT CONTROL DEVICES (FUQHC)

USE

This category covers assemblies intended for mounting on outward-swinging doors for the purpose of locking such exit doors against unauthorized egress.

RELATED PRODUCTS

Assemblies intended to facilitate safe egress of persons in case of emergency are covered under Controlled Exit Type Panic Hardware (FULAC) and Panic Hardware (FVSRC).

These assemblies have not been investigated with reference to fire resistance classification. Devices so classified are covered under Fire Exit Hardware (GXHXC).

These assemblies have not been investigated with reference to burglary protection classifications. Devices so classified are included in the Burglary Protection Equipment List.

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S132, "Standard Method of Tests for Emergency Exit and Emergency Fire Exit Hardware," and CAN/ULC-S533, "Egress Door Securing and Releasing Devices."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exit Control Device."

PANIC HARDWARE (FVSRC)

USE

This category covers assemblies intended for mounting on or integral with outward-swinging doors to facilitate the safe egress of persons in case of emergency.

RELATED PRODUCTS

These assemblies have not been investigated from a fire protection standpoint and are not intended for use on labelled fire doors. Related devices so classified are covered under Fire Exit Hardware (GXHXC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S132, "Emergency Exit and Fire Exit Hardware."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Panic Hardware."

EXIT SIGNS, SELF-LUMINOUS AND PHOTOLUMINESCENT (FWBXC)

USE

This category covers exit signs that utilize a nonelectrical illumination power source. It includes exit signs containing self-luminous gases or with a photoluminescent surface that relies on external illumination. These signs are intended for installation in accordance with the "National Building Code of Canada," and other codes governing the marking of the means of egress.

DRY LOCATION

These exit signs have been investigated only for dry, indoor locations unless otherwise marked. They are intended to be installed and operated in accordance with the product markings and installation instructions provided.

VIEWING DISTANCE

These exit signs have been investigated for visibility from 100 feet unless marked with a maximum viewing distance of 50 or 75 feet.

EXTERNAL ILLUMINATION

Exit signs whose visibility is dependent on external illumination (such as photoluminescent signs) are intended for installation only where such external illumination is deemed reliable and sufficient by the Authority Having Jurisdiction and where the lighting controls are accessible only to authorized personnel. Where compliance with the visibility requirements requires external illumination greater than 1 ft-c, these signs are marked, where visible after installation, for a minimum 5 ft-c illumination, measured on the face of the sign. If specific type(s) of lighting are needed to achieve the required visibility, the lighting type is also marked on the sign.

REPLACEMENT DATE

Exit signs whose visibility is expected to decline over time (such as those containing self-luminous gases) are marked, where visible after installation, with a replacement date.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C924, "Photoluminescent and Self-Luminous Exit Signs."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Self-Luminous Exit Sign" or "Photoluminescent Exit Sign," or other appropriate product name as shown in the individual Listings.

EXTERIOR WALL SYSTEMS (FWFFC)

This category covers systems intended for use as external cladding for walls. The systems are divided into two categories:

1. Combustible Exterior Wall Cladding Systems (FWFJC), consisting of combustible cladding materials in the form of prefabricated panels or field-applied coatings. The system numbers are prefixed by the designation "CW."
2. Exterior Wall Insulation and Finish Systems (FWFOC), consisting of insulation protected by noncombustible finish materials in the form of field-applied coatings. The system numbers are prefixed by the designation "EW."

COMBUSTIBLE EXTERIOR WALL CLADDING SYSTEMS (FWFJC)

GENERAL

Combustible Exterior Wall Cladding Systems (FWFJC)–*Continued*

This category covers combustible exterior wall cladding systems that are attached to the outside of building walls and intended to be used on buildings required to be of noncombustible construction in accordance with the "National Building Code of Canada" (NBCC).

In order to be eligible for certification, combustible exterior cladding is required to:

1. restrict flaming on or in the wall assembly so that it does not spread more than 5 m above an opening 2.5 m±0.1 m wide by 1.4 m±0.1 m high, located in the middle of and not more than 3 m above the lowest edge of a wall assembly that is not less than 5 m wide and not less than 10 m high, and
2. have the heat flux during the flame exposure on the wall assembly be such that it does not exceed 35 kW/m^2 at a height of 3.5 m above the opening (noted in Item 1 above),

when tested in accordance with CAN/ULC-S134, "Standard Method of Fire Test of Exterior Wall Assemblies," and in consideration of the conditions defined in the NBCC (1990 Edition), under Article 3.1.5.5, sentences (1) through (8).

This method enables an assessment of fire hazard characteristics of exterior wall assemblies containing combustible elements, such as cladding, sheathing and insulation. The primary purpose of the test is to determine the comparative burning characteristics of cladding on exterior wall assemblies by evaluating, under full scale conditions, the flame spread over the exterior surface, the incremental heat flow to the exterior surface resulting from the burning of the assembly, and the damage to the assembly following exposure to the test fire.

Typically, the illustrated designs reflect the precise dimensions and condition of the sample assembly which has been subjected to the fire-endurance test. Within practical limits, a construction must duplicate the illustrated design and the details included in the associated text in order to achieve the indicated assembly rating.

Authorities Having Jurisdiction should be consulted before installation.

Numbered items refer to the descriptive text below each drawing. Individual components of a proprietary nature or over which it is necessary to exercise control at the manufacturing location are certified under the certification and Follow-Up Service of Underwriters Laboratories of Canada. Such items are identified in the text by a black dot thus•. Under this Service, periodic examination and tests are conducted on samples selected at random from current production and stock.

Each certified product bears the label or other identification of Underwriters Laboratories of Canada from which it may be determined that a product is suitable for use as a material in a particular assembly or assemblies.

RELATED PRODUCTS

Components intended for use with combustible exterior wall cladding systems are covered under Components for Combustible Exterior Wall Cladding Systems (FWFLC).

ADDITIONAL INFORMATION

For additional information, see Exterior Wall Systems (FWFFC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S134, "Standard Method of Fire Test of Exterior Wall Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combustible Exterior Wall Cladding System."

Components for Combustible Exterior Wall Cladding Systems (FWFLC)

USE

This category covers components for combustible exterior wall cladding systems designated for use in specific assemblies covered under Combustible Exterior Wall Cladding Systems (FWFJC).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Combustible Exterior Wall Cladding Systems (FWFJC) and Exterior Wall Systems (FWFFC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S134, "Standard Method of Fire Test of Exterior Wall Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of

Components for Combustible Exterior Wall Cladding Systems (FWFLC)−*Continued*

this Directory) together with the word "LISTED," a control number, and the product name "Component for Combustible Exterior Wall Cladding Systems."

EXTERIOR WALL INSULATION AND FINISH SYSTEMS (FWFOC)

GENERAL

This category covers exterior wall insulation and finish systems, which are attached to the outside of building walls and intended to provide an insulated exterior building envelope in accordance with the "National Building Code of Canada" (NBCC).

In order to evaluate the effectiveness of these materials, their performance has been related to their ability to resist fall-off and disintegration when a representative assembly is exposed to a condition of fire exposure represented by the Standard Time-Temperature Curve of CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

The requirements of the NBCC for foamed plastic insulation used in exposing building faces, in buildings exceeding 3 storeys in building height, are that the foamed plastic shall be protected on the exterior surface by noncombustible material that will remain in place for at least 15 minutes when tested in conformance with CAN/ULC-S101.

Typically, the illustrated designs reflect the precise dimensions and condition of the sample assembly which has been subjected to the fire-endurance test. Within practical limits, a construction must duplicate the illustrated design and the details included in the associated text in order to achieve the indicated fire-resistance rating.

The illustrated designs which show assemblies that have been subjected to the Standard Fire Endurance Test are prefixed by the letters "EW."

Authorities Having Jurisdiction should be consulted before installation.

Numbered items refer to the descriptive text below each drawing. Individual components of a proprietary nature or over which it is necessary to exercise control at the manufacturing location are certified under the certification and Follow-Up Service of Underwriters Laboratories of Canada. Such items are identified in the text by a black dot thus •. Under this Service, periodic examination and tests are conducted on samples selected at random from current production and stock.

Each certified product bears the label or other identification of Underwriters Laboratories of Canada from which it may be determined that a product is suitable for use as a material in a particular assembly or assemblies.

RELATED PRODUCTS

Components intended for use with exterior wall insulation and finish systems are covered under Components for Exterior Wall Insulation and Finish Systems (FWFXC).

ADDITIONAL INFORMATION

For additional information, see Exterior Wall Systems (FWFFC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exterior Wall Insulation and Finish System."

Components for Exterior Wall Insulation and Finish Systems (FWFXC)

USE

This category covers components for exterior wall insulation and finish systems designated for use in specific assemblies covered under Exterior Wall Insulation and Finish Systems (FWFOC).

ADDITIONAL INFORMATION

For additional information, see Exterior Wall Insulation and Finish Systems (FWFOC) and Exterior Wall Systems (FWFFC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Component for Exterior Wall and Finish Systems."

EXTINGUISHERS AND EXTINGUISHING SYSTEM UNITS (FWFZC)

This category covers extinguishers, extinguishing agents and extinguishing system units.

The relative fire-extinguishing potential of extinguishers is expressed by a NUMERAL and LETTER designation. The LETTER designation refers to the general class of fire for which the extinguisher is suitable.

Class A fires are defined as fires in ordinary combustible materials such as wood, cloth and paper, where the "quenching-cooling" effect of quantities of water or solutions containing large percentages of water is most effective in reducing the temperature of the burning material below the ignition temperature and is, therefore, of first importance.

Class B fires are defined as fires in flammable petroleum products or other flammable liquids, greases, etc., where the "blanketing-smothering" effect of oxygen-excluding media is most effective.

Class C fires are defined as fires involving electrical equipment where the electrical nonconductivity of the extinguishing media is of first importance.

The NUMERAL is indicative of the approximate relative fire-extinguishing potential of the first-aid fire appliances. For example, a 4-A extinguisher possesses approximately twice the potential of a 2-A extinguisher.

Authorities Having Jurisdiction should be consulted as to the conditions under which the various extinguishers will be accepted. Subject to approval by the Authorities Having Jurisdiction, the extinguishers are intended to be located on the basis of floor area, or extinguishing potential of the appliances, or specific hazard, or other conditions involved.

Extinguishing agents are classified according to the general class of fire for which the agent is suitable, expressed by LETTER designation, where applicable.

Extinguishing system units are classified according to the types of extinguishing systems in which they are intended to be used.

AEROSOL-GENERATING FIRE EXTINGUISHING SYSTEM UNITS (FWSAC)

GENERAL

This category covers aerosol-generating extinguishing -system units, which are devices that, when assembled into a system, are designed to generate and discharge fine potassium carbonate particles and inert gases for the extinguishment of fires. Each system consists of one or more aerosol generators, actuating assemblies for automatic or manual operation, and miscellaneous subsidiary devices. The units are suitable for use over a temperature range of -40°C to +54°C or as otherwise noted in the individual certifications.

The units are intended for total flooding use where there is a fixed enclosure about the hazard to enable the required concentration to be achieved and maintained for the required period of time to ensure the effective extinguishment of a fire within the enclosure. They are intended for normally unoccupied applications. The aerosol generated may create a potential hazard for personnel and equipment in the protected area. In generating aerosol, there are high-temperature products of the extinguishing media discharged; this characteristic should be investigated before the units are installed. The potential effects of the agent discharge residue on sensitive equipment and other objects have not been investigated.

These units are intended for protection against fires that fall under the Class B and C categories. Aerosol generators, where indicated in the individual certifications, are also suitable for the protection of limited quantities of Class A materials. It should be noted that fires involving densely packed fibrous materials are special hazards which cannot be protected by the units covered under this category.

These units and systems are intended to be designed, installed, operated, tested and maintained in accordance with ANSI/NFPA 2010, "Aerosol Fire-Extinguishing Systems."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2127, "Inert Gas Clean Agent Extinguishing System Units," in addition to the requirements contained in ULC Subject C1500, "Aerosol Generating Fire Extinguishing System Units." The following is a list of the requirements from ULC Subject C1500 that are added to the applicable requirements in UL 2127: Temperature Cycling (10 cycles), High Humidity Exposure, Fire Exposure, Hydrogen Sulfide Exposure, Hydrogen Sulfide/Carbon Dioxide Exposure, Discharge Temperature Measurement, Rough Usage, Explosive Atmosphere, a Modified Class A Crib Fire Test and Accelerated Aging of Solid Aerosol.

ULC MARK

Aerosol-Generating Fire Extinguishing System Units (FWSAC)−*Continued*

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Aerosol Generating Fire Extinguishing System Unit."

ANTIFREEZE SOLUTION EXTINGUISHERS (FWTXC)

GENERAL

This category covers expellent-gas-operated, antifreeze solution extinguishers, which are special-type, first-aid fire appliances designed for operation at temperatures as low as -40°C. They are intended for use in locations where low-temperature conditions make water-type extinguishers unsuitable. Unless otherwise indicated in the individual certifications, they are intended for use on Class A fires.

The fire-extinguishing certifications of these extinguishers are developed at normal ambient temperatures (approximately 21°C) and may be reduced at lower temperatures.

Antifreeze solution extinguishers are of two basic types: one employing a cartridge that retains the expellant gas until it is punctured, and the other type employing a shut-off valve that retains the gas in the same single chamber with the extinguishing solution.

Chemical Charges — Extinguishers of this type employ special charges. Reliability of operation may be endangered by use of charges other than those furnished by the manufacturer. The extinguishing agents are either calcium chloride solutions or alkali-metal salt solutions (loaded stream). Care must be taken to follow the charging and maintenance directions on the extinguisher nameplate or recharging package. When the directions do not specify discharge, cleaning, and recharging annually, Authorities Having Jurisdiction should be consulted as to the acceptable procedure in ensuring operative condition.

ULC requires that original charges be supplied by the manufacturer of the device.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S507, "Water Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Antifreeze Solution Extinguisher."

CARBON DIOXIDE EXTINGUISHERS (FXHVC)

GENERAL

This category covers carbon dioxide extinguishers, which are portable appliances designed and tested for operation over a temperature range of -40°C to 49°C.

The fire extinguishing classifications of these extinguishers are developed at normal ambient temperature (approximately 21°C) and may be reduced at lower temperatures.

CO_2 is a nonconductor and its properties are such that when air is displaced by it or mixed with it in suitable proportions it is effective on Class B and C fires.

In using extinguishers of this type, especially in unventilated places such as small rooms, closets or confined spaces, operators and others should take precautions to avoid breathing the vapours or gases liberated or produced by the extinguishers.

Extinguishers utilize CO_2 stored in TC-3A or -3AA shipping containers, which are equipped with special cutter or seated-type valves permitting release of CO_2 gas through hand hose and nozzle (or tanks constructed in compliance with ASME Unfired Pressure Vessel Code Requirements). TC shipping containers (cylinders) for CO_2 are required to be designed for 12400 kPa or higher pressure and are so marked.

The small sizes are provided with a handle or strap for portability and a wall hook for mounting, whereas the large sizes are mounted on two-wheel trucks. Cylinders in service should be weighed semi-annually to detect loss of liquid by leakage, tampering or use.

These appliances do not need to be protected against freezing. The extinguishers are capable of complete uninterrupted discharge at temperatures down to -40°C. If the discharge of the extinguisher is interrupted during an attack on a fire by closing the valve one or more times when the temperature of the extinguisher contents is below -18°C, blockage of the discharge may occur, thereby rendering the extinguisher useless for any further use on the fire being attacked. This condition corrects itself without any damage to the extinguisher after a period of time dependent upon the ambient temperature. Therefore, use of carbon dioxide extinguishers at temperatures lower than -18°C should not contemplate intermittent discharge.

Carbon Dioxide Extinguishers (FXHVC)−*Continued*

MARINE USE

All ULC certified CO_2 extinguishers have been approved for use within the jurisdiction of Canadian marine authorities where the extinguisher is of an appropriate size and classification. Compliance with the requirements of other marine jurisdictions is indicated on the extinguisher label.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S503, "Carbon-Dioxide Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Carbon Dioxide Extinguisher."

CARBON DIOXIDE EXTINGUISHING SYSTEM UNITS (FXVTC)

This category covers carbon dioxide extinguishing system units intended for use in carbon dioxide extinguishing systems, installed in accordance with ANSI/NFPA 12, "Standard on Carbon Dioxide Extinguishing Systems," with additional limitations as specified in the individual Listings. When so installed they may form manual or combined manual and automatic systems, with or without remote operation. Such systems in their simplest form consist of one or more storage containers with discharge valves, control heads, piping and discharge nozzles. The system thus formed uses high pressure (approximately 5850 kPa storage) carbon dioxide. The high-pressure storage containers are either TC-3A or -3AA shipping containers (cylinders).

Authorities Having Jurisdiction should be consulted before installation.

Carbon Dioxide Extinguishing System Units, General Use (FYJRC)

GENERAL

This category covers devices that may be used in all types of carbon dioxide extinguishing systems, such as cylinders, cylinder valves, control heads, selector valves, pneumatic and electrical detectors, etc.

The individual certifications contain information regarding the equivalent length of system units which affect the flow of carbon dioxide in pipelines. This information may be used in computing system flow rates according to the methods described in ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems."

ADDITIONAL INFORMATION

For additional information, see Carbon Dioxide Extinguishing System Units (FXVTC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Carbon Dioxide Extinguishing System Unit, General Purpose."

Carbon Dioxide Extinguishing System Units, Hand Hose Line (FYWZC)

GENERAL

This category covers hand hose line systems consisting of a hose reel or rack, hose, and a discharge nozzle assembly connected by fixed piping to a supply of carbon dioxide.

The carbon dioxide extinguisher systems in which these racks and reels are used are fixed piping installations with carbon dioxide stored in one or more cylinders at atmospheric temperatures (cylinder capacities 22.7, 34.0 or 45.4 kg), or tanks in which liquid carbon dioxide is stored under

Carbon Dioxide Extinguishing System Units, Hand Hose Line (FYWZC)−*Continued*

continuously controlled low temperature. The carbon dioxide may be directed to one or more hose lines consisting of flexible metallic reinforced hose having discharge ends equipped with horns or nozzles and shutoff valves. Local or remote manual control of supply of carbon dioxide may be provided. The hose-carrying capacity of the reels or racks is indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Carbon Dioxide Extinguishing System Units (FXVTC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Carbon Dioxide Extinguishing System Unit, Hand Hose Line."

Carbon Dioxide Extinguishing System Units, Local Application (FZKXC)

GENERAL

This category covers local-application systems consisting of a fixed supply of carbon dioxide permanently connected to a system of fixed piping, with nozzles arranged to discharge directly into a fire.

The products in the individual certifications are primarily local-application nozzles which, when used with other devices certified for general use, form local-application carbon dioxide systems.

Local-application nozzles are tested to determine their fire extinguishing limitations; this data is shown in tabular form in individual certifications. For overhead nozzles the tables give carbon dioxide flow rate (90% of splash rate, kg/min) versus height (m) and maximum area (m^2) versus height (m) limits within which extinguishment has been obtained in test fires. For tankside nozzles the tables give maximum and minimum design flow rates (kg/min) within which extinguishment has been obtained in fire tests, versus area coverage (m^2), supplemented by other limitations on nozzle spacing and maximum area extinguished. For linear nozzles the tables give maximum and minimum design flow rate (kg/min) versus throw (maximum distance across hazard).

Individual nozzles may be provided with a range of orifice sizes which have been rated for equivalent number by comparison with the "Standard" orifice described in ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems." Orifice size numbers are marked on the body of the nozzle. Selection of nozzle orifices in individual system designs to achieve design flow rates is dependent on system flow-rate calculations.

ADDITIONAL INFORMATION

For additional information, see Carbon Dioxide Extinguishing System Units (FXVTC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product, or the Listing Mark on the smallest unit container in which the product is packaged with or without the ULC symbol on the product, is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Carbon Dioxide Extinguishing System Unit, Local Application."

Carbon Dioxide Extinguishing System Units, Total Flooding (GAMTC)

GENERAL

This category covers total-flooding systems consisting of a fixed supply of carbon dioxide permanently connected to fixed piping, with fixed nozzles arranged to discharge carbon dioxide into an enclosed space or an enclosure surrounding the hazard.

The products in the individual certifications are devices intended for use with other devices certified for general use to form total-flooding carbon dioxide systems.

Total-flooding nozzles may be provided with a range of orifice sizes, which have been rated for equivalent number by comparison with the "Standard" orifice described in ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems." The selection of nozzle orifices in the individual system designs to achieve design flow rates is dependent on system flow-rate calculations.

Carbon Dioxide Extinguishing System Units, Total Flooding (GAMTC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Carbon Dioxide Extinguishing System Units (FXVTC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the ULC symbol on the product, is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Carbon Dioxide Extinguishing System Unit, Total Flooding."

HALOGENATED AND CLEAN AGENT EXTINGUISHERS (GAOMC)

GENERAL

This category covers Halogen agent extinguishers containing Halon 1211, 1301, 1211/1301, and halocarbon clean agent extinguishers containing HCFC Blend 1130/1220/2420 and HCFC 123 extinguishing agents. These extinguishers are portable appliances designed and tested for operation over a temperature range of -40°C to 49°C unless otherwise shown in the individual Listings.

The fire-extinguishing classifications of these extinguishers are developed at normal ambient temperature (21°C) and may be reduced at lower temperatures.

Halogenated agents and halocarbon clean agents have properties such that, when air is displaced by them or mixed with them in suitable proportions, they are effective on Class B fires and, when used in sufficient quantity, on Class A fires (refer to the individual Listings for extinguishers suitable for Class A fires). As a nonconductor of electricity, they may also be used on energized electrical equipment involved in fire situations (Class C).

Undecomposed 1211, 1301, 1211/1301, HCFC Blend 1130/1220/2420, and HCFC 123 agents are relatively low in toxicity. However, 1211, 1301 and 1211/1301 agents may have an anaesthetic effect on humans at concentrations above 4%, by volume. At concentrations above 20%, they will reduce the oxygen concentration in the air below the 16% level generally considered necessary to sustain life.

The HCFC and HCFC agent blends each have different specific concentrations which produce the aforementioned effects.

The products of decomposition of 1211, 1301, 1211/1301, HCFC Blend 1130/1220/2420, and HCFC 123 agents can be hazardous to personnel. They have a characteristic sharp odour which is highly irritating to the nose, throat, etc. Care should be taken to avoid inhalation of the agent and the products produced when the agents are applied to fires.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate halogenated agent extinguisher products in this category is CAN/ULC-S512, "Halogenated Agent Hand and Wheeled Fire Extinguishers."

The basic standard used to investigate halocarbon clean agent extinguisher products in this category is CAN/ULC-S566, "Halocarbon Clean Agent Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Halogenated Agent Extinguisher" or "Clean Agent Extinguisher."

Halogenated Media Automatic Fire Extinguisher Units (GAOZC)

GENERAL

This category covers automatic fire extinguisher units of the type and capacity as noted in the individual certifications. These extinguishers are intended for fixed installation in complete enclosures and are unclassified as to their fire-extinguishing potential.

Halogenated Media Automatic Fire Extinguisher Units (GAOZC)−*Continued*

Halon 1211, bromochlorodifluoromethane and other proprietary mixtures of halogenated hydrocarbons have properties such that, when air is displaced by them or mixed with them in suitable proportions, they are effective on Class B fires and, when used in sufficient quantity, on Class A fires (refer to the individual certifications for extinguishers suitable for Class A fires). As these media are nonconductors of electricity, they may also be used on energized electrical equipment involved in fire situations (Class C).

Undecomposed Halons are low in toxicity. However, they may have anaesthetic effects on humans at concentrations above 4%, by volume. At concentrations above 20%, they will reduce the oxygen concentration in air below the 16% level generally considered necessary to sustain life.

While the products of decomposition of these media can be hazardous to personnel, their presence is readily apparent from their characteristic sharp odour which is highly irritating to the nose, throat, etc. Care should be taken to avoid inhalation of these media and the products produced when the media are applied to fires.

ADDITIONAL INFORMATION

For additional information, see Halogenated Agent Extinguishers (GAOMC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S512, ''Halogenated Agent Hand and Wheeled Fire Extinguishers.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Halogenated Media Automatic Fire Extinguisher Unit.''

CLEAN AGENT EXTINGUISHING SYSTEM UNITS (GAQFC)

USE AND INSTALLATION

This category covers clean agent extinguishing system units, which are assembled in a system with an agent storage container assembly to discharge an extinguishing agent through fixed piping and nozzles for the extinguishment of fires. These units include actuating assemblies designed for automatic and/or manual operation, container assemblies for storing the extinguishing agent, discharge assemblies, manifold check valves, selector valves, discharge nozzles and other miscellaneous devices.

This category also covers clean agent extinguishing system unit assemblies comprised of a single enclosure that houses 1) electronic control and signaling equipment and 2) a clean agent extinguishing system unit, connected and assembled in the enclosure and intended for connection to an electrical power connection, clean agent system piping, and heat- or smoke-detection devices.

Clean agent extinguishing systems are intended to be designed, installed and maintained in accordance with ANSI/NFPA 2001, ''Clean Agent Fire Extinguishing Systems,'' and the manufacturer's installation, operation and maintenance manual. These units are designed for total-flooding applications unless otherwise indicated in the individual certifications. For total-flooding applications, the hazard is surrounded by a fixed enclosure that enables the required concentration to be achieved and maintained for the required period of time, ensuring effective extinguishment of fire in combustible materials.

The total-flooding design concentrations for surface-type Class A and Class B fires are specified in the individual manufacturer's design and/or installation, operation and maintenance manual referenced in the individual certifications.

Fires involving densely-packed fibrous materials, such as baled cotton, jute, pressed fiberboard or the like, are special hazards and should be given specific consideration. Extinguishment of materials of this type may require substantially higher concentrations.

For information regarding safeguards for personnel, products of decomposition, and exposure to the agent, refer to ANSI/NFPA 2001.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate clean agent extinguishing system units in this category is UL 2166, ''Halocarbon Clean Agent Extinguishing System Units,'' or UL 2127, ''Inert Gas Clean Agent Extinguishing System Units.''

The basic standards used to investigate clean agent extinguishing system unit assemblies in this category are UL 2166, or UL 2127, ANSI/UL 864,

Clean Agent Extinguishing System Units (GAQFC)−*Continued*

''Control Units and Accessories for Fire Alarm Systems,'' and ULC-S527, ''Control Units for Fire Alarm Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Clean Agent Extinguishing System Unit'' or ''Clean Agent Extinguishing System Unit Assembly.''

DRY CHEMICAL EXTINGUISHERS, HAND AND WHEELED (GBARC)

GENERAL

This category covers hand and wheeled dry-chemical extinguishers, which are portable appliances of the stored-pressure or cartridge-operated type. They are intended for operation over a temperature range of -40°C to +49°C unless otherwise noted in the individual certifications.

In the stored-pressure type, the dry chemical is expelled by dry air, nitrogen, or other expellant gases, stored in a single chamber with the dry chemical.

In the cartridge-operated type, the dry chemical is expelled by carbon dioxide or nitrogen stored in a separate expellant-gas cartridge.

The hand units are provided with a self-closing shut-off nozzle or control valve, and may also utilize a hose as a means of directing the discharge.

They are provided with a carrying handle for portability and a wall hook or bracket for mounting.

The wheeled units are provided with a hose and shut-off nozzle, mounted on a carriage, and are suitable for use inside factory and warehouse buildings in which doorways are wide enough to permit passage of extinguishers from one room to another, or in which the extinguisher will not be required to pass from one room to another. They are also suitable for use in outdoor applications such as mill yards and similar places.

Dry-chemical extinguishers may be charged with ordinary, sodium bicarbonate or potassium bicarbonate, or multi-purpose, ammonium phosphate/ammonium sulphate, dry chemical.

The dry chemical utilized is a specially prepared mixture of chemicals in finely divided form, treated with additives to produce flowability and water repellancy characteristics.

The base type designations indicated in the individual certifications identify the principal extinguishing chemical or chemicals in the dry-chemical charge with which the extinguisher was classified.

Extinguishers charged with ordinary dry chemicals are classified for use on Class B and C fires. They are not effective on deep-seated fires in ordinary combustible materials (Class A), but may have some value on incipient surface fires in such materials.

Extinguishers charged with multi-purpose chemicals (with the exception of small sizes) are classified for use on Class A, B and C fires.

The fire-extinguishing classifications of these extinguishers are developed at normal ambient temperatures (approximately 21°C) in accordance with CAN/ULC-S508, ''Rating and Fire Testing of Fire Extinguishers,'' and may be reduced at lower temperatures.

Reliability of operation may be endangered by use of charges other than those furnished by the manufacturer of the device or by mixing of agents of different base ingredients.

Maintenance includes annual or more frequent inspection by removing and weighing the gas cartridge or checking pressure in the cylinder, ascertaining that dry chemical flows freely, and that the hose, when provided, is unobstructed and in working order. Extinguishers with the dry chemical and expellant gas in the same single chamber are examined for leakage by observation of the pressure gauge.

REBUILT PRODUCTS

This category also covers dry-chemical extinguishers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt dry-chemical extinguishers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt dry-chemical extinguishers are subject to the same requirements as new dry-chemical extinguishers.

MARINE USE

All ULC certified dry-chemical extinguishers have been approved for use within the jurisdiction of Canadian marine authorities where the extinguisher is of an appropriate size and classification. Compliance with the requirements of other marine jurisdictions is indicated on the extinguisher label.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S504, ''Dry Chemical Fire Extinguishers.''

Dry Chemical Extinguishers, Hand and Wheeled (GBARC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dry Chemical Extinguisher, Hand and Wheeled."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

Dry Chemical Extinguishing Agents (GBNRC)

USE

This category covers dry chemicals intended for the recharging of specific ULC labelled extinguishers. These materials have been investigated for their fire-extinguishing capabilities and performance characteristics in combination with the extinguishers indicated in the individual certifications. Their use with other extinguishers has not been investigated. Users should be aware that use of these products in any extinguisher may void the extinguisher warranty.

ADDITIONAL INFORMATION

For additional information, see Dry Chemical Extinguishers, Hand and Wheeled (GBARC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S514, "Dry Chemical for Use in Hand and Wheeled Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dry Chemical Extinguishing Agent."

DRY CHEMICAL EXTINGUISHING SYSTEM UNITS (GBYSC)

GENERAL

This category covers dry-chemical fire extinguishing system units, which are devices assembled in a system designed to discharge dry chemical through fixed piping and nozzles. The systems consist of actuating assemblies, container assemblies for storing the dry chemical and expellant gas, discharge assemblies and miscellaneous devices. They are suitable for use over a temperature range of -40°C to +49°C, unless otherwise noted in the individual certifications.

Actuating assemblies provide a means of operating the discharge valves, thereby releasing the dry chemical. They may include pneumatic release devices, thermostats, trip levers, mechanical linkages and cables, and pulleys.

Container assemblies provide a means of storing expellant gas and supplying dry chemical to discharge assemblies. They may include one or more containers, dry chemical tubes, valve assemblies and outlet fittings.

Discharge assemblies provide a means of directing the dry-chemical discharge. They may include couplings, fixed piping and specially designed discharge nozzles.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1254, "Pre-Engineered Dry Chemical Extinguishing Systems Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dry-Chemical Extinguishing System Unit."

FOAM EXTINGUISHING SYSTEM UNITS (GEEZC)

This category covers devices and materials used in systems employing foam as the fire-extinguishing medium.

ANSI/NFPA 11, "Standard for Low-, Medium-, and High-Expansion Foam," and Authorities Having Jurisdiction should be consulted regarding use of devices and materials before installation of these systems.

Foam Extinguishing System Units (GEEZC)−*Continued*

Air Foam, Mechanical Foam (GEFZC)

This category covers foam produced by the addition of a foaming agent (a liquid) to water to make it capable of foaming in the presence of air, which is usually incorporated by the mechanical action of jets in a fixed foam maker or portable playpipe. The foaming agent, or air foam liquid, is referred to as "stablilizer" in the individual Listings.

Air Foam Liquid Concentrates, Mechanical Foam (GFGVC)

GENERAL

This category covers Categories 1 and 2 foam liquid concentrates, which include protein, fluoroprotein, film-forming fluoroprotein (FFFP), aqueous film-forming foam (AFFF), or other synthetic-based materials.

Foam is generally produced by the addition of a foam liquid concentrate to water and mechanically mixing air into the foam solution. Some foam solutions may be discharged through equipment that does not mix air into the solution, as indicated in the individual certifications.

Category 1 foam liquid concentrate is suitable for use on fires involving ordinary hydrocarbon petroleum products, but may not be suitable for use on fires involving polar solvent fuels. Category 2 foam liquid concentrate has been investigated for use on polar solvents as noted in the individual certifications.

Liquid concentrates may be stored in the original shipping containers or in pressure-proportioning tanks. Liquid concentrates are not intended to be stored at temperatures below 2°C, unless otherwise indicated in the individual certifications, or above 50°C. They are intended to be stored in locations free of excessive moisture to avoid external corrosion of containers and other equipment.

The quality of foam produced is affected by proportioning and discharge equipment. The individual certifications of liquid concentrates reference all the equipment with which they may be used and the corresponding operating limitations including the foam concentrations. There are two types of foam discharge outlets:

Type II — Discharge devices that do not deliver foam gently onto the liquid surface but are designed to minimize submergence of the foam or agitation of the surface. Examples include foam chambers, subsurface injection equipment, or applying the foam off a backboard or the wall of a tank.

Type III — Discharge devices that deliver foam directly onto the liquid surface at an angle above the horizontal. Examples include handheld nozzles or monitors. Unless otherwise indicated in the individual certifications, the type of discharge outlet certified with a foam is Type III.

Foam liquid concentrates investigated with certified sprinklers and fixed spray foam nozzles are intended to be installed in accordance with the applicable NFPA Standard, but in no case is the protected area intended to exceed 12.1 sq. m.

ADDITIONAL INFORMATION

For additional information, see Air Foam, Mechanical Foam (GEFZC), Foam Extinguishing System Units (GEEZC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S564, "Categories 1 and 2 Foam Liquid Concentrates."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Foam Liquid Concentrate Mechanical Foam."

Foam-discharge Outlets (GFUTC)

GENERAL

This category covers foam chambers provided with integral foam makers intended for fixed installation on outdoor flammable-liquid-storage tanks as a means of producing foam and introducing it into the tanks for fire protection. These devices are available as Type I or Type II discharge outlets.

Foam heads may be of the open type or the closed automatic type and are designed to discharge foam solution. These heads are intended for fixed installation as a means of applying foam solution on liquid surfaces in small tanks, drain areas, dip tanks, etc.

Foam-water sprinklers are intended for fixed installation to apply foam solution on liquid surfaces.

Foam extinguishing systems are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 11, "Low-, Medium-, and High-Expansion Foam," and ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems."

Authorities Having Jurisdiction should be consulted before installation.

Foam-discharge Outlets (GFUTC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Air Foam, Mechanical Foam (GEFZC), Foam Extinguishing System Units (GEEZC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S654, ''Categories 1 and 2 Foam Liquid Concentrates.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fixed Air Foam Discharge Outlet.''

Foam Liquid Concentrates, Category 3 (GFVKC)

GENERAL

This category covers Category 3 foam liquid concentrates, which include film-forming fluoroprotein (FFFP) and aqueous film-forming foam (AFFF). The foam liquid concentrates are primarily used for aircraft rescue fire fighting.

Foam is generally produced by the addition of a foam liquid concentrate to water and mechanically mixing air into the foam solution.

Category 3 AFFF and FFFP foam liquid concentrates are suitable for use on fires involving ordinary hydrocarbon petroleum products, but may not be suitable for use on fires involving polar solvent fuels.

Liquid concentrates may be stored in the original shipping containers or in pressure-proportioning tanks. Liquid concentrates are not intended to be stored at temperatures below 2°C, unless otherwise indicated in the individual certifications, or above 50°C. They are intended to be stored in locations free of excessive moisture to avoid external corrosion of containers and other equipment.

ADDITIONAL INFORMATION

For additional information, see Air Foam, Mechanical Foam (GEFZC), Foam Extinguishing System Units (GEEZC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S560, ''Category 3 Aqueous Film-Forming Foam (AFFF) Liquid Concentrates,'' and CAN/ULC-S563, ''Category 3 Film-Forming Fluoroprotein (FFFP) Foam Liquid Concentrates.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Foam Liquid Concentrate, Category 3.''

Foam Makers, Fixed (GGIRC)

USE AND INSTALLATION

This category covers foam makers of the fixed type intended to be installed between the supply piping of foam solution (water plus liquid concentrate) and piping leading to the discharge outlet. The foam maker aspirates air into the foam solution passing through the device.

Foam extinguishing systems are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 11, ''Low-, Medium-, and High-Expansion Foam.''

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Air Foam, Mechanical Foam (GEFZC), Foam Extinguishing System Units (GEEZC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S564, ''Categories 1 and 2 Foam Liquid Concentrates.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fixed Air Foam Maker.''

Nozzles, Hose Stream (GHJXC)

USE

This category covers foam hose-stream nozzles, which are portable devices that may be either 1) special playpipes incorporating a foam maker to aspirate air into a foam-water solution to produce foam, or 2) nonaspirating-type nozzles for which the discharge of foam solution produces a foam. These nozzles may pick up foam liquid concentrate directly from a container (self-inducting) or utilize a foam solution produced by introducing the liquid concentrate into a water stream at some remote point.

Nozzles, Hose Stream (GHJXC)−*Continued*

Foam extinguishing systems are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 11, ''Low-, Medium-, and High-Expansion Foam.''

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Air Foam, Mechanical Foam (GEFZC), Foam Extinguishing System Units (GEEZC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S564, ''Categories 1 and 2 Foam Liquid Concentrates.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Foam Hose Stream Nozzle.''

Proportioners, Foam Concentrate (GHXVC)

GENERAL

This category covers proportioners intended to provide continuous introduction of foam liquid concentrates, in adequate ratio, into a water stream flowing under pressure in pipe or hose lines. Introduction is made at or enroute to the foam maker. Foam concentrate may be introduced into flowing water by the following means:

1. **In-line inductor** – By inducting the foam concentrate through single or multiple inductors located in the water line to the foam maker. Inductors may be for portable or fixed installation. They may have an adjustable or fixed orifice for induction.
2. **Bladder or diaphragm tank balanced pressure** – By storing foam concentrate in a tank and forcing the foam concentrate into flowing water through the orifice plate of a ratio-flow controller. Foam concentrate is forced out of the bladder or diaphragm by directing part of the flowing water between the inside of the tank and outside of the bladder or diaphragm.
3. **In-line balanced pressure** – By using a positive displacement pump to provide foam liquid pressure to a foam orifice plate of a ratio-flow controller. A pressure-reducing service diaphragm-balancing valve is used to balance foam liquid and water pressures.
4. **Balanced pressure** – By using a positive displacement pump to provide foam liquid pressure to a foam orifice plate of a ratio-flow controller. A back-pressure service diaphragm-balancing valve is used to balance foam liquid and water pressures.

The certification of a bladder or diaphragm tank balanced-pressure system includes the tank, bladder or diaphragm, center tubes inside the tank and ratio-flow controller.

The certification of an in-line balanced pressure or balanced-pressure system includes the diaphragm-balancing valve and ratio-flow controller.

Foam extinguishing systems are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 11, ''Low-, Medium-, and High-Expansion Foam,'' and ANSI/NFPA 16, ''Installation of Foam-Water Sprinkler and Foam-Water Spray Systems.''

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Air Foam, Mechanical Foam (GEFZC), Foam Extinguishing System Units (GEEZC) and Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S564, ''Categories 1 and 2 Foam Liquid Concentrates.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Air Foam Proportioner.''

FOAM EXTINGUISHERS (GJZSC)

Foam Extinguishers, Expellant Gas Operated (GJZTC)

GENERAL

This category covers foam, expellant-gas-operated extinguishers, which are first-aid fire appliances intended for use on Class A and B fires.

Foam Extinguishers, Expellant Gas Operated (GJZTC)−*Continued*

These extinguishers are intended to be installed, maintained and tested in accordance with the "National Fire Code of Canada."

Chemical Charge — They employ a foam/water solution as the extinguishing agent. The solution is ejected by means of the expellant gas, which is contained in the same chamber as the solution. Fire-extinguishing foam is formed upon discharge through an air-aspirating nozzle. The reliability of operation may be endangered if foam solutions other than those indicated on the extinguisher label are used.

Size — They are of the 9 L capacity to filling mark, or larger, and are provided with a self-closing discharge valve, hose, and nozzle. These extinguishers are rated and classified as indicated in the individual certifications.

Caution — When located where temperatures of 0°C or lower may be encountered, the extinguishers must be protected against freezing.

MARINE USE

All ULC certified foam extinguishers have been approved for use within the jurisdiction of Canadian marine authorities where the extinguisher is of an appropriate size and classification. Compliance with the requirements of other marine jurisdictions is indicated on the extinguisher label.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S554, "Water Based Agent Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Foam Extinguisher, Expellant Gas Operated."

HALOGENATED AGENT EXTINGUISHING SYSTEM UNITS (GLERC)

GENERAL

This category covers halogenated agent extinguishing system units, which are devices assembled in a system to discharge liquefied gas through fixed piping and nozzles for the extinguishment of fires. The systems consist of actuating assemblies designed for manual or automatic operation, cylinder assemblies for storing the agent, discharge assemblies, and miscellaneous subsidiary devices. Cylinder assemblies are superpressurized with dry nitrogen. They are suitable for use over a temperature range of -40°C to +49°C unless otherwise noted in the individual certifications.

Total flooding systems are intended for use with a fixed enclosure about the hazard to enable the required concentration to be built up and maintained for the required period of time to ensure the effective extinguishment of fire in combustible materials.

All system units are suitable for the protection of Class B and C hazards. Some system units, as shown in the individual certifications, are also suitable for the protection of Class A materials. It should be noted that fires involving densely packed fibrous materials, such as baled cotton or pressed fibreboard, are special hazards which cannot be protected by these systems.

Undecomposed Halon 1301 is low in toxicity. However, it may have anaesthetic effects on humans at concentrations above 7% by volume. At concentrations above 20%, it will reduce the oxygen concentration in air below the 16% level generally considered necessary to sustain life.

The products of decomposition of Halon 1301 can be hazardous to personnel. They have a characteristic sharp odour which is highly irritating to the nose, throat, etc. Care should be taken to properly ventilate the hazard area before entering after a fire, as it is possible that toxic concentrations of decomposition products could exist in the hazard area.

Undecomposed Halon 1211 is low in toxicity. However, it may have anaesthetic effects on humans at concentrations above 4%, by volume. At concentrations above 20%, it will reduce the oxygen concentration in air below the 16% level generally considered necessary to sustain life.

The products of decomposition of Halon 1211 can be hazardous to personnel. They have a characteristic sharp odour which is highly irritating to the nose, throat, etc. Care should be taken to avoid inhalation of the agent and the products produced when the agent is applied to fires.

The products of decomposition can also be corrosive to certain types of equipment and facilities. This possibility should be investigated before halogenated agent extinguishing system units are installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

Halogenated Agent Extinguishing System Units (GLERC)−*Continued*

The basic standard used to investigate products in this category is UL 1058, "Halogenated Agent Extinguishing System Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Halogenated Agent Extinguishing System Unit."

FIRE EXTINGUISHER SERVICE AGENCIES (GLOQC)

GENERAL

This category covers the Certification of Agencies engaged in the servicing of portable fire extinguishers.

Portable fire extinguishers, as referenced herein, means any hand portable or wheeled fire extinguisher. Servicing, as referenced herein, means any operation performed on an extinguisher subsequent to its initial sale and installation, the intention of which is the continuance of its function, performance and safety. Service Agencies, as referenced herein, include self-employed individuals, agencies, companies, divisions of companies, and other definable entities who are engaged in the service of portable fire extinguishers. In addition to their fixed service facilities, agencies, where so identified in the individual certifications, are equipped to provide limited service from mobile shops or service vehicles.

The Service Agency bears the responsibility for the correctness of the service performed. ULC makes no representations or warranties, expressed or implied, that serviced extinguishers will prevent any loss by fire or that the extinguisher will, in all instances, provide the protection for which it is installed or intended. ULC does not assume or undertake to discharge any liability for any loss which may result from failure of the extinguisher to perform as intended.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

Certified Service Agencies have demonstrated their ability to perform specific service operations on specified types of extinguishers as described in the individual certifications, and in accordance with CAN/ULC-S532, "Regulation of the Servicing of Portable Fire Extinguishers." This service requires the use of recharge materials as specified on the extinguishers or of materials certified by ULC as being equivalent.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Extinguisher Service Agency."

HALON AND CLEAN AGENT FIRE EXTINGUISHING SYSTEMS AND STORAGE FACILITY SERVICING AGENTS (GLPAC)

GENERAL

This category covers the Certification of Agencies engaged in the servicing of halon and/or clean agent fire extinguishing systems, storage facilities, and components. A fire extinguishing system, as referenced herein, means any fixed system, pre-engineered or engineered, as described in Halogenated Agent Extinguishing System Units (GLERC) or Clean Agent Extinguishing System Units (GAQFC). Servicing, as referenced herein, means any operation performed on an extinguishing system subsequent to its initial sale and installation, the intention of which is the continuance of its function, performance and safety. Storage facilities include any designated premise for the storage of halon and/or clean agents. Service Agencies, as referenced herein, include self-employed individuals, agencies, companies, divisions of companies, and other definable entities who are engaged in the service of halon and/or clean agent fire extinguishing system units.

The Service Agency bears the responsibility for the correctness of the service performed. ULC makes no representations or warranties, expressed or implied, that serviced extinguishing systems will prevent any loss by fire or that the system will, in all instances, provide the protection for which it is installed or intended. ULC does not assume or undertake to discharge any liability for any loss which may result from failure of the extinguishing system components or storage facilities to perform as intended.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

Halon and Clean Agent Fire Extinguishing Systems and Storage Facility Servicing Agents (GLPAC)−*Continued*

REQUIREMENTS

Certified Service Agencies have demonstrated their ability to perform specific service operations on extinguishing systems and/or the monitoring and control of storage facilities, as described in the individual certifications, and in accordance with ULC/ORD-C1058.18, "Regulation of the Servicing of Halon Extinguishing Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Halon and Clean Agent Fire Extinguishing System and Storage Facility Servicing Agent."

RESTAURANT COOKING AREA FIRE EXTINGUISHING SYSTEMS SERVICING AGENTS (GLXXC)

GENERAL

This category covers the Certification of Agencies engaged in the servicing of restaurant cooking area fire extinguishing systems, and components. A fire extinguishing system, as referenced herein, means any fixed system, pre-engineered, wet chemical, as described in Water Extinguishers, Expellant Gas Operated (GNFVC). Servicing, as referenced herein, means any operation performed on an extinguishing system subsequent to its initial sale and installation, the intention of which is the continuance of its function, performance and safety. Service Agencies, as referenced herein, include self-employed individuals, agencies, companies, divisions of companies, and other definable entities, who are engaged in the service of restaurant cooking area fire extinguishing system units.

The Service Agency bears the responsibility for the correctness of the service performed. ULC makes no representations or warranties, expressed or implied, that serviced extinguishing systems will prevent any loss by fire or that the system will, in all instances, provide the protection for which it is installed or intended. ULC does not assume or undertake to discharge any liability for any loss which may result from failure of the extinguishing system components to perform as intended.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

Certified Service Agencies have demonstrated their ability to perform specific service operations on extinguishing systems, as described in the individual certifications, and in accordance with ULC/ORD-C1254.18, "The Servicing of Restaurant Cooking Area Extinguishing Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Restaurant Cooking Area Fire Extinguishing System Servicing Agent."

SELF-CONTAINED AUTOMATIC EXTINGUISHER UNITS (GMFZC)

GENERAL

This category covers fixed extinguisher units having integral automatically operated thermal fire detection. The fire-extinguishing classifications of these extinguisher units are developed at ambient room temperature (approximately 21°C/70°F) and may be reduced at lower temperature. These units are intended to be installed and maintained in accordance with the certified company's installation and maintenance manual dated as specified in the individual certifications. Copies of the manual can be obtained from the certified company.

Authorities Having Jurisdiction should be consulted as to the acceptability for particular hazards and requirements covering installation.

USE

The hazards to be protected, extinguishing agent capacities and application limitations are indicated in the individual certifications. These units are not intended for protection of hazard areas larger than specified in the individual certifications with multiple units, or for use in occupied spaces including sleeping rooms unless specified in the individual certifications. Breathing of fumes or vapors after discharge of the unit should be avoided.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

Self-contained Automatic Extinguisher Units (GMFZC)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1254, "Pre-Engineered Dry Chemical Extinguishing System Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Self-contained Automatic Extinguisher Unit" or "Automatic Extinguisher Unit."

WATER EXTINGUISHERS, EXPELLANT GAS OPERATED (GNFVC)

GENERAL

This category covers expellant-gas-operated water extinguishers, which are first-aid fire appliances intended for use on Class A fires and, where indicated, suitable for use on fires involving Class C hazards.

These devices are intended to be installed, maintained and tested in accordance with the "National Fire Code of Canada."

Chemical Charge — They employ plain water as the extinguishing agent. Water is ejected by means of the expellant gas, which is contained in the same chamber as the extinguishing agent. The reliability of operation may be endangered if liquids other than plain water are used.

Size — They are of the 9 L capacity to filling mark, and are provided with a self-closing discharge valve and a hose and nozzle. These extinguishers are rated and classified 2-A.

Caution — When located where temperatures of 0°C or lower may be encountered, the extinguishers must be protected against freezing.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S507, "Water Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Water Extinguisher, Expellant Gas Operated."

WATER-SPRAY FIRE EXTINGUISHERS (GNVYC)

GENERAL

This category covers water-spray fire extinguishers, which are portable appliances of the stored pressure, cartridge or pressurized-cylinder-operated type as indicated in the individual Listings. Unless otherwise specified in the individual Listings, they are intended for operation in the temperature range of 2°C to 49°C. Operation of these units may be affected by use at temperatures outside these limits.

These portable extinguishers are provided with a self-closing shutoff nozzle or control valve and utilize a nozzle and/or nozzle and hose assembly as a means of directing the discharge. Hand portable extinguishers are provided with a carrying handle for portability and a wall hook or bracket for mounting.

USE AND INSTALLATION

These fire extinguishers are intended for use on Class A and C fires unless otherwise indicated in the individual Listings. These extinguishers are intended to be installed, maintained and tested in accordance with the applicable requirements of the "National Fire Code of Canada."

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S508, "Rating and Fire Testing of Fire Extinguishers," and CAN/ULC-S554, "Water Based Agent Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Water-spray Fire Extinguisher – Classification ____."

WET CHEMICAL EXTINGUISHING SYSTEM UNITS (GOASC)

GENERAL

This category covers wet-chemical fire extinguishing system units, which are assembled in a system designed to discharge a chemical extinguishing solution through fixed piping and nozzles. They are suitable for use over a temperature range of -22°C to +49°C unless otherwise noted in the individual certifications. Expellant-gas-operated systems consist of actuating assemblies designed for automatic and manual operation, expellant-gas assemblies and miscellaneous devices. Systems of the stored-pressure type have the expellant gas stored in the same cylinder as the extinguishing agent.

Actuating assemblies provide a means of operating the cylinder valves, thereby expelling the solution. They may include pneumatic-release devices, trip levers, mechanical linkages, and cables and pulleys.

Discharge assemblies provide a means of directing the discharge. They include fixed piping and specially designed nozzles.

Miscellaneous devices include mechanically operated gas-shutoff valves and electrical power shutoff devices.

These systems are intended for the extinguishment of fires in hoods, filters and ducts used for ventilation of restaurant cooking equipment. Protection for fires originating in associated cooking appliances is provided as indicated in the individual certifications. Additional protection is required in ducts where pools of grease may collect.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C1254.6-95, "Fire Testing of Restaurant Cooking Area Fire Extinguisher System Units," and ANSI/UL 1254, "Pre-Engineered Dry Chemical Extinguishing Systems Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wet Chemical Extinguishing System Unit."

EXTINGUISHERS, MISCELLANEOUS (GOUZC)

Wet Chemical Automatic Fire Extinguisher Units (GMCHC)

USE

This category covers automatic fire extinguisher units of the type and capacity noted in the individual certifications. The units are intended for specific fixed installations as described in the individual certifications and are unclassified as to their fire-extinguishing potential.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S554, "Water Based Agent Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wet Chemical Automatic Fire Extinguisher Unit."

Wet Chemical Fire Extinguishers (GNXGC)

GENERAL

This category covers extinguishers that use a wet chemical solution as the extinguishant. They are suitable for the extinguishment of Class A, Class B, or specific types of fires as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S507, "Water Fire Extinguishers." The extinguishers meet the safety requirements of CAN/ULC-S507, but may vary in discharge characteristics, temperature tolerances, durations and content. Total mass does not exceed 20 kg.

Wet Chemical Fire Extinguishers (GNXGC)–*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wet Chemical Fire Extinguisher."

Back Pack Foam Fire Extinguishers (GOVJC)

GENERAL

This category covers back-pack foam extinguishers, which are first-aid fire appliances intended for use on Class A and B fires. These extinguishers use a wet chemical solution as the extinguishant.

Back-pack extinguishers consist of a rigid or soft tank, shoulder straps, and a single-action, positive-displacement, trombone-type, hand-operated pump.

These extinguishers are intended to be installed, maintained and tested in accordance with the "National Fire Code of Canada."

Chemical Charge — They employ a foam/water solution as the extinguishing agent. The solution is ejected by means of the pump action which inducts foam concentrate contained in one container with water contained in the back pack. Fire-extinguishing foam is formed upon discharge through an air-aspirating nozzle. The reliability of operation may be endangered if foam solutions other than those indicated on the extinguisher label are used.

Size — They are of the capacity rating and classification as indicated in the individual certifications.

Caution — When located where temperatures of 0°C or lower may be encountered, the extinguishers must be protected against freezing.

MARINE USE

All ULC certified foam extinguishers have been approved for use within the jurisdiction of Canadian marine authorities where the extinguisher is of an appropriate size and classification. Compliance with the requirements of other marine jurisdictions is indicated on the extinguisher label.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S557, "Back-Pack Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Back Pack Foam Fire Extinguisher."

MISCELLANEOUS COMPONENTS (GOYKC)

The devices covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate installation in the field. The final acceptance of the component is dependent upon its application and use in complete assemblies submitted for examination and tests to Underwriters Laboratories of Canada.

Pulleys for Fire Extinguishing Systems (FWKRC)

GENERAL

This category covers pulleys suitable for use in the manufacture of wet- and dry-chemical extinguishing system units where the suitability of the application has been investigated by Underwriters Laboratories of Canada. These devices are intended for use as components of completed equipment submitted for investigation, and not for separate installation in the field.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1254, "Pre-Engineered Dry Chemical Extinguishing System Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pulley for Fire Extinguishing Systems."

Shell Components for Extinguishers, Hand and Wheeled (GAVHC)

GENERAL

The devices covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate installation in the field. The final acceptance of the component is dependent upon its application and use in complete assemblies of fire extinguishers submitted for examination and tests to Underwriters Laboratories of Canada.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S504, "Dry Chemical Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shell Component for Extinguishers, Hand and Wheeled."

Hose Assemblies for Fire Extinguishers (GLUXC)

GENERAL

The devices covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct, separate installation in the field. The final acceptance of the component is dependent upon its application and use in complete systems submitted to Underwriters Laboratories of Canada.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S504, "Dry Chemical Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hose Assembly for Fire Extinguishers – Component."

Tamper Indicators for Fire Extinguishers, Hand and Wheeled (GOZCC)

GENERAL

The devices covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate installation in the field. The final acceptance of the component is dependent upon installation and use in complete equipment submitted to Underwriters Laboratories of Canada.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S504, "Dry Chemical Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tamper Indicator for Fire Extinguishers, Hand and Wheeled."

Discharge Valves for Fire Extinguishers, Hand and Wheeled (GOZGC)

GENERAL

The devices covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate installation in the field. The final acceptance of the component is dependent upon installation and use of the complete equipment submitted to Underwriters Laboratories of Canada.

Discharge Valves for Fire Extinguishers, Hand and Wheeled (GOZGC)–*Continued*

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S503, "Carbon Dioxide Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Component, Discharge Valve for Fire Extinguishers, Hand and Wheeled."

Clean Agent Extinguishing Media (GOZNC)

GENERAL

The products covered under this category have been assessed with respect to their fire-extinguishing performance, their ozone-depletion characteristics and their toxicity, and are intended for use as components of complete extinguishing systems or portable extinguishers. The final acceptance of the extinguishing media covered under this category is dependent upon its application and use in complete systems or fire extinguishers submitted to Underwriters Laboratories of Canada.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2166, "Halocarbon Clean Agent Extinguishing System Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clean Agent Extinguishing Media."

Gauges, Pressure, for Fire Extinguishers (GOZXC)

GENERAL

This category covers pressure gauges suitable for use in the manufacture of stored-pressure-type hand portable fire extinguishers as indicated in the individual certifications, where the suitability of the application has been investigated by Underwriters Laboratories of Canada. These devices are intended for use as components of completed equipment submitted for investigation, and not for separate installation in the field.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S504, "Dry Chemical Fire Extinguishers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gauge, Pressure, for Fire Extinguishers."

Marking and Labeling Components for Fire Extinguishers, Hand and Wheeled (PGDQC)

GENERAL

The devices covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate installation in the field. The final acceptance of the component is dependent upon installation and use in complete equipment submitted to Underwriters Laboratories of Canada.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S504, "Dry Chemical Fire Extinguishers."

Marking and Labeling Components for Fire Extinguishers, Hand and Wheeled (PGDQC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marking and Labeling Component for Fire Extinguishers, Hand and Wheeled."

CLEAN AGENT EXTINGUISHING SYSTEM UNITS, MARINE (GOYWC)

USE AND INSTALLATION

This category covers clean agent extinguishing system units, which are devices assembled in a system to discharge an extinguishing agent through fixed piping and nozzles for the extinguishment of fires. These units include actuating assemblies designed for automatic and manual operation, tank assemblies for storing the extinguishing agent, discharge assemblies, manifold check valves, selector valves, discharge nozzles, and other miscellaneous devices.

Clean agent extinguishing system units are intended to be used in accordance with Environment Canada rules for chemicals intended to replace stratospheric ozone-depleting substances.

Clean agent extinguishing systems are intended to be designed, installed and maintained in accordance with ANSI/NFPA 2001, "Clean Agent Fire Extinguishing Systems," IMO MSC/Circular 848, and the manufacturer's installation and maintenance manual. These units are designed for total flooding applications unless otherwise indicated in the individual certifications. For total flooding applications, the hazard is surrounded by a fixed enclosure, which enables the required concentration to be built up and maintained for the required period of time to ensure the effective extinguishment of fire in combustible materials.

The total flooding design concentrations for surface type Class A and B fires are specified in the individual manufacturer's design and/or installation manual referenced in the individual certifications.

For information regarding safeguards for personnel, products of decomposition, and exposure to the agent, refer to the applicable sections of ANSI/NFPA 2001.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units (FWFZC).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 2127, "Inert Gas Clean Agent Extinguishing System Units," and UL 2166, "Halocarbon Clean Agent Extinguishing System Units."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clean Agent Extinguishing System Unit, Marine."

FABRICS (GPIXC)

This category covers fabrics intended for awnings, special-purpose covers, draperies, decorations, and other uses.

FABRICS, FLAME-RESISTANT (GPJYC)

GENERAL

This category covers fabrics investigated for burning characteristics when subjected to a small-flame test and a large-flame test. Performance requirements include resistance to flaming of melted or dripping particles, and limitations on vertical spread of flame.

Fabrics intended for interior uses may also comply with the performance requirements after being subjected to a specific type of cleaning as recommended by the manufacturer and indicated in the individual certifications.

Fabrics indicated "for exterior use" have been investigated for their performance requirements after weatherability and other exposure conditions.

Four types of fabrics are covered under this category:

Flame-Resistant Fabric, Impregnated — These are chemically treated fabrics, in various colours, which are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds. The treatment may be expected to remain effective under ordinary conditions or exposure for the useful life of the fabric. Laundering or other cleaning methods will reduce the effectiveness of the treatment when so indicated in the individual certifications.

Flame-Resistant Fabrics, Synthetic — These fabrics are composed of woven synthetic fibres, in various colours, which are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds. Smoldering combustion may follow flaming and may spread in folds. Laundering or other cleaning methods will not affect the flammability of the fabrics unless indicated.

Fabrics, Flame-Resistant (GPJYC)−*Continued*

Flame-Resistant Fabrics, Plastic-Coated — These fabrics are composed of plastic-coated fibres, in various colours, which are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds. Laundering or other cleaning methods will not affect the flammability of the fabrics unless indicated.

Flame-Resistant Fabrics, Plastic-Faced — These are composed of fabrics to which a plastic film, in various colours, is laminated to one or both sides. They are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds. Laundering or other cleaning methods will not affect the flammability of the fabrics unless indicated.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S109, "Flame Tests of Flame-Resistant Fabrics and Films."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flame Resistant Fabric."

FLAME-RESISTANT TENT FABRICS (GPKNC)

GENERAL

This category covers flame-resistant fabrics used in the construction of tents. These fabrics have been investigated for burning characteristics when subjected to a small-flame test and a large-flame test. Performance requirements include resistance to flaming of melted or dripping particles and limitations on vertical spread of flame. These fabrics have also been investigated for their performance requirements after weatherability and other exposure conditions.

The structural or other properties of the tents have not been investigated.

The certifications pertain to the materials themselves and not to the structures in which they are installed.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S109, "Flame Tests of Flame-Resistant Fabrics and Films."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flame Resistant Tent Fabric."

FIRE DOORS (GSNVC)

GENERAL

This category covers fire doors designed for the protection of openings in fire separations against fire when installed in accordance with the "National Building Code of Canada," and the requirements recommended in ANSI/NFPA 80, "Fire Doors and Other Opening Protectives."

When considering the various ratings of a particular fire door, such as 4 h, 3 h, 1-1/2 h, 1 h, 3/4 h or 20 minutes, it should be noted that the basic design of the doors has been established as a result of a representative door being subjected to a fire and hose stream test. Doors that have been positive-pressure tested are indicated in the individual certifications.

The rating of 4 h, 3 h, 2 h, 1-1/2 h, 1 h, 3/4 h or 20 minutes indicates the duration of exposure to fire. The temperature rise refers to the temperature developed on the unexposed face of the door at the end of 30 or 60 minutes of fire exposure. Those labels which do not show temperature rise are for doors that develop temperature rises in excess of 250°C during the first 30 minutes of fire exposure. Doors rated 3/4 h, in which 6 mm thick wired-glass lights in excess of 0.065 m^2 per door or leaf are permitted, are not classified as to temperature rise. Doors with glass vision panels of 0.065 m^2 or less per wall opening carry the same temperature rise classification as similar doors without glass lights.

If the door performs successfully during a 4 h test, then all ratings also apply; if the door performs successfully during a 3 h test, then only the 2 h, 1-1/2 h, 1 h, 3/4 h and 20 minute ratings also apply; if the door per-

forms successfully for a 1-1/2 h test, then only the 1 h, 3/4 h, and 20 minute ratings also apply. Similarly, the lower rating for doors performing successfully for 3/4 h would also apply. The ratings assigned to a particular door are influenced by the following:

(a) The duration of the fire test
(b) The intended location
(c) Provisions for glass lights
(d) Latching requirements

The protection of an opening depends not only upon the use of a ULC labelled door of the proper type, but also upon the use of ULC labelled accessories, as specified in the general Guide Information for each respective type of door. Authorities Having Jurisdiction should be consulted as to which type, mounting, hardware and frame are acceptable for any given location.

The following definitions are used in the various fire door categories:

1. **Locks or Latches** — The term locks or latches are used interchangeably. The function of either is to hold a door in the closed position under a fire condition.
2. **Latch Throw** — The throw of a latch given in millimetres is the distance the latch protrudes from the edge of the door and is greater than the actual engagement of the latch in the strike. (The engagement is controlled by the door installation requirements given in ANSI/NFPA 80 or as otherwise specified in the individual certifications.)
3. **Fire Door Hardware** — Fire door hardware (see GZYXC) is of the surface type for application with swinging (single or in pairs), horizontal-sliding (single-slide or centre-parting) or vertical-sliding fire doors.
4. **Builders' Hardware** — Builders' hardware is of the recessed type and consists of butt hinges, pivots or olive knuckles and single- or three-point latches. Installation requirements for fire door application are specified in ANSI/NFPA 80.
5. **Fire Exit Hardware** — Fire exit hardware (see GXHXC) is panic-type hardware investigated from the standpoint of fire and panic protection. It is designed to facilitate the safe egress of persons in the case of emergency. This hardware is intended for use on swinging fire doors of the ratings, types and sizes as shown in the individual certifications under this category.
6. **Panic Hardware** — Panic hardware (see FVSRC) is designed to facilitate the safe egress of persons in the case of emergency. This hardware is not intended for use with fire doors.
7. **Door Opening Size** — In all cases, the maximum door opening sizes are given rather than the actual door sizes. The clearances around the edges of a door when hung in a ULC labelled frame are intended to be in accordance with the requirements contained in ANSI/NFPA 80.
8. **Closing Device** — A closing device is a mechanism which, if kept in good working condition, will ensure that the fire doors are kept in a closed position and latched, or, if normally open, will close and latch the door at time of fire.
9. **Astragal** — An astragal is a metal strip used to cover the opening between the inactive and active leafs of door swinging in pairs. Doors swinging in pairs are intended to be provided with astragals unless otherwise specified in the individual certifications to provide the necessary protection in accordance with ANSI/NFPA 80.

While doors for openings exceeding the maximum size limitations have not been subjected to standard fire tests, in certain cases ULC may be prepared to furnish a label for such oversize doors, after a detailed review of drawings. In addition, ULC reserves the option of a factory and field inspection. The oversize labels do not indicate that the doors are capable of furnishing standard fire protection but only that the doors conform to the requirements of design, material and construction as established in the individual certifications.

Authorities Having Jurisdiction should be consulted as to the size of door that will be acceptable in a given location.

COMPOSITE TYPE

Composite fire doors covered under this category are of the steel-covered, wood-covered or plastic-covered type. They consist of a manufactured core material with either steel edges or chemically impregnated wood edges, and face veneers of either steel, wood or plastic.

Each certified sliding and swinging steel-covered door bears a "Fire Door" label with reference to one of the following ratings: 3 h, 1-1/2 h, 3/4 h or 20 minutes and, where applicable, temperature rise, and minimum latch throw. In addition to the above, some manufacturers of swinging doors are eligible to furnish doors bearing the marking, "Fire Door to be equipped with Fire Exit Hardware," as indicated in the individual certifications.

Wood- and plastic-covered fire doors are of the swinging type only. Each certified door of this type bears a "Fire Door" label with reference to one of the following ratings: 1-1/2 h, 1 h, 3/4 h or 20 minutes, together with the appropriate letter designation and minimum latch throw and, where applicable, temperature rise. In addition to the above, some manufacturers

are eligible to furnish doors bearing the marking, "Fire Door to be Equipped with Fire Exit Hardware," as indicated in the individual certifications.

The label covers the design and construction of the door only.

Dutch Door — Dutch-type door panels bearing a fire door label for 3 h, 1-1/2 h, 3/4 h or 20 minutes may be provided by some manufacturers as indicated in the individual certifications.

Sizes — The maximum size of opening to be protected is indicated in the individual certifications.

Astragals — Doors swinging in pairs are intended to be provided with astragals, unless otherwise specified in the individual certifications, to provide the necessary protection in accordance with ANSI/NFPA 80.

Glass Lights — Some wood- or plastic-covered composite door manufacturers can furnish doors bearing 1-1/2 h, 1 h, or 3/4 h labels with glass lights of maximum sizes as indicated in the individual certifications.

Glass lights for steel-covered composite doors are intended to be in accordance with the following dimensional limitations applicable to the particular rating classification required. The glass lights, when employed, consist of wired-glass of 6 mm minimum thickness.

(I) 3 h – Glass lights are not permitted.

(II) 1-1/2 and 1 h – The exposed glass area shall not exceed 0.065 m^2 per individual door or leaf with no dimension exceeding 300 mm. Flush doors may be provided with long narrow vision panels in which the glass area shall not exceed 0.065 m^2 per individual door or leaf with the height not exceeding 840 mm and the width not exceeding 250 mm.

(III) 3/4 h and 20 minute – The exposed glass area per light shall not exceed 0.84 m^2 with neither dimension exceeding 1370 mm. More than one light per door or opening is permitted with no restrictions as to the total combined glass area (e.g., may have two glass lights in the same door, each with a maximum exposed glass area of 0.84 m^2).

Accessories for Installation

Locks, Latches and Bolts — Single-swing doors for all locations are intended to be provided with ULC labelled single-point locks or latches with a minimum throw of 12.7 mm.

Doors swinging in pairs for all locations are intended to be provided with ULC labelled single-point locks or latches with a minimum throw of 19 mm. The inactive leaf of doors (steel-covered) swinging in pairs is intended to be provided with ULC labelled automatic or self-latching top and bottom flush bolts with a minimum throw of 19 mm. The inactive leaf of doors (wood or plastic-covered) swinging in pairs is intended to be provided with ULC labelled automatic or self-latching top and bottom surface mounted steel bolts with a minimum throw of 19 mm.

Variations in the abovementioned minimum throw requirements are indicated in the individual certifications.

For a list of manufacturers of single-point locks or latches, see Single-Point Locks or Latches (GYJTC) and Single-Point Locks or Latches, Electrically Controlled (GYKHC).

Hinges — All steel-covered doors are intended to be provided with steel hinges, pivots or olive knuckles in accordance with ANSI/NFPA 80. Except as indicated in the individual certifications, all wood- or plastic-covered doors are intended to be provided with steel hinges (not pivots or olive knuckles) in accordance with ANSI/NFPA 80.

Door Frames — Swinging doors of this type are intended to be installed in ULC labelled door frames. See Door and Window Frames (GVTVC).

Door Closers — ULC labelled door closers and door-operating devices are intended to be installed in accordance with ANSI/NFPA 80. See Swinging Door Closers (GVEVC).

Sliding Door Hardware — Sliding doors of the steel-covered type are intended to be provided with ULC labelled surface-mounted fire door hardware. See Fire Door Hardware (GZYXC).

ACCESS, CHUTE, DUMBWAITER AND SERVICE COUNTER TYPES

Access doors are of the swinging types, formed of steel, of the flush design, with frames, latching and closing mechanism.

Chute doors of the intake and discharge types are of formed steel, of the flush design, with frame, latching and closing mechanism.

Dumbwaiter doors are of counterbalanced and swinging types of the flush design, of formed steel and include wall guides, frame, latching and counterbalancing mechanisms.

Service counter doors are of the single and two-speed counterbalanced types of flush design, or of the rolling type, of formed steel and include wall guides, frame, sill latching and counterbalancing mechanisms.

Each door bears a "Frame and Fire Door Assembly" label with one of the following ratings: 1-1/2 h Temp Rise - 30 minutes - 250°C maximum, 1-1/2 h Temp Rise - 60 minutes - 250°C maximum, or 1-1/2 h, unless otherwise specified in the individual certifications with no reference to temperature rise. The label on all doors of these types covers the design and construction of the door, frame and hardware; for service counter doors the label includes the sill.

Access, chute, dumbwaiter and service counter door assemblies covered under this category are suitable only for installation in concrete or masonry wall construction unless otherwise specified in the individual certifications.

Sizes — Access doors are labelled for openings not exceeding 920 mm in width and 920 mm in height.

Chute doors of the intake type are labelled for openings not exceeding 920 mm in width and 920 mm in height, and discharge doors not exceeding 920 mm in width and 1220 mm in height.

Dumbwaiter doors are labelled for openings not exceeding 1220 mm in width and 1760 mm in height.

Service counter doors are labelled for openings not exceeding 1830 mm in width and 1530 mm in height.

Glass Lights — Dumbwaiter doors may be provided with 6 mm thick wired-glass vision lights not exceeding 0.065 m^2 per individual door or leaf.

HOLLOW-METAL TYPE

Hollow-metal fire doors covered under this category are either of the flush or panelled design.

Each certified door bears a "Fire Door" label with the reference to one of the following ratings: 3 h, 1-1/2 h, 3/4 h or 20 minutes and minimum latch throw and, where applicable, temperature rise. In addition to the above, some manufacturers are eligible to furnish doors bearing the marking, "Fire Door to be Equipped with Fire Exit Hardware," as indicated in the individual certifications.

The label covers the design and construction of the door only.

Dutch Door — Dutch-type door panels bearing a Fire Door label for 3 h, 1-1/2 h, 3/4 h or 20 minutes may be provided by some manufacturers as indicated in the individual certifications.

Sizes — The maximum size of opening to be protected is indicated in the individual certifications.

Astragals — Doors swinging in pairs are intended to be provided with astragals unless otherwise specified in the individual certifications to provide the necessary protection in accordance with ANSI/NFPA 80.

Glass Lights — Glass lights for hollow-metal doors are intended to be in accordance with the following dimensional limitations applicable to the particular rating classification required. The glass lights, when employed, consist of wired-glass of 6 mm minimum thickness.

(I) 3 h – Glass lights are not permitted.

(II) 1-1/2 h – The exposed glass area shall not exceed 0.065 m^2 per individual door or leaf with no dimension exceeding 300 mm. Flush doors may be provided with long or narrow vision panels in which the glass area shall not exceed 0.065 m^2 per individual door or leaf with the height not exceeding 840 mm and the width not exceeding 250 mm.

(III) 3/4 h and 20 minute – The exposed glass area per light shall not exceed 0.84 m^2 with neither dimension exceeding 1370 mm. More than one light per door or opening is permitted with no restrictions as to the total combined glass area (e.g., may have two glass lights in the same door, each with a maximum exposed glass area of 0.84 m^2.

Accessories for Installation

Locks, Latches and Bolts — Single-swing doors for all locations are intended to be provided with ULC labelled single-point locks or latches with a minimum throw of 12.7 mm.

Doors swinging in pairs for all locations are intended to be provided with ULC labelled single-point locks or latches with a minimum throw of 19 mm. The inactive leaf of doors swinging in pairs is intended to be provided with ULC labelled automatic or self-latching top and bottom flush bolts or surface-mounted steel bolts with a minimum throw of 19 mm.

Variations in the abovementioned minimum throw requirements are indicated in the individual certifications.

For a list of manufacturers of single-point locks or latches, see Single-Point Locks or Latches (GYJTC) and Single-Point Locks or Latches, Electrically Controlled (GYKHC).

Hinges — All swinging doors are intended to be provided with steel hinges, pivots or olive knuckles in accordance with ANSI/NFPA 80.

Door Frames — Swinging doors of this type are intended to be installed in ULC labelled door frames. See Door and Window Frames (GVTVC).

Door Closers — ULC labelled door closers and door-operating devices are intended to be installed in accordance with ANSI/NFPA 80. See Swinging Door Closers (GVEVC).

METAL-CLAD (KALAMEIN) TYPE

Metal-clad (Kalamein) fire doors covered under this category are either of the flush or panelled design consisting of metal-covered wood cores.

Each certified door bears a "Fire Door" label with reference to one of the following ratings: 1-1/2 h, 3/4 h or 20 minutes and, where applicable, temperature rise.

The label covers the design and construction of the door only.

Sizes — The maximum size of opening to be protected is indicated in the individual certifications.

Astragals — Doors swinging in pairs are intended to be provided with astragals unless otherwise specified in the individual certifications to provide the necessary protection in accordance with ANSI/NFPA 80.

Glass Lights — Glass lights for metal-clad (Kalamein) doors are intended to be in accordance with the following dimensional limitations applicable to the particular rating classification required. The glass lights, when employed, consist of wired-glass of 6 mm minimum thickness.

(I) 1-1/2 h – The exposed glass area shall not exceed 0.065 m^2 per individual door or leaf with no dimension exceeding 300 mm.

(II) 3/4 h and 20 minute – The exposed glass area per light shall not exceed 0.84 m^2 with neither dimension exceeding 1370 mm. More than one light per door or opening is permitted with no restrictions as to total combined glass area (e.g., may have two glass lights in the same door, each with a maximum exposed glass area of 0.84 m^2).

Accessories for Installation

Locks, Latches and Bolts — Single-swing doors for all locations are intended to be provided with ULC labelled single-point locks or latches with a minimum throw of 12.7 mm.

Doors swinging in pairs for all locations are intended to be provided with ULC labelled single-point locks or latches with a minimum throw of 19 mm. The inactive leaf of doors swinging in pairs is intended to be provided with ULC labelled automatic or self-latching top and bottom flush bolts with a minimum throw of 19 mm.

Variations in the abovementioned minimum throw requirements are indicated in the individual certifications.

For a list of manufacturers of single-point locks or latches, see Single-Point Locks or Latches (GYJTC) and Single-Point Locks or Latches, Electrically Controlled (GYKHC).

Hinges — These doors are intended to be provided with steel hinges, pivots or olive knuckles in accordance with ANSI/NFPA 80.

Door Frames — These doors are intended to be installed in ULC labelled door frames. See Door and Window Frames (GVTVC).

Door Closers — ULC labelled door closers and door operating devices are intended to be installed in accordance with ANSI/NFPA 80. See Swinging Door Closers (GVEVC).

PASSENGER ELEVATOR (HOLLOW-METAL) TYPE

Hollow-metal passenger elevator doors covered under this category are single-slide or centre-parting assemblies comprising door panels, frame, header, track, hangers, sill, sill support plates, sill brackets, pendant bolts, retaining angles, closer assembly and interlock.

Each certified completed assembly bears a master "Passenger Elevator Fire Door and Frame Assembly" label with reference to a 2 h, 1-1/2 h or 3/4 h rating unless otherwise specified in the individual certifications on one of the hall trim components or on a door panel positioned in such a way as to render it readily visible to Authorities Having Jurisdiction.

All other major components of the assembly bear a "Component for Passenger Elevator Fire Door and Frame Assembly" label, or, in the event of hardware being supplied by an alternate manufacturer, such items of hardware will bear a "Passenger Elevator Door Hardware" label, under Elevator Fire Door Hardware, Passenger (GZKZC).

Assemblies that do not include hardware are noted in the individual certifications.

Passenger elevator door assemblies covered under this category are suitable only for installation in concrete or masonry shaft wall construction unless otherwise specified in the individual certifications.

Some passenger elevator door assemblies covered under this category may be provided with an interlock mechanism and associated wiring, which is operational for a period of a least 1 h when the assembly is subjected to the standard fire exposure described in CAN4-S104, "Standard Method for Fire Test of Door Assemblies." Assemblies that do not qualify are indicated in the individual certifications.

Sizes — The maximum sizes of panel and frame opening permitted are shown in the individual certifications.

Glass Lights — These doors are not provided with glass lights.

ROLLING STEEL TYPE

Rolling steel fire doors covered under this category consist of interlocking galvanized steel slats, bottom bars, wall guides, counterbalancing, and automatic mechanisms. They may be provided with a motor-drive assembly that does not interfere with the manual or automatic closing of the door.

Each certified door bears a "Fire Door" label with reference to one of the following ratings: 4 h, 3 h, 1-1/2 h, or 3/4 h but with no reference to temperature rise. The label covers the design and construction of the door, including the governor and automatic releasing mechanism.

Sizes — Rolling and lift-up steel doors are labelled for openings not exceeding 13.4 m^2 in area with no dimension exceeding 3660 mm unless otherwise specified in the individual certifications.

Glass Lights — Rolling and lift-up steel doors are not provided with glass lights.

Installation — Rolling and lift-up steel doors, unless otherwise noted in the individual certifications, are intended for installation in masonry construction.

SHEET-METAL TYPE

Sheet-metal fire doors covered under this category are of formed steel. They are of the corrugated, flush or panelled designs.

Each certified door bears a "Fire Door" label with reference to one of the following ratings: 3 h, 1-1/2 h, 3/4 h or 20 minutes, and minimum latch throw when applicable but with no reference to temperature rise. In addition to the abovementioned, some manufacturers are eligible to furnish doors bearing the marking, "Fire Door to be Equipped with Fire Exit Hardware," as indicated in the individual certifications. The label covers the design and construction of the door only.

Sizes

Type of Door	Max Size of Opening, m^2	Max Size of Opening Width, mm	Height, mm
Horizontal sliding, single	11.0	3660	3660
Horizontal sliding, centre-parting	11.0	3660	3660
Vertical sliding	7.5	3050	3050
Swinging, single	—	1830	3660
Swinging, in pairs	—	3050	3660

Astragals — Doors swinging in pairs are intended to be provided with astragals unless otherwise specified in the individual certifications to provide the necessary protection in accordance with ANSI/NFPA 80.

Glass Lights — Glass lights for sheet-metal doors are intended to be in accordance with the following dimensional limitations applicable to the particular rating classification required. The glass lights, when employed, consist of a wired-glass of 6 mm minimum thickness.

(I) 3 h – Glass lights are not permitted.

(II) 1-1/2 h – The exposed glass area shall not exceed 0.065 m^2 per individual door or leaf with no dimension exceeding 300 mm.

(III) 3/4 h and 20 minute – The exposed glass area per light shall not exceed 0.84 m^2 with neither dimension exceeding 1760 mm. More than one light per door or opening is permitted with no restrictions as to the total combined glass area (e.g., may have two glass lights in the same door, each with a maximum exposed glass area of 0.84 m^2).

Accessories for Installation

Locks, Latches and Bolts — Single-swinging doors and doors swinging in pairs of the corrugated, flush or panelled design for installation in 3 h locations, in openings of size greater than 1220 mm in width by 2440 mm in height, or 2440 mm in width by 2440 mm in height respectively, are intended to be provided with ULC labelled surface-mounted fire door hardware. See Fire Door Hardware (GZYXC).

Single-swing doors of the flush or panelled design for installation in all other locations are intended to be provided with either ULC labelled surface-mounted fire door hardware or ULC labelled single-point locks or latches with a minimum throw of 12.7 mm.

Doors swinging in pairs of the flush or panelled design for installation in all other locations are intended to be provided with either ULC labelled surface-mounted fire door hardware or ULC labelled single-point locks or latches with a minimum throw of 19 mm. The inactive leaf of doors swinging in pairs is intended to be provided with ULC labelled self-latching or automatic top and bottom flush bolts or surface-mounted steel bolts with a minimum throw of 19 mm.

Where single-point locks or latches are permitted in the individual certifications, variations in the abovementioned minimum throw requirements are indicated in the individual certifications.

For a list of manufacturers of single-point locks or latches, see Single-Point Locks or Latches (GYJTC) and Single-Point Locks or Latches, Electrically Controlled (GYKHC).

Hinges — Swinging doors of the flush or panelled design for 3 h locations and all doors of the corrugated design are intended to be provided with ULC labelled surface-mounted hinges. See Fire Door Hardware (GZYXC).

Doors of the flush or panelled design for all other locations are intended to be provided with either ULC labelled surface-mounted hinges or steel hinges, pivots or olive knuckles in accordance with ANSI/NFPA 80.

Door Frames — Swinging doors of this type, unless lap mounted, are intended to be installed in ULC labelled door frames. See Door and Window Frames (GVTVC).

Door Closers — ULC labelled door closers and door operating devices are intended to be installed in accordance with ANSI/NFPA 80. See Swinging Door Closers (GVEVC).

Sliding Door Hardware — Sliding doors of the corrugated, flush or panelled design for installation in all locations are intended to be provided with ULC labelled surface-mounted fire door hardware. See Fire Door Hardware (GZYXC).

SPECIAL-PURPOSE TYPE

Special-purpose fire door and frame assemblies covered under this category are of the types indicated in the individual certifications and are comprised of doors, frames, accessories and hardware, including locks and latches.

Each completed certified assembly bears a master "Frame and Fire Door Assembly" label with reference to one of the following ratings: 3 h, 2 h, 1-1/2 h, 1 h, 3/4 h or 20 minutes; together with the minimum latch throw and, where applicable, maximum temperature rise.

All other major components of the assembly bear a "Component for Special Purpose Frame and Fire Door Assembly" label positioned so as to render it readily visible to Authorities Having Jurisdiction.

Sizes — The maximum size of opening to be protected is indicated in the individual certifications.

Glass Lights — Some manufacturers can furnish labelled doors with glass lights of maximum sizes as indicated in the individual certifications.

Accessories for Installation

Door Closers — ULC labelled door closers and door operating devices are intended for installation in accordance with ANSI/NFPA 80. See Swinging Door Closers (GVEVC).

Authorities Having Jurisdiction should be consulted before installation.

STEEL, METAL-CLAD AND HOLLOW-METAL (FREIGHT ELEVATOR) TYPES

Steel and metal-clad fire doors of the counterbalanced types covered under this category are of either formed steel or metal-covered wood panels including guides, latching and counterbalancing mechanisms when installed in masonry. For drywall installation this category also includes frames. Refer to the individual certifications for details.

Single, horizontal-swinging doors covered under this category are of the hollow-metal (honeycomb) type, including frame, latch and interlock mechanisms.

Horizontal-swinging doors in pairs covered under this category are of the hollow-metal (honeycomb) type, including frame, latch, flush bolt and double interlock (one per door) mechanisms.

Each certified door bears a "Freight Elevator Fire Door" or "Freight Elevator Fire Door and Frame Assembly" label with reference to a 2 h, 1-1/2 h, 1 h, or 3/4 h rating and, where applicable, temperature rise and minimum latch throw.

Sizes — The maximum size of opening to be protected is indicated in the individual certifications.

Glass Lights — The glass lights, when provided, consist of wired-glass of 6 mm minimum thickness. The exposed glass per light is not intended to exceed 0.065 m^2 with neither dimension exceeding 300 mm. More than one light per door or opening is permitted, provided that the total combined glass area does not exceed 0.065 m^2.

TIN-CLAD TYPE

Tin-clad fire doors covered under this category consist of two- or three-ply wood-core construction, covered with 0.3 mm galvanized steel or terne plate.

Each certified door bears a "Fire Door" label with reference to one of the following ratings: 3 h, 1-1/2 h, 3/4 h or 20 minutes and, when applicable, the temperature rise.

Type of Door	Temperature Rise, °C at: 30 min	60 min	Max Size of Opening, m^2	Max Size of Opening Width, mm	Height, mm
3-ply horizontal-sliding, single or centre-parting	250	250	11.0	3660	3660
3-ply, swinging, single	250	250	—	1830	3660
3-ply, swinging, in pairs	250	250	—	3050	3660
3-ply, vertical-sliding	250	250	7.5	3050	3050
2-ply, horizontal-sliding	250	—	7.5	3050	3050
2-ply, swinging, in pairs	250	—	7.5	3050	3050
2-ply, swinging, single	250	—	—	1830	3050

Astragals — Doors swinging in pairs or centre-parting doors are intended to be provided with astragals unless otherwise specified in the individual certifications to provide the necessary protection in accordance with ANSI/NFPA 80.

Glass Lights — Glass lights for tin-clad doors are intended to be in accordance with the following dimensional limitations applicable to the particular rating classification required. The glass lights, when employed, consist of wired-glass of 6 mm minimum thickness.

(I) 3 h – Glass lights are not permitted.

(II) 1-1/2 h – The exposed glass area shall not exceed 0.065 m^2 per individual door or leaf with no dimension exceeding 300 mm.

(III) 3/4 h and 20 minute – The exposed glass area per light shall not exceed 0.84 m^2 with neither dimension exceeding 1760 mm. More than one light per door or opening is permitted with no restrictions as to the total combined glass area (e.g., may have two glass lights in the same door, each with a maximum exposed glass area of 0.84 m^2).

Accessories for Installation

Hardware — These doors are intended to be provided with ULC labelled surface-mounted fire door hardware. See Fire Door Hardware (GZYXC).

Door Frames — Swinging doors of this type, unless lap mounted, are intended to be installed in ULC labelled door frames. See Door and Window Frames (GVTVC).

Door Closers — Door closers and door operating devices are intended to be installed in accordance with ANSI/NFPA 80.

TWENTY-MINUTE WOOD-CORE TYPE

Wood-core flush fire doors covered under this category consist of various core constructions with hardboard, plywood or plastic veneered faces.

Each certified swinging door bears a "Fire Door" label with reference to a 20-minute rating.

Sizes — The maximum sizes are shown in the individual certifications.

Glass Lights — These doors may be provided with glass lights at the factory. The maximum area of exposed glass is indicated in the individual certifications.

Overhead Panels — Single-swing doors may be provided with overhead panels, as indicated in the individual certifications.

Accessories for Installation

Locks, Latches and Bolts — Single-swing doors and the active door of doors swinging in pairs are intended to be provided with ULC labelled single-point locks or latches certified for use with 20-minute wood-core doors. The inactive leaf of doors swinging in pairs is intended to be provided with ULC labelled automatic or self-latching top and bottom flush bolts with a minimum throw of 19 mm.

Single-swing doors may be provided with ULC labelled rim-type or mortise-type fire exit hardware.

Doors swinging in pairs may be provided with ULC labelled mortise-type and/or surface-mounted, vertical-rod-type fire exit hardware.

For a list of manufacturers of single-point locks or latches, see Single-Point Locks or Latches (GYJTC) and Single-Point Locks or Latches, Electrically Controlled (GYKHC).

Hinges — Swinging doors of this type are intended to be provided with steel mortise hinges only in accordance with ANSI/NFPA 80.

Astragals — Astragals are intended to be provided with doors swinging in pairs and single-swing doors with overhead panels.

Door Frames — Swinging doors of this type are intended to be installed in ULC labelled door frames. See Door and Window Frames (GVTVC).

Door Closers — ULC labelled surface-mounted door closers and door operating devices are intended to be installed in accordance with ANSI/NFPA 80. See Swinging Door Closers (GVEVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door."

FIRE DOOR MATERIALS (GSRZC)

Composite Core (GSSGC)

USE

This category covers materials of various compositions intended for use as cores in the construction of composite fire doors incorporating such materials.

The use of these materials in labelled composite fire doors is governed by the Label Service Procedure issued to the fire door manufacturers.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Composite Core."

ROLLING STEEL DOOR VISCOUS SPEED GOVERNORS (GSVAC)

GENERAL

This category covers rolling steel door viscous speed governors intended for use with rolling steel fire doors not exceeding the maximum sizes and fire protection ratings as indicated in the individual certifications. They are designed to control the closing speed of the door to between 152 and 610 mm/s as required by ANSI/NFPA 80, "Standard for Fire Doors and Other Opening Protectives."

These viscous speed governors have been investigated with respect to the determination that the governors do not adversely affect the fire protection rating of fire doors to which they are applied, and also with respect to their ability to control the speed of descent of rolling steel doors.

Rolling steel door viscous speed governors are intended to be installed in accordance with the installation instructions packaged with each device.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rolling Steel Door Viscous Speed Governor."

RETROFIT TWENTY MINUTE FIRE DOOR KITS (GSVNC)

GENERAL

This category covers retrofit 20-minute fire door kits intended to be attached to hollow core, semi-solid, or solid wood doors to upgrade the fire protection rating of the door to 20 minutes.

Retrofit fire door kits are designed to be attached to a door in accordance with the manufacturer's installation instructions provided with each kit.

Sizes — The maximum size of openings to be protected is indicated in the individual certifications.

Retrofit fire door kits are intended to be installed on site. After installation of the kit, the entire fire door assembly is intended to comply with the relevant requirements of ANSI/NFPA 80, "Standard for Fire Doors and Other Opening Protectives."

These fire door kits may be installed to satisfy the provisions of the Ontario Fire Code Retrofit Sections 9.5, 9.6 and 9.8, as permitted by Authorities Having Jurisdiction.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies." In establishing these ratings, testing is conducted utilizing ULC certified frames with ULC certified hardware.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Retrofit Twenty Minute Fire Door Kit."

ropu

FOLDING DOOR ASSEMBLIES (GSXZC)

GENERAL

This category covers horizontally-sliding folding door assemblies intended to be used for the division of large rooms, such as in assembly occupancies, to provide additional protection against the rapid spread of fire.

These folding door assemblies are comprised of door panels, frame, header, track, hinges and latches.

The hourly ratings, as indicated in the individual certifications, have been established as a result of a representative assembly being subjected to a fire and hose stream test.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

Folding Door Assemblies (GSXZC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Special Purpose Fire Door and Frame Assembly.''

DOOR CLOSERS AND HOLDERS (GTBTC)

This category covers door closers and holders for fire doors intended for installation in accordance with the ''National Building Code of Canada.''

Fire doors must be in the fully closed position to perform their intended function. The protection of an opening depends not only upon the use of a labelled door of the proper type, but also upon the use of a labelled frame, labelled hardware, labelled door closer, labelled door holders, or combination door closer and holder, and coordinators, if required, as well as the correct installation of such equipment.

Door closers of the self-closing type (without hold-open features) are covered under Swinging Door Closers (GVEVC).

Door closers incorporating hold-open features with fusible link releases are covered under Swinging Door Closers (GVEVC).

Door holders intended for use with automatic protection equipment and self-closing door closers are covered under Door Holders (GTPRC).

Combination swinging door closers and holders intended for use with automatic protection equipment are covered under Combination Swinging Door Closers and Door Holders (GTISC).

Authorities Having Jurisdiction should be consulted as to which types of mounting Listed holding and closing mechanisms are acceptable for in any given location.

Door Holders (GTPRC)

USE

This category covers door holders intended for use with swinging, sliding or rolling fire doors. They are designed to hold doors in the open position under normal usage and release the doors under fire conditions. They are intended for use with a suitable door closer and with automatic operating devices or systems.

Authorities Having Jurisdiction should be consulted as to which door, door holder, door closer and automatic operating device or other combinations of system units are acceptable for any given location. The door holders are intended for use with automatic operating devices or system units and have been investigated from the standpoint of risk of electrical shock and fire protection.

RELATED PRODUCTS

Automatic operating devices or systems consist of releasing devices, thermostats for releasing device service or smoke-automatic fire detectors for use with releasing device equipment, as certified in the ULC List of Equipment and Materials entitled ''Fire Protection Equipment.''

ADDITIONAL INFORMATION

For additional information, see Door Closers and Holders (GTBTC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C228, ''Door Closers and Holders.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Door Holder.''

Swinging Door Closers (GVEVC)

GENERAL

This category covers door-closing mechanisms of the self-closing or automatic type designed for use with swinging fire doors.

Self-closing door closers of either the surface-mounted, concealed, semi-concealed or spring-hinge type return the door to the closed position when opened.

Automatic door closers of either the surface-mounted, concealed, semi-concealed type employ a hold-open arm with a fusible link, which permits the door to close when a fire occurs.

The spring hinges covered under this category do not comply with all the requirements of CAN/ULC-S133, ''Standard Method of Tests for Door Closers Intended for Use with Swinging Doors.'' They have been investigated from the standpoint of fire protection and are intended for use on swinging doors not exceeding 920 mm in width by 2140 mm in height.

The swinging door closer is intended to be installed in accordance with the installation instructions packaged with the device. The use of sex bolts or through bolts to mount the closer to the door is required for wood or plastic-faced composite-type fire doors. The use of sex bolts to mount the closers to the door is required for steel-covered composite type, sheet-metal type, or hollow-metal-type fire doors provided without closer reinforcements. The use of steel machine screws to mount the closer to the door is required for steel-covered composite type, sheet-metal type, or hollow-metal-type fire doors incorporating steel closer reinforcements. The use of wood screws, sheet-metal screws, sex bolts, or through bolts to mount the closer to the door is required for metal-clad (Kalamein) type or wood-core-type fire doors.

Swinging Door Closers (GVEVC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Door Closers and Holders (GTBTC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S133, ''Standard Method of Tests for Door Closers Intended for Use with Swinging Doors.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Swinging Door Closer.''

Combination Swinging Door Closers and Door Holders (GTISC)

GENERAL

This category covers swinging door closers with integral electromagnetic door holders intended for use with swinging fire doors.

These devices may be constructed with integral smoke detectors or heat detectors.

Combination door closers and holders are designed to hold doors in the open position under normal usage and return the doors to the closed-and-latched position under fire conditions. These devices are intended for use in connection with automatic operating devices or systems. Combination closers/holders have been investigated for compliance with the electrical features of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I, '' as well as fire protection features.

ADDITIONAL INFORMATION

For additional information, see Swinging Door Closers (GVEVC), Door Closers and Holders (GTBTC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S133, ''Standard Method of Tests for Door Closers Intended for Use with Swinging Doors,'' and ULC/ORD-C228, ''Door Closers and Holders.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Combination Swinging Door Closer and Door Holder.''

Fire Door Operators with Automatic Closers (GVFOC)

GENERAL

This category covers fire door operators with automatic closers intended for use on a pair of hollow-metal fire doors swinging in the same or opposite direction with certified vertical-rod-type fire exit hardware that incorporates an integral releasing system, and on a single-swing, hollow-metal fire door with certified electric strikes.

These devices consist of an electromechanical-powered operator, an electrically-operated releasing device for automatic closing, and an electrical control system for normal operation. Under fire conditions, power to the operator and releasing device is interrupted by means of a certified smoke or heat detector connected to the electrical control system; with power interrupted, the closing mechanism brings the door to the closed position. Once the paired doors are in the closed position, the de-energized releasing device will, in turn, activate the mechanical mechanism in the vertical-rod device that will allow the top and bottom bolt of the device to engage the strikes and latch the door. For single doors, the de-energized releasing device will, in turn, activate the electric strike and latch the door (fail secure).

Fire door operators have been investigated from the standpoint of fire protection and electrical shock. The fire protection performance was investigated by examining the ability of the device to close and latch the door in a fire situation.

Fire Door Operators with Automatic Closers (GVFOC)−*Continued*

The installation of the fire door operator does not require a modification of the fire door frames and is intended to be in accordance with the manufacturer's installation instructions.

ADDITIONAL INFORMATION

For additional information, see Swinging Door Closers (GVEVC), Door Closers and Holders (GTBTC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S133, "Standard Method of Tests for Door Closers Intended for Use with Swinging Doors."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED, " a control number, and the product name "Fire Door Operator with Automatic Closer."

DOOR AND WINDOW FRAMES (GVTVC)

USE

This category covers fire door and fire window frames intended for use with labelled fire doors and windows to provide the degree of fire protection indicated on the door or frame label, whichever is the lesser, when installed in accordance with the "National Building Code of Canada."

DOOR FRAMES

Fire door frames consist essentially of a head and jamb members, including hardware reinforcements, wall anchors, door stops and provisions for anchoring to the floor. Frames may be shipped from the factory as a single unit or in knocked-down form.

Manufacturers eligible to produce labelled frames built in accordance with the specifications contained in CAN4-S105, "Standard Specification for Fire Door Frames Meeting the Performance Required by CAN4-S104," are identified by the reference to "Standard Frames" in the individual certifications.

CAN4-S105 includes specifications for standard frames as follows:

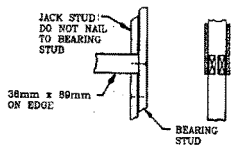
Maximum Size of Frame: Door rebate opening shall not exceed 1220 mm in width by 3050 mm in height for single swinging doors and 2440 mm in width by 3050 mm in height for doors swinging in pairs, for use in 3 h, l-1/2 h, 3/4 h and 20-minute locations.

Frames with Transom Panels — Maximum Size of Frame: Overall rebate opening shall not exceed 2440 mm in width by 3050 mm in height, with a transom panel rebate opening not exceeding 2440 mm in width by 815 mm in height, for use in 3 h, 1-1/2 h, 3/4 h or 20-minute locations.

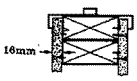
Frames with Transom Lights (incorporating 6 mm thick Georgian wired glass) — **Maximum Size of Frame:** Overall rebate opening shall not exceed 1220 mm in width by 3050 mm in height with a transom light rebate opening not exceeding 1220 mm in width by 1370 mm in height with a maximum area of 0.84 m^2, for use in 3/4 h and 20-minute locations.

Some manufacturers may provide proprietary frames incorporating transom and/or side panels and transom and/or side lights in excess of the size limitation specified in CAN4-S105 and may also provide proprietary frames having unusual design features, such as fixed or removable panels, as indicated in the individual certifications.

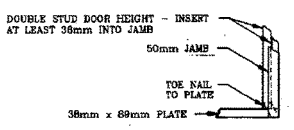
Where fire door frames are installed in wood stud partitions, double studding shall be provided around the opening as shown below:



HEADER DETAIL



WOOD−STUD ANCHOR DETAIL



FLOOR−JAMB DETAIL

Door and Window Frames (GVTVC)−*Continued*

Studs over the frame header shall be located at a maximum of 610 mm on centre.

Framing around openings in non-load-bearing steel stud assemblies shall be designed in accordance with the provisions of CAN4-S105 and the "National Building Code of Canada."

Framing around openings in load-bearing steel stud assemblies, where applicable, are identified in the individual designs under Fire Resistance Ratings (BXUVC).

Freight elevator fire door frames consist of a head and a jamb member, wall anchors and sill with a floor anchor. The maximum sizes of frames are indicated in the individual certifications.

While frames for openings exceeding the maximum size limitations have not been subjected to standard fire tests, in certain cases ULC may be prepared to furnish a label for such oversize frames after a detailed review of drawings. In addition, ULC reserves the option of a factory and field inspection. The oversize labels do not indicate that the frames are capable of furnishing standard fire protection but only that the frames conform to the requirements of design, material and construction as established by the individual certifications.

Authorities Having Jurisdiction should be consulted as to which size of frame will be acceptable in a given location.

WINDOW FRAMES

The basic design of window frames has been established as a result of a representative window frame being subjected to a fire and hose stream test in accordance with CAN4-S106, "Standard Method for Fire Test of Window and Glass Block Assemblies."

The rating of 3/4 h indicates the duration of exposure to fire. The exposed area of individual wired-glass lights are limited to 0.84 m^2 with no dimension exceeding 1370 mm unless otherwise stated.

Fire window frames consist of sashes of various designs and mullions as indicated below for the protection of openings in concrete or masonry wall construction unless otherwise specified in the individual certifications.

The fire window frame prepared at the factory for the glazing material does not normally include the glass itself. The 6 mm thick wired glass is usually provided by other than the fire window frame manufacturer and is installed after the installation of the fire window frame in the building. The wired glass is intended to conform to the requirements for such glass contained in the "National Building Code of Canada."

The protection of an opening depends not only upon the use of a ULC labelled fire window frame of a proper type and wired glass, but also upon other accessories as specified under the respective types and the proper installation.

Authorities Having Jurisdiction should be consulted as to which type and mounting are acceptable for any given location.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies," or CAN4-S105, "Standard Specification for Fire Door Frames Meeting the Performance Required by CAN4-S104."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Door and Window Frame."

MISCELLANEOUS FIRE DOOR ACCESSORIES (GVUXC)

USE AND INSTALLATION

This category covers miscellaneous fire door accessories intended for installation with certified fire doors and/or certified fire door frames as identified in the individual certifications. The accessories have been investigated to determine that, when installed in accordance with the manufacturer's instructions, the accessories do not adversely affect the fire rating of the fire door and/or fire door frame.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Miscellaneous Fire Door Accessory."

IMPACT PROTECTORS FOR FIRE DOORS AND FRAMES (GVUZC)

USE AND INSTALLATION

This category covers impact protectors intended for use with swinging fire doors and fire door frames having a fire-protection rating not exceeding those indicated in the individual certifications.

They are intended to protect fire doors and fire door frames from accidental impact during normal operation of the doors.

Impact protectors are intended to be installed in accordance with the installation instructions packaged with each protector.

Impact protectors have been investigated only with respect to the determination that the protectors do not adversely affect the fire-protection rating of fire doors and fire door frames to which they are applied.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Impact Protector for Fire Doors and Frames."

FIRE DOOR GLASS LIGHT FRAMES (GVVXC)

USE AND INSTALLATION

This category covers glass light frames intended for installation in certified swinging fire doors rated up to and including 1-1/2 h, as provided by the door manufacturers indicated in the individual certifications.

Framing Member Material	Max Width mm (in.)	Max Height mm (in.)	Max Area m^2 ($in.^2$)	Max Door Rating
Wood+	762 (30)	1016 (40)	0.78 (1200)	20 min
Steel	1372 (54)	1372 (54)	0.84 (1296)	3/4 hr
Steel	254 (10)	838 (33)	0.065 (100)	1-1/2 hr

Values in parentheses are explanatory or approximate information

\+ Glass light frames consisting of wood framing members and their mounting fasteners are only intended for use in 20-minute wood-core doors.

The glass light frame is intended to be installed in accordance with the installation instructions packaged with the device. The use of steel sex-bolts or steel sheet-metal screws to install the glass light frame in the door is required depending on the type of door and the design of light frame. The fasteners are furnished as part of the light frame.

The glass light frame may be installed in the certified swinging fire doors by some manufacturers at the door manufacturer's plant or in the field. When the light frame is intended to be installed in the field, the cut-out in the door is made at the door manufacturer's plant, and the door bears a marking indicating the manufacturer and model designation of certified glass light frame to be installed in the door.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door Glass Light Frame."

GASKETING MATERIALS FOR FIRE DOORS (GVWZC)

GENERAL

This category covers gasketing materials intended for installation on certified fire doors and/or certified fire door frames or in their thresholds, as specified in the individual certifications. The gasketing material is intended to be installed in accordance with the installation instructions packaged with the material.

Gasketing Materials for Fire Doors (GVWZC)−*Continued*

The gasketing material consists of a metal frame or a flexible material, either mechanically secured within a metal frame or housing or applied by means of a pressure-sensitive adhesive to the perimeter of the certified fire door and/or certified fire door frame, or installed within their thresholds, as specified in the individual certifications.

The gasketing material may be installed on the certified fire doors at the fire door and/or frame manufacturer's plant or at the job site.

Gasketing materials for fire doors have been investigated only with respect to determination that the materials do not adversely affect the fire rating of fire doors in which they are installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104-M80, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gasketing Material for Fire Doors."

HARDWARE (GWGRC)

This category covers builders' hardware for different types of fire doors and elevator doors intended to be installed in accordance with the "National Building Code of Canada."

The protection of an opening depends not only upon the use of a labelled door of the proper type, but also upon the use of labelled frames and hardware and the correct installation of those components.

Authorities Having Jurisdiction should be consulted as to which type and pattern of hardware will be acceptable in the proposed location.

Builders' Hardware (GWTZC)

This category covers fire exit hardware, self-latching and automatic flush bolts, and single-point locks and latches intended for use with swinging fire doors.

Accessories for Single-point Locks and Latches and Fire Exit Hardware (GWVWC)

USE AND INSTALLATION

This category covers accessories for single-point locks and latches and fire exit hardware consisting of trim parts, as identified in the individual Listings, intended for field retrofitting.

Trim parts are intended for installation on Fire Exit Hardware (GXHXC) or Single-Point Locks or Latches (GYJTC) having a rating up to and including 3 h, as shown in the individual Listings.

These trim parts are intended to be installed as shown in the installation instructions provided with the part.

The installation of these trim parts does not require a modification of the hardware, since they are designed as a bolt-on-type attachment.

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC), Fire Doors (GSNVC) and Fire Resistance Ratings (BXRHC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product or on the smallest unit container in which the product is packaged is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol, the word "LISTED" above the ULC symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT TYPE+]
FOR INSTALLATION ON
[TYPE OF RETROFITTED HARDWARE+]
Control No.

\+ as noted in the individual Listings

In addition, the ULC symbol, the letter "F" and any qualifications as to the parts hourly rating are cast or stamped on the exposed surface of each trim part if the entire Listing Mark is not visible after installation of the product.

Auxiliary Locks (GWXTC)

USE AND INSTALLATION

This category covers auxiliary locks for use on swinging fire doors having a rating up to and including 3 h unless a reduced rating is otherwise indicated in the individual Listings.

Auxiliary locks are intended for installation on Listed Fire Door Frames and/or Classified Swinging Fire Doors in accordance with the installation instructions packaged with the device. The auxiliary locks are intended to be used on fire doors and/or frames in addition to the primary latching device required for use on fire doors and/or frames.

Authorities Having Jurisdiction should be consulted before installing auxiliary locks on fire doors and/or frames.

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Auxiliary Lock" and any qualifications to the product hourly rating.

Hinges (GWZQC)

GENERAL

This category covers door hinges intended for use on swinging-type fire doors of the type specified in the individual certifications.

These hinge designs have been investigated with respect to their fire protection and cycling characteristics and are for use on single-swing doors and doors swinging in pairs of the type and rating indicated in the individual certifications.

They have been investigated for use on fire doors installed in accordance with ANSI/NFPA 80, "Standard for Fire Doors and Other Opening Protectives," and the manufacturer's installation instructions.

In general, hinges are mounted on single doors not exceeding 1200 mm in width by 2440 mm in height, and doors in pairs not exceeding 2440 mm in width by 2440 mm in height (unless otherwise noted in the individual certifications).

Continuous-type hinges are intended to be installed in accordance with the installation instructions packaged with each device (see the individual certifications for acceptable door types).

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hinge."

Electric Strikes (GXAYC)

GENERAL

This category covers electric strikes intended to replace the fixed strike plate used in fire door frames of the single-swing type, on a centre mullion used with doors in pairs, and in the meeting edge of the inactive door of a pair.

Electric strikes have been investigated from the standpoint of fire protection, for use with fire doors and frames having a rating of up to 3 h. The ratings for specific applications are noted in the individual certifications.

Electric strikes are intended to be installed such that they are released only when current is applied to the unit (fail secure).

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Strike."

Fire Exit Hardware (GXHXC)

GENERAL

This category covers exit hardware devices designed to permit the safe egress of the occupants in the case of emergency, as well as to provide fire protection for door assemblies.

They have been investigated from the standpoint of fire and panic protection.

The individual certifications refer to single-point locks and latches of either the mortise or rim type with 19 mm latch bolts and either surface-mounted or concealed vertical rod devices, mullion assemblies and coordinators for use in fire doors having a rating up to and including 3 h (unless otherwise noted in the individual certifications). In general, fire exit hardware devices are intended for use in hollow-metal, composite (steel, wood or plastic-covered), sheet-metal and metal-clad (Kalamein) type fire doors of the sizes noted in the individual certifications.

Locks and latches are intended for use on single-swinging doors not exceeding 1220 mm in width and 2440 mm in height, and intended for use on the active or inactive door of doors swinging in pairs in openings not exceeding 2440 mm in width and 2440 mm in height (unless otherwise noted in the individual certifications).

Fire exit hardware may be used on 20-minute, wood-core fire doors with the addition of through bolts as noted in the individual certifications.

RELATED PRODUCTS

For certifications for panic hardware application only, see Controlled Exit Type Panic Hardware (FULAC), Egress Door Securing and Releasing Devices (FUPLC), Exit Control Devices (FUQHC) and Panic Hardware (FVSRC).

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN4-S104, "Standard Method for Fire Tests of Door Assemblies," and CAN/ULC-S132, "Standard Method of Tests for Emergency Exit and Emergency Fire Exit Hardware."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Exit Hardware."

Flush and Surface Bolts, Manual Type (GXSRC)

GENERAL

This category covers manual flush and surface bolt assemblies intended to secure the inactive leaf of swinging fire doors mounted in pairs with the active leaf provided with a labelled single-point latch.

The bolt assemblies have been investigated only from the standpoint of fire protection and are intended for use on fire doors of the type indicated in the individual certifications, having a rating up to and including 3 h (unless otherwise noted in the individual certifications), mounted in pairs not exceeding 2440 mm in either dimension (unless otherwise indicated in the individual certifications).

Manually-operated top and bottom flush or surface bolts on the inactive leaf of a pair of doors are permitted to be used when acceptable to the Authority Having Jurisdiction, provided they do not pose a hazard to safety to life. This provision limits their use to rooms not normally occupied by humans (e.g., transformer vaults, storage rooms).

These assemblies consist of individual top and bottom flush bolt or surface bolt units, manually-actuated strikes, the necessary mounting screws, and installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flush and Surface Bolt, Manual Type."

Single-point Locks or Latches (GYJTC)

GENERAL

This category covers single-point locks and latches of either the bored (cylindrical or tubular), mortise, or unit type intended for use on fire doors having a rating up to and including 3 h (unless otherwise noted in the individual certifications).

Single-point Locks or Latches (GYJTC)−*Continued*

They have been investigated with respect to their fire-protection characteristics only.

In general, single-point locks and latches of the bored (cylindrical or tubular), mortise or unit types are for use on hollow-metal, metal-clad (Kalamein), composite (steel, wood and plastic covered), and sheet-metal-type fire doors (unless otherwise noted in the individual certifications), are mounted in single-swing doors not exceeding 1220 mm in width and 2440 mm in height, and the active door of doors mounted in pairs not exceeding 2440 mm in either dimension (unless otherwise noted in the individual certifications).

Single-point locks and latches of the bored (cylindrical or tubular) or mortise types for use on 20-minute, wood-core doors are mounted in single doors not exceeding 1220 mm in width by 2440 mm in height or 920 mm in width by 2750 mm in height (unless otherwise noted in the individual certifications).

Auxiliary-type locks for use on 20-minute, wood-core fire doors are intended to be mounted in conjunction with ULC labelled single-point locks and latches.

In general, single-point locks and latches with 12.7 mm minimum latch throw are intended for single-swing doors, and latches with 19 mm minimum latch throw are intended for the active door of doors mounted in pairs with the inactive door provided with top and bottom flush or surface bolts of either the automatic or self-latching type.

Some door manufacturers can provide doors mounted in pairs with a minimum latch throw of less than 19 mm. The door label specifies the minimum latch throw required for the individual door.

Backsets are restricted to 60 mm minimum and 70 mm maximum unless otherwise indicated in the individual certifications.

Lever handles or paddles are not eligible for use with labelled single-point locks or latches unless provided for in the individual certifications.

RELATED PRODUCTS

Assemblies investigated for both fire protection and panic features are covered under Fire Exit Hardware (GXHXC).

Manual-type flush bolts are covered under Flush and Surface Bolts, Manual Type (GXSRC).

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, ''Standard Method for Fire Tests of Door Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Single-Point Lock or Latch.''

Single-point Locks or Latches, Electrically Controlled (GYKHC)

GENERAL

This category covers electrically controlled single-point locks and latches of either the cylindrical (bored), mortise, or unit type, intended for use on fire doors having a rating up to and including 3 h (unless otherwise noted in the individual certifications).

Locks and latches are intended to be provided as complete units including housings/bodies, latch bolts, strikes and trim.

Electrically controlled single-point locks and latches have also been investigated for electrical features and are intended for use in Class 2 circuits in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

The electrically controlled single-point locks and latches have been provided with solenoids for remote locking or unlocking of the operating knob or handle on one side of the latch case.

In general, electrically controlled single-point locks and latches are intended for use on hollow metal, metal-clad (Kalamein), composite (steel, wood and plastic covered), and sheet-metal-type fire doors (unless otherwise noted in the individual certifications), are mounted in single-swing doors not exceeding 1220 mm in width by 2440 mm in height, and the active door of doors mounted in pairs not exceeding 2440 mm in either dimension (unless otherwise noted in the individual certifications).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, ''Standard Method for Fire Tests of Door Assemblies.''

ULC MARK

Single-point Locks or Latches, Electrically Controlled (GYKHC)−*Continued*

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Single-Point Lock or Latch, Electrically-Controlled.''

Elevator Fire Door Hardware, Passenger (GZKZC)

GENERAL

This category covers passenger elevator fire door hardware intended for use as a component of horizontally-sliding passenger elevator fire door assemblies of single- and multi-speed side-opening and centre-opening types. The hardware package consists of interlocks, header, track, hangers, pendant bolts, sill, sill support plates, sill brackets, retaining angles and closer assemblies, and may be used in lieu of corresponding items covered under Fire Doors (GSNVC) as passenger elevator (hollow metal) type fire door assemblies.

Hanger assemblies may be provided in lieu of hanger components. They consist of a header, hangers, pendant bolts, track and attachments mounted together so that the assembly may be handled as a complete unit.

Some passenger elevator doors may be provided with an integral hanger, in which case the hanger assembly consists of a header and track. For integral hangers, the door label covers the details of hanger and attachments.

Passenger elevator hardware packages covered under this category may be provided with certain components only, such as interlocks. The components covered under this category are identified in the individual certifications.

Elevator fire door hardware packages covered under this category have been investigated for compliance with the requirements for Fire Fighter's Elevators in the ''National Building Code of Canada.''

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, ''Standard Method for Fire Tests of Door Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Elevator Fire Door Hardware, Passenger.''

Fire Door Hardware (GZYXC)

GENERAL

This category covers fire door hardware intended for use with composite (steel-covered), sheet-metal and tin-clad doors. There are two types: hardware intended for use with sliding doors, and hardware intended for use with swinging doors as indicated in the individual certifications.

Sliding hardware is one of three types: horizontally mounted, single- or centre-parting, and vertically sliding.

Swinging hardware is of two types: single-swing or swinging in pairs.

To provide the degree of fire protection for a wall opening as indicated by the fire door label, this hardware is intended to be applied and the resulting door hardware assembly installed in accordance with the ''National Building Code of Canada.''

Wall bolts or closing devices are not included in a set of labelled hardware.

For sliding door hardware, labels as illustrated are applied singly to each hanger, binder, bumper, flush pull and stay roll and two to each section of track for a complete set of labelled single slide hardware; and for doors in pairs labels are applied singly to each track section, centre floor binder, centre track binder, and centre latch assembly.

For swinging door hardware, labels are applied singly to each hinge strap, hinge bracket, connecting bar, and catch for single doors; and for doors in pairs, to above named parts and to each latch, each top and bottom bolt and keeper for standing door, and to each hinge wall strap.

Manufacturers certified as makers of hardware for standard-size fire doors and shutters are prepared to furnish labelled hardware shown by examination and tests to be suitable for mounting these devices in the several situations classified below.

A complete set of standard hardware for standard-size single sliding or swinging doors requires the use of 10 labels, and 20 labels are required for each pair of standard size swinging doors.

SLIDING-TYPE HARDWARE

Fire Door Hardware (GZYXC)−*Continued*

Horizontal-Sliding, Tin-Clad — Hardware for horizontal-sliding tin-clad doors is intended for use with doors not exceeding 11 m2 in area or 3660 mm in either dimension.

Component Parts — Each complete set of certified hardware for horizontal tin-clad doors includes:

1. One track, length equal to twice the width of the opening plus 535 mm, punched for wall bolts.
2. Two hangers for openings 1830 mm and less in width; three hangers for openings wider than 1830 mm; and bolts for attaching hangers to door.
3. Two binders.
4. One stay roll with attachment bolts suitable for the form of sill used.
5. One bracket for each track bolt.
6. Two half-oval chafing strips for back of door; two flat strips for front of door opposite the half-oval strips; bolts for fastening above strips together through door; length of strips to be 100 mm less than width of door. Doors exceeding 2440 mm in height require three chafing strip assemblies.
7. One strip 125 mm less than width of door to take wear of stay roll; and wood screws for attachment.
8. One wedge with screws for attachment.
9. Handles with bolts and screws for attachment.
10. One front bumper and one back bumper.
11. Four bumper shoes and screws for attachment; each bumper shoe may be made in two pieces.
12. Washers for wall bolts.
13. Instructions for installation.

Exceptions — Wall bolts are not included, as requirements for length vary. Automatic attachments are not included in a set of labelled hardware.

Horizontal-Sliding, Sheet-Metal and Composite (Steel-Covered) — Hardware for horizontal-sliding sheet-metal and composite (steel-covered fire doors) is essentially the same as for tin-clad doors, with minor differences to conform to design of various manufacturers.

Vertical-Sliding — Hardware for vertical-sliding tin-clad and sheet-metal doors is intended for use with doors not exceeding 7.5 m^2 in area or 3050 mm in either dimension.

Component Parts — Each complete set of certified hardware for vertical-sliding tin-clad and sheet-metal doors includes:

1. Two 90 by 9.5 mm tracks, length equal to twice the height of the opening plus 230 mm, punched for wall bolts.
2. One cast-iron bracket for each track bolt.
3. Two malleable-iron track guides for each track for openings 1525 mm or less in height and an additional guide for each track for each 760 mm or fraction thereof in excess of 1525 mm.
4. One bumper bolted to top of each track with wall bolt.
5. Four bumper shoes and screws for attachment.
6. Two wrought-iron or steel cables, not less than 8 mm in diameter.
7. Two cable brackets.
8. Four cable fasteners and thimbles.
9. Two cable pulleys, with malleable-iron frames and sheaves.
10. Counterweights.
11. Two 19 by 6 mm half-oval chafing strips for back of door; length 50 mm less than height of door; strips held by M6 bolts or machine screws with countersunk heads, passing through door and bearing against washers.
12. Handles with bolts and screws for attachment.
13. Necessary washers, rivets, bolts and screws to properly fasten the hardware to the door and wall.
14. Instructions for installation.

Exceptions — Wall bolts are not included, as requirements for length vary. Automatic attachments are not included in a set of labelled hardware.

Caution — In view of the greater accident hazard of vertical-sliding doors, horizontal-sliding doors are considered preferable where structural details permit their use.

SWINGING-TYPE HARDWARE

Swinging-type hardware is designed for single-swing sheet-metal and three-ply tin-clad doors not exceeding 1830 mm in width and 3660 mm in height, and doors swinging in pairs not exceeding 3050 mm in width and 3660 mm in height, and two-ply tin-clad doors swinging single not exceeding 1830 mm in width and 3050 mm in height and doors swinging in pairs not exceeding 3050 mm in width and 3050 mm in height.

Each complete set of labelled hardware for swinging tin-clad doors contains:

For doors mounted singly — Wall strips (except for openings supplied with standard steel frames), hinge brackets, strap hinges, catches, latches, latch keepers, connecting bar, operating handle mechanism, latch spring, and necessary washers, rivets, and bolts to mount hardware on door and wall.

Fire Door Hardware (GZYXC)−*Continued*

For doors mounted in pairs — Above members, top and bottom bolts, and top and bottom bolt keepers for standing doors.

All parts are made of iron or steel. The number and spacing of hinges and latches depend on door sizes.

Hardware for swinging sheet-metal doors is essentially the same as for tin-clad doors, with minor differences to conform to constructions of various manufacturers.

ADDITIONAL INFORMATION

For additional information, see Hardware (GWGRC) and Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door Hardware."

FIRE DOOR VIEWERS (HAAUC)

GENERAL

This category coves fire door viewers intended for use with doors having fire protection ratings not exceeding those indicated in the individual certifications.

They have been investigated with respect to their fire protection characteristics only.

They require a hole to be drilled through the fire door of a diameter to provide a tight fit (see the installation instructions accompanying the fire door viewer).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors (GSNVC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door Viewer."

FIRE MAIN EQUIPMENT (HAMVC)

HYDRANTS (HBORC)

USE

This category covers hydrants intended for general water works service, and for private fire protection. These hydrants are of the base/valve design and for service pressure not exceeding 1030 kPa.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S520, "Fire Hydrants."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydrant."

INDICATOR POSTS, GATE VALVE (HCBZC)

USE

This category covers indicator posts designed for use with underground gate valves controlling water supplies to automatic sprinkler equipment, standpipes, etc., where connections enter buildings. Indicator posts provide aboveground means for operating valves and indicate the position of the valves, whether open or shut, or in some intermediate position.

Unless otherwise noted in the individual certifications, these indicator posts are of the telescopic barrel type intended for use with gate valves, nominal pipe sizes 4 to 14. Indicator posts intended for use with valves larger than NPS 14 and those for use with valves in pits are as indicated in the individual certifications.

REQUIREMENTS

Indicator Posts, Gate Valve (HCBZC)−*Continued*

The basic standard used to investigate products in this category is ULC/ORD-C789, "Indicator Posts for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Indicator Post, Gate Valve."

METERS FOR PRIVATE FIRE SERVICE (HCPXC)

This category covers meters intended for use in private fire service. They are manufactured in three styles:

Detector-check-valve-type meters are those which detect small rates of flow only.

Regular-type meters are those which measure the entire flow through the line in which they are installed.

Meters for fire pumps are those for measuring the capacities of fire pumps during routine testing.

Flow Meters for Fire Pump Service (HDKUC)

GENERAL

This category covers meters intended for fixed installation in steel pipe for monitoring water flow rates in stationary fire pumps or mobile fire fighting apparatus where the working pressure does not exceed 1720 kPa, unless otherwise indicated in the individual certifications.

The flow sensors may be of various types (paddle wheel, differential, turbine, spring probe) as indicated in the individual certifications, and are intended to provide an accuracy of 3% over the working range of the flow meter.

These meters are not intended for calibration use.

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flow Meter for Fire Pump Service."

Meters, Regular Type (HDRTC)

GENERAL

This category covers main line meters of the proportional type, meters of the displacement type in a bypass, and turbine-type meters. The weighted valve mechanism of the main line meter diverts small flows to the bypass meter.

The accuracy is within the limits specified by recognized standards for cold water meters or as indicated in the individual certifications. These meters are intended for private fire service connections to public water supplies, at working pressures not exceeding 1210 kPa unless otherwise indicated in individual certifications.

REQUIREMENTS

The basic standard used to investigate products in this category is UL Subject 327, "Outline of Investigation for Turbine Type Flow Meters."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter, Regular Type."

PIPE (HEFRC)

This category covers metallic (cast-iron, ductile-iron and copper) and nonmetallic (asbestos-cement and polyvinyl) pipe and associated mechanical-type joint fittings intended for use in public and private waterworks and fire service systems. Pipe is intended to be installed in accordance with standard practice or in compliance with the manufacturer's instructions covering the installation of pipe of this kind. The laying conditions for cast-iron and ductile-iron pipe are intended to be in accordance with the applicable CSA, ANSI or AWWA specifications noted in the individual Listings.

Information concerning type, size, thickness class, pressure rating, length, and other detailed information is noted in the individual Listings.

Pipe (HEFRC)−*Continued*

Authorities Having Jurisdiction should be consulted before installation.

Nonmetallic Pipe (HFNWC)

GENERAL

This category covers PVC and glass-fibre filament-wound epoxy/PVC pressure pipe classified as nonmetallic. It is intended for use in public and private underground waterworks and fire service systems and connections to such systems where the working pressure does not exceed that indicated in the individual certifications, and when installed in accordance with the manufacturer's installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Pipe (HEFRC).

REQUIREMENTS

The basic standard used to investigate the design and construction specifications of this pipe is ULC/ORD-C1713-2003, "Pressure Pipe and Couplings, Glass Fiber-Reinforced, for Underground Fire Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Pipe."

Nonmetallic Pipe, PVC (HGBUC)

GENERAL

This category covers polyvinyl chloride (PVC) pressure pipe intended for use in underground fire service systems where the working pressure does not exceed that indicated in the individual certifications. This category includes PVC distribution pressure pipe in sizes ranging from 4-12 NPS and PVC transmission pressure pipe in sizes ranging from 14-36, as indicated in the individual certifications. This pipe is intended to be installed in accordance with the manufacturer's installation instructions.

ADDITIONAL INFORMATION

For additional information, see Pipe (HEFRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1285-2003, "Pipe and Couplings, Polyvinyl Chloride (PVC) for Underground Fire Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Pipe PVC."

Pipe, Reinforced Concrete, Steel Cylinder Type (HGITC)

GENERAL

This category covers reinforced concrete, steel-cylinder-type pipe, consisting of a steel plate cylinder with steel bell and spigot rings welded to its ends, spirally wound with steel rod reinforcement prestressed to provide slight initial compression in the cylinder and concrete lining. The pipe has an external coating of cement mortar.

Reinforced concrete pipe is intended for use in fire service systems when installed in accordance with the manufacturer's installation instructions.

ADDITIONAL INFORMATION

For additional information, see Pipe (HEFRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/AWWA C303, "Concrete Pressure Pipe, Bar-Wrapped, Steel-Cylinder Type."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Reinforced Concrete, Steel Cylinder Type."

PIPE FITTINGS (HHJZC)

This category covers pipe fittings intended for use in public and private waterworks and fire service systems, and connections to such systems where the working pressures do not exceed those for which the fittings are rated.

Pipe Fittings (HHJZC)−*Continued*

Fittings, Cast-iron (HHXXC)

USE

This category covers cast-iron fittings intended for use in public or private waterworks, and fire service systems, where the working pressures do not exceed those for which the fittings are rated.

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/ASME B16.1, ''Gray Iron Pipe Flanges and Flanged Fittings (Classes 25, 125, and 250),'' and ANSI/ASME B16.4, ''Gray Iron Threaded Fittings – Classes 125 and 250.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fitting, Cast-Iron.''

Fittings, Malleable- and Ductile-iron (HJKAC)

USE

This category covers malleable- and ductile-iron fittings intended for use in public or private waterworks, and fire service systems where the working pressures do not exceed those for which the fittings are rated.

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/AWWA C110/A21.10, ''Ductile-Iron and Gray-Iron Fittings,'' and ANSI/ASME B16.3, ''Malleable Iron Threaded Fittings – Classes 150 and 300.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fitting, Malleable- and Ductile-Iron.''

Fittings, Retainer Type (HJKFC)

USE

This category covers fittings consisting of mechanical joint retainer devices and flange adapters for use with metallic and/or nonmetallic pipe, as indicated in the individual certifications. They are intended for use in underground fire service systems, in public or private waterworks, and are intended to be installed in accordance with the manufacturer's installation instructions.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C194, ''Guide for the Investigation of Gasketed Joints for Cast-Iron Pressure Pipe and Fittings.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fitting, Retainer Type.''

Fittings, Miscellaneous (HKOXC)

USE AND INSTALLATION

This category covers miscellaneous fittings intended for use in public or private waterworks, and fire service systems utilizing the type of pipe indicated in the individual certifications, where the working pressures do not exceed those for which the fittings are rated. They are intended to be installed in accordance with the manufacturer's installation instructions.

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/ASME B16.3, ''Malleable Iron Threaded Fittings – Classes 150 and 300,'' ULC/ORD-C1474 (2003), ''Adjustable Drop Nipples for Sprinkler Systems,'' and/or ULC/ORD-C213, ''Rubber Gasketed Fittings for Fire Protection Service.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fitting, Miscellaneous.''

Underground Accessory Fittings (HKQAC)

USE AND INSTALLATION

Underground Accessory Fittings (HKQAC)−*Continued*

This category covers saddle fittings and other accessory fittings intended for use in underground public or private waterworks, and fire service systems utilizing the type of pipe indicated in the individual certifications, where the working pressures do not exceed those for which the fittings are rated. They are intended to be installed in accordance with the manufacturer's installation instructions. These products have not been investigated for use in potable water systems.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C194-1975, ''Guide for the Investigation of Gasketed Joints for Cast-Iron Pipe and Fittings.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Saddle Fitting'' or ''Underground Accessory Fitting.''

Fittings, Union, Malleable-iron (VIZIC)

USE

This category covers union fittings intended for use in piping conveying water where the working pressure does not exceed that indicated in the individual certifications.

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/ASME B16.3, ''Malleable Iron Threaded Fittings – Classes 150 and 300.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fitting, Union, Malleable-Iron.''

Fittings, Rubber-gasketed (VIZMC)

GENERAL

This category covers iron couplings consisting of housings, rubber gasket, and steel track bolts. This category also covers iron, ductile-iron and steel-elbow fittings and tees designed for use with the rubber-gasketed fittings.

The joints formed with these fittings need not be restrained, unless otherwise indicated in the individual certifications.

These fittings are intended for use either aboveground or underground in fire protection systems (automatic sprinkler, open sprinkler, and standpipe) and connections to such systems when installed in accordance with ANSI/NFPA 13, ''Installation of Sprinkler Systems,'' ANSI/NFPA 14, ''Installation of Standpipe and Hose Systems,'' and ANSI/NFPA 15, ''Water Spray Fixed Systems for Fire Protection.'' Other uses may be permitted as described in the individual certifications. For couplings of steel pipe with grooved ends, all bolts are intended to be tightened to torque values specified by the manufacturer's installation instructions.

These products have not been investigated for use in potable water systems.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C213, ''Rubber Gasketed Fittings for Fire Protection Service.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fitting, Rubber-Gasketed.''

STRAINERS, PIPELINE (HLCVC)

USE

This category covers pipeline strainers intended for use in water-supply connections to fire main equipment, such as automatic sprinkler systems and fixed water-spray systems, where protection against clogging of water-discharge openings is needed.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C321-2003, ''Pipeline Strainers.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of

Strainers, Pipeline (HLCVC)−*Continued*

this Directory) together with the word "LISTED," a control number, and the product name "Strainer, Pipe Line."

VALVES (HLQTC)

Valves, Backflow Preventer (BAEUC)

GENERAL

This category covers backflow preventer valves intended for use in fire protection service in cross-connections between water supplies. These valves have been investigated for strength of body, friction loss and check valve seat leakage only. They have not been investigated for all aspects of their performance in general waterworks service, as may be required by Authorities Having Jurisdiction.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C312, "Check Valves for Fire Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Valve, Backflow Preventer."

Ball Valves, System Control (HLUGC)

GENERAL

This category covers shut-off ball valves intended for general use in air- and water-supply piping of fire protection equipment, dry-pipe and alarm valve "trim," and other applications where either gate or globe valves are ordinarily used. These valves are intended for a maximum working pressure of 1210 kPa unless otherwise noted in the individual certifications.

Shut-off ball valves may be provided with an assembly of supervisory switches having electrical signalling contacts for the purpose of indicating an abnormal condition and the restoration to normal of such valves. Valve position signal attachments are operated by a mechanical linkage to moveable parts of the valve. The signalling contacts are intended for connection to actuating circuits of a separate electrically-operated transmitter, or to the signalling line circuit of a separate electrical control unit by which their action is indicated. These switches are intended for use in ordinary locations.

Separately installed supervisory switch assemblies are intended for mounting directly to the valve-actuating mechanism.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1091, "Butterfly Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ball Valve, System Control."

Butterfly Valves (HLXSC)

GENERAL

This category covers butterfly valves intended for use in water-supply piping of fire protection equipment, and intended for a maximum working pressure of 1210 kPa unless otherwise noted in the individual certifications.

They are equipped with a gear, or travelling nut, or pneumatic actuator to reduce the possibility of water hammer. When a butterfly valve is in the open position, the disc may extend beyond the end of the valve body. During installation, care should be taken that the disc does not interfere with the operation of system components installed immediately adjacent to the butterfly valve.

Butterfly valves may be provided with an assembly of supervisory switches having electrical signalling contacts for the purpose of indicating an abnormal condition and the restoration to normal of such valves. Valve position signal attachments are operated by a mechanical linkage to moveable parts of the valve. The signalling contacts are intended for connection to actuating circuits of a separate electrically-operated transmitter, or to the signalling line circuit of a separate electrical control unit by which their action is indicated. These switches are intended for use in ordinary locations.

Separately installed supervisory switch assemblies are intended for mounting directly to the valve-actuating mechanism.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C1091, "Butterfly Valves for Fire-Protection Service," and UL

Butterfly Valves (HLXSC)−*Continued*

1091, "Butterfly Valves for Fire-Protection Service." The following is a list of the requirements from UL 1091 that supersede or are added to the applicable requirements in ULC/ORD-C 1091: UL 1091 section or paragraph reference, 1.2, 7.1, 8, 9, 10.1, 11, 12, 13, 15, 16.1, 16.2, 17, 18.1, 18.2, 19, 20, 21, 22, 24, 25, 26.1, 26.2.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Butterfly Valve."

Valves, Check, Swing (HMERC)

GENERAL

This category covers check valves intended for use in fire service systems for working pressures not exceeding 1210 kPa for sizes 2 to 12 NPS incl., and 1030 kPa for sizes larger than 12 NPS. Some valves are rated for pressures greater than 1210 kPa as indicated in individual certifications.

Check valves consist of the swing type and split clapper type.

Check valves are regular type, iron-bodied, bronze-fitted and may have metal-to-metal or rubber-faced checks as noted in the individual certifications. They may be provided with threaded, flanged, hub ends or wafer style, appropriate to the size of valve and the intended use, and installed in either horizontal or vertical positions.

Detector-type check valves are iron or brass bodied with a weighted clapper and provisions for connection of a bypass meter around the check.

In the open position, the disc of a wafer or lug-style check valve may extend beyond the end of the valve body. During installation, it should be determined that the check valve disc does not interfere with the operation of system components installed immediately adjacent to the check valve.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C312, "Check Valves for Fire-Protection Service," and ANSI/UL 312, "Check Valves for Fire-Protection Service." The following is a list of the requirements from ANSI/UL 312 that supersede or are added to the applicable requirements in ULC/ORD-C312: ANSI/UL 312 section or paragraph reference, 7.2, 12.3, 15.1, 17.3, 23, 24.4.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Valve, Check Swing."

Valves, Gate (HMRZC)

GENERAL

This category covers shut-off valves intended for use in dry-pipe and alarm valve "trim," and air and water piping of fire protection equipment. They are intended for working pressures not exceeding 1210 kPa for valves NPS 12 and smaller, and not exceeding 1030 kPa for larger valves.

Unless otherwise noted, valves are iron-bodied, bronze-fitted and provided with threaded, flanged, or hub ends appropriate to the size of valve and the intended use.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C262, "Gate Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Valve, Gate."

Residential Sprinkler Domestic Water Shut-off Valves (VKVIC)

GENERAL

This category covers valves intended to automatically shut off essentially all flow to a domestic water system and divert the available water supply to the sprinkler system, should there be a fire sprinkler operation while there is domestic water usage.

These valves are intended for use in residential sprinkler systems as described in ANSI/NFPA 13D, "Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes," and ANSI/NFPA 13R, "Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."

REQUIREMENTS

Residential Sprinkler Domestic Water Shut-off Valves (VKVIC)−*Continued*

The basic standard used to investigate products in this category is ULC/ORD-C260, "Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Domestic Water Shut-Off Valve."

POLYMERIC MATERIALS FOR USE IN PIPE AND FITTINGS IN SPRINKLER SYSTEMS PIPING (QORRC)

The materials covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate use in the field. THE FINAL ACCEPTANCE OF THE COMPONENT IS DEPENDENT UPON ITS USE IN EQUIPMENT SUBMITTED TO UNDERWRITERS LABORATORIES OF CANADA.

GENERAL

This category covers materials investigated in accordance with established procedures to define their properties in order to facilitate evaluation of their use in end-product applications.

These materials have been investigated in accordance with the applicable test methods (as referenced in ANSI/ASTM D1598, "Standard Test Method for Time-to-Failure of Plastic Pipe Under Constant Internal Pressure," and ANSI/ASTM D1599, "Standard Test Method for Resistance to Short-Time Hydraulic Pressure of Plastic Pipe, Tubing, and Fittings,") of ULC/ORD-C199P (2002), "Combustible Piping for Sprinkler Systems," for sustained internal pressure where the standard dimension ratio (SDR = ratio of average outside diameter to minimum wall thickness) and maximum ambient temperature do not exceed the values given in the individual certifications, and the internal pressure does not exceed 1.21 MPa (175 psig). The minimum hoop stress of the material at 50 years, as calculated in accordance with ANSI/ASTM D2837, "Standard Test Method for Obtaining Hydrostatic Design Basis for Thermoplastic Pipe Materials or Pressure Design Basis for Thermoplastic Pipe Products," for the maximum SDR and pipe size range, is indicated in the individual certifications. Components, such as piping and fittings, formed from these materials are limited to a nominal size range and minimum wall thickness as noted in the individual certifications.

Flammability — Materials may be classified based on burning tests conducted in accordance with CAN/CSA-C22.2 No. 0.17 (2000), "Evaluation of Properties of Polymeric Materials." By small-scale test, materials are classified 94HB, 94V-0, 94V-1, 94V-2 and/or 94-V5. CAN/CSA-C22.2 No. 0.17 (2000) small-scale test data does not pertain to building materials, furnishings and related contents. CAN/CSA-C22.2 No. 0.17 (2000) small-scale test data is intended solely for determining the flammability of plastic materials used in components and parts of end-product devices and appliances, where the acceptability of the combination is determined by ULC.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Polymeric Material for Use in Pipe and Fittings in Sprinkler Systems Piping."

HEATING ACCESSORIES (HJNNC)

This category covers accessories intended for use in the assembly or installation of air-conditioning or heating equipment and similar applications.

STRAINERS, OIL BURNERS (METZC)

USE

This category covers oil burner strainers intended for use in the assembly or installation of oil-burning equipment.

They are intended for use by the oil burner manufacturer in the assembly of oil-burning equipment where the suitability of the application has been determined by Underwriters Laboratories of Canada. Although these devices are designed as "strainers," they may either be strainers or filters according to the common terminology of the industry.

Fuel Oil Specifications — Fuel oil specifications indicated by number in the individual certifications refer to CAN/CGSB 3.2, "Heating Fuel Oil," and ASTM D396-69, "Standard Specification for Fuel Oils."

Strainers, Oil Burners (METZC)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C331, "Strainers for Flammable Fluids and Anhydrous Ammonia."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Oil Burner Strainer."

VALVES (MFVVC)

GENERAL

This category covers valves designed specifically for use in conjunction with heating and cooling appliances.

The type of fluid for which a valve has been investigated is indicated in the individual certifications by the following symbols:

A – Air or nontoxic, nonflammable gases
Ac – Acetylene
F – Common refrigerants except ammonia
FA – Common refrigerants including ammonia
G – City gas supplied by public utilities
LP – Liquefied petroleum gases
02 – Nos. 1 and 2 fuel oils, oils having viscosities of not more than 40 mPa.s, SU at 38°C
04 – No. 4 fuel oils, oils having viscosities of 40 to 125 mPa.s, SU at 38°C
05 – No. 5 fuel oils, oils having viscosities of 125 mPa.s, SU at 38°C, to 40 mPa.s, SF at 50°C
06 – No. 6 fuel oil, oils having viscosities of 90 to 300 mPa.s, SF at 50°C
Ox – Oxygen
S – Steam
W – Water or other aqueous nonflammable liquids

Constant-level valves are intended for use with fuel oil handling or burning equipment to provide for the uniform delivery of oil. They may include manually operated metering valves to regulate the flow of oil.

Valves that include automatic shut-off devices are suitable for assembly by manufacturers as part of oil-burning appliances to prevent the hazardous discharge of oil at the burner when the acceptability of the combination has been determined by Underwriters Laboratories of Canada.

The valves are suitable for installation in the oil supply line at the supply tank connected to burners requiring gravity oil feed. The vent opening of those valves which do not include an automatic shut-off device are intended to be connected by piping or tubing to the outside of the building and terminate at a level above the fill opening of the tank. The vent piping or tubing is not intended to be connected to tanks or tank vents.

These valves are suitable for use with oil fuels not heavier than No. 2 under pressure not more than 20 kPa (approximately 2.35 m head of oil).

Electrically-operated valves of the general-purpose type are intended to control the flow of a fluid, but are not intended to be depended upon to act as a safety valve. It may be a normally closed or normally open valve. (Such valves were previously designated "regulating valves.")

Unless otherwise indicated in the individual certifications, these valves are intended for stationary installations in an ambient temperature normally prevailing in habitable spaces, and for handling fluids at a temperature not exceeding 25°C in locations which are not hazardous locations as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The investigation of these valves includes electrical input and dielectric strength tests, when appropriate, and operation and temperature tests. Parts subjected to pressure are tested for external leakage at 1.5 times maximum rated pressure and for strength at not less than 5 times maximum rated pressure.

General-purpose valves are also subjected to an endurance test of 6,000 cycles of operation (up to 100,000 cycles if they are for handling hazardous fluids) and are then tested for external leakage but not for leakage past the seat.

Manually-operated valves are intended specifically for use with gas- or oil-burning equipment.

Metering valves are primarily for use in the burner fuel supply line to manually regulate the flow of fuel to the burner.

Shut-off valves are for use in the burner supply line to manually shut off the flow of fuel to the burner.

Three-way valves are for use in burner installations with two interconnected sources of fuel supply to allow fuel to be admitted to the burner from only one source at a time.

Special-purpose valves are intended for use as indicated in the individual certifications.

REQUIREMENTS

Valves (MFVVC)−*Continued*

The basic standards used to investigate products in this category are ULC/ORD-C842, "Valves for Flammable and Combustible Liquids," and CAN/CGA-3.16, "Lever Operated Non-Lubricated Gas Shut-Off Valves."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Valve."

PIPE JOINTING MATERIALS (QLSPC)

This category covers products in the form of compounds or tapes, intended for use as aids in joining and sealing threaded pipe connections or other threaded metal parts in devices handling gasoline or petroleum oils. Where indicated in the individual Listings, these products are also suitable for use in devices handling natural gas or methane (maximum pressure as indicated in the individual Listings), propane and butane.

Pipe Joint Tapes (KTCLC)

GENERAL

This category covers polytetrafluoroethylene plastic in the form of tape. These materials are intended for application in accordance with the manufacturer's instructions. The maximum pipe size for which the materials are suitable are indicated in the individual certifications. These materials have not been tested under fire conditions.

Authorities Having Jurisdiction should be consulted before use.

ADDITIONAL INFORMATION

For additional information, see Pipe Jointing Materials (QLSPC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S642, "Compounds and Tapes for Threaded Pipe Joints."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pipe Joint Tape."

Pipe Joint Compounds (QLSRC)

GENERAL

This category covers nonhardening compounds in the form of pastes and liquids and generally consisting of metallic powders or organic or inorganic fillers, special oils, plasticizers and solvents. They are intended for use as aids in joining and sealing threaded pipe connections or other threaded metal parts in accordance with the manufacturer's instructions. These products have not been investigated for their capability of maintaining a seal in a threaded joint under fire exposure conditions but have been classified as to their fire hazard.*

These products are intended for application at or above 15°C unless specified otherwise in the individual certifications.

* In the case of products that are liquids at ordinary temperatures and atmospheric pressure, the hazards have been rated in accordance with Underwriters Laboratories of Canada's Standard of Classification, in which:

Ether rates 100
Gasoline rates 90-100
Alcohol (ethyl) rates 60-70
Kerosene (100°F flash) rates 30-40
Paraffin oil rates 10-20

For further information, refer to UL 340, "Tests for Comparative Flammability of Liquids."

Authorities Having Jurisdiction should be consulted before use.

ADDITIONAL INFORMATION

For additional information, see Pipe Jointing Materials (QLSPC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S642, "Compounds and Tapes for Threaded Pipe Joints."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pipe Joint Compound."

FIRE RESISTANT DUCTS (HNKNC)

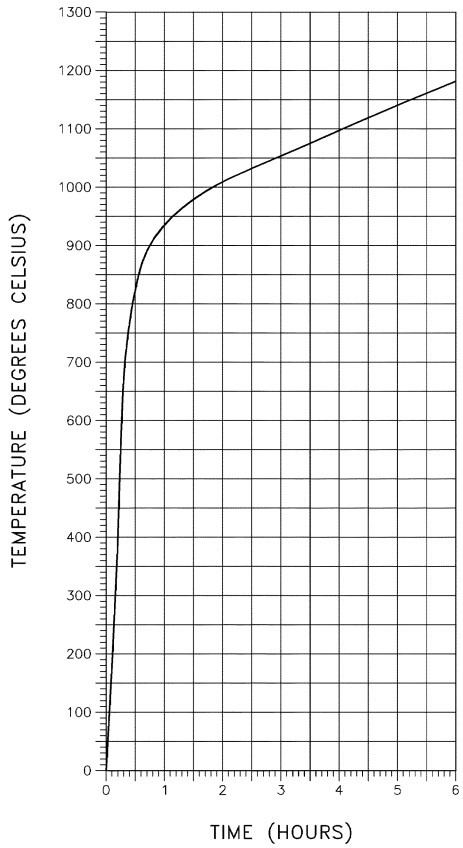
GENERAL

This category covers fire-resistant ducts, ducts intended for the movement of air in ventilation, heating, air conditioning, and other such systems.

The fire-resistance ratings for the illustrated ducts have been established on the basis of the performance of test samples representative of the design of such ducts when subjected to a fire-endurance test conducted in accordance with ISO 6944 (1985), "Fire Resistance Tests – Ventilation Ducts." ISO 6944 (1985) contains requirements for two types of ventilation duct assemblies, identified as Duct A and Duct B. The requirements for Duct A are intended for ventilation duct assemblies that pass through the fire environment without openings. The requirements for Duct B are intended for ventilation duct assemblies where the duct contains openings within the fire environment. Unless indicated otherwise in the design descriptions, all the ventilation duct assemblies covered under this category are tested to the requirements of Duct A only.

The fire exposure conditions employed in ISO 6944 (1985) are defined by the temperature-versus-time relationship depicted by the curve in Figure 1, which is also identical to the exposure defined in ISO 834-1, "Fire-Resistance Tests – Elements of Building Construction – Part 1: General Requirements."

Figure 1



The fire-resistance rating is expressed as one number based on the performance criteria found in ISO 6944 (1985). The assigned fire-resistance rating is the lowest of the performance criteria, Stability, Insulation and Integrity. These are described as follows:

Stability — The time, expressed in hours, when stability failure occurs. Stability failure is deemed to have occurred when the duct portion inside or outside the fire-resistance furnace collapses in such a manner that the duct no longer fulfills its intended function.

Insulation — The time, expressed in hours, when the temperature rise above initial ambient temperature on the unexposed surface of the duct system, outside the furnace, exceeds either:

a) 140°C as an average value; or
b) 180°C as a maximum value read by any surface thermocouple.

Integrity — The time, expressed in hours, when cracks, holes or other openings occur in the duct system, outside the furnace, through which flames or hot gases can pass.

Unless indicated otherwise in the design descriptions, the ratings apply to both horizontal and vertical runs of duct.

The conditions of acceptance described in ISO 6944 (1985) are developed on the premise that the duct itself and its method of treatment, when it

passes through a fire separation with a fire-resistance rating, provides the indicated fire-resistance rating and, as such, that the fire dampers are not required.

Unless indicated otherwise in the design descriptions, rigid restraint of the duct has not been simulated in the fire test and the ratings do not apply to ducts that are fully restrained against thermal expansion in field applications.

In addition to the requirements of ISO 6944 (1985), assemblies incorporating grease ducts are investigated to the requirements of "ULC Grease Duct Insulation Test Protocol," and covered under Grease Duct Insulation (YYETC). These grease duct assemblies incorporate grease duct insulation materials intended for insulating metal grease ducts in commercial institutional kitchen systems to protect adjacent combustibles from ignition in the event of an internal grease duct fire. They have been investigated for the ability to permit the reduction of clearances to combustible construction and are intended to be installed in accordance with the manufacturer's recommended installation instructions and the applicable section of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

All other limitations of the duct are stated in the design descriptions (e.g., maximum cross-sectional area, maximum support spacing, type of duct use).

Numbered items refer to the descriptive text below each drawing. Individual components of a proprietary nature, or over which it is necessary to exercise control at the manufacturing location, are Listed under the Label Service Program of Underwriters Laboratories of Canada. Such items are identified in the text by a black dot thus •. Under these Services, periodic examinations and tests are conducted on samples selected at random from current production and stock. Each Listed product bears the label of Underwriters Laboratories of Canada from which it may be determined that a product is suitable for use as a material in a particular duct or ducts. Materials intended for use with these ducts are covered under Duct Insulation (HNNZC), Coated Ducts (HNNXC) and Fire Resistant Duct Panels (HNOAC) following the series of illustrated ducts.

Authorities Having Jurisdiction should be consulted before installation.

COATED DUCTS (HNNXC)

USE

This category covers duct sections, which are factory-coated with materials intended to provide fire-resistive properties. Coated ducts are designated for use in specific fire-resistant duct assemblies covered under Fire Resistance Ducts (HNKNC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ducts (HNKNC).

REQUIREMENTS

The basic standard used to investigate products in this category is ISO 6944 (1985), "Fire Resistance Tests – Ventilation Ducts."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Coated Duct."

DUCT INSULATION (HNNZC)

USE

This category covers duct insulation designated for use in specific fire-resistant duct assemblies covered under Fire Resistance Ducts (HNKNC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ducts (HNKNC).

REQUIREMENTS

The basic standard used to investigate products in this category is ISO 6944 (1985), "Fire Resistance Tests – Ventilation Ducts."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Duct Insulation."

FIRE RESISTANT DUCT PANELS (HNOAC)

USE

This category covers duct panels designated for use in specific fire-resistant duct assemblies covered under Fire Resistance Ducts (HNKNC).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ducts (HNKNC).

REQUIREMENTS

The basic standard used to investigate products in this category is ISO 6944 (1985), "Fire Resistance Tests – Ventilation Ducts."

ULC MARK

Fire Resistant Duct Panels (HNOAC)–*Continued*

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Resistant Duct Panel."

FITTINGS (HSNXC)

This category covers adapters, connectors, pigtails, expansion coils, etc., commonly used in the assembly of appliances, equipment or piping for the handling of flammable gases or liquids. The fluids intended for use with these products are identified in the individual Listings.

ADAPTERS AND MISCELLANEOUS FITTINGS (HTBVC)

Flammable-liquid, Underground Hose Type Connectors (QLWVC)

USE AND INSTALLATION

This category covers flexible rubber hose type pipe connectors rated at a minimum of 345 kPa designed for use in joining lengths of rigid underground piping in connection with underground storage and transfer of flammable liquids. They are intended to serve as flexible junctions to compensate for expansion, contraction and heaving of underground piping, to minimize stresses in piping caused by settling of storage tanks, and to absorb vibration that may be set up in the piping system during the operation of pumps.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S633, "Flexible Underground Hose Connectors for Flammable and Combustible Liquids."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flammable Liquid, Underground Hose Type Connector."

Strainers (VXYVC)

USE

This category covers products intended for use in conjunction with equipment or piping installations handling flammable or combustible fluids. The maximum working pressure and type of fluid service are noted in the individual certifications.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C331, "Strainers for Flammable Fluids and Anhydrous Ammonia."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Strainer."

FLASHLIGHTS AND LANTERNS (IKBRC)

GENERAL

This category covers flashlights and lanterns investigated for use in the presence of specific flammable gas or vapour-air atmospheres in any of the groups under Class I hazardous (classified) locations. These devices employ dry-cell batteries and miniature lamp bulbs and are so constructed that, when the glass bulbs are broken, the lamp bulbs are instantaneously disconnected from the circuit.

Safety of operation in the presence of explosive mixtures may be endangered if lamps or dry-cell batteries having ratings other than those specified by the manufacturer are used.

Flashlights and lanterns are not intended for use in hospital operating rooms unless so marked on the device.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Flashlight and Lantern.''

FUEL EQUIPMENT (IRMTC)

LP-GAS AND COMPRESSED NATURAL GAS ACCESSORIES, AUTOMOTIVE TYPE (ITPVC)

USE AND INSTALLATION

This category covers accessories designed for use on LP-gas and compressed natural gas fuelled automotive vehicles. Their use does not imply that the entire fuel system on the vehicle has been investigated or is certified by Underwriters Laboratories of Canada.

These accessories may be installed in accordance with Amendment 1 to CAN/CGA-B149.2, ''Propane Storage and Handling Code,'' or Amendment 1 to CAN/CGA-B149.1, ''Natural Gas and Propane Installation Code.''

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standards used to investigate products in this category are CSA 12.2, ''Propane Fuel System Components for Use on Highway Vehicles,'' and ANSI/AGA NGV3.1/CGA NGV 12.3, ''Fuel System Components for Natural Gas Powered Vehicles.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''LP-Gas and Compressed Natural Gas Accessory, Automotive Type.''

FUEL EQUIPMENT, MARINE (ITRQC)

TANKS, MARINE (ITRZC)

This category covers equipment specifically investigated and certified for use in marinas or aboard marine vessels.

GAS SYSTEMS, COMPRESSED (JOVVC)

ACCESSORIES, GAS SYSTEMS (JPJTC)

This category covers accessories intended for use primarily by distributors of compressed gas, and in manufacturing systems, and adapted to the type of gas and working pressures encountered in general use.

Gas Connectors (JPJZC)

USE

This category covers assemblies for the connection of portable outdoor gas-fired appliances to the gas supply piping. They are intended for unconcealed outdoor locations and for use on gas piping systems having fuel gas pressures not in excess of 3.45 kPa.

These assemblies are intended for use in accordance with CAN/CGA-B149.1, ''Natural Gas and Propane Installation Code,'' and CAN/CGA-B149.2, ''Propane Storage and Handling Code.''

REQUIREMENTS

The basic standard used to investigate products in this category is CGA-8.4, ''Gas Hose Connectors for Portable Outdoor Gas-Fired Appliances.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas Connector.''

Hose Assemblies, Natural Gas and Propane (MXCQC)

GENERAL

Hose Assemblies, Natural Gas and Propane (MXCQC)−*Continued*

This category covers hose assemblies designed for conducting natural and propane gas. They consist of a length of Type I, Type II or Type III synthetic rubber hose and couplings, as described in CAN/CGA-8.1, ''Elastomeric Composite Hose and Hose Couplings for Conducting Propane and Natural Gas,'' or CAN1-8.3, ''Thermoplastic Hose and Hose Couplings for Conducting Propane and Natural Gas.'' They are intended for use in accordance with B149.1, ''Natural Gas and Propane Installation Code.'' Types I, II and III hose assemblies are designed for a maximum working pressure of 2400 kPa unless otherwise noted in the individual certifications.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CGA-8.1, ''Elastomeric Composite Hose and Hose Couplings for Conducting Propane and Natural Gas,'' or CAN1-8.3, ''Thermoplastic Hose and Hose Couplings for Conducting Propane and Natural Gas.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Hose Assembly, Natural Gas and Propane.''

CLOSURES FOR WALLS AND PARTITIONS (KCJAC)

GLASS BLOCKS (KCJUC)

GENERAL

This category covers glass blocks certified for a 3/4 h fire exposure when installed in accordance with the ''National Building Code of Canada,'' and ANSI/NFPA 80, ''Standard for Fire Doors and Fire Windows.'' The 3/4 h rating is established as a result of a representative assembly being subjected to a fire and hose stream test.

These glass blocks shall be permitted for the protection of exterior openings not exceeding 11.15 m^2 in area with neither dimension exceeding 3.66 m.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S106, ''Standard Method for Fire Tests of Window and Glass Block Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Glass Block.''

GLAZING MATERIALS (KCMZC)

GENERAL

This category covers glazing materials certified for fire exposure when installed in accordance with the ''National Building Code of Canada,'' and ANSI/NFPA 80, ''Standard for Fire Doors and Fire Windows.'' A 3/4 h rating is established as a result of a representative assembly being subjected to a fire and hose stream test.

These glazing materials are permitted for the protection of openings with the maximum aggregate area and dimensions indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S106, ''Standard Method for Fire Tests of Window and Glass Block Assemblies.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Glazing Material.''

HEATERS, AUTOMOTIVE (KIZZC)

COMBUSTION TYPE AUTOMOTIVE HEATERS (KJNXC)

USE

This category covers manually or automatically started gasoline, diesel fuel or propane gas-burning heating units designed for installation in passenger, commercial or off-highway vehicles or stationary engines, intended for preheating or space-heating purposes as indicated in the individual certifications.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combustion Type Automotive Heater."

COOKING EQUIPMENT (KMSVC)

COOKING ASSEMBLIES, SELF-CONTAINED (KNKGC)

GENERAL

This category covers, but is not limited to, unit cooking appliances such as ovens, deep fat fryers and broilers. They are self-contained in integral enclosures and may be provided with fire protection systems and means to remove smoke and vapour from the cooking operation.

The assemblies may be attended, or provide for automatic dispensing, as indicated in the individual certifications. These devices are investigated for fire, gas, electrical hazard and upset, as appropriate, and as indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 109, "Commercial Cooking Appliances."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cooking Assembly, Self-Contained."

COOKING APPLIANCES, MISCELLANEOUS (KNZTC)

GENERAL

This category covers ovens, broilers, griddles, smokers and other solid, liquid or gaseous fuelled, or combination fuelled appliances. They do not include provisions for the collection and cleaning of the cooking smoke and vapours.

Electrical features such as rotisseries, timers, and fuel-feed control may be provided.

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI Z21.58/CSA 1.6, "Outdoor Cooking Gas Appliances," ANSI Z83.11/CSA 1.8, "Gas Food Service Equipment," and ULC-S627, "Space Heaters for Use with Solid Fuels."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cooking Appliance, Miscellaneous."

HEATING EQUIPMENT (KTCRC)

This category covers heating appliances investigated to determine the suitability of the construction and performance of the appliances as an assembly and of the fuel-burning apparatus, controls, electrical features and other parts furnished by the manufacturer as part of the Listed assembly. It has also been determined that the combustible walls and surfaces adjacent to or in contact with the appliance will not attain unsafe temperatures when the appliance is installed and used as directed. The clearances to combustible construction designated under "Installation" in the individual Listings of boilers, furnaces, heaters and similar appliances indicate the minimum safe distance in millimeters measured in a straight line through air between the appliances, its flue pipe, and unprotected combustible material, including plastered construction having combustible supports, and the type of floor acceptable under the appliance. In all cases, the appliances should be installed to provide ready access to all components as may be necessary for cleaning and servicing, as the clearances indicated are only those required to avoid overheating of adjacent combustible construction.

Fuel Oil Specification — The fuel oil designations employed in the individual Listings and on the ULC label attached to a burner are those specified in CAN/CGSB-3.2, "Heating Fuel Oil," and ANSI/ASTM D396, "Standard Specification for Fuel Oils."

BOILER ASSEMBLIES (KVFTC)

Gas-fired Boiler Assemblies (KVTRC)

GENERAL

This category covers gas-fired boiler assemblies of the residential or industrial type.

These boiler assemblies are intended for installation on the type of floors and with clearances to combustible material not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated on the boiler assembly label or on the burner label, and with limit controls.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.13/CSA 4.9, "Gas-Fired Low Pressure Steam and Hot Water Boilers," or CAN1-3.1, "Industrial and Commercial Gas-Fired Package Boilers."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas-Fired Boiler Assembly."

Gas-oil-fired Boiler Assemblies, Combination (KWGZC)

GENERAL

This category covers combination gas-oil-fired boiler assemblies of the residential or commercial/industrial type.

These boiler assemblies are intended for installation on the type of floors and with clearances to combustible material not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated on the boiler assembly label or on the burner label, and with limit controls.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standards used to investigate residential-type products in this category are ANSI Z21.13/CSA 4.9, "Gas-Fired Low Pressure Steam and Hot Water Boilers," and CSA B140.7, "Oil-Burning Equipment: Steam and Hot-Water Boilers."

The basic standards used to investigate commercial/industrial-type products in this category are CAN1-3.1 (latest edition), "Industrial and Commercial Gas-Fired Package Boilers," and CSA B140.7.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas-Oil-Fired Boiler Assembly, Combination."

Oil-fired Boiler Assemblies (KWUXC)

GENERAL

This category covers oil-fired boiler assemblies of the residential or commercial/industrial type.

These boiler assemblies are intended for installation on the type of floors and with clearances to combustible material not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated on the boiler assembly label or on the burner label, and with limit controls.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B140.7, "Oil-Burning Equipment: Steam and Hot-Water Boilers."

Oil-fired Boiler Assemblies (KWUXC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Oil-Fired Boiler Assembly.''

Oil-solid Fuel-fired Boiler Assemblies (KWVFC)

GENERAL

This category covers oil-solid fuel-fired boiler assemblies of the residential or commercial/industrial type.

These boiler assemblies are intended for installation on the type of floors and with clearances to combustible material not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated on the boiler assembly label or on the burner label, and with limit controls.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standards used to investigate residential-type products in this category are CAN/CSA-B366.1, ''Solid-Fuel-Fired Central Heating Appliances,'' and CSA B140.7, ''Oil-Burning Equipment: Steam and Hot-Water Boilers.''

The basic standard used to investigate commercial/industrial-type products in this category is CSA B140.7.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Oil-Solid Fuel-Fired Boiler Assembly.''

Solid Fuel-fired Boiler Assemblies (KXBWC)

GENERAL

This category covers solid fuel-fired boiler assemblies of the residential or commercial/industrial type.

These boiler assemblies are intended for installation on the type of floors and with clearances to combustible material not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated on the boiler assembly label or on the burner label, and with limit controls.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-B366.1 (latest edition), ''Solid-Fuel-Fired Central Heating Appliances,'' and CSA B140.7, ''Oil-Burning Equipment: Steam and Hot-Water Boilers.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Solid Fuel-Fired Boiler Assembly.''

BURNERS (KXIVC)

Gas Burners (KXWTC)

USE

This category covers gas burners intended for installation in heating appliances, such as boilers, furnaces, ovens, etc. Gas burners are provided with primary safety controls as indicated on the label.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CGA 3.4 (latest edition), ''Industrial and Commercial Gas-Fired Conversion Burners.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas Burner.''

Gas-oil Burners, Combination (KYKRC)

USE

Gas-oil Burners, Combination (KYKRC)−*Continued*

This category covers combination gas-oil burners intended for installation in heating appliances, such as boilers, furnaces, ovens, etc. Gas-oil burners are provided with primary safety controls as indicated on the label.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standards used to investigate products in this category are CGA 3.4 (latest edition), ''Industrial and Commercial Gas-Fired Conversion Burners,'' and CSA B140.1, ''Vapourizing-Type Oil Burners,'' or CSA B140.2.1 (latest edition), ''Atomizing-Type Oil Burners.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas-Oil Burner, Combination.''

Oil Burners (KYXZC)

USE

This category covers oil burners intended for installation in heating appliances, such as boilers, furnaces, ovens, etc. Oil burners are provided with primary safety controls as indicated on the label.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B140.1, ''Vapourizing-Type Oil Burners,'' or CSA B140.2.1 (latest edition), ''Atomizing-Type Oil Burners.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Oil Burner.''

CENTRAL FURNACES (KZLXC)

Gas-fired Central Furnaces (KZZVC)

GENERAL

This category covers gas-fired central furnaces intended for installation on the type of floors and with clearances to combustible material not less than indicated on the central furnace.

They are provided with primary safety controls as indicated on the furnace label or burner label, and with limit controls..

Direct-vent, forced-air furnaces are intended to be provided with a venting assembly as specified on the appliance. When suitable for use in mobile homes and recreational vehicles, it is so indicated in the individual certifications and on the product.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.47/CSA 2.3, ''Gas-Fired Central Furnaces.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas-Fired Central Furnace.''

Gas-oil Fired Central Furnaces, Combination (LANTC)

GENERAL

This category covers gas-oil-fired combination central furnaces intended for installation on the type of floors and with clearances to combustible material not less than indicated on the central furnace.

They are provided with primary safety controls as indicated on the furnace label or burner label, and with limit controls.

Direct-vent, forced-air furnaces are intended to be provided with a venting assembly as specified on the appliance. When suitable for use in mobile homes and recreational vehicles, it is so indicated in the individual certifications and on the product.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

Gas-oil Fired Central Furnaces, Combination (LANTC)−*Continued*

The basic standards used to investigate products in this category are ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces," and CSA B140.4 (latest edition), "Oil-Fired Warm Air Furnaces."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas-Oil Fired Central Furnace, Combination."

Oil-fired Central Furnaces (LBBRC)

GENERAL

This category covers oil-fired central furnaces intended for installation on the type of floors and with clearances to combustible material not less than indicated on the central furnace.

They are provided with primary safety controls as indicated on the furnace label or burner label, and with limit controls.

Direct-vent, forced-air furnaces are intended to be provided with a venting assembly as specified on the appliance. When suitable for use in mobile homes and recreational vehicles, it is so indicated in the individual certifications and on the product.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B140.4 (latest edition), "Oil-Fired Warm Air Furnaces."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Oil-Fired Central Furnace."

Solid Fuel-fired Central Furnaces (LBHZC)

GENERAL

This category covers solid-fuel-fired central furnaces intended for installation on the type of floors and with clearances to combustible material not less than indicated on the central furnace.

They are provided with primary safety controls as indicated on the furnace label or burner label, and with limit controls.

Direct-vent, forced-air furnaces are intended to be provided with a venting assembly as specified on the appliance. When suitable for use in mobile homes and recreational vehicles, it is so indicated in the individual certifications and on the product.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-B366.1 (latest edition), "Solid-Fuel-Fired Central Heating Appliances."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solid Fuel-Fired Central Furnace."

PORTABLE HEATERS (LJNZC)

Kerosene-fired Portable Heaters (LKBXC)

USE AND INSTALLATION

This category covers unvented portable heaters intended for installation on combustible or noncombustible floors at the minimum clearances to combustible materials as indicated in the individual certifications.

The heaters are designed to restrict the spillage of fuel and to extinguish the flame in the event of upset. Care should be employed to avoid contact with curtains, draperies and similar combustibles. It is intended that adequate combustion air be provided into the space in which they are used, and that the manufacturer's instructions for use and maintenance be followed.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN3-B140.9.3, "Portable Kerosine-Fired Heaters."

Kerosene-fired Portable Heaters (LKBXC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Kerosene Fired Portable Heater."

ROOM HEATERS (LPJXC)

Oil-fired Room Heaters, Vented (LQZRC)

GENERAL

This category covers assemblies intended for installation in residential or commercial premises as non-ducted area space heaters. They may be provided with thermostatically controlled automatic ignition and primary safety controls and interlocks to shut down the burner in the event of flame or induced draft failure. They may be provided with integral fuel tanks or means for connection to remote fuel tanks as stated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-B140.3, "Oil Burning Stoves and Water Heaters."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vented Oil Fired Room Heater."

WATER HEATERS (LURXC)

Gas-fired Service Water Heaters (LUYWC)

GENERAL

This category covers gas-fired service water heaters intended for installation on the type of floors and with clearances to combustible construction not less than indicated on the heater. They are provided with primary safety controls and with limit controls. When indicated in the individual certifications, the water heater may be combined with an air-handling unit.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.10.1/CSA 4.1, "Gas Water Heaters – Volume I, Storage Water Heaters with Input Ratings of 75,000 Btu Per Hour or Less," or ANSI Z21.10.3/CSA 4.3, "Gas Water Heaters – Volume III, Storage Water Heaters with Input Ratings Above 75,000 Btu Per Hour, Circulating or Instantaneous."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas-Fired Service Water Heater."

Gas-oil-fired Service Water Heaters (LVCQC)

GENERAL

This category covers water heaters intended for installation on the type of floors and with clearances to combustible construction not less than indicated on the heater. They are provided with primary safety controls and with limit controls. When indicated in the individual certifications, the water heater may be combined with an air-handling unit.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA B140.12, "Oil-Burning Equipment: Service Water Heaters for Domestic Hot Water, Space Heating, and Swimming Pools," and ANSI Z21.10.1/CSA 4.1, "Gas Water Heaters – Volume I, Storage Water Heaters with Input Ratings of 75,000 Btu Per Hour or Less," or ANSI Z21.10.3/CSA 4.3, "Gas Water Heaters – Volume III, Storage Water Heaters with Input Ratings Above 75,000 Btu Per Hour, Circulating or Instantaneous."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufac-

Gas-oil-fired Service Water Heaters (LVCQC)−*Continued*

tured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas-Oil Fired Service Water Heater.''

Oil-fired Service Water Heaters (LVFVC)

GENERAL

This category covers water heaters intended for installation on the type of floors and with clearances to combustible construction not less than indicated on the heater. They are provided with primary safety controls and with limit controls. When indicated in the individual certifications, the water heater may be combined with an air-handling unit.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B140.12 (latest edition), ''Oil-Burning Equipment: Service Water Heaters for Domestic Hot Water, Space Heating, and Swimming Pools.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Oil-Fired Service Water Heater.''

HEATING EQUIPMENT, MISCELLANEOUS (LVTTC)

GENERAL

This category covers unvented fixed or portable heaters intended for installation on combustible or noncombustible floors at the minimum clearances to combustible materials as indicated in the individual certifications.

These appliances use fuels acceptable for use in unvented applications as permitted by the Authorities Having Jurisdiction.

It is intended that adequate combustion air be provided into the space in which they are used, and that the manufacturer's instructions for use and maintenance be followed.

ADDITIONAL INFORMATION

For additional information, see Heating Equipment (KTCRC).

REQUIREMENTS

The basic standards used to investigate products in this category (except gas-fired crop dryers) are CAN3-B140.9.3, ''Portable Kerosine-Fired Heaters,'' CAN/ULC-S610, ''Factory-Built Fireplaces,'' and/or ANSI Z83.7/CSA 2.14, ''Gas-Fired Construction Heaters.''

The basic standard used to investigate gas-fired crop dryers in this category is CSA 3.8, ''Gas-Fired Equipment for Drying Farm Crops.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Heating Equipment, Miscellaneous,'' or other appropriate product name as shown in the individual Listings.

HOSE (MURZC)

FLEXIBLE METAL HOSE (MUSFC)

This category covers flexible metal hose intended for handling gases that are usually considered to be combustible, such as liquefied petroleum gas and manufactured and natural fuel gases, and ordinary flammable and combustible liquids, such as fuel oils, gasoline, kerosene, alcohol, and the like.

Flexible metal hose is not considered a substitute for standard pipe, wrought-iron or steel, and its use should be confined to applications where flexible connections cannot be avoided. It should not be subjected to torsional, tensile or excessive bending stresses and should be protected against mechanical damage.

Flexible Metal Hose for Flammable Fluids (MVTVC)

GENERAL

This category covers flexible metallic hose intended for use in handling combustible gases such as manufactured, natural, and liquefied petroleum

Flexible Metal Hose for Flammable Fluids (MVTVC)−*Continued*

gases, and for handling ordinary flammable liquids such as fuel oil, gasoline, kerosene, acetone, alcohol, cleaning liquids, and the like. Where indicated in the individual certifications, this hose is also suitable for use with anhydrous ammonia. Flexible metallic hose is intended for lines other than those employed in connection with safety devices, and where bending is not caused by automatic action. The maximum working pressure is noted in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Flexible Metal Hose (MUSFC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C536, ''Flexible Metallic Hose.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Flexible Metallic Hose for Flammable Liquids.''

GASOLINE HOSE (MWHTC)

GENERAL

This category covers synthetic rubber gasoline hose in sizes 16 to 32 mm inside diameter, intended for use on dispensing equipment at service stations or portable gasoline tanks, as discharge conduit, and other equipment requiring the use of a flexible conductor for gasoline.

Gasoline hose consists of an inner tube of synthetic rubber reinforcement and an outer cover of synthetic rubber or other polymeric materials.

The hose may include gasoline vapor recovery features. The vapor recovery portion of the hose consists of a separate tube or hose in addition to the regular liquid hose.

Gasoline hose should be regularly inspected at least four times a year and discarded when found to be deteriorated to a noticeable extent. Appropriate ventilation of the rooms where hose is used is essential.

CAUTION — At ambient temperatures, uncondensed gasoline continually gives off flammable vapor. An open flame, spark, or other ignition source, even at some distance from the gasoline, can ignite this vapor. The proportion of air to vapor will determine if the resulting combustion will be in the form of a burning gas or destructive explosion. The vapor from 0.5 L of gasoline will make 5.5 m3 of air explosive. Avoid leaks and spills, and exercise extreme caution in the handling of gasoline.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S612, ''Hose for Flammable and Combustible Liquids.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gasoline Hose.''

HOSE AND HOSE FITTINGS (MYYTC)

FIRE HOSE, LINED, FOR PUBLIC AND PRIVATE FIRE DEPARTMENT USE (MZQEC)

GENERAL

This category covers woven-cotton-jacketed, rubber-lined fire hose, and fire hose having synthetic fibre or filament yarns in the hose jackets and other linings as indicated in the individual certifications. Woven-jacketed-lined fire hose is made in the following trade sizes: 38, 50 and 65 mm, single- and multiple-jacketed; and 77, 90 and 125 mm, multiple-jacketed. Single-jacketed hose is intended for use at fire hydrants, standpipes, and similar places. It is less resistant to hard usage, and may not be suitable where the fabric will be subjected to chafing on rough or sharp surfaces. Single-jacketed hose is also made with a rubber or synthetic cover. Multiple-jacketed hose is intended for use on pumping engines and in places where service conditions require the additional protection against wear afforded by the extra woven jacket.

This category does not cover couplings or their method of attachment.

Fire hose of other constructions that meets the performance of jacketed-lined fire hose may be included as described in the individual certifications.

Lightweight hose having a lining or tube of latex-rubber-coated fabric or polyurethane complying in all respects other than lining thickness with the requirements for woven-jacketed-lined hose, and judged to be substantially equivalent, may be certified as indicated in the individual certifications.

Fire Hose, Lined, for Public and Private Fire Department Use (MZQEC)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S511, ''Lined Fire Hose for Interior Standpipes and Municipal and Industrial Fire Protection Services.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fire Hose Lined for Public and Private Fire Department Use.''

FIRE HOSE FOR INTERIOR STANDPIPES, LINED (MZTQC)

GENERAL

This category covers hose with cotton or synthetic jackets, with natural rubber, synthetic rubber or fabric-reinforced natural or synthetic latex linings laminated to the inner surface of the jacket. The hose is of lightweight construction, is made in 38 mm size, and is intended primarily for permanent installation at building standpipes.

This category does not cover couplings or their method of attachment.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S511, ''Lined Fire Hose for Interior Standpipes and Municipal and Industrial Fire Protection Services.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fire Hose for Interior Standpipes, Lined.''

FIRE HOSE, FORESTRY, LINED, PERCOLATING AND NON-PERCOLATING (MZZAC)

GENERAL

This category covers hose suitable for fighting forest fires. They include both lined percolating and non-percolating hose with woven jackets. Percolating hose is designed to provide wetting the entire hose surface to help protect it from burning.

This category does not cover couplings or their method of attachment.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S518, ''Non-Percolating Forestry Hose,'' or CAN/ULC-S519, ''Percolating Forestry Hose.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fire Hose, Forestry, Lined, Percolating'' or ''Fire Hose, Forestry, Lined, Non-Percolating.''

QUICK-CONNECT COUPLINGS, EXTERNAL LUG, FOR FORESTRY FIRE HOSE (NBBVC)

USE

This category covers couplings and adapters of the external lug, quick-connect type suitable for use with forestry fire hose.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S551, ''Forged External-Lug Quick-Connect Couplings and Adapters for Forestry Fire Hose,'' or ULC-S558, ''External-Lug Quick-Connect Couplings and Adapters for Forestry Fire Hose.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''External Lug, Quick Connect Coupling for Forestry Hose.''

HOUSEHOLD ALARM SYSTEMS (NBSQC)

HOUSEHOLD BURGLAR ALARM SYSTEM UNITS (NBSXC)

GENERAL

This category covers the individual units which may be interconnected to form an electrically operated household burglar alarm system. These units include a main control unit (with integral or separate power supply) and alarm-indicating devices (bells, relays, etc.). For other devices that may be used, see Contacts and Switches (AMQVC), Intrusion Detection Units (ANSRC) and Heat Detectors (SZGUC).

An installation drawing is employed as the controlling factor to ensure proper interconnection among units. The drawing may be attached to the control unit, provided detached, or included as part of an instruction or installation booklet.

An instruction booklet illustrating typical installation layouts, operation, maintenance, servicing, and test procedures is provided for each household burglar alarm system.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C1023, ''Preliminary Standard for Household Burglar Alarm System Units,'' and ANSI/UL 1023, ''Household Burglar-Alarm System Units.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Household Burglar Alarm System Unit,'' ''Security Equipment,'' ''Security Subassembly,'' ''Fire Alarm and Security Equipment,'' ''Fire Alarm and Security Subassembly,'' or other appropriate product name as shown in the individual Listings.

INSULATED BUILDING PANELS (OERQC)

GENERAL

This category covers factory-assembled insulated building panels intended for use as walls and ceilings in noncombustible construction.

These panels have been investigated in a full-scale room fire test. The room consists of four walls at right angles, a floor, and a ceiling. The room interior is 3.6 m long, 2.4 m wide and 2.4 m high. The floor and one of the 2.4 m by 2.4 m walls are constructed of noncombustible materials. The noncombustible wall has an open doorway measuring 2.0 m high and 0.8 m wide. The other three walls and the ceiling are constructed from the panels under investigation. Where the panels are not used for ceiling application, the test ceiling is selected to represent the worst case condition anticipated in the field and will be described in the individual certifications.

The panels are subjected to an ignition source as described in CAN/ULC-S138, located in one of the two corners opposite the doorway, for a period of not less than 15 minutes. Panels covered under this category have demonstrated that their contribution to fire growth within the room is sufficiently low to an extent that flames do not exit the open doorway, the floor heat flux level does not exceed 20 kW/m^2, and the room temperature does not exceed 600°C as measured 300 mm from the corner diagonally opposite to the ignition source and between 670 mm and 2100 mm from the floor.

Where sprinkler protection is specified, one sprinkler head is located 75 mm below the ceiling, 2.0 m from the 2.4 m wall, and 1.2 m from the 3.6 m wall adjacent to the ignition source. The type of sprinkler head and minimum water flow rate is specified in the individual certifications. A requirement of the sprinkler system is that it be consistent with ANSI/NFPA 13, ''Installation of Sprinkler Systems,'' and NFPA 231, ''General Storage,'' or NFPA 231C, ''Rack Storage of Materials,'' as applicable, and with generally accepted practices for the intended installation.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For surface burning characteristics of insulated building panels, see Composite Panels (BKRQC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S138, ''Method of Test for Fire Growth of Insulated Building Panels in a Full-Scale Room Configuration'' (supersedes ULC/ORD-C376).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufac-

tured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulated Building Panel."

FOAMED PLASTIC INSULATED GARAGE DOORS (OERZC)

GENERAL

This category covers factory-manufactured garage door assemblies using foamed plastic insulation when the foamed plastic is separated from occupied spaces by a facing other than minimum 0.38 mm sheet metal with a melting point not below 650°C.

Garage door assemblies using foamed plastic insulation covered under this category are investigated in a full-scale room fire test in accordance with ULC/ORD-C263.7, "Room Fire Test Method for Garage Doors Using Foamed Plastic Insulation." The room consists of four walls at right angles, a floor, and a ceiling. The room interior is 3660 mm long, 2440 mm wide and 2440 mm high. The floor, walls, and ceiling are constructed of noncombustible materials. One 2440 mm long wall has an open doorway measuring 2030 mm high and 760 mm wide. On the 2440 mm long wall opposite to the wall with the open doorway, the garage door with foamed insulation is mounted with the unprotected foam exposed to the inside of the room.

The garage doors are subjected to an ignition source as described in ULC/ORD-C263.7 located in one of the two corners opposite the doorway for a period of not less than 15 minutes. Garage doors covered this category have demonstrated that their contribution to fire growth within the room is sufficiently low to an extent that flashover does not occur, maximum instantaneous net peak of heat release does not exceed 260 kW, flames do not visually propagate for the full width of the specimen, core temperature rise does not exceed 400°C, and total smoke release does not exceed 60 m^2, 5 minutes after test nor 150 m^2, 7-1/2 minutes after the start of test.

The certifications pertain to the materials themselves and not to the structures in which they may be installed.

The insulating, acoustical, structural, wind loading, toxicity of the products of combustion, and other such properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For surface burning characteristics of foamed plastic insulated garage doors, see Composite Building Panels (BKRQC).

ADDITIONAL INFORMATION

For additional information, see Insulated Building Panels (OERQC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C263.7, "Room Fire Test Method for Garage Doors Using Foamed Plastic Insulation."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Foamed Plastic Insulated Garage Door."

LOCKS (OWVVC)

COMBINATION LOCKS (OXJTC)

GENERAL

This category covers combination locks intended for use on chests, safes and vault doors to provide means of locking the bolt work against unauthorized opening.

Combination locks are investigated primarily for correctness of design and accuracy of construction to guard against manipulation of the combination by sense of sight, touch or hearing. Combination locks do not necessarily have built-in protection against entry by force; such protection depends largely on the construction of the safe or vault door on which the lock is installed.

Combination locks may be of the hand-change or key-change type. The key-change type enables the owner to change the combination setting readily without opening the lock case. It is important that locks be set on a combination of numbers individual to each safe rather than on a common factory setting.

Combination locks are capable of withstanding ordinary wear and tear, corrosion, and rough usage for an extended period of service, normally without attention. They should not be lubricated, except by experts trained in the care and inspection of such locks.

Group 1 combination locks are highly resistant to expert or professional manipulation. The protection against expert manipulation includes closed

Combination Locks (OXJTC)–*Continued*

cams, notched tumblers, extra levers, or other advanced design features not found in conventional designs. Group 1 locks are considered suitable for use on burglary-resisting safes and chests such as Class TRTL-15X6, -30, -30X6, -60, TXTL-60x6 and on vaults.

Group 1R combination locks afford the same protection against expert or professional manipulation as a Group 1 lock and, in addition, include resistance against radiological methods of attack. Group 1R locks are considered suitable for use on safes, security files, and vaults where the highest degree of protection is required.

Group 2 combination locks are resistant to semiskilled manipulation. Group 2 combination locks are considered to be suitable for use on Unlisted safes, insulated record containers, residential security containers, and similar security containers.

Group 2M combination locks are moderately resistant to skilled manipulation. Group 2M combination locks are considered suitable for use on tool-resistant safes, Class TL-15, TL-15x6, TL-30 and TL-30x6, insulated record containers and light vault doors.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S327-1998, "Burglary Resistant Combination Locks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combination Lock."

BURGLARY RESISTANT KEY LOCKS (OZFWC)

GENERAL

This category covers locks of the two-key, plate-tumbler type, designed for use on safe deposit boxes, collection safes and the like, where a high degree of resistance to theft, unauthorized entry, and robbery is the prime object. Such locks require the use of both a proper guard key and an individual customer's key for normal release of locking bolt.

Two-key safe deposit locks are available in various ranges of possible key changes, and some have sealed change keys from which the renter may select a key. Selection of the type of lock, therefore, depends on the number of deposit boxes at a given location and mode of operation desired to afford greatest protection both to the customer and deposit company.

Two-key locks do not necessarily embody inherent protection against punching, drilling, and other burglarious means. Such protection depends upon the method of installation and design of door and boxes so equipped. Also, the locks should be considered as complementary to, not substitutes for, Combination Locks (OXJTC).

Security-container key locks are designed for use on key-locked safes and related devices to provide a means of locking the boltwork against unauthorized opening and to protect against opening by picking and manipulating.

Security-container key locks may not have built-in protection against entry by drilling or forcing of the internal mechanism; such protection depends largely on the security container on which it is installed.

The key of a security-container key lock is field changeable and is equipped with a mechanical relocking device which operates if the lock is punched or pulled.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328, "Burglary Resistant Key Locks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Burglary Resistant Key Lock."

TIMELOCKS (OZMVC)

GENERAL

This category covers delayed-action timelocks intended for protection against robbery. The timelocks may be classified into two groups, depending on whether the mechanism is automatic in operation and setting, or provides for manual setting at the will and convenience of the user. Automatic devices are generally factory adjusted to a fixed minimum time delay, whereas manual devices may be varied by the user to the desired delay at each winding.

The ability of a timelock to function continually and reliably for long periods of time depends on many factors, such as installation, care and inspection service. Where greater assurance of ability to unlock is desired,

Timelocks (OZMVC)−*Continued*

devices having multiple timer movements or power sources are available. Also, certain types of locks may be recommended by the manufacturer for some specific applications, as indicated in the individual certifications.

Timelocks should be under the care and inspection service of the manufacturer, or an organization recommended by the manufacturer.

Timelocks should be selected with proper regard to their use, operation and application.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S337, "Delayed-Action Timelocks," and ULC/ORD-C887, "Timelocks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Timelock."

MANIFOLDS (PBBZC)

This category covers devices for manifolding high-pressure gas cylinders and those designed to eliminate pipe joints where valves, gauges, etc., are to be grouped at a central location. The individual Listings identify the fluids with which these devices are intended to be used.

COMPRESSED GAS MANIFOLDS (PCRTC)

USE

This category covers compressed gas manifolds intended for connecting together a number of high-pressure gas cylinders containing oxygen, nitrogen, nitrous oxide, carbon dioxide, air, inert gases or fuel gases other than acetylene, or as limited by the individual certifications.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C407, "Manifolds for High Pressure Gas."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Compressed Gas Manifold."

ULC AUTHORIZED LABEL SUPPLIERS PROGRAM (PGAAC)

This category covers authorized label suppliers that have been found to comply with ULC's requirements for printing ULC's registered certification mark. The requirements for this program are outlined in the ULC publication "Printing ULC Marks."

ULC publishes authorized label suppliers online at www.ulc.ca. This database is the only method provided by UL to indicate that a label supplier is authorized to print ULC's registered Certification Mark.

The authorized label supplier's phone number, facsimile number, website and e-mail address (if applicable) and the types of labels the supplier has available are identified in the individual authorizations.

The authorized label supplier may not apply any Mark in such a way as to imply, indicate, or give the perception that the labels themselves are Listed as part of this program.

LIFE SAFETY EQUIPMENT (QGUYC)

LIFE SAFETY ROPE, HARNESS AND ASSOCIATED EQUIPMENT (QGUZC)

GENERAL

This category covers ropes, harnesses and hardware intended for use by fire fighters to support fire service personnel and civilians during rescue, fire fighting and other emergency operations. The load is limited to a maximum number of two people. The safe working load is not to exceed 275 kg.

Ropes for emergency life safety operations are intended to be previously unused. They are not intended for water rescue. Once used, a life safety rope is intended to be downgraded for other uses.

Life Safety Rope, Harness and Associated Equipment (QGUZC)−*Continued*

Rope tends to lose its strength when wet. Whenever a rope becomes wet, it must be allowed to dry naturally before being repacked and stored. It regains its strength when it dries.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S555, "Fire and Emergency Service Technical Rescue Ropes and Water Rescue Throw Ropes and Associated Equipment."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Life Safety Rope, Harness and Associated Equipment."

PUMPING EQUIPMENT FOR FIRE SERVICE (QVUTC)

This category covers pumps, drivers and accessory equipment used in supplying water for fire protection purposes.

In the individual Listings, the term "Rated Net Head Pressure" expresses the potential lift capacity of each pump at rated speed and rated capacity.

For example, horizontal shaft pumps or vertical shaft pumps taking suction under lift and having a "Rated Net Head Pressure" of 690 kPa are capable of lifting water from a cistern, pond, creek, river or other source, a vertical distance of 70 m, neglecting friction loss. It should be noted that the lift distance is intended to be measured from the surface of the water source. Where a pump is located above the water surface, the pressure at the discharge side of the pump is less than the "Rated Net Head Pressure" by an amount, expressed in kilopascals, approximately equivalent to the vertical distance in metres between the centre line of the pump discharge and surface of the water source plus loss due to friction in the suction pipe.

Where a horizontal shaft pump is supplied with water under pressure, the "Rated Net Head Pressure" is the pressure at the discharge side of the pump minus the pressure at which water is supplied to the pump.

ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection," and Authorities Having Jurisdiction should be consulted before installation.

CENTRIFUGAL FIRE PUMPS (QXJYC)

GENERAL

This category covers centrifugal fire pumps and pump and controller assemblies intended for installation and use in accordance with ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

1. **Horizontal and Vertical Shaft, Split-Case, Impeller Type** — A pump, single- or multi-stage, characterized by a housing which is split parallel to the shaft. The pump is normally installed with the shaft in the horizontal position, unless it is specifically indicated in the individual certifications that the pump is designed for installation in the vertical position.
2. **Vertical In-Line** — A pump designed for installation between piping flanges such that the suction and discharge connections have approximately the same centre line which intersects and is perpendicular to the shaft axis. This pump is designed to fully support the pump driving unit.
3. **Vertical Shaft, Turbine Type** — A pump with one or more submerged impellers discharging into one or more bowls (stages) and a vertical column pipe connecting the bowl(s) to the discharge head on which the pump driver is mounted. This pump is especially suited for conditions where the source of water is below ground level. Manufacturers can furnish pumps with oil-lubricated or water-lubricated bearings. A vertical shaft turbine-type pump mounted in a suction vessel (sometimes referenced as a "can" pump) is used for installation in a pipeline where it draws its suction from public mains or other positive-suction pressure sources.
4. **End Suction** — A single suction pump having its suction nozzle on the opposite side of the casing from the stuffing box and having the face of the suction nozzle perpendicular to the longitudinal axis of the shaft.
5. **Pump and Controller Assembly** — An assembly consisting of a vertical in-line pump and a limited-service electric controller necessitating only connections to a suitable power supply and suction and discharge piping. The controller is also certified separately under Pump Controllers (QYZSC).

Centrifugal Fire Pumps (QXJYC)−*Continued*

The pumps are rated at net head pressures as indicated in the individual certifications (minimum 275 kPa). Where a range of rated net pressures is shown, the manufacturer is in a position to furnish impellers to produce any rated pressure in that range.

Pumps rated at 700 kPa or greater net head pressures are designated as "standard" fire pumps. Those that are rated between 275 kPa and 700 kPa are generally considered as "low pressure" or "booster" pumps.

The maximum allowable discharge pressure is the maximum pressure that can safely be tolerated within the pump casing under any operating condition. While the values indicated in the individual certifications are the maximum for a given model designation, each pump is designed to accommodate specific installation needs, and the ratings indicated in the individual certifications are not intended to be modified. Where the pump output rating is less than the maximum allowable discharge pressure, the output rating is to prevail. Where pumps are used as "booster" pumps, care must be exercised in their selection to ensure that the maximum allowable discharge pressure of the pump is not exceeded when installed in a supply main.

ADDITIONAL INFORMATION

For additional information, see Pumping Equipment for Fire Service (QVUTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C448, "Guide for the Investigation of Pumps for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Centrifugal Fire Pump."

FIRE PUMP RELIEF VALVES (QXZQC)

GENERAL

This category covers fire pump relief valves intended for use in fire service systems up to maximum relief pressures specified in the individual certifications for sizes 3/4 to 10 NPS.

Relief valves are intended to be set to prevent pressure on the fire protection system elements in excess of that pressure which the system elements are capable of withstanding.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Pumping Equipment for Fire Service (QVUTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Pump Relief Valve."

INTERNAL COMBUSTION ENGINES FOR DRIVING CENTRIFUGAL FIRE PUMPS (QYLUC)

GENERAL

This category covers diesel engines used as a means for driving centrifugal fire pumps where supplemental units are desired or where other sources of power are not dependable or not available.

The power ratings noted in the individual certifications represent the engine power available at 91 m above sea level (barometer 100 kPa) and 25°C air temperature after taking the deductions considered in ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

ADDITIONAL INFORMATION

For additional information, see Pumping Equipment for Fire Service (QVUTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C448A-1979, "Guide for the Investigation of Diesel Engines Driving Centrifugal Fire Pumps."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these

Internal Combustion Engines for Driving Centrifugal Fire Pumps (QYLUC)−*Continued*

products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Internal Combustion Engine for Driving Centrifugal Fire Pumps."

PUMP CONTROLLERS (QYZSC)

USE AND INSTALLATION

This category covers equipment intended for starting and stopping centrifugal fire pumps, including nonautomatic types and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

Controllers for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers for squirrel-cage motors may be for across-the-line starting, primary resistance starting, or reduced-voltage autotransformer starting as indicated in the individual certifications.

"Limited Service Controllers" are intended for across-the-line-type, squirrel-cage motors of 22.4 kW or less, 600 V or less.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Pumping Equipment for Fire Service (QVUTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pump Controller."

FIRE AND ALARM EQUIPMENT (SYKJC)

This category covers equipment for initiating, controlling and indicating signals pertaining to the protection of life and property against fire, and intended to be installed, maintained and operated as system arrangements in accordance with CAN/ULC-S524, "Installation of Fire Alarm Systems."

Users of this equipment should consult Authorities Having Jurisdiction concerning the particular types to be used, number and location of stations, character and installation of wiring, methods to be followed in the receipt and disposition of signals, keeping of records, rendering of reports and all other details having a bearing on adequate installation, maintenance and use of the system to be employed.

Listed protective fire alarm equipment is subjected to laboratory investigation to determine its suitability for its intended service and for installation, maintenance and use in conformity with the applicable standard with particular regard to design and construction, practicability of application and reliability of performance in addition to the possible electrical hazards involved in its use.

This equipment may be used in different combinations as system assemblies. All parts of such an assembly may be either of one manufacture or of different manufactures. Special equipment designed for use with other particular equipment is indicated in the individual Listings.

A complete system is considered to be a combination of interrelated signal-initiating devices, signal-transmitting devices, signal-indicating devices and control unit installed in a protected premise in accordance with regulations enforced by the Authority Having Jurisdiction who determines the suitability of the installation for its particular application. This category applies only to the equipment intended to be installed to form these systems and not to the systems as installed.

The individual Listings indicate the type of factory follow-up service by which the Listed equipment is covered.

Identification of the equipment as being Listed can be made by observation of the label in the case of Label Service Listings and by the catalogue designations in the case of Reexamination Service Listings.

Assemblies of separately Listed parts in combination are not considered to be Listed system combinations unless the complete combination is Listed.

LISTING SERVICES

Certificate Service

Under this Certificate Service, Underwriters Laboratories of Canada authorizes the issuance of ULC certificates to installations which the

Listed installing/monitoring company represents to be in compliance with requirements established for the class. The certificate indicates the classification, location of equipment, period covered by the certificate, and name of the installing/monitoring company.

ULC conducts countercheck field examinations of representative installations of each Listed installing company, but assumes no liability for any loss that may result from failure of the equipment, incorrect certification, or nonconformity with requirements. If installations not in compliance with ULC's requirements are found as a result of field examinations, they are subject to correction by the listed installing company or cancellation of the certificate.

The appearance of a Listee's name in any of the following categories does not mean that all of the services of the Listed classification comply with ULC's requirements. Only those field installations which actually bear the certificate are covered by ULC's Certificate Service.

The location of the monitoring or installing company's headquarters is given in each case, but many maintain branch offices, operating stations, or selling agencies in localities other then those recorded in the following categories.

CONTROL UNITS, RELEASING DEVICE SERVICE (SYZVC)

GENERAL

This category covers control units intended for use with separately certified automatic fire detectors and releasing devices to form electrically supervised releasing systems. Units may incorporate circuits to provide for the transmission of signals to remote locations and for supplementary local annunciation. The control unit may consist of a unit assembly or a series of modules assembled in one or more enclosures.

Components or modules of the control unit with modular construction that may be shipped separately to the site or that are eligible for field replacement are identified by component labels (see **ULC MARK** below).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment (TBCXC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, "Control Units for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Releasing Device Service Control Unit," "Component for Releasing Device Service Control Unit," "Fire Alarm Equipment," "Fire Alarm Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

RELEASING DEVICES (SZNTC)

GENERAL

This category covers releasing devices intended for use

a) in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual certifications, or
b) as a means of releasing air, water, or other extinguishing systems under pressure from a piping system and confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

Releasing devices may include a control unit in an assembly operating as a system.

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment (TBCXC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, "Control Units for Fire Alarm Systems," and ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Releasing Device."

RELEASING DEVICE EQUIPMENT (TBCXC)

This category covers releasing devices with accessory equipment designed to release operating weights, air, water, or other extinguishing systems under pressure in the functioning of fire protection equipment.

They are available in both automatic and manual types. The automatic type may be actuated by heat detectors, smoke detectors, or detectors employing other principles of operation.

POWER SUPPLY UNITS, RELEASING DEVICE (TBJWC)

USE

This category covers power-supply units intended for use with certified releasing devices and releasing device control units.

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment (TBCXC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, "Control Units for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply Unit, Releasing Device."

VISUAL AND VISUAL-AUDIBLE SIGNAL APPLIANCES, FIRE ALARM, INCLUDING ACCESSORIES (UEESC)

GENERAL

This category covers visual-signal appliances and appliances that provide a visual and audible signal. Some visual and/or visual-audible signal appliances, as identified in the individual certifications, may utilize certified accessories to supplement the operation of the visual and/or visual-audible device.

The visual signal is a flashing light having a minimum effective luminous intensity of 2 cd. A xenon strobe lamp with a suitable diffuser is commonly employed for the light source. The flash rate falls in the range of one to two flashes per second.

These appliances may incorporate bells, sirens, horns, speakers, etc., and are rated 85 dB(A) at 3.048 m.

The suitability of a visual-signal appliance for any specific area is dependent on the maximum ambient light level, the reflectivity of interior surfaces, and the effective luminous intensity of the flash. Maximum ambient light levels will generally occur in areas subject to direct sunlight. Selection and location of visual-signal appliances should be based on an engineering survey of all factors involved, including the directivity aspects of signal perception.

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories," CAN/ULC-S541, "Speakers for Fire Alarm Systems, Including Accessories," CAN/ULC-S526, "Visible Signal Devices for Fire Alarm Systems, Including Accessories," and ULC-S527, "Control Units for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Visual and Visual-Audible Signal Appliance, Fire Alarm."

AUDIBLE SIGNAL APPLIANCES, FIRE ALARM, INCLUDING ACCESSORIES (ULSZC)

USE

This category covers electrically-operated bells, buzzers, horns and similar signal-sounding appliances. Some audible-signal appliances, as identified in the individual certifications, may utilize certified accessories to supplement the operation of the audible device.

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories," and ULC-S527, "Control Units for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Audible Signal Appliance" and "Audible Signal Appliance Accessory."

BOXES, FIRE ALARM (UMGXC)

This category covers coded fire alarm boxes, combined coded fire alarm and watchman's station boxes, and non-coded fire alarm stations intended for use with private fire alarm systems.

Boxes, Coded, Fire Alarm (UMUVC)

USE

This category covers coded fire alarm boxes intended for use with private fire alarm systems, and combined coded fire alarm and watchman's station boxes.

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S528, "Manual Stations for Fire Alarm Systems, Including Accessories."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Box, Coded, Fire Alarm."

Boxes, Non-coded, Fire Alarm (UNIUC)

USE

This category covers manual non-coded fire alarm boxes intended for use with fire alarm systems.

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S528, "Manual Stations for Fire Alarm Systems, Including Accessories."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Non-Coded Fire Alarm Box," "Non-Coded Watchman's Station," "Non-Coded Fire and Watch Station," "Fire Alarm Back Box" or "Fire Alarm Box Trim."

Manual Box, Fire Alarm, Accessory (UNIZC)

USE

This category covers accessories intended for use in indoor manual station, non-coded fire alarms.

The manual station accessory is intended to provide a protective transparent enclosure or cover to a manual station without restricting access to the manual station and its operation.

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S528, "Manual Stations for Fire Alarm Systems, Including Accessories."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manual Box, Fire Alarm, Accessory."

CONTROL UNITS, SYSTEM, FIRE ALARM (UOJZC)

GENERAL

This category covers electrical units for fire protective signaling systems intended for use in indoor locations in accordance with the standards recommended by the "National Building Code of Canada" for fire alarm protection service.

A control unit consists of an assembly of electrical parts having provision for connection of power-supply circuits routed through the control unit equipment by a prescribed scheme of circuiting. The circuits are extended to separate devices by which the operating parts of the control unit are actuated for signals and to separate or incorporate appliances by which the signals are indicated, so as to form a coordinated system combination for definite signaling service. The control unit may consist of a unit assembly or a series of modules assembled in one or more enclosures.

Control Units, System, Fire Alarm (UOJZC)−*Continued*

The Listee of a control unit furnishes the related actuating devices and signal-indicating appliances for use with the control unit or indicates the particular devices and appliances required and supplies instructions necessary to complete their interconnection at the installation.

The individual certifications indicate that wiring diagrams have been submitted with the control unit, along with information regarding its intended application, and that the unit has been tested with representative actuating devices and signal-indicating devices to be used with it as an interrelated assembly.

Components or modules of the control unit with modular construction that may be shipped separately to the site or that are eligible for field replacement are identified by component labels (see **ULC MARK** below).

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S527, "Control Units for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fire Alarm System Control Unit," "Component for Fire Alarm System Control Unit," "Fire Alarm Equipment," "Fire Alarm Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

CONTROL UNIT ACCESSORIES, SYSTEM, FIRE ALARM (UOXXC)

USE

This category covers accessories used to supplement a system control unit as indicated by the installation wiring diagram applying to its application. These accessories are intended for use with certified system control units where the suitability of combination has been determined by Underwriters Laboratories of Canada.

Components or modules of the control unit accessories with modular construction that may be shipped separately to the site or that are eligible for field replacement are identified by component labels (see **ULC MARK** below).

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S527, "Control Units for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fire Alarm System Accessory," "Component for Fire Alarm System Accessory," "Component for Fire Alarm Control Unit," "Fire Alarm Equipment," "Fire Alarm Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

DETECTORS, AUTOMATIC (UPLVC)

This category covers individual devices or prescribed combinations of devices designed to detect flame, heat, smoke or combustion gases resulting from a fire and to automatically operate electrical contacts. The signalling contacts may be integral parts of an individual device or parts of a separate device to which the detecting element is connected as an extended component.

The signalling contacts of the detector are intended to be connected to the circuit conductors of the fire-protective signalling system so that the fire alarm signal initiated by the detector will be indicated by the system.

The type of system (central station, proprietary, auxiliary, remote station or local) with which the detector can be used depends upon the design of the signalling circuit to which the detector contacts are intended to be connected. A detector may have non-coded signalling contacts connected directly to the actuating circuit of system control unit or to the actuating circuit of an electrically-operated transmitter, which will transmit coded signals over the signalling line circuit of a local, auxiliary, proprietary, remote station, or central station system.

The wiring diagram of the transmitter or system control unit with which the detector is used indicates the circuit application of the detector.

Detectors, Automatic (UPLVC)−*Continued*

A combination-type detector depends upon two or more related but separate pieces of equipment designed to be installed together so as to form a complete detector.

Flame-automatic Fire Detectors (UPZTC)

USE

This category covers devices intended to detect the presence of a flame but discriminate against other forms of light-producing processes, such as welding, grinding, luminaires, etc. The signalling contacts of the detector are intended to be connected to the circuit conductors of a fire-protection signalling system.

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic (UPLVC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S529, ''Smoke Detectors for Fire Alarm Systems,'' and ULC/ORD-C386, ''Flame Detectors.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Flame Detector – Automatic Fire Detector.''

Thermostats - Automatic Fire Detectors (UQGSC)

GENERAL

This category covers thermostat-type automatic fire detectors, which are integral assemblies of heat-responsive elements and non-coded electrical contacts that function automatically under conditions of increase in air temperature. These products consist of detection heads intended for mounting to compatible component bases having electrical functions, or self-contained units for mounting to standard electrical utility boxes.

The possible contact configurations of these devices are as follows:

- one-pole normally open-circuit type (1PNO)
- one-pole normally closed-circuit type (1PNC)
- two-pole open-circuit type (2PNO)
- two-pole normally closed-circuit type (2PNC)
- two-pole normally open-circuit and closed-circuit type (2PNO/NC)

Thermostats with normally open contacts are suitable for use as initiating devices of a fire-protective signalling system. Units with normally closed contacts are suitable for use as the heat-responsive portion of a releasing-device system.

The devices are either of the fixed-temperature (F), combination fixed-temperature and rate-of-rise (C), or rate compensation (R) type. There are basically two types: (1) A spot-pattern-type thermostat is one in which the thermally-sensitive element is a compact unit of small area; (2) a line-pattern-type thermostat is one in which the thermally-sensitive element is continuous along a line.

These thermostats have been investigated for indoor use only unless otherwise indicated in the individual certifications. Typically, thermostats are intended for locations where normal ceiling temperatures prevail (below 38°C). Locations where temperatures at ceiling are likely to be unduly high, from source of heat other than fire conditions, such as boiler rooms, dry kilns, etc., demand special consideration and selection of thermostats operating normally at higher temperatures, and which are capable of withstanding high temperatures for long periods of time. Care should be exercised to select thermostats having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 38°C, install the 71°C or equivalent (ordinary) rating thermostats.

For ceiling temperatures exceeding 38°C, but not 66°C, install 100°C or equivalent (intermediate) rating thermostats.

For ceiling temperatures exceeding 66°C, but not 107°C, install 141°C or equivalent (high) rating thermostats.

For ceiling temperatures exceeding 107°C, but not 149°C, install 182°C or equivalent (extra high) rating thermostats.

The response sensitivity of thermostats to standard test fires is indicated by the ''spacing'' rating. The spacing rating is the maximum distance between adjacent thermostats installed on a symmetrical layout with the maximum right-angle distance to any wall or partition one-half the distance between thermostats. THE FIRE TESTS ON THERMOSTATS CONDUCTED BY ULC ARE BASED ON ONLY ONE SET OF CONDITIONS, NAMELY A 5 m HIGH SMOOTH CEILING, NO AIR MOVEMENT, AND NO PHYSICAL OBSTRUCTIONS BETWEEN THE FIRE SOURCE AND

Thermostats - Automatic Fire Detectors (UQGSC)−*Continued*

THE THERMOSTAT. Under other conditions and forms of ceiling construction, reduced spacing may be required to obtain equivalent performance.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room space area, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment, and to draft conditions likely to be encountered at the time of the fire.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic (UPLVC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530, ''Heat Actuated Fire Detectors for Fire Alarm Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Thermostat – Automatic Fire Detector.''

Heat-automatic Fire Detector Accessories (UQKEC)

USE AND INSTALLATION

This category covers heat detector accessories, which are devices employed to supplement heat detector operation when connected as part of a fire alarm system, or used to validate heat detector operation. The interconnection is indicated on the installation wiring diagram associated with the detector. Their installation and application are restricted to the limitations supplied with the device.

ADDITIONAL INFORMATION

For additional information, see Thermostats – Automatic Fire Detectors (UQGSC), Detectors, Automatic (UPLVC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530, ''Heat Actuated Fire Detectors for Fire Alarm Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Heat-automatic Fire Detector Accessory.''

Smoke-automatic Fire Detectors (UROXC)

GENERAL

This category covers smoke detectors designed to detect the particulate constituent of smoke, and which may utilize the ionization or photoelectric principle of operation. The intended application of smoke detectors is identified in the individual certifications in accordance with the following basic classifications:

1. **Spot-Type Detector Units for Open-Area Protection** — These products consist of detection heads intended for mounting to compatible component bases having electrical functions, or self-contained units for mounting to standard electrical utility boxes. They are intended for use as initiating devices of a fire-protective signalling system. In this application, the smoke detector is connected in the initiating circuit of a compatible system control unit, or in the initiating circuit of compatible interface equipment, such as an electrically-actuated transmitter or transponder. Detectors may be provided with an integral audible device which is energized in the alarm condition, and/or with an integral heat detector which is connected internally to the smoke detector alarm circuit. Actuation of the heat detector results in the same alarm signal as obtained from the smoke detector.
2. **Spot-Type Detector Units for Releasing Device Service** — These products consist of detection heads intended for mounting to compatible component bases having electrical functions, or self-contained units for mounting to standard electrical utility boxes. They are provided with normally closed contacts for connection to releasing equipment to close fire doors, shut down fan motors, etc. These units are not intended for use as initiating devices of a fire-protective signalling system.
3. **Air-Duct-Type Detector Units** — These products consist of a smoke detection device (or head) contained within a duct attachment having sampling tubes, or a detector for mounting within the duct. The primary function of air duct detectors is to shut down blowers and

Smoke-automatic Fire Detectors (UROXC)−*Continued*

dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic hazard and property damage from distribution of smoke by the building duct system. THESE DETECTORS ARE NOT INTENDED AS A SUBSTITUTE FOR OPEN-AREA PROTECTION.

4. **Projected-Beam-Type Smoke Detector Units for Open-Area Protection** — Each projected beam detector consists of a transmitter and a receiver which are located separately from each other within a specified distance and mounted on the ceiling or wall. The transmitter/receiver pair smoke detector is intended for use as an initiating device of a fire-protective signalling system. In this application, the smoke detector is connected in the initiating circuit of a compatible system control unit. The detector may be provided with an integral audible device which is energized in the alarm condition, and/or with an integral heat detector which is connected internally to the smoke detector alarm circuit.
5. **Sampling Detectors** — These products consist of a programmable controller/analyzer and sampling tubes used for open-area protection in cleanrooms or computer facilities. Sensitivities may be extremely high; the Authority Having Jurisdiction should be consulted before installation.

Installation

The following factors should be considered in every installation:

1. **Environmental Considerations** — The detectors are intended for indoor use only where normal ceiling temperatures prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted alarms. Some typical examples of such locations are:

a. Areas where particulate matter from exhaust or normal manufacturing processes are present.
b. In dusty areas, or in atmospheres where particulate matter such as aerosols, could enter the chamber.

2. **Detector Locations** — The location of detectors should be based on an engineering survey of the conditions to be anticipated in service. Detectors should be installed only after a thorough study is made of the premises to be protected (whether in planning or construction stage) and of the life and property values involved. Consideration should be given to all features which would have a bearing on the location and number of detectors required, including such pertinent physical configurations as sizes of bays, ceiling heights, sloped roofs, diffusion from air conditioning and ventilating currents, high stock piling, etc. Test smoke should be employed, where feasible, to explore prevailing conditions prior to installation. For early detection, units are intended to be located so as to obtain optimum advantage from ambient air movement. Since an optimum layout may not be a symmetrical spacing of units, a "spacing" rating is not allocated to smoke detectors.
3. **Stability of System** — In view of the innumerable environmental conditions which exist in the field, it is recommended that the stability of a system be monitored prior to placement into service to screen out detector locations where unwanted alarms may occur. Relocation of the detectors, or a change in the sensitivity setting where permitted in the marking of the detectors, may be required.
4. **Air Duct Detectors** — Intended to be installed in systems where temperatures at the detectors do not exceed 38°C. If air duct detectors suitable for the purpose are connected to a fire alarm system, adequate precautions should be taken to ensure that false alarms will not be caused by any operational aspect of the air system or by environmental particulate matter drawn into the duct either from indoors or outdoors. Each installation should be checked for adequate stability under prolonged shut down and maximum velocity conditions which may occur in practice.

Maintenance

Smoke detectors may require periodic cleaning and servicing to ensure proper operation. If a cleaning schedule is not instituted, unwanted alarms or loss in sensitivity may result. The frequency of cleaning required will depend upon the ambient conditions which prevail and may be determined by sensitivity testing. Reference should be made to the manufacturer's instructions for the test instruments which may be required and the procedure to be followed for determination of the sensitivity of installed detectors.

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic (UPLVC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S529, "Smoke Detectors for Fire Alarm Systems."

Detectors utilizing audible signals or combined with thermostats are additionally investigated to CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories," and/or CAN/ULC-S530, "Heat Actuated Fire Detectors for Fire Alarm Systems."

Smoke-automatic Fire Detectors (UROXC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Smoke-Automatic Fire Detector."

Accessories, Smoke-automatic Fire Detector (URRQC)

USE

This category covers accessories intended for use with certified automatic fire detectors. Their installation and application are restricted to the limitations supplied with the device.

ADDITIONAL INFORMATION

For additional information, see Smoke-Automatic Fire Detectors (UROXC), Detectors, Automatic (UPLVC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S529, "Smoke Detectors for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Accessory, Smoke-Automatic Fire Detector."

EXTINGUISHING SYSTEM ATTACHMENTS, FIRE ALARM (USQTC)

GENERAL

This category covers devices having electrical signalling contacts and designed for attachment to extinguishing system equipment so as to provide:

(a) Alarm signals indicating discharge of extinguishing means.
(b) Supervisory signals indicating abnormal conditions of extinguishing system equipment.
(c) Supervisory signals indicating restoration to normal of extinguishing system equipment.

Plug-type switches do not comply with (c) above and are not intended for ordinary use. They are intended to be installed for unusual conditions such as pit valves and nonrising stem gate valves where no other method of protection is available or practical.

Waterflow in extinguishing systems may also be detected by alarm valves covered under Valves, Alarm (VPLXC).

The signal contacts of these attachments may be of the non-coded or coded type.

Devices classified as non-coded types have contacts that perform a switching function and are intended for connection to actuating circuits of a separate electrically-operated transmitter or to the signalling line circuit of a separate electrical control unit by which their action is indicated.

Devices classified as coded type have contacts that perform a coded signalling impulse function resulting from the operation of a transmitting mechanism which is a part of the attachment, and are intended for connection to the signalling line circuit of a separate electrical control unit by which their action is indicated.

These devices are suitable for use in conjunction with central station watchman, fire alarm and supervisory protective signalling services.

Attachments for automatic sprinkler systems are classified as follows:

Waterflow Alarm Signal Types

Alarm or Dry-Pipe Valve Attachment – Mechanically operated on lifting of alarm valve clapper, or pressure operated, by suitable connection to alarm or dry-pipe valve piping trim.
Waterflow Indicators – Paddle operated.
Special Attachment – Type not included by above classification.

Supervisory Signal Types

Valve Position Signal Attachment – Operated by mechanical linkage to movable parts of valve.
Gate Valve Position Supervisory – Ordinary.
Gate Valve Position Supervisory – Plug-type switch.
Water Level Signal Attachment – Operated by tank float.
Pressure Signal Attachment – Operated by pressure change of air, steam or water.
Temperature Signal Attachment – Operated by water or air temperature change.

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

Extinguishing System Attachments, Fire Alarm (USQTC)−*Continued*

The basic standard used to investigate products in this category is ULC-S548, "Alarm Initiating and Supervisory Devices for Water Type Extinguishing Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Extinguishing System Attachment, Fire Alarm."

FIRE ALARM DEVICES, SINGLE AND MULTIPLE STATION (UTEMC)

This category covers heat-actuated-type single-station fire alarm devices normally intended to be employed in ordinary indoor locations, together with smoke-actuated-type fire alarm devices. Recommendations for typical installations are contained in CAN/ULC-S540-1999, "Installation of Residential Fire Warning Systems."

These devices are self-contained units incorporating means for both fire detection and alarm sounding.

A heat-sensitive element of eutectic alloy or bimetallic metal is generally employed in the detection mechanism. Energy for sounding the alarm may be obtained from a wound spring or compressed gas.

These devices are normally employed as separate units, in which case they are known as single-station devices. However, the units operated by compressed gas may also be connected by tubing with other and similar units. These units are known as multiple-station devices. When connected in this manner, the detection of a fire by one unit results in the sounding of an alarm by all units. The spring-wound units are not capable of being linked together in this way.

Fire Alarm Devices, Heat Actuated (UTEZC)

GENERAL

This category covers heat-actuated devices intended for locations where normal ceiling temperatures prevail (below 38°C). In order to minimize false alarms from premature operation, the operating temperature rating of heat-actuated devices should be appropriate for the maximum ambient temperature expected. Locations where the temperatures at the ceiling level are likely to be unduly high from sources of heat other than fire conditions, such as boiler rooms, etc., require special considerations.

Under these conditions, alarm devices operating normally at higher temperatures and capable of withstanding higher than normal ambient temperatures for long periods of time may be required. Care should be exercised to select alarm devices having the appropriate temperature rating to guard against false alarms from premature operation.

For ceiling temperatures not exceeding 38°C, devices having a temperature rating of 58°C are recommended. For ceiling temperatures exceeding 38°C but not 66°C, devices having a temperature rating of 79°C are recommended.

The response sensitivity of heat-actuated fire alarm devices to standard test fires is indicated in the spacing rating assigned to the device. The spacing rating is the maximum distance between adjacent devices installed in a symmetrical layout with the maximum right-angle distance to any wall or partition one half the distance between the devices.

The spacings as specified in individual certifications are for flat, smooth ceiling construction of ordinary height, generally regarded as the most favourable conditions for distribution of heated air currents resulting from a fire. Under other forms of ceiling construction, reduced spacing of alarm devices may be required.

The placement and spacing of alarm devices should be based on consideration of the normal ceiling temperatures, possible exposure of the devices to abnormal heat, and to the draft conditions likely to be encountered at the time of a fire. Recommendations for typical installations are contained in CAN/ULC-S540, "Installation of Residential Fire Warning Systems."

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station (UTEMC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530, "Heat Actuated Fire Detectors for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Alarm Device, Heat Actuated."

Fire Alarm Devices, Heat Actuated for Household Use (UTERC)

GENERAL

This category covers heat-actuated devices normally installed in locations where normal ceiling temperatures prevail (below 38°C). As the temperature rating of a device decreases, the maximum allowable ceiling temperature decreases accordingly. As a result, the number of areas where these products may be used is limited. Accordingly, devices having a temperature rating of 47°C are suitable for use only in indoor residential locations where the maximum ceiling temperature is 33°C.

The placement of alarm devices should be based on consideration of typical ceiling temperatures, possible exposure of the devices to abnormal heat, and to the draft conditions likely to be encountered at the time of a fire. The number of alarm devices should be based on consideration of the size of the room. Recommendations for typical installations are contained in CAN/ULC-S540-1999, "Installation of Residential Fire Warning Systems."

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Heat Actuated (UTEZC), Fire Alarm Devices, Single and Multiple Station (UTEMC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530, "Heat Actuated Fire Detectors for Fire Alarm Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Alarm Device, Heat Actuated for Household Use."

Smoke Alarms and Accessories (UTGTC)

GENERAL

This category covers smoke alarms intended for use in ordinary indoor locations, mobile homes or recreational vehicles. Some smoke alarms, as identified in the individual certifications, may utilize certified accessories to supplement the smoke alarm's application.

This category also covers accessories intended for use with smoke alarms, such as relays, remote silencing switches, etc.

Each unit incorporates means for both fire detection and alarm sounding and may be single-station type or multiple-station type as identified in the individual certifications. A single-station-type smoke alarm is a self-contained unit not arranged for interconnection with other units. A multiple-station-type smoke alarm is a self-contained unit designed for interconnection with other units of the same model or catalogue designation within an individual dwelling unit, and functionally arranged so that actuation of one results in alarm sounding by all interconnected units.

Smoke alarms are not intended for use in fire alarm systems. In addition, the acceptability of smoke alarms equipped with ancillary features such as relays, automatic diallers, radio transmitters or interconnections is subject to approval by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station (UTEMC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S531, "Smoke-Alarms."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Smoke Alarm" or "Smoke Alarm Accessory."

Smoke-alarm Components (UTHDC)

GENERAL

This category covers devices that are incomplete in certain constructional features or restricted in performance capabilities and intended for use as components of smoke alarms which are submitted for investigation rather than for direct separate installation in the field. The final acceptance of the product is dependent upon its installation and use in complete assemblies of smoke alarms submitted for examination and tests to Underwriters Laboratories of Canada.

ADDITIONAL INFORMATION

For additional information, see Smoke Alarms and Accessories (UTGTC), Fire Alarm Devices, Single and Multiple Station (UTEMC) and Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S531, "Smoke-Alarms."

Smoke-alarm Components (UTHDC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Smoke-Alarm Component.''

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION (UTHVC)

GENERAL

This category covers fixed-temperature and rate-of-rise heat-actuated-type detectors or devices employing a special construction different from conventional thermostats, designed to detect an abnormal increase in air temperature.

These detectors and devices are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with CAN/ULC-S530, ''Heat Actuated Fire Detectors for Fire Alarm System,'' CAN/ULC-S524-01, ''Installation of Fire Alarm Systems,'' and CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating device circuits of certified control units that provide audible alarm signals or employed as part of an extinguishing system.

Spacings for Equipment Protection — Reference should be made to the manufacturer's installation drawings and instructions

Authorities Having Jurisdiction should be consulted before installation

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530-1991, ''Heat Actuated Fire Detectors for Fire Protective Signaling Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Heat-Actuated Device for Special Application.''

HOUSEHOLD FIRE WARNING SYSTEMS (UTLQC)

Household Fire Warning System Units (UTOUC)

GENERAL

This category covers the individual units which are interconnected to form an electrically operated household fire-warning system. These units include a main control unit (with integral or separate power supply) and related accessories intended for connection to the control unit.

A control unit may additionally include circuit facilities for connection to intrusion-detection devices and control stations to form a combination fire and burglar alarm system. In such a combination control unit, the fire alarm signal takes precedence over the burglar alarm signal and a distinction between alarm signals is required. A common trouble signal may be employed for both. Combination units are also covered under Household Burglar Alarm System Units (NBSXC).

Installation — The units comprising a system are intended to be installed in accordance with the applicable requirements of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' or CAN/ULC-S540, ''Installation of Residential Fire Warning Systems.''

At least one smoke detector is intended to be provided in a household fire-warning system. The smoke detector can be either electrically wired and operated from the control unit, or be a separately operated device, such as a single-station-type smoke detector covered under Fire Alarm Devices, Single and Multiple Station (UTEMC).

An installation drawing is employed as the controlling factor to ensure proper interconnection of units. The drawing may be attached to the control unit, provided detached, or included as part of an instruction or installation booklet.

Instructions — An instruction booklet illustrating typical installation layouts, operations, maintenance, servicing, and test procedures is provided with each control unit.

RELATED PRODUCTS

Additional equipment, such as bells, horns, heat detectors and smoke detectors, may be required in various applications to complete a system.

Household Fire Warning System Units (UTOUC)−*Continued*

Separate certifications of such equipment are covered under Audible Signal Appliances (ULSZC), Smoke-Automatic Fire Detectors (UROXC), Thermostats – Automatic Fire Detectors (UQGSC) and Fire Alarm Devices, Single and Multiple Station (UTEMC).

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S545, ''Residential Fire Warning System Control Units.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Household Fire Warning System Unit,'' ''Fire Alarm Equipment,'' ''Fire Alarm Subassembly,'' ''Fire Alarm and Security Equipment,'' ''Fire Alarm and Security Subassembly,'' or other appropriate product name as shown in the individual Listings.

POWER SUPPLY UNITS, FIRE ALARM (UTRZC)

USE

The category covers power-supply units intended for application as components of fire-protective signalling systems.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S318, ''Power Supplies for Burglar Alarm Systems,'' in addition to certain applicable clauses of ULC-S527, ''Control Units for Fire Alarm Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Power Supply Unit, Fire Alarm.''

SPEAKERS AND ACCESSORIES FOR FIRE ALARM SYSTEMS (UUMWC)

USE

This category covers speakers and their accessories intended for use in fire alarm and/or emergency communication systems. Some speakers, as identified in the individual certifications, may utilize certified accessories to supplement the operation of the audible device.

ADDITIONAL INFORMATION

For additional information, see Fire and Alarm Equipment (SYKJC).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S541, ''Speakers for Fire Alarm Systems, Including Accessories,'' and ULC-S527, ''Control Units for Fire Alarm Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Speaker for Fire Alarm System'' or ''Speaker Accessory for Fire Alarm System.''

TRANSMITTERS, ELECTRICALLY ACTUATED, FIRE ALARM (UUTVC)

GENERAL

This category covers unit assemblies containing an electrically-controlled mechanism designed to automatically transmit coded signals when actuated by non-coded signalling contacts which are not part of its assembly. The coded signalling contacts are intended to be connected to the line circuit of a control unit by which the transmitter signals are indicated.

These transmitters are usually employed to obtain coded signal indication of the operation of automatic fire detectors, extinguishing system attachments and similar devices having non-coded signalling contacts.

These transmitters are designated as being for central station, proprietary, remote station or local service in accordance with the provisions made for electrical supervision of their actuating circuits and their ability to operate under faulty conditions as specified in the standards applying to the application.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S527, ''Fire Alarm Control Units,'' and ULC/ORD-C693, ''Central Station Fire Protective Signalling Systems and Services.''

Transmitters, Electrically Actuated, Fire Alarm (UUTVC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Transmitter, Electrically Actuated, Fire Alarm."

ROOF COVERING MATERIALS (TEVTC)

This category covers built-up and prepared roof-covering materials intended for the protection of roof decks from external fire exposure. These roof coverings have not been investigated for performance when exposed to a fire from an internal source, i.e., directed onto the underside of the roof deck assembly. For roof deck assemblies investigated for performance under internal fire exposure, see Roof Deck Constructions (TGKXC).

Built-up roof coverings are composed of labeled materials covered under Built-Up Roof Covering Materials (TGFUC), and assembled as indicated to provide Class A, B or C coverings.

Prepared roof coverings, covered under Prepared Roof Covering Materials (TFWZC), applied in accordance with detailed instructions included in the packages of materials as received, provide Class A, B or C coverings as indicated on the label applied to each package.

Authorities Having Jurisdiction should be consulted as to which class of roof coverings will be acceptable in each location.

Class A includes roof coverings that are effective against severe fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not carry or communicate fire, afford a fairly high degree of fire protection to the roof deck, do not slip from position, possess no flying brand hazard, and do not require frequent repairs in order to maintain their fire-resisting properties.

Class B includes roof coverings that are effective against moderate fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not readily carry or communicate fire, afford a moderate degree of fire protection to the roof deck, do not slip from position, possess no flying brand hazard, but may require infrequent repairs in order to maintain their fire-resisting properties.

Class C includes roof covering that are effective against light fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not readily slip from position, possess no flying brand hazard, and may require occasional repairs or renewals in order to maintain their fire-resisting properties.

POLYVINYL CHLORIDE ROOFING MEMBRANE (TFVMC)

GENERAL

This category covers polyvinyl chloride (PVC) roofing membranes certified as to their physical properties.

CAN/CGSB-37.54, "Polyvinyl Chloride Roofing and Waterproofing Membrane," provides for classification of PVC membranes by type (construction) and class (intended use) as follows:

Type 1 — Non-reinforced, for flashing only
Type 2 — Containing embedded fibres
Type 3 — With a non-embedded fabric backing
Type 4 — Reinforced with an embedded fabric
Class A — Non-exposed roofing
Class B — Exposed roofing
Class C — Waterproofing
Class D — Asphalt compatible

REQUIREMENTS FOR PVC MEMBRANES
(Unless otherwise specified, these are minimum requirements)

Property	Type 1	Requirements Type 2	Type 3	Type 4
Overall thickness, mm	1.2			
Coating thickness, mm[a]	—			
Tensile strength, MPa	10.4	10.4	—	—
Breaking strength, kN/m	—	—	35.0	35.0
Elongation at break, %	250.0	250.0	15[b]	15[b]

Polyvinyl Chloride Roofing Membrane (TFVMC)−*Continued*

Property	Type 1	Requirements Type 2	Type 3	Type 4
Lap joint strength as % of tensile breaking strength				
—Initial[c]	75.0		75.0	75.0
—After 7 d in boiling water[d]	70.0		70.0	70.0
Low-temperature impact	8 out of 10 pass			
Retention of properties after heat aging, as % of original[d]	8 out of 10 pass			
—Tensile breaking strength	90.0	90.0	90.0	90.0
—Elongation[b]	90.0	90.0	90.0	90.0
—Low-temperature flexibility	Pass	Pass	Pass	Pass
Resistance to accelerated weathering, Visual inspection	No cracking, blistering appreciable color change			
—Elongation, % of original[b]	90.0	90.0	90.0	90.0
—Low temperature impact	8 out of 10 pass			
—Low-temperature flexibility	Pass	Pass	Pass	Pass
Water vapor transmission, max g/m^2 in 24 h				
—Classes A and B	4.0	4.0	4.0	4.0
—Class C	1.0	1.0	1.0	1.0
Effect of water absorption, Mass increase, max %	30%	30%	30%	30%
Tensile breaking strength, % of original	90%	90%	90%	90%
Elongation, % of original[b]	90%	90%	90%	90%
Dimensional change, max %				
Without loading	2.0	0.5	0.5	0.5
With loading				
—Machine direction	0.5	0.5	0.5	0.5
—Cross machine direction	0.2	0.2	0.2	0.2
Cone penetration, N	30.0	30.0	30.0	30.0
Asphalt compatibility, Class D only Mass decrease, max %	5.0	5.0	5.0	5.0

[a]With no single measurement less than 0.32 mm.
[b]The PVC matrix must not break before the reinforcement.
[c]No shearing of the lap joint shall occur.
[d]With no delamination.

The certifications pertain to the materials themselves and not to the structures in which they may be installed.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on the performance of these products, see Built-Up Roof Covering Materials (TGFUC).

ADDITIONAL INFORMATION

For additional information, see Roof Covering Materials (TEVTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CGSB-37.54, "Polyvinyl Chloride Roofing and Waterproofing Membrane" (current issue).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of

Polyvinyl Chloride Roofing Membrane (TFVMC)−*Continued*

this Directory) together with the word "LISTED," a control number, and the product name "Polyvinyl Chloride Roofing Membrane."

PREPARED ROOF COVERING MATERIALS (TFWZC)

GENERAL

This category covers materials intended to provide Classes A, B and C coverings on combustible (wood – 19 mm thick sheathing boards or minimum 9.5 mm thick plywood or minimum 7.5 mm thick plywood with all joints blocked with solid lumber, unless otherwise indicated) decks when applied in accordance with detailed instructions included with each package.

The roof-covering classifications are applicable for either new work or for re-roofing purposes when installed on roof decks as described above.

Flashings and trimmings are intended to be the same as or not less than the equivalent of the roof coverings in each class, or of copper, or galvanized steel, having a minimum thickness of 0.5 mm.

Class A — Prepared Roof Coverings

Asphalt shingles are composed of matts that have been saturated and coated on both sides with asphalt and surfaced with inorganic granules laid in accordance with the instruction sheets with each package. The shingles are limited to the minimum thickness of roof deck specified and capable of receiving and retaining nails.

Reinforced plastic roof panels are composed of bonding plastic skins to an insulated metal grid core. The panels are self-supported and are tested without a roof deck. The panels are joined together in accordance with the manufacturer's instructions and at maximum inclines indicated in the individual certifications.

Formed steel shingles are composed of galvanized sheet steel with various surface treatments including grit surfacing, laid in accordance with the instruction sheets accompanying packages. The shingles are limited to 12.7 mm minimum plywood decks with an underlayment of one layer of certified 12.7 mm gypsum wallboard and one layer of labelled organic felt.

Class B — Prepared Roof Coverings

Formed steel shingles are composed of galvanized sheet steel with various surface treatments including grit surfacing, laid in accordance with the instruction sheets accompanying packages. The shingles are limited to 12.7 mm minimum plywood decks provided with a layer of 0.05 mm polyethylene-coated steel foil, and to inclines sufficient to permit drainage.

Asphalt shingles are composed of matts that have been saturated and coated on both sides with asphalt and surfaced with inorganic granules laid in accordance with the instruction sheets with each package. The shingles are limited to the minimum thickness of roof deck specified and capable of receiving and retaining nails.

Class C — Prepared Roof Coverings

Fire-retardant-treated red cedar shingle and shake coverings are composed of factory-treated red cedar shingles and shakes laid in accordance with instruction sheets accompanying bundles. The coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage.

Asphalt shingles are composed of matts that have been saturated and coated on both sides with asphalt and surfaced with inorganic granules laid in accordance with the instruction sheets with each package. The shingles are limited to the minimum thickness of roof deck specified and capable of receiving and retaining nails.

ADDITIONAL INFORMATION

For additional information, see Roof Covering Materials (TEVTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S107, "Method of Fire Tests for Roof Coverings."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Prepared Roof Covering Material."

BUILT-UP ROOF COVERING MATERIALS (TGFUC)

GENERAL

This category covers materials intended for built-up roof coverings which provide Classes A, B and C coverings on combustible solid decks (wood – 19 mm thick sheathing boards or plywood), unless otherwise indicated. Classifications are applicable to roof-covering systems indicated in the individual certifications.

The roof-covering classifications apply only to coverings composed of labelled materials assembled as described below; flashings and trimmings

Built-Up Roof Covering Materials (TGFUC)−*Continued*

being the same as or not less than the equivalent of the roof coverings in each class, or of copper or galvanized steel having a minimum thickness of 0.5 mm.

Asphalt Organic-Felt Coverings with Hot-Mopping Asphalt — Classes A and B

These coverings are composed of asphalt-saturated organic-felt and/or combinations of cap or base sheets (saturated felts that are asphalt-coated on one or both sides) applied with hot-mopping asphalt as noted below (minima specified) and surfaced with approximately 150 kg of roofing gravel or crushed stone or 150 kg of crushed slag per 10 m^2 of finished roof embedded in a flood coat of hot-mopping asphalt. The roofing gravel, crushed stone, or slag is to be dry, relatively free from dirt and dust, and graded in size from 6 to 16 mm. This covering is limited to roof decks having inclines not exceeding 1:4.

Asphalt Organic-Felt Coverings with Hot-Mopping Asphalt — Class C

These coverings are composed of asphalt-saturated organic-felt combinations of cap or base sheets (saturated felts that are asphalt-coated on one or both sides) applied with hot-mopping asphalt as noted below (minima specified). Coverings are surface-finished with a cold-application coating. See the individual certifications for coating designations and limitation for inclines on which these coverings are intended to be applied.

or

Ballasted as per Classes A and B asphalt organic-felt coverings for roof deck inclines not exceeding 1:4.

The first layer of the constructions noted below are generally nailed to combustible decks through tin discs and hot-mopped to noncombustible decks. Succeeding layers are hot-mopped in place.

Class A

1. Five layers of perforated Type 15 felt.
2. Four layers of Type 15 felt.
3. One layer of Type 30 and two layers of Type 15 felt.
4. One layer of Type 15 felt and two layers of Type 15 or 30 cap or base sheets.
5. Three layers of Type 15 or 30 cap or base sheets.
6. Three layers of Type 15 felt. Limited to noncombustible roof decks.

Class B

1. Four layers of perforated Type 15 felt.
2. Three layers of Type 15 felt.
3. Two layers of Type 15 or 30 cap or base sheets.

Class C

1. Three layers of Type 15 felt.
2. One layer of Type 30 and one layer of Type 15 felt.
3. Two layers of Type 15 or 30 cap or base sheets.
4. Two layers of Type 15 felt and one layer of Type 15 or 30 cap or base sheets.

Tar Organic-Felt Coverings — Classes A and B

These coverings are composed of tar-saturated organic felt in combinations as noted below, applied with hot-mopping coal tar pitch (minima specified), surfaced with approximately 200 kg of roofing gravel or crushed stone or 150 kg of crushed slag per 10 m^2 of finished roof embedded in a flood coat of hot-mopping coal tar pitch. The roofing gravel, crushed stone, or slag is to be dry, relatively free from dirt and dust, and graded in size from 6 to 16 mm. For exceptions, see the individual certifications. This coating is limited to roof decks having inclines not exceeding 0.25:1. It is recommended that wood decks be covered with building paper before application of the roof covering.

Class A

1. Four layers of Type 15 organic felt.
2. Three layers of Type 15 organic-felt. Limited to noncombustible roof decks.

Class B

1. Three layers of Type 15 organic-felt.

See the individual certifications for roof-covering assemblies not covered by the above.

RELATED PRODUCTS

Products used in roof deck constructions and investigated for performance under internal fire exposure are covered under Roof Deck Construction Materials (TGKXC).

ADDITIONAL INFORMATION

For additional information, see Roof-covering Materials (TEVTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S107, "Method of Fire Tests for Roof Coverings."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Built-Up Roof Covering Material."

ROOF DECK CONSTRUCTIONS (TGKXC)

GENERAL

This category covers roof deck constructions as identified by the construction numbers noted below. Tests have demonstrated that they will not contribute materially to flame spread on the underside when subjected to a controlled, standardized, fire exposure.

ULC's tunnel furnace normally used to develop surface burning characteristics of individual building materials has been adapted to tests of these assemblies. The limits of flame spread applicable to construction described in this category were established by analysis of results of tunnel furnace tests of other constructions which, by large-scale fire tests and by experience in actual installations, were known to have contributed extensively to flame spread or, conversely, were regarded as being acceptable from this standpoint.

The primary construction considered for the purpose of establishing limits was a steel roof deck, without vapour barrier or adhesives, insulated with 25-mm thick plain vegetable fibreboard mechanically attached and covered with a 4-ply built-up roof covering with gravel surfacing. As one requisite of Listing under this category, roof deck constructions shall not develop flame spread on the underside in excess of the limits established in tests of the above assembly.

While the tunnel furnace is used to investigate these constructions, these Listings should not be confused with those appearing under either Classification of Materials as to Surface Burning Characteristics (BIKTC) or Fire Resistance Ratings (BXUVC). The surface burning characteristics is a comparative evaluation of materials (occasionally with facings or backing) with respect to flame spread, fuel contributed, and smoke developed. The fire-resistance classification is the time rating of an assembly with respect to resistance to flame passage, heat transfer and maintenance of structural integrity.

Roof deck constructions are various assemblies of materials as described below, Listed on the basis of specific requirements for maximum flame spread on the underside of the assembly within definite time limits. These constructions differ from materials covered under BIKTC in, that in the latter, materials are assigned comparative numerical values. They also differ from assemblies covered under BXUVC since temperature transmission through roof deck constructions and structural performance under load are not measured nor are time ratings assigned.

An investigation of a roof deck construction primarily determines whether the contribution to an igniting fire by any or all of the materials in the assembly is at a sufficient rate to cause propagation of flame on the underside, in excess of the established limits.

Authorities Having Jurisdiction should be consulted before installation.

It should be noted that roof deck constructions are placed in two groups. Constructions beginning with Construction No. C1 pertain to assemblies using metallic decks, and those beginning with Construction No. CNM1 pertain to assemblies using nonmetallic decks.

The specifications for the materials and their assembly are important details in limiting the flame spread on the underside of roof deck constructions. Follow-Up Service of Underwriters Laboratories of Canada is available for those materials so designated in the construction described. The individual Listings of these materials are covered under Roof Deck Construction Materials (TGYVC). Products so Listed and bearing the label or Listing Mark of Underwriters Laboratories of Canada have been subject to countercheck of the specifications established on the basis of the materials used in the construction tested.

REQUIREMENTS

Roof deck constructions are evaluated in accordance with the requirements contained in CAN/ULC-S126, "Standard Method of Test for Fire Spread Under Roof Deck Assemblies."

ROOF DECK CONSTRUCTION MATERIALS (TGYVC)

GENERAL

This category covers roof deck construction materials designated for use in specific constructions as described under Roof Deck Constructions (TGKXC). These materials may be vapour barriers, insulations and adhesives applied over steel roof decks and underneath roof-covering materials. They also include fire-retardant-treated lumber and plywood used as deck material.

ADDITIONAL INFORMATION

For additional information, see Roof Deck Constructions (TGKXC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S126, "Standard Method of Test for Fire Spread Under Roof Deck Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Roof Deck Construction Material."

Roof Deck Construction Materials (TGYVC)–*Continued*

products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Roof Deck Construction Material."

SAFES AND CHESTS (TOXVC)

NIGHT DEPOSITORIES, BURGLARY-RESISTANT (TPZRC)

GENERAL

This category covers night depositories that offer a limited or moderate degree of protection against expert burglary by common tools and cutting torches. The night depositories are classified as follows:

Class C1 – at least 15 minutes protection.

Class C2 – at least 30 minutes protection.

Night depositories are designed to receive deposits after banking hours from outside the bank building. They consist of a depository head, connecting chute, security container and, optionally, a secondary-defence device.

The depository head incorporates a limited degree of theft resistance to reduce the possibility of removing the deposits through the opening using lines, wires, hooks, small pries, wrenches and screwdrivers in a relatively quiet attack.

The secondary-defence device is a device which is activated in the event that the depository head is forcibly removed from the building structure in which it is installed.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S330, "Burglary Resistant Night Depositories."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Night Depository, Burglary-Resistant."

SAFES, TOOL RESISTANT (TQMZC)

GENERAL

This category covers tool-resistant safes that offer a limited degree of protection against expert burglary by common tools. The safes are classified as follows:

A. Tested on six sides:
   1. Class TL-15X6 – at least 15 minute protection.
   2. Class TL-30X6 – at least 30 minute protection.

B. Tested on side containing the door:
   1. Class TL-15 – at least 15 minute protection.
   2. Class TL-30 – at least 30 minute protection.

Safes with single-side protection, or weighing less than 340 kg, are equipped with anchors and instructions for anchoring in larger safes or concrete enclosures.

All safes have a Group 1 or 1R combination lock and are equipped with relocking devices.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S324, "Burglary Resistant Safes."

Safes covered under this category are subject to a retest program to confirm continued compliance with existing published attack test requirements. The frequency of the retest(s) is every seven (7) years following the original year tested.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Safe, Tool-Resistant."

TORCH- AND TOOL-RESISTANT SAFES, CLASS TRTL-30X6 (TROVC)

GENERAL

This category covers combination-locked chests and safes designed to offer protection against entry by common mechanical tools, electrical tools, cutting torches, or any combination of these means.

Performance tests have been conducted against the entire unit.

These safes weigh at least 750 lbs.

Torch- and Tool-Resistant Safes, Class TRTL-30X6 (TROVC)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S324, "Burglary Resistant Safes."

Safes covered under this category are subject to a retest program to confirm continued compliance with existing published attack test requirements. The frequency of the retest(s) is every seven (7) years following the original year tested.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Torch- and Tool-Resistant Safe, Class TRTL-30X6."

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UCEVC)

SPEAKERS AND ACCESSORIES, FIRE ALARM, FOR USE IN HAZARDOUS LOCATIONS (UEAYC)

USE

This category covers speakers and their accessories intended for use in fire alarm and/or emergency communication systems, and for general signalling duties in hazardous (classified) locations.

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/ULC-S541, "Speakers for Fire Alarm Systems, Including Accessories"
ULC-S527, "Standard for Control Units for Fire Alarm Systems"
CSA-C22.2 No. 25, "Enclosures for Use in Class II Groups E, F, and G Hazardous Locations"
CSA-C22.2 No. 30, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"
CAN/CSA-C22.2 No. 157, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Speaker for Fire Alarm System," or "Speaker Accessory for Fire Alarm System."

VISUAL AND VISUAL-AUDIBLE SIGNAL APPLIANCES, FIRE ALARM, FOR USE IN HAZARDOUS LOCATIONS (UEJZC)

GENERAL

This category covers visual-signal appliances and appliances that provide a visual and visual-audible signal in hazardous (classified) locations.

The visual signal is a flashing light having a minimum effective luminous intensity of 2 cd. A xenon strobe lamp with a suitable diffuser is commonly employed for the light source. The flash rate falls in the range of one to two flashes per second.

These appliances may incorporate bells, sirens, horns, speakers, etc., and are rated 85 dB(A) at 3.048 m.

The suitability of a visual-signal appliance for any specific area is dependent on the maximum ambient light level, the reflectivity of interior surfaces, and the effective luminous intensity of the flash. Maximum ambient light levels will generally occur in areas subject to direct sunlight. Selection and location of visual-signal appliances should be based on an engineering survey of all factors involved, including the directivity aspects of signal perception.

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories"
CAN/ULC-S526, "Visible Signal Devices for Fire Alarm Systems, Including Accessories"
CAN/ULC-S541, "Speakers for Fire Alarm Systems, Including Accessories"
ULC-S527, "Standard for Control Units for Fire Alarm Systems"

Visual and Visual-Audible Signal Appliances, Fire Alarm, for Use in Hazardous Locations (UEJZC)−*Continued*

CSA-C22.2 No. 25, "Enclosures for Use in Class II Groups E, F, and G Hazardous Locations"
CSA-C22.2 No. 30, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"
CAN/CSA-C22.2 No. 157, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Visual and Visual-Audible Signal Appliance, Fire Alarm for Use in Hazardous Locations."

AUDIBLE-SIGNAL APPLIANCES, FIRE ALARM, FOR USE IN HAZARDOUS LOCATIONS (UGKZC)

USE

This category covers electrically-operated bells, buzzers, horns, sirens, and similar signal-sounding devices intended for fire-protective signalling service and for general signalling duties in hazardous (classified) locations.

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories"
CSA-C22.2 No. 25, "Enclosures for Use in Class II Groups E, F, and G Hazardous Locations"
CSA-C22.2 No. 30, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"
CAN/CSA-C22.2 No. 157, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Audible Signal Appliance, Fire Alarm."

FIRE ALARM DEVICES FOR USE IN HAZARDOUS LOCATIONS (UHMVC)

USE

This category covers coded and noncoded fire alarm and fire and watch boxes intended for use with private fire alarm systems in hazardous (classified) locations.

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/ULC-S528, "Manual Stations for Fire Alarm Systems, Including Accessories"
CSA-C22.2 No. 25, "Enclosures for Use in Class II Groups E, F, and G Hazardous Locations"
CSA-C22.2 No. 30, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"
CAN/CSA-C22.2 No. 157, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Alarm Device for Use in Hazardous Locations."

FLAME DETECTORS, FIRE ALARM, FOR USE IN HAZARDOUS LOCATIONS (UIAZC)

GENERAL

This category covers devices intended to detect the presence of a flame but discriminate against other forms of light-producing processes, such as welding, grinding, luminaires, etc., in hazardous (classified) locations. The signalling contacts of the detector are intended to be connected to the circuit conductors of a fire-protection signalling system.

Intrinsically safe equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

REQUIREMENTS

The basic standards used to investigate products in this category are:

Flame Detectors, Fire Alarm, for Use in Hazardous Locations (UIAZC)−*Continued*

CAN/ULC-S529, "Smoke Detectors for Fire Alarm Systems"
ULC/ORD-C386, "Flame Detectors"
CSA-C22.2 No. 25, "Enclosures for Use in Class II Groups E, F, and G Hazardous Locations"
CSA-C22.2 No. 30, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"
CAN/CSA-C22.2 No. 157, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flame-Automatic Fire Detector for Use in Hazardous Locations."

THERMOSTATS, FIRE ALARM, FOR USE IN HAZARDOUS LOCATIONS (UIRVC)

GENERAL

This category covers fire alarm thermostats intended for use in hazardous (classified) locations. This category covers the thermostats only, not the wiring or other appliances of which they form a part.

Typically, thermostats are intended for locations where normal ceiling temperatures prevail (below 38°C).

Locations where temperatures at ceiling are likely to be unduly high, from sources of heat other than fire conditions, demand special consideration in selecting thermostats having the proper temperature rating to guard against false alarms from premature operation. Usual practice requires a margin of 17 to 36°C between the maximum ambient ceiling temperature and operating temperature of the thermostat. The following are suggestions for usual occupancies:

For ceiling temperatures not exceeding 38°C, install 57 to 74°C rated thermostats.
For ceiling temperatures exceeding 38°C, but not 66°C, install 85 to 100°C rated thermostats.

The spacings specified are for flat, smooth ceiling construction of ordinary height, generally regarded as the most favourable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling construction, reduced spacing of thermostats may be required.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room or space areas, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment and to draft conditions likely to be encountered at the time of a fire.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/ULC-S530, "Heat Actuated Fire Detectors for Fire Alarm Systems"
CSA-C22.2 No. 25, "Enclosures for Use in Class II Groups E, F, and G Hazardous Locations"
CSA-C22.2 No. 30, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"
CAN/CSA-C22.2 No. 157, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat, Fire Alarm."

SMOKE CONTROL SYSTEM EQUIPMENT (UUKLC)

GENERAL

This category covers electrical units intended to be installed in conjunction with heating, ventilating, and air conditioning (HVAC) equipment to form a system for controlling the flow of smoke in a building during a fire condition in accordance with the Fire Safety in High Buildings section of the "National Building Code of Canada."

System equipment may consist of such devices as a main system control unit, remote control units, or fire fighter's smoke control stations. The control unit may be completely stand-alone or integral within a fire alarm system control unit. The Listee furnishes installation instructions necessary for the interconnection of the smoke control equipment, HVAC equipment, and fire alarm system equipment.

Smoke control systems are specially designed to meet the specific needs of an individual building and its occupants, and it is the responsibility of the Authority Having Jurisdiction to determine the acceptability of the system for its intended function.

This category does not cover devices such as fans, dampers, motors, etc., which perform the actual smoke control functions.

Components or modules of the control unit with modular construction that may be shipped separately to the site or that are eligible for field replacement are identified by component labels (see **ULC MARK** below).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S527, "Control Units for Fire Alarm Systems," and ULC/ORD-C100, "Smoke Control System Equipment."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Smoke Control System Equipment," "Component for Smoke Control System Equipment," "Fire Alarm Equipment," "Fire Alarm Subassembly," "Fire Alarm and Security Equipment," "Fire Alarm and Security Subassembly," or other appropriate product name as shown in the individual Listings.

FIRE ALARM SYSTEMS, INSPECTION AND TESTING (UWJSC)

GENERAL

This category covers alarm service companies involved with the testing and inspection of fire alarm systems, and which are eligible to issue ULC certificates for the inspection and testing of fire alarm systems.

The alarm service company issuing a certificate bears the responsibility for the periodic inspection and testing of fire alarm systems, as well as the keeping of records with respect to these activities. All required inspection and testing is intended to be provided for in an appropriate contract between the alarm service company and the subscriber.

System documentation is provided by the alarm service company for a certificated system and includes specification documents and records of the initial inspection and test, and any subsequent inspections and tests.

The locations at which Listed alarm service companies maintain service centres are shown in the individual Listings.

Underwriters Laboratories of Canada makes no representations or warranties, expressed or implied, that the alarm system will prevent any loss by fire, smoke, water damage or otherwise, or that the system will provide the protection for which it is installed or intended. The certificate is evidence that the system has been inspected and tested by a ULC Listed alarm service company and that it is subject to countercheck field inspections by ULC representatives. ULC does not assume or undertake to discharge any liability for any loss which may result from failure of the equipment, incorrect certification, non conformity with requirements, cancellation of the certificate or withdrawal of the alarm service company from Listing by ULC prior to the expiration date appearing on the certificate. If an installation is found not in conformity with requirements, it shall be corrected or the certificate is subject to cancellation.

To provide recognition of the degrees of competence required to inspect and test fire alarm systems of different levels of complexity, each Listed fire alarm service centre is identified with the highest level of complexity for which it has been certified.

The levels of complexity of fire alarm systems are defined as follows:

- **LEVEL 1** — a fire alarm system of a generic type which does not exceed twenty four (24) zones;
- **LEVEL 2** — a fire alarm system of the Level 1 type which exceeds twenty four (24) zones;
- OR
- — a fire alarm system manufactured to a specification that may include programming of the operating system;
- **LEVEL 3** — a fire alarm system of the Level 2 type which includes voice alarm features;
- **LEVEL 4** — a fire alarm system, computer based, having multiple control units networked or multiplexed together.

REQUIREMENTS

The basic standard used to investigate the services in this category is CAN/ULC-S536, "Inspection and Testing of Fire Alarm Systems."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to iden-

tify services which are under its Listing and Follow-Up Service. The Listing Mark for these services includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the service name.

SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES (VDGTC)

This category covers devices and equipment intended for use in sprinkler systems and water spray systems.

In addition to ANSI/NFPA 13, "Standard for the Installation of Sprinkler Systems," ANSI/NFPA 15, "Standard for Water Spray Fixed Systems for Fire Protection," and ANSI/NFPA 16, "Standard for the Installation of Foam-Water Sprinkler and Foam-Water Spray Systems," Authorities Having Jurisdiction should be consulted before installation.

AIR COMPRESSORS, SPECIAL TYPE (VDURC)

USE

This category covers special units intended for use with sprinkler equipment of special designs.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C753, "Guide for the Investigation of Alarm Accessories for Automatic Water-Supply Control Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Compressor, Special Type."

GAUGES, PRESSURE (VEVXC)

USE

This category covers nonrecording spring pressure gauges of the Bourdon spring, single-tube type. They are designed for use in automatic and open sprinkler systems, standpipe systems and similar types of fire fighting equipment.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C393, "Indicating Pressure Gauges for Fire Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gauge, Pressure."

HANGERS, PIPE (VFXTC)

GENERAL

This category covers pipe hangers intended for supporting piping in sprinkler systems, water spray systems and other piping systems used for fire protection service.

Pipe hangers are designed for the following rod and pipe sizes:

Rod Size, NPS	Nom Pipe Size
3/8	3/4 to 4 inclusive
1/2	5 to 8 inclusive
5/8	10 and 12

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C203, "Pipe Hanger Equipment for Fire Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these

Hangers, Pipe (VFXTC)−*Continued*

products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pipe Hanger."

NOZZLES, SPRAY TYPE, FIXED (VGYZC)

This category covers spray nozzles that discharge water in a specific spray pattern as defined by the manufacturer. Spray nozzles consist of the automatic or nonautomatic (open) type, and are intended for installation in fixed piping systems.

Nozzles, Automatic Pattern (VHMXC)

GENERAL

This category covers automatic spray nozzles assembled of frames and operating parts, in some cases, quite similar to those of automatic sprinklers, and with deflectors which may or may not be shaped similar to those of automatic sprinklers. Identification by Authorities Having Jurisdiction may require check of the markings on the nozzles against the "Marking" information given in the individual certifications.

Temperature Ratings — The standard temperature ratings of automatic spray nozzles are as follows:

Rating	Operating Temp of Fusible Element, °C	Colour	Max Normal Temp at Point of Installation, °C
Ordinary	57-66-71-74	Uncoloured*	38
Intermediate	79-100	White*	66
High	121-138-141	Blue	107
Extra high	163-171-182	Red	149
Very extra high	204-213	Green	191
	232	Orange	218
	260	Orange	246

* The 57°C spray nozzles of some manufacturers are half black and half uncoloured.

The 79°C nozzles of the same manufacturers are yellow.

The frame arms only are coloured to show temperature rating.

Manufacturers are able to supply these automatic water spray nozzles with their operating parts omitted.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199, "Automatic Sprinklers for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Pattern Spray Type Fixed Nozzle."

Nozzles, Non-automatic Pattern (VIAVC)

GENERAL

This category covers water spray nozzles of the non-automatic (open) pattern. These nozzles are of a distinctive shape that differentiate them from automatic sprinklers unless otherwise noted in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199, "Automatic Sprinklers for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Non-Automatic Pattern Spray Type Fixed Nozzle."

AIR PRESSURE MAINTENANCE DEVICES, AUTOMATIC (VIOTC)

GENERAL

This category covers automatically controlled air or nitrogen supply valves or assemblies of components to be used to maintain desired pres-

Air Pressure Maintenance Devices, Automatic (VIOTC)−*Continued*

sure in dry-pipe sprinkler systems and in special sprinkler systems employing supervising pressure by feeding air or nitrogen as needed from a dependable pressure source. The suitability for air or nitrogen is indicated in the individual certifications and is marked on each valve or assembly.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, ''Guide for the Investigation of Dry Pipe, Deluge and Pre-Action Valves for Fire-Protection Service.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Air Pressure Maintenance Device, Automatic.''

QUICK OPENING DEVICES, ACCELERATORS AND EXHAUSTERS (VJPZC)

USE AND INSTALLATION

This category covers auxiliary attachments for dry-pipe valves designed to reduce time delay in operation of the valve after the opening of one or more sprinklers.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C193, ''Guide for the Investigation of Alarm Valves for Fire-Protection Service.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Quick Opening Device,'' ''Accelerator'' or ''Exhauster.''

SPECIAL SYSTEM WATER CONTROL VALVES AND SYSTEM ACCESSORIES (VKRVC)

Special System Water Control Valves, Class I and Clean Agent Extinguishing System Unit Assemblies (VKYPC)

GENERAL

This category covers assemblies comprised of a single enclosure that houses three main assemblies which include 1) electronic control and signaling equipment, 2) a fire-suppression-system water control valve assembly, and 3) a clean agent extinguishing system unit, connected and assembled in the enclosure and intended for connection to a water supply, electrical power connection, water system piping, clean agent system piping, and heat- or smoke-detection devices.

The water-based fire-suppression assembly consists of a fire main control valve, water flow control valve (deluge type), electrically-operated solenoid valves, check valve, trim and drain valves, gauges, supervisory devices and special system accessories as indicated in the individual certifications. The water-based fire-suppression assembly may incorporate products covered under Special System Water Control Valves, Class I (VLFTC), Check Valves (HMERC), Valves, Trim and Drain Certified for Canada (VQGU7), Gauges, Pressure (VEVXC), Extinguishing System Attachments (USQTC), Switches, Pressure (VOXZC), Accessories for Special Systems, Class III Ordinary Locations (VLTRC), and other products as indicated in the individual certifications. The water-based fire-suppression assembly is rated for a maximum pressure of 1206 kPa unless otherwise indicated in the individual certifications.

Clean agent extinguishing system unit assemblies are covered under Clean Agent Extinguishing System Units (GAQFC).

Electronic control and signaling assemblies are covered under Control Units, Releasing Device Service (SYZVC).

Special System Water Control Valves, Class I and Clean Agent Extinguishing System Unit Assemblies (VKYPC)−*Continued*

Authorities Having Jurisdiction should be consulted regarding installation, operational programming and approval of working plans before installation of the assemblies.

These assemblies are intended to be installed in accordance with the manufacturer's installation instructions and the applicable requirements of the National Fire Protection Association, including ANSI/NFPA 13, ''Installation of Sprinkler Systems,'' ANSI/NFPA 15, ''Water Spray Fixed Systems for Fire Protection,'' and ANSI/NFPA 25, ''Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.''

Clean agent extinguishing systems are intended to be designed, installed and maintained in accordance with ANSI/NFPA 2001, ''Clean Agent Fire Extinguishing Systems,'' and the manufacturer's installation, operation and maintenance manual.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C260, ''Guide for the Investigation of Dry-Pipe, Deluge and Pre-Action Valves for Fire-Protection Service,'' UL 2127, ''Inert Gas Clean Agent Extinguishing System Units,'' UL 2166, ''Halocarbon Clean Agent Extinguishing System Units,'' ULC-S527, ''Control Units for Fire Alarm Systems,'' and ANSI/UL 864, ''Control Units and Accessories for Fire Alarm Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Special System Water Control Valve and Clean Agent Extinguishing System Unit Assembly.''

Special System Water Control Valves, Class I (VLFTC)

GENERAL

This category covers valves intended for use in controlling water flow to deluge, pre-action, and foam-water sprinkler systems and water spray systems. Small sizes of the valves may be useful as automatic cold weather valves and for installation on larger dry-pipe valves as a means of triggering their operation.

These valves are installed with a number of accessory devices to form systems.

RELATED PRODUCTS

The following accessory devices are useful in other types of systems in addition to those covered under this category:

1. Air compressors for supervisory air supply (see VDURC)
2. Air pressure maintenance devices (see VIOTC)
3. Alarm devices – Pressure switches (electric) – Water motor and gongs (see VPLXC)
4. Dry-pipe valves (see VPZVC)
5. Releasing devices (see SZNTC)
6. Sprinkler alarm and supervisory devices (see USQTC)
7. Automatic and open sprinklers (see VNIVC)
8. Foam-water sprinklers (see VNWTC)
9. Fire alarm thermostats (see UIRVC)
10. Quick-opening devices (see VJPZC)
11. Automatic and nonautomatic water spray nozzles (see VHMXC and VIAVC, respectively)

Several accessory devices designed especially for these special systems are certified as ''Accessories for Special Systems'' and are covered under Accessories for Special Systems, Class III Ordinary Locations (VLTRC).

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, ''Guide for the Investigation of Dry Pipe, Deluge and Pre-Action Valves for Fire-Protection Service.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Special System Water Control Valve, Class I.''

Special System Water Control Valves, Class II (VLMTC)

USE

This category covers valves intended for use as pressure control and/or indicator-type water flow valves for fire extinguishing systems.

Special System Water Control Valves, Class II (VLMTC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C312, "Check Valves for Fire Protection Service," and ANSI/UL 1739, "Pilot-Operated Pressure-Control Valves for Fire-Protection Service." The following requirements from ANSI/UL 1739 supersede or are added to the applicable requirements in ULC/ORD-C312: ANSI/UL 1739 section or paragraph reference, 5, 8, 12.4, 12.5, 14.1, 16, 17, 18, 19, 22, 23, 24.3, 24.4, 25.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Special System Water Control Valve, Class II."

Accessories for Special Systems, Class III Ordinary Locations (VLTRC)

For Use in Ordinary Locations

USE

This category covers accessory units intended for use in special-type systems.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, "Guide for the Investigation of Dry Pipe, Deluge and Pre-Action Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Accessory for Special Systems."

Expansion Chambers (VLTZC)

USE AND INSTALLATION

This category covers expansion chambers intended to be installed in fire protection service systems incorporating a backflow prevention device and supplying water, with or without antifreeze, up to the maximum rated working pressure and limitations as specified in the individual certifications. When properly sized and pre-charged with air, expansion chambers are capable of compensating for the effects of thermal expansion of the system solution.

These expansion chambers are intended for use and for installation in accordance with ANSI/NFPA 13, "Standard for the Installation of Sprinkler Systems."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Expansion Chamber."

SPRINKLERS, AUTOMATIC, OPEN AND OUTSIDE (VNIVC)

GENERAL

This category covers automatic sprinklers, which are heat-sensitive devices for automatically distributing water on a fire in sufficient quantity either to extinguish it or prevent its spread. Open sprinklers serve the same function but operate under separate automatic or manual control. Outside sprinklers are open sprinklers intended for use in the protection of windows, walls and roofs from exposure fires.

Sprinklers are designed for upright, pendent or horizontal installation as indicated in the individual certifications. "Old style" sprinklers may be installed in either upright or pendent positions.

Sprinklers may be utilized under "ordinary" or "special service" conditions. Ordinary conditions are generally considered to include ordinary

Sprinklers, Automatic, Open and Outside (VNIVC)−*Continued*

hazards and encompass the majority of installations. Special-service conditions include those where special water distribution patterns or flows are required or where unusual hazards, high ambient temperatures or corrosive atmospheres exist.

Special-service sprinklers should only be made by qualified fire protection specialists. Extended-coverage sidewall sprinklers are intended for use in light hazard occupancies only where they are installed from 100 to 150 mm below the ceiling, unless otherwise indicated in the individual certifications. The coverage area, minimum flow rate and orifice size are specified in the individual certifications. When extended coverage sprinklers are installed in multiple sprinkler applications per room, the maximum allowable ceiling height is intended to be 2.1 m unless otherwise indicated in the individual certifications.

Residential sprinklers are designed to discharge water, at the pressures indicated in the individual certifications, in specific patterns and flows over designated areas for the control of fire in one- and two-family dwellings and mobile homes.

Unless otherwise indicated, sprinklers have nominal orifice of 13 mm diameter or provide flows equivalent to a nominal 13 mm variable orifice.

Small-orifice sprinklers are intended for light hazard occupancies unless otherwise indicated in the individual certifications. They have a pintle extending above the deflector and the nominal orifice size stamped or cast on the wrench flat.

Sprinklers are manufactured in various temperature ratings. The common ratings in use are as follows:

Rating	Operating Temp, °C	Colour Code	Max Normal Temp at Point of Installation, °C
Ordinary	57 to 77	Uncoloured*	38
Intermediate	79 to 107	White	66
High	121 to 149	Blue	107
Extra high	163 to 191	Red	149
Very extra high	204 to 240	Green	191
Ultra high	260 to 302	Orange	246
Ultra high	343	Orange	329

* Occasionally, 57°C sprinklers are colour-coded black.

The colour code appears normally on the sprinkler frame arms only.

Ceiling (flush) type sprinklers with cover plates are intended to be installed in accordance with the temperature rating of the sprinkler, not the temperature rating of the ceiling cover plate.

The following abbreviations are used in the individual certifications:

Adj. – Adjustable
Br. – Brass
Bl. – Black plated (nickel/tin)
C – Chrome plated
Cad. – Cadmium plated
Calc. Chl. – Calcium chloride
Conc. – Concealed
CR – Corrosion resistant
DP – Dry pendent
EC – Extended coverage
En. – Enamel coated
En./L – Enamel over lead coating
Fl. – Flush
H – Horizontal
Int. – Intermediate level
L – Lead coated
Lacq. – Lacquer coated
LH – Light hazard
N – Natural
N. Adj. – Nonadjustable
Ni. – Nickel
Orf. – Orifice
P – Pendent
Pol. – Polyester
QR – Quick release
RS – Rack storage
Rec. – Recessed
Res. – Residential
Sdw. – Sidewall
Std. – Standard
Tf. – Teflon
U – Upright
W – Wax coated
W/L – Wax over lead coating
Win. – Window

Sprinklers, Automatic, Open and Outside (VNIVC)−*Continued*

The individual certifications are presented in metric SI units. The following equivalents of frequently used figures are provided for immediate reference.

Temperatures		Lineal Dimensions	
°C	°F	mm	in.
57	135	6.4	1/4
71	160	7.9	5/16
74	165	9.5	3/8
77	170	11.1	7/16
79	175	12.7	1/2
100	212	13.5	17/32
107	225		
121	250	m	ft
141	286	2.7	9
149	300	3.1	10
163	325	3.7	12
182	360	4.3	14
191	375	4.9	16
204	400	5.5	18
246	475	6.1	20
260	500	6.7	22
302	575	7.3	24
	343	650	

Pressure		Flow	
kPa	psi	L/min	US gpm
114	16.5	76	20
152	22.0	95	25
228	33.0	114	30
283	41.0	133	35
1200	175.0	151	40

Sprinklers are marked to indicate position of installation, temperature ratings, nonstandard orifices, year of manufacture, and other information relevant to their application. Small orifice sprinklers, and large orifice sprinklers with 1/2 NPS inlet threads, are provided with a pintle extending above their deflectors.

Authorities Having Jurisdiction should be consulted as to the proper type, pattern and temperature rating of sprinklers required in any given location.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199, ''Automatic Sprinklers for Fire-Protection Service.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Sprinkler, Automatic, Open and Outside.''

ATTACHMENTS TO SPRINKLER SYSTEMS (VNSYC)

USE AND INSTALLATION

This category covers devices installed as part of water-spray systems intended to protect restaurant-type cooking equipment. They are placed in a branch line, serving the water-spray nozzles protecting the cooking and exhaust equipment, to monitor the pressure and flow within the system. In event of nozzle activation, a water-flow sensing device actuates a solenoid valve or electrical contactor, shutting off the source of fuel or energy to the cooking equipment and activates alarm systems.

These devices are intended to be used only with those sprinklers or spray nozzles indicated in the manufacturer's installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

Attachments to Sprinkler Systems (VNSYC)−*Continued*

The basic requirements used to investigate products in this category are contained in UL Subject 199B, ''Outline of Investigation for Control Cabinets for Automatic Sprinkler Systems Used for Protection of Commercial Cooking Equipment.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Attachment to Sprinkler Systems.''

SPRINKLER SYSTEM ACCESSORIES (VNTWC)

Plastic Pipe and Fittings for Sprinkler Systems (VIWTC)

USE AND INSTALLATION

This category covers plastic pipe and fittings for sprinkler systems intended for use in light-hazard occupancies and residential occupancies.

Plastic pipe and fittings are intended for use in wet-pipe systems and are not suitable for outdoor applications. Their use in ceiling spaces above non-sprinklered areas has not been investigated.

As the performance of plastic pipe and fittings can be adversely affected by elevated temperatures, it is important that they not be installed where ambient temperatures normally exceed the maximum temperature ratings specified in the individual certifications.

Plastic pipe and fittings are intended to be installed in accordance with the manufacturer's installation instructions and the ''National Building Code of Canada.'' Special installation and design criteria relative to pipe hanger spacings, piping and sprinkler restraint, sprinkler temperature ratings, piping location, testing procedures and friction loss characteristics are specified in the manufacturer's installation instructions provided with the pipe and fittings.

Authorities Having Jurisdiction should be consulted before installation.

Protected Installations — It is important that plastic pipe and fittings, when used in conjunction with standard-response sprinklers, be separated from the area served by the sprinkler system, by ceilings, walls or soffits consisting of, as a minimum, lath and plaster, 9 mm thick gypsum board, 13 mm thick plywood, or a suspended membrane ceiling with lay-in panels or tiles, classified with respect to surface burning characteristics, having a mass of not less than 1.7 kg/m^2 and installed in steel suspension grids.

During remodelling or ceiling repair operations, precautions should be taken to properly shield the pipe from the protected space. The provision of supplementary fire protection during such operations is strongly recommended.

Exposed Installations — Plastic pipe and fittings can be used without ceiling protection (exposed) where indicated in the individual certifications. Such use is limited to installations under smooth, flat, horizontal, fixed ceilings in conjunction with quick-response or residential sprinklers, maximum rating 77°C.

System Risers — When protected, plastic pipe and fittings can also be used as system risers.

Underground Service — Where indicated in the individual certifications, plastic pipe and fittings can also be used for underground service.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199P, ''Combustible Piping for Sprinkler Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Plastic Pipe and Fittings for Sprinkler Systems.''

Thermoplastic Support Devices and Cover Systems for Sprinkler Piping (VIXOC)

GENERAL

This category covers support devices and cover systems intended for use with certified thermoplastic piping installed in sprinkler systems in the types of occupancies specified in Plastic Pipe and Fittings for Sprinkler Systems (VIWTC).

The support devices are intended for use with CPVC pipe only, whereas the cover systems are for use with CPVC, copper tubing or steel piping as indicated in the individual certifications.

Thermoplastic Support Devices and Cover Systems for Sprinkler Piping (VIXOC)−*Continued*

The support devices and cover systems are intended to be installed in accordance with the requirements specified in the manufacturer's installation instructions and ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes," or ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height." Special installation and design criteria relative to pipe support spacings, piping restraint and piping location are specified in the manufacturer's installation instructions provided with the pipe.

The cover systems are intended for installation below smooth, flat horizontal ceilings and are intended to be supported in accordance with the manufacturer's installation instructions. As indicated in the individual certifications, the cover system may function as a protective membrane for CPVC piping, or as a decorative cover only. Cover systems referenced as decorative are not an acceptable means of providing protection for CPVC piping when a protective membrane is required.

The manufacturer's installation instructions should be reviewed and Authorities Having Jurisdiction should be consulted before installation.

Unless otherwise indicated in the individual certifications, these thermoplastic pipe support devices and cover systems have not been investigated for use in air-handling spaces.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199P, "Combustible Piping for Sprinkler Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermoplastic Support Device and Cover System for Sprinkler Piping."

Steel Sprinkler Pipe (VIZYC)

GENERAL

This category covers steel sprinkler pipe intended for use in wet, preaction, deluge or dry-pipe sprinkler systems as indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

Schedule 10, 30 and 40 Pipe

This pipe is manufactured to dimensions and materials specified in ASTM A53/A53M, "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless," ASTM A135/A135M, "Standard Specification for Electric-Resistance-Welded Steel Pipe," and ASTM A795/A795M, "Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use."

Generally, joining by roll-grooving is limited to Schedule 10 (lightweight) pipe, and joining by threading, roll-grooving or cut-grooving to Schedule 30 and 40 (standard-weight) pipe. All pipe is suitable for joining by welding or with certified plain-end fittings. The pressure rating of this pipe is determined by the lowest-pressure-rated component in the system.

Lightwall Pipe

This pipe may have lesser wall thicknesses than Schedule 40 pipe. The pipe may be threaded or unthreaded as specified in the individual certifications. Threading requires the use of thread gauges conforming to the dimensions of ANSI/ASME B1.20.1, "Pipe Threads, General Purpose (Inch)." This pipe has been investigated for both mechanical strength and relative corrosion resistance expressed in terms of a corrosion resistance ratio (CRR). The ratio for each size pipe is defined as follows:

$$CRR = \frac{X^3}{X_{40}}$$

Where X = Thickness of the certified pipe measured either under the first exposed thread for threaded pipe or at the thinnest wall section for unthreaded pipe.

Where X_{40} = Thickness of Schedule 40 pipe measured either under the first exposed thread for threaded pipe or at the thinnest wall section for unthreaded pipe.

The "first exposed thread" is the minimum pipe thickness exposed to both interior and exterior corrosion and occurs at a threaded joint assembly at a line defined by the thread width just before the pipe engages the fitting.

While the CRR is an indication of relative resistance to corrosion, the actual corrosion performance of steel pipe can vary depending on the composition or quality of the steel of which it is formed, the composition of the water(s) to which it is exposed, and other related service conditions.

Steel Sprinkler Pipe (VIZYC)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C199S, "Light Wall Steel Pipes for Sprinkler Systems for Fire Protection Service," ASTM A53/A53M, "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless," ASTM A135/A135M, "Standard Specification for Electric-Resistance-Welded Steel Pipe," and ASTM A795/A795M, "Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Steel Sprinkler Pipe."

Heating Cables for Sprinkler Systems (VNUCC)

USE AND INSTALLATION

This category covers heating cables intended for installation on Schedule 40 steel pipe of a wet sprinkler system to prevent freezing in unheated areas at ambient temperatures down to -40°C unless otherwise indicated in the individual certification. Generally, the sprinkler piping will also require insulation around the heating cable and pipe. Limitations of use are as detailed in the manufacturer's installation instructions and the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 130, "Requirements for Electrical Resistance Heating Cables and Heating Device Sets."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heating Cables for Sprinkler Systems."

SPRINKLERS, FOAM-WATER (VNWTC)

USE

This category covers fixed nozzles intended for installation on piping of spray systems for fire protection. The sprinklers produce and distribute air foam when foam liquid is introduced into the water supply and distribute water over the same area in the absence of foam liquid.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S564, "Categories 1 and 2 Foam Liquid Concentrates."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sprinkler, Foam Water."

VALVES, ALARM (VPLXC)

GENERAL

This category covers automatic alarm valves intended for use in automatic wet-pipe sprinkler equipment. Valves of certain makes may be installed without a retarding chamber for steady pressure service, and with a retarding chamber for variable pressure service. Unless otherwise stated in the individual certifications, these alarm valves may be installed either vertically or horizontally. Valves may be provided with either a pressure switch (electric circuit closer) for giving electrical alarms, or a water motor and gong for mechanical alarms, or both.

These valves are capable of withstanding a moderate degree of service pressure increase, but different makes vary in this respect and all may send false alarms when installed in systems containing considerable

Valves, Alarm (VPLXC)−*Continued*

entrapped air and are subject to fluctuations of service pressure, such as occur in sprinkler installations having city service connections.

The most frequent causes of failure to give alarms are failure of current supply for electrical bells where batteries are used, misalignment of the shaft of the water motor and gong, and clogging of the nozzle that directs the stream of water to the wheel of the water motor.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C193, "Guide for the Investigation of Alarm Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Alarm Valve."

VALVES, DRY-PIPE (VPZVC)

GENERAL

This category covers dry-pipe valves manufactured in nominal pipe sizes ranging from 2 to 8 inclusive. They are intended for use as automatic means of controlling water flow to automatic dry-pipe sprinkler systems.

In addition to normal operation tests, dry-pipe valves are investigated to determine that they are provided with necessary "trim," such as gate and check valves, which are not specifically tested unless they have a specific effect on operation of the valve. Accessories such as alarm devices, alarm line strainers, etc., which are of importance to proper operation, including alarm signals, are normally examined and/or tested for suitability of use in connection with valves covered under Valves, Alarm (VPLXC).

The individual certifications include so-called cold-weather valves, and air-check valves, which are small size dry-pipe valves for special uses.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices (VDGTC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, "Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dry Pipe Valve."

STANDPIPE EQUIPMENT (VROZC)

This category covers devices intended for use in standpipe equipment.

Requirements for the use and installation of these devices are included in ANSI/NFPA 14, "Standard for the Installation of Standpipe and Hose Systems," ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection," ANSI/NFPA 24, "Standard for the Installation of Private Fire Service Mains and Their Appurtenances," and ANSI/NFPA 25, "Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems."

Authorities Having Jurisdiction should be consulted before use and installation.

FIRE DEPARTMENT CONNECTIONS (VSQVC)

USE AND INSTALLATION

This category covers fire department connections intended for installation on the exterior of buildings having standpipe and hose or sprinkler systems to enable a fire department to connect hose lines directly to the system to supplement existing water supplies.

ADDITIONAL INFORMATION

For additional information, see Standpipe Equipment (VROZC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 405, "Fire Department Connections."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Department Connection."

Fire Department Connections (VSQVC)−*Continued*

HOSE CABINETS AND RACKS (VTETC)

USE

This category covers cabinets intended for the enclosure of a hose rack and for storage of hose and other related equipment The hose racks are of the semiautomatic type for the storage of 15 to 30 m of 32 and 38 mm unlined fire hose. Semiautomatic racks are not intended for use by individuals untrained in handling fire streams.

ADDITIONAL INFORMATION

For additional information, see Standpipe Equipment (VSQVC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C47, "Fire Hose Rack Assemblies."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hose Cabinet and Rack."

HOSE VALVES (VTSRC)

GENERAL

This category covers hose valves manufactured in the standard patterns and sizes indicated below.

Gate Type — Nominal pipe size 2-1/2 – for hose connections to standpipes and fire pumps.

Angle Type — Nominal pipe sizes 1-1/2 and 2-1/2 – for hose connections to standpipes.

ADDITIONAL INFORMATION

For additional information, see Standpipe Equipment (VSQVC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C668, "Guide for the Investigation of Hose Valves for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hose Valve."

NOZZLES, SPRAY TYPE, PORTABLE (VUFZC)

GENERAL

This category covers portable spray-type nozzles intended for use with rubber-lined hose only, unless otherwise indicated in the individual certifications.

The use of nonadjustable spray nozzles is not likely to prove hazardous when used at distances in excess of 3 m from live electrical apparatus and circuits involving voltages not in excess of 250,000, where such nozzles are designed so as not to discharge a straight stream.

The use of applicators and adjustable nozzles around live electrical apparatus and circuits may involve serious accident hazards, therefore, these devices are not recommended for use on Class C fires.

ADDITIONAL INFORMATION

For additional information, see Standpipe Equipment (VSQVC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 401, "Portable Spray Hose Nozzles for Fire-Protection Service."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Spray Type Nozzle."

PRESSURE-REDUCING AND -RESTRICTING DEVICES (VUTXC)

USE AND INSTALLATION

This category covers devices intended for use in wet-pipe systems and intended to be installed in the supply piping of standpipe systems or at

Pressure-reducing and -Restricting Devices (VUTXC)−*Continued*

the hose outlets as a means of reducing existing high pressure in the piping system to a level that the fire hose nozzle can be managed by an operator.

Pressure-restricting devices are designed to reduce outlet pressures under flowing (residual) conditions only and are intended to be used in situations where the inlet pressure does not exceed 1200 kPa. Pressure-reducing devices are designed to reduce outlet pressures under both flowing (residual) and nonflowing (static) conditions. The type of device is indicated in the individual certifications.

These devices are intended to be installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," and ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," and maintained in accordance with ANSI/NFPA 25, "Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems," and the manufacturer's installation instructions. The manufacturer's instructions include a description of the performance characteristics of these devices under flowing (residual) and nonflowing (static) conditions.

Pressure-reducing or -restricting devices having a 1-1/2 NPS outlet are intended to be used in Class II standpipe systems, and devices having a 2-1/2 NPS outlet are intended for use in Class I or III standpipe systems.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Standpipe Equipment (VSQVC).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C668, "Guide for the Investigation of Hose Valves for Fire Protection Service," and ANSI/UL 1468, "Direct Acting Pressure Reducing and Pressure Restricting Valves."

The following requirements from ANSI/UL 1468 supersede or are added to the applicable requirements in ULC/ORD-C668: ANSI/UL 1468 section or paragraph reference, 7.2, 8.1, 8.2, 9, 9A, 10.2, 17, 19, 20, 21, 22, 23, 27, 28, 30.1 e), f), 30.4, 30.5, 31.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Pressure-reducing Device," "Pressure-reducing Valve," "Pressure-restricting Device" or "Pressure-restricting Valve."

TANKS (WWXRC)

HOLDING TANKS, SEWAGE (WXYXC)

USE AND INSTALLATION

This category covers underground and aboveground tanks in which sewage is received and retained prior to its collection for further treatment.

These tanks are intended for installation in accordance with the requirements specified by the Authority Having Jurisdiction.

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-B66, "Prefabricated Septic Tanks and Sewage Holding Tanks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Holding Tank, Sewage."

****

FIRESTOP SYSTEMS (XHEZC)

GENERAL

This category covers firestop systems intended for installation in fire separations and assigned fire ratings when investigated to CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

These firestop systems are intended for use in fire-resistive wall and/or floor assemblies investigated to CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials"; see Fire Resistance Ratings (BXUVC).

These firestop systems are composed of various materials. Typically, the illustrated system reflects the precise dimensions and conditions of the sample assembly which has been subjected to the fire endurance and hose stream test. The hourly ratings apply only to the complete systems. Individual components are not assigned ratings and are not intended to be interchanged between systems.

Materials used in the firestop systems are intended to be installed in accordance with the manufacturer's instructions provided with the materials. The structural integrity of the floor or wall assembly needs to be investigated when providing openings for the penetrating items.

The minimum and/or maximum annular space referenced in the firestop system must be maintained in order to achieve the hourly rating of the system. The annular space of a penetrating item through a rectangular opening is determined by measuring the distance from the closest point of the penetrating item to a point perpendicular to each of the four sides of the opening. The diagonal dimension is not intended to represent the annular space of a rectangular opening. The annular space between multiple penetrating items within a rectangular opening is determined by measuring the closest point of one penetrating item to the closest point of the adjacent penetrating item.

Unless otherwise stated in the individual designs, the differential pressure between the exposed and unexposed surfaces of the tested assembly measured during the fire test is 2.5 – 10 Pa.

Unless otherwise stated in the text under each illustrated system, the use of insulation as batts and blankets, packing or forming material is restricted to mineral wool insulation with a minimum density of 81 kg/m^3 compressed a minimum of 50% within the opening.

When concrete block wall or hollow-core concrete slab is indicated in a firestop system, concrete or mortar should be installed in voids to create a solid surround for the opening. The structural integrity of the floor or wall assembly is intended to be investigated in accordance with the requirements of the building code when providing openings for the penetrating items.

FIRESTOP SYSTEM TYPES

Head-of-Wall Joint Firestop Systems (HW)

These systems are identified by system numbers that begin with the prefix "HW." These systems are generally intended for installation in vertical separations between wall and floor or roof structures. These systems are generally not limited in length unless indicated, but are limited in width and depth as specified. These firestop systems do not incorporate penetrating items such as pipe or cable. The use of such penetrating items can significantly affect the rating(s) of the systems.

Joint Firestop Systems (JF)

These systems are identified by system numbers that begin with the prefix "JF." These systems are generally intended for installation in openings such as construction joints, gaps and spaces in floors or walls or at floor and wall intersections, as indicated in the illustrated assemblies. These systems are generally not limited in length unless indicated, but are limited in width and depth as specified. These firestop systems do not incorporate penetrating items such as pipe or cable. The use of such penetrating items can significantly affect the rating(s) of the systems.

Perimeter Joint Firestop Systems (PJ)

The assigned ratings are governed by the lowest of the fire-resistance ratings of the individual components (i.e., the wall, floor, or joint system). These systems are identified by system numbers that begin with the prefix "PJ." These systems consist of a floor with a fire-endurance rating, an exterior wall with or without a fire-endurance rating, and a perimeter joint system. The individual components are not assigned ratings and are not intended to be interchanged between systems. These perimeter joint firestopping systems do not incorporate penetrating items such as pipe or cable. The use of such penetrating items may significantly affect the rating(s) of the systems.

Service Penetration Firestop Systems (SP)

These systems are identified by system numbers that begin with the prefix "SP." These systems are generally intended for installation in openings of limited dimensions and shape in floor or wall assemblies, as specified in the illustrated systems. If tested, permitted penetrating items such as pipe, cable, cable trays, etc., will be specifically identified in the illustrated systems and corresponding text. Unless specifically described in the individual systems, the use of penetrating items of alternate size, type, quantity, etc., can significantly affect the rating(s) of the system.

Service Penetration for Combustible Systems (SPC)

These systems are identified by system numbers that begin with the prefix "SPC." These systems are generally intended for installation in openings of limited dimensions and shape in floor or wall assemblies, as specified in the illustrated systems.

These systems are tested with a minimum differential pressure of 50 Pa between the exposed and unexposed surfaces of the assembly to meet the requirements for combustible pipe for use in drain, waste and vent piping as referenced in the "National Building Code of Canada." Similar requirements also exist in other jurisdictions for combustible pipe used for various applications.

Unless specifically described in the individual systems, the use of penetrating items of alternate size, type, quantity, etc., can significantly affect the rating(s) of the system.

ALTERNATE NUMBERING SYSTEMS

Alternate Numbering System for Through-Penetration Firestop Systems

The alternate systems are identified by an alpha-alphanumeric identification system. The alpha components identify the type of assembly being penetrated and the numeric component identifies the type of penetrating item. The first alpha component is F, W or C. The F signifies a floor is being penetrated, the W signifies a wall is being penetrated, and C signifies either a floor or a wall is being penetrated.

The second alpha component may be any letter. The significance of the letter used is:

Letter	Description
A	Concrete floors with a minimum thickness less than or equal to 127 mm (5 in.)
B	Concrete floors with a minimum thickness greater than 127 mm (5 in.)
C	Framed floors
D	Steel decks in marine vessels
E through I	Not used at present time
J	Concrete or masonry walls with a minimum thickness less than or equal to 203.2 mm (8 in.)
K	Concrete or masonry walls with a minimum thickness greater than 203.2 mm (8 in.)
L	Framed walls
M	Bulkheads in marine vessels
N through Z	Not used at present time

The numeric component uses sequential numbers to identify the penetrating item. The significance of the number used is:

No. Range	Description
0000-0999	No penetrating items
1000-1999	Metallic pipe, conduit or tubing
2000-2999	Nonmetallic pipe, conduit or tubing
3000-3999	Electrical cable
4000-4999	Cable trays with electrical cable
5000-5999	Insulated pipe
6000-6999	Miscellaneous electrical penetrants, such as busducts
7000-7999	Miscellaneous mechanical penetrants, such as air ducts
8000-8999	Groupings of penetrations, including any combination of items listed above
9000-9999	Not used at present time

Alternate Numbering Systems for Joint Systems

The alternate systems are identified by an alphanumeric identification system. The alpha components identify the type of joint system and whether the joint system has movement capabilities. The numeric components identify the nominal joint width. In the case of head-of-wall joint system, the width of the joint does not include the voids created under the crests of metal deck floor or roof systems.

The first two alpha characters identify the type of joint system as follows:

Alpha Characters	Description of Joint System
FF	Floor-to-Floor
WW	Wall-to-Wall
FW	Floor-to-Wall
HW	Head-of-Wall
CG	Wall-to-Wall Joints Intended for use as Corner Guards

The third alpha character is either S or D. The S signifies joint systems which do not have movement capabilities. The D signifies joint systems which do have movement capabilities.

The numeric component uses sequential numbers to identify the nominal width of the joint systems. The significance of the number used is:

No. Range	Nom Joint Width
0000-9999	Less than or equal to 2 in.
1000-1999	Greater than 2 in. and less than or equal to 6 in.
2000-2999	Greater than 6 in. and less than or equal to 12 in.
3000-3999	Greater than 12 in. and less than or equal to 24 in.
4000-4999	Greater than 24 in.

RATINGS

Five ratings may be established for each firestop system: F, FT, FH, FTH and L. An F rating is based upon flame occurrence on the unexposed surface. An FT rating is based upon temperature rise criteria as well as flame occurrence on the unexposed surface. When a test sample is also subjected to a hose stream test, FH and FTH ratings may be established. An FH rating is based upon flame occurrence on the unexposed surface and acceptable performance during the hose stream test. An FTH rating is based upon a temperature rise criterion, flame occurrence on the unexposed surface and acceptable performance during the hose stream test. An L rating is based on the volume of air flowing, per unit of time, through the openings around the test sample under a specified pressure difference. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchangeable between systems. The rating of a firestop system applies to its use in the specific assembly of materials, penetration and floors or walls in which it was tested.

F Rating

A firestop system is considered as meeting the requirements for an F rating if it remains in the opening during the fire test for the rating period without permitting the passage of flame through openings, or the occurrence of flaming on any element of the unexposed side of the assembly.

FT Rating

A firestop system is considered as meeting the requirements for the FT rating if it remains in the opening during the fire test within the limitations as specified for an F rating and, additionally, the transmission of heat through the firestop system during the rating period will not have been such as to raise the temperature of any thermocouple on the unexposed surface of the firestop system more than 181°C above its initial temperature.

FH Rating

A firestop system is considered as meeting the requirements for an FH rating if it remains in the opening during the fire test and hose stream within the limitations for an F rating and, additionally, during the hose stream test, the firestop system will not develop any opening that would permit a projection of water from the stream beyond the unexposed side.

FTH Rating

A firestop system is considered as meeting the requirements for an FTH rating if it remains in the opening during the fire test and hose stream test within the limitations as described for F, FT and FH ratings.

L Rating

An L rating is based on the volume of air flowing, per unit of time, through the openings around the test sample under a specified pressure difference applied across the surface of the system. The rating is intended to assist Authorities Having Jurisdiction and others in determining the acceptability of firestop systems with reference to the control of air movement through the assembly. The rating is expressed in litres per second (L/s) per linear metre of opening for joint systems.

SIMPLIFIED USE INSTRUCTIONS

Identify the type of construction (e.g., concrete floor, gypsum wall) and firestop system (e.g., JF, SP) for which a fire-resistance rating is required.

Numbered items refer to the descriptive test below each drawing. Items identified by "•" are ULC Listed items. These items are of a proprietary nature over which it is necessary to exercise control at the manufacturing location and are Listed under the Follow-Up Program of Underwriters Laboratories of Canada. They are required to bear the Listing Mark of ULC. Look under Guide Number, Listing Category, and Manufacturer's Name for more information on the product.

FILL, VOID OR CAVITY MATERIALS (XHHWC)

USE AND INSTALLATION

This category covers fill, void or cavity materials, which are proprietary materials installed at the job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system or through-penetration firestop system.

Properties of the fill, void or cavity materials other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Fill, Void or Cavity Materials (XHHWC)−*Continued*

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fill, Void or Cavity Material."

FIRESTOP DEVICES (XHJIC)

USE AND INSTALLATION

This category covers firestop devices, which are factory-built products intended to provide a degree of fire resistance to openings in fire-resistive walls or floors to accommodate penetrating items, such as electrical cable, cable trays, conduit and pipe.

Firestop devices are intended to be installed in accordance with the instructions provided with the device and the instructions specified in the individual through-penetration firestop system. Certifications of these firestop devices contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual certifications.

Properties of the firestop devices other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Firestop Device."

FIRESTOP SYSTEM COMPONENTS (XHJZC)

USE

This category covers firestop system components designated for use in specific assemblies covered under Firestop Systems (XHEZC).

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Firestop System Component."

FORMING MATERIALS (XHKUC)

USE AND INSTALLATION

This category covers forming materials investigated for use in firestop systems and joint systems. The forming materials are manufactured from proprietary materials, processed into the form of boards or sheets and formed into various sizes and shapes.

These materials are used as a form and seal to prevent leakage during the installation and curing of some fill, void or cavity materials and should be installed in accordance with the instructions specified in the individual joint system or through-penetration firestop system. After installation, forming materials are left in place and, together with the fill material, provide a degree of fire resistance for the opening.

Properties of the forming materials other than their capacity to provide a degree of the fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

Forming Materials (XHKUC)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Forming Material."

LIGHT-GAUGE FRAMING (XHLIC)

USE AND INSTALLATION

This category covers light-gauge framing members, which are proprietary products installed at the job site in accordance with the installation instructions provided with the product and with the instructions specified in the individual joint system.

Properties of the light-gauge framing members other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Light-gauge Framing."

MECHANICAL JOINT ASSEMBLIES (XHLPC)

USE AND INSTALLATION

This category covers mechanical joint assemblies, which are proprietary products installed at the job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system.

Properties of the mechanical joint assemblies other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mechanical Joint Assembly."

PIPE-COVERING MATERIALS (XHLUC)

USE AND INSTALLATION

This category covers pipe-covering materials intended to be installed in accordance with the instructions specified in the individual through-penetration firestop systems. Certification of these products contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual certifications.

Properties of the pipe-covering materials other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pipe-covering Material."

THROUGH-PENETRATING PRODUCTS (XHLYC)

USE AND INSTALLATION

This category covers proprietary products, such as cable, conduit, pipe and tubing, whose fire-resistive properties have been investigated for specific applications in which they pass through openings in fire-rated walls or floors, or both, within a building.

Properties of the through-penetrating products other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Firestop Systems (XHEZC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, ''Standard Method of Fire Tests of Firestop Systems.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Through-penetrating Product.''

TORCHES (XLFXC)

This category covers blowpipes and torches for welding, cutting, heating, metal spraying and lighting. The individual Listings identify the intended fluid and use.

TORCHES, UTILITY, PROPANE-FIRED (XMHTC)

USE

This category covers utility torches designed for industrial uses, such as heat treatment, expanding, brazing, softening and melting. These torches include, as a minimum, a venturi, a control valve, a fixed orifice, and one or more burner tips. They are intended for connection only to CTC or DOT propane containers through approved LP-gas high-pressure hose, high-pressure regulators, and shipping-container valves. When designed for use with fuel in the liquid phase, it is indicated in the individual certifications. Utility torches are intended to be used only under the constant supervision of an attendant.

REQUIREMENTS

The basic standard used to investigate products in this category is CSA/CGA 2.29 (1997), ''Hand-Held Torches for Fuel Gases.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Torch, Utility, Propane-Fired.''

TRUCKS, INDUSTRIAL AND OTHER POWER-OPERATED MOBILE EQUIPMENT (XVHZC)

This category covers industrial equipment of the power-operated, riding or walking type, such as lift trucks, platform trucks, towing tractors, floor maintenance machines, etc.

These devices may be electric, battery powered, internal combustion engine, or pneumatic powered.

TRUCKS, ELECTRIC BATTERY-POWERED (XVVXC)

This category covers battery-operated electric industrial trucks where the fire hazard, incident to their use in ordinary locations, has been reduced to an acceptable degree. Where tests have been conducted to determine their suitability for use in hazardous (classified) locations as defined by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' the truck may be designated Type EX covering Class I, Group D, and Class II, Group G locations.

Electric battery-powered industrial trucks are designated Type E, EE, ES or EX.

Unless marked to indicate otherwise, industrial trucks are tested on a course having a ramp with a 5% minimum grade.

Trucks, Industrial, Type EX (XWXTC)

GENERAL

Trucks, Industrial, Type EX (XWXTC)−*Continued*

This category covers electric-battery-powered trucks with safeguards in addition to those required for Type E and EE trucks.

ADDITIONAL INFORMATION

For additional information, see Trucks, Electric Battery-Powered (XVVXC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C583, ''Guide for the Investigation of Electric Battery Powered Industrial Trucks.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Truck, Industrial Type EX.''

TRUCKS, INDUSTRIAL, INTERNAL COMBUSTION ENGINE-POWERED (XXLRC)

This category covers industrial lift trucks that present inherent fire hazards incident to the storage and use of fuel, and have been investigated for fire hazards associated with the fuel, electrical and exhaust systems. Storage and use of these trucks should conform to the requirements of the Authority Having Jurisdiction.

Internal combustion engine-powered industrial trucks are classified as Types D, DS, DY, G, GS, LP and LPS.

Trucks, Industrial, Type DS (XYMXC)

GENERAL

This category covers diesel-engine-powered trucks that are judged under requirements similar to those applying to Type D trucks. Special features are provided as additional safeguards to further reduce the inherent fire hazards of the electrical, fuel and exhaust systems.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558, ''Guide for the Investigation of Internal Combustion Engine-Powered Industrial Trucks.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Truck, Industrial, Type DS.''

Trucks, Industrial, Type DY (XZAVC)

GENERAL

This category covers Type DY trucks fuelled with diesel fuel provided with all safeguards required for Type DS trucks without any electrical equipment, including ignition equipment and equipped with temperature-limitation features.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558 (1975), ''Guide for the Investigation of Internal Combustion Engine-Powered Industrial Trucks.''

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Truck, Industrial, Type DY.''

TRUCKS, INDUSTRIAL, MISCELLANEOUS (YBEOC)

Trucks, Industrial, Pneumatic-powered (YBEXC)

USE

This category covers pneumatic-powered trucks without electric or fuel components. They are provided with safeguards such that they are suitable for use in the Hazard Classification, Class I, Division I, Group D of ANSI/NFPA 505, ''Fire Safety Standards for Powered Industrial Trucks Including Type Designations, Areas of Use, Conversions, Maintenance, and Operations.''

Authorities Having Jurisdiction should be consulted relative to the use of these vehicles.

Trucks, Industrial, Pneumatic-powered (YBEXC)–*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C583, "Guide for the Investigation of Electric Battery Powered Industrial Trucks."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Truck, Industrial, Pneumatic-Powered."

VALVES (YEWTC)

This category covers valves intended for use in the assembly of appliances or equipment or in piping handling gases or liquids. The fluids and the specific or general kind of service for which the valves are intended are noted in the individual Listings.

CHECK VALVES (YFKRC)

LP-gas Excess-flow Check Valves (YHNTC)

USE AND INSTALLATION

This category covers valves intended to automatically restrict the propane gas fuel supply if the flow rate exceeds the rated capacity.

These valves are intended to be installed in accordance with CAN/CGA-B149.2, "Propane Storage and Handling Code."

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C125, "Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief)."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "LP-Gas Excess-Flow Check Valve."

Flash Arresters (YIIQC)

USE

This category covers flash arresters for oxy-fuel gas systems, intended for use at pressures up to 2070 kPa. They are intended to be inserted in leads not exceeding 6 mm pipe size that connect cylinders to a header or coupler block, or to supply gas regulators, or to torches as indicated in the individual certifications.

REQUIREMENTS

The basic standard used to investigate products in this category is ISO 5175, "Equipment Used in Gas Welding, Cutting and Allied Processes – Safety Devices for Fuel Gases and Oxygen or Compressed Air – General Specifications, Requirements and Tests."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flash Arrester."

REGULATORS (YJQVC)

This category covers gas regulators, which are divided into two groups: compressed gas regulators and LP-gas regulators. Regulators designed as compressed gas regulators are not investigated for their ability to maintain the delivery pressure within predetermined limits. Regulators designed as LP-gas regulators are investigated to determine that they are capable of controlling and maintaining a uniform gas delivery pressure.

Compressed Gas Regulators (YKFTC)

GENERAL

This category covers regulators designed for use with the compressed gases specified in the individual certifications, to reduce the storage cylinder pressure or line pressure to the delivery pressure.

These regulators or reducing valves are investigated to determine that they do not leak across operating seats in the no-flow position; also, regulators designed for inlet pressures in excess of 1720 kPa are investigated to determine that the design prevents throwing of parts if the seat fails.

The ability of these regulators to maintain the delivery pressure within predetermined limits, the effects of overpressure on connected equipment, and the physiological effects of the use of medical equipment regulators has not been investigated.

Compressed Gas Regulators (YKFTC)–*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C252, "Compressed-Gas Pressure Regulators."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Compressed Gas Regulator."

SHUT-OFF VALVES (YPMTC)

This category covers shut-off valves exclusive of the electrically-operated types and are manually, float, or pressure actuated.

LP-gas Shut-off Valves (YSDTC)

GENERAL

This category covers LP-gas shut-off valves, which include CTC and DOT authorized shipping container, gas line service, and other valves as identified in the individual certifications, suitable for use in systems storing and handling LP-gas in either the liquid or gaseous phase. These valves are intended for use where the working pressure does not exceed 1720 kPa. These valves are, unless otherwise specified, suitable for installation where a positive shut-off is required. Metal-to-metal seat-type valves are suitable for installation only in branch or bypass lines where a positive shut-off is not essential.

Safety-relief devices included in the assembly of a shut-off valve for CTC or DOT authorized compressed gas shipping containers, which devices are to comply with the requirements of the Canadian Transport Commission, have not been investigated.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C125, "Valves for Anhydrous Ammonia and Propane (Other than Safety Relief)," and CGA-3.16, "Lever Operated Non-Lubricated Gas Shut-Off Valves."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "LP Gas Shut-Off Valve."

VAULT DOORS, BURGLARY-RESISTANT (YUSRC)

GENERAL

This category covers combination-and-time-locked vault doors designed to offer protection against expert burglary attacks by cutting torches, fluxing rods, portable electric power and common hand tools. as follows:

The burglary classifications for these doors are:

M – 15 minute protection
C1-30 – 30 minute protection
C2-60 and **C2-90** – 60 and 90 minute protection, respectively
C3-120 – 2 hour protection

These doors are intended for installation as closures for reinforced concrete vaults in accordance with the requirements of the Authority Having Jurisdiction and under the supervision of an authorized representative of the manufacturer, or for vaults constructed of modular vault panels certified for the same classification.

These doors are equipped with relocking devices. They are constructed of reinforced concrete, combined with special materials to resist torches, carbide drills, or abrasive cutting tools. The door lugs are of substantial design and material.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S321, "Burglary Resistant Vault Doors and Modular Panels."

Vaults covered under this category are subject to a retest program to confirm continued compliance with existing published attack test requirements. The frequency of the retest(s) is every seven (7) years following the original year tested.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vault Door, Burglar Resistant, Class I."

BURGLARY-RESISTANT MODULAR VAULT INSTALLATION AGENCIES (YUTPC)

GENERAL

This category covers agencies engaged in the installation of burglary-resistant modular vaults.

Burglary-resistant vault assembly components (e.g., modular doors and panels) are rated according to the length of time they withstand attack by common mechanical tools, electrical tools, cutting torches, or any combination of these means in the hands of experienced operators. The ratings based on the net working time to effect entry are as follows:

Class C1 30 – Minimum 30 minutes protection
Class C2 60 – Minimum 60 minutes protection
Class C2 90 – Minimum 90 minutes protection
Class C3 120 – Minimum 2 hours protection dd

Installation agencies, as referenced here, include self-employed individuals, agencies, companies, divisions of companies, and other definable entities who are engaged in the installation of modular vaults.

Certified installation agencies have demonstrated their ability to install specific modular vaults, as described in the individual Listings, in accordance with the modular vault manufacturer's installation instructions.

The installation agency bears the responsibility for the correctness of the installation performed. Underwriters Laboratories of Canada makes no representations or warranties, expressed or implied, that the modular vault will prevent any loss or will, in all instances, provide the protection for which it is installed or intended. ULC does not assume or undertake to discharge any liability for any loss which may result from failure of the modular vault to perform as intended.

ADDITIONAL INFORMATION

For additional information, see Vault Doors, Burglary-Resistant (YUSRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S321, "Burglary Resistant Vault Doors and Modular Panels."

ULC MARK

The Listing Mark (certificate) of Underwriters Laboratories of Canada for a certified installation is the only evidence provided by ULC to identify services which are under its Listing and Follow-Up Service. The Listing Mark of these services include the ULC symbol (as illustrated in the Introduction of this List of Equipment and Materials) together with the service name.

VAULT PANELS, BURGLARY-RESISTANT (YUTZC)

GENERAL

This category covers prefabricated modular units constructed at the manufacturer's plant and assembled, together with the same class of vault door, on site, to form a complete vault.

The burglary classifications for these panels are:

Class C1 30 – Minimum 30 minutes protection
Class C2 60 – Minimum 60 minutes protection
Class C2 90 – Minimum 90 minutes protection
Class C3 120 – Minimum 2 hours protection

ADDITIONAL INFORMATION

For additional information, see Vault Doors, Burglary-Resistant (YUSRC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S321, "Burglary Resistant Vault Doors and Modular Panels."

Vaults covered under this category are subject to a retest program to confirm continued compliance with existing published attack test requirements. The frequency of the retest(s) is every seven (7) years following the original year tested.

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vault Panel, Burglary-Resistant."

VAULT VENTILATORS AND VAULT-VENTILATING PORTS (YUUTC)

GENERAL

This category covers devices intended for installation in a vault wall to provide means for introducing fresh air to persons locked in the vault by accident or during a robbery.

Vault ventilators and ports are examined primarily for safety of integral electrical equipment and strength to resist burglary. When installed in a concrete wall according to the manufacturer's instructions, these ventilator assemblies do not reduce the burglary resistance of the vault wall significantly.

Ventilators are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Also, the conduit for electrical connections should not form a direct path through the wall but should be offset at least once, and preferably twice, so as not to invalidate the burglary classification of the vault.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S322, "Vault Ventilators and Vault-Ventilating Ports."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vault Ventilator."

VENTILATING EQUIPMENT FOR RESTAURANT COOKING APPLIANCES (YXLTC)

This category covers filter units, cleaning and recycling assemblies, exhaust hoods, grease ducts, grease duct insulation, power ventilators and other apparatus intended for installation as parts of ventilating and exhaust systems serving restaurant-type cooking appliances and in accordance with ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."

Where there are differences between the particular requirements contained in ANSI/NFPA 96 and the ULC Standard indicated in the individual product categories, the requirements of the ULC Standard shall govern unless explicitly stated otherwise by the Authority Having Jurisdiction.

FILTER UNITS, KITCHEN EXHAUST (AKUSC)

GENERAL

This category covers devices intended for the removal of grease and other contaminants from exhaust stream serving equipment installed in accordance with ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."

Grease filter units are capable of removing grease from air streams and provide surfaces that retain only small amounts of grease, which is susceptible to ignition when exposed to flame. These units have been investigated as to flammability after exposure to grease-laden air stream.

Where there are differences between the particular requirements contained in ANSI/NFPA 96 and the referenced ULC Standard, the requirements of the ULC Standard shall govern unless explicitly stated otherwise by the Authority Having Jurisdiction.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S649, "Grease Filters for Commercial and Institutional Kitchen Exhaust Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Filter Unit, Grease."

EXHAUST CLEANING AND RECYCLING ASSEMBLIES FOR COMMERCIAL KITCHEN EXHAUST SYSTEMS (YXMTC)

GENERAL

This category covers assemblies intended to reduce the level of contaminants in kitchen exhaust systems and to allow its discharge at levels other than 1000 mm above the roof as required by ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations." They are also designed to limit exhaust temperatures to 138°C maximum to permit their conveyance through air ducts conforming to the requirements for low-capacity heating systems as contained in the "National Building Code of Canada." By means of an optional exhaust recycling system, provision is made to allow the tempering of make-up air by recirculating a portion of the exhaust air to the kitchen area only.

The assembly may include a hood and damper assembly as an integral unit.

These assemblies are intended to be installed in accordance with the manufacturer's recommended installation instructions and the applicable section of ANSI/NFPA 96.

Exhaust Cleaning and Recycling Assemblies for Commercial Kitchen Exhaust Systems (YXMTC)−*Continued*

Where there are differences between the particular requirements contained in ANSI/NFPA 96 and the referenced ULC Standard, the requirements of the ULC Standard shall govern unless explicitly stated otherwise by the Authority Having Jurisdiction.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S647, "Exhaust Cleaning and Recirculation Assemblies for Commercial and Institutional Kitchen Exhaust Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhaust Cleaning and Recycling Assembly for Commercial Kitchen Exhaust Systems."

EXHAUST HOODS FOR COMMERCIAL OR INSTITUTIONAL KITCHENS (YYCWC)

GENERAL

This category covers exhaust hoods intended for placement over restaurant-type cooking equipment. These devices have been investigated for smoke and vapor capture, and the ability to remove a large percentage of grease and other airborne particulates from the exhaust stream. Where duct temperature-limiting devices are provided, their ability to limit duct temperatures to a maximum of 190°C has also been investigated.

Hoods may be provided with any of the following features:

Fixed grease-extraction devices
Removable grease-extraction devices
Means to limit the temperature of gases entering the exhaust duct to 190°C
Hot water and detergent cleaning systems*
Other cleaning systems*
Make-up air plenums
Make-up air dampers
Lighting fixtures

* The efficiency of cleaning systems has not been investigated.

Exhaust hoods are intended for installation in compliance with the applicable sections of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S646, "Exhaust Hoods and Related Controls for Commercial and Institutional Kitchens."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhaust Hood for Commercial or Institutional Kitchens."

Exhaust Hood Accessories (YYCZC)

USE

This category covers exhaust hood accessories used to supplement the operation of hood maintenance, and which may be connected to a fire alarm system as indicated by the installation wiring diagram pertinent to its application.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S646, "Exhaust Hoods and Related Controls for Commercial and Institutional Kitchens."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhaust Hood Accessory."

GREASE DUCT INSULATION (YYETC)

GENERAL

This category covers grease duct insulation materials intended for insulating metal grease ducts in commercial institutional kitchen systems to protect adjacent combustibles from ignition in the event of an internal grease duct fire. They have been investigated for the ability to permit the

Grease Duct Insulation (YYETC)−*Continued*

reduction of clearances to combustible construction in accordance with the requirements of "ULC Grease Duct Insulation Test Protocol," and are intended to be installed in accordance with the manufacturer's recommended installation instructions and the applicable section of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

Minimum clearances to combustible construction are indicated in the individual certifications.

The fire-resistance performance of these materials has not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies which have been assigned fire-resistance ratings are covered under Fire-Resistant Ducts (HNKNC) in the ULC List of Equipment and Materials entitled "Fire Resistance."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Grease Duct Insulation."

GREASE DUCTS FOR RESTAURANT COOKING APPLIANCES (YYGQC)

GENERAL

This category covers grease ducts intended for commercial institutional kitchen exhaust systems. They are intended to be installed in accordance with the manufacturer's recommended installation instructions and the applicable section of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

The fire-resistance performance of these materials has not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products associated with assemblies that have been assigned fire-resistance ratings are covered under Fire Resistant Ducts (HNKNC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S646, "Exhaust Hoods and Related Controls for Commercial and Institutional Kitchens."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Grease Duct for Restaurant Cooking Appliances."

POWER VENTILATORS FOR COMMERCIAL KITCHEN EXHAUST SYSTEMS (YZHWC)

GENERAL

This category covers assemblies intended to provide the motive power for the exhausting of grease and contaminant-laden air from commercial kitchen exhaust systems. They are designed such that the exit point of the exhaust is a minimum of 1000 mm above roof level, or terminate through an exterior masonry wall as specified in the individual certifications.

These ventilators are intended to be installed in accordance with the manufacturer's installation instructions and the applicable section of ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."

Where there are differences between the particular requirements contained in ANSI/NFPA 96 and the referenced ULC Standard, the requirements of the ULC Standard shall govern unless explicitly stated otherwise by the Authority Having Jurisdiction.

Authorities Having Jurisdiction should be consulted before installation.

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S645, "Power Roof Ventilators for Commercial and Institutional Kitchen Exhaust Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator for Commercial Kitchen Exhaust Systems."

VENTS, SMOKE AND HEAT (ZAQRC)

This category covers smoke and heat vents designed to relieve smoke and heat from the seat of a fire in a building, thereby minimizing sprinkler operation, lowering building temperatures, exhausting smoke, and improving accessibility for fire-fighting personnel to permit close approach and direct action against the seat of the fire. The advantages or disadvantages of venting and the conditions under which venting should be provided have not been investigated.

For information concerning the spacing of vents and venting ratios, see ANSI/NFPA 204, "Smoke and Heat Venting."

ROOF VENTS, AUTOMATICALLY OPERATED (ZBDZC)

GENERAL

This category covers automatically-operated roof vents consisting of a body, frame, one or more doors and operating mechanisms.

The roof vents are intended to be operated manually and automatically in the event of fire. Operation does not depend on electrical power or other energy sources that may be interrupted during a fire.

The investigation of automatically-operated roof vents includes determination as to their design and construction, practicability of installation, durability, reliability of operation and uniformity. The vents are intended to be installed in accordance with the instructions provided by the manufacturer and operated periodically.

These devices are designed to operate against snow loads of 49 kg/m^2 or less. To avoid excessive snow loads they should be located at a minimum horizontal distance of 10 h from any object projecting above the roof on which the vent is installed (where h is the vertical height of the top of the object above the level of the roof on which the vent is installed).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Vents, Smoke and Heat (ZAQRC).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C793, "Guide for the Investigation of Automatically Operated Smoke and Heat Roof Vents."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Roof Vent, Automatically Operated."

WATER SAFETY PRODUCTS (ZDSNC)

LIFEBUOYS (ZDTLC)

GENERAL

This category covers small-vessel lifebuoys and SOLAS lifebuoys intended primarily for use as a throwable device on vessels.

PRODUCT MARKINGS

The markings on each small-vessel lifebuoy include the Listee's name/trademark/logo and address, model, lot number, mass of the lifebuoy, and pertinent use data. All markings are required to be in English and French.

The markings on each SOLAS lifebuoy include the Listee's name/trademark/logo and address, model, lot number, drop test height, mass of the lifebuoy, the statement, "Suitable for quick release from the bridge" or "Not suitable for quick release from the bridge," and pertinent use data. All markings are required to be in English and French.

REQUIREMENTS

The basic standard used to investigate products in this category is TP 14475E, "Canadian Life Saving Appliance Standard."

Lifebuoys (ZDTLC)−*Continued*

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the statement, "Complies with Transport Canada Requirements in TP 14475E," and the product name "Small-vessel Lifebuoy" or "SOLAS Lifebuoy."

PERSONAL BUOYANT WATER SAFETY PRODUCTS (ZDTQC)

USE

This category covers personal buoyant water safety products, such as personal flotation devices (PFD) and life jackets, suitable for use on recreational boats.

REQUIREMENTS

These products have been approved by Transport Canada and found to meet the applicable requirements of:

1. **Personal Flotation Devices (PFD):** — CAN/CGSB-65.11, "Personal Flotation Devices," CAN/CGSB-65.15, "Personal Flotation Devices for Children," and the Canadian Addendum to ANSI/UL 1180, "Fully Inflatable Recreational Personal Flotation Devices."
2. **Life Jackets:** — CAN/CGSB-65.7, "Life Jackets."
3. **Standard Life Jackets Inherently Buoyant:** — CGSB-65-GP-14, "Life Jackets, Inherently Buoyant, Standard Type."
4. **Life Jackets:** — TP 13571, "Standards for SOLAS Life Jackets."
5. **Marine Abandonment Immersion Suit Systems:** — CAN/CGSB-65.16, "Immersion Suit Systems."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," an issue number, and the product name "Personal Buoyant Water Safety Product."

Components for Personal Buoyant Water Safety Products (ZDTCC)

GENERAL

This category covers components or materials used in the construction of personal buoyant water safety products (see ZDTQC) such as foam, fabrics, threads, webbing, zippers, buckles, adjusters, etc.

ADDITIONAL INFORMATION

For additional information, see Personal Buoyant Water Safety Products (ZDTQC).

REQUIREMENTS

The products covered under this category have been investigated as follows:

1. **Components for Personal Flotation Devices (PFD):** — Constructed in accordance with CAN/CGSB 65.11, "Personal Flotation Devices," and CAN/CGSB 65.15, "Personal Flotation Devices for Children."
2. **Components for Life Jackets:** — Constructed in accordance with CAN/CGSB 65.7, "Life Jackets."
3. **Closed-Cell Foamed Polymeric Materials:** — Constructed in accordance with CAN/CGSB 65.18, "Closed-Cell Foamed Polymeric Materials."
4. **Textile Components of Life Jackets and Personal Flotation Devices:** — Constructed in accordance with CAN/CGSB 65.19, "Textile Components of Lifejackets and Personal Flotation Devices."

ULC MARK

The Listing Mark of Underwriters Laboratories of Canada on the product is the only method provided by ULC to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the ULC symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Personal Buoyant Water Safety Product."

BUILDING MATERIALS CERTIFIED FOR CANADA (AABM7)

GENERAL

Building materials include adhesives, coatings, acoustical materials and the like, investigated for surface burning characteristics, such as flame spread and smoke developed during fire exposure. Other building materials include prefabricated buildings, structural building products, gypsum board, fireplaces and chimneys, elevator equipment, and exiting equipment, such as exit signs, exit appliances, and emergency lighting and power equipment.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE PROTECTION EQUIPMENT CERTIFIED FOR CANADA (AAFP7)

GENERAL

Fire protection equipment includes fire suppression equipment and systems, fire alarm equipment and fire fighting equipment, such as fire hoses, fire service protective clothing, and automotive fire apparatus. Also included are furnishings in buildings investigated for combustibility, such as upholstered furniture, mattresses, and warehouse pallets.

This equipment is intended for use only as described in the general Guide Information for each product category and individual Listings. This equipment has been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

CERTIFICATE SERVICE

Fire alarm systems require extensive installation work and maintenance by the Listed installing company. UL's Standards for these systems cover installation methods, extent of protection, and maintenance service, which are supervised under UL's Certificate Service.

Under Certificate Service, UL authorizes the issuance of UL's certificates to installations which the Listed installing company represents to be in compliance with requirements established for the product category. The certificate indicates the classification, extent, location of equipment, period covered by the certificate, and name of the installing company.

UL conducts countercheck field examinations of representative installations of the Listed installing company. UL assumes no liability for any loss that may result from failure of the equipment, incorrect certification or nonconformity with requirements. If installations not in compliance with UL's requirements are found as a result of field examinations, they are subject to correction by the Listed installing company or cancellation of the certificate.

All of a company's alarm system installations may not be covered under UL's Certificate Service. Only those installations for which a certificate has been properly issued are covered under UL's Certificate Service.

UL maintains a Certificate Verification Service (ULCVS) that allows Authorities Having Jurisdiction (AHJs) to verify up-to-date Certificate information and identify companies eligible to issue Certificates as of the date of the inquiry. Only those alarm or signal system installations for which a Certificate has been issued are covered under UL's Certificate Service. The verification of a Certificate on ULCVS is the only method UL provides to identify the Certificated alarm systems actively covered under its Listing and Follow-Up Service.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 2 of the CEC should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Terminations — Copper pigtail leads may be used with aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

FIRE PROTECTION EQUIPMENT CERTIFIED FOR CANADA (AAFP7)

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper conductors only. Terminals marked "CO/ALR" are for use with aluminum or copper conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum or copper conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the CEC, unless specifically identified as suitable for use in hazardous locations.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING, COOLING, VENTILATING AND COOKING EQUIPMENT CERTIFIED FOR CANADA (AAHC7)

GENERAL

This equipment is intended for heating, cooling, refrigerating, ventilating and cooking, and uses various energy sources including electricity, gas, petroleum-base liquid, solid fuel or solar energy.

Fuel-fired equipment is intended for use only with the fuels described in the general Guide Information for each product category and individual Listings. This equipment has been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment with other fuels, and in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category, has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

In addition, certain products have been investigated with reference to environmental and public health effects and for potential conformity to the installation and use provisions of applicable environmental and public health requirements, if so indicated in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 2 of the CEC should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Terminations — Copper pigtail leads may be used with aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper conductors only. Terminals marked "CO/ALR" are for use with aluminum or copper conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum or copper conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the CEC, unless specifically identified as suitable for use in hazardous locations.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AAIZ7)

GENERAL

Electrical equipment for use in and relating to Class I, II and III, Division 1 and 2 hazardous (classified) locations has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). Those products investigated for conformity to the installation and use provisions of the Canadian Coast Guard Regulations are identified in the general Guide Information for each product category or the individual Listings for the product. Attention is called to the limitations of the individual Listings and Classifications specified in the general Guide Information for each product category, such as current, voltage, horsepower limits, markings, special descriptions and installation provisions.

Unless equipment is identified in 1) the product category title as relating to hazardous (classified) locations or 2) the individual Listings as apparatus for use in unclassified locations, all product categories contain electrical equipment for use in Class I, II and III hazardous (classified) locations.

Electrical equipment for use in and relating to hazardous (classified) locations must also comply with the applicable requirements for the same type of equipment for use in unclassified locations. For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

HAZARDOUS (CLASSIFIED) LOCATIONS — GENERAL INFORMATION

Hazardous (classified) locations, as defined in the CEC, are locations where fire or explosion hazards may exist due to the presence of flammable gases, vapors or flammable liquids (Class I), combustible dusts (Class II), or ignitable fibers or flyings (Class III).

There are two independent classification systems as described in the CEC. One system divides all hazardous (classified) locations into Classes, Divisions and Groups. Division 1 is a location where a flammable or combustible atmosphere is present under normal operating conditions. Division 2 is a location where a combustible atmosphere is present only under abnormal conditions.

The other classification system divides only Class I hazardous (classified) locations into Zones and Gas Groups. Zone 0 is a location where an explosive or flammable atmosphere is present continuously or for long period of time. Zone 1 is a location where the explosive or flammable atmosphere is likely to occur during normal operation. Zone 2 is a location where the explosive or flammable atmosphere is not likely to occur in normal operation and, if it occurs, will exist for only a short time.

Protection against explosion in hazardous (classified) locations requires that all equipment that could be exposed to the flammable or combustible atmospheres be of a type suitable for installation in such locations. The Classes and Groups for which equipment has been Listed or Classified are shown in the individual Listings and Classifications under the respective categories and are marked on the equipment itself. In addition, intrinsically safe circuit wiring terminals and intrinsically safe equipment is marked "Intrinsically Safe."

Gas, Vapor and Dust Groups

The following paragraphs group flammable and explosive mixtures of specific gases, vapors and dusts in accordance with the CEC.

Class I Equipment

Equipment for use in Class I hazardous (classified) locations, as defined in the CEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification for Divisions 1 and 2, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group A — Atmospheres containing acetylene.

Class I, Group B — Atmospheres containing acrolein, butadiene, ethylene oxide, propylene oxide, hydrogen, or fuel and combustible process gases containing more than 30% hydrogen by volume.

Class I, Group C — Atmospheres containing ethyl ether, ethylene, or gases or vapors of equivalent hazard.

Class I, Group D — Atmospheres containing acetone, ammonia, benzene, butane, cyclopropane, ethanol, gasoline, hexane, methane, methanol, naphtha, propane, or gases or vapors of equivalent hazard.

Class I, Zone 0, 1 and 2 Gas Groups

For purposes of location classifications for Zones, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group IIA — Atmospheres containing acetone, ammonia, benzene, butane, ethanol, gasoline, hexane, methane, methanol, naphtha, propane, or gases or vapors of equivalent hazard.

Class I, Group IIB — Atmospheres containing ethyl ether, ethylene, or gases or vapors of equivalent hazard.

Class I, Group IIC — Atmospheres containing hydrogen, acetylene, ethyl nitrate, or gases or vapors of equivalent hazard.

The following table compares Class I, Division 1 and 2 Gas Groups with Class I, Zone 0, 1 and 2 Gas Groups. The gases shown are representative of others in the Group.

Division 1 & 2	Zone 0, 1 & 2
A (acetylene)	IIC (acetylene and hydrogen)
B (hydrogen)	IIC (acetylene and hydrogen)
C (ethylene)	IIB (ethylene)
D (propane)	IIA (propane)

Class I Equipment in Class II Locations

Equipment Listed or Classified for use in Class I locations is not necessarily acceptable for Class II locations as it may not be dust-tight or operate at a safe temperature when blanketed with dust.

Class II Equipment

Dust-ignition-proof equipment for use in Class II hazardous (classified) locations, as defined in the CEC, is tested with respect to acceptability of operation in the presence of combustible dusts in air. For purposes of location classification, the CEC groups combustible dust-air mixtures as follows:

Class II, Group E — Atmospheres containing combustible metal dusts, including aluminum, magnesium, and their commercial alloys, or other combustible dusts whose particle size, abrasiveness, and conductivity present an equivalent hazard.

Class II, Group F — Atmospheres containing carbon black, charcoal, coal or coke dusts which have more than 8% total volatile material, or atmospheres containing these dusts sensitized by other materials so that they present an explosion hazard.

Class II, Group G — Atmospheres containing combustible dusts not included in Group E or F, including flour, grain, wood, plastic and chemicals.

Class II Equipment in Class III Locations

Equipment Listed or Classified for Class II, Group G hazardous (classified) locations is also suitable for use in Class III locations, except for 1) those products marked for Division 2 only, and 2) fan-cooled type motors where there is a very large amount of lint or combustible flyings which are likely to choke or clog the air passages of the motor.

Class III Equipment

Equipment for use in Class III hazardous (classified) locations, as defined in the CEC, is tested with respect to acceptability of operation in the presence of easily ignitable fibers or flyings. These fibers or flyings are not likely to be in suspension in the air in quantities sufficient to produce ignitable mixtures.

Intrinsically Safe Circuits and Apparatus, and Associated Apparatus

Intrinsically safe circuits and apparatus may be investigated for any or all of the Classes and Groups as defined in the CEC. In an intrinsically safe circuit, the energy level available in the hazardous (classified) location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated apparatus be installed and interconnected in accordance with the CEC and the instructions provided with the equipment.

Associated apparatus is apparatus in which the circuits are not necessarily intrinsically safe, but which affect the energy in the intrinsically safe circuits and are relied upon to maintain intrinsic safety. Associated apparatus is not intended for use in hazardous (classified) locations unless use in hazardous (classified) locations is specifically indicated.

When interconnecting associated apparatus with equipment for use in the hazardous (classified) location, special attention should be paid to installation instructions, control drawings, or product markings which may limit the types of connections that are acceptable.

Equipment Relating to Hazardous (Classified) Locations

Equipment relating to hazardous (classified) locations includes 1) devices, products, and materials for use in locations where it is necessary for safety to avoid the accumulation of static electricity on personnel or equipment, 2) anesthesia equipment, 3) devices not intended for operation in hazardous (classified) locations, but which are designed to indicate certain potentially dangerous conditions with respect to such locations, 4) electrical equipment not intended for installation in hazardous (classified) locations except for provision of certain intrinsically safe (low energy) circuit extensions as indicated in the individual Listings and Classifications, and 5) paint spray booths.

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AAIZ7)

Suitability of Listed or Classified Equipment

Equipment intended for use in a hazardous (classified) location Class and Group and marked "Division 1" (or "Div. 1") or without any Division indication is suitable for use in both Division 1 and 2 locations as defined in the CEC, and in unclassified locations. Equipment marked "Division 2" (or "Div. 2") is suitable only for Division 2 and unclassified locations. In addition, the CEC permits equipment Listed for Class I, Division 1 to be used in a Class I, Zone 1 or 2 location of the same gas group and with a suitable temperature rating. Equipment Listed for Class I, Division 2 is permitted to be used in a Class I, Zone 2 location of the same gas group and with a suitable temperature rating. Equipment marked for use in or relating to Class I, Zone 0 locations is also suitable for use in or relating to Zones 1 and 2 locations of the same gas group and with suitable temperature rating. Equipment marked for use in or relating to Class I, Zone 1 locations is also suitable for use in or relating to Class I, Zone 2 locations of the same gas group with suitable temperature rating. Equipment marked for use in or relating to Class I, Zone 2 locations is suitable only for use in or relating to those locations classified as Class I, Zone 2, and in unclassified locations.

In addition, equipment for use in hazardous (classified) locations is also suitable for use in unclassified locations.

RELATED EQUIPMENT

For additional information on equipment for use in Zone classified locations, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

For additional information on electrical equipment for use in unclassified locations, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

CLASS I TEMPERATURE CONSIDERATIONS

The marked operating temperature of the equipment is based on either the maximum external temperature or internal temperature of the equipment, depending on the protection technique used.

For Class I, Division 1 and Zone 1 equipment, in general, the operating temperature is the maximum temperature of external surfaces of the equipment. For Class I, Division 2 and Zone 0 or 2 equipment, in general, the operating temperature is the maximum temperature of all parts of the equipment, including internal parts, that may be exposed to the flammable material.

Equipment is required to be marked with the operating temperature or operating temperature code if the maximum operating temperature is more than 100°C (212°F).

This temperature marking should not exceed the ignition temperature of the specific gas or vapor to be encountered.

AMBIENT TEMPERATURES

Unless the equipment is marked otherwise, it has been investigated only for use under normal atmospheric conditions in an ambient temperature within the range of -25°C (-13°F) to +40°C (+104°F). Use of equipment under conditions of higher than normal atmospheric pressure or oxygen partial pressure, use in artificial atmospheres, and use under conditions of excessively high ambient temperatures can increase the likelihood of ignition of flammable atmospheres. In addition, low ambient temperatures may increase explosion pressures developed within explosion-proof equipment.

ENCLOSURE MODIFICATION AND MAINTENANCE

The integrity of an enclosure for explosion-proof or dust-ignition-proof equipment must be maintained. Making holes (other than conduit openings specified in the instructions) or alterations in the enclosure during installation may compromise the ability of the enclosure to contain the explosion or to exclude dust. Holding bolts and threaded parts must be screwed tight. The continued acceptability of the equipment will depend upon proper maintenance.

ENVIRONMENTAL CONSIDERATIONS

Unless the equipment is marked otherwise, it is intended to be used indoors where severe corrosive conditions are not likely to be present. Equipment investigated for severe environmental conditions is marked with an enclosure type designation or other designation indicating the suitability of the equipment in different environments. See **ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT** below for more information.

ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT

The CEC directs that equipment shall not be used in damp or wet locations; locations where exposed to gases, fumes, vapors, liquids or other agents having a deteriorating effect on the equipment; or locations where exposed to excessive temperatures unless the equipment is identified for use in such environments. To assist Authorities Having Jurisdiction, electrical equipment Listed or Classified for use in and relating to hazardous (classified) locations may be investigated for use in certain operating environments and marked with enclosure type numbers. The following table summarizes the intended uses of the various enclosure types:

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AAIZ7)

Provides a Degree of Protection Against the Following Environmental Conditions:	Type of Enclosure															
	1	2	3	3R	3S	3X	3RX	3SX	4	4X	5	6	6P	12	12K	13
Incidental contact with the enclosed equipment	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Falling dirt	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Dripping and light splashing of noncorrosive liquids	—	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Rain, snow and sleet	—	—	X	X	X	X	X	X	X	X	—	X	X	—	—	—
Rain, snow and sleet (external mechanism shall be operable when ice covered)	—	—	—	—	X	—	—	X	—	—	—	—	—	—	—	—
Circulating dust, lint, fibers and flyings	—	—	X	—	X	X	—	X	X	X	—	X	X	X	X	X
Settling airborne dust, lint, fibers and flyings	—	—	X	—	X	X	—	X	X	X	X	X	X	X	X	X
Windblown dust	—	—	X	—	X	X	—	X	X	X	—	X	X	—	—	—
Hosedown and splashing water	—	—	—	—	—	—	—	—	X	X	—	X	X	—	—	—
Oil and coolant seepage	—	—	—	—	—	—	—	—	—	—	—	—	—	X	X	X
Oil or coolant spraying and splashing	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	X
Corrosive agents	—	—	—	—	—	X	X	X	—	X	—	—	X	—	—	—
Occasional temporary submersion	—	—	—	—	—	—	—	—	—	—	—	X	X	—	—	—
Occasional prolonged submersion	—	—	—	—	—	—	—	—	—	—	—	—	X	—	—	—

Enclosures for indoor locations include Types 1, 2, 5, 7, 9, 12, 12K and 13; enclosures for indoor or outdoor locations include Types 3, 3R, 3S, 4, 4X, 6 and 6P.

In some cases, individual appliances and equipment may be marked "Raintight" or "Rainproof" indicating that they have been subjected to a test designed to simulate exposure to beating rain. For equipment designated as "Raintight" such exposure will not result in entrance of water. For equipment designated as "Rainproof" such exposure will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure.

Additionally or alternatively, IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)," describes a system for classifying the degrees of ingress protection (or IP Code) provided by the enclosures of electrical equipment as follows:

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AAIZ7)

First Characteristic Numeral	• Degrees of Protection Against Ingress of Solid Foreign Objects • Degrees of Protection Against Access to Hazardous Parts	Second Characteristic Numeral	Degrees of Protection Against Ingress of Water Harmful Effects
IP0X	• Nonprotected • Nonprotected	IPX0	Nonprotected
IP1X	• 50 mm diameter and greater	IPX1	Vertically dripping
IP2X	• Back of hand • 12.5 mm diameter and greater	IPX2	Dripping (15 degrees tilted)
IP3X	• Finger • 2.5 mm diameter and greater	IPX3	Spraying
IP4X	• Tool • 1.0 mm diameter and greater	IPX4	Splashing
IP5X	• Wire • Dust-protected	IPX5	Jetting
IP6X	• Wire • Dust-tight	IPX6	Powerful jetting
	• Wire	IPX7	Temporary immersion
		IPX8	Continuous immersion

FITTINGS AT SUPPLY ENTRIES

Consideration should be given to the Type or IP rating of fittings used at supply entries. When the manufacturer supplies a fitting with the enclosure, enclosures are to be connected to the wiring system using the fitting provided. If no fitting is provided by the manufacturer, the fitting employed must meet or exceed the Type or IP rating of the enclosure, so that the assembly maintains its protection against contaminants.

PROCESS SEALS

Process-connected electrical equipment provided with seals to prevent the migration of process fluids into the electrical system are either the single-seal or dual-seal types. The construction, testing and marking requirements for process seals are found in ANSI/ISA-12.27.01, "Requirements for Process Sealing Between Electrical Systems and Flammable or Combustible Process Fluids."

REQUIREMENTS

The standards used to investigate these products address the risk of explosion associated with installation in a hazardous (classified) location, as well as the risk of fire and electric shock associated with any electrical equipment. Unless indicated otherwise in the Guide Information for the product category, the basic hazardous (classified) locations standards used to investigate these products with respect to risk of explosion are referenced below for the protection techniques shown.

Protection Technique	Standard
Explosion-proof	CSA-C22.2 No. 30-1986, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"
Dust-ignition-proof	CSA-C22.2 No. 25-1966, "Enclosures for Use in Class II Groups E, F and G Hazardous Locations," or CAN/CSA-E61241-1-1-2002, "Electrical Apparatus for Use in the Presence of Combustible Dust – Part 1-1: Electrical Apparatus Protected by Enclosures and Surface Temperature Limitation – Specification for Apparatus"
Intrinsic safety	CAN/CSA-C22.2 No. 157-1992, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"
Nonincendive circuits, components and equipment; hermetically sealed and sealed components; nonsparking equipment	CSA-C22.2 No. 213-1987, "Non-Incendive Electrical Equipment for Use in Class I, Division 2 Hazardous Locations"
Purged and pressurized	ANSI/NFPA 496, "Standard for Purged and Pressurized Enclosures for Electrical Equipment"

The basic unclassified locations standard used to investigate these products with respect to risk of fire and electric shock is CSA-C22.2 No. 14,

"Industrial Control Equipment," unless specified otherwise in the general Guide Information for each product category.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

GLOBAL POSITIONING SYSTEMS

If provided as part of the equipment, global positioning system (GPS) and/or enhanced 911 (E911) hardware, GPS and/or E911 operating software, or other GPS-related and/or E911-related aspects of equipment have not been investigated for performance or reliability. The equipment has only been investigated for the explosion, fire, shock and casualty hazards required by the applicable hazardous (classified) locations standards. Certification of the equipment does not cover the performance or reliability of any GPS and/or E911 hardware, GPS and/or E911 operating software, or other GPS-related and/or E911-related aspects of the equipment. **UL makes no representations, warranties or certifications whatsoever regarding the performance or reliability of any GPS-related and/or E911-related functions of the equipment.**

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

MARINE EQUIPMENT

Certain equipment has been specifically investigated and certified for use aboard Canadian marine vessels. Such equipment has been investigated in accordance with the applicable requirements of UL and the Canadian Coast Guard. For additional information, see the general Guide Information for the specific product category. Equipment bearing UL's Marine Mark for Canada is suitable for use only with stranded copper wire.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL EQUIPMENT FOR USE IN ORDINARY LOCATIONS CERTIFIED FOR CANADA (AALZ7)

GENERAL

Electrical equipment for use in unclassified (ordinary) locations is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). Electrical equipment for use in hazardous (classified) locations, as defined by the CEC, may also be used in ordinary locations.

INVESTIGATION REQUIREMENTS AND STANDARDS

Electrical equipment for use in ordinary locations has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the CEC.

Some products are certified for uses not within the scope of the CEC. Such products are investigated for the specifications or the use conditions indicated in the general Guide Information for each product category.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

The general Guide Information for each product category describes the limitations relative to the products covered, such as current, voltage and horsepower limits, markings, special descriptions and installation provisions.

INSTALLATION REQUIREMENTS

Ordinary locations, as defined in the CEC, include:

Damp Location — An exterior or interior location that is normally or periodically subject to condensation of moisture in, on, or adjacent to electrical equipment and includes partially protected locations under canopies, marquees, roofed open porches, and similar locations.

Dry Location — A location not normally subject to dampness, but may include a location subject to temporary dampness as in the case of a building under construction, provided ventilation is adequate to prevent an accumulation of moisture.

Wet Location — A location in which uncontrolled liquids may drip, splash, or flow on or against electrical equipment.

Outdoor Use — In general, individual appliances and equipment have been investigated only for use indoors, in dry locations. An exception is where outdoor use is specifically permitted by the Rule of the CEC concerned with the product installation. See also the general Guide Information for the product category or included in the individual Listing. In some cases the title (e.g., Snow Movers, Swimming Pool Fixtures) indicates the conditions for which the product has been investigated.

Cord- and plug-connected appliances obviously intended for outdoor use, such as gardening appliances, are not intended for use in the rain, and should be stored indoors when not in use.

Enclosure Types

Rule 2-400 of the CEC specifies that equipment shall be identified for use in certain operating environments. Rule 2-112 provides guidance regarding protection against corrosion and Table 65 provides the basis for selecting motor controller enclosure types for use in specific locations. To assist inspection authorities, UL requires type designations on power distribution and control equipment enclosures such as cabinets and cutout boxes, enclosed panelboards or switchboards, meter sockets, enclosed circuit breakers or switches, industrial control and other equipment. The following table summarizes the intended uses of the various type enclosures for other than hazardous locations:

Enclosure Type Number	Provides a Degree of Protection Against the Following Environmental Conditions*
1	Indoor use
2	Indoor use, limited amounts of falling water
3R	Outdoor use, undamaged by the formation of ice on the enclosure**
3RX	Same as 3R plus resists corrosion
3	Same as 3R plus windblown dust
3X	Same as 3 plus resists corrosion
3S	Same as 3R plus windblown dust, external mechanisms remain operable while ice laden
3SX	Same as 3S plus resists corrosion
4	Outdoor use, splashing water, windblown dust, hose-directed water, undamaged by the formation of ice on the enclosure**
4X	Same as 4 plus resists corrosion
5	Indoor use to provide a degree of protection against settling airborne dust, falling dirt, and dripping noncorrosive liquids
6	Same as 3R plus entry of water during temporary submersion at a limited depth
6P	Same as 3R plus entry of water during prolonged submersion at a limited depth
12, 12K	Indoor use, dust, dripping noncorrosive liquids
13	Indoor use, dust spraying water, oil and noncorrosive coolants

*All type enclosures provide a degree of protection against ordinary corrosion and against accidental contact with the enclosed equipment when doors of covers are closed and in place. All type enclosures provide protection against a limited amount of falling dirt.

**All outdoor type enclosures provide a degree of protection against rain, snow and sleet. Outdoor enclosures are also suitable for use indoors if they meet the environmental conditions present.

An enclosure that complies with the requirements for more than one type of enclosure may be marked with multiple designations.

Enclosures marked with a type may also be marked as follows:

- A Type 1 enclosure may be marked "Indoor Use Only"
- A Type 3, 3X, 3S, 3SX, 4, 4X, 6 or 6P enclosure may be marked "Raintight"
- A Type 3R or 3RX enclosure may be marked "Rainproof"

- A Type 4, 4X, 6 or 6P enclosure may be marked "Watertight"
- A Type 3X, 3RX, 3SX, 4X or 6P enclosure may be marked "Corrosion Resistant"
- A Type 2, 5, 12, 12K or 13 enclosure may be marked "Driptight"
- A Type 3, 3X, 3S, 3SX, 5, 12K, or 13 enclosure may be marked "Dusttight"

For equipment designated "Raintight," testing designed to simulate exposure to beating rain will not result in entrance of water. For equipment designated "Rainproof," testing designed to simulate exposure to beating rain will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure. "Watertight" equipment is so constructed that water does not enter the enclosure when subjected to a stream of water. "Corrosion resistant" equipment is so constructed that it provides degree of protection against exposure to corrosive agents such as salt spray.

"Driptight" equipment is so constructed that falling moisture or dirt does not enter the enclosure. "Dusttight" equipment is so constructed that circulating or airborne dust does not enter the enclosure.

Sizes and Ratings

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

Marked ratings of utilization equipment include ampere, wattage or volt-ampere ratings. Motor-operated utilization equipment may also be marked with a horsepower rating. The actual marked ratings (other than the horsepower rating) and other markings or instructions, if any, are to be used to select branch-circuit conductors, branch-circuit overcurrent protection, control devices and disconnecting means.

The ampere or wattage marking on power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Appliance and Utilization Equipment Terminations

Except as noted in the general Guide Information for some product categories, most terminals, unless marked otherwise, are for use only with copper wire. If aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits as specified in Table 2 of the CEC. If the termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Distribution and Control Equipment Terminations

Most terminals are suitable for use only with copper wire. Where aluminum wire can or shall be used (some crimp terminals may be Listed only for aluminum wire), there is marking to indicate this. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted in the following paragraphs or in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C ampacities for wire size Nos. 14-1 AWG, and 75°C ampacities for wire size Nos. 1/0 AWG and larger, as specified in Table 2 of the CEC.

Some distribution and control equipment is marked to indicate the required temperature rating of each field-installed conductor. If the equipment, normally intended for connection by wire sizes within the range 14-1 AWG, is marked "75C" or "60/75C," it is intended that 75°C insulated wire may be used at full 75°C ampacity. Where the connection is made to a circuit breaker or switch within the equipment, such a circuit breaker or switch must also be marked for the temperature rating of the conductor.

A 75°C conductor temperature marking on a circuit breaker or switch normally intended for wire sizes 14-1 AWG does not in itself indicate that 75°C insulated wire can be used unless 1) the circuit breaker or switch is used by itself, such as in a separate enclosure, or 2) the equipment in which the circuit breaker or switch is installed is also so marked.

A 75 or 90°C temperature marking on a terminal (e.g., AL7, CU7AL, AL7CU or AL9, CU9AL, AL9CU) does not in itself indicate that 75 or 90°C insulated wire can be used unless the equipment in which the terminals are installed is marked for 75 or 90°C.

Higher temperature rated conductors than specified may be used if the size is based on the above statements.

Copper Pigtail Leads — Copper pigtail leads may be used with aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Wiring Devices — Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper conductors only. Terminals marked "CO/ALR" are for use with aluminum and copper conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper conductors, both solid and stranded, unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum and copper conductors.

Wire Connectors — Combinations of dissimilar conductors in terminal or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing. See also the information under Wire Connectors and Soldering Lugs Certified for Canada (ZMVV7).

Terminals — Product terminals, including wire connectors and terminal screws, are acceptable for connection of only one conductor, unless there is marking or a wiring diagram indicating the number of conductors which may be connected.

Tightening Torque — Some equipment may be marked to show a tightening torque for wire connectors intended for use with field wiring.

Supply Cords — When flexible supply cords or cord sets are replaced on utilization equipment and appliances, the replacement should be of the same type, AWG size, voltage rating and temperature rating as originally used.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

MARINE EQUIPMENT

Certain equipment has been specifically investigated and certified for use aboard Canadian marine vessels, and for potential conformity to the installation and use provisions of the Canadian Coast Guard Technical Publication TP-1332. For additional information, see the general Guide Information for the specific product category. Equipment bearing UL's Marine Mark for Canada is suitable for use only with stranded copper wire.

* *

MECHANICAL EQUIPMENT AND ASSOCIATED PRODUCTS CERTIFIED FOR CANADA (AAME7)

GENERAL

Mechanical equipment includes mechanically operated and gasoline-powered products, worker safety-related products, toys, and other products that have been investigated for mechanical strength and operation with regard to personal injury and for other specific hazards.

This equipment is intended for use only as described in the general Guide Information for each product category and individual Listings. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

****

MECHANICAL EQUIPMENT AND ASSOCIATED PRODUCTS CERTIFIED FOR CANADA (AAME7)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARINE PRODUCTS CERTIFIED FOR CANADA (AAMP7)

GENERAL

Marine products are specifically investigated and certified for use aboard Canadian marine vessels, and for potential conformity to the installation and use provisions of the Canadian Coast Guard Technical Publication TP-1332.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

In addition, certain products have been investigated with reference to environmental and public health effects and for potential conformity to the installation and use provisions of applicable environmental and public health requirements, if so indicated in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AANZ7)

GENERAL

Electrical equipment intended for use in and relating to Class I, Zone 0, 1 and 2 hazardous (classified) locations has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). Attention is called to the limitations of the individual Listings and Classifications specified in the general Guide Information for each product category, such as current, voltage, horsepower limits, markings, special descriptions and installation provisions.

Unless equipment is identified in 1) the product category title as relating to Zone classified hazardous locations or 2) the individual Listings as apparatus for use in unclassified locations, all product categories contain electrical equipment for use in Class I, Zone 0, 1 and 2 hazardous (classified) locations.

Regarding electrical equipment for use in and relating to Division classified locations, some general technical information is provided together with the specific technical information provided regarding Zone classified locations. For additional specific technical information regarding Division classified locations, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

Electrical equipment for use in and relating to hazardous (classified) locations must also comply with the applicable requirements for the same type of equipment for use in unclassified locations. For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

HAZARDOUS (CLASSIFIED) LOCATIONS — GENERAL INFORMATION

Class I hazardous (classified) locations, as defined in the CEC, are locations where fire or explosion hazards may exist due to the presence of flammable gases, vapors or flammable liquids. Equipment specifically investigated for hazardous (classified) locations is identified by a single Class (Class I) that is divided into Zones (0, 1 and 2) and gas Groups (IIA, IIB and IIC), as described in the CEC. Essentially, if the location has a flammable or combustible atmosphere present continuously or for long periods of time, it is a Zone 0 location. If the atmosphere is flammable or combustible and likely to exist under normal conditions, it is a Zone 1 location. If the atmosphere of flammable or combustible gases or vapors is not likely to exist in normal operation, it is a Zone 2 location.

Protection against explosion in hazardous (classified) locations requires that all equipment that could be exposed to the flammable or combustible atmospheres be of a type suitable for installation in such locations. The Class, Zone and Groups for which equipment has been Listed or Classified is shown in the individual Listings and Classifications under the respective categories and is marked on the equipment itself.

Gas and Vapor Groups

The following paragraphs group flammable and explosive mixtures of specific gases and vapors in accordance with the CEC classifications. For a complete list of group classifications for Class I materials, see IEC 60079-12, "Classification of Mixtures of Gases or Vapors with Air According to their Maximum Experimental Safe Gaps and Minimum Igniting Currents."

Equipment for use in Class I, Zone 0, 1 and 2 hazardous (classified) locations, as defined in the CEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group IIC — Atmospheres containing hydrogen, acetylene, ethyl nitrate, or gases or vapors of equivalent hazard.

Class I, Group IIB — Atmospheres containing ethyl ether, ethylene, or gases or vapors of equivalent hazard.

Class I, Group IIA — Atmospheres containing acetone, ammonia, benzene, butane, ethanol, gasoline, hexane, methane, methanol, naphtha, propane, or gases of vapors of equivalent hazard.

Intrinsically Safe Circuits and Apparatus, and Associated Apparatus

Intrinsically safe circuits and apparatus may be investigated for any or all of the Class I Zones and Groups as defined in the CEC. In an intrinsically safe circuit, the energy level available in the hazardous (classified) location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated apparatus be installed and interconnected in accordance with the CEC and the instructions provided with the equipment.

Associated apparatus is apparatus in which the circuits are not necessarily intrinsically safe, but which affect the energy in the intrinsically safe circuits and are relied upon to maintain intrinsic safety. Associated apparatus is not intended for use in hazardous (classified) locations unless use in hazardous (classified) locations is specifically indicated.

When interconnecting associated apparatus with equipment for use in the hazardous (classified) location, special attention should be paid to installation instructions, control drawings, or product markings which may limit the types of connections that are acceptable.

Equipment Relating to Hazardous (Classified) Locations

Equipment relating to Class I, Zone 0, 1 and 2 hazardous (classified) locations includes electrical equipment not intended for installation in hazardous (classified) locations except for provision of certain intrinsically safe (low energy) circuit extensions as indicated in the individual Listings and Classifications.

Suitability of Listed or Classified Equipment

Equipment marked for use in or relating to Class I, Zone 0 locations is also suitable for Zone 1 and 2 locations of the same gas group and with similar temperature marking, and in unclassified locations. Equipment marked for use in or relating to Class I, Zone 1 locations is also suitable for use in or relating to Class I, Zone 2 locations of the same gas group with similar temperature marking, and in unclassified locations.

Equipment marked for use in or relating to Class I, Zone 2 locations is suitable only for use in or relating to those locations classified as Class I, Zone 2 and in unclassified locations. In addition, the CEC states that equipment that is Listed for Zone 0, 1 or 2 is permitted in a Class I, Division 2 location of the same gas group and with a suitable temperature rating.

In addition, equipment for use in hazardous (classified) locations is also suitable for use in unclassified locations.

RELATED EQUIPMENT

For additional information on equipment for use in Division classified locations, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

For additional information on electrical equipment for use in unclassified locations, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

PROTECTION TECHNIQUES

Equipment for use in Class I, Zone 0, 1 or 2 locations may employ one or more of the following protection techniques:

Location Classification	Protection Technique	Protection Technique Identification
Zone 0	Intrinsic safety (2 fault)	ia
Zone 1	Intrinsic safety (1 fault)	ib
	Flameproof	d
	Purged and pressurized	px, py
	Oil immersion	o
	Increased safety	e
	Encapsulation	m
	Powder filling	q
Zone 2	Nonsparking	nA
	Sparking with protected contacts	nC
	Restricted breathing	nR
	Energy-limited	nL
	Purged and pressurized	pz
Unclassified	Associated apparatus with I.S. connections for Zone 0 (2 fault)	[ia]
	Associated apparatus with I.S. connections for Zone 1 (1 fault)	[ib]

Intrinsic Safety — Equipment in which any spark or thermal effect produced under normal or fault conditions is incapable of causing ignition of the atmosphere. See **Intrinsically Safe Circuits and Apparatus, and Associated Apparatus** above for more information.

Flameproof — The enclosure of the equipment will withstand an internal explosion, and prevent passage of flame to the surrounding atmosphere. Care must be taken to maintain the length and clearance (gap) of flameproof joints in service.

Purged and Pressurized — A protective inert gas is maintained inside the equipment enclosure at a pressure above that of the surrounding atmosphere, in order to prevent ingress of the explosive gas or vapor.

Oil Immersion — Arcing contacts are immersed in a protective liquid.

Increased Safety — The equipment contains no normally arcing parts, and additional measures (such as larger spacings between wiring connections) are taken to prevent the possibility of high temperatures or sparks. A minimum IP rating of IP 54 is required.

Encapsulation — Arcing contacts are completely surrounded by an encapsulating material.

Powder Filling — Arcing contacts are surrounded by a filling material (glass or quartz powder).

Nonsparking — The equipment has no normally arcing parts or thermal effects capable of ignition.

Sparking with Protected Contacts — Arcing contacts are in nonincendive circuits, or are inside a hermetically sealed container or sealed device.

Restricted Breathing — The enclosure relies on tight seals and gaskets to prevent diffusion of the explosive atmosphere into the equipment enclosure. Provision for checking that the restricted breathing properties of the enclosure are maintained is provided.

Energy-Limited — No spark or thermal effect is capable of causing ignition of a given gas or vapor under specified conditions.

The one- or two-letter identification of the protection technique is marked on the product. Products employing multiple protection techniques are marked with all applicable identifications. For example, a control station containing a flameproof switch and an encapsulated pilot light, mounted in an increased safety enclosure, will be marked with all three protection techniques: "edm."

TEMPERATURE CONSIDERATIONS

For equipment investigated for Class I, Zone 0, 1 and 2 hazardous (classified) locations, the operating temperature is the maximum temperature of any external or internal surface to which the surrounding atmosphere has access, based on the protection method employed.

Equipment is required to be marked with the operating temperature or operating temperature code.

The marked temperature should not exceed the ignition temperature of the specific gas or vapor mixture to be encountered.

AMBIENT TEMPERATURES

Unless the equipment is marked otherwise, it has been investigated only for use under normal atmospheric conditions in an ambient temperature within the range of -20°C (-4°F) to +40°C (+104°F). Use of flameproof equipment under conditions of higher than normal atmospheric pressure or oxygen partial pressure, use in artificial atmospheres, and use under conditions of excessively high ambient temperatures can increase the likelihood of ignition of flammable atmospheres. In addition, low ambient temperatures may increase explosion pressures developed within the equipment. Plastic parts of enclosures or encapsulating materials may not maintain their integrity in excessively high or low ambient, unless marked otherwise.

ENCLOSURE MODIFICATION AND MAINTENANCE

The integrity of an enclosure must be maintained. Making holes (other than conduit openings specified in the instructions) or alterations in the enclosure during installation may compromise the ability of a flameproof enclosure to contain an explosion. Most other protection techniques require a minimum IP rating and alterations in the enclosure may impair the enclosure's ability to protect against ingress of contaminants or water. See **ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT** below for more information. Holding bolts and threaded parts must be screwed tight. The continued acceptability of the equipment will depend upon proper maintenance.

ENVIRONMENTAL CONSIDERATIONS

Unless the equipment is marked otherwise, it is intended to be used indoors where severe corrosive conditions are not likely to be present. Equipment investigated for severe environmental conditions is marked with an enclosure type designation or other designation indicating the suitability of the equipment in different environments. See **ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT** below for more information.

ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT

The CEC directs that equipment shall not be used in damp or wet locations; locations where exposed to gases, fumes, vapors, liquids or other agents having a deteriorating effect on the equipment; or locations where exposed to excessive temperatures unless the equipment is identified for use in such environments. To assist Authorities Having Jurisdiction, electrical equipment Listed or Classified for use in and relating to hazardous (classified) locations may be investigated for use in certain operating environments and marked with enclosure type numbers. The following table summarizes the intended uses of the various enclosure types:

Provides a Degree of Protection Against the Following Environmental Conditions:	Type of Enclosure															
	1	2	3	3R	3S	3X	3RX	3SX	4	4X	5	6	6P	12	12K	13
Incidental contact with the enclosed equipment	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Falling dirt	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AANZ7)

Provides a Degree of Protection Against the Following Environmental Conditions:	Type of Enclosure															
	1	2	3	3R	3S	3X	3RX	3SX	4	4X	5	6	6P	12	12K	13
Dripping and light splashing of noncorrosive liquids	—	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Rain, snow and sleet	—	—	X	X	X	X	X	X	X	X	—	X	X	—	—	—
Rain, snow and sleet (external mechanism shall be operable when ice covered)	—	—	—	—	X	—	—	X	—	—	—	—	—	—	—	—
Circulating dust, lint, fibers and flyings	—	—	X	—	X	X	—	X	X	X	—	X	X	X	X	X
Settling airborne dust, lint, fibers and flyings	—	—	X	—	X	X	—	X	X	X	X	X	X	X	X	X
Windblown dust	—	—	X	—	X	X	—	X	X	X	—	X	X	—	—	—
Hosedown and splashing water	—	—	—	—	—	—	—	—	X	X	—	X	X	—	—	—
Oil and coolant seepage	—	—	—	—	—	—	—	—	—	—	—	—	—	X	X	X
Oil or coolant spraying and splashing	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	X
Corrosive agents	—	—	—	—	—	X	X	X	—	X	—	—	X	—	—	—
Occasional temporary submersion	—	—	—	—	—	—	—	—	—	—	—	X	X	—	—	—
Occasional prolonged submersion	—	—	—	—	—	—	—	—	—	—	—	—	X	—	—	—

In some cases, individual appliances and equipment may be marked "Raintight" or "Rainproof," indicating that they have been subjected to a test designed to simulate exposure to beating rain. For equipment designated as "Raintight" such exposure will not result in entrance of water. For equipment designated as "Rainproof" such exposure will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure.

Enclosures for indoor locations include Types 1, 2, 5, 7, 9, 12, 12K and 13; enclosures for indoor or outdoor locations include Types 3, 3R, 3S, 4, 4X, 6 and 6P.

Additionally or alternatively, IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)," describes a system for classifying the degrees of ingress protection (or IP Code) provided by the enclosures of electrical equipment as follows:

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AANZ7)

First Characteristic Numeral	• Degrees of Protection Against Ingress of Solid Foreign Objects • Degrees of Protection Against Access to Hazardous Parts	Second Characteristic Numeral	Degrees of Protection Against Ingress of Water Harmful Effects
IP0X	• Nonprotected	IPX0	Nonprotected
IP1X	• Nonprotected • 50 mm diameter and greater	IPX1	Vertically dripping
IP2X	• Back of hand • 12.5 mm diameter and greater • Finger	IPX2	Dripping (15 degrees tilted)
IP3X	• 2.5 mm diameter and greater • Tool	IPX3	Spraying
IP4X	• 1.0 mm diameter and greater • Wire	IPX4	Splashing
IP5X	• Dust-protected • Wire	IPX5	Jetting
IP6X	• Dust-tight • Wire	IPX6	Powerful jetting
		IPX7	Temporary immersion
		IPX8	Continuous immersion

FITTINGS AT SUPPLY ENTRIES

Consideration should be given to the Type or IP rating of fittings used at supply entries. When the manufacturer supplies a fitting with the enclosure, enclosures are intended to be connected to the wiring system using the fitting provided. If no fitting is provided by the manufacturer, the fitting employed must meet or exceed the Type or IP rating of the enclosure, so that the assembly maintains its protection against contaminants.

PROCESS SEALS

Process-connected electrical equipment provided with seals to prevent the migration of process fluids into the electrical system are either the single-seal or dual-seal types. The construction, testing and marking requirements for process seals are found in ANSI/ISA-12.27.01, ''Requirements for Process Sealing Between Electrical Systems and Flammable or Combustible Process Fluids.''

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate these products with respect to risk of explosion are indicated below for the location classifications and protection techniques shown. Note that for all equipment, CAN/CSA-C22.2 No. 60079-0 (2011), ''Explosive Atmospheres – Part 0: Equipment – General Requirements,'' is also used.

Location Classification	Canadian Standard	Protection Technique Identification
Zone 0		ia
	CAN/CSA-C22.2 No. 60079-11 (2011),''Explosive Atmospheres – Part 11: Equipment Protection by Intrinsic Safety 'i'"	
Zone 1		d
	CAN/CSA-C22.2 No. 60079-1 (2011), "Explosive Atmospheres – Part 1: Equipment Protection by Flameproof Enclosures 'd'"	
		px, py
	CAN/CSA-C22.2 No. 60079-2 (2012), "Explosive Atmospheres – Part 2: Equipment Protection by Pressurized Enclosures 'p'"	
		q
	CAN/CSA-C22.2 No. 60079-5 (2011), "Explosive Atmospheres – Part 5: Equipment Protection by Powder Filling 'q'"	

Location Classification	Canadian Standard	Protection Technique Identification
		o
	CAN/CSA-C22.2 No. 60079-6 (2011), "Explosive Atmospheres – Part 6: Equipment Protection by Oil Immersion 'o'"	
		e
	CAN/CSA-C22.2 No. 60079-7 (2012), "Explosive Atmospheres – Part 7: Equipment Protection by Increased Safety 'e'"	
		ib
	CAN/CSA-C22.2 No. 60079-11 (2011),"Explosive Atmospheres – Part 11: Equipment Protection by Intrinsic Safety 'i'"	
		m
	CAN/CSA-C22.2 No. 60079-18 (2012), "Explosive Atmospheres – Part 18: Equipment Protection by Encapsulation 'm'"	
Zone 2		pz
	CAN/CSA-C22.2 No. 60079-2 (2012), "Explosive Atmospheres – Part 2: Equipment Protection by Pressurized Enclosures 'p'"	
		nA, nC, nL, nR, nZ
	CAN/CSA-C22.2 No. 60079-15 (2012), "Electrical Apparatus for Explosive Gas Atmospheres – Part 15: Construction, Test and Marking of Type of Protection 'n' Electrical Apparatus"	
Unclassified		[ia], [ib]
	CAN/CSA-C22.2 No. 60079-11 (2011),"Explosive Atmospheres – Part 11: Equipment Protection by Intrinsic Safety 'i'"	

The basic unclassified locations standard used to investigate these products with respect to risk of fire and electric shock is CSA-C22.2 No. 14, "Industrial Control Equipment,'' unless otherwise specified in the general Guide Information for each product category.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

GLOBAL POSITIONING SYSTEMS

If provided as part of the equipment, global positioning system (GPS) and/or enhanced 911 (E911) hardware, GPS and/or E911 operating software, or other GPS-related and/or E911-related aspects of equipment have not been investigated for performance or reliability. The equipment has only been investigated for the explosion, fire, shock and casualty hazards required by the applicable hazardous (classified) locations standards. Certification of the equipment does not cover the performance or reliability of any GPS and/or E911 hardware, GPS and/or E911 operating software, or other GPS-related and/or E911-related aspects of the equipment. **UL makes no representations, warranties or certifications whatsoever regarding the performance or reliability of any GPS-related and/or E911-related functions of the equipment.**

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switch-

board may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

MARINE EQUIPMENT

Certain equipment has been specifically investigated and certified for use aboard Canadian marine vessels. Such equipment has been investigated in accordance with the applicable requirements of UL and the Canadian Coast Guard. For additional information, see the general Guide Information for the specific product category. Equipment bearing UL's Marine Mark for Canada is suitable for use only with stranded copper wire.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING AND ASSOCIATED PRODUCTS CERTIFIED FOR CANADA (AAPP7)

GENERAL

Plumbing products include plumbing fixtures, fixture fittings, pipe and fittings, and appliances, as well as accessories associated with such equipment.

This equipment is intended for use only as described in the general Guide Information for each product category and individual Listings. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

In addition, certain products have been investigated with reference to environmental and public health effects and for potential conformity to the installation and use provisions of applicable environmental and public health requirements, if so indicated in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 2 of the CEC should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Terminations — Copper pigtail leads may be used with aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper conductors only. Terminals marked "CO/ALR" are for use with aluminum or copper conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum or copper conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the CEC, unless specifically identified as suitable for use in hazardous locations.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAMMABLE AND COMBUSTIBLE LIQUIDS AND GASES EQUIPMENT CERTIFIED FOR CANADA (AAPQ7)

GENERAL

This equipment is intended for the storing, containing, conveying, dispensing, regulating or use of flammable and combustible gases, liquids or waste materials. This equipment also includes chemical products that are Classified with respect to fire hazard.

This equipment is intended for use only with the liquids and gases described in the general Guide Information for each product category and individual Listings. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment with other liquids and gases, and in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category, has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

FLAMMABLE AND COMBUSTIBLE LIQUIDS AND GASES EQUIPMENT CERTIFIED FOR CANADA (AAPQ7)

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the information at the beginning of certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 2 of the CEC should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Terminations — Copper pigtail leads may be used with aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper conductors only. Terminals marked "CO/ALR" are for use with aluminum or copper conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum or copper conductors.

Combination of dissimilar conductors in terminal or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the CEC, unless specifically identified as suitable for use in hazardous locations.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOFING MATERIALS AND SYSTEMS CERTIFIED FOR CANADA (AARM7)

GENERAL

Roofing materials and systems are investigated for protection from external fire exposure. Roof deck assemblies are investigated for performance under internal fire exposures and for uplift resistance.

These materials are intended for use only in specific construction designs as described in the general Guide Information for each product category and individual Listings. The use of the materials in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a

published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC), and the applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACCESS CONTROL SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AATF7)

USE

This category covers units for access control systems, providing a means of regulating or controlling entry into an area, or access to or the use of a device by electrical, electronic and/or mechanical means.

Intrinsically safe systems covered under this category have been investigated on the basis that all equipment connected to the system is certified as part of the system unless otherwise indicated and is used as intended.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Access Control System Unit for Hazardous Locations,'' ''Access Control System (Associated Apparatus)'' or ''Access Control System Unit (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ADAPTERS, VEHICLE BATTERY CERTIFIED FOR CANADA (AATX7)

USE

This category covers portable adapters that are intended to be supplied from the battery-powered electrical system of a vehicle. Connection to a vehicle electrical system is by means of a connector intended for insertion into a cigarette lighter receptacle or vehicle power outlet. Vehicle battery adapters may supply output for appliances such as portable computers, telephones, radios, tape players, battery chargers and tools.

Products covered under this category include (1) cord assemblies consisting of the connector for insertion into a receptacle, a flexible cord and connector intended for connection to an appliance, (2) units consisting of the connector for insertion into a receptacle, a flexible cord and permanently attached filtering or regulating circuitry, which may include an additional enclosure, output cord and connector or battery receptacle.

This category does not cover (1) products intended for marine use in areas where ignition-protected equipment is required, and (2) power inverters intended to be supplied from the battery-powered electrical system of a vehicle; see Power Converters/Inverters and Power Converter/Inverter Systems Certified for Canada (QPPY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1, ''General Use Power Supplies,'' in addition to one or more of the following:

CSA Technical Information Letter No. I-35, ''Interim Certification Requirements for Inverters for Use in Vehicles''
CAN/CSA-C22.2 No. 107.2, ''Battery Chargers''
CAN/CSA-C22.2 No. 223, ''Power Supplies with Extra-Low-Voltage Class 2 Outputs''
CAN/CSA-C22.2 No. 60950-1 (2007), ''Information Technology Equipment – Safety – Part 1: General Requirements''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Vehicle Battery Adaptor,'' ''Vehicle Battery Adapter'' (or ''VBA''), ''Vehicle Power Adapter'' (or ''VPA'') or ''Cigarette Lighter DC Power Supply,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ADVERTISING DISPLAYS, NONILLUMINATED CERTIFIED FOR CANADA (AAVU7)

USE

This category covers electrically operated, nonilluminated units intended to draw attention to, or to display, demonstrate or advertise products.

Advertising displays intended for permanent installation indoors only are so marked. Cord-and-plug-connected advertising displays suitable for outdoor use are marked ''Outdoor.''

RELATED PRODUCTS

Advertising displays including illumination are covered under Signs Certified for Canada (UXYT7).

Advertising displays that include a changing-message sign are covered under Signs Certified for Canada (UXYT7) and Signs, Changing Message Certified for Canada (UYFS7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), ''Portable and Stationary Electric Signs and Displays.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Advertising Display,'' ''Non-Illuminated Advertising Display'' or ''Animated Display,'' or other appropriate product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CONDITIONING EQUIPMENT CERTIFIED FOR CANADA (AAYZ7)

ACCESSORIES, AIR CONDITIONING EQUIPMENT CERTIFIED FOR CANADA (ABFY7)

GENERAL

This category covers accessories intended for installation only on certified equipment as designated in the individual certifications of the equipment and accessory. These accessories are intended primarily for field installation, but may be factory installed.

The equipment on which an accessory covered under this category may be field installed is marked to indicate that it is certified for use with the specific accessory as designated by model, catalog number, part number, etc. in this category. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed.

Information concerning field-wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 236 (2005), ''Heating and Cooling Equipment,'' in addition to the standards applicable to the heating and cooling equipment on which the heater assemblies are intended to be installed.

Alternatively, single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Electrical Appliances, Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60335-2-40 (2012), ''Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Air Conditioning Equipment Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACCESSORIES, AIR-DUCT MOUNTED CERTIFIED FOR CANADA (ABQK7)

USE AND INSTALLATION

This category covers products consisting of parts and/or subassemblies employing ultraviolet lamps for the purpose of treating air by the effects of ultraviolet radiation and having provisions for mounting on heating and ventilation ducts used for air distribution.

This equipment is intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

PRODUCT MARKINGS

Information concerning field-wiring connections, mounting location, installation clearances, etc., are either marked on the accessory and/or in detailed installation instructions accompanying each accessory.

Products intended for use with germicidal lamps are marked ''This product (fixture) is designed for use with germicidal lamps and must be installed in compliance with competent technical directions so that the user's eye and bare skin will not be subjected to ultraviolet rays.''

Accessories, Air-duct Mounted Certified for Canada (ABQK7)−*Continued*

FACTORS NOT INVESTIGATED

The health aspects associated with the use of these products and their ability to aid in disinfection of environmental air have not been investigated. This limitation is specified in the instruction manual and on the product for all products covered under this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12 (1982), ''Portable Luminaires,'' CSA-C22.2 No. 250.0 (2004), ''Luminaires,'' and CAN/CSA-C22.2 No. 236 (2005), ''Heating and Cooling Equipment,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

AIR DUCT MOUNTED ACCESSORY
WITH RESPECT TO ELECTRIC SHOCK, FIRE AND CASUALTY HAZARDS ONLY
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CONDITIONERS, PACKAGED TERMINAL CERTIFIED FOR CANADA (ACKZ7)

USE AND INSTALLATION

This category covers packaged terminal air conditioners rated 600 V or less, intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' They consist of a wall sleeve and a combination of assemblies designed as a unit, and are intended as the prime source of refrigeration and dehumidification. They may also have provision for heating by hot water, reverse cycle refrigeration, steam, electricity or gas-fired burner(s). They are intended for installation through walls and are basically intended to serve a single room, zone or space although some units may have provision to additionally serve an adjacent room. These units employ alternating current, hermetic refrigerant motor compressors with factory-charged refrigeration systems and include a means for ventilation and circulating air.

This category does not cover equipment intended for connection to duct systems for the purpose of providing central cooling and/or heating.

Permanently connected units are intended to be connected to a branch circuit protected by overcurrent devices as specified on the data plate. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If time-delay fuses are required for restarting, the unit is marked to this effect.

Cord-connected units that require a circuit breaker or time-delay fuses to permit restarting are marked to this effect.

Units employing gas heat are intended to be installed in accordance with the installation instructions and markings on the appliance, and are intended to be connected to a gas supply of the type specified on the appliance. Equipment is intended to be installed in accordance with the current edition of ANSI Z223.1/NFPA 54, ''National Fuel Gas Code.''

RELATED PRODUCTS

See Air Conditioners, Room Certified for Canada (ACOT7) and Gas-fired Room Heaters, Vented Certified for Canada (LPNH7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate the refrigeration portion of the products in this category are CSA-C22.2 No. 117, ''Room Air Conditioners,'' and CSA-C22.2 No. 236, ''Heating and Cooling Equipment,'' or CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Appliances, Part 1: General Requirements,'' and CAN/CSA-C22.2 No.

Air Conditioners, Packaged Terminal Certified for Canada (ACKZ7)−*Continued*

60335-2-40 (2012), ''Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.''

The basic standard used to investigate the gas heating portion of the products in this category, if provided, is the current edition and effective addenda thereto of ANSI Z21.86/CSA 2.32, ''Vented Gas-Fired Space Heating Appliances.''

UL MARK

The Listing Mark and Gas-fired Listing Mark, if gas heat is provided, of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Packaged Terminal Air Conditioner,'' ''Section of Packaged Terminal Air Conditioner'' or ''Cooling Portion of Packaged Terminal Air Conditioner.''

The Gas-fired Listing Mark for the gas heating portion of these products, if provided, includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name ''Gas Heating Portion of Packaged Terminal Air Conditioner,'' and the standard designation ''ANS Z21.86(+) CSA-2.32(+)-(++) Fan-Type Direct Vent Wall Furnace.''

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CONDITIONERS, ROOM CERTIFIED FOR CANADA (ACOT7)

GENERAL

This category covers room air conditioners and recreational vehicle (RV) air conditioners. They are encased assemblies designed as a unit and intended as the prime source of cooling and dehumidification, intended to serve a single room, zone, or space. These products may be self-contained or split-system. Accessories intended for use with room air conditioners are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Room air conditioners are intended for installation in windows, through walls, or as consoles located in or adjacent to the room, zone, or space to be conditioned. They may also be split-system, where the evaporator section is installed inside, and the condensing unit is installed outside. The two sections are connected by refrigerant piping and electrical wiring.

These units employ hermetic refrigerant motor-compressors with factory-charged refrigeration systems and include a means for circulating air. They may also have provision for electric heating, reverse cycle heating, and ventilation. Room air conditioners are not intended for connection to duct systems for the purpose of providing central cooling and/or heating. RV air conditioners may be ducted to remote areas of the vehicle as specified in the installation instructions, which include the minimum duct size, maximum length, and minimum register size.

A console or in-wall type room air conditioner may have provision to additionally serve a single adjacent room.

Split-system room air conditioners are designed for field interconnection with a matching section. Such units and sections are marked to relate the two for proper installation. The sections may be shipped separately.

RV air conditioners are intended for roof-top or underfloor mounting as indicated in the installation instructions, and are intended only for permanent connection to the source of electrical supply.

Permanently connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

PRODUCT MARKINGS

Cord-connected units that require circuit breakers or time-delay fuses to permit restarting are so marked.

Units with water-cooled condensers investigated for connection to ground water sources are so marked.

Air Conditioners, Room Certified for Canada (ACOT7)−*Continued*

Some equipment may be designed to accept accessories installed in the field. In such cases, both the room air conditioner and the accessory are marked to relate the two for proper installation.

If parts or sections of the room air conditioner are separately shipped from the factory, they are marked to relate the sections to one another for proper installation.

RELATED PRODUCTS

Packaged terminal air conditioners are covered under Air Conditioners, Packaged Terminal Certified for Canada (ACKZ7).

Air conditioners for spot cooling or environmental control of electronic enclosures are covered under Air Conditioners, Special Purpose Certified for Canada (ACVS7).

Dehumidifiers are covered under Dehumidifiers, Refrigeration Type Certified for Canada (AFFT7).

Products Verified for energy efficiency are covered under Air Conditioners, Room Verified for Energy Efficiency (ZYAT).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 117, ''Room Air Conditioners.''

Split-system air conditioners are investigated to CSA-C22.2 No. 236, ''Heating and Cooling Equipment.''

Alternatively, the basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Appliances, Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60335-2-40 (2012), ''Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.''

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Room Air Conditioner,'' ''Split System Air Conditioner,'' ''Split Type Air Conditioner,'' ''Section of Room Air Conditioner'' or ''Accessory for Room Air Conditioner.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CONDITIONERS, SPECIAL PURPOSE CERTIFIED FOR CANADA (ACVS7)

GENERAL

This category covers equipment designed for special purposes, such as portable spot cooling, environmental control of electronic enclosures, or supplementary cooling of computer rooms or computer equipment. These products may be self-contained or sectional, and are designed to provide conditioned air to a single room or space. Accessories are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

This equipment consists of one or more factory-made sections. If the equipment is provided in two or more sections, each such section is designed for field interconnection with a matched section(s) to make the air conditioner assembly. Unless so indicated in the individual certifications, the evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or furnished as a separate section. The individual certifications show the distinctive designation of each section comprising the assembly.

The proper method of electrical installation (number of branch circuits, disconnects, etc.) is shown on the wiring diagram and/or marking required to be attached to the unit, if intended for permanent connection to the source of electrical supply.

Accessories for special purpose air conditioners are provided with instructions for installation into the product.

Units suitable for use with certified field-installed accessories, such as electric resistance heaters, are specifically indicated in the individual certifications.

PRODUCT MARKINGS

Units suitable for outdoor installation are so marked. Units not marked as suitable for outdoor installation are for indoor use only.

Air Conditioners, Special Purpose Certified for Canada (ACVS7)−*Continued*

Where a clearance is required to be maintained to combustible construction, the minimum clearance is designated in the individual certifications and is also marked on the unit. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

Some equipment is designed to accept accessories installed in the field. In such cases, both the air conditioner and the accessory are marked to relate the two for proper installation.

RELATED PRODUCTS

See Air Conditioners, Room Certified for Canada (ACOT7), Air Conditioners, Packaged Terminal Certified for Canada (AFFT7), Dehumidifiers, Refrigeration Type Certified for Canada (ACKZ7) and Heating and Cooling Equipment Certified for Canada (LZFE7).

Equipment without a refrigeration system is covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

Permanently connected computer room air conditioners are covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 236 (1990), "Heating and Cooling Equipment," CSA-C22.2 No. 117, "Room Air Conditioners," or CAN/CSA-C22.2 No. 60335-1 (2011), "Safety of Household and Similar Appliances, Part 1: General Requirements," and CAN/CSA-C22.2 No. 60335-2-40 (2012), "Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers."

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Special Purpose Air Conditioner," "Section of Special Purpose Air Conditioner" or "Accessory for Special Purpose Air Conditioner," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PACKAGED TERMINAL AIR CONDITIONERS, REPLACEMENT CERTIFIED FOR CANADA (ADAU7)

GENERAL

This category covers replacement packaged terminal air conditioner and replacement packaged terminal heat pump chassis investigated for field installation with existing wall sleeves, louvers, and panels as marked on the unit. They are rated 600 V or less and intended as the prime source of air conditioning and dehumidification.

These units may also have provision for heating by hot water, reverse-cycle refrigeration, steam or electric resistance elements. They employ alternating current, hermetic refrigerant motor-compressors with factory-charged refrigeration systems, and include a means for ventilating and circulating air.

INSTALLATION

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and is intended for installation through walls and to serve a single room, zone or space, although some units may have provision to additionally serve an adjacent room.

Permanently connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

PRODUCT MARKINGS

Cord-connected units requiring a circuit breaker or time-delay fuses to permit restarting are so marked.

Units are marked to indicate the existing wall sleeves, louvers and panels with which they are to be used and field installed.

Packaged Terminal Air Conditioners, Replacement Certified for Canada (ADAU7)−*Continued*

RELATED PRODUCTS

Room air conditioners are covered under Air Conditioners, Room Certified for Canada (ACOT7).

Air conditioners intended for spot cooling or environmental control of electronic enclosures are covered under Air Conditioners, Special Purpose Certified for Canada (ACVS7).

Dehumidifiers are covered under Dehumidifiers, Refrigeration Type Certified for Canada (AFFT7).

Air-conditioning equipment designed for connection to duct systems for the purpose of providing central cooling and/or heating is covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 117, "Room Air Conditioners," and CSA-C22.2 No. 236, "Heating and Cooling Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

REPLACEMENT PACKAGED TERMINAL AIR CONDITIONER FOR FIELD INSTALLATION WITH EXISTING WALL SLEEVES, OUTDOOR LOUVERS, AND INDOOR PANELS AS SPECIFIED ON THE PRODUCT AS TO ELECTRIC SHOCK, FIRE AND CASUALTY HAZARDS ONLY

Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR FILTERING APPLIANCES CERTIFIED FOR CANADA (AEDX7)

GENERAL

This category covers portable and stationary air-filtering appliances intended for window, floor, table and similar mounting. This category also covers fixed air-filtering appliances intended for permanent mounting to walls, ceilings and similar applications. The appliances consist primarily of air-circulating fans and mechanical filters, but may additionally employ ultraviolet/germicidal lamps.

FACTORS NOT INVESTIGATED

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Appliances not provided with filters and intended for circulating air in a room are covered under Fans, Ceiling Suspended Certified for Canada (GPRT7) and Fans, Electric Certified for Canada (GPWV7).

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners Certified for Canada (AGGZ7).

Ionizers, fans employing ionizers, and ion generators are covered under Ion Generators Certified for Canada (OETX7).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners Certified for Canada (EOGX7).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted Certified for Canada (ABQK7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113 (1984), "Fans and Ventilators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

Air Filtering Appliances Certified for Canada (AEDX7)−*Continued*

together with the word ″LISTED,″ a control number, and the product name ''Air Filtering Appliance'' or ''Air Filter,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DEHUMIDIFIERS, REFRIGERATION TYPE CERTIFIED FOR CANADA (AFFT7)

GENERAL

This category covers portable, self-contained household, commercial and industrial dehumidifiers for removing moisture from the air. These dehumidifiers are designed for cord connection to a single-phase, alternating-current source of supply rated at not more than 250 V, 30 A. They employ hermetic refrigerant motor-compressors and may also incorporate electric air heaters. They are intended for use indoors in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

RELATED PRODUCTS

Air conditioners intended for spot cooling are covered under Air Conditioners, Special Purpose Certified for Canada (ACVS7).

Desiccant-type dehumidifiers with a heater are covered under Heaters, Specialty Certified for Canada (KSOT7).

Duct-mounted and permanently connected dehumidifiers are covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

See Air Conditioners, Room Certified for Canada (ACOT7).

Products Verified for energy efficiency are covered under Dehumidifiers, Refrigeration Type Verified for Energy Efficiency (ZYHM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 92, ''Dehumidifiers,'' or CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Appliances, Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60335-2-40 (2012), ''Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.''

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Dehumidifier'' for a household unit, or ''Special Purpose Dehumidifier'' for a commercial or industrial unit.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTROSTATIC AIR CLEANERS CERTIFIED FOR CANADA (AGGZ7)

GENERAL

This category covers duct type, room type (fixed), stationary and portable electrostatic air cleaners intended to remove airborne dust particles and the like.

Room-type electrostatic air cleaners are self-contained units; the fixed types are intended for permanent installation. The portable or stationary types are cord connected.

Electrostatic air cleaners are intended for use where removal of dust and dirt from equipment is frequent enough to prevent excessive accumulation, which may result in flashover and fire damage. The instructions and warnings supplied with and on each piece of equipment should be carefully observed.

Electrostatic air cleaners have either Class 1 or Class 2 filters or adhesive-coated ionizer collector cells as follows:

Class 1 filters or adhesive-coated ionizer collector cells are those which, when clean, do not contribute fuel when attacked by flame and which emit only negligible amounts of smoke.

Class 2 filters or adhesive-coated ionizer collector cells are those which, when clean, burn moderately when attacked by flame or emit moderate amounts of smoke, or both.

Electrostatic Air Cleaners Certified for Canada (AGGZ7)−*Continued*

REBUILT PRODUCTS

This category also covers electrostatic air cleaners that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt electrostatic air cleaners are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt electrostatic air cleaners are subject to the same requirements as new electrostatic air cleaners.

FACTORS NOT INVESTIGATED

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Ionizers, fans employing ionizers, and ion generators are covered under Ion Generators Certified for Canada (OETX7).

Air-filtering appliances utilizing mechanical filtration only or ultraviolet/germicidal lamps are covered under Air-filtering Appliances Certified for Canada (AEDX7).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners Certified for Canada (EOGX7).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted Certified for Canada (ABQK7).

Power supplies intended for use in electrostatic air-cleaning equipment are covered under Power Supplies, Electrostatic Air-cleaning Equipment Certified for Canada (QQCH8).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 187, ''Electrostatic Air Cleaners.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electrostatic Air Cleaner.''

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EVAPORATIVE COOLER RETROFIT PUMPS CERTIFIED FOR CANADA (AGIS7)

USE AND INSTALLATION

This category covers pumps intended to replace the original pumps provided in certified evaporative coolers and pumps meant as retrofit pumps providing additional functionality, such as the timed purging of evaporative-cooler reservoirs. They do not require qualified service personnel for installation when the evaporative cooler is provided with a receptacle intended for cord-and-plug connection of the pump. For installations where the pump is not provided with a plug or where the plug must be cut off in order to wire the pump directly into the cooler circuitry, installation by qualified service personnel is specified. Pump construction, performance and installation instructions have been investigated to determine that, when properly installed, they comply with the requirements applied to original equipment pumps in these coolers.

PRODUCT MARKINGS

The pump packaging indicates the brand name, models or ratings of the evaporative coolers for which the pump is designed. Information concerning mounting of the pump, cord routing, maximum depth of water in the reservoir, and regular testing of any GFCI protecting the pump is either marked on the pump packaging or provided in detailed installation instructions accompanying each pump.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

Evaporative Cooler Retrofit Pumps Certified for Canada (AGIS7)−*Continued*

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 108 (2001), "Liquid Pumps," and CSA-C22.2 No. 104 (1993), "Humidifiers."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

EVAPORATIVE COOLER RETROFIT PUMP
FOR USE WITH SPECIFIED EVAPORATIVE COOLERS ONLY
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EVAPORATIVE COOLERS CERTIFIED FOR CANADA (AGNY7)

GENERAL

This category covers evaporative coolers of portable, window and stationary types for residential, commercial and industrial applications. Stationary types may have provision for connection to a duct system for air distribution. Models investigated for outdoor installation are marked "Outdoor Use."

Motors used in stationary equipment intended for duct system connection are prevented from hazardous overheating by inherent overheating devices, by overcurrent protective devices, or by impedance of the motor windings.

RELATED PRODUCTS

Air coolers that include a motor-compressor and refrigeration system are covered under Room Air Conditioners Certified for Canada (ACOT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 104 (1993), "Humidifiers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Evaporative Cooler" or "Evaporative Air Cooler."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HUMIDIFIERS CERTIFIED FOR CANADA (AHIV7)

GENERAL

This category covers humidifiers intended for residential and commercial applications that circulate moistened air and generally incorporate an air-circulating fan with or without filters. Stationary types may have provision for connection to heating and ventilating ducts for air distribution.

Motors used in stationary equipment intended for duct connection are prevented from hazardous overheating by inherent overheating devices, overcurrent protective devices, or inherent impedance. Impedance-protected motors do not generate smoke during locked-rotor testing.

RELATED PRODUCTS

Evaporative coolers are covered under Evaporative Coolers Certified for Canada (AGNY7).

Vaporizers are covered under Vaporizers Certified for Canada (YEIV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 104 (1993), "Humidifiers."

Humidifiers Certified for Canada (AHIV7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Humidifier."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CONDITIONING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AHSY7)

AIR CONDITIONERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (AIDR7)

Room Air Conditioners for Use in Hazardous Locations Certified for Canada (AINU7)

USE AND INSTALLATION

This category covers room air conditioners for use in hazardous locations. They are encased assemblies designed as a unit and intended as the prime source of refrigeration and dehumidification, basically intended to serve a single room, zone or space. They are intended for installation in windows or through walls. These units employ alternating-current, hermetic refrigerant motor-compressors with factory-charged refrigeration systems and include a means for circulating air. The effect of in-wall units on the fire resistance rating of the wall has not been investigated.

Permanently connected units are intended to be connected only to a branch circuit protected by overcurrent devices which do not exceed the value marked on the data plate or attached wiring diagram. The marked branch circuit overcurrent device protection is the maximum for which the unit has been investigated. If time-delay fuses are required for starting, the unit is marked to this effect.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Room Air Conditioner for Use in Hazardous Locations."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CONDITIONING SYSTEMS CERTIFIED FOR CANADA (AIXZ7)

FILTER UNITS, AIR CERTIFIED FOR CANADA (AJZV7)

USE AND INSTALLATION

This category covers air-filter units of both washable and throw-away types intended for the removal of dust and other airborne particles from air circulated mechanically in equipment and systems installed in accordance with the requirements for air conditioning, cooling, heating and/or ventilating contained in the "National Building Code of Canada."

Air filters are classed as to flammability as follows:

- **Class 1** filters are units which, when clean, do not contribute fuel when attacked by flame and which emit only negligible amounts of smoke.
- **Class 2** filters are units which, when clean, burn moderately when attacked by flame or emit moderate amounts of smoke or both.

The classification ratings apply to filters in a clean condition. The combustibility and smoke generation of a filter after a period of service will depend in part on the nature and quantity of the contaminates collected.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Air-filter units are marked "Class 1" or "Class 2," as applicable.

FACTORS NOT INVESTIGATED

The toxicity of products of combustion resulting from exposure to flame has not been investigated, nor the ability of these units to remove dust or other airborne particles or flammable vapors.

RELATED PRODUCTS

Electrically operated air-filtering appliances are covered under Air-filtering Appliances Certified for Canada (AEDX7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S111, "Standard Method of Fire Tests for Air Filter Units."

UL MARK

The Classification Mark of UL on the product or on the container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

AIR FILTER UNIT
AS TO FLAMMABILITY ONLY
Control No.
*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FILTERS, GREASE CERTIFIED FOR CANADA (AKUS7)

USE AND INSTALLATION

This category covers grease filters intended to be used with restaurant-type cooking equipment installed in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations." Use in conjunction with certified restaurant hood and duct extinguishing system units requires a review of the location of heat-sensing elements with regard to the nature, protection and degree of sensitivity desired.

These filters have demonstrated an ability to remove grease from air streams and provide surfaces that can hold only a small amount of grease which is susceptible to ignition when attacked by flames.

These units have been investigated as to flammability only after exposure to grease-laden air.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S649, "Grease Filters for Commercial Kitchen Exhaust Systems."

Filters, Grease Certified for Canada (AKUS7)−*Continued*

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

GREASE FILTER
AS TO FLAMMABILITY AFTER EXPOSURE TO GREASE LADEN AIR ONLY
Control No.
*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MECHANICAL AIR CLEANERS CERTIFIED FOR CANADA (ALEV7)

USE AND INSTALLATION

This category covers mechanical air cleaners intended to remove airborne dust particles and the like.

Mechanical air cleaners of the duct type are intended for installation in and adjoining heating, air conditioning and ventilating systems in accordance with the requirements for air conditioning, cooling, heating and/or ventilating in the "National Building Code of Canada."

A mechanical air-cleaning assembly consists of an inner air-cleaning assembly or element and an outer housing attached to the duct work, and is specifically designed and fabricated for the internal assembly.

These products are not intended for tandem (back-to-back) installation.

Mechanical air cleaners may be either Class 1 or Class 2 as follows:

- Class 1 cleaners are those which, when clean, do not contribute fuel when attacked by flame and which emit only negligible amounts of smoke.
- Class 2 cleaners are those which, when clean, burn moderately when attacked by flame or emit moderate amounts of smoke or both.

RELATED PRODUCTS

Electrically operated air-filtering appliances are covered under Air-filtering Appliances Certified for Canada (AEDX7).

Air filters are covered under Filter Units, Air Certified for Canada (AJZV7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S111, "Standard Method of Fire Tests for Air Filter Units."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name "Mechanical Air Cleaner."

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR DUCTS AND AIR CONNECTORS CERTIFIED FOR CANADA (ALJX7)

This category covers air ducts and air connectors made of materials consistent with and for use in accordance with the "National Building Code of Canada." Unless otherwise indicated in the individual Listings and on the Listing Mark attached to the product, they are intended for indoor use only.

Air ducts and air connectors are identified as Class 0, Class 1 or Class 2 as follows:

Class 0 air ducts and air connectors have surface burning characteristics of zero.

Class 1 air ducts and air connectors have a flame spread index of not

over 25 without evidence of continued progressive combustion and a smoke-developed index of not over 50.

Class 2 air ducts and air connectors have a flame spread index of not over 50 without evidence of continued progressive combustion and a smoke-developed index of not over 50 for interior surfaces and not over 100 for exterior surfaces.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR DUCTS CERTIFIED FOR CANADA (ALLU7)

GENERAL

This category covers air ducts identified as Class 0, Class 1 or Class 2 in accordance with the information in Air Ducts and Air Connectors Certified for Canada (ALJX7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S110, "Standard Methods of Tests for Air Ducts."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Duct, Class *." The Listing Mark for air ducts has a rectangular shape.

* 0, 1 or 2

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CONNECTORS CERTIFIED FOR CANADA (ALNR7)

GENERAL

This category covers air connectors identified as Class 0, Class 1 or Class 2 in accordance with the information in Air Ducts and Air Connectors Certified for Canada (ALJX7). The installation length for air connectors is intended to be in accordance with the "National Building Code for Canada," having a maximum length of 4 m.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S110, "Standard Methods of Tests for Air Ducts."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Connector for Installation In Lengths Not Over 4 m, Class *." The Listing Mark for air connectors has a round shape.

* 0, 1 or 2

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR-SAMPLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ALOA7)

GENERAL

This category covers air-sampling pumps, sample-draw pumps and similar equipment.

RELATED PRODUCTS

Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Sampling Equipment for Use in Hazardous Locations" or "Air Sampling Pump for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECURITY EQUIPMENT CERTIFIED FOR CANADA (ALOV7)

GENERAL

Security equipment and systems are investigated to provide protection against burglary, robbery or theft.

This equipment is intended for use only as described in the general Guide Information for each product category and individual Listings. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

CERTIFICATE SERVICE

Protective systems require extensive installation work and maintenance by the Listed installing company. UL's Standards for these systems cover installation methods, extent of protection, and maintenance service, which are supervised under UL's Certificate Service.

Under Certificate Service, UL authorizes the issuance of UL's certificates to installations which the Listed installing company represents to be in compliance with requirements established for the product category. The certificate indicates the classification, extent, location of equipment, period covered by the certificate, and name of the installing company.

UL conducts countercheck field examinations of representative installations of the Listed installing company. UL assumes no liability for any loss that may result from failure of the equipment, incorrect certification or nonconformity with requirements. If installations not in compliance with UL's requirements are found as a result of field examinations, they are subject to correction by the Listed installing company or cancellation of the certificate.

All of a company's alarm system installations may not be covered under UL's Certificate Service. Only those installations for which a certificate has been properly issued are covered under UL's Certificate Service.

UL maintains a Certificate Verification Service (ULCVS) that allows Authorities Having Jurisdiction (AHJs) to verify up-to-date Certificate information and identify companies eligible to issue Certificates as of the date of the inquiry. Only those alarm or signal system installations for which a Certificate has been issued are covered under UL's Certificate Service. The verification of a Certificate on ULCVS is the only method UL provides to identify the Certificated alarm systems actively covered under its Listing and Follow-Up Service.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from

related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the AHJ. AHJs should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 2 of the CEC should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Terminations — Copper pigtail leads may be used with aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper conductors only. Terminals marked "CO/ALR" are for use with aluminum or copper conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum or copper conductors.

Combination of dissimilar conductors in terminal or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the CEC, unless specifically identified as suitable for use in hazardous locations.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ALARM SYSTEM UNITS CERTIFIED FOR CANADA (ALOZ7)

ACCESS CONTROL SYSTEM UNITS CERTIFIED FOR CANADA (ALVY7)

GENERAL

This category covers units for access control systems, providing a means of regulating or controlling entry to and/or exit from an area, by electrical or mechanical means. Accessories covered under this category include keypads, token card readers, biometric readers, request-to-exit devices, access-point sensors, access-point actuators, and the like.

The design of the electronic access control system should take into consideration the requirements of the intent of applicable Building and Fire Codes to provide unimpeded egress in an emergency situation without the use of special equipment.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Access Control Unit," or the specific product name or designation as shown in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S319, "Electronic Access Control Systems."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Access Control System Units Certified for Canada (ALVY7)−*Continued*

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CENTRAL STATION ALARM UNITS CERTIFIED FOR CANADA (AMCX7)

USE AND INSTALLATION

This category covers signal-receiving, recording and supervisory units intended for permanent use within a central station or subsidiary station and associated subscriber's control units and the like, to be installed within protected property.

A control unit may or may not provide for the operation of a local alarm sounding device.

The units are suitable for use in central station burglar alarm systems, as indicated in the individual certifications.

For protection against compromise, the communication channel between the protected property and the remote monitoring location may be provided with communication channel security as indicated in the individual certifications.

These units are provided with installation instructions.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S304, "Central and Monitoring Station Burglar Alarm Units," and ANSI/UL 1635, "Digital Alarm Communicator System Units."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONNECTORS AND SWITCHES CERTIFIED FOR CANADA (AMQV7)

GENERAL

Connectors and Switches Certified for Canada (AMQV7)−*Continued*

This category covers insulated and noninsulated contact springs and mating brackets, magnetically actuated switches, mercury switches, floor mats, safe and vault contacts, shunting devices, flexible connectors, foil connectors, and similar products intended for use with commercial or residential burglar alarm systems.

Some products have been investigated for use as partial or supplemental protection only, or in household (residential) burglar alarm systems only. These restrictions are indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C634, "Guide for the Investigation of Connectors and Switches for Use with Burglar Alarm Systems."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTRUSION-DETECTION UNITS CERTIFIED FOR CANADA (ANSR7)

USE

This category covers electronic devices that may be used to provide protection for mercantile premises, stock rooms, stock cabinets, safes, vaults and other items.

Intrusion-detection units utilize invisible beams (photoelectric), electromagnetic radiation, ultrasonic radiation, passive infrared, sound and vibration detection or other principles to detect and signal intrusion or movement within mercantile premises and stockrooms, approaches to safes, penetration of vaults, and the like. Intrusion-detection units are used in combination with or instead of conventional forms of burglar alarm wiring on walls, floors, ceilings, openings, safes, vaults and other items requiring protection.

The individual certifications indicate the range, coverage or other limitations of the units as applicable.

These units have been investigated for fire, electrical shock and reliability of operation. The effect of radiation on radio communication or radio navigation has not been investigated. The Authority Having Jurisdiction should be consulted for regulations governing the use and operation of radiation devices.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S306, "Intrusion Detection Units."

UL MARK

Intrusion-detection Units Certified for Canada (ANSR7)−*Continued*

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOCAL ALARM UNITS CERTIFIED FOR CANADA (AOTX7)

USE AND INSTALLATION

This category covers local alarm units used to control burglar alarm circuits and a local audible alarm-sounding device. The units are acceptable for use to form a Grade A or Grade B local burglar alarm system in bank safes and vaults, and to form a Grade A local burglar alarm system in mercantile premises or mercantile safes and vaults as indicated in the individual certifications. They may be used with units covered under Police-station-connected Alarm Units Certified for Canada (APAW7).

These units are provided with installation instructions.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S303, "Local Burglar Alarm Units and Systems," and CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

POLICE-STATION-CONNECTED ALARM UNITS CERTIFIED FOR CANADA (APAW7)

USE AND INSTALLATION

This category covers police-station-connected alarm units used to control burglar-alarm circuits and a local audible-alarm-sounding device at a protected premises, and to transmit an alarm signal from the protected premises to a police station or to a central station. The units are acceptable for use to form a Grade AA, Grade A, Grade BB or Grade B police-station-connected system in bank safes and vaults, and to form a Grade AA or Grade A police-station-connected system in mercantile premises or mercantile safes and vaults as indicated in the individual certifications. They may be used with units covered under Local Alarm Units Certified for Canada (AOTX7). The transmission methods and communication channel security used to connect the protected premises to the police station or central station are indicated in the individual certifications.

These units are provided with installation instructions.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC -S303, "Local Burglar Alarm Units and Systems," CAN/ULC-S304, "Signal Receiving Centre and Premise Burglar Alarm Control Units," and CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, BURGLAR ALARM SYSTEM CERTIFIED FOR CANADA (APHV7)

USE

This category covers low-voltage, low-energy power-supply units intended to be used with standby batteries to provide electrical energy for burglar-alarm systems.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S318, "Power Supplies for Burglar Alarm Systems."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROPRIETARY ALARM UNITS CERTIFIED FOR CANADA (APOU7)

GENERAL

This category covers proprietary burglar alarm systems, which are electrical monitoring systems designed to provide status indication of burglar-alarm-actuating devices. All equipment is intended to be operated and maintained by competent and experienced personnel responsible to the owner of the protected premise.

The individual certifications identify the individual units that may be interconnected or used with other separately certified units to form a proprietary burglar alarm system. The individual units include main control units (with integral or separate power supply) and accessory units (switches, transmitters, end-of-line devices, subscriber's units, and the like).

A control unit may consist of a complete assembly or may be prewired at the factory for accepting readily-installed modules for system expansion. The installation manual indicates the type and number of modules that can be employed in a control unit.

A control unit may additionally be connected to fire alarm devices to form a combination fire/burglary control unit. In combination units, the fire alarm signal takes precedence over the burglar alarm signal and a distinction between alarm signals is provided. A common trouble signal may be employed for both systems.

A control unit accessory is a special unit assembly intended to be separately connected within a system and which is suitable for use only with a specific control unit.

Installation information is provided to ensure proper interconnection among units. The information may be attached to the control unit or included as part of an installation or instruction booklet.

A control unit may or may not provide for the operation of a local alarm-sounding device.

Proprietary Alarm Units Certified for Canada (APOU7)–*Continued*

For protection against compromise, the communication channel between the protected property and the remote monitoring location may be provided with line security. Systems with line security are identified in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1076, "Proprietary Burglar Alarm Units and Systems."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ALTERNATORS, GENERATORS AND MOTORS, ELECTRIC, MARINE CERTIFIED FOR CANADA (ARDY7)

USE AND INSTALLATION

This category covers engine-mounted marine electric motors, generators, alternators, motor-actuating solenoids, and voltage regulators rated at less than 50 V dc. These products include connecting wiring harnesses provided by the product manufacturer as part of the device.

These devices are intended for installation in accordance with the manufacturer's specifications and the applicable Canadian Coast Guard Regulations.

All products and components are ignition protected, except that voltage regulators may not be of ignition-protected construction if marked with a warning placard stating that they must be mounted outside of areas requiring ignition-protected equipment.

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 183.2 (1983), "DC Electrical Installations on Boats."

UL MARK

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Alternator" or "Voltage Regulator."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ALUMINUM-SHEATHED CABLE CONNECTORS, TYPE ALS CERTIFIED FOR CANADA (ASFV7)

GENERAL

This category covers fittings for use with aluminum-sheathed cable, Type ALS, employing jacketed corrugated aluminum sheath. These products are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Connector Selection — Connectors are intended to be selected in accordance with the size and type of cable for which they are designated. Aluminum connectors are intended for use only with cable employing a corrugated aluminum sheath unless marked on carton otherwise (see **MARKINGS**).

Use in Concrete — Fittings made of aluminum are not considered suitable for use in concrete or cinder fill unless protected with asphalt paint or the equivalent. Fittings which are suitable for use in concrete are identified by a marking on the carton.

Grounding — Aluminum-sheathed-cable connectors for use with corrugated aluminum or copper tube or smooth aluminum tube are considered suitable for grounding where installed in accordance with the CEC.

Dry and Wet Locations — Nonmetallic parts, such as glands or seals, are suitable for use at a temperature of 90°C in dry and wet locations. The fittings are suitable for use in dry or wet locations unless marked otherwise (see **MARKINGS**).

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

MARKINGS

Aluminum-sheathed-cable fittings or the smallest unit shipping cartons are marked with (1) the range of cable diameters, (2) the type "ALS," and (3) "Concrete-tight" if suitable for use in poured concrete. Aluminum-sheathed-cable fittings suitable for use only in dry locations are marked "Dry Locations" on the device and smallest unit carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 18.3 (2004), "Conduit, Tubing, and Cable Fittings."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Aluminum-Sheathed Cable Connector."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AMUSEMENT AND GAMING MACHINES CERTIFIED FOR CANADA (ASMU7)

GENERAL

This category covers self-contained commercial amusement and gaming machines.

The appliances are marked on or adjacent to the electrical rating plate with one of the following: "Suitable for Indoor Use Only," "Suitable for Protected Locations — See Installation Instructions," or "Suitable for Outdoor Use." Complete instructions appear on an appliance intended for use in a protected location, indicating the manufacturer's recommendations concerning the use or installation, or both, of any canopy, marquee, shelter, etc., that may be necessary for the protection of the appliance. The instructions may be located inside the appliance if they are accessible through the front door.

REBUILT PRODUCTS

This category also covers amusement and gaming machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt amusement and gaming machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt amusement and gaming machines are subject to the same requirements as new amusement and gaming machines.

FACTORS NOT INVESTIGATED

The burglary- and theft-protection features of coin-operated machines have not been investigated unless specifically indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0.4, "Bonding of Electrical Equipment," and CSA-C22.2 No. 1, "Audio, Video and Similar Electronic Equipment," or CAN/CSA-E60335-2-82, "Safety of Household and Similar Electrical Appliances – Particular Requirements for Amusement Machines and Personal Service Machines," when indicated in the individual Listings.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Amusement Machine" or "Gaming Machine," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ANIMAL CARE APPLIANCES CERTIFIED FOR CANADA (ASTS7)

USE

This category covers motor-operated equipment intended for the grooming, management and feeding of animals, or other forms of animal care, for household or commercial use.

RELATED PRODUCTS

Animal hair clippers are covered under Hair Clipping and Shaving Appliances Certified for Canada (KEFX7).

Heating appliances, such as pet dryers, vivarium heaters, heated pet bowls and heated pet beds are covered under Heaters, Specialty Certified for Canada (KSOT7).

Aquarium equipment is covered under Aquarium Equipment Certified for Canada (AVRR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68 (1992), "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ANTENNA ROTATORS CERTIFIED FOR CANADA (ASYI7)

USE

This category covers power-operated antenna rotators intended for use with VHF and/or UHF television, FM radio and similar antennas receiving signals directly from transmitters.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, "Audio, Video, and Similar Electronic Equipment," or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Antenna Rotator," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ANTITHEFT ALARMS AND DEVICES CERTIFIED FOR CANADA (ATJT7)

USE

This category covers individual units, with or without certified accessories or subassemblies, that may be used alone or interconnected with other suitable certified equipment to form an electrically or mechanically operated system, or both, for theft deterrent or security warning/applications.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1037 (1988), "Guide for the Investigation of Antitheft Alarms and Devices."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly" with or without the word "Commercial."

When applicable, the Signaling Mark is also included. The combined Security/Signaling Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Security and Fire Alarm Equipment" or "Security and Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

APPLIANCE CONTROLS CERTIFIED FOR CANADA (ATNZ7)

GENERAL

This category covers controllers (single device or interconnected series of components) with one or more input power and possibly signal ports. Included are controllers with solid-state circuitry, and one or more output switching components to directly control all or a portion of household type appliances, such as portable luminaires, audio/video equipment, etc. These controllers typically respond directly or indirectly to sensors or remote control signals to affect operation or electronically store or process information by virtue of a memory system.

These controls are intended only for nonindustrial appliances.

RATINGS

Appliance controls are rated maximum 16 A and are intended to be installed on a 20 A maximum branch circuit. The voltage is limited according to the end-product standard. They are not intended for controlling motor-operated appliances unless specifically identified for such use, e.g., appliance controls designated for control of electric fans. They have been investigated for use in nominal 25°C environments, unless otherwise stated in the individual certifications.

PRODUCT MARKINGS

Controls typically have resistive or general use (power factor 0.75 - 0.80) loads. A controller may be specifically identified for other load types, e.g., "Suitable for ___ W lamp loads," or "Suitable for ___ hp electric fans," where the blank identifies the numerical value of the rating.

RELATED PRODUCTS

Devices intended to be part of a building control system are covered under Management Equipment, Energy Certified for Canada (PAZX7).

Devices that use light and/or motion (passive infrared)-sensitive switches are covered under Switches, Photoelectric Certified for Canada (WJCT7).

Devices indented for industrial applications are covered under Power Circuit and Motor-mounted Apparatus Certified for Canada (NMTR7).

Devices such as thermostats are covered under Temperature-indicating and Regulating Equipment Certified for Canada (XAPX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14 (2005), "Industrial Control Equipment," unless otherwise noted in the individual certifications.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Appliance Control," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

APPLIANCE OUTLET CENTERS CERTIFIED FOR CANADA (AUJZ7)

This category covers appliance outlet centers, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

Materials, including the methods used for installation of electrical, mechanical and plumbing equipment incorporated in these assemblies by their manufacturer, have been investigated for installation requirements in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," the "National Fire Code of Canada," "National Building Code of Canada," and "Canadian Plumbing Code."

These appliance outlet centers are intended for installation subject to approval by the Authority Having Jurisdiction.

Appliance outlet centers consist of one or more electrical outlets and may have one or more outlets of another type (i.e., gas, steam, water sup-

ply and drain) supported within a suitable enclosure. The enclosure itself may consist of individual components providing some compartmentalization and a single cover may be provided to enclose all compartments. They are intended for permanent indoor installation where more than one appliance may be used simultaneously. They are intended for connection to feeder circuits consistent with their marked ratings.

Components utilized in the assembly of appliance outlet centers are intended to be suitable for the use and are investigated to conform with the standard for safety which would be used if the component were to be submitted separately.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL APPLIANCE OUTLET CENTERS CERTIFIED FOR CANADA (AUUZ7)

USE

This category covers appliance outlet centers, which consist of a group of outlets with or without suitable branch circuit overcurrent protective devices, branch-circuit switching and/or timer provisions. This category also covers appliance outlet center enclosures intended for use with specific appliance outlet centers.

These products are not intended for use in residential dwellings.

Commercial appliance outlet centers may be provided as complete assemblies or as open-type designs intended to be mounted in specific enclosures. Devices that constitute an open-type assembly are marked to identify the specific commercial appliance outlet center enclosure into which they are intended to be installed. In addition, the enclosures are marked to indicate the specific commercial appliance outlet center(s) intended for use within the enclosure.

ADDITIONAL INFORMATION

For additional information, see Appliance Outlet Centers Certified for Canada (AUJZ7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 244, "Switchboards."

These products are additionally investigated using CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), to ensure compliance with the installation and use provisions of the CEC.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Appliance Outlet Center" or "Commercial Appliance Outlet Center Enclosure."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RESIDENTIAL APPLIANCE OUTLET CENTERS CERTIFIED FOR CANADA (AVGQ7)

USE

This category covers appliance outlet centers intended for use in residential dwellings.

ADDITIONAL INFORMATION

For additional information, see Appliance Outlet Centers Certified for Canada (AUJZ7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

Residential Appliance Outlet Centers Certified for Canada (AVGQ7)−*Continued*

together with the word "LISTED," a control number, and the product name "Residential Appliance Outlet Center."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AQUARIUM EQUIPMENT CERTIFIED FOR CANADA (AVRR7)

GENERAL

This category covers household and commercial aquarium equipment, such as air pumps, submersible water pumps, submersible air pumps, water pumps, filters, heaters, light reflectors (hoods) and UV treatment devices.

RELATED PRODUCTS

Water pumps covered under this category have not been investigated for use in fountains or ponds. Such pumps are covered under Pumps, Electrically Operated, Liquid Certified for Canada (REUZ7).

These pumps have not been investigated for use with or in proximity to swimming pools or spas. Such pumps are covered under Pumps Certified for Canada (WCSX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

CSA-C22.2 No. 12, "Portable Luminaires"
CAN/CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances"
CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)"
CAN/CSA-C22.2 No. 108, "Liquid Pumps"
CSA-E60335-2-55, "Household and Similar Electrical Appliances – Safety – Part 2-55: Particular Requirements for Electrical Appliances for Use with Aquariums and Garden Ponds"

Additional standards may be applicable based on the features employed. In addition, the following requirements are also used as applicable:

CSA Technical Information Letter No. C-37, "Input Ratings for Cord-Connected Heating and Cooking Appliances, Hairdressing Equipment and Electric Irons for Household Use" (issued 2-28-05)
CSA Technical Information Letter No. O-21, "Liquid Pumps and Grounding Modification" (issued 9-29-95)
CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-93)
CSA Technical Information Letter No. B-62, "Interim Certification Requirements for Non-Ferrous Screwshell and Other Current-Carrying Parts of Lampholders" (issued 11-15-93)

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Aquarium Equipment," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ARC-FAULT CIRCUIT INTERRUPTERS CERTIFIED FOR CANADA (AVYI7)

USE

This category covers arc-fault circuit interrupters (AFCI) intended to mitigate the effects of arcing faults that may pose a risk of fire ignition under certain conditions if the arcing persists.

These devices have been investigated to determine their ability to recognize and react to arcing faults. They have also been investigated to deter-

mine resistance to unwanted tripping because of the presence of arcing that occurs in control and utilization equipment under normal operating conditions and to verify that operation is not unduly inhibited by the presence of loads and circuit characteristics that may mask or attenuate unwanted arcing.

PRODUCT MARKINGS

Arc-fault circuit interrupters are marked to identify the type of device to aid the user in determining the intended location in a circuit.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ARCHITECTURAL AND FLOATING FOUNTAINS CERTIFIED FOR CANADA (AWEG7)

USE AND INSTALLATION

This category covers electrical equipment systems intended for use in architectural and floating fountains. Equipment may consist of pumps (including submersible pumps), lights, control panels, and timers. Equipment may also include wind sensors, light detectors, freeze-prevention equipment, and the like. These systems may be submersible or intended for remote installation. Systems suitable for outdoor use are so marked.

RELATED PRODUCTS

Similar portable equipment is covered under Fountains, Small Decorative Certified for Canada (IQRW7).

Control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls Certified for Canada (WAWU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 108, ''Liquid Pumps,'' CSA-C22.2 No. 89, ''Swimming-Pool Luminaires, Submersible Luminaires and Accessories,'' and CSA-C22.2 No. 14, ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Architectural Fountain,'' ''Floating Fountain'' or ''Floating Fountain Equipment,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ARMORED CABLE CERTIFIED FOR CANADA (AWEZ7)

ARMORED CABLE CONNECTORS, TYPE AC CERTIFIED FOR CANADA (AWSX7)

GENERAL

This category covers armored-cable connectors suitable for use with armored-cable types ACG90, ACGWU90 and TECK or aluminum-armored cable in dry locations only, and intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

This category does not cover staples or straps for armored cable or connectors for flexible metal conduit, power and control tray cable or metal-clad cable.

The individual certifications for each connector used with nonmetallic-sheathed cable may have details about the size and number of the nonmetallic-sheathed cable it will secure.

All male threaded fittings have only been investigated for use with locknuts.

Armored Cable Connectors, Type AC Certified for Canada (AWSX7)−*Continued*

Size of Cable Used — Connectors of the 1/2 trade size, unless marked otherwise, are capable of holding 14–2 AWG armored cable and any larger size which it will accommodate.

Use with Aluminum Cable — Connectors other than direct-bearing setscrew type are suitable for use with aluminum-armored cable.

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

MARKINGS

Some connectors are also acceptable for use with flexible metal conduit, flexible cord, nonmetallic-sheathed cable or service-entrance cable as indicated on the device or carton. Connectors for use with nonmetallic-sheathed cable are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations. Unless marked otherwise on the carton, the connectors are suitable for connection of only one cable per cable entry.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 18.3 (2004), ''Conduit, Tubing, and Cable Fittings.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Armored Cable Connector.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS CERTIFIED FOR CANADA (AXGV7)

GENERAL

This category covers the following types of products:

Appliance Coupler — A single-outlet female contact device to be wired on flexible cord as part of a detachable power supply cord to be connected to a male inlet of an appliance.

Appliance or Flatiron Plug — An appliance coupler type of device having a slot configuration specified for use with heating or cooking appliances.

Attachment Plug — A male contact device for the temporary connection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.

Cord Connector — A female contact device to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection to an attachment plug or, as an appliance coupler, to an equipment inlet.

Male Inlet (Equipment Inlet, Motor Attachment Plug) — A male contact device to be mounted on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.

Table Tap — A cord connector having more than one outlet and intended to rest on a horizontal surface while in use.

This category does not cover devices to be molded on flexible cord or wire and unassembled devices to be factory assembled on flexible cord or wire. Such devices are complete only after installation of the flexible cord or wire and they are judged as part of a complete assembly.

Ratings

These devices are rated 600 V or less, ac or dc, and 200 A or less. They may also be rated in horsepower as noted in the individual product categories.

Outlet devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Outlet devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, e.g., a 120/208 V, 3-phase, device is tested on a circuit involving 120 V to ground.

Grounding

Devices having a terminal identified by a green-colored finish, or by the word ''green,'' are grounding types. The blade, pin or contact member connected to this terminal is for equipment grounding only.

RELATED PRODUCTS

This category does not cover pin-and-sleeve type devices; refer to Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors Certified for Canada (QLGD7).

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS, FUSELESS CERTIFIED FOR CANADA (AXUT7)

GENERAL

This category covers appliance couplers, appliance and flatiron plugs, attachment plugs, cord connectors, male inlets (equipment inlets, motor attachment plugs) and table taps. These devices do not incorporate switches or overcurrent protection.

Devices for Use in Hospitals — Attachment plugs and cord connectors certified for hospital use in other than hazardous (classified) locations are identified by (1) the marking ''Hospital Only,'' or (2) the marking ''Hospital Grade'' and a green dot on the device. Male inlets may be identified only by the marking ''Hospital Only.'' The identification is visible after installation on the flexible cord or, in the case of the male inlets, on the utilization equipment.

PRODUCT MARKINGS

These devices are marked as follows:

1. Listee's name or identification on device
2. Catalog number or equivalent on device or carton
3. Complete electrical rating except on 15 A, 125 V devices
4. Terminal identification by color or otherwise
5. Date code or equivalent
6. Instruction card with pin-terminal devices intended for field assembly on flexible cord, plus any other necessary assembly instructions
7. Additional markings as required

ADDITIONAL INFORMATION

For additional information, see Attachment Plugs Certified for Canada (AXGV7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 42, ''General Use Receptacles, Attachment Plugs and Similar Wiring Devices.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol together with the word ''LISTED,'' a control number, and the product name ''Fuseless Attachment Plug'' or ''Plug,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIO AND RADIO EQUIPMENT, COMMERCIAL CERTIFIED FOR CANADA (AZCY7)

COMMERCIAL AUDIO AND RADIO EQUIPMENT, SYSTEMS AND ACCESSORIES CERTIFIED FOR CANADA (AZJX7)

GENERAL

This category covers power-operated audio and radio equipment and accessories rated 250 V or less, which operate from a supply circuit in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' This equipment is designed to meet the use requirements of commercial enterprises or establishments, churches, schools, theaters, factories and similar locations.

Commercial audio and radio equipment includes amplifiers, preamplifier mixers, signal processors, etc., for general use; public address and centralized sound systems; intercommunication devices and systems; radio receivers, tuners and tuner/amplifiers; record turntables, sound masking systems, tape decks and power supplies intended for use with commercial sound systems; special effects units and integral amplifier/speakers, etc. that are intended for use by professional and semi-professional musicians.

This category also covers accessories for use with commercial audio and radio equipment, such as audio modulated lights, audio level indicators, etc.

This category does not cover dictating or transcribing machines for office use.

Speakers and their accessories investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual certifications. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

Commercial Audio and Radio Equipment, Systems and Accessories Certified for Canada (AZJX7)−*Continued*

RELATED PRODUCTS

Musical instruments and accessories other than those noted above are covered under Musical Instruments Certified for Canada (PWHZ7).).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, ''Audio, Video, and Similar Electronic Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Commercial Audio System,'' ''Commercial Audio Equipment,'' ''Commercial Sound Equipment,'' ''Commercial Audio Product'' or ''Commercial Radio,'' or other appropriate product name (prefixed by the word ''Commercial'') as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL PHONOGRAPHS, TAPE-PLAYING AND RECORDING APPLIANCES AND ACCESSORIES CERTIFIED FOR CANADA (AZQW7)

GENERAL

This category covers power-operated phonographs, tape-playing and recording appliances and accessories rated 300 V or less, for use on supply circuits in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' These appliances are designed for use in churches, schools, institutions and/or in public places.

This category also covers commercial phonographs, tape-playing and recording appliances that utilize records, wire or tape. Each unit has complete reproduction facilities including record turntable and/or tape deck, amplifier and speaker.

This category also covers accessories for use with commercial phonographs and tape-playing and recording appliances, such as head demagnetizers and tape erasers.

These units are intended for indoor use only unless specified otherwise in the individual certifications.

Products of the above types may also be covered under Audio/Video Apparatus Certified for Canada (AZSQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, ''Audio, Video, and Similar Electronic Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Commercial Phonograph,'' ''Commercial Tape Player'' or ''Commercial Recorder,'' or other appropriate product name (prefixed by the word ''Commercial'') as shown in the individual Listings.

Commercial Phonographs, Tape-playing and Recording Appliances and Accessories Certified for Canada (AZQW7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIO/VIDEO, INFORMATION AND COMMUNICATION TECHNOLOGY EQUIPMENT CERTIFIED FOR CANADA (AZOA7)

USE

This category covers equipment, appliances and systems rated 600 V or less normally found in offices and other business establishments, residences (homes), educational facilities, churches, institutions and other similar environments classified as unclassified locations.

Included in this category is equipment powered by primary or secondary batteries, either standard sizes (e.g., AA, C, D) or nonstandard sizes specified by manufacturer, type and ratings.

This equipment has been investigated for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

Unless specified in the individual certifications, the efficacy, reliability, interoperability and functionality of this equipment has not been investigated.

INSTALLATION

When certified equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit should be separately provided.

Equipment identified with an Enclosure Type designation, or as ''Raintight'' or ''Rainproof,'' is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7). Equipment identified with an Enclosure Type designation may be additionally marked with an Ingress Protection (IP) designation in accordance with Rule 2-402 of the CEC.

Products such as LAN transceivers and baluns investigated for use in air-handling spaces are marked ''Suitable for use in environmental air spaces (plenums) in accordance with Rules 16-220 and 60-402 of the Canadian Electrical Code,'' or equivalent. These products have been additionally investigated to ANSI/UL 2043, ''Fire Test for Heat and Visible Smoke Release for Discrete Products and their Accessories Installed in Air-Handling Spaces.'' Products that bear this marking are suitable for installation in accordance with Rules 16-220 and 60-402 of the CEC.

ACCESSORIES

Field-installed accessories for certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified equipment specified in the markings or instructions.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. AUDIO/VIDEO EQUIPMENT CERTIFIED FOR CANADA (AZOE7)

GENERAL

This category covers equipment and accessories intended for use in household, commercial (including general care areas of health care facilities) and professional locations that transmit or receive signals wirelessly, from an antenna, or using the low-voltage ac mains. This includes equipment that produces or reproduces information that is analog or digital in nature.

Equipment covered under this category includes:

Receiving equipment and amplifiers for sound and/or vision, electronic musical instruments, and electronic accessories such as rhythm generators,

Audio/Video Equipment Certified for Canada (AZOE7)−*Continued*

tone generators, music tuners and the like for use with electronic or non-electronic musical instruments, audio and/or video educational equipment, video projectors, video cameras and video monitors, household video games, juke boxes, record and optical disc players, tape and optical disc recorders, antenna signal converters and amplifiers, Citizen's Band equipment, equipment for imagery, electronic light-effect equipment, intercommunication equipment using the low-voltage mains as the transmission medium, cable head-end receivers, and accessories designed to be used in combination with the abovementioned equipment.

Carts, stands and wall mounts marked for use with specific audio, video and musical instrument equipment and portable audio/video equipment that is intended for use in vehicles or marine vessels.

Equipment incorporating low-energy induction-power-transfer technology as follows: 1) induction-power transmitters intended to be supplied by a branch circuit of 600 V or less, 2) induction receivers intended for use with specific induction-power transmitters, and 3) induction receivers intended for use with induction-power transmitters conforming to industry-accepted interoperability specifications. The output of an induction receiver does not exceed a) 60 V d.c. or 42.4 V peak, and b) 100 VA capacity.

This category also covers accessories which, for purposes of this category, are components, subassemblies and other devices supplied with markings and/or instructions that allow for their interconnection with or installation to other certified equipment through standard industry interfaces and similar methods. They may be either field installed (aftermarket) or installed at a manufacturing facility subject to UL's Follow-up Service.

RELATED EQUIPMENT

Information technology equipment investigated to CAN/CSA-C22.2 No. 62368-1, ''Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements,'' is covered under Information Technology Equipment Certified for Canada (AZOT7).

Communication technology equipment investigated to CAN/CSA-C22.2 No. 62368-1 is covered under Communication Technology Equipment Certified for Canada (AZOJ7).

Multimedia equipment or equipment having multi-function in the field of audio/video, information and communication technology investigated to CAN/CSA-C22.2 No. 62368-1 is covered under this category, Information Technology Equipment Certified for Canada (AZOT7) and/or Communication Technology Equipment Certified for Canada (AZOJ7).

Power supplies for use with audio/video, information and communication technology equipment investigated to CAN/CSA-C22.2 No. 62368-1 are covered under Power Supplies for Use with Audio/Video, Information and Communication Technology Equipment Certified for Canada (QQJQ7).

ADDITIONAL INFORMATION

For additional information, see Audio/Video, Information and Communication Technology Equipment Certified for Canada (AZOA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 62368-1 (2012), ''Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements.''

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Audio/Video Equipment,'' ''Audio Equipment,'' ''Audio Product,'' ''Audio System,'' ''AV Equipment,'' ''AV Product,'' ''AV System,'' ''Commercial Audio Equipment,'' ''Commercial Audio Product,'' ''Commercial Audio System,'' ''Musical Instrument,'' ''Television Equipment,'' ''Television Receiver,'' ''Video Equipment,'' ''Video Product,'' ''Video System,'' or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word ''Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMUNICATION TECHNOLOGY EQUIPMENT CERTIFIED FOR CANADA (AZOJ7)

GENERAL

This category covers equipment that may be electronic or electromechanical in design or a combination thereof.

Various groupings of equipment are covered under this category, such as:

Telecommunication equipment: Cellular site equipment, cordless telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems, powerline communication equipment, private automated branch exchanges (PABXs), telephone answering machines, telephone sets, voicemail systems, IP telephones, IP systems, wireless telephony systems.

This category also covers accessories which, for purposes of this category, are components, subassemblies and other devices supplied with markings and/or instructions that allow for their interconnection with or installation to other certified equipment through standard industry interfaces and similar methods. They may be either field installed (aftermarket) or installed at a manufacturing facility subject to UL's Follow-up Service.

INSTALLATION

Some equipment has been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel. Such equipment is provided with installation instructions that state "To be installed only in a Restricted Access Location," or equivalent.

RELATED EQUIPMENT

Audio/video equipment investigated to CAN/CSA-C22.2 No. 62368-1, "Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements," is covered under Audio/Video Equipment Certified for Canada (AZOE7).

Information technology equipment investigated to CAN/CSA-C22.2 No. 62368-1 is covered under Information Technology Equipment Certified for Canada (AZOT7).

Multimedia equipment or equipment having multi-function in the field of audio/video, information and communication technology investigated to CAN/CSA-C22.2 No. 62368-1 is covered under this category, Audio/Video Equipment Certified for Canada (AZOE7) and/or Information Technology Equipment Certified for Canada (AZOT7).

Power supplies for use with audio/video, information and communication technology equipment investigated to CAN/CSA-C22.2 No. 62368-1 are covered under Power Supplies for Use with Audio/Video, Information and Communication Technology Equipment Certified for Canada (QQJQ7).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Uninterruptible power-supply (UPS) equipment intended for indoor and outdoor use that may be stationary or fixed is covered under Uninterruptible Power-supply Equipment Certified for Canada (YEDU7).

Power supplies for information technology and telecommunication equipment investigated to CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements," are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

Air-conditioning equipment for use in computer rooms or other areas in which information technology equipment (ITE) is installed is covered under Air Conditioners, Special Purpose Certified for Canada (ACVS7) and Heating and Cooling Equipment Certified for Canada (LZFE7).

Modular assemblies of telecommunication equipment (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunication Equipment Certified for Canada (WYKM7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies is covered under Communications Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool or otherwise support IT or telecommunication equipment that will be installed at a later time are covered under Information Technology and Telecommunication Equipment Cabinets, Enclosures and Racks Certified for Canada (NWIN7).

Equipment intended to protect against mains transients is covered under Surge-protective Devices Certified for Canada (VZCA7).

Protectors intended for use on communication circuits are covered under Primary Protectors for Communications Circuits Certified for Canada (QVGV7) or Secondary Protectors for Communications Circuits Certified for Canada (QVRG7).

ADDITIONAL INFORMATION

Communication Technology Equipment Certified for Canada (AZOJ7)−*Continued*

For additional information, see Audio/Video, Information and Communication Technology Equipment Certified for Canada (AZOA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 62368-1 (2012), "Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Answering Machine" or "Cordless Phone," or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word "Accessory."

****

INFORMATION TECHNOLOGY EQUIPMENT CERTIFIED FOR CANADA (AZOT7)

GENERAL

This category covers equipment that may be electronic or electromechanical in design or a combination thereof.

Various groupings of equipment and peripherals are covered under this category, such as:

Computing equipment: Central processing units (CPUs), hand-held computers (personal assistants), laptop computers, notebook computers, pen-based computers, personal computers, point-of-sale terminals, scanners (including portable barcode scanners), servers, work stations.

Peripherals, miscellaneous: Docking stations, flash memory cards, keyboards, mouse, PCMCIA-memory-modem cards, port replicators, trackballs.

Displays: Flat-panel displays, LCD displays, monitors, plasma displays.

Information storage equipment: Automated information storage equipment, CD-ROM/RW drives, disk drives, DVD drives, tape drives, optical drives.

Office appliances: Adding machines, bursters, calculators, collators, dictation and transcribing machines, electric typewriters, erasers, folding, embossing and sealing machines, label printers, microfilm readers, motor-operated file cabinets, overhead projectors, paper cutters, paper shredders, pencil sharpeners, sorters, stackers, staplers.

Printers/Reproduction equipment: Copiers, duplicating machines, microfilm printers, mimeograph machines, plotters, printers.

Mailing, banking and currency-handling equipment: Cash registers, coin counters, feeders and dispensers, accounting machines, check-writing-, -assigning, -dating, -inserting, -mailing, -numbering and -stamping machines, point-of-sale terminals.

Multimedia equipment/peripherals: Cable modems, digital cameras, DLP projectors, LCD projectors, microphones, set top boxes, speakers, video conferencing systems.

Network equipment/peripherals: Baluns, bridges, fiber optic transceivers, hubs, nodes, Power over Ethernet (PoE) equipment (e.g., power source equipment [PSE] and powered devices [PD]), repeaters, routers, switches, transceivers.

Wireless (RF, infrared) transceiving equipment: RF modems, hand-held computers with integral transceivers.

Static-neutralizing equipment: Power units with discharge bars used with or within copiers, collators, film-plate processors, digital printers, duplicating machines and similar equipment.

This category also covers accessories which, for purposes of this category, are components, subassemblies and other devices supplied with markings and/or instructions that allow for their interconnection with or installation to other certified equipment through standard industry interfaces and similar methods. They may be either field installed (aftermarket) or installed at a manufacturing facility subject to UL's Follow-up Service.

INSTALLATION

Some equipment has been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel.

Information Technology Equipment Certified for Canada (AZOT7)−*Continued*

Such equipment is provided with installation instructions that state "To be installed only in a Restricted Access Location," or equivalent.

Equipment intended to be installed in closed and multiunit standard racks and cabinets has been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions.

RELATED EQUIPMENT

Audio/video equipment investigated to CAN/CSA-C22.2 No. 62368-1, "Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements," is covered under Audio/Video Equipment Certified for Canada (AZOE7).

Communication technology equipment investigated to CAN/CSA-C22.2 No. 62368-1 is covered under Communication Technology Equipment Certified for Canada (AZOJ7).

Multimedia equipment or equipment having multi-function in the field of audio/video, information and communication technology investigated to CAN/CSA-C22.2 No. 62368-1 is covered under this category, Audio/Video Equipment Certified for Canada (AZOE7) and/or Communication Technology Equipment Certified for Canada (AZOJ7).

Power supplies for use with audio/video, information and communication technology equipment investigated to CAN/CSA-C22.2 No. 62368-1 are covered under Power Supplies for Use with Audio/Video, Information and Communication Technology Equipment Certified for Canada (QQJQ7).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Uninterruptible power-supply (UPS) equipment intended for indoor and outdoor use that may be stationary or fixed is covered under Uninterruptible Power-supply Equipment Certified for Canada (YEDU7).

Power supplies for use with information technology and telecommunication equipment investigated to CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements," are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

Air-conditioning equipment for use in computer rooms or other areas in which information technology equipment (ITE) is installed is covered under Air Conditioners, Special Purpose Certified for Canada (ACVS7) and Heating and Cooling Equipment Certified for Canada (LZFE7).

Filing cabinets covered under this category have not been investigated with respect to fire resistance or security. Fire-resistant filing cabinets are covered under Record-protection Equipment Certified for Canada (RYPH7).

Other equipment associated with information technology/processing but not intended for use in offices, residences or computer rooms is covered under Graphic Arts Equipment Certified for Canada (KCQT7), Inspection and Measuring Electrical Equipment Certified for Canada (NYOK7), Teaching and Instruction Equipment Certified for Canada (WYFW7), Laboratory-use Electrical Equipment Certified for Canada (OGTK7), Medical Equipment Certified for Canada (PIDF7), Marking and Coding Equipment, Electronic Certified for Canada (PGBE7) and Photographic Equipment Certified for Canada (QINT7). Other multimedia equipment and accessories may be covered under Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7). Other telecommunication appliances and equipment is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies is covered under Communication Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool or otherwise support IT or telecommunication equipment that will be installed at a later time are covered under Information Technology and Telecommunication Equipment Cabinets, Enclosures and Racks Certified for Canada (NWIN7).

Power distribution products intended for indoor use as relocatable multiple-outlet extensions of a single branch circuit not for exclusive use of ITE and consisting of an attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles are mounted are covered under Relocatable Power Taps Certified for Canada (XBYS7).

Power distribution products intended for installation in modular furniture are covered under Furniture Power Distribution Units Certified for Canada (IYNC7).

Equipment intended to protect against mains transients is covered under Surge-protective Devices Certified for Canada (VZCA7).

Information Technology Equipment Certified for Canada (AZOT7)−*Continued*

SPECIAL CONSIDERATIONS

Equipment investigated with respect to security or burglary resistance is covered under Access Control System Units Certified for Canada (ALVY7), Antitheft Alarms and Devices Certified for Canada (ATJT7) and other associated categories. Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security.

The burglary- and theft-protection features of coin-operated equipment, banking and currency-handling equipment, cash registers, coin counters and the like have not been investigated.

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems Certified for Canada (TPEU7). ATMs that have not been investigated for security protection are covered under Bank Equipment Certified for Canada (BALT7).

ADDITIONAL INFORMATION

For additional information, see Audio/Video, Information and Communication Technology Equipment Certified for Canada (AZOA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 62368-1 (2012), "Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Copier," "Paper Shredder" or "Personal Computer," or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word "Accessory."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIO/VIDEO APPARATUS CERTIFIED FOR CANADA (AZSQ7)

GENERAL

This category covers the following apparatus – rated 300 V or less and designed for household use, commercial use in churches, schools and institutions and/or other public places – that is to be connected to the supply mains either directly or indirectly:

(1) Apparatus and accessories that transmit or receive signals from an antenna. This includes apparatus that produces or reproduces information that is analog or digital in nature.

(2) Audio apparatus and accessories that reproduce or process audio signals, including amateur radios, amplifiers, apparatus for the visually impaired and the physically handicapped, disc players, head demagnetizers, intercommunicating devices and systems, preamplifier mixers, preamplifiers, public address and centralized sound systems, radio clocks, radio-clock-telephones, radio receivers, signal processors for general use, sound masking systems, transceivers, tuners, and tuner-amplifiers.

(3) Video apparatus that receives signals from an antenna, through a CATV/MATV cable system, from a video-recorded medium, or from image producing units, such as antenna amplifiers, antenna-positioning apparatus, cable (CATV) television converters, cable television descramblers, master antenna amplifiers, microwave or satellite receivers, school televisions, television monitors, television receivers, television tuners, video cameras, video switchers and encoders, video tape recorders, and video-amplification, -processing, -receiving, -recording, and -reproducing apparatus.

(4) Motor-driven apparatus that comprises one or more of the above-mentioned apparatus, or can be used only in combination with one or more of them, including phonographs, radio-phonographs, tape players and recorders that utilize records, tape, or wire, record changers, television/radio-phonographs, television/video tape recorders, turntables, and similar apparatus. Commercial apparatus has complete reproduction facilities including record turntable, and or tape deck, amplifier and speaker. Unless specifically noted otherwise in the individual certifications, these units are for indoor use only.

(5) Other apparatus obviously provided to be used in combination with the above-mentioned apparatus, such as cable-connected remote control devices, power supplies for use with commercial sound systems, special effects units and integral amplifier-speakers that are intended for use by professional and semiprofessional musicians.

(6) Electronic accessories, wherein the accessories are separate, but are used in addition to or as a supplement to the basic apparatus, such as audio-modulated lights, audio-level indicators, character generators, CRT degaussers, digital processors, editing controllers, tape erasers, tape rewinders.

(7) Portable audio or video apparatus that is intended for use with a vehicle, marine, or any other battery circuit as the power supply means.

(8) Battery eliminators, including direct plug-in adapters and other types of power supplies intended for use with apparatus covered in this product category.

(9) Carts, stands and similar apparatus marked for use with specific audio and video apparatus.

(10) Apparatus incorporating low-energy induction-power-transfer technology as follows: a) induction-power transmitters intended to be supplied by a branch circuit of 600 V or less, b) induction receivers intended for use with specific induction-power transmitters, and c) induction receivers intended for use with induction-power transmitters conforming to industry-accepted interoperability specifications. The output of an induction receiver does not exceed (i) 60 V d.c. or 42.4 V peak, and (ii) 100 VA capacity.

ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either specific or generic certified equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers audio and video apparatus that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt audio and video apparatus is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt audio and video apparatus is subject to the same requirements as new audio and video apparatus.

RELATED PRODUCTS

Television and video equipment intended for use in health care facilities is investigated to CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements," and is covered under Television/Video Equipment for Use in Health Care Facilities Certified for Canada (KFCV7).

Musical instruments and their accessories are investigated to CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065 and are covered under Musical Instruments Certified for Canada (PWHZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Audio/Video Apparatus," "Audio Equipment," "Audio Product," "Audio System," "Commercial Audio Equipment," "Commercial Audio Product," "Commercial Audio System," "Musical Instrument," "Radio Receiver," "Television Equipment" (or "TV Equipment" or "TV Equip"), "Television Receiver," "Video Equipment," "Video Product," "Video System," "AV Product," "AV Apparatus," "AV Power Supply," or the name of the specific type of product as shown in the individual Listings, or combinations of the product identities where required.

The category identifier for field-installed accessories includes the word "Accessory."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

Equipment rack systems consist of an equipment rack and one or more audio or video components such as amplifiers, equalizers, VCRs and similar equipment. Each component installed in the rack that does not bear the UL Mark is identified by type and model number on a tag that is permanently attached to the rack. If all components installed in the rack bear the UL Listing Mark, the tag is not required.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIO AND VIDEO EQUIPMENT CERTIFIED FOR CANADA (AZUJ7)

EQUIPMENT TYPES

This category covers:

(1) **Audio products and accessories** intended for household use and are involved with the reproduction or processing of audio signals such as amateur radio products, amplifiers, disc players, intercommunicating devices, radio-phonographs, radio receivers, radio-clocks, record players, tape recorders, tape players, transceivers, tuners, tuner-amplifiers, and similar products.

(2) **Video products** intended for household or commercial use that receive signals off the air from a satellite or microwave antenna, through a CATV/MATV cable system, from a video-recorded medium, or from image producing units. Examples of such products are video tape recorders, video-receiving, -processing, -recording, -reproducing, and -amplification products, antenna amplifiers, antenna positioning equipment, cable television (CATV) converters, microwave or satellite receivers, television tuners, television cameras, television receivers and monitors, and similar products. These products have not been evaluated for security surveillance protection.

(3) **Auxiliary products and accessories** intended for use with audio or video products wherein the auxiliary and accessory products are separate and do not perform the desired function, but are used in addition to or as a supplement to products according to items (1) and (2). Examples of such products are character generators, digital processors, editing controllers, video switches and encoders, CRT degaussers, video tape rewinders, head demagnetizers, tape erasers, separately enclosed nonpowered loudspeakers, and similar products.

(4) **Circuits in audio and video products** intended to connect directly to a telecommunication network.

(5) **Portable audio or video products** of the types described in items (1)–(4) intended for use with a vehicular, or any other battery circuit as the power supply means.

(6) **Carts and stands** and similar structures marked for use with specific audio and video products.

RELATED EQUIPMENT

Commercial audio products are covered under Commercial Audio and Radio Equipment, Systems and Accessories Certified for Canada (AZJX7) or Commercial Phonographs, Tape-playing and Recording Appliances and Accessories Certified for Canada (AZQW7).

Video products intended for entertainment purposes in ordinary locations of health care facilities are covered under Television/Video Equipment for Use in Health Care Facilities Certified for Canada (KFCV7).

Professional audio and video equipment is covered under Video and Audio Equipment, Professional Certified for Canada (ZCBY7).

Audio and video equipment may also be covered under Audio/Video Apparatus Certified for Canada (AZSQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, "Audio, Video, and Similar Electronic Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Audio Equipment," "Audio System," "Radio Receiver," "Television Equipment," "Television Receiver," "Video Product," "AV Product," "AV Apparatus," or other appropriate product name as shown in the individual Listings, or combinations of the preceding identities, where required.

****

AUDIO AND VIDEO EQUIPMENT CERTIFIED FOR USE IN SPECIFIED EQUIPMENT CERTIFIED FOR CANADA (AZVG7)

USE AND INSTALLATION

This category covers products that are retrofit devices or kits consisting of parts and/or subassemblies intended for field installation by qualified service personnel in UL-certified commercial audio and video equipment that involves modifying, revising, or replacing the circuitry internal to the certified equipment. These products have been investigated to determine that when installed in accordance with the manufacturer's installation instructions they do not adversely affect the operation of the specified equipment.

The retrofit kits are limited in the amount of field revision that will be performed to no more than 50% revision to or replacement of the certified product circuitry. The parts that form the enclosure of the certified product may be modified in the field, to fulfill the installation of the kit, but not replaced. Installation instructions are provided with each kit and include information identifying the specific equipment into which the kit may be installed. The instructions include a statement indicating that upon completion of the retrofit, a 1000 V AC or DC Dielectric Strength test is to be performed between specified points.

RELATED EQUIPMENT

See Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate these retrofit kits and their combination with the specified product are CAN/CSA-C22.2 No. 0.4, "Bonding and Grounding of Electrical Equipment," and CAN/CSA-C22.2 No. 1, "Audio, Video, and Similar Electronic Equipment." The applicable standard is the one used during the investigation of the end-use product.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT KIT FOR INSTALLATION IN SPECIFIED [identification of equipment]
IDENTIFIED IN THE MANUFACTURER'S INSTALLATION INSTRUCTIONS
Control No.

The Classification Mark appears on the largest part of the kit assembly that can be readily assembled by an installer on site. Each major part of the kit is identified by appropriate marking.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BACKFLOW SPECIAL CHECK VALVE DEVICES CERTIFIED FOR CANADA (BAEU7)

GENERAL

This category covers backflow special check valves consisting of the following types:

Double check (DC)
Double-check detector type (DCD)
Reduced pressure (RP)
Reduced-pressure detector type (RPD)

These devices consist of the reduced-pressure-principle type and the double-check-valve type. Both types of valves may include a bypass meter assembly and are designated as detector type. They have been certified as to the friction loss, strength of body, seat leakage and elastomeric check-valve-facing requirements of ULC/ORD-C312, "Check Valves for Fire Protection Service."

These devices are intended for use in fire-service systems for rated pressures not exceeding 1206 kPa for sizes 3/4 through 10 NPS.

These devices have not been investigated for use in potable water systems.

Each valve is provided with the manufacturer's installation instructions, which include flow performance information from zero flow to flowing velocities in excess of 4.57 m/s.

Valves are intended for horizontal (H) installation only unless specifically indicated for horizontal installation and vertical (V) upward flow installation as described in the individual certifications.

Requirements for the installation and use of these valves are included in National Fire Protection Association standards for the installation of fire-protection systems employing water, such as:

ANSI/NFPA 13, "Installation of Sprinkler Systems"
ANSI/NFPA 14, "Installation of Standpipe and Hose Systems"
ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection"
ANSI/NFPA 22, "Water Tanks for Private Fire Protection"
ANSI/NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances"

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C312, "Check Valves for Fire Protection Service."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, and the following additional information:

BACKFLOW SPECIAL CHECK VALVE DEVICE
AS TO FRICTION LOSS, BODY STRENGTH, SEAT LEAKAGE AND ELASTOMERIC SEAL CHARACTERISTICS ONLY
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BANK EQUIPMENT CERTIFIED FOR CANADA (BALT7)

GENERAL

This category covers bank equipment, including currency dispensers, depositories, motor-operated vault doors, remote tellers' systems, tellers' fixtures and similar devices. These products have been certified as to electrical fire, shock and casualty hazards only.

FACTORS NOT INVESTIGATED

The burglary and theft protection features of this equipment have not been investigated. Vault doors have not been investigated for the protection of openings in walls against fire or for the protection of records stored in the vault.

RELATED EQUIPMENT

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems Certified for Canada (TPEU7).

Currency-handling equipment not for exclusive use in banks may be covered under Information Technology Equipment Certified for Canada (NWGQ7). The performance and functional characteristics of this equipment have not been investigated.

Electrically operated control mechanisms that receive coins, currency, credit cards, debit cards or tokens to select prices, accumulate credits, store coins or currency, give change, or initiate a vend cycle for an appliance, or combinations of these functions, are covered under Coin and Currency Changers and Actuators Certified for Canada (DUCU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

BANK EQUIPMENT
AS TO ELECTRICAL, FIRE, SHOCK, AND CASUALTY HAZARDS ONLY
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUBRICANT-DISPENSING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (BAYZ7)

GENERAL

This category covers equipment intended for dispensing lubricants, such as lubricating oils and greases. The lubricants intended to be dispensed by this equipment involve flash points greater than 200°F.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Lubricant Dispensing Equipment for Hazardous Locations'' or ''Lubricant Dispenser for Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERIES FOR USE IN LIGHT ELECTRIC RAIL AND STATIONARY APPLICATIONS CERTIFIED FOR CANADA (BBFX7)

GENERAL

This category covers batteries intended for various stationary applications, such as energy storage for wind turbines, and photovoltaic and uninterruptible power supply applications.

This category also covers electric energy storage systems (EESS) for use in light electric rail (LER) applications and stationary rail applications, such as rail substations. These systems are intended for installation within the rail car or within a sheltered stationary location, such as a rail substation. These systems may utilize regenerative braking from the trains as a source of energy for recharging and are intended for direct connection to the rail power lines. These devices are intended for balancing loads during peak hours, serving as an energy storage device during regenerative breaking of the trains, and as a source of emergency power to move trains to the nearest station during power outages.

Various battery chemistries are included, such as lead acid, lithium-ion, nickel-metal hydride, nickel cadmium, sodium-metal chloride, and flowing electrolyte. Systems composed of electrochemical capacitors or battery and electrochemical capacitor hybrid systems are also included. They are intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These systems have been investigated for potential electric shock, fire and explosion hazards.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

BATTERIES FOR USE IN LIGHT ELECTRIC RAIL AND STATIONARY APPLICATIONS CERTIFIED FOR CANADA (BBFX7)

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1973, ''Batteries for Use in Light Electric Rail (LER) Applications and Stationary Applications,'' in addition to the requirements contained in Clause 4.3.8 of CAN/CSA-C22.2 No. 60950-1 (2007), ''Information Technology Equipment – Safety – Part 1: General Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Lithium-ion * Battery,'' ''Nickel-metal Hydride * Battery,'' ''Nickel Cadmium * Battery,'' ''Sodium Nickel Chloride * Battery,'' ''Sodium Sulfur * Battery,'' ''Zinc Bromine * Flow Battery,'' ''Vanadium Redox * Flow Battery,'' ''Lead-acid * Battery'' or ''Electrochemical * Capacitor.''

* LER-application or Stationary-application

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERIES WITH INTEGRAL CHARGERS, RECHARGEABLE CERTIFIED FOR CANADA (BBGE7)

GENERAL

This category covers indoor use, household and commercial batteries with integral, nonseparable, battery chargers commonly known as rechargeable battery packs. These products are either direct-plug-in type or cord-and-plug-connected type.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 107.2, ''Battery Chargers.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Rechargeable Battery Pack,'' ''Rechargeable Battery'' or ''Battery Management System,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERY CHARGERS, AUTOMOTIVE TYPE CERTIFIED FOR CANADA (BBGQ7)

GENERAL

This category covers indoor- and outdoor-use household and commercial battery chargers intended for charging engine-starter batteries used in automotive-type applications.

Some of these battery chargers incorporate parts that tend to produce arcs or sparks, such as snap switches, fuseholders, and receptacles and, therefore, when located in commercial garages or aircraft hangars, should be located in separate rooms or enclosures provided for the purpose, or should be located an appropriate distance above the floor in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''.

RELATED PRODUCTS

Battery chargers intended to recharge industrial storage batteries that provide power for material-handling trucks, tractors, personnel carriers and similar motive equipment are covered under Battery Chargers, Industrial Certified for Canada (BBHZ7).

Battery chargers intended for nonautomotive-type applications are covered under Battery Chargers, Nonautomotive Type Certified for Canada (BBML7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 107.2, "Battery Chargers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Battery Charger" or "Battery Charger Station."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERY CHARGERS, INDUSTRIAL CERTIFIED FOR CANADA (BBHZ7)

USE

This category covers battery chargers intended for use with industrial storage batteries, which provide power for material-handling trucks, tractors, personnel carriers, and similar motive equipment. These industrial battery chargers are rated 600 V or less. They may be either cord-and-plug connected or permanently connected.

REBUILT PRODUCTS

This category also covers industrial battery chargers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt industrial battery chargers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt industrial battery chargers are subject to the same requirements as new industrial battery chargers.

RELATED PRODUCTS

Battery chargers intended for charging engine-starter batteries are covered under Battery Chargers, Automotive Type Certified for Canada (BBGQ7).

Household- and commercial-type battery chargers intended for nonautomotive use are covered under Battery Chargers, Nonautomotive Type Certified for Canada (BBML7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 107.2, "Battery Chargers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Battery Charger."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERY CHARGERS, MARINE CERTIFIED FOR CANADA (BBJY7)

GENERAL

This category covers semiautomatic and automatic battery chargers intended for fixed installation aboard boats.

The battery chargers are intended for installation and operation in accordance with the manufacturer's instructions and the applicable requirements of CSA-C22.2 No. 183.1, "Alternating-Current (AC) Electrical Installations on Boats," and CSA-C22.2 No. 183.2, "DC Electrical Installations on Boats."

Battery chargers that comply with the ignition-protection requirements are marked "Ignition Protection."

This category does not cover portable battery chargers except that the chargers may be equipped with demountable brackets for removal when not in use.

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 107.2 (2001), "Battery Chargers."

UL MARK

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Battery Charger," "Battery Charger, Marine" or "Marine Battery Charger."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTERY CHARGERS, NONAUTOMOTIVE TYPE CERTIFIED FOR CANADA (BBML7)

USE

This category covers indoor- and outdoor-use household and commercial battery chargers intended for nonautomotive use and having other than Class 2 output.

RELATED PRODUCTS

Automotive-type battery chargers intended for charging starter-motor batteries are covered under Battery Chargers, Automotive Type Certified for Canada (BBGQ7).

Battery chargers intended to recharge industrial storage batteries which provide power for material-handling trucks, tractors, personnel carriers and similar motive equipment are covered under Battery Chargers, Industrial Certified for Canada (BBHZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 107.2, "Battery Chargers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Battery Charger," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BEDDING, ELECTRICALLY HEATED CERTIFIED FOR CANADA (BBTY7)

USE

This category covers electrically heated blankets, comforters, quilts, sheets, mattress pads, mattresses, foot warmers, throw blankets (or throws), slumber heat pads, and similar bedding intended for household use.

Safety and laundering instructions are provided in the unit markings as well as the packaging or instruction manual provided with each unit.

This category does not cover electrically heated bedding intended for infants or helpless people insensitive to heat, such as a person with poor blood circulation.

This category does not cover electric bedding intended for mechanical beds and the like, unless specifically indicated in the individual certifications.

RELATED PRODUCTS

Products intended for hospital service or other similar supervised medicinal usage are covered under Medical Equipment Certified for Canada (PIDF7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 101 (1984), "Electrically Heated Bedding Appliances for Household Use," in addition to the following:

CSA Technical Information Letter No. 93-045, "Flame Testing for Non-metallic Enclosures" (June 2, 1993)

CSA Technical Information Letter No. 529, "Introduction of Metric Units, Adoption of TIL 969, 969A, 969B, and 969C" (November 12, 1986)

CSA Technical Information Letter No. 529A, "Air Oven Aging Temperature for Flexibility Testing of PTC Heater Type Element Wire" (May 22, 1987)

CSA Technical Information Letter No. 529B, "Supplement to TIL 529 and 529A: Product Instructions" (December 15, 1989)

CSA Technical Information Letter No. 611, "Use of Wool Felt in Place of Hair Felt for Test Purposes" (October 6, 1988)

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Electric Blanket," "Electric Comforter," "Electric Quilt," "Electric Sheet," "Electric Mattress Pad," "Mattress," "Electric Foot Warmer," "Electric Throw Blanket," "Electric Throw," "Slumber Heat Pad," or the name of the specific type of product as shown in the individual Listings.

* *

BLOWPIPES AND TORCHES CERTIFIED FOR CANADA (BDCT7)

USE

This category covers blowpipes and torches intended for oxy-fuel or air-aspirated fuel gas welding and cutting operations. Devices intended for use with acetylene are designed to utilize this gas at pressure not over 100 kPa from low- or medium-pressure acetylene generators, or stored in high-pressure acetylene cylinders employing suitable pressure-reducing valves. Devices for use with other fuel gases are intended for use at those pressures recommended by the manufacturer.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C123 (1975), "Guide for the Investigation of Torches, Oxy-Fuel Gas."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Welding Torch," "Cutting Torch," "Cutting Attachment," "Cutting and Welding Torch (Blowpipe)," "Powder Spraying Attachment," "Powder Spraying Torch," "Heating Blowpipe," "Scarfing Blowpipe," or other appropriate product name as shown in the individual Listings.

* *

BOILERS, ELECTRIC CERTIFIED FOR CANADA (BDJS7)

GENERAL

This category covers electrically heated steam and hot water boilers that are within the scope of ASME Boiler and Pressure Vessel Codes, Volume I (Power Boilers) and Volume IV (Heating Boilers). This category may also include water heaters if, based on water temperature, input rating, or water tank capacity, they fall under the scope of the above ASME codes.

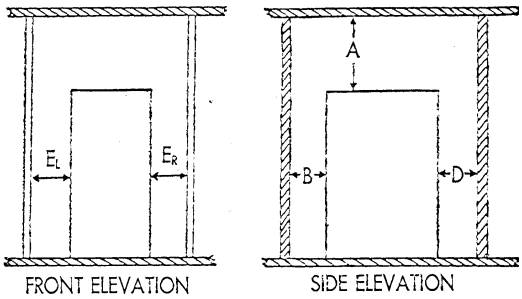
The pressure vessels of these appliances are constructed and stamped in accordance with the applicable section of the ASME Boiler and Pressure Vessel Code. The boilers are equipped with necessary temperature or pressure regulating and limit controls and with the appropriate ASME-rated pressure relief devices, and are marked with the appropriate ASME symbol.

INSTALLATION

Each boiler is provided with a marking that indicates the floor material (combustible or noncombustible) on which the boiler may be mounted and the necessary clearances from all other surfaces of the boiler to combustible materials.

The minimum acceptable clearances in centimeters between the boiler surfaces and adjacent combustible surfaces, the type of flooring required for mounting the boiler and the proper installation in an alcove or closet are indicated on the published printed cards by appropriate symbols and dimensions. The clearances so designated are the minimum required to avoid overheating, additional clearances may be required for accessibility. Each clearance requirement is indicated on the published printed cards by appropriate symbols and dimensions.

A boiler installation is indicated as follows:



Description of dimension, symbols and abbreviations:

A – Clearance above top of boiler

B – From front of boiler. Prefix "C" to numeral indicates suitability for closet or alcove installations; prefix "A," suitability for alcove installation but not for closet

D – From back of boiler

E_L – From left side of boiler

E_R – From right side of boiler

F – Indicates type of flooring: NC = Noncombustible, C = Combustible; numeral indicates minimum clearance below suspended units to combustible floor

G – Total minimum free area in square centimeters of closet ventilating openings

RELATED PRODUCTS

Water heaters for potable water limited to a maximum water temperature of 99°C (210°F) are covered under Commercial Storage Tank and Booster Water Heaters Certified for Canada (KSBZ7), Water Heaters, Space Heating Certified for Canada (KSDR7) and Household Water Heaters, Storage Tank Certified for Canada (KSDT7).

Other hot water and steam generating equipment employing construction outside the scope of the ASME Boiler and Pressure Vessel Code are covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7), Commercial Cooking Appliances Certified for Canada (KNGT7), Household Cooking Appliances Certified for Canada (KNUR7) and Heaters, Specialty Certified for Canada (KSOT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 165, "Electric Boilers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Boiler," or other appropriate product name as shown in the individual Listings.

* *

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOOTHS, TELEPHONE CERTIFIED FOR CANADA (BEDZ7)

INDOOR TELEPHONE BOOTHS CERTIFIED FOR CANADA (BERX7)

GENERAL

This category covers indoor telephone booths. These booths may incorporate fans, switches, and completely wired luminaires in various combinations. Each booth may be packaged unassembled and shipped for field assembly.

RELATED PRODUCTS

Luminaires, such as those to illuminate telephone directories, located on the outside of booths, are covered under Luminaires and Fittings, Special Purpose, Miscellaneous Certified for Canada (IETR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250, ''Luminaires.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Telephone Booth,'' ''Indoor Telephone Booth'' or ''Indoor Booth.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTDOOR TELEPHONE BOOTHS CERTIFIED FOR CANADA (BFFV7)

GENERAL

This category covers outdoor telephone booths consisting of structural metal frames and roof sections with separate wireways for telephone and power-supply conductors. The booths incorporate fans, switches and completely wired luminaires in various combinations. Each booth may be packaged unassembled and shipped for field assembly.

This category also covers accessories, such as pedestals, that incorporate separate wireways for telephone and power-supply conductors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250, ''Luminaires.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Wired Outdoor Telephone Booth'' or ''Outdoor Telephone Booth Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOWLING AND BILLIARD EQUIPMENT CERTIFIED FOR CANADA (BFTT7)

USE

This category covers equipment intended for use in bowling and billiard establishments and for servicing pins and balls.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial),'' CSA-C22.2 No. 118, ''Construction and Test of Picture Machines and Appliances,'' and CAN/CSA-C22.2 No. 60950-1, ''Information Technology Equipment – Safety – Part 1: General Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Bowling Equipment'' or ''Billiard Equipment,'' or the name of the specific product as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOXES, JUNCTION AND PULL CERTIFIED FOR CANADA (BGUZ7)

GENERAL

This category covers sheet-metal boxes, cast-metal boxes, and nonmetallic boxes. These boxes are provided with a cover secured by fasteners other than hinges. All boxes in this category have a volume of more than 1640 cm^3 (100 cu in). These boxes are intended for installation in accordance with Section 12 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

ENVIRONMENTAL RATINGS AND CONDITIONS

Each junction and pull box is marked with one or more of the following Enclosure Type ratings for which it was investigated: Type 1, 2, 3, 3R, 3S, 4, 4X, 5, 6, 6P, 12, 12K or 13. The intended uses for each Enclosure Type are as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

PVC junction and pull boxes are suitable for use with PVC rigid nonmetallic conduit. Such boxes are inherently resistant to atmospheres containing common industrial corrosive agents and will also withstand vapors or mists of caustics, pickling acids, plating baths, hydrofluoric and chromic acids.

Boxes marked as Type 2 or 3R enclosures may be marked to indicate the intended mounting orientation, or the location where electrical parts are intended to be installed, or both, where necessary to maintain the designated environmental rating.

Boxes marked as Type 3, 3S, 4, 4X, 6, 6P, 12, 12K or 13 have integral mounting means external to the enclosure cavity or may have openings into the enclosure cavity for attachment of separate mounting means supplied with the enclosure or available as a kit referenced from enclosure markings.

CONDUIT CONNECTIONS

Cast-metal boxes suitable for field drilling and tapping of holes for conduit connections and mounting are marked to indicate the location and the trade sizes of the openings either on the box or on the packaging carton.

USE IN CONCRETE OR CINDER FILL

Cast-aluminum boxes suitable for use in concrete or cinder fill are marked to indicate this fact either on the box or on the packaging carton. These boxes may not be supplied with mounting means.

ELECTRICAL EQUIPMENT

Some boxes are intended for the installation of specific kinds of equipment; however, this category does not cover any electrical material or fittings contained in the box.

GROUNDING PROVISIONS

Metal boxes are intended to receive one of the bonding conductors specified in Rule 10-804 of the CEC and are provided with either a factory-supplied equipment grounding conductor terminal or instructions to obtain equipment grounding conductor terminal kit(s) available from the manufacturer, or are marked to indicate the boxes are intended to be grounded by metal raceways or metallic cable sheaths.

RELATED PRODUCTS

Boxes intended for electric meter sockets are covered under Meter Sockets Certified for Canada (PJYZ7).

Boxes provided with a door are covered under Cabinets and Cutout Boxes Certified for Canada (CYIV7).

Enclosures intended for use with industrial control panels are covered under Industrial Control Panels Certified for Canada (NITW7).

Boxes having a volume of 1640 cm^3 (100 cu in.) or less are covered under Metallic Outlet Boxes Certified for Canada (QCIT7) or Nonmetallic Outlet Boxes Certified for Canada (QCMZ7).

Boxes for use in hazardous (classified) locations are covered under Boxes, Junction and Pull for Use in Class I, Zone Classified Hazardous Locations Certified for Canada (BGYM7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 94, "Special Purpose Enclosures."

UL MARK

The Listing Mark on the product, or the UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Junction and Pull Box," "Junction Box," "Pull Box," "J&P," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOXES, JUNCTION AND PULL FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (BGYM7)

USE AND INSTALLATION

This category covers sheet-metal boxes, cast-metal boxes, and nonmetallic boxes intended for making wiring connections only.

All boxes in this category are for use with threaded rigid conduit or steel intermediate metal conduit, or other approved wiring methods in accordance with Section 18 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Boxes identified with an enclosure type designation are intended for use as indicated in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

Cast-metal boxes suitable for field drilling and tapping of holes for conduit connections and mounting are marked to indicate the location and the trade sizes of the openings either on the box or on the packaging carton.

Cast-aluminum boxes suitable for use in concrete or cinder fill are marked to indicate this fact either on the box or on the packaging carton. Such boxes are protected with asphalt-base paint or the equivalent.

Where field installation of certain kinds of equipment is acceptable, which may include terminals, jumpers, busbars, conduit fittings, etc., the installation instructions provided with the product will specify the type, number and mounting arrangements for the equipment to be installed.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 94, "Special Purpose Enclosures."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Junction and Pull Box for Hazardous Locations," "Junction Box for Hazardous Locations" or "Pull Box for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BRAKES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (BHIX7)

GENERAL

This category covers brakes intended primarily for holding purposes, but may be used for stopping light-inertia loads.

This category includes two types of electric brakes. One type is intended to be attached directly to a certified motor at the factory of the motor manufacturer in accordance with instructions provided by the brake manufacturer. The other type is provided with a mounting bracket and is coupled to the motor.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the brake is acceptable for Groups A, B, C and D. The brake is also marked with the operating temperature code designating the maximum internal or external surface temperature determined at rated full-load torque marked on the brake, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current-interrupting contacts immersed in oil, located in a nonincendive circuit or located in a purged and pressurized enclosure. If the brake is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor to which the brake is coupled is deenergized, and vice versa.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The brake is marked with the operating temperature or operating temperature code designating the maximum full load external temperature determined at rated full-load torque (as marked on the brake), when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

The Certification Mark on a brake applies to the brake only, not to driving equipment, such as a motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division I and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division I and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Brake for Hazardous Locations."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUILDING MATERIALS CERTIFIED FOR CANADA (BHWV7)

DISCRETE PRODUCTS INSTALLED IN AIR-HANDLING SPACES CERTIFIED FOR CANADA (BHZF7)

GENERAL

This category covers products installed in air-handling spaces (plenums) as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The test provides data with regard to peak rate of heat release, maximum peak normalized optical density and maximum average normalized optical density during fire exposure of the certified materials.

Discrete Products Installed in Air-handling Spaces Certified for Canada (BHZF7)−*Continued*

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Classification Mark of UL on the product or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

+

AS TO HEAT RELEASE RATE AND SMOKE OPTICAL DENSITY ONLY

Control No.

+ The product name or other appropriate product description as shown in the individual Classifications

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE BURNING CHARACTERISTICS CERTIFIED FOR CANADA (BIKT7)

GENERAL

Surface burning characteristics provide data with regard to flame spread and smoke developed during fire exposure of the Classified materials in comparison with inorganic reinforced cement board and untreated red oak lumber when exposed to fire under similar conditions.

UNEVALUATED FACTORS

The toxicity of the products of combustion has not been investigated. It should be recognized that the products of combustion from fires may be toxic to varying degrees, inasmuch as they may include smoke (particulate), carbon dioxide, carbon monoxide, and other vapors and gases, depending upon the conditions of heating or burning and the materials involved. Occupancy tenability depends upon the conditions of heating or burning and the degree of confinement (ventilation) of the products of combustion or decomposition.

REQUIREMENTS

Fire tests based on Classifications of materials that are self-supportable in position, or supported in a test furnace to a thickness comparable to their intended use, are conducted according to CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies." The self-supporting capabilities of materials may arise from their structural integrity or the manner in which they are applied.

Fire tests based on Classifications of flooring, floor covering materials, and materials that are not self-supporting, or that cannot be conveniently tested in a ceiling-mounted configuration, such as thermoplastics and loose-fill materials, are conducted according to CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Floor Coverings, and Miscellaneous Materials and Assemblies."

CAN/ULC-S102 and CAN/ULC-S102.2 also invoke the provisions of ULC-S127, "Standard Corner Wall Method of Test for Flammability Characteristics of Non-Melting Building Materials," for materials with low thermal inertia, such as foamed plastics.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Acoustical Materials Certified for Canada (BIYR7)

GENERAL

This category covers acoustical materials certified as to surface-burning characteristics as shown in the individual certifications.

Acoustical tiles that are not self-supporting are supported for the tests with metal (noncombustible) supports or fasteners or attached to wood furring strips (combustible).

Acoustical Materials Certified for Canada (BIYR7)−*Continued*

Some acoustical materials are provided with facings that may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the facing or by using a factory or field joint (if applicable).

In some cases, products are certified under the designation "FHC 25/50." This denotes that these products have flame-spread values of 25 or less and smoke-developed values of 50 or less.

The certifications are confined to the materials themselves and to the methods of application indicated and do not pertain to structures in which the materials may be installed.

Products identified as finished with a coating have not been investigated as to increase of surface burning due to repainting after installation.

The sound absorbing qualities, light reflectance, washability, toxicity of the products of combustion, and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For the fire-resistance rating of these products, see Acoustical Materials Certified for Canada (BYIT7).

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL MARK

The Classification Mark of UL on the product or package of products is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Adhesives Certified for Canada (BJLZ7)

GENERAL

This category covers adhesives certified as to surface-burning characteristics when applied to uncoated, high density (nominal 1762 kg/cu meter), 1/4 in. thick inorganic reinforced cement board with flame-spread and smoke-developed values of 0 and other surfaces at the specific coverage rates indicated in the individual certifications.

The flash point of the finished adhesive appears in the individual certifications. The publication of the flash point is not intended to establish a flammability classification of the liquid adhesives, but to indicate the flashing characteristics of the liquid adhesive under a standard test procedure. When no flash point values appear in the individual certifications, the adhesive shows no flash point in the closed-cup tester. When it is not possible to determine the flash point in the closed-cup tester, the flash point is indicated as "Not Determinable."

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Surface Burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Batts and Blankets Certified for Canada (BKNV7)

GENERAL

This category covers batts and blankets for building insulation certified as to surface-burning characteristics in the individual certifications.

Some batts or blankets are provided with facings that may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the facings or by using a factory or field joint (if applicable). Materials that do not have sufficient rigidity to support themselves in the tests are supported with metal rods or bars.

In some cases, products are certified under the designation "FHC 25/50." This denotes that these products have flame-spread values of 25 or less and smoke-developed values of 50 or less.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials are installed.

The thermal conductivity, vapor resistance, toxicity of the products of combustion, and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

In addition to the surface-burning characteristics, where indicated in the individual certifications, unfaced batts and blankets have also been investigated to CAN/ULC-S114, "Standard Method of Test for Determination of Noncombustibility in Building Materials."

UL MARK

The Classification Mark of UL on the product or package of products is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. Building Units Certified for Canada (BLBT7)

GENERAL

Building Units Certified for Canada (BLBT7)−*Continued*

This category covers building units, consisting of proprietary mixes of organic and/or inorganic materials formed into panels, blocks, boards, planks, slabs, or sheets fabricated into various sizes, thicknesses and shapes, certified as to surface-burning characteristics.

Some building units are provided with facings or are composites of several materials which may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the facing or by using a factory or field joint (if applicable).

For building units consisting of an interior core material faced on both surfaces, the certification of the product includes the surface-burning characteristics of the core material in addition to the surface-burning characteristics of the finished product.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The insulating, acoustical, structural, toxicity of the products of combustion, and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL MARK

The Classification Mark of UL on the product or carton is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Caulking and Sealants Certified for Canada (BLIS7)

GENERAL

This category covers caulkings and sealants certified as to surface-burning characteristics when applied to uncoated, high density (nominal 110 pcf), 1/4 in. thick inorganic reinforced cement board, with flame-spread and smoke-developed values of 0, in longitudinal beads or strips at the specific percentages of exposed area or at full coverage at the specific sq m/l as shown in the individual certifications.

The flash point of liquid materials is also determined. The publication of the flash point data is not intended to establish a flammability classification of the liquid material, but to indicate the flashing characteristics of the liquid material under a standard test procedure. When no flash point values appear in the individual certifications, either the liquid material shows no flash point in the closed tester or flash point is not applicable to the product tested.

The certifications are confined to the materials themselves and do not pertain to the structures in which they are installed.

The toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test For Surface Burning Characteristics of Building Materials and Assemblies."

Cementitious Cement and Plaster Mixtures Certified for Canada (BLPR7)

GENERAL

This category covers cementitious mixtures certified as to surface-burning characteristics when applied in accordance with instructions supplied with the material.

Cementitious mixtures included in the individual certifications cover proprietary mixes prepared at the factory, which require only the addition of water for application to interior building surfaces in the field.

Cementitious mixtures are certified as to surface-burning characteristics when applied to uncoated, high density (nominal 110 pcf), 1/4 in. thick inorganic reinforced cement board with flame-spread and smoke-developed values of 0 and other surfaces at the thickness indicated in the individual certifications.

The certifications are confined to the materials themselves and do not pertain to the structures to which the materials are applied.

The thermal conductivity, vapor resistance, toxicity of the products of combustion, and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For the fire-resistance rating of these products, see Spray-applied Fire-resistive Materials Certified for Canada (CHPX7).

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. Coating Materials Certified for Canada (BMCZ7)

This category covers coating materials intended for application to building surfaces. They are divided into two categories: (1) Coatings, Fire Retardant, intended for application to interior combustible surfaces (and occasionally interior noncombustible surfaces) for the purpose of reducing the surface burning characteristics, and (2) Coatings, General Purpose, intended for various purposes. The purpose of the classification is to express the degree of surface burning characteristics of the coating.

Coating Materials Certified for Canada (BMCZ7)−*Continued*

The flash points (closed cup) of the fire retardant and general-purpose coatings (including preliminary and overcoatings) appear in the individual classifications. The publication of the flash point data is not intended to establish a flammability classification of the liquid coatings, but to indicate the flashing characteristics of the liquid coatings under a standard test procedure. Where "no flash" is indicated, the coating has no flash point in the closed-cup tester.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Coatings, Fire Retardant Certified for Canada (BMQX7)

GENERAL

This category covers coating materials certified as to their surface-burning characteristics as applied to the specific interior surfaces and at the specific coverage rates indicated in the individual certifications. The flash points (closed-cup method) of the coatings are also indicated in the individual certifications.

To be eligible for certification, the surface coating or coating system must reduce the flame spread of Douglas fir and all other tested interior combustible surfaces (having flame spreads of 100 or greater by test) to which it is applied at least 50% or to a flame-spread classification value of 50 or less, whichever is the lesser spread of flame. A coating or coating system may be certified as applied to other surfaces (having flame spreads of less than 100 by test) after its eligibility as a fire-retardant coating or coating system has been established as applied to Douglas fir, with the requirement that the flame-spread classification must not exceed a value of 50 to be eligible for certification.

The surface-burning characteristics are applicable only when the coating is applied at the rates of coverage and to the type or kind of surfaces indicated, when the coating is applied in accordance with the directions supplied with the container, and when the coating is maintained.

Typical combustible surfaces indicated in the individual certifications are Douglas fir, cellulose acoustical tile, cellulose board, and oriented strandboard (OSB). The Douglas fir substrates consist of nominal 1 by 4 in. finished tongue-and-groove flooring. (The flame spread of the uncoated Douglas fir is 70-100.)

The cellulose acoustical tile substrates consist of nominal 12- by 12- by 1/2 in. tongue-and-groove "Factory Finish" (starch type) perforated tiles. (The flame spread of the cellulose tile substrates is normally in excess of 150.)

The cellulose board substrates consist of nominal 10- by 48- by 1/2 in. square edge "Factory Finish" (starch type) unperforated boards. (The flame spread of the cellulose board is normally in excess of 75.)

The oriented strandboard substrates consist of a nominal 3/4 in. thick 24 in. wide by 96 in. long board. (The flame spread of the oriented strandboard is normally in excess of 150.)

Unless otherwise indicated in the individual certifications, cellulose board and cellulose tile substrates are supported for the tests attached to wood furring strips.

Typical noncombustible surfaces indicated in the individual certifications are 1/4 in. thick inorganic reinforced cement board (flame spread 0) and gypsum wallboard (flame spread 15).

Fire-retardant coatings may be tinted in the field provided compatible tints are used in a proportion not exceeding 2 oz. of tint per gal. of coating.

Deeper shades may or may not be supplied by the individual manufacturers.

The certifications are confined to the materials themselves and do not pertain to the structures on which the materials are installed.

The toxicity of the products of combustion and other properties have not been investigated.

The useful life of these coating materials has not been investigated; however, it is important that the coatings be maintained for continued effectiveness.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Coating Materials Certified for Canada (BMCZ7), Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

Coatings, General Purpose Certified for Canada (BNEV7)

GENERAL

This category covers coating materials certified as to surface-burning characteristics when applied to the specific surfaces and at the specific coverage rate indicated in the individual certifications. The flash points (closed-cup tester) of the coatings are also indicated in the individual certifications.

The coating (system) has initially been investigated as applied to uncoated high-density (nominal 1762 kg/cu meter), 1/4-in.-thick inorganic reinforced cement board with flame-spread and smoke-developed values of 0. The coating (system) may have also been investigated on other surfaces or substrates.

General-purpose coatings may be tinted in the field, provided compatible tints are used in a proportion not exceeding 7 oz. of tint per gal of coating. Deeper shades may or may not be supplied by the individual manufacturers.

These materials have been investigated for their surface-burning characteristics only and have not been investigated for their resistance to weather or exterior exposure or for the toxicity of the products of combustion.

The certifications are confined to the materials themselves and do not pertain to the structures in which the material is installed.

Authorities Having Jurisdiction should be consulted before application.

ADDITIONAL INFORMATION

For additional information, see Coating Materials Certified for Canada (BMCZ7), Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

Loose Fill Materials Certified for Canada (BPHX7)

GENERAL

This category covers loose fill materials intended to be poured or blown into stud spaces of walls or joist spaces of ceilings or attics for thermal insulation purposes.

All noncellulosic-based materials are Classified as to surface-burning characteristics in accordance with CAN/ULC-S102.2, "Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Coverings, and Miscellaneous Materials and Assemblies."

Cellulosic-based materials are Classified in accordance with CAN/ULC-S703, "Cellulose Fibre Insulation for Buildings." This standard includes investigations of Types 1 and 2 cellulosic insulation for Corrosiveness, Design Density, Fungi Resistance, Moisture Vapor Sorption, Open-Flammability, Open-Flammability Permanency, Separation of Chemicals, Smoulder Resistance and Thermal Resistivity. It also includes the following additional investigations on Type 2 insulation, if applicable: Cohesion/Adhesion – Exposed Surfaces; Design Moisture – Closed Cavities and Open Spaces; and Settlement – Open Spaces.

Unless otherwise noted in the individual Classifications, cellulosic materials are intended for pneumatic application.

Loose fill materials consisting of cellulosic fiber chemically treated to reduce its combustibility incorporate treatments consisting of water-soluble salts which may be affected by repeated exposure to water or conditions that may result in the condensation of water and will continue, under unfavorable conditions, to smoulder and glow.

The Classifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The toxicity of the products of combustion have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate noncellulosic products in this category for surface-burning characteristics is CAN/ULC-S102.2, "Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Coverings, and Miscellaneous Materials and Assemblies."

The basic standard used to investigate cellulosic products in this category is CAN/ULC-S703, "Cellulose Fibre Insulation for Buildings." Where indicated in the individual Classifications, cellulosic products may also be investigated for surface-burning characteristics to CAN/ULC-S102.2.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

For noncellulosic-based materials:

LOOSE FILL MATERIAL
SURFACE BURNING CHARACTERISTICS
+

Lumber, Treated Certified for Canada (BPVV7)

GENERAL

This category covers the surface-burning characteristics of lumber that has been treated by pressure impregnation to reduce combustibility.

To be eligible for certification, treated lumber must have a flame spread of less than 70 or 70% of the flame spread of untreated lumber of the same species, whichever results in the lesser value.

Unless otherwise indicated, the treatments consist of water soluble salts which will be affected by repeated exposure to water or conditions that may result in the condensation of water. In order to determine the effect of moisture conditions on the surface-burning characteristics, treated lumber (where indicated in the individual certifications) has been subjected to a Standard Rain Test (CAN/ULC-S107 (1987), "Standard Methods of Fire Tests of Roof Coverings") consisting of cyclic wetting and drying periods. These products are eligible to bear the supplemental statement "No increase in the listed Classification when subjected to the Standard Rain Test."

The surface-burning characteristics are established on samples dried to equilibrium at Standard conditions without further processing or machining. As the lumber is not necessarily treated throughout its cross section, it is imperative that no outer material be removed if the published certifications are to be maintained. However, some species of treated lumber, as indicated in the individual certifications, may have been factory milled on either surface without altering the existing classification, as determined by fire testing material before and after milling.

Some species of treated lumber, as indicated in the individual certifications, have also been tested for the spread of flame and evidence of significant progressive combustion for tests of 30-min duration under the same conditions of exposure.

The structural qualities of this lumber have not been determined. The certifications are confined to the materials themselves and do not pertain to the structures in which they may be installed.

The toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Lumber, Treated Certified for Canada (BPVV7)−*Continued*

TREATED LUMBER
SURFACE BURNING CHARACTERISTICS
+
Control No.
or
TREATED LUMBER
SURFACE BURNING CHARACTERISTICS
+
IN ACCORDANCE WITH THE
STANDARD CAN/ULC-S102M
Control No.

+ Flame spread and smoke developed values applicable to the product

In addition, one or more of the following statements may be added if so qualified:

1. "No evidence of significant progressive combustion in tests of 30 minutes duration"
2. "Results apply to samples machined before or after treatment"
3. "No increase in the listed Classification when subjected to the Standard Rain Test"

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Mineral and Fiber Boards Certified for Canada (BQXR7)

GENERAL

This category covers mineral and fiber boards consisting of proprietary mixes of organic and/or inorganic fibers and binders formed into various sizes and thicknesses and supplied with or without surface coatings or facings. The boards are certified as to surface-burning characteristics as indicated in the individual certifications.

Some mineral and fiber boards are provided with facings that may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the facings or by using a factory or field joint (if applicable).

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The insulating, acoustical, structural, toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

In addition to the surface-burning characteristics, where indicated in the individual certifications, unfaced mineral and fiber boards have also been certified to CAN/ULC-S114, "Standard Method of Test for Determination of Noncombustibility in Building Materials."

UL MARK

The Classification Mark of UL on the product or smallest unit package is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MINERAL AND FIBER BOARDS
SURFACE BURNING CHARACTERISTICS

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Pipe- and Equipment-covering Materials Certified for Canada (BRGU7)

GENERAL

This category covers pipe- and equipment-covering materials consisting of proprietary mixes of organic and/or inorganic materials and binders formed into rectangular or circular cross sections, and supplied with or without facings and joint treatments. The covering materials are certified as to surface-burning characteristics as indicated in the individual certifications.

Some pipe and equipment coverings are provided with facings that may affect the contribution of combustibles under fire conditions. The effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the facing and/or by using a factory or field joint (if applicable).

For those materials employing a field joint covering treatment, the facing is provided with a seam (as above) prior to the application of the joint covering treatment.

When the materials are field laminated to the pipe, the surface-burning characteristics are derived when the material is applied with the specified adhesive to uncoated, high density (nominal 110 pcf), 1/4-in.-thick inorganic reinforced cement board that has flame-spread and smoke-developed values of 0. The certifications are confined to the materials themselves, when applied to the surface indicated, in accordance with the directions as shown in the individual certifications or supplied with the product or the adhesive.

In some cases, products are certified under the designation "FHC 25/50." This denotes that these products have flame-spread values of 25 or less and smoke-developed values of 50 or less.

Materials that do not have sufficient rigidity to support themselves during the test are supported with metal rods or 2-in. hexagonal mesh wire with metal rods.

The washability, thermal conductivity, vapor resistance, structural, toxicity of the products of combustion and other properties have not been investigated.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

In addition to the surface-burning characteristics, where indicated in the individual certifications, pipe- and equipment-covering materials have also been certified to ASTM C411, "Hot-Surface Performance of High Temperature Thermal Insulation," at the maximum temperature to which they may be exposed in service.

In addition, where indicated in the individual certifications, unfaced pipe and equipment covering-materials have also been certified to CAN/ULC-S114, "Standard Method of Test for Determination of Noncombustibility in Building Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PIPE AND EQUIPMENT COVERING
SURFACE BURNING CHARACTERISTICS
+
Control No.

+ Flame spread and smoke developed values or the designation "FHC 25/50" applicable to the product

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Plastic Certified for Canada (BRKZ7)

This category covers foamed plastic (BRYX7) and reinforced plastic (BTOR7).

Foamed Plastic Certified for Canada (BRYX7)

GENERAL

This category covers foamed plastic materials in the form of factory-produced boards, panels and tile, or ingredients for use in forming foamed plastic materials in the field. Foamed plastic materials are Classified as to surface burning characteristics as indicated in the individual Classification Mark on, or in connection with, the product.

The Classifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The toxicity of the product of combustion and other properties have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Surface Burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate thermosetting foamed plastic materials is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

The basic standard used to investigate thermoplastic foamed plastic materials is CAN/ULC-S102.2, "Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies."

In addition to the surface burning characteristics, where indicated in the individual Classifications, the foamed plastic has also been Classified in accordance with CAN/ULC-S701-05, "Thermal Insulation, Polystyrene, Boards and Pipe Covering," for Types 1, 2 and 3.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

The Classification Mark appears on the cartons of factory-produced blocks, boards, panels and tile. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory) and the following additional information:

FOAMED PLASTIC
SURFACE BURNING CHARACTERISTICS
+
IN ACCORDANCE WITH THE
STANDARD CAN/ULC-S102 [or CAN/ULC-S102.2]
Control No.

+ Flame spread and smoke developed values applicable to the product

or

The Classification Mark appears on the containers of foamed plastic ingredients intended for field applications. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FOAMED PLASTIC INGREDIENTS
SURFACE BURNING CHARACTERISTICS
++
IN ACCORDANCE WITH THE
STANDARD CAN/ULC-S102
Control No.

++ In addition to the flame spread and smoke developed values, the Classification Mark also incorporates the manufacturer's designation for the specific ingredient within the marked container, the designation for the other ingredients with which it must be reacted, and the thickness and density of plastic material to which the surface burning characteristics is applicable.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Laminated Plastic Certified for Canada (BSMV7)

GENERAL

This category covers laminated plastic consisting of layers of resin-impregnated papers bonded under heat and pressure to form decorative or nondecorative sheets, certified as to surface-burning characteristics as indicated in the individual certifications. These materials are tested unbonded and bonded to uncoated, high-density (nominal 1762 kg/cu meter), 1/4-in.-thick inorganic reinforced cement board with recommended adhesive(s) in accordance with instructions accompanying the product or adhesive(s). Laminated plastic may also be investigated on other surfaces or substrates, as indicated in the individual certifications.

The bonding of laminated plastic may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the laminate or by using a factory or field joint (if applicable).

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

Washability, light reflectivity, durability, toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Plastic Certified for Canada (BRKZ7), Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

UL MARK

The Classification Mark of UL on the product or package of products is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LAMINATED PLASTIC
SURFACE BURNING CHARACTERISTICS
+
Control No.
or
LAMINATED PLASTIC
SURFACE BURNING CHARACTERISTICS
+
IN ACCORDANCE WITH THE STANDARD CAN/ULC-S102M
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Molded Plastic Certified for Canada (BTAT7)

GENERAL

This category covers molded plastic in the form of sheets, panels and grids certified as to surface-burning characteristics. Also, molded plastic strips are certified as to surface-burning characteristics with the specific percentage of exposed area limited as indicated in the individual certifications.

Certifications may be supplemented by evaluations of molded plastic bonded to a substrate as indicated in the individual certifications. The bonding of molded plastic may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the molded plastic or by using a factory or field joint (if applicable).

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The light transmission, washability, color stability, toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''The Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

The basic standard used to investigate thermoplastic materials is CAN/ULC-S102.2, ''Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Covering, and Miscellaneous Materials and Assemblies.''

Reinforced Plastic Certified for Canada (BTOR7)

GENERAL

This category covers glass-fiber, and glass-fiber and metal reinforced plastic sheets as flat, corrugated, or patterned panels, certified as to the surface-burning characteristics as indicated in the individual certifications.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials my be installed.

The structural, light stability and translucence, weathering, toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. Plywood Certified for Canada (BUBZ7)

Treated Plywood Certified for Canada (BUGV7)

GENERAL

This category covers the surface-burning characteristics of treated plywood treated by pressure impregnation to reduce combustibility.

Unless otherwise indicated, the treatment consists of water-soluble salts which will be affected by repeated exposure to water or conditions that

Treated Plywood Certified for Canada (BUGV7)−*Continued*

may result in condensation. In order to determine the effect of moisture conditions on the surface-burning characteristics, treated plywood (where indicated in the following certifications) has been subjected to a Standard Rain Test (CAN/ULC-S107 (2003), ''Methods of Fire Tests of Roof Coverings'') consisting of cyclic wetting and drying periods. These products are eligible to bear the supplemental statement, ''No increase in the listed Classification when subjected to the Standard Rain Test.''

Some species of treated plywood, as indicated by the individual certifications, have also been tested for spread of flame and evidence of significant progressive combustion for test of 30 min. duration under the same conditions of exposure.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The structural qualities of this treated plywood have not been investigated.

The toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

In addition, if so qualified, the following statements may be added:

1. ''No evidence of significant progressive combustion in tests of 30 min duration.''
2. ''No increase in the listed Classification when subjected to the Standard Rain Test.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Sheathing Materials Certified for Canada (BVDV7)

GENERAL

This category covers single or laminated materials, rigid or flexible, of various types and thicknesses, certified as to surface-burning characteristics as shown in the individual certifications.

Some sheathing materials are constructed in such a way that internal components may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the sheathing material or by using a factory or field joint (if applicable). Nonthermoplastic materials are supported for the test on 50 mm hexagonal mesh wire with metal rods. In addition, other methods of mounting may be investigated as indicated in the individual certifications. Sheathing materials incorporating a treated kraft paper component may contain treatments consisting of water-soluble salts which may be affected by repeated exposure to water or condensation.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The structural strength, thermal conductivity, vapor resistance, toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

Sheathing Materials Certified for Canada (BVDV7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies,'' or CAN/ULC-S102.2, ''Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Coverings, and Miscellaneous Materials and Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. Tape, General Use Certified for Canada (BVYS7)

GENERAL

This category covers tape certified as to surface-burning characteristics when applied to uncoated, high-density (nominal 1762 kg/cu m), 0.06-mm-thick inorganic reinforced cement board with flame-spread and smoke-developed values of 0 in longitudinal strips at the specific percentages of exposed area shown in the individual certifications.

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, ''Test for Surface Burning Characteristics of Building Materials and Assemblies.''

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Gypsum Board Certified for Canada (BWFR7)

GENERAL

This category covers gypsum board of various thicknesses consisting of cores primarily of gypsum, but with various additives, certified as to surface-burning characteristics as indicated in the individual certifications.

Some gypsum board is provided with facings that may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint, constructed by slitting the facing or by using factory or field joint (if applicable).

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials are installed.

The insulating, acoustical, structural, toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For the fire-resistance rating of these products, see Gypsum Board Certified for Canada (CKNX7).

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Test for Surface Burning Characteristics of Building Materials and Assemblies."

In addition to the surface-burning characteristics, where indicated in the individual certifications, the gypsum board core has also been certified in accordance with CAN/ULC-S114 (2005), "Standard Method of Test for Determination of Non-Combustibility in Building Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

GYPSUM BOARD
SURFACE BURNING CHARACTERISTICS
+
Issue No.

+ Flame spread and smoke developed values applicable to the product

The Classification Mark may also include the statement: **WALLBOARD CORE ALSO CLASSIFIED IN ACCORDANCE WITH CAN/ULC-S114 STANDARD METHOD OF TEST FOR DETERMINATION OF NON-COMBUSTIBILITY IN BUILDING MATERIALS** (or **WALLBOARD CORE ALSO CLASSIFIED IN ACCORDANCE WITH CAN/ULC-S114**).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Wall Coverings Certified for Canada (BWSZ7)

GENERAL

This category covers the surface burning characteristics of wall coverings intended for application to interior surfaces. These materials have been investigated for their surface burning characteristics only and not for their resistance to wear, mildew, or for the toxicity of the products of combustion or other properties.

For those materials intended for field application with an adhesive, the surface burning characteristics are developed by testing the wall covering as applied to uncoated, high density (nominal 1762 kg/cu m), 1/4 in. thick inorganic reinforced cement board that has flame spread and smoke developed values of 0.

The testing of bonded wall coverings may affect the contribution of combustibles under fire conditions. This effect is determined by testing the sample with a longitudinal butt joint constructed by slitting the wall covering or by using a factory or field joint (if applicable).

The Classifications are confined to the materials themselves, when applied with the specified adhesive at the specified application rate, as indicated in the individual Classifications.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface Burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC S102M, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL MARK

Wood Particleboard Certified for Canada (BXGX7)

GENERAL

This category covers wood particleboard formed as a flat panel primarily consisting of various size particles of wood bonded together with a binder by means of controlled production methods.

Unfaced, nondecorative wood particleboard is certified as to surface-burning characteristics as shown in the individual certifications.

If the wood particleboard is treated, the treatment is with water-soluble salts that will be affected by repeated exposure to water or conditions that may result in condensation of water.

The certifications are confined to the materials themselves and do not pertain to the structures in which the material may be installed.

The toxicity of the products of combustion and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. Prefinished Wood Particleboard Certified for Canada (BXNW7)

GENERAL

This category covers wood particleboard with a decorative coating, facing or veneer applied to one or both faces and certified as to surface-burning characteristics. If the wood particleboard is treated, the treatment is with water-soluble salts, which may be affected by repeated exposure to water or conditions that may result in condensation of water.

Some prefinished wood particleboard is provided with a facing that may affect the contribution of combustibles under fire conditions. This effect is

Prefinished Wood Particleboard Certified for Canada (BXNW7)−*Continued*

determined by testing the sample with a longitudinal butt joint, constructed by slitting the facing, or by using a factory or field joint (if applicable).

The certifications are confined to the materials themselves and do not pertain to the structures in which the materials may be installed.

The toxicity of the products of combustion and other properties has not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Surface-burning Characteristics Certified for Canada (BIKT7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials and Assemblies."

UL MARK

The Classification Mark of UL on the cartons of factory-produced blocks, boards, form units, panels and tile is the only method provided by UL to identify these products manufactured under its Classification and Follow-Up Service. FIRE-RESISTANCE RATINGS CERTIFIED FOR CANADA (BXRH7)

GENERAL

Fire resistance ratings are included for:

1. Assemblies, such as beams, floors, roofs, columns, walls and partitions. These fire resistance designs provide the detailed construction of the assemblies and the components used.
2. Systems, such as construction joint systems, through-penetration firestop systems, electrical circuit protective systems and duct assemblies. These designs provide the detailed construction of the systems and the components used.
3. Opening protectives, such as dampers, fire doors, glazing and related equipment. Opening protectives are used to protect openings in fire resistance rated assemblies.

These materials are intended for use only in specific assembly or system designs as described in the general Guide Information for each product category and individual Listings, except for opening protectives. Opening protectives have been investigated for use as described in the instructions and markings provided with the opening protectives. The use of the materials and opening protectives in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards developed by the Canadian Commission on Building Codes and Fire Codes (CCBFC), CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark for Canada applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark for Canada is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

TECHNICAL SERVICE

Fire resistance assemblies and products are developed by the design submitter and have been investigated by UL for compliance with applicable requirements. The published information cannot always address every construction nuance encountered in the field.

Design Modifications

Careful consideration needs to be given to alterations or modifications of the fire resistance assemblies.

When field issues arise, it is recommended the first contact for assistance be the technical service staff provided by the product manufacturer noted for the design. Users of fire resistance assemblies are advised to consult the general Guide Information for each product category and each group of assemblies. The Guide Information includes specifics concerning alternate materials and alternate methods of construction.

Contacting UL

UL provides assistance to users of fire resistance assemblies and products, which includes clarification of the published information.

UL also provides a service to investigate modifications to the fire resistance assemblies when requested by the design submitter. Requests for clarification should describe the change and include drawings, if necessary.

Requests for clarifications or investigations can be made by contacting UL at:

- Phone: +1 877-ULHELPS (+1 877-854-3577)
- Fax: +1 847-574-4017
- E-mail: archservices@ul.com
- UL's website: www.ul.com

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE-RESISTANCE RATINGS - CAN/ULC-S101 CERTIFIED FOR CANADA (BXUV7)

This category covers fire-test methods and acceptance criteria in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Con-

struction and Materials." The ratings are expressed in hours and are applicable to floors, roofs, beams, columns and walls.

The specifications for the materials and construction of the fire-resistive assemblies are details that directly relate to the established ratings. The hourly ratings apply only to the entire assembly. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems.

Unless specifically detailed in a design or in the product certification information, the impact of galvanization applied to structural steel members has not been investigated under fire-test conditions. Galvanization may impact the adhesion of spray-applied fire-resistive materials or mastic and intumescent coatings.

When a test assembly complies with the acceptance criteria, a detailed description of the assembly, its performance in the fire test and other pertinent details, such as specifications of materials, Classification coverage and alternate assembly details are included in a report for the test sponsor. Sponsors may provide copies of the complete test report upon request. The report also contains a summary of important features of the rated assembly.

A complete description of each rated fire-resistive assembly can be found in Fire-resistance Ratings – ANSI/UL 263 (BXUV).

CAN/ULC-S101 requires loads applied to test samples to be calculated using the Limit States Design Method specified in the "National Building Code of Canada." The standard also requires fire-resistive assemblies with ratings obtained from samples tested with applied loads less than the maximum calculated value to be identified as "Load Restricted."

Assemblies tested with less than the maximum allowable load that would result from loading calculated using the Limit States Design Method are identified as "Load Restricted." The Percent Load Reduction and corresponding Load Restricted Factor for typical assemblies noted in Table I are based upon loading calculated in accordance with the Working Stress Design Method as compared to loading calculated in accordance with the Limit States Design Method. The calculations were performed for assemblies representing spans and member sizes of typical fire-test assemblies. The loads were calculated assuming a span of 4 m for floors and roofs and 3 m for walls.

The "National Building Code of Canada" requires that buildings and their structural components be designed to have sufficient strength and stability so that the factored resistance (ϕR) is greater than or equal to the effects of factored loads. The values for ϕ and R are specified in the applicable Limit State Design Methods for concrete, masonry, steel and timber.

Some fire-resistive designs are specified with a Load Restricted Factor. When using fire-resistive designs with a Load Restricted Factor, the factored resistance of the structural members or components should be reduced by multiplying the factored resistance by the Load Restricted Factor specified in the individual fire-resistive designs.

The Load Restricted Factor should be applied to the factored resistance of all structural members or components, including, but not limited to, factored moment resistance (M_r), factored shear resistance (V_r), factored tensile resistance (T_r) and factored compressive resistance (C_r).

Table I

Type of Assembly	Percent Load Reduction (LSD-WSD)/LSD	Load Restricted Factor
W8x28 – AISC (W200x42 – CISC) noncomposite steel beam	12	0.88
W8x28 – AISC (W200x42 – CISC) composite steel beam	29	0.71
Floor/Roof supported by open-web steel joists	4	0.96
Floor supported by cold-formed steel channels	0	none
Floor supported by 2 x 10 in. (38 x 235 mm) wood joists	35	0.65
Wall supported by 2 x 4 in. (38 x 89 mm) wood studs	18	0.82
Wall supported by cold-formed steel studs	0	none
Steel columns	0	none

The ratings for floors supported by cold-formed steel channels and walls supported by cold-formed steel studs do not have a Load Restriction Factor because the associated loads in Canada and the U.S. are based on the same standard: CSA S136 (2001), "North American Specification for the Design of Cold-Formed Steel Structural Members," and "North American Specification and Commentary for the Design of Cold-Formed Steel Structural Members" (2007).

The ratings for steel columns do not have a Load Restricted Factor because these ratings are based on temperature limitations. No loading is applied to steel columns during the fire test.

The engineer of record should be consulted whenever fire-resistive assemblies with Load Restricted Factors are selected. The indicated load reductions are based upon factored load effects that are governed by the reduced factored resistance of the structural elements. The selection of structural elements is, at times, based upon service limits, such as deflection and vibration. These factors and others, such as the change in material strength properties as a function of temperature, should be considered when selecting fire-resistive assemblies with Load Restricted ratings.

Unless stated in a design, it is recommended the Load Restricted Factors in Table I be used. Designs detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV) that are also intended for use in Canada include the statement "Load Restricted for Canadian Applications – See Guide BXUV7."

Assemblies developed from tests where the load applied on the sample was based upon calculations in accordance with the Limit States Design Method are identified in Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ACOUSTICAL MATERIALS CERTIFIED FOR CANADA (BYIT7)

USE

This category covers both mineral fiber and metal-pan ceiling materials investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The fiber material is composed of glass or mineral-wool fiber and binders, formed into tiles and lay-in panels. The perforated metal pans are steel and support mineral-wool pads.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADHESIVES CERTIFIED FOR CANADA (BYWR7)

USE

This category covers adhesives investigated for use in fire-resistive designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The methods and rates of application are given in the design illustration and on the container in which the product is furnished.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

For information on surface-burning characteristics, see Adhesives Certified for Canada (BJLZ7).

AIR TERMINAL UNITS CERTIFIED FOR CANADA (BZGU7)

USE

This category covers air terminal units investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV).

Air terminal units are designed to regulate the flow and distribute conditioned air within a building, and are ceiling mounted at the ends of ducted air systems. The units are designed to be compatible with acoustical ceilings but are independently supported as shown in installation instructions supplied with the units.

BUILDING UNITS CERTIFIED FOR CANADA (BZXX7)

USE

This category covers building units investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The building units are composed of proprietary mixes of materials processed into the form of rigid boards, blocks, planks, sheets or slabs, and are formed in various sizes, shapes and thickness.

Unless specified in the individual designs as being suitable for exterior-use applications, building units are intended for interior-use applications only.

RELATED PRODUCTS

CEILING FIRESTOP FLAP ASSEMBLIES CERTIFIED FOR CANADA (CABS7)

USE

This category covers ceiling dampers investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Ceiling firestop flap assemblies are designed to function as a heat barrier in air-handling openings penetrating fire-resistive membrane ceilings.

Ceiling firestop assemblies have been investigated for use in lieu of the protection specified in the floor or roof and ceiling construction designs which contain air ducts and specify hinged-door-type dampers (firestop flap assemblies) over each duct outlet. Ceiling firestop flap assemblies are intended to be installed in accordance with installation instructions provided with the product. The location of the ceiling firestop flap assembly in the duct outlet relative to the ceiling level is specified in the installation instructions; this location must be followed during installation in order to obtain the rated assembly performance.

The individual certifications indicate whether (1) each ceiling firestop flap assembly can be used in all designs conforming to the specifications under the certification, or (2) only for specific design(s) which show the certified company name and ceiling firestop flap assembly type. In the latter case, the individual design numbers are shown in the Certification Mark.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S112.2, "Standard Method of Fire Test of Ceiling Firestop Flap Assemblies," and/or CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. CEMENTITIOUS BACKER UNITS CERTIFIED FOR CANADA (CAGP7)

USE

This category covers cementitious backer units investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Cementitious backer units are composed primarily of cement, aggregate and reinforcement and are used as backer boards or underlayment.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

CLAY MASONRY UNITS CERTIFIED FOR CANADA (CAGZ7)

USE

This category covers clay masonry units investigated for use in fire-resistance designs as detailed in Fire Resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7). The solid or hollow bricks are made from clay, shale, fire clay, or mixtures thereof, and subjected to firing.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL CERTIFICATE

The Certificate of UL is the only method provided by UL to identify clay masonry units covered under its Classification and Follow-Up Service Program.

The Certificate serves as evidence that the Classified company (1) is a subscriber to the service for clay masonry units, (2) is authorized to issue the certificate as its representation that the units are in accordance with requirements established by UL, and (3) is subject to UL's Follow-Up Service on representative samples selected at the factory and in the field.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE-RESISTANCE-RATED GLAZING MATERIALS CERTIFIED FOR CANADA (CCET7)

USE

This category covers fire-resistance-rated glazing materials investigated for use in specified fire-resistive wall or partition constructions with respect to (1) wall construction details, (2) maximum size of individual glazing panels, and (3) the maximum aggregate area of glazing panels per 645 sq cm (100 sq ft) of wall area as described in the individual design illustrations. The glazing material provides the insulation properties for compliance with the temperature rise requirement of the Standard Test Method.

Details of the wall-opening framing for the fire-resistance-rated glazing material and installation of the glazing material within the framed openings are described in the individual design illustrations.

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. FLOOR- AND ROOF-TOPPING MIXTURES CERTIFIED FOR CANADA (CCOX7)

USE

This category covers floor- and roof-topping mixtures investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). These proprietary materials are factory blended and require the addition of water and other materials to be mixed at the job site in accordance with application instructions shown on the bags. The materials are mixed, placed and troweled similar to concrete topping and are used as a nonstructural floor filling and leveling medium. The mixtures are intended for use on floors or on roofs, but not necessarily on both, as indicated in the individual certifications.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

FOAMED PLASTIC CERTIFIED FOR CANADA (CCVW7)

USE

This category covers foamed plastic investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The foamed plastic is in the form of rigid boards, formed units or ingredients for use in forming foamed plastic in the field intended for use in roof-ceiling or wall and partition designs.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

For information on surface-burning characteristics, see Foamed Plastic Certified for Canada (BRYX7).

LUMINAIRES, LUMINAIRE ASSEMBLIES AND LUMINAIRE ENCLOSURES CERTIFIED FOR FIRE RESISTANCE CERTIFIED FOR CANADA (CDHW7)

USE

This category covers luminaires, luminaire assemblies and luminaire enclosures investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The luminaires, assemblies and enclosures (in conjunction with a luminaire) are intended for recessed installation in ceilings in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." They have been shown to provide a degree of fire resistance with the floor or roof assemblies with which they have been tested.

The luminaires and luminaire assemblies have been investigated and found to comply with applicable electrical requirements and are so labeled.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Constructions and Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MASTIC AND INTUMESCENT COATINGS CERTIFIED FOR CANADA (CDWZ7)

GENERAL

This category covers mastic and intumescent coatings investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The coatings are mixed at the factory and are applied directly to building structures by means of pumping equipment specifically designed for that purpose or by hand with a paint brush, roller or towel.

The influence of various environments on the fire-resistive properties of the coatings has been investigated. These tests were conducted to evaluate the influence of the environments on the intumescent properties of the coating.

The simulated environmental tests conducted on mastic coatings intended for interior use are aging, high humidity, carbon dioxide and sulfur dioxide air mixture, chlorine and washing.

The environments included in investigation of coatings intended for exterior use are aging, high humidity, ultraviolet light, salt spray, carbon dioxide and sulfur dioxide air mixture, and wet-freeze-dry cycling.

To investigate the influences of environments, the coating material is applied to either steel plates or structural steel shapes and a selected number of samples are subjected to the environments. After the environmental exposures, samples are subjected to the fire exposure defined in CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials." The ability of the coating to retain its fire-resistive properties is determined on the basis of a comparative analysis of the fire test data obtained from fire tests on samples that were exposed and fire tests on samples that were not exposed to the simulated environments.

RELATED PRODUCTS

MINERAL AND FIBER BOARDS CERTIFIED FOR CANADA (CERZ7)

USE

This category covers mineral and fiber boards investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL

263 (BXUV). These boards consist of proprietary mixes of organic and/or inorganic fibers and binders formed into various sizes and thickness. The uses of the boards include forms for gypsum concrete, luminaire protection boxes, roof insulation, membrane ceiling materials, and beam and column protection.

Unless specified in the individual designs and certifications as being suitable for exterior-use application, mineral and fiber boards are intended for interior-use application only.

Authorities Having Jurisdiction should be consulted before installation.

MOLDED PLASTIC CERTIFIED FOR CANADA (CEVT7)

USE

This category covers molded plastic investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The molded plastic in the form of sheets, panels or formed units is intended for use in wall and partition designs.

The weatherability, washability, color stability, toxicity of the products of combustion and related properties have not been investigated.

RELATED PRODUCTS

NONMETALLIC PLUMBING SYSTEM COMPONENTS CERTIFIED FOR FIRE RESISTANCE CERTIFIED FOR CANADA (CEYD7)

USE AND INSTALLATION

This category covers nonmetallic tubing investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Certified products are intended to be used and installed in accordance with model codes, such as the "National Plumbing Code of Canada," and the "National Building Code of Canada."

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

OUTLET BOXES AND FITTINGS CERTIFIED FOR FIRE RESISTANCE CERTIFIED FOR CANADA (CEYY7)

GENERAL

This category covers special-purpose boxes for installation in floors and nonmetallic outlet boxes for installation in floors, walls and partitions, and/or ceilings in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). They have shown a degree of fire resistance when installed in the particular floor(s), wall(s) and/or ceiling(s) described for each certified company. Boxes of the type covered in the Products Certified for Canada Directory have been investigated and found to comply with established electrical requirements and are so certified.

FLOOR BOXES

Boxes for use with floors have been investigated for use with electrical receptacles fabricated of melamine, phenolic or urea materials, unless specified otherwise in the installation instructions and certification information. Floor boxes and fittings are intended to be installed in accordance with installation instructions provided with the product.

OUTLET BOXES AND FITTINGS CERTIFIED FOR FIRE RESISTANCE CERTIFIED FOR CANADA (CEYY7)

Boxes with integral connectors for electric metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

Floor boxes designated for floor installation as covered in the CEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type, such as "Floor Box" or "Floor Box, Concrete Type," as appropriate.

WALL AND PARTITION AND CEILING BOXES

Nonmetallic outlet boxes evaluated for installation in fire-resistive assemblies are provided with the appropriate Certification Mark for electrical products and other markings as described in the general information section of Nonmetallic Outlet Boxes Certified for Canada (QCMZ7).

Nonmetallic outlet boxes certified for use in fire-resistive designs may have the following marking in the base of the box:

Class * hr, F, W and/or C

where * indicates hourly rating such as 1 hr or 2 hr and F = Floor, W = Wall and C = Ceiling.

They are certified for use in certain fire-resistive designs as detailed in Volume 1 of the UL Fire-resistance Directory when installed in accordance with the details described for each certified company. Any certified metallic or nonmetallic cover is suitable for use with these nonmetallic boxes.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings Certified for Canada (BXUV7).

Outlet boxes that comply with established electrical requirements are covered under Metallic Outlet Boxes Certified for Canada (QCIT7) and Nonmetallic Outlet Boxes Certified for Canada (QCMZ7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product or on each UL Classified steel floor and form unit with factory-installed floor boxes, or the UL symbol on the product and the Classification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ROOFING MEMBRANES CERTIFIED FOR CANADA (CHCI7)

USE

This category covers roofing membranes investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The single-ply roofing membranes (such as EPDM, PVC, CSPE, modified bitumen, etc.) are intended for use as the roof covering in roof-ceiling designs. The membranes have been investigated for use in specified designs when installed in accordance with the details described for each certified company.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

For information on external fire exposure, see Roofing Systems Certified for Canada (TGFU7). The membranes covered under TGFU7 for each certified company are the only membranes eligible to bear the Fire Resistance Classification. For method of attachment, refer to the manufacturers' certifications under Roofing Systems (TGFU).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Method of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the packaging is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SHEATHING MATERIALS CERTIFIED FOR CANADA (CHIZ7)

USE

This category covers sheathing materials investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Sheathing materials are thin, flexible sheets used as vapor retarders between the roof deck and roof insulation or between concrete floor topping and wood subflooring.

The structural strength, thermal conductivity and vapor resistance of these materials have not been investigated.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Method of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the package or roll is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SPEAKER ASSEMBLIES FOR FIRE RESISTANCE CERTIFIED FOR CANADA (CHML7)

USE AND INSTALLATION

This category covers speaker assemblies investigated for use in ceilings of fire-resistive floor-ceiling and roof-ceiling assemblies in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). They have been shown to provide a degree of fire resistance when installed in the specific designs described for each certified company.

The speaker assemblies have been investigated for use in specific ceilings with respect to: (1) maximum size of the individual speaker assemblies, (2) minimum spacing between individual speakers, and (3) maximum aggregate area of the speaker assemblies per 100 sq ft of ceiling area.

Speaker assemblies are intended to be installed in accordance with the installation instructions supplied with the product and as described in the individual fire-resistive designs.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Method of Fire Endurance Tests of Building Construction and Materials."

These speaker assemblies are provided with an outer enclosure. The insulation material that surrounds the enclosure that is exposed to the airflow in a return air-plenum space has also been investigated to CAN/ULC-S102, "Method of Test for Surface Burning Characteristics of Building Materials." These materials have a flame-spread value of 25 or less and a smoke-developed value of 50 or less.

UL MARK

The Classification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SPRAY-APPLIED FIRE-RESISTIVE MATERIALS CERTIFIED FOR CANADA (CHPX7)

GENERAL

This category covers spray-applied fire-resistive materials (SFRM) investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV).

SFRMs include two general types of products previously certified as cementitious mixtures and sprayed fiber materials. In BXUV, the cementitious mixtures are grouped in the 700 series designs, and the sprayed fiber materials are grouped in the 800 series designs. The 600 series and the 900 series designs are used to identify those assemblies that include both the cementitious mixtures and the sprayed fiber type products in an assembly.

Cementitious mixtures typically consist of one or more binders, aggregates and fibers that are mixed with water to form a slurry and conveyed through a hose to a nozzle where compressed air is typically used to disperse the material into a spray pattern. The sprayed fiber materials typically consist of one or more binders, fibers and aggregates that are conveyed by low-pressure air through a hose to a nozzle where the material is mixed with atomized water and sprayed. The mixture and application instructions are printed on each bag of SFRMs.

Surfaces on which the SFRMs are applied should be free of dirt, oil and loose scale. The minimum thickness and density information specified in the design text must be followed to obtain the specified rating. The test method used to investigate the SFRM is specified in the design text.

Regulations governing the application and use of SFRMs have been promulgated by various governmental agencies. Authorities Having Jurisdiction should be consulted to determine local requirements.

Unless specified in the design text as being suitable for exterior-use application, SFRMs investigated to CAN/ULC-S101, "Standard Method of Fire Endurance Tests of Building Construction and Materials," are intended for interior-use application only.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

STEEL FLOOR AND FORM UNITS CERTIFIED FOR CANADA (CHWX7)

USE

This category covers steel floor and form units investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Steel floor and form units provide a permanent form for concrete topping in floor-ceiling assemblies. They are designed to carry floor loads of a building independently of, or compositely with, the concrete topping depending on the design feature of a particular unit. See individual floor-ceiling or roof-ceiling designs for certification of steel floor and form units.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

FRAMING MEMBERS CERTIFIED FOR CANADA (CIKV7)

USE

This category covers framing members that include suspension systems for ceiling membrane materials, and other direct or indirect supporting members for surfacing materials in walls or partitions and columns.

Framing members may be manufactured in metric sizes to accommodate metric-sized panels. Metric-sized framing members are intended to be used only with metric-sized materials or metric-sized gypsum wallboard. Manufacturers of metric-sized framing members intended for support of metric-sized acoustical materials or gypsum wallboard are indicated in the individual certifications.

Typical inch-pound-sized modules and equivalent metric-sized modules are:

Panel Dimensions Nominal Size (in.)	Panel Dimensions Nominal Size (mm)
12 x 12	300 x 300
12 x 24	300 x 600
24 x 24	600 x 600
24 x 36	600 x 900
24 x 48	600 x 1200
24 x 60	600 x 1500
20 x 60	500 x 1500
30 x 60	750 x 1500

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

UL MARK

The Classification Mark of UL on the carton is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

STRUCTURAL CEMENT-FIBER UNITS CERTIFIED FOR CANADA (CIYT7)

USE

This category covers structural cement-fiber units investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). These units consist of proprietary mixes of processed cement-fiber and a cementitious binder formed into flat or stemmed slabs or boards of various sizes, shapes and thickness. The products may, after exposed to the standard fire test, continue to smolder and glow.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Method of Fire Endurance Tests of Building Construction and Materials.''

UL MARK

Two methods of labeling are provided for this material: (1) Each piece will bear the Classification Mark, or (2) a Certificate is issued. A Certificate is prepared by the manufacturer for each construction site to be supplied. The use of the Certificate is optional when each piece bears the Classification Mark but in all cases it is restricted to material shipped directly from a factory to a construction site.

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

STRUCTURAL STEEL MEMBERS CERTIFIED FOR CANADA (CJFS7)

USE

This category covers structural steel members investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Structural steel members consist of various sizes of sheet steel or open-web composite steel load-bearing members designed to carry the floor or wall loads of a building. The floor-load-carrying members provide reinforcement for the structural concrete floor and a support for the suspended-ceiling systems.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

STRUCTURAL WOOD MEMBERS CERTIFIED FOR CANADA (CJIX7)

USE

This category covers structural wood members investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Structural wood members consist of various sizes of joists or studs fabricated partially or completely from wood products and are designed to carry the floor or wall loads of a building. The floor-load-carrying members provide support for the suspended-ceiling systems. See the individual floor-ceiling, roof-ceiling or wall designs for construction details on the certification of structural wood members.

The properties of the members other than those related to fire resistance have not been investigated.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNITS, PARTITION PANEL CERTIFIED FOR CANADA (CJMR7)

USE

This category covers partition panel units investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The units are metal panels containing factory- or field-applied insulation, insulating concrete or gypsum as its core material.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

VERMICULITE AGGREGATE CERTIFIED FOR CANADA (CJZZ7)

USE

This category covers vermiculite aggregate investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Vermiculite aggregate is a laminated micaceous mineral produced by expanding the ore at elevated temperatures, forming a lightweight, laminated, flaky structure predominately gold in color. Upon the addition of water, this aggregate, when proportioned and mixed with the material or materials as specified in the individual designs, forms a plastic mass for use in building structures.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. GYPSUM BOARD CERTIFIED FOR CANADA (CKNX7)

GENERAL

This category covers gypsum board investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV).

Gypsum board is primarily gypsum reinforced with mineral fibers, bound on each side by paper or similar exterior finish. It can be applied to steel or wood joists to form interior ceilings, and to steel or wood studs to form interior walls.

Gypsum board may also be used as a base for the application of plaster coatings, as underlayment for roof insulations, and as a form for gypsum concrete when proper facings are used.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

For information on surface-burning characteristics, see Gypsum Board Certified for Canada (BWFR7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

WALL AND PARTITION FACINGS AND ACCESSORIES CERTIFIED FOR CANADA (CLBV7)

GENERAL

This category covers wall and partition facings and accessories consisting of metal facing units, accessory clips, coatings and fasteners.

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the units is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

WALL-OPENING PROTECTIVE MATERIALS CERTIFIED FOR CANADA (CLIV7)

USE

This category covers wall-opening protective materials investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The protective materials are proprietary compositions used to maintain the hourly ratings of fire-resistive walls and partitions containing flush-mounted devices, such as outlet boxes, electrical cabinets and mechanical cabinets.

The Metallic Electrical Outlet Boxes section under **WALL AND PARTITION ASSEMBLIES** in BXUV specifies the conditions under which certified metallic outlet and switch boxes may be installed within fire-resistance-rated wall assemblies constructed with bearing and nonbearing wood or steel studs and gypsum board facings. In addition, Outlet Boxes and Fittings Certified for Fire Resistance Certified for Canada (CEYY7) includes certifications for nonmetallic outlet boxes along with the conditions under which such outlet and switch boxes may be installed within fire-resistive wall assemblies. With either type of outlet or switch box, it may be possible to install the boxes under less stringent conditions when such boxes are used in conjunction with wall-opening protective materials. The use of wall-opening protective materials may allow for (1) reducing the spacing between boxes contained on opposite sides of the wall, (2) increasing the size of the boxes, (3) increasing the density of boxes installed, and/or (4) allowing the use of boxes on each side of staggered stud walls. The individual certifications indicate the specific applications and the method of installation for which the materials have been investigated. Unless otherwise specified in the individual certifications, all conduit connectors used in conjunction with metallic outlet boxes are intended to be steel.

Electrical devices are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Method of Fire Endurance Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. WOOD SASH MEMBERS CERTIFIED FOR CANADA (CLJJ7)

USE

This category covers wood sash members investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). Wood sash members include wood or wood composite materials used to form the stiles and rails of window frames for fire-resistive glazing.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, ''Standard Methods of Fire Endurance Tests of Building Construction and Materials.''

UL MARK

The Classification Mark of UL on the carton is the only method provided by UL to identify these products manufactured under its Classification and Follow-Up Service. BUSWAYS, METAL ENCLOSED, OVER 751 VOLTS CERTIFIED FOR CANADA (CVZW7)

USE

This category covers metal-enclosed busways of the nonsegregated phase type, for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' A nonsegregated phase busway is one in which all phase conductors are in a common metal enclosure without barriers between the phases.

Busways are intended to be installed with supports at intervals of 1.5 m or less unless marked as suitable for greater support intervals.

Busways are intended for installation in a horizontal position unless marked as suitable for vertical installation.

PRODUCT TYPE

These are assemblies of metal-enclosed rigid bus or cable type conductors together with associated interconnections, such as elbows, tees, wall flanges, and the like. Busways covered under this category use air as part of the insulation system. Busways with insulation systems comprised of gas (other than air), solid or liquid insulation systems are not covered under this category.

RATINGS

These assemblies are intended for use on systems with nominal rated voltages from 751 V to 46 kV ac.

ENCLOSURES

These assemblies are intended for either indoor or outdoor applications. A nonventilated assembly investigated for outdoor use is marked ''Enclosure 3.'' A ventilated assembly investigated for outdoor use is marked ''For Outdoor Use.''

Enclosures are of the ventilated or nonventilated type. A ventilated enclosure is provided with means to permit circulation of sufficient air to remove excess heat.

A nonventilated enclosure is constructed to provide no intentional circulation of external air through the enclosure.

PRODUCT MARKINGS

These products are permanently marked with the following electrical ratings: maximum volts and amperes, number of poles or phases, insulation (BIL) level, and frequency. When shipped in sections, each section includes all the required markings

Busways with neutral conductors smaller than the phase conductors are also marked with the current rating of the neutral conductor.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 201, ''Metal-Enclosed High Voltage Busways.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Metal-enclosed Busway.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUSWAYS AND ASSOCIATED FITTINGS CERTIFIED FOR CANADA (CWFT7)

GENERAL

This category covers busways and associated fittings, rated 600 V or less, 6000 A or less. Busways are grounded metal enclosures containing factory-mounted bare or insulated conductors, which are usually copper or aluminum bars, rods or tubes. These enclosures and, in some cases an additional ground bus, are intended for use as equipment grounding conductors.

Some busways are not intended for use ahead of service equipment and are marked with the maximum rating of overcurrent protection to be used on the supply side of the busway.

Busways may be of one of the following designs:

Lighting Busway — Busway intended to supply and support industrial and commercial luminaires. Lighting busway is limited to a maximum current rating of 50 A.

Trolley Busway — Busway having provision for continuous contact with a trolley by means of a slot in the enclosure. Trolley busway may be additionally marked ''Lighting Busway'' if intended to supply and support industrial and commercial luminaires.

Continuous Plug-in Busway — Busway provided with provision for the insertion of plug-in devices at any point along the length of the busway. Continuous plug-in busway is intended for general use and may be installed within reach of persons. Busways of this design are limited to a maximum current rating of 225 A.

Short-run Busway — Unventilated busway intended for a maximum run of 9.4 m horizontally, 3.05 m vertically and are primarily used to supply switchboards. Except for transformer stubs, short-run busway is not intended to have intermediate taps.

USE AND INSTALLATION

Busways investigated to determine their suitability for

- installation in a specified position,
- for use in a vertical run, or for support at intervals greater than 1.5 m,
- for outdoor use

are so marked. This marking is on or contiguous with the name plate incorporating the manufacturer's name and electrical rating.

A busway or fitting containing a vapor seal is so marked, but unless marked otherwise, the busway or fitting has not been investigated for passage through a fire-rated wall.

Busway marked ''Lighting Busway'' and protected by overcurrent devices rated in excess of 20 A is intended for use only with luminaires employing heavy-duty lampholders unless additional overcurrent protection is provided for the luminaire in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

Trolley busway should be installed out of the reach of persons or be otherwise installed to prevent accidental contact with exposed conductors.

Some busways have a number of short stubs and are marked for use with certain compatible equipment.

Busways and fittings covered under this category are intended for use with copper conductors unless marked to indicate which terminals are

suitable for use with aluminum conductors. Such marking is independent of any marking on the terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of the CEC. Termination provisions are determined based on values provided in these tables with no adjustment made for correction factors.

Some fittings are suitable for use as service equipment and are so marked.

PLUG-IN BUSWAY FITTINGS INTENDED FOR USE ON OTHER MANUFACTURERS' BUSWAYS

Busway fittings of the plug-in design may be suitable for use on other manufacturers' continuous plug-in or lighting busways. Busway fittings investigated for use on other manufacturers' busways are limited to fittings incorporating luminaires. Fittings are marked to indicate with which busway they are intended to be used. Fittings intended for this application are limited to short-circuit current ratings of 10 kA, 600 V or less.

RATINGS

Busways and associated fittings marked ''Short Circuit Current Rating(s) Maximum RMS Symmetrical Amps ___ Volts ___'' have been investigated for the rating indicated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 27 (2000), ''Busways.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Busway,'' ''Short-Run Busway'' or ''Busway Plug,'' or other appropriate product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABINETS AND CUTOUT BOXES CERTIFIED FOR CANADA (CYIV7)

GENERAL

This category covers sheet-metal boxes and nonmetallic boxes. Cutout boxes are provided with a door secured by hinges and one or more fasteners and are intended for surface mounting. A cabinet consists of two parts: a cabinet box and a mating cabinet front that contains a door. A cabinet may be flush mounted or surface mounted. These boxes are intended for installation in accordance with Section 12 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ENVIRONMENTAL RATINGS AND CONDITIONS

Each cabinet and cutout box is marked with one or more of the following Enclosure Type ratings for which it was investigated: Type 1, 2, 3, 3R, 3S, 4, 4X, 5, 6, 6P, 12, 12K or 13. The intended uses for each Enclosure Type are as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Cabinets and cutout boxes marked as Type 2 or 3R enclosures may be marked to indicate the intended mounting orientation, or the location where electrical parts are intended to be installed, or both, where necessary to maintain the designated environmental rating.

Cabinets and cutout boxes marked as Type 3, 3S, 4, 4X, 6, 6P, 12, 12K or 13 have integral mounting means external to the enclosure cavity or may have openings into the enclosure cavity for attachment of separate mounting means supplied with the enclosure or available as a kit referenced from enclosure markings.

ELECTRICAL EQUIPMENT

Some cabinets and cutout boxes are intended for the installation of specific kinds of equipment; however, this category does not cover any electrical material or fittings contained in the box.

RELATED PRODUCTS

Boxes provided with a cover secured by fasteners other than hinges are covered under Boxes, Junction and Pull Certified for Canada (BGUZ7).

Enclosures intended for use with industrial control panels are covered under Industrial Control Panels Certified for Canada (NITW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 94, ''Special Purpose Enclosures.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Cabinet Front,'' ''Electric Cabinet Box'' or ''Cutout Box.''

The product name ''Electric Cabinet Front'' is for the front trim or matt used on the flush- or surface-mounted cabinet box. The product name ''Electric Cabinet Box'' is for the box only.

The product name ''Cutout Box'' is for the surface-mounted box provided with a door.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE ASSEMBLIES AND FITTINGS FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION CERTIFIED FOR CANADA (CYJV7)

USE

This category covers the interconnecting cable assemblies and panel-mounted fittings used with industrial control equipment and proximity switches. These assemblies are intended to be used in an industrial environment to distribute the control signals and power to the remote proximity switches or other control circuit devices. The cable assemblies and mating fittings are not intended to be used as a substitute for the fixed wiring of a building structure. These devices are intended for use only with the Listee's same line of products covered under this category.

Cable assemblies and fittings are rated in volts and amperes. The devices are marked with such rating on the device or smallest unit shipping container. The products covered under this category have not been investigated for interruption of current.

Cable Assemblies — Cable assemblies consist of a length of flexible cord with a molded-on or assembled-on male or female connector on at least one end of the cable. Cable assemblies with only one end terminated are intended for direct connection to a proximity switch, control panel, or similar device.

Assembled-on Cord Connectors and Attachment Plugs — Fittings intended to be installed onto flexible cord may have a male or female insert configuration. The diameter and the wire size of the flexible cord to which the fitting is intended to be assembled is indicated on the fitting or the smallest unit shipping container.

Panel-mounted Fittings — These fittings consist of a panel-mounted assembly with either a male or female insert. Each assembly is provided with a means to secure to a panel. These fittings may be provided with leads intended for direct wiring connection to a control panel, proximity switch, or other similar device.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 182.3, ''Special Use Attachment Plugs, Receptacles and Connectors.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit shipping container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Cable Assembly for Industrial Control and Signal Distribution,'' ''Cable Assembly Fitting for Industrial Control and Signal Distribution,'' ''CYJV7 Cable Assembly'' or ''CYJV7 Cable Assembly Fitting.''

The cable assemblies that have terminations on one end only may be bulk labeled with the Listing Mark provided on the smallest unit shipping container. All other Listing Marks are applied to each individual device.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE ASSEMBLIES FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (CYJX7)

USE

This category covers cable assemblies, cable plugs and sockets, panel-mounted plugs and sockets, and plugs and sockets used for interconnection

between one piece of electrical equipment and another piece of electrical equipment (by means of a cable or cord assembly involving plugs and sockets on both ends, or a plug and socket on one end and unterminated cable or cord on the other), or

between premises wiring and a piece of electrical equipment (by means of a cable or cord assembly involving a socket on the equipment end and unterminated cable or cord on the premises wiring end).

This interconnection is in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). These assemblies are intended to be used in locations that are classified as Class I, Division 2 to distribute the control signals to remote proximity switches or other control-circuit devices.

Each cable assembly is provided with means to mechanically secure the plug or socket on either end of the cable assembly to the intended equipment plug or socket so as to protect against unintentional separation. The means used to provide this mechanical securement is constructed as follows:

1. separation shall be possible only with the aid of a tool,
2. when not secured, the means shall be captive to the cable assembly, and
3. a marking is provided that is likely to be readily visible after installation that reads, "WARNING – Do Not Connect or Disconnect When Energized," or equivalent.

Note: The warning marking may be on the securement means or on the cable assembly. It may be necessary to provide more than one warning marking for ready visibility.

Instructions are provided indicating that, should the cable assembly become separated from the intended equipment plug or socket, the part that remains energized is a socket outlet.

This category does not cover cable assemblies with plugs on both ends.

Product Types

The following products are covered under this category:

Cable Assemblies — Cable assemblies consist of a length of cord or cable as follows:

1. extra-hard-usage cord,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

Note: See the following Code references for additional details on these wiring methods:

For extra-hard-usage cord, see Section 4 of the CEC or Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC).

For instrumentation tray cable (Type ITC), see Article 727 of the NEC.

For power-limited tray cable (Type PLTC), see Article 725 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket. Cable assemblies with only one end terminated are intended for direct connection to a proximity switch, control panel, or similar device.

Cable Plugs and Sockets — Plugs and sockets intended to be field wired or molded onto cord or cable as indicated under **Cable Assemblies** above may have a male or female insert configuration. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket or the smallest unit shipping container.

Panel-mounted Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is provided with a means to secure to a panel. These plugs and sockets may be provided with leads intended for direct wiring connection to a control panel, proximity switch, or other similar device.

RATINGS

These cable assemblies are rated based on the involved cord or cable as follows:

1. extra-hard-usage cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Cable assemblies and plugs and sockets are rated in volts and amperes. The devices are marked with such rating on the device or smallest unit shipping container.

SPECIAL CONSIDERATIONS

The cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by J18-156 of the CEC.

These cable assemblies and mating plugs and sockets are intended for use only with the Listee's same line of cable assemblies and mating plugs and sockets covered under this category.

The products covered under this category are not intended for interruption of current and are so marked.

These devices are intended for indoor use only, unless otherwise so identified.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 182.3 (1987), "Special Use Attachment Plugs, Receptacles and Connectors."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cable Assembly for Industrial Control and Signal Distribution for Use in Hazardous Locations," "Cable Assembly Plug for Industrial Control and Signal Distribution for Use in Hazardous Locations," "Cable Assembly Socket for Industrial Control and Signal Distribution for Use in Hazardous Locations," "CYJX7 Cable Assembly for Use in Hazardous Locations," "CYJX7 Cable Assembly Plug for Use in Hazardous Locations" or "CYJX7 Cable Assembly Socket for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE ASSEMBLIES FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (CYJZ7)

USE

This category covers cable assemblies, cable plugs and sockets, panel-mounted plugs and sockets, and plugs and sockets used for interconnection

between one piece of electrical equipment and another piece of electrical equipment (by means of a cable or cord assembly involving plugs and sockets on both ends, or a plug and socket on one end and unterminated cable or cord on the other), or

between premises wiring and a piece of electrical equipment (by means of a cable or cord assembly involving a socket on the equipment end and unterminated cable or cord on the premises wiring end).

This interconnection is in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These assemblies are intended to be used in loca-

tions that are classified as Class I, Zone 2 to distribute the control signals to remote proximity switches or other control-circuit devices.

Each cable assembly is provided with means to mechanically secure the plug or socket on either end of the cable assembly to the intended equipment plug or socket so as to protect against unintentional separation. The means used to provide this mechanical securement is constructed as follows:

1. separation shall be possible only with the aid of a tool,
2. when not secured, the means shall be captive to the cable assembly, and
3. a marking is provided that is likely to be readily visible after installation that reads, "WARNING – Do Not Connect or Disconnect When Energized," or equivalent.

   Note: The warning marking may be on the securement means or on the cable assembly. It may be necessary to provide more than one warning marking for ready visibility.

Instructions are provided indicating that, should the cable assembly become separated from the intended equipment plug or socket, the part that remains energized is a socket outlet.

This category does not cover cable assemblies with plugs on both ends.

Product Types

The following products are covered under this category:

Cable Assemblies — Cable assemblies consist of a length of cord or cable as follows:

1. extra-hard-usage cord,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

   Note: See the following Code references for additional details on these wiring methods:

   For extra-hard-usage cord, see Section 4 of the CEC or Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC).

   For instrumentation tray cable (Type ITC), see Article 727 of the NEC.

   For power-limited tray cable (Type PLTC), see Article 725 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket. Cable assemblies with only one end terminated are intended for direct connection to a proximity switch, control panel, or similar device.

Cable Plugs and Sockets — Plugs and sockets intended to be field wired or molded onto cord or cable as indicated under **Cable Assemblies** above may have a male or female insert configuration. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket or the smallest unit shipping container.

Panel-mounted Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is provided with a means to secure to a panel. These plugs and sockets may be provided with leads intended for direct wiring connection to a control panel, proximity switch, or other similar device.

RATINGS

These cable assemblies are rated based on the involved cord or cable as follows:

1. extra-hard-usage cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Cable assemblies and plugs and sockets are rated in volts and amperes. The devices are marked with such rating on the device or smallest unit shipping container.

SPECIAL CONSIDERATIONS

The cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by 18-156 of the CEC.

These cable assemblies and mating plugs and sockets are intended for use only with the Listee's same line of cable assemblies and mating plugs and sockets covered under this category.

The products covered under this category are not intended for interruption of current and are so marked.

These devices are intended for indoor use only, unless otherwise so identified.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 182.3 (1987), "Special Use Attachment Plugs, Receptacles and Connectors."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cable Assembly for Industrial Control and Signal Distribution for Use in Hazardous Locations," "Cable Assembly Plug for Industrial Control and Signal Distribution for Use in Hazardous Locations," "Cable Assembly Socket for Industrial Control and Signal Distribution for Use in Hazardous Locations," "CYJZ7 Cable Assembly for Use in Hazardous Locations," "CYJZ7 Cable Assembly Plug for Use in Hazardous Locations" or "CYJZ7 Cable Assembly Socket for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE GLANDS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (CYLQ7)

USE

This category covers products for threaded termination and entry of cable approved for hazardous (classified) locations (in accordance with Clause 18-106(1) of CAN/CSA-C22.1, "Canadian Electrical Code, Part I") into Flameproof 'd' or Increased Safety 'e' enclosures in accordance with the installation instructions provided with the gland.

Flameproof cable glands provide strain relief and either polymeric sealing or elastomeric sealing of effectively filled cable. Glands requiring a polymeric seal are for use only with the sealing compounds specified by the manufacturer in the instructions provided with the fitting.

Increased Safety cable glands provide strain relief and a minimum ingress protection rating of IP 54 to maintain the integrity of the type of protection.

Glands covered under this category are for termination of the cable types (armored, unarmored, circular, etc.) indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cable Gland for Use in Hazardous Locations" or "Cable Fitting for Use in Hazardous Locations" or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (CYMJ7)

USE

This category covers cable termination fittings and combination cable termination and sealing fittings for threaded connection of cable to equipment in as indicated in the individual certifications. The termination and sealing fittings are intended for use only with the sealing compound as specified by the manufacturer in instructions furnished with the fitting.

These devices are intended for use in sealing the conductors and outer jackets of certified cable of the type indicated in the individual certifications. No splices of conductors are intended to be made in the fitting. Restrictions on position and/or location of the fitting are indicated in the manufacturer's instructions.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "+ Cable Sealing Fitting for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

+ Generic cable designation, such as "Tech," "Tray," etc.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE SEALING FITTINGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (CYMX7)

USE

This category covers combination termination and sealing fittings for threaded connection of cables to equipment in Class I, Division 1, and/or Class II, Division 1 hazardous locations, as indicated in the individual certifications. They are for use only with sealing compound as specified by the manufacturer in instructions furnished with the fitting.

These devices are intended for use in sealing the conductors and outer jackets of certified cable of the type indicated in the individual certifications. No splices of conductors are to be made in the fitting. Restrictions on position and/or location of the sealing fitting are indicated in the manufacturer's instructions.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are CSA-C22.2 No. 30 (1991), "Explosion-Proof Enclosures for Use in Class I Hazardous Locations," CSA-C22.2 No. 25 (1966), "Enclosures for Use in Class II Groups E, F, and G Hazardous Locations," and CSA-C22.2 No. 174 (1984), "Cables and Cable Glands for Use in Hazardous Locations."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Type + Cable Sealing Fitting for Use in Hazardous Locations," or other appropriate product name as indicated in the individual Listings.

+ Generic cable designation, such as MC, TC, etc.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE TRAYS, METAL CERTIFIED FOR CANADA (CYNW7)

GENERAL

This category covers metal cable trays intended for assembly in the field and for use in accordance with Section 12 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These products have been investigated for corrosion resistance, load class ratings and suitability for use as equipment grounding conductors when installed in accordance with the manufacturer's markings.

The investigation of cable trays does not include the support system.

The cross-sectional area of the grounding metal is marked on the outer surface of the sidewall of the tray.

INSTALLATION

Certified metal cable trays are marked with load/span class designations as specified below. These class designations represent the static weight supportable by cable tray spans.

Load/Span Class Designations
Design load at varying support spacings in kg/m

Class	1.5 m	2.0 m	2.5 m	3.0 m	4.0 m	5.0 m	6.0 m
A	99	62	45	37	N/A	N/A	N/A
C_1	259	164	119	97	N/A	N/A	N/A
D_1	N/A	N/A	N/A	179	113	82	67
E	N/A	N/A	N/A	299	189	137	112

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 126 (1991), "Cable Tray Systems."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

METAL CABLE TRAY
IN ACCORDANCE WITH THE STANDARD FOR CABLE TRAY SYSTEMS
CAN/CSA-C22.2 NO. 126
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE TRAYS, NONMETALLIC CERTIFIED FOR CANADA (CYOV7)

USE

This category covers nonmetallic, including fiberglass (fiberglass-reinforced plastic) cable tray systems installed for the support of power and/or control cable. Nonmetallic cable trays are intended for assembly in the field and for use in accordance with Section 12 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Cable trays are intended to be installed as recommended by the manufacturer. Cable trays are marked with load/span ratings and may additionally be marked with Class designations A, C, D or E. These Class designations represent the static weight supportable by cable tray spans.

Load	Span (m)	
(kg/linear m)	3.0	6.0
37	A	—
67	—	D
97	C	—

CABLE TRAYS, NONMETALLIC CERTIFIED FOR CANADA (CYOV7)

Load (kg/linear m)	Span (m) 3.0	6.0
112	—	E
179	D	—
299	E	—

These nonmetallic cable trays are constructed of flame-retardant material, provide a degree of voltage isolation, are investigated for the effects of low-temperature handling, and are suitable for outdoor use.

Nonmetallic cable trays have not been investigated for use in air-handling spaces.

The investigation of nonmetallic cable trays does not include the support system.

RELATED PRODUCTS

For metallic cable trays, see Cable Trays, Metal Certified for Canada (CYNW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 126.2 (2002), ''Nonmetallic Cable Tray Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Nonmetallic Cable Tray.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CAMERA EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (CYPB7)

GENERAL

This category covers cameras and pan-and-tilt drives.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 60065 (2003), ''Audio, Video and Similar Electronic Apparatus – Safety Requirements.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Camera for Use in Hazardous Locations'' or ''Pan and Tilt Drive for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CAMERA EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (CYPH7)

GENERAL

This category covers camera equipment, such as cameras and pan and tilt drives.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 60065 (2003), ''Audio, Video and Similar Electronic Apparatus – Safety Requirements.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Camera for Use in Hazardous Locations'' or ''Pan and Tilt Drive for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CAPACITORS CERTIFIED FOR CANADA (CYWT7)

GENERAL

This category covers general-use power factor correction units for applications on ac power systems with voltages up to 600 V. These assemblies employ integrally protected capacitors investigated under Capacitors Certified for Canada (CYWT8).

This category does not cover power factor correction units with integral automatic controls or power factor correction unit controllers.

USE AND INSTALLATION

These units are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and are intended for indoor use, unless otherwise indicated by markings on the units.

RELATED PRODUCTS

Power factor correction units with integral automatic controls are covered under Industrial Control Panels Certified for Canada (NITW7).

Power factor correction controllers are covered under Power Circuit and Motor-mounted Apparatus Certified for Canada (NMTR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 190 (1985), ''Capacitors for Power Factor Correction.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Factor Correction Unit'' or ''Capacitor Bank,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CARBON MONOXIDE DETECTORS, SINGLE AND MULTIPLE STATION CERTIFIED FOR CANADA (CZHF7)

GENERAL

This category covers single- and multiple-station carbon monoxide detectors, intended to be employed in indoor locations, as a travel alarm and for use in recreational vehicles.

Single-station Type — Single-station carbon monoxide detectors are self-contained units that incorporate a sensor and related electrical components to initiate an audible alarm signal from the unit when an abnormal amount of carbon monoxide actuates the unit. These devices may be energized from (1) a commercial power-supply source by means of permanent wiring in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," or a flexible power-supply cord and plug, (2) use of limited-energy cable or equivalent wiring connected to the outlet of a suitable Class 2 power supply, or (3) by one or more batteries.

Where a battery is employed as a main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal which persists for at least seven days.

Multiple-station Type — Multiple-station carbon monoxide detectors are similar to single-station units but are provided with leads or terminals to permit the interconnection of single-station units so that actuation of any one unit results in the actuation of audible alarms of all units. The installation instructions (manual) indicate the maximum number of units that can be interconnected. Refer to the instruction manual provided with each detector for installation data.

Travel Alarm — A travel alarm consists of a carbon monoxide detector provided with a mounting bracket for temporary mounting only. Its use is indicated on the UL Certification Mark.

Detectors for Recreational Vehicles — These devices are investigated for the more stringent environmental and operational conditions encountered in recreational vehicles as described in the designated sections of CSA 6.19, "Residential Carbon Monoxide Alarming Devices."

Where applicable, supplementary devices and accessories for use with these units, such as a remote horn, are indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA 6.19, "Residential Carbon Monoxide Alarming Devices."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate:

"Single-station Carbon Monoxide Detector"
"Multiple-station Carbon Monoxide Detector"
"Single- and/or Multiple-station Carbon Monoxide Detector"
"Single- and/or Multiple-station Carbon Monoxide Detector Accessory"
"Travel Carbon Monoxide Alarm"
"Single-station Carbon Monoxide Detector – Also Suitable as Travel Carbon Monoxide Alarm"
"Single-station Carbon Monoxide Detector – Also Suitable for Use in Recreational Vehicles"
"Single-station Carbon Monoxide Detector – Also Suitable for Use in Recreational Vehicles as a Travel Carbon Monoxide Alarm"
"Single-station Smoke Detector – Also Suitable as a Single-station Carbon Monoxide Alarm"
"Multiple-station Smoke Detector – Also Suitable as a Multiple-station Carbon Monoxide Detector"
"Single- and/or Multiple-station Smoke Detector – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Detector"
"Single-station Smoke and/or Carbon Monoxide Detector Accessory – Also Suitable for Use as a Home Health Care Control Unit"

****

CARBONATORS CERTIFIED FOR CANADA (CZKR7)

GENERAL

This category covers carbonators for commercial and household use.

Commercial Units

Carbonators intended for commercial use consist of electric-motor-driven water pumps and mixing chambers intended for mixing water and carbon-dioxide gas and storing the mixture under carbon-dioxide-gas pressure.

These units are intended for connection to compressed-carbon-dioxide cylinders, and for permanent connection to electrical and plumbing systems. The mixing storage chambers are provided with suitable pressure-relief valves.

These units may be provided with a means for permanent connection to the electrical system or with a power-supply cord. Units supplied with a power-supply cord are also provided with provision for conversion to permanent connection.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water-supply lines.

The compressed-carbon-dioxide cylinders, reducing valves or associated fittings intended for use with these carbonators are not covered under this category.

Household Units

Carbonators intended for household use are intended to carbonate liquids using disposable carbon-dioxide cylinders. The cylinders, as well as the containers intended to contain the carbonated liquids, are provided with the carbonator.

These units are provided with a power-supply cord for connection to the electrical system.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming liquids prepared by the use of these machines has been investigated.

RELATED PRODUCTS

Refrigerated beverage dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers Certified for Canada (SFWY7); nonrefrigerated beverage dispensers are covered under Food-preparing Machines, Commercial Certified for Canada (IPST7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 68 (2009), "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Carbonator."

****

CARTS AND STANDS FOR HOUSEHOLD, COMMERCIAL AND INSTITUTIONAL USE CERTIFIED FOR CANADA (CZUV7)

USE

This category covers household, commercial and institutional-use carts, stands and entertainment centers to provide a surface for structural support of audio/video equipment.

INSTRUCTIONS AND PRODUCT MARKINGS

Carts, stands and entertainment centers intended for use with a television are marked to indicate the maximum weight of the television. Other supporting surfaces may be marked with the maximum specified weight or the information may be presented in the use and care instructions.

Carts, stands and entertainment centers intended for use with specific equipment or equipment parameters are marked to identify the equipment or equipment parameters.

Use and care instructions are provided for the proper use and assembly of the cart, stand or entertainment center.

RELATED PRODUCTS

Tall institutional carts that have a support bracket or a shelf more than 1 m (39.37 in.) above the floor and that are intended for use in schools, institutions, hospitals or similar locations are covered under Carts, Tall Institutional Certified for Canada (CZWK7).

Furnishings not intended for use as a mobile cart or audio/video stand are covered under Decorative Furnishings Certified for Canada (IYNA7) or Furnishings, Household and Commercial Certified for Canada (IYQX7).

CARTS AND STANDS FOR HOUSEHOLD, COMMERCIAL AND INSTITUTIONAL USE CERTIFIED FOR CANADA (CZUV7)

Audio/video support systems intended to be mounted to walls, ceilings or another permanent part of a building as the primary support means are covered under Wall and Ceiling Mounts and Accessories Certified for Canada (IYNW7).

When the manufacturer of the video and/or audio components supplies the supports for those components, the supports are and covered under Audio/Video Apparatus Certified for Canada (AZSQ7) or Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Information technology and communications equipment cabinet, enclosure and rack systems are covered under Audio/Video, Information and Communication Technology Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

Custom-built telecommunications equipment cabinets and racks are covered under Custom-built Telecommunications Equipment Certified for Canada (WYKM7).

Television and video equipment intended for use in health care facilities is covered under Television/Video Equipment for Use in Health Care Facilities Certified for Canada (KFCV7).

Utility tables employing permanently attached receptacles and either a permanently attached power-supply cord or separable cord set are covered under Tables, Utility Certified for Canada (WWJT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60065 (2003), ''Audio, Video and Similar Electronic Apparatus – Safety Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number; and one of the following product names: ''Television Cart,'' ''Audio Cart,'' ''Stereo System Cart,'' ''Television Pedestal'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CARTS, TALL INSTITUTIONAL CERTIFIED FOR CANADA (CZWK7)

USE

This category covers carts that have a support bracket or a shelf more than 1 m (39.37 in.) above the floor and that are intended for use in schools, institutions, hospitals or similar locations. These carts are intended to provide a surface for the structural support of products including, but not limited to, audio/video equipment, information technology equipment, medical equipment, and the like.

INSTRUCTIONS AND PRODUCT MARKINGS

Carts intended for use with a television are marked to indicate the maximum weight of the television. Other supporting surfaces may be marked with the maximum specified weight or the information may be presented in the use and care instructions.

Carts intended for use with specific equipment or equipment parameters are marked to identify the equipment or equipment parameters.

A tall institutional cart is marked to indicate the proper method to move the cart.

Use and care instructions are provided for the proper use and assembly of the cart or stand.

RELATED PRODUCTS

Carts, stands and entertainment centers are covered under Carts and Stands for Household, Commercial and Institutional Use Certified for Canada (CZUV7).

When the manufacturer of the video and/or audio components supplies the supports for those components, the supports are covered under Audio/Video Apparatus Certified for Canada (AZSQ7) or Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Information technology and communications equipment cabinet, enclosure and rack systems are covered under Audio/Video, Information and Communication Technology Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

Custom-built telecommunications equipment cabinets and racks are covered under Custom-built Telecommunications Equipment Certified for Canada (WYKM7).

Television and video equipment intended for use in health care facilities is covered under Television/Video Equipment for Use in Health Care Facilities Certified for Canada (KFCV7).

Utility tables employing permanently attached receptacles and either a permanently attached power-supply cord or separable cord set are and covered under Tables, Utility Certified for Canada (WWJT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60065 (2003), ''Audio, Video and Similar Electronic Apparatus – Safety Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Tall Institutional Cart,'' ''Tall Institutional Table,'' ''Tall Institutional Television Cart,'' ''Tall Institutional TV Cart,'' ''Tall Institutional TV Table,'' ''Tall Institutional Audio Cart,'' ''Tall Institutional Audio Table,'' ''Tall Institutional Video Cart,'' ''Tall Institutional Video Table,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CENTRIFUGES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (DAZV7)

GENERAL

This category covers centrifuges designed for use in hazardous (classified) locations. They have been investigated with respect to risk of explosion, fire, electric shock, and injury to persons.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 151 (1986), ''Laboratory Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Centrifuge for Use in Hazardous Locations.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR-OPERATED CHECK-OUT STANDS CERTIFIED FOR CANADA (DBNT7)

USE

This category covers motor-operated check-out stands intended for use in retail stores to facilitate tally and packing operations. These check-out stands are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Foot and knee controls are also covered under this category.

RELATED PRODUCTS

Self-check-out stands not provided with a motorized belt are covered under Custom-built Kiosks Certified for Canada (EMHH7).

Point-of-sale cabinets not provided with a motorized belt are covered under Wired Cabinets Certified for Canada (ZNXR7) or Furniture, Powered and Nonpowered Certified for Canada (IYNE7).

Barcode scanners and cash registers are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Conveyors that do not form a component part of a check-out stand are covered under Conveyors Certified for Canada (EJJR7).

Scales are covered under Scales and Accessories, Electronic Certified for Canada (TUTT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," and CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Check Out Stand."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CHIMNEYS, FIREPLACES, VENTS AND SOLID-FUEL-BURNING APPLIANCES CERTIFIED FOR CANADA (DCBR7)

This category covers chimneys, fireplaces, vents and solid-fuel-burning appliances, which include factory-built type products not requiring field construction and intended for use in accordance with the "National Building Code of Canada."

These products are investigated to determine the suitability of their construction and performance for the service for which they are intended. It is determined that temperatures on combustible materials and surfaces adjacent to or in contact with the assembly will not exceed specified limits when the product is installed and used as directed.

Processed solid fuel is investigated for use with the type of solid-fuel-burning appliance specified for the fuel.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CHIMNEYS CERTIFIED FOR CANADA (DCOZ7)

This category covers chimneys consisting entirely of factory-made parts. The parts of each model of chimney are designed to be assembled with the other parts of that model without requiring field construction.

Chimney and Vent Connectors and Accessories Certified for Canada (DDCY7)

USE AND INSTALLATION

This category covers chimney and vent connectors and accessories which are engineered systems intended for connecting appliances to a vertical chimney or vent, or to reduce the clearances from connectors to combustible material in accordance with CSA B149.1, "Natural Gas and Propane Installation Code, " CSA B139, "Installation Code for Oil-Burning Equipment," or CSA B365, "Installation Code for Solid-Fuel-Burning Appliances and Equipment," as applicable.

The type(s) of fuel-fired heating appliance (e.g., gas, liquid, solid fuel) with which these connectors and accessories have been investigated is indicated in the individual certifications. This information, together with

Chimney and Vent Connectors and Accessories Certified for Canada (DDCY7)−*Continued*

other restrictions of use, such as mounting position and clearance to combustibles, are also marked on the product and/or detailed in the manufacturer's installation instructions furnished with the product.

ADDITIONAL INFORMATION

For additional information, see Chimneys Certified for Canada (DCOZ7), Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C441.3, "Gas Vent Connectors," ULC/ORD-C441, "Pellet Vents," and ULC-S641, "Factory-Built Chimney Connectors and Wall Pass-Through Assemblies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Chimney Connector," "Gas Vent Connector," "Vent Connector," "Chimney Accessories," "Gas Vent Accessories" or "Vent Accessories."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Chimneys, 1400 Degree Fahrenheit Certified for Canada (DDTZ7)

USE AND INSTALLATION

This category covers factory-built 1400°F (760°C) chimneys intended for venting flue gases at a temperature not exceeding 1400°F (760°C) under continuous operating conditions, from building-heating appliances and other low-heat appliances as specified in the Chimney Selection Chart of ANSI/NFPA 211, "Chimneys, Fireplaces, Vents, and Solid Fuel-Burning Appliances."

Each 1400°F factory-built chimney consists of one or more chimney sections, a chimney cap, lateral supports, thimble and flashing assembly if needed, and other parts as specified in the installation instructions provided with each chimney system.

These chimneys are intended to be installed in accordance with the installation instructions provided with each chimney assembly. They are not intended to be enclosed within combustible construction, but an interior chimney should be enclosed in a noncombustible fire-resistive shaft of appropriate size and rating where the chimney extends through any story of a building above that in which the connected appliance is located. An unenclosed chimney may be placed adjacent to walls of combustible construction at the clearances specified on each chimney section and in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Building-heating-appliance chimneys are covered under Chimneys, Residential Type and Building-heating Appliance Certified for Canada (DDXU7).

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C959, "540°C and 760°C Industrial Chimneys."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "1400°F Chimney Part."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Chimneys, Residential Type and Building-heating Appliance Certified for Canada (DDXU7)

USE AND INSTALLATION

This category covers residential-type and building-heating-appliance chimneys intended for venting flue gases at a temperature not exceeding 1000°F (540°C), under continuous operating conditions, from gas-, liquid- and solid-fuel-fired, residential-type appliances and building-heating appliances specified in the Chimney Selection Chart of ANSI/NFPA 211, "Chimneys, Fireplaces, Vents, and Solid Fuel-Burning Appliances."

Each residential-type chimney consists of one or more chimney sections, a support assembly (ceiling support or tee section), firestop spacers to be employed at each floor and ceiling penetrated if a support is not installed at that location, a roof assembly, a chimney cap, flashing and other parts as designated in the installation and maintenance instructions provided with each chimney system and required to complete the particular installation. Chimneys certified as suitable for masonry fireplaces are intended to employ the appropriate fireplace adapter specified in the individual certifications.

These chimneys are intended to be installed in accordance with the installation instructions provided with each chimney-support assembly. Minimum air-space clearance to combustible materials should be maintained as marked on the chimney sections.

Residential chimneys may have the support assembly located at any floor level with the chimney extending vertically upward (30° maximum offset) through the floors, ceilings, and roof of the building to a height not greater than indicated in the individual certifications. Portions of the chimney which may extend through accessible spaces should be enclosed in all cases to avoid personal contact with or damage to the chimney.

Chimneys designated in the individual certifications and on the individual chimney parts as only a building-heating-appliance chimney are intended for installation in, or exterior to, other than one- or two-family dwellings. These chimneys are intended to be installed in accordance with the installation instructions provided with the chimney. They are not intended to be enclosed within combustible construction. An interior chimney is intended to be enclosed in a noncombustible, fire-resistive shaft of appropriate size where the chimney extends through any story of a building above that in which the connected appliance is located. An unenclosed chimney may be placed adjacent to walls of combustible construction at the air space clearances specified on each chimney section and in the individual certifications.

Each building-heating-appliance chimney consists of one or more chimney sections, a chimney cap, lateral supports, thimble and flashing assembly, and other parts as designated in the installation and maintenance instructions provided with each chimney system.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C959, "540°C and 760°C Industrial Chimneys."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Type and Building Heating Appliance Chimney Part" or "Building Heating Appliance Chimney Part."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LINERS CERTIFIED FOR CANADA (DDZR7)

USE AND INSTALLATION

This category covers chimney liners intended for installation in new or existing masonry chimneys as indicated in the individual certifications. Chimneys equipped with these liners are suitable for the venting of combustion products from residential appliances burning gas, oil, or solid fuel as indicated in the individual certifications.

Residential appliances include fireplaces, space heaters, and central-heating furnaces and boilers.

Separate chimney-liner parts required for installation of chimney liners are specified in the installation instructions provided with the chimney liners. The performance of the liner assembly may be affected if the proper combination of these components is not used. Installation of liners

Liners Certified for Canada (DDZR7)−*Continued*

designed for new chimney use should be performed only by skilled masons in chimneys conforming to the requirements of the "National Building Code of Canada."

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S640, "Lining Systems for New Masonry Chimneys," and CAN/ULC-S635, "Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liner for New Masonry Chimney," "Liner for Existing Masonry Chimney" or "Component for Chimney Liner [Manufacturer's Name and Model]."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIREPLACES CERTIFIED FOR CANADA (DEET7)

USE AND INSTALLATION

This category covers factory-built fireplaces, which consist of a fire chamber assembly, one or more chimney sections, a roof assembly, and other parts, as designated in the installation and operating instructions provided with each fireplace. Firestops or firestop spacers, if specified, are intended to be included and installed at joist areas where the fireplace chimney extends through floors and ceilings. These parts are designed to be assembled with their companion parts as shown in the installation instructions provided with the fire chamber. These fireplaces are suitable for installation in buildings, and are intended to burn solid wood or coal fuels.

These fireplaces may be provided with glass door assemblies, electric blower assemblies, heating air duct system, combustion air duct kits, hearth extensions, adjustable flue gas dampers, or other optional features as specified in the installation and operating instructions. Fireplaces provided with glass doors, or having glass doors as an optional feature, are indicated by an "X" under the heading **Glass Doors** in the individual Listings.

These fireplaces are intended for installation as indicated in the individual Listings and may be located at any floor level with the chimney extending vertically upward through the floors, ceilings, and roof to a height not less or greater than that indicated in the individual Listings.

A line under a specific heading in the individual Listings indicates exclusion from the specific item or installation.

The fire chamber assembly is designed to be installed directly upon and adjacent to combustible building construction or at a clearance not less than specified in the individual Listings and on the fire chamber. The chimney sections are intended to be installed to provide clearance to combustible material not less than specified in the individual Listings and on the chimney section. If the fireplace chimney is designed to extend through floors and ceilings, the clearances to the floor and ceiling construction should be that established by the installation of the designated factory-furnished firestop or firestop spacer. Portions of the chimney that may extend through spaces used for living quarters or storage should be enclosed to avoid personal contact with and damage to the chimney.

Solid-fuel inserts should not be installed in fireplaces covered under this category unless specified in the individual Listings of the fireplace and the insert certification.

Factory-built fireplaces suitable for installation in a mobile home are indicated by an "X" under the heading **Mobile Home Use** in the individual Listings and on the fire chamber.

Each factory-built fireplace for use in a mobile home consists of a fire chamber assembly, one or more chimney sections, separate combustion air inlets, a roof assembly consisting of a separate flashing and spark arrester cap, and other parts, as designated in the installation and operating instructions provided with each fireplace.

A firestop spacer-thimble is included and employed at joist areas where the fireplace chimney extends through the mobile home ceiling.

RELATED PRODUCTS

Fireplaces Certified for Canada (DEET7)−*Continued*

Chimneys are covered under Chimneys, Residential Type and Building-heating Appliance Certified for Canada (DDXU7).

Appliances intended to burn gas fuels that are for installation in vented fireplaces are covered under Decorative Gas-fired Appliances for Installation in Vented Fireplaces Certified for Canada (EOIM7).

Accessories for fireplaces are covered under Fireplace Accessories Certified for Canada (DEHX7).

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S610, "Standard for Factory-Built Fireplaces."

Fireplace Accessories Certified for Canada (DEHX7)

USE AND INSTALLATION

This category covers fireplace accessories, which consist of heat exchangers, glass door assemblies, fire chamber forms, direct-connect systems and other accessories which are intended for installation in masonry fireplaces constructed and installed in accordance with ANSI/NFPA 211, "Chimneys, Fireplaces, Vents and Solid Fuel-Burning Appliances," or applicable local code requirements.

Some heat exchangers may include electric blower assemblies as specified in the installation instructions.

Direct-connect systems are intended for use in connecting solid-fuel-fired fireplace inserts, fireplace stoves and room heaters to the chimney of an existing masonry fireplace.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S610, "Factory-Built Fireplaces."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Solid Fuel Burning Appliance Accessory – Door Assembly," "Solid Fuel Burning Appliance Accessory – Heat Exchanger," "Solid Fuel Burning Appliance Accessory – Fire Chamber Form," "Solid Fuel Burning Appliance Accessory – Direct Connect System," or other appropriate product name as shown in the individual Listings.

****

FIREPLACES, OUTDOOR USE CERTIFIED FOR CANADA (DEPE7)

USE AND INSTALLATION

Fireplaces, Outdoor Use Certified for Canada (DEPE7)−*Continued*

This category covers factory-built fireplaces intended for outdoor use. They consist of a fire-chamber assembly, one or more chimney sections, a roof assembly and other parts, as designated in the installation and operating instructions provided with each fireplace. Firestops or firestop spacers, if specified, are intended to be included and installed at joist areas where the fireplace chimney extends through floors and ceilings. These parts are designed to be assembled with their companion parts as shown in the installation instructions provided with the fire chamber. These fireplaces are intended to burn solid wood or coal fuels only and are not intended to be used for cooking. These fireplaces are intended to be installed in accordance with the "National Building Code of Canada."

Outdoor-use fireplaces may be provided with glass-door assemblies, hearth extensions, or other optional features as specified in the installation and operating instructions. These fireplaces may also be suitable for indoor installation as specified in the installation instructions.

Outdoor-use fireplaces are intended for installation as indicated in the individual Listings and should be located within an exterior wall with the front of the fireplace exposed to the outdoors. The chimney should extend vertically upward through the floors, ceilings and roof to a height not less or greater than that indicated in the individual Listings.

The fire chamber assembly is designed to be installed directly upon and adjacent to combustible building construction or at a clearance not less than that specified in the individual Listings and on the fire chamber. The chimney sections are intended to be installed to provide clearance to combustible material not less than that specified in the individual Listings and on the chimney section. If the fireplace chimney is designed to extend through floors and ceilings, the clearances to the floor and ceiling construction should be that established by the installation of the designated factory-furnished firestop or firestop spacer. Portions of the chimney that may extend through spaces used for outdoor living or storage should be enclosed to avoid personal contact with and damage to the chimney.

FLOOR PROTECTORS AND WALL SHIELDS CERTIFIED FOR CANADA (DFCV7)

USE AND INSTALLATION

This category covers floor protectors and wall shields intended for use with certified solid-fuel heat-producing appliances for the reduction of the surface temperature of combustible wall construction materials.

Floor protectors are intended to be placed over combustible floor-construction materials beneath and adjacent to certified fireplace stoves, solid-fuel room heaters, factory-built fireplaces, and fireplace inserts where reference to the certified floor protector is specified, or when one layer of 9 mm thick noncombustible material (or 6 mm covered with sheet metal) is specified as the floor protection material, unless indicated otherwise in the individual certifications.

Wall shields are intended to be placed over combustible wall-construction materials for the purpose of reducing the clearance to com-

Floor Protectors and Wall Shields Certified for Canada (DFCV7)−*Continued*

bustible materials from that presently required for individually certified fireplace stoves and solid-fuel room heaters. The reduced clearances to walls are specified in the individual certifications. Wall shields may also be placed over combustible wall construction for the purpose of a decorative wall finish with no reduction of clearance to combustible materials from the clearance required for certified fireplace stoves and solid-fuel room heaters.

Floor protectors and wall shields are intended to be installed in accordance with the installation instructions provided with each product.

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S632 (1991), ''Heat Shields.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. * *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS VENTS CERTIFIED FOR CANADA (DFFZ7)

USE AND INSTALLATION

This category covers gas-vent pipes and related parts intended for installation as Type B or Type BW gas vents. Portions of vents that may extend through accessible spaces should be enclosed to avoid contact with and damage to the vent.

The appropriate designation ''Type B'' or ''Type BW'' is marked on each certified vent-pipe section and vent-pipe fitting.

Type B gas vents are for venting certified gas appliances with draft hoods and other certified gas appliances specified for use with Type B gas vents. Type B gas vents should not be used for venting wall furnaces certified for use with Type BW gas vents only, incinerators and appliances certified for use with chimneys only, combination gas/oil-burning appliances, and appliances that may be converted readily to the use of solid or liquid fuels. Unless otherwise indicated in the individual certifications, Type B gas vents are for single- and multistory buildings. That part of the vent which extends above the roof line and those vents certified for exterior use are inherently corrosion resistant or specially coated to resist corrosion. Type B gas vents are intended for installation with clearances not less than marked on each vent-pipe section and indicated in the individual certifications. Also, if so marked on the vent-pipe section, a Type B gas vent may be installed centrally within a wall space between 50 mm (2 in.) by 100 mm (4 in.) or 50 mm (2 in.) by 150 mm (6 in.) studs, respectively, spaced on 400 mm (16 in.) centers. The designation ''Type B-50mm (2 in.) x 100mm (4 in.)'' or ''Type B-50mm (2 in.) x 150mm (6 in.),'' respectively, is used in the individual certifications to signify suitability for such installations. When so installed, the clearance should be as established by the integral spacers at each vent-pipe joint and by the specified firestop spacer. The firestop spacer should be placed at the level of each ceiling or floor penetrated by the vent for installations of this kind.

Type BW gas vents are for venting only approved vented recessed heaters having inputs not greater than specified in the individual certifications. These vents are intended to be installed with a solid header plate to serve as a firestop at that point. These vents include provisions for direct attachment to the header plate flue outlet of the heater and are suitable for installation in walls and partitions of buildings when the vents are centrally located directly above vented recessed heaters within the space between two studs, 50 mm (2 in.) by 100 mm (4 in.), and 400 mm (16 in.) on centers. The clearance between the vent and interior surfaces of the wall or partition should be not less than that determined by the header plate, ceiling plate-spacers, firestop spacers, and the integral spacers at each vent-pipe joint. The stud space in which the vent is installed should be ventilated at the first ceiling level penetrated by the vent as attained by installation of the ceiling plate-spacers furnished with the vent. The firestop spacer should be placed at each subsequent ceiling or floor level penetrated by the vent. Vents designated ''Single-Story'' are intended for installation only in single-story buildings or the top story of multistory buildings. Vents designated ''Multi-Story'' are intended for installation in either single-story buildings or in one or more stories of multistory buildings. Type BW gas vents may be continued through roof by properly installed Type B gas vents or be connected to chimneys.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S605, ''Gas Vents.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Type ____ Gas Vent'' or ''Material for Type ____ Gas Vent.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-TEMPERATURE VENTING SYSTEMS, TYPE L CERTIFIED FOR CANADA (DFTX7)

USE AND INSTALLATION

This category covers Type L venting systems intended for use with gas and oil appliances certified as suitable for venting with Type L venting systems. They may be used also where Type B gas vents are permitted. Type L venting system piping may be used for chimney and vent connectors and also for connection to pellet-burning appliances.

Portions of venting systems which may extend through accessible spaces are to be enclosed to avoid personal contact with and damage to the venting system.

The designation ''Type L Venting System'' is marked on each certified part. Unless otherwise indicated in the individual certifications, Type L venting systems are for single- and multistory buildings and are intended for installation with clearances not less than marked on each pipe section. The minimum clearance is indicated in the individual certifications reading: ''Type L Vent Minimum clearance ____ mm.''

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S609, ''Low-Temperature Vents, Type L,'' and ULC/ORD-C441, ''Pellet Vents.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Type L Vent'' or ''Pellet Vent.''

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESSED SOLID FUEL CERTIFIED FOR CANADA (DFXJ7)

USE

This category covers composite fire logs intended for use in specific types of solid-fuel-burning appliances, such as factory-built fireplaces. These fuels are intended as an alternate to natural solid-wood fuel only in the products specified in the individual certifications.

The type of appliance and other conditions of use are marked on the product.

RELATED PRODUCTS

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

COMPOSITE FIRE LOG or PROCESSED SOLID FUEL FOR USE IN FACTORY-BUILT FIREPLACES
Control No.
*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOM HEATERS, SOLID-FUEL TYPE CERTIFIED FOR CANADA (DGAW7)

These solid fuel type room heaters (space heaters) consist of a free standing, chimney connected fire chamber operated with the door(s) closed which may be (1) equipped with manual draft controls or a thermostatic draft control, (2) surrounded with a decorative outer enclosure and (3) provided with electric blower assemblies, chimney connectors, electric cooking equipment (consisting of electric ovens and/or surface units) and other parts as identified in the individual Listings and specified in the installation and operating instructions provided with each room heater.

These room heaters are intended to be placed on a noncombustible floor or on a floor protector on combustible floors with clearances to combustible material not less than indicated in the individual listings and marked on the room heater.

The combustible floor beneath the unit is to be covered with materials specified in the installation instructions packaged with the unit. The floor area to be covered is as specified in the installation instructions.

The chimney connectors are to be installed to provide clearances to combustible material not less than specified in the installation instructions and individual listings.

The room heater is to be connected to a chimney suitable for use with residential type and other building heating appliances as specified in the installation instructions. Factory-built residential type and building heating appliance chimneys shall be Listed and of the Type HT designation.

Some room heaters have been investigated with specific venting systems as indicated in the individual listings.

These room heaters are intended for the burning of solid wood, coal, solid wood pellets or shelled corn fuels as indicated in the individual listings and marked on the room heater.

Solid fuel type room heaters suitable for installation in a mobile home are indicated in the individual listings and marked on the room heater.

Each room heater, for use in a mobile home consists of a fire chamber assembly, one or more chimney sections; separate combustion air inlets; a roof assembly consisting of a flashing and spark arrester cap, and other parts, as designated in the installation and operating instructions provided with each room heater. A firestop spacer-thimble is included and employed at joist or stud areas where the chimney extends through the mobile home ceiling/roof or wall. The parts are designed to be assembled with their companion parts as shown on the installation instructions provided with each room heater.

The chimney sections are to be installed to provide clearance to combustible material not less than specified in the Listings and on the chimney section. The chimney connected to the room heater, is designed to extend through the mobile home ceilings or walls with the clearance to the ceiling/roof or wall construction to be that established by the installation of the designated factory furnished firestop spacer-thimble.

The basic standard used to investigate products in this category is CAN/ULC-S627, ''Space Heaters For Use with Solid Fuels''.

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED'', a control number, and one of the following product names as appropriate: (A) ''Solid Fuel Room Heater Intended For Use With (Company Name) Listed Solid Fuel Room Heater Parts'', (B) ''Solid Fuel Room Heater Part'', (C) ''Solid Fuel Room Heater'',

Room Heaters, Solid-fuel Type Certified for Canada (DGAW7)−*Continued*

(D)''Solid Fuel Fired Space Heater Intended For Use With (Company name) Listed Solid Fuel Fired Space Heater Parts'', (E)''Solid Fuel Fired Space Heater-Part'', ''(F)'' Solid Fuel Fired Space Heater''.

Each Listed solid fuel room heater bears a Listing Mark with a product name similar to (C) and (F). When additional parts are required to complete the room heater installation, the room heater bears a Listing Mark with a product name similar to (A) and (D), and each additional part bears a Listing Mark with a product name similar to (B) and (E).

SOLID-FUEL-BURNING-APPLIANCE ACCESSORIES CERTIFIED FOR CANADA (DGOU7)

USE

This category covers accessories intended for use with the designated solid-fuel room heaters, fireplaces and fireplace stoves as indicated in the individual certifications. The accessories are intended to be installed in accordance with the installation instructions provided with the device.

RELATED PRODUCTS

See Fireplaces Certified for Canada (DEET7) and Room Heaters, Solid-fuel Type Certified for Canada (DGAW7).

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S604, ''Factory Built Type A Chimneys,'' CAN/ULC-S610, ''Factory-Built Fireplaces,'' and ULC-S627, ''Space Heaters for Use with Solid Fuels.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SOLID FUEL BURNING APPLIANCE ACCESSORY – [PRODUCT IDENTITY*]

SPECIAL GAS VENTS CERTIFIED FOR CANADA (DGSH7)

USE AND INSTALLATION

This category covers Type BH special gas vents designed only for venting approved gas appliances intended for negative or positive pressure venting producing flue gases having temperatures specified below:

Class I — Venting systems suitable for gas-fired appliances producing flue gas temperatures of more than 135°C but not more than 245°C.

Class II — Vent systems suitable for gas-fired appliances producing flue gas temperatures of 135°C or less, and classified into four temperature ratings as follows:

A – Up to and including 65°C
B – Up to and including 90°C
C – Up to and including 110°C
D – Up to and including 135°C

The specific appliance classification with which each Type BH gas vent may be used is indicated in the individual certifications and on the product.

Special Gas Vents Certified for Canada (DGSH7)−*Continued*

These vents are intended to be installed in accordance with the installation instructions provided with the product. Minimum air-space clearance to combustible materials should be maintained as marked on the vent sections using the parts specified in the installation instructions.

Firestop spacers are intended to be employed at each floor and ceiling penetrated. Flashings are provided for sealing roof and exterior wall penetrations. These vents are terminated with the specific caps provided.

These vents are intended to terminate in accordance with CSA B149.1, ''Natural Gas and Propane Installation Code,'' or CSA B149.2, ''Propane Storage and Handling Code.''

ADDITIONAL INFORMATION

For additional information, see Chimneys, Fireplaces, Vents and Solid-fuel-burning Appliances Certified for Canada (DCBR7), Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S636, ''Type BH Gas Venting Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Gas Vent Type BH.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEASONAL AND HOLIDAY DECORATIVE PRODUCTS CERTIFIED FOR CANADA (DGVT7)

SEASONAL AND HOLIDAY DECORATIVE PRODUCT ACCESSORIES CERTIFIED FOR CANADA (DGWU7)

GENERAL

This category covers accessories intended for use with decorative-lighting strings and decorative outfits. This includes such items as flasher controllers with and without sound, and other miscellaneous devices for use with decorative-lighting strings and decorative outfits.

This category does not cover decorative lamps, decorative-lighting strings, decorative outfits, electric ornaments, cord sets (extension cords), temporary power taps, decorative-lighting harnesses, or any other nondecorative-lighting products.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 37 (1989), ''Christmas Tree and Other Decorative Lighting Outfits.''

Products employing controllers are additionally investigated to the requirements contained in CSA Technical Information Letter No. B-70, ''Decorative Lighting Strings with Flashers or Controllers'' (issued March 3, 2003).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Decorative Outfit Accessory.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC ORNAMENTS CERTIFIED FOR CANADA (DGXC7)

USE

This category covers electric ornaments, which are units provided with input leads and adapters intended to take the place of push-in lamps in a series-connected decorative-lighting string or decorative outfit. An ornament may be electronically or nonelectronically operated. Electric ornaments are intended for indoor use only.

An electronically operated ornament employs a motor, a printed wiring assembly, electronic components, or the like. This type of ornament may produce sound, be illuminated, animated, or the like, or a combination of the above.

A nonelectronically operated ornament is provided with a wiring assembly consisting of only a lamp and lampholder on one end and an adapter on the other end. This type of ornament is illuminated only.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 37 (1989), ''Christmas Tree and Other Decorative Lighting Outfits.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Ornament.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTFITS, DECORATIVE CERTIFIED FOR CANADA (DGXW7)

USE

This category covers decorative outfits intended for temporary use and includes decoration units other than strings, such as plaques, wreaths, stars, crosses, tree-top units, sprays, candle sets, flasher controls and motorized devices such as tree stands with or without provision for illumination and color wheels.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 37, ''Christmas Tree and Other Decorative Lighting Outfits.''

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Decorative Outfit for Indoor and Outdoor Use'' or ''Decorative Outfit for Indoor Use Only.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRINGS, DECORATIVE LIGHTING CERTIFIED FOR CANADA (DGZZ7)

USE

This category covers decorative-lighting strings intended for seasonal, temporary use, consisting of a string of lights that may be draped over or around trees or other objects for decorative effect. Decorative-lighting strings are factory assembled with replaceable lamps and are connected by means of an attachment plug or the like.

Strings are not intended for installation on artificial trees employing metal or metalized plastic needles, leaves or branch coverings. They also should not be installed in a manner that can cut or damage wire insulation.

Strings, Decorative Lighting Certified for Canada (DGZZ7)−*Continued*

RELATED PRODUCTS

Decorative-lighting strings provided with individual lamp shades or diffusers over each individual lamp and decoration units other than strings are covered under Outfits, Decorative Certified for Canada (DGXW7), Seasonal and Holiday Decorative Product Accessories Certified for Canada (DGWU7) and Electric Ornaments Certified for Canada (DGXC7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 37, ''Christmas Tree and Other Decorative Lighting Outfits.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Decorative-lighting String.''

The Listing Mark for this category requires the use of a holographic label.

****

CIRCUIT BREAKERS CERTIFIED FOR CANADA (DHJR7)

GENERAL

This category covers circuit breakers which, unless otherwise noted, are of the manually operable, air break type, providing automatic overcurrent protection.

PRODUCT MARKINGS AND RATINGS

Circuit breakers are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors.

1. Circuit breakers with a current rating of 125 A or less are marked as being suitable for 60°C, 75°C only or 60/75°C rated conductors. It is acceptable to use conductors with a higher insulation rating, if the ampacity is based on the conductor temperature rating marked on the breaker.
2. Circuit breakers rated 125 A or less and marked suitable for use with 75°C rated conductors are intended for field use with 75°C rated conductors at full 75°C ampacity only when the circuit breaker is installed in a circuit breaker enclosure or individually mounted in an industrial control panel with no other component next to it, unless the end-use equipment (panelboard, switchboard, service equipment, power outlet, etc.) is also marked suitable for use with conductors rated 75°C.
3. A circuit breaker with a current rating of more than 125 A is suitable for use with conductors rated 75°C.
4. Circuit breakers intended for continuous operation at 100% of rated current may be marked to be connected with 90°C rated wire with the size based on 75°C ampacity.

****

CIRCUIT-BREAKER ACCESSORIES CERTIFIED FOR CANADA (DIHS7)

USE

This category covers accessories, such as manual and electrical operators, shunt trip devices, undervoltage trip devices, alarm switches and auxiliary switches, intended for field installation for use only with specific circuit-breaker types. Correct combinations of circuit breakers and accessories are indicated by markings on or with the accessory and/or the circuit breaker.

ADDITIONAL INFORMATION

Circuit-breaker Accessories Certified for Canada (DIHS7)−*Continued*

For additional information, see Circuit Breakers Certified for Canada (DHJR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 5 (2002), ''Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Circuit Breaker Accessory'' (or ''C.B. Acc.'') or the name of the specific product, such as ''Undervoltage Trip Relay.''

****

CIRCUIT BREAKERS AND SURGE-PROTECTIVE DEVICES CERTIFIED FOR CANADA (DIMV7)

USE AND INSTALLATION

This category covers combination circuit breaker and surge-protective devices (SPDs) incorporating overcurrent protection, and surge protection designed for repeated limiting of transient-voltage surges on 50 or 60 Hz power circuits not exceeding 600 V. SPDs are designated:

Type 1 — Permanently-connected SPDs intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including meter sockets, and intended to be installed without an external overcurrent-protective device.

Type 2 — Permanently-connected SPDs intended for installation on the load side of the service equipment overcurrent device, including SPDs located at the branch panel.

The combination circuit breaker and SPD is a factory-assembled device, with the SPD either internal or external to the circuit breaker. When the SPD is external to the circuit breaker, the circuit breaker, SPD, internal wiring, mounting means, etc., is provided as a single unit.

They are intended for installation in circuit-breaker enclosures, panelboards, and the like, on grounded 60 Hz alternating-current power circuits in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

RELATED PRODUCTS

See Circuit Breakers, Molded Case and Circuit-breaker Enclosures Certified for Canada (DIVQ7) and Surge-protective Devices Certified for Canada (VZCA7).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers Certified for Canada (DHJR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate the circuit-breaker portion of products in this category is CAN/CSA-C22.2 No. 5 (2002), ''Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures.''

The basic standard used to investigate Type 1 SPDs intended for installation in accordance with Article 26-500 of the CEC is CAN/CSA-C233.1 (1987), ''Gapless Metal Oxide Surge Arresters for Alternating Current Systems,'' or IEEE C62.1 (1989), ''Gapped Silicon-Carbide Surge Arresters for AC Power Circuits.''

The basic standard used to investigate Type 2 SPDs in this category is CSA-C22.2 No. 8 (1986), ''Electromagnetic Interference (EMI) Filters,'' in addition to the requirements contained in CSA Technical Information Letter No. I-IIB, ''Surge/Transient Voltage Suppressors,'' and CSA Technical Information Letter No. A-24, ''Interim Certification Requirements for AC Line Connected Wiring Devices with Varistors.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Circuit Breaker and Surge Protective Device'' (or ''Circuit Breaker and SPD'').

Circuit Breakers and Surge-protective Devices Certified for Canada (DIMV7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS, MOLDED CASE AND CIRCUIT-BREAKER ENCLOSURES CERTIFIED FOR CANADA (DIVQ7)

USE

This category covers circuit breakers and circuit-breaker enclosures designed to provide service-entrance, feeder or branch-circuit protection in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

These circuit breakers are intended for use with certified enclosures, or as part of other certified equipment, or without enclosures where acceptable.

Some circuit breakers are not provided with a means to prevent their installation in assemblies that are circuit-limiting (commonly referred to as Class CTL assemblies). These circuit breakers are for use in old style, non-circuit-limiting equipment and are marked ''For Replacement Use Only, Not CTL Assemblies.''

Circuit breakers marked ''SWD'' and rated 347 V or less are suitable for switching fluorescent lighting loads on a regular basis at their rated voltage.

Circuit breakers marked ''HID'' have been investigated for switching high-intensity-discharge lighting loads on a regular basis at their rated voltage.

Some circuit breakers include a pole intended to disconnect the grounded circuit conductor of a branch circuit. All poles of these circuit breakers open simultaneously.

Single-pole circuit breakers rated 120 V ac or 120/240 V ac and multi-pole independent trip circuit breakers rated 120/240 V ac are suitable for use in a single-phase, multi-wire circuit with the neutral connected to the load, where the voltage to ground does not exceed 120 V.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 120/240 V ac, are suitable for use in line-to-line single-phase circuits or line-to-line lighting and appliance branch circuits connected to 3-phase, 4-wire systems, provided the systems have a grounded neutral and the voltage to ground does not exceed 120 V.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 125/250 V dc, are suitable for use in line-to-line connected 3-wire dc circuits supplied from a system with a grounded neutral where the voltage to ground does not exceed 125 V.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 125/250 V (both ac and dc), are suitable for use in accordance with either of the above two paragraphs, as applicable.

Some independent trip circuit breakers are marked ''independent trip,'' ''no common trip'' or equivalent wording.

3-pole circuit breakers are suitable for use only on 3-phase systems unless marked to indicate otherwise.

Multi-pole common trip circuit breakers rated 120/240 V ac are suitable for use in a single-phase multi-wire circuit, with or without the neutral connected to the load, where the voltage to ground does not exceed 120 V.

Multi-pole common trip circuit breakers rated 125/250 V or 125/250 V dc are suitable for use in a single-phase and a dc multi-wire circuit, with or without the neutral connected to the load, where the voltage to ground does not exceed 125 V.

Circuit breakers, the performance of which may be affected by a 40°C ambient temperature within the enclosure, and that have been investigated for this application, are marked ''40 C.''

Unless otherwise marked, circuit breakers should not be loaded to exceed 80% of their current rating, where in normal operation the load will continue for three hours or more.

Circuit-breaker enclosures are marked to indicate the environmental conditions to which they are permitted to be exposed.

A current-limiting circuit breaker is one that does not employ a fusible element and that when operating within its current-limiting range, limits the let-through I^2t to a value less than the I^2t of a 1/2 cycle wave of the symmetrical prospective current.

Some certified circuit breakers have adjustable settings and can be repeatedly field adjusted for all changeable characteristics. Adjustable circuit breakers are marked with the maximum ampere rating and either a percentage or similar markings, or with current markings for each continuous-current adjustment setting.

PRODUCT TYPES

Circuit Breakers, Molded Case and Circuit-breaker Enclosures Certified for Canada (DIVQ7)−*Continued*

Circuit breakers and circuit-breaker enclosures are indicated by the label designations as follows:

Circuit Breaker — without enclosure, and with noninterchangeable trip units.

CTL Circuit Breaker — has physical size, configuration or other means which, in conjunction with the physical means provided in a circuit-limiting assembly (commonly referred to as a Class CTL assembly), is designed to prevent the installation of more circuit-breaker poles than the number for which the assembly is designed and rated.

Circuit-breaker Frame — frame only of circuit breaker with provision for interchangeable trip units. A labeled circuit-breaker frame is certified for use only with labeled circuit-breaker trip unit.

Circuit-breaker Trip Unit — trip unit only of circuit breaker having provision for interchangeable trip units.

Circuit-breaker Enclosure — enclosure only for individual 1-, 2- or 3-pole circuit breaker or for two single-pole circuit breakers not interconnected.

INSTALLATION

Circuit breakers are tested under overload conditions at six times the rating to cover motor circuit applications and are suitable for use as motor circuit disconnects per Section 28-602(1)(b) of the CEC.

Certified circuit breakers may be mounted in any position unless marked to indicate otherwise.

Line and load markings on a circuit breaker are intended to limit connections thereto as marked.

RATINGS

Certified circuit breakers are rated 600 V or less. A circuit breaker is also marked ac or dc if not suitable for both. The frequency is included if other than 60 Hz.

Circuit breakers that have an interrupting rating higher than 5000 A are marked to indicate the higher rating(s).

An interrupting rating on a circuit breaker included in a piece of equipment does not automatically qualify the equipment in which the circuit breaker is installed for use on circuits with higher available currents than the rating of the equipment itself.

PRODUCT MARKINGS

A circuit breaker that includes an accessory device, whether attached to the circuit breaker by the manufacturer of the circuit breaker, or by others, is marked to indicate the presence of that accessory.

Where the accessory is a shunt trip device that is suitable for operation with ground-fault protection, such suitability is indicated in the marking of the circuit breaker.

2-pole circuit breakers suitable for controlling 3-phase corner grounded delta circuits are marked "1ϕ - 3ϕ" to indicate their suitability.

Circuit-breaker enclosures that are suitable for use as service equipment are marked accordingly.

Circuit-breaker enclosures that have a short-circuit rating are marked accordingly.

Current-limiting circuit breakers are marked ''current limiting'' and are marked either to indicate the let-through characteristics or to indicate where such information may be obtained.

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers Certified for Canada (DHJR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 5 (2002), ''Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Circuit Breaker,'' ''Circuit Breaker Frame,'' ''Circuit Breaker Trip Unit'' or ''Circuit Breaker Enclosure.'' The words ''Circuit Breaker'' may be abbreviated ''C.B.'' in all of the product names permitted above (e.g., ''C.B. Enclosure'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS WITH EQUIPMENT GROUND-FAULT PROTECTION CERTIFIED FOR CANADA (DIYA7)

USE AND INSTALLATION

This category covers combination circuit breaker and equipment ground-fault protective devices designed to serve the dual function of providing overcurrent protection, and ground-fault protection for equipment, as required by CAN/CSA-C22.2 No. 0, "Canadian Electrical Code, Part II" (CEC). They are intended to be used at nominal system voltages of 600 V or less.

A circuit breaker and equipment ground-fault device is intended to be installed only on grounded alternating-current systems in accordance with the CEC.

(1) These devices are intended to be installed in new or existing panelboards or the like.

(2) The equipment ground-fault protection trip level is marked on the devices.

(3) These devices are suitable for use on systems where the voltage does not exceed the rating on the device.

(4) A two-wire device is not suitable for use in a multiwire branch circuit as defined in the CEC.

(5) These devices are marked so that they can be distinguished from a circuit breaker and ground-fault circuit interrupter.

(6) These devices may have any voltage rating that is acceptable for a circuit breaker.

RELATED PRODUCTS

See Circuit Breakers, Molded Case and Circuit-breaker Enclosures Certified for Canada (DIVQ7).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers Certified for Canada (DHJR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 5 (2002), "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures," and CAN/CSA-C22.2 No. 144 (1991), "Ground Fault Circuit Interrupters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Breaker with Equipment Ground Fault Protection" (or "C.B. W/EQ.GFP").

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FUSED CIRCUIT BREAKERS CERTIFIED FOR CANADA (DIYV7)

USE AND INSTALLATION

This category covers fused circuit breakers designed to provide service-entrance, feeder or branch-circuit protection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." They are rated 600 V or less.

These fused circuit breakers are intended for use with certified enclosures, or as part of other certified equipment, or without enclosures where applicable.

Fused circuit breakers include all the mechanical features of molded-case circuit breakers and, in addition, have one or more replaceable current limiters or fuses that function to increase the fault-current interrupting ability. They are intended to be used in the same manner as other circuit breakers when installed at the service and as branch-circuit protection and are intended to be mounted in certified enclosures. Fused circuit breakers are identified with respect to their performance characteristics as either Type 1 or Type 2.

Type 1 fused circuit breakers meet all performance requirements of molded-case circuit breakers. The fuse, fuses, or replaceable current limiters function only to extend the fault-current interrupting rating beyond the short-circuit test requirement applicable. Type 1 devices are limited to constructions that are designed to accommodate and coordinate with fuses or replaceable current limiters having high interrupting-capacity ratings.

Type 2 fused circuit breakers use a fuse, fuses or current limiters so coordinated that they function at currents below those specified in short-circuit test requirements. Except for this feature of short-circuit operation, Type 2 fused circuit breakers meet all requirements applicable to molded-case circuit breakers and, in addition, are required to clear circuits up to

Fused Circuit Breakers Certified for Canada (DIYV7)−*Continued*

and including 25 times their amp rating, and circuits of 1000 A or less regardless of amp rating, without causing operation of the fuse, fuses or current limiters that are a part of the device. Type 2 devices are limited to constructions designed to accommodate and coordinate with fuses having high interrupting-capacity ratings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKER AND GROUND-FAULT CIRCUIT INTERRUPTERS CERTIFIED FOR CANADA (DKUY7)

USE AND INSTALLATION

This category covers combination circuit breaker and ground-fault circuit interrupter (GFCI) devices designed to serve the dual function of providing overcurrent protection, and protection against shock hazard, as required by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

A circuit breaker and ground-fault circuit interrupter is intended to be installed only on grounded 60 Hz alternating-current systems in accordance with the CEC.

These devices are intended to be installed in new or existing service equipment, panelboards, and the like.

GFCIs are intended to be used only in electrical circuits where one of the conductors if solidly grounded.

Class A GFCIs are intended to provide protection from electric shock as specified the CEC.

A two-wire device is not suitable for use in a multiwire branch circuit as defined in the CEC.

Some devices rated 120/240 V do not have a load neutral wire connector and are intended for use with 208 V or 240 V loads only.

RELATED PRODUCTS

See Circuit Breakers, Molded Case and Circuit-breaker Enclosures Certified for Canada (DIVQ7).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers Certified for Canada (DHJR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 5 (2009), "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures," and CSA-C22.2 No. 141.1 (2006), "Ground-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Breaker and Ground-fault Circuit Interrupter" (or "C.B./GFCI").

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (DKPA7)

This category covers circuit breakers of the manually operable, air-break type, providing automatic overcurrent protection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These circuit breakers and circuit breaker enclosures are intended for use only with copper conductors.

BRANCH CIRCUIT AND SERVICE CIRCUIT BREAKERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (DKPN7)

USE

This category covers enclosed circuit breakers and circuit breaker enclosures designed to provide service-entrance, feeder or branch-circuit protection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These circuit breakers are designed to carry rated current at ambient temperature of 40°C or less and are marked "40C."

These circuit breakers are open type and intended to operate within flameproof enclosures, or enclosed flameproof circuit breakers having increased safety "e" terminals for mounting within increased safety "e" enclosures or panelboards, or as part of other certified equipment having a type of protection suitable for the intended location. Increased safety terminals are intended for termination of copper conductors only.

RELATED PRODUCTS

See Circuit Breakers Certified for Canada (DHJR7).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers for Use in Zone Classified Hazardous Locations Certified for Canada (DKPA7) and Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 5 (2002), "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Branch Circuit Breaker for Use in Hazardous Locations" or "Service Circuit Breaker for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR OVER 600 VOLTS CERTIFIED FOR CANADA (DLAH7)

GENERAL

This category covers indoor and outdoor enclosed assemblies of switchgear devices, such as switches, interrupting devices, circuit breakers, and control, metering, protective and regulating equipment with associated interconnections and supporting structure, in nominal voltages above 600 V through 46 kV ac. These devices are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," in unclassified locations, for controlling and protecting the power from generators and other sources of electrical energy.

These switchgear assemblies are completely enclosed on all sides and top with sheet metal (except for ventilation openings and inspection windows) and may contain the following: (1) circuit breakers, (2) insulated busbars and connections, (3) instrument and control power transformers, (4) instruments, meters and relays, and (5) control wiring and accessory devices.

CIRCUIT BREAKERS

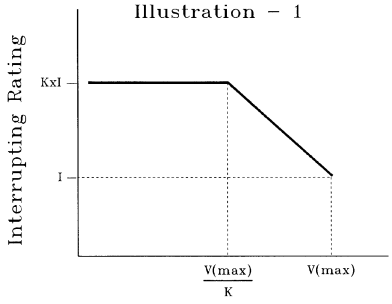
The circuit breakers are three-pole devices of the draw-out type, are trip-free and may be either air-break or vacuum-type devices.

Circuit-breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amps. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amps that is applicable at the maximum rated voltage. Circuit breakers using the rating structure of ANSI/IEEE C37.06 (1987), "AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis – Preferred Ratings and Related Required Capabilities," are also provided with a "K" factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. The circuit breaker may interrupt a current greater than "I" by a factor up to the value of "K," at a voltage reduced from the maximum rated voltage, "V Max" by the same factor, or at a lower voltage, as depicted in Illustration 1. Circuit breakers using the rating structure of ANSI/IEEE C37.06 (1997) or later do not have a "K" factor, or are marked with a "K" factor of 1.0.

Illustration – 1



Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

The circuit breakers are contained in individual grounded metal compartments.

Generator Circuit Breakers

Generator circuit breakers are rated on a symmetrical current basis and intended for installation in metal-clad switchgear between the generator and the transformer terminals. They are intended for use with generators and transformers rated between 10 and 100 MVA.

Generator circuit breakers are marked with:

- Manufacturer's name, type designation and serial number
- Year of manufacture
- Rated frequency
- Continuous current
- Maximum voltage
- Full wave impulse withstand voltage
- Short-circuit duty cycle
- Short-circuit current
- DC component (in percentage of peak value of the rated short-circuit current)
- Close, latch and carry current
- Short-time current
- Out-of-phase current
- Interruption time

METAL-CLAD SWITCHGEAR

These switchgear assemblies may consist of a single vertical section housing one or more individual circuit-breaker compartments or auxiliary compartments, along with the associated busbar structure, or may consist of several abutting sections interconnected by horizontal buses.

These switchgear assemblies are marked with the following: rated maximum voltage, rated frequency, rated insulation level, and rated continuous current.

In addition, a single line diagram is marked on each assembly to indicate (1) the maximum available short-circuit capacity of the system(s) to which the assembly may be connected, (2) whether the assembly is for indoor or outdoor use, (3) whether accessibility from the rear, side, top or ends is required for installation, and (4) the suitability of the equipment for mounting over combustible surfaces.

Circuit breakers used in these switchgear assemblies are suitable for continuous use at 100% of their continuous current rating.

The marking "Suitable for Use as Service Equipment" appears on each switchgear section or assembly optionally intended for use at a service.

A switchgear section marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Generally this switchgear is shipped without wire connectors and the busbar terminations are provided with standard bolt-hole patterns. The suitability of the wire connectors installed must be determined by Authorities Having Jurisdiction at the time of final inspection.

A switchgear section investigated to determine if it is rainproof is marked "Rainproof."

The individual circuit-breaker compartments are intended to accommodate a circuit breaker and are marked to indicate the type(s) of circuit breaker that may be installed.

Individual auxiliary compartments are intended to house control components such as meters, instrument and/or control power transformers, and the like.

Switchgear assemblies are generally provided with shop drawings or the like that include circuit and connection diagrams of the assembly, continuous current ratings of the main and section details of control and ground-fault protection (if provided) circuits, etc.

ARC-RESISTANT SWITCHGEAR

Metal-clad switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers that are secured as intended may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear has been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant switchgear is marked with an Accessibility Type designation based upon the construction. The Types may be either A, B or C, based upon the construction.

Type A designates switchgear with arc-resistant construction at the front only.

Type B designates switchgear with arc-resistant construction at the front, back and sides.

Type C designates switchgear with arc-resistant construction at the front, back and sides and between compartments within the same cell or adjacent cells.

In Type C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (2004), "Switchgear Assemblies."

Additional standards used to investigate products in this category are:

IEEE C37.20.2 (1999), "IEEE Standard for Metal-Clad Switchgear"

ANSI/NEMA C37.54 (2002), "Indoor Alternating Current High-Voltage Circuit Breakers Applied as Removable Elements in Metal-Enclosed Switchgear – Conformance Test Procedures"

ANSI/NEMA C37.55 (2002), "Switchgear – Medium Voltage Metal-Clad Assemblies – Conformance Test Procedures"

Circuit breakers investigated prior to 2002 were investigated to ANSI C37.54 (1987).

The basic standard used to investigate switchgear Classified as "arc resistant" is EEMAC G14-1 (1987), "Procedure for Testing the Resistance of Metal-Clad Switchgear Under Conditions of Arcing Due to an Internal Fault."

Additional standards used to investigate generator circuit breakers in this category are ANSI/IEEE C37.013 (1997), "AC High-Voltage Generator Circuit Breakers Rated on a Symmetrical Current Basis," and ANSI/IEEE C37.013A (2007), "AC High-Voltage Generator Circuit Breakers Rated on a Symmetrical Current Basis – Amendment 1: Supplement for Use with Generators Rated 10 – 100 MVA."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium Voltage AC Power Circuit Breaker" or "Metal-clad Switchgear."

The Listing Mark for metal-clad switchgear sections also includes the marking "____ of ____." The first blank is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchgear assembly. The second blank is stamped with the total number of sections in the switchgear assembly. Only those sections and compartments that bear the Listing Mark are covered under UL's Follow-Up Service.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark noted above and the following additional information:

ARC RESISTANT SWITCHGEAR
IN ACCORDANCE WITH
[standard designation and date]

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicated the position (from left to right) of the vertical section bearing the UL Mark.

****

CLEANING MACHINES CERTIFIED FOR CANADA (DMDT7)

This category covers household and commercial dishwashers, motor-operated cleaning machines, electrically-operated high-pressure cleaning machines, vacuum cleaning machines and blower cleaners.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding. Such appliances are distinctively marked "Double-Insulated or Double Insulation."

In cases where the nature or construction of the equipment is such that precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installation or use, suitable warnings are marked on the equipment.

Those cleaning machines which have been found suitable for installation outdoors, or with sections exposed outdoors, are so indicated on the equipment.

The burglary and theft protection features of the coin-operated machines have not been investigated.

****

CLEANING MACHINES, MOTOR OPERATED CERTIFIED FOR CANADA (DMGK7)

USE

This category covers cleaning machines of the motor-operated type for household and commercial use. Products employing liquid cleaning agents are intended for use with water-based (nonflammable) cleaners.

FACTORS NOT INVESTIGATED

Any health hazards that may be associated with the use of these cleaning machines, such as removal of pathological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

RELATED PRODUCTS

This category does not cover dishwashers, high-pressure cleaning machines, vacuum cleaning machines, blower cleaners, or cleaning machines of the heating type for household and commercial use. See Dishwashers, Commercial Certified for Canada (DMGR7), Dishwashers, Household Certified for Canada (DMIY7), High-pressure Cleaning Machines, Electrically Operated Certified for Canada (DMKK7), Vacuum Cleaning Machines and Blower Cleaners Certified for Canada (DMLW7) and Heaters, Specialty Certified for Canada (KSOT7) for details on these types of cleaning machines.

ADDITIONAL INFORMATION

For additional information, see Cleaning Machines Certified for Canada (DMDT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

Cleaning Machines, Motor Operated Certified for Canada (DMGK7)−*Continued*

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISHWASHERS, COMMERCIAL CERTIFIED FOR CANADA (DMGR7)

USE

This category covers commercial, freestanding, undercounter, and counter-insert dishwashers using water as the principal cleaning medium. Commercial dishwashers may be provided with electric heaters, natural or LP-gas equipment or low-pressure steam equipment for water heating. The water is heated in open (atmospheric pressure) tanks.

These dishwashers are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Commercial dishwashers are intended for use in commercial establishments, such as kitchens of restaurants, bars and hospitals, where they are not to be accessible to the public.

REBUILT PRODUCTS

This category also covers commercial dishwashers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial dishwashers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial dishwashers are subject to the same requirements as new commercial dishwashers.

RELATED PRODUCTS

See Dishwashers, Household Certified for Canada (DMIY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z83.21/CSA-C22.2 No. 168, "Commercial Dishwashers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISHWASHERS, HOUSEHOLD CERTIFIED FOR CANADA (DMIY7)

USE AND INSTALLATION

This category covers household dishwashers intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Household dishwashing machines may be of the cord-and-plug-connected or the permanently connected type.

An undercounter unit may not have a complete enclosure; the unit is intended to be installed beside kitchen cabinets, and an enclosure is to be provided at installation. Such units are so marked.

Some cord-and-plug-connected units are suitable for field conversion to permanently connected installation; conversion instructions are provided with the conversion parts kit.

Dishwashers, Household Certified for Canada (DMIY7)−*Continued*

Some permanently connected-type dishwashers may be converted to cord connection by means of a cord kit that is available from the manufacturer of the dishwasher.

REBUILT PRODUCTS

This category also covers household dishwashers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household dishwashers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household dishwashers are subject to the same requirements as new household dishwashers.

RELATED PRODUCTS

For commercial dishwashers, see Dishwashers, Commercial Certified for Canada (DMGR7).

Products Verified for energy efficiency are covered under Dishwashers, Household Verified for Energy Efficiency (ZYHZ).

ADDITIONAL INFORMATION

For additional information, see Cleaning Machines Certified for Canada (DMDT7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 167, "Household Dishwashers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HIGH-PRESSURE CLEANING MACHINES, ELECTRICALLY OPERATED CERTIFIED FOR CANADA (DMKK7)

USE

This category covers electrically operated, high-pressure cleaning machines in which the discharge line is hand-supported and manipulated, for household and commercial use. The products may use either hot or cold water, and they may be portable, stationary or fixed.

Products used with liquid cleaning agents are intended for water-based (nonflammable) cleaners.

FACTORS NOT INVESTIGATED

Any health hazard that may be associated with the use of these cleaning machines, such as dispersion of pathological, chemical, physical, radioactive, or other contaminating agents has not been investigated.

RELATED PRODUCTS

Fuel-engine-driven, high-pressure cleaning machines are covered under High-pressure Cleaning Machines, Engine Driven Certified for Canada (DNZW7).

Electrically operated, high-pressure cleaning machines provided with steam-cleaning features, where the steam cleaner is the appliance's primary function, are covered under Heaters, Specialty Certified for Canada (KSOT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

Electrically operated, high-pressure cleaning machines provided with steam-cleaning features, where the high-pressure cleaning function is the appliance's primary function, are additionally investigated to CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

High-pressure Cleaning Machines, Electrically Operated Certified for Canada (DMKK7)−*Continued*

together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

VACUUM CLEANING MACHINES AND BLOWER CLEANERS CERTIFIED FOR CANADA (DMLW7)

GENERAL

This category covers coin-operated vacuum cleaners and motor-operated vacuum cleaners and blower cleaners intended for household and commercial (industrial) use. Products intended for household use only are so marked. Attachments packaged with the products or indicated in the instruction manual packaged with the product are also covered under this category.

Central vacuum cleaners are intended for installation as part of a permanent central suction system in a building. Since they are intended for remote operation, they incorporate suitable overcurrent protection.

This category also covers household vacuum cleaners provided with a steam-cleaning feature, where the vacuum cleaner is the appliance's primary function.

This category also covers electrified wall inlet valve assemblies for use in central vacuum cleaning systems. The assemblies are shipped as a kit comprised of the mounting plate/rough-in box and cover plate. The cover plate identifies the appropriate hoses and nozzles certified for use with the valve. The assembly bears the Certification Mark.

REBUILT PRODUCTS

This category also covers vacuum cleaners that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt vacuum cleaners are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt vacuum cleaners are subject to the same requirements as new vacuum cleaners.

FACTORS NOT INVESTIGATED

Any health hazards that may be associated with the use of vacuum cleaners or combination blower and vacuum cleaners, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

RELATED PRODUCTS

Steam-cleaning machines with vacuum-cleaning features, where the steam cleaner is the appliance's primary function, are covered under Heaters, Specialty Certified for Canada (KSOT7).

ADDITIONAL INFORMATION

For additional information, see Cleaning Machines Certified for Canada (DMDT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 243, "Vacuum Cleaners, Blower Cleaners and Household Floor Finishing Machines."

Industrial- and commercial-use wet and dry vacuums, including power brushes, are investigated to CSA-C22.2 No. 243, or CAN/CSA-E60335-1/4E, "Household and Similar Electrical Appliances – Safety – Part 1: General Requirements," and CAN/CSA-E60335-2-69, "Safety of Household and Similar Electrical Appliances – Part 2: Particular Requirements for Wet and Dry Vacuum Cleaners, Including Power Brush, for Industrial and Commercial Use."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLEANING MACHINES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (DMRR7)

GENERAL

This category covers portable vacuum cleaners provided with special suction attachments, such as crevice tools, brushes, etc., intended to facilitate cleaning operations.

Some vacuum cleaners are designed specifically to pick up water in connection with floor-scrubbing operations; such cleaners are so indicated in the individual certifications.

Connections to supply lines require the use of receptacles with plugs, or receptacles with plugs interlocked with snap switches or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

ADDITIONAL INFORMATION

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 243 (1991), "Vacuum Cleaning Machines and Blower Cleaners."

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (1986), "Motors and Generators for Use in Hazardous Locations," in addition to the hazardous (classified) locations standards referenced in Equipment for Use in and Relating to Class I, II and III, Division I and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cleaning Machine for Use in Hazardous Locations."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLEANING MACHINES CERTIFIED FOR CANADA (DNEZ7)

This category covers commercial-use internal-combustion-engine-powered or electric-battery-powered cleaning machines, such as sweepers, scrubbers, floor maintenance machines, and high-pressure cleaning machines.

BATTERY-POWERED ELECTRIC CLEANING MACHINES CERTIFIED FOR CANADA (DNSX7)

Listing of the following battery operated electric cleaning machines signifies that the fire hazard incident to their use in ordinary locations, has been reduced to an acceptable degree. No tests have been conducted to determine their suitability for use in hazardous locations as defined by the Canadian Electrical Code.

Electric battery powered cleaning machines are designated Type E, EE or ES.

Type E Cleaning Machines Certified for Canada (DOGV7)

GENERAL

This category covers electric-battery-powered cleaning machines having minimum acceptable safeguards against fire hazards.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

Type E Cleaning Machines Certified for Canada (DOGV7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C583 (1974), ''Guide for the Investigation of Electric Battery Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power-operated Cleaning Machine, Type E.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Type EE Cleaning Machines Certified for Canada (DOUT7)

GENERAL

This category covers electric-battery-powered cleaning machines provided with safeguards in addition to minimum acceptable safeguards against fire hazards. On Type EE cleaning machines electric motors and other electrical equipment, such as resistors and contactors, are completely enclosed.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C583 (1974), ''Guide for the Investigation of Electric Battery Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Cleaning Machine Type EE.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Type ES Cleaning Machines Certified for Canada (DPBS7)

GENERAL

This category covers electric-battery-powered cleaning machines provided with safeguards in addition to minimum acceptable safeguards against fire hazards. On Type ES cleaning machines, barriers are provided to restrict the entrance of combustible flyings into electrical enclosures, and to guard against the emission of flame and molten metal during potential internal fault conditions.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C583 (1974), ''Guide for the Investigation of Electric Battery Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Cleaning Machine, Type ES.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HIGH-PRESSURE CLEANING MACHINES, ENGINE DRIVEN CERTIFIED FOR CANADA (DNZW7)

USE AND INSTALLATION

This category covers high-pressure cleaning machines in which the discharge line is hand-supported and manipulated, driven by gasoline-, LP-gas-, or diesel-fueled internal-combustion engines. These machines may be hot- or cold-water types for portable, stationary or fixed installations.

RELATED PRODUCTS

Electrically operated, high-pressure cleaning machines that use water as the cleaning agent for household and commercial use are covered under High-pressure Cleaning Machines, Electrically Operated Certified for Canada (DMKK7).

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-B140.11 (1989), ''Oil/Gas-Fired Commercial/Industrial Pressure Washers and Steam Cleaners.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''High-pressure Cleaning Machine,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTERNAL-COMBUSTION-ENGINE-POWERED CLEANING MACHINES CERTIFIED FOR CANADA (DPIR7)

These machines are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these machines should conform to the requirements of Authorities Having Jurisdiction.

Fire hazard incident to use of fuel, electrical and exhaust systems have been investigated.

Internal combustion engine-powered cleaning machines are designated Type D, DS, G, GS, LP or LPS.

Type D Cleaning Machines Certified for Canada (DPPQ7)

USE

This category covers diesel-engine-powered cleaning machines having minimum acceptable safeguards against inherent fire hazards.

These machines are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these machines should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558 (1975), ''Guide for the Investigation of Internal Combustion Engine Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power-operated Cleaning Machine, Type D.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Type DS Cleaning Machines Certified for Canada (DPSU7)

USE

This category covers diesel-engine-powered cleaning machines with fuel, electrical and exhaust systems provided with safeguards in addition to those required for Type D cleaning machines.

These machines are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these machines should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558 (1975), ''Guide for the Investigation of Internal Combustion Engine Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Cleaning Machine Type DS.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Type G Cleaning Machines Certified for Canada (DPVZ7)

USE

This category covers gasoline-engine-powered cleaning machines having minimum acceptable safeguards against inherent fire hazards.

These machines are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these machines should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558 (1975), ''Guide for the Investigation of Internal Combustion Engine Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Cleaning Machine Type G.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Type GS Cleaning Machines Certified for Canada (DPZT7)

USE

This category covers gasoline-engine-powered cleaning machines with fuel, electrical and exhaust systems provided with safeguards in addition to those required for Type G cleaning machines.

These machines are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these machines should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558 (1975), ''Guide for the Investigation of Internal Combustion Engine Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Type GS Cleaning Machines Certified for Canada (DPZT7)−*Continued*

Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Cleaning Machine Type GS.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Type LP Cleaning Machines Certified for Canada (DQCY7)

USE

This category covers liquefied petroleum gas (LP-gas) engine-powered trucks having minimum acceptable safeguards against inherent fire hazards.

These machines are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these machines should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558 (1975), ''Guide for the Investigation of Internal Combustion, Engine Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Cleaning Machine Type LP.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Type LPS Cleaning Machines Certified for Canada (DQGS7)

USE

This category covers liquefied petroleum gas (LP-gas) engine-powered cleaning machines with fuel, electrical and exhaust systems provided with safeguards in addition to those required for Type LP cleaning machines.

These machines are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these machines should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558 (1975), ''Guide for the Investigation of Internal Combustion Engine Powered Industrial Trucks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Cleaning Machine Type LPS.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLOCKS, HOUSEHOLD CERTIFIED FOR CANADA (DROX7)

USE

This category covers electrically operated clocks intended for household use and installation.

RELATED EQUIPMENT

The following products are covered under Time-indicating and -Recording Appliances Certified for Canada (XHNR7): Electrically operated clocks that form parts of a master clock system; secondary, cost, payroll, and other clocks intended primarily for industrial and commercial installations; time stamps, job-card recorders, timers, and similar time-indicating and -recording appliances.

Clock-operated switches designed to close and open circuits to a load at predetermined intervals are covered under Switches, Clock Operated Certified for Canada (WGZR7).

Clocks that include a radio, CD player, or other audio/video functions are covered under Audio/Video Apparatus Certified for Canada (AZSQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Clock,'' ''Household Clock'' or ''Clock Movement,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLOSED-CIRCUIT TELEVISION EQUIPMENT CERTIFIED FOR CANADA (DRQH7)

USE AND INSTALLATION

This category covers video products intended for commercial use and which produce signals and/or distribute signals within a closed-circuit system. Examples of such products are video tape recorders; video disc recorders; video-receiving, -processing, -recording, and -amplification equipment; video cameras, and the like intended for use in closed-circuit video systems, as well as power supplies intended for use with closed-circuit television products.

This category covers auxiliary and accessory equipment including pan-and-tilt units, wall-mounting brackets, console enclosures, and racks intended for use with closed-circuit video equipment.

This category also covers portable closed-circuit video equipment intended for use with a vehicular, marine, or any other battery circuit as the power-supply means.

Many of these video products require special installation such as a separate transformer, power supply, special grounding methods, special mounting, special cable construction, or interconnection between units by means of one or more of such features are covered in the manufacturer's installation instructions.

Information concerning field-wiring connections, mounting location, mounting method, clearances, etc., is marked on the unit or specified in the installation instructions accompanying the unit.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, ''Audio, Video and Similar Electronic Equipment,'' or CAN/CSA-C22.2 No. 60065 (2003), ''Audio, Video and Similar Electronic Apparatus.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest shipping carton is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes

the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Commercial CCTV Equipment,'' ''Commercial CCTV Product,'' ''Commercial CCTV Video Equipment,'' ''Commercial CCTV Video Product,'' or other appropriate product name as shown in the individual Listings, prefixed by ''Commercial'' or ''Commercial Use.''

Equipment rack systems consist of an equipment rack and one or more audio or video components such as video tape recorders, mixers, multiplex units and similar equipment. Components investigated for use in this rack are either provided with their own Listing Mark or are identified by type and model number on a tag permanently secured to the rack at the factory by the manufacturer.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COIN AND CURRENCY CHANGERS AND ACTUATORS CERTIFIED FOR CANADA (DUCU7)

GENERAL

This category covers electrically-operated control mechanisms that receive coins, currency, credit cards, debit cards or tokens to select prices, accumulate credits, store coins or currency, give change or initiate a vend cycle for an appliance, or combinations of these functions.

This equipment is rated 250 V or less, single-phase, and may be either cord or permanently connected to the source of supply in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and CAN/CSA-C22.2. No. 0, ''General Requirements – Canadian Electrical Code, Part II.''

The burglary and theft protection on features of these mechanisms have not been investigated unless specifically indicated in the individual certifications.

This category does not cover (1) equipment that vends a service or product, (2) coin and currency sorting, packing or counting equipment, and (3) clock-operated, coin-operated mechanisms.

REBUILT PRODUCTS

This category also covers coin and currency changers and actuators that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt coin and currency changers and actuators are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt coin and currency changers and actuators are subject to the same requirements as new coin and currency changers and actuators.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number and electrical rating.

Coin and currency changers and actuators intended for outdoor use are so marked.

RELATED PRODUCTS

Clock-operated, coin-operated mechanisms are covered under Switches, Clock Operated Certified for Canada (WGZR7).

Coin-operated vending appliances are covered under Vending Machines, Refrigerated Certified for Canada (SQMX7) and Vending Machines Certified for Canada (YWXV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 128, ''Vending Machines.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Coin Changer,'' ''Currency Changer,'' ''Coin and Currency Changer,'' ''Money Changer,'' or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COLD CATHODE TRANSFORMERS AND POWER SUPPLIES CERTIFIED FOR CANADA (DUEC7)

USE

This category covers indoor and outdoor use cold cathode transformers and power supplies for use as part of a cold cathode electric discharge lighting system, sign, field-assembled skeletal neon sign and outline lighting system, or field-installed neon outline lighting system.

These transformers and power supplies have been investigated for secondary-circuit ground fault protection.

Cold cathode transformers and power supplies are intended for use in or with electric signs and outline lighting within the scope of CAN/CSA-C22.2 No. 207 (1989), "Portable and Stationary Electric Signs and Displays," and for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," "Weatherproof" or "WP." Products marked "Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 4 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

Type 2 – Neon supply with input and output terminals or leads that should be enclosed in accordance with the CEC.

Type 3 – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the CEC.

Type 4 – Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 13 (Section A), "Transformers for Luminous-Tube Signs."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cold Cathode Transformer" or "Cold Cathode Power Supply."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMBUSTION-DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (DUFK7)

USE

This category covers electronically operated combustion detectors intended for use on gas- or oil-burning equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combustion Detection Equipment for Use in Hazardous Locations" or "Combustion Detector for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMUNICATIONS-CIRCUIT ACCESSORIES CERTIFIED FOR CANADA (DUXR7)

GENERAL

This category covers devices intended for use in residential or commercial communications-station applications for connections to the telephone communication loop circuits. The individual certifications describe the intended location of these devices, either 1) on the equipment side or 2) on the outside plant side of a primary protector for communications circuits (see QVGV7).

The term "equipment side" indicates that the communications-circuit accessory may only be employed on that portion of the loop circuit protected by a primary protector for communications circuits (see QVGV7).

The term "outside plant," as defined in ANSI/IEEE 100 (1984), "The Authoritative Dictionary of IEEE Standards Terms," is "that part of the plant extending from the line side of the main distributing frame to the line side of the station or PBX protector or connecting block, or to the line side of the main distributing frame in another office building." The "outside plant" side is not protected by a primary protector.

Accessory units may also provide features relating to the communications circuit without accessorizing the communications-protector function. Examples of accessories are RJ-type jacks and plugs, quick-connect terminal assemblies, telephone wall plates, telephone extension cords, cross-connect terminal blocks, MTU modules, terminal enclosures, network interface devices (NIDs) (excluding complex interface devices, such as fiber optic and broadband subscriber interface units), wire-guide assemblies and connector blocks.

INSTALLATION INSTRUCTIONS

In certain applications, communications-circuit protectors are not required because there is no exposure to accidental contact with electric light or power conductors as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Accordingly, those products normally used only on the equipment side of a primary protector may be used without the protector. Products intended for this application are identified in the individual certifications and the installation documentation.

RELATED EQUIPMENT

Other telecommunications appliances and equipment are covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7), Telephones, Cellular Certified for Canada (WYLR7) or Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Modular assemblies of telecommunications equipment (e.g., racks, circuit card assemblies) that are designed for field installation by trained service personnel are covered under Custom-built Telecommunications Equipment Certified for Canada (WYKM7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communications companies is covered under Communications Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool or otherwise support IT or telecommunications equipment that will be

installed at a later time are covered under Information Technology and Telecommunications Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 182.4 (1990), "Plugs, Receptacles and Connectors for Communication Systems," and CAN/CSA-C22.2 No. 233 (1989), "Cords and Cord Sets for Communication Systems."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Communications-circuit Accessory" (or "Comm Ckt Acc"), or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMUNICATIONS SERVICE EQUIPMENT CERTIFIED FOR CANADA (DUZO7)

GENERAL

This category covers communications service equipment intended to be installed on the network side of the subscriber demarcation point, up to and including the subscriber interface unit (SIU), network interface unit (NIU), or network interface device (NID). This equipment is intended to be installed and maintained by telecommunications companies, CATV companies, and similar network communications companies which provide public telecommunications, CATV, or other network services to subscriber premises. As appropriate, this equipment is to be installed in accordance with Sections 16, 54, 56 and 60 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and the applicable Standards and Sections of Part III of the CEC.

This equipment may or may not incorporate primary protection for communications circuits, or have provision for the installation of a Listed primary protector. This information is specified in the individual Listings for the equipment. Primary protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electrical light and power conductors operating at over 300 V to ground as defined in Section 60 of the CEC. These devices may also be used to protect against electrical transients from electromagnetic disturbances or higher than normal voltages induced on the network circuits due to close proximity of the protected circuit to electric light or power conductors.

Primary protection is identified as "provided" when primary protection is built into the equipment, "compatible" when the equipment has provision for the installation of a Listed primary protector, or "none" when there are no provisions for a primary protector. Where applicable, compatible primary protector designations are either marked on the equipment or included on the individual product data sheet.

Primary protector fusing information identifies whether the primary protector is integrally "fused" (a "fused primary protector") or if a fusing wire is to be provided (a "fuseless primary protector"). Where a fusing wire is required, the maximum size fusing wire to be used in series with the equipment is indicated by the following alphabetical designations:

A — 24 AWG copper wire with thermoplastic insulation
B — 22 AWG copper wire with thermoplastic insulation
C — 20 AWG, 40% copper-clad wire
D — 26 AWG copper wire with thermoplastic insulation

Equipment intended to connect a shielded cable drop and/or incorporating a primary protector is provided with an appropriately sized grounding terminal.

Requirements for the location and installation of equipment incorporating primary protectors and provisions for cable grounding are provided in Sections 16, 54, 56 and 60 of the CEC.

Unless marked "indoor use only," this equipment has been judged suitable for indoor and outdoor use and provides basic protection against rain and corrosion. Equipment that provides a degree of protection against more severe environmental conditions, such as wind-blown dust and rain, icing, splashing water, immersion, etc., is marked with an enclosure type designation and provides a degree of protection as indicated in Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Except for **OTHER EQUIPMENT** identified with a specific temperature range, outdoor equipment has been investigated over a temperature range of -40C to +46C. The effects of insolation (solar loading) have also been considered.

Where indicated by a "WARNING" marking on the interface unit, the cable drop may supply Class 2 power with a voltage up to 100 V to the interface. For such installations, the cable drop should be located, routed, or protected so that it is not exposed to touch by persons, or appropriate cable constructions or other means suitable for the installation should be provided.

INTERFACE EQUIPMENT

A subscriber interface unit (SIU), network interface unit (NIU) or network interface device (NID) is used to provide telecommunications, CATV, and other signal information to the subscriber premises and isolation between the Class 3 power on the cable drop and the subscriber premises signal circuits. An interface may incorporate two separate compartments, one compartment for network connections and components, and another compartment for the subscriber connection terminals and standard jacks.

Each individual interface Listing provides the following information: Interface designation, primary protector provisions, compatible primary protectors, fusing information, and indoor or outdoor environmental use specifications.

Primary protector provisions and fusing information are marked on the interface.

TAP EQUIPMENT

A power-passing tap (PPT) or power-passing multi-tap (PPMT) is used to tap both signal and Class 2 power from the main utility network for the subscriber cable drop. This tap may be located on a utility pole, within a utility-owned equipment pedestal or vault, or similar location in accordance with Part III of the CEC. In addition to coupling the signal circuits from the network to the cable drop, the tap limits power on the cable drop to Class 2 Levels with a maximum voltage of 100 V. Unless otherwise noted in the individual Listings, taps using communications cable for cable drops have been investigated for subscriber cable drops not exceeding 500 ft in length.

Each individual tap Listing provides the following information: Tap designation, voltage rating, power-carrying media, primary protector provisions, compatible primary protectors, fusing information, and indoor or outdoor environmental use specification.

OTHER EQUIPMENT

Other equipment may contain features that are unique to a system or application. Information concerning special installation procedures, compatibility and other important design features are provided in the individual Listings, on product markings, on product data sheets and in utility installation practices.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 226 (1992), "Protectors in Telecommunication Networks," CAN/CSA-C22.2 No. 225 (1990), "Telephone Equipment," and CAN/CSA-C22.2 No. 950 (1995), "Safety of Information Technology Equipment, Including Electrical Business Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Subscriber Interface Unit" (or "SIU"), "Network Interface Unit" (or "NIU"), "Network Interface Device" (or "NID"), "Power Passing Tap" (or "PPT"), "Power Passing Multi-Tap" (or "PPMT") or, for other equipment, "Communication Service Equipment," with or without an appropriate product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMUNICATIONS CABLE CERTIFIED FOR CANADA (DUZX7)

USE AND INSTALLATION

This category covers communications cable which is a single-conductor coaxial cable or a multiple-conductor jacketed cable intended for telephone and other communications circuits for use as described in Section 60 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

This cable is used as wiring from a protector to a telephone or other communications equipment within a building, and for use as interconnecting wiring between parts of a communications system.

Except for special locations specifically required by the CEC, communications cable, in general, is not required to be installed in conduit or raceway.

PRODUCT MARKINGS

Communications cable is identified by marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

CM — This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685, ''Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables.'' Smoke measurements are not applicable.

CMG— The damage height of this cable does not exceed 1.5 m (4 ft 11 in.) when tested in accordance with the CSA FT4/IEEE 1202 Vertical-Tray Flame Test in UL 1685 (CSA FT4 flame test). Smoke measurements are not applicable

CMP — This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 1.52 m (5 ft), when tested per ANSI/NFPA 262, ''Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces,'' (CSA FT-6).

CMR — The flame propagation height of this cable is less than 3.66 m (12 ft) when tested per ANSI/UL 1666, ''Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts.''

CMX — This cable complies with the VW-1 Flame Test requirements in ANSI/UL 2556, ''Wire and Cable Test Methods.'' Type CMX cable may be marked ''Outdoor'' to indicate its suitability for installation outdoors on dwellings.

CMH — This cable complies with the FT-1 Flame Test requirements in ANSI/UL 2556 (CSA FT-1 flame test).

Cable that contains one or more optical fiber members has the suffix ''-OF'' added to the above.

Cable marked ''Shielded'' contains one or more electromagnetic shields.

An FT6, FT4 or FT1 flame rating, as applicable, may be marked on the cable. Each certified cable may have any one of these ratings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 214 (2008), ''Communications Cables.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Communications Cable.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONDUIT AND FITTINGS CERTIFIED FOR CANADA (DWFV7)

CONDUIT AND CABLE HARDWARE CERTIFIED FOR CANADA (DWMU7)

GENERAL

This category covers conduit straps, staples, and similar types of hardware intended for installation in wiring systems in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

The mechanical strength of these products is investigated with consideration given to the intended installation. Metallic devices are also investigated for resistance to corrosion, and nonmetallic devices may be investigated for flammability and exposure to elevated or cold temperatures.

Conduit and Cable Hardware Certified for Canada (DWMU7)−*Continued*

CARTON MARKINGS

The product carton for a metallic or polymeric construction of any conduit and cable hardware that is intended for use in spaces used for environmental air is marked ''Suitable for use in other space used for environmental air in accordance with Sections 12-010(3), (4), (5) and 12-020 of the Canadian Electrical Code, Part I.''

The product made of polymeric material that is suitable where exposed to rain is so indicated on the device or carton. The term ''Wet Location'' on the device or carton indicates suitability for use where directly exposed to rain.

Products intended for use at elevated or cold temperatures (above 90°C or below -5°C) are so indicated on the device or carton. The application temperature on the device or carton indicates suitability for use at the extended temperature range.

The following, where applicable, is marked on the carton or installation instructions provided on or in the carton:

1. Types or range of thicknesses of a beam flange, drop wire, or rod
2. Intended mounting orientations, if restricted (for example, vertical or horizontal)
3. Sizes and types of conduit, cable, or tubing intended to be supported for hangers, staples, and straps
4. Load rating greater than for the intended applications
5. Designated assembly torque when other than intended

RELATED PRODUCTS

Cable ties are covered under Positioning Devices Certified for Canada (ZODZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 18.4 (2004), ''Hardware for the Support of Conduit, Tubing, and Cable.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Conduit and Cable Hardware,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONDUIT FITTINGS CERTIFIED FOR CANADA (DWTT7)

GENERAL

This category covers metallic and nonmetallic conduit fittings, such as connectors, couplings, locknuts and sealing (liquid-tight) locknuts for use in the assembly of nonmetallic and metallic wiring systems. Also covered are fittings used to provide a transition between metallic and nonmetallic wiring systems. This category also includes metal and insulating bushings for use on conduit. These products are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

The individual certifications for each connector used with nonmetallic-sheathed cable may have details about the size and number of the nonmetallic-sheathed cable it will secure.

All male threaded fittings and nipples have only been investigated for use with locknuts.

Fittings with internal female threads (e.g., hubs, conduit bodies, couplings) have only been investigated for use with threaded rigid conduit.

Insulating Bushings — Insulating bushings provided either separately or as part of a fitting are suitable for temperatures of 150°C if they are colored black or brown, and for 90°C if any other color unless specifically marked for a higher temperature.

Volume — Fittings or covers for fittings should be judged to contribute no volume other than the equivalent raceway connected to it unless specifically marked.

Sealing (Liquid-tight) Locknuts — Sealing locknuts are intended for use with threaded rigid metal conduit and intermediate metal conduit with one sealing locknut in the outside or the inside and either an ordinary locknut or sealing locknut on the inside of the enclosure for wet locations

Conduit Fittings Certified for Canada (DWTT7)−*Continued*

or liquid-tight applications. Sealing locknuts may also be used with certified wet location or liquid-tight fittings where so marked on the fitting carton and used on the inside of the enclosure.

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT MARKINGS

Liquid-tight Flexible Nonmetallic Conduit Fittings — Liquid-tight flexible nonmetallic conduit fittings are marked as follows:

1. A fitting for Type A conduit only is marked "Liquid-Tight Flexible Nonmetallic Conduit Type A Only" or "LFNC-A only" or "FNMC-A only."
2. A metallic fitting for Type B is marked "Liquid-Tight Flexible Nonmetallic Conduit Type B Only" or "LFNC-B" or "FNMC-B" or with equivalent wording.
3. A nonmetallic fitting for Type B conduit only is marked "Liquid-Tight Flexible Nonmetallic Conduit Type B Only" or "LFNC-B only" or "FNMC-B only."
4. A nonmetallic fitting for Type C conduit only is marked "Liquid-Tight Flexible Nonmetallic Conduit Type C Only" or "LFNC-C only" or "FNMC-C only."

Nonmetallic Fittings — Nonmetallic fittings for use with rigid PVC conduit are intended for use at a maximum working temperature of 75°C.

PVC Conduit Fittings — All PVC conduit fittings are designed for connection to both Schedule 40 and 80 PVC conduit by the use of suitable solvent-type cement. Instructions supplied by the solvent-type-cement manufacturer describe the method of assembly and precautions to be followed.

Fittings for Dry Locations — Fittings that are intended only for dry locations but are used with conduit or tubing not limited to dry locations are marked "DRY" or "DRY LOCATIONS ONLY."

CARTON MARKINGS

A metallic fitting that physically cannot be connected to any type of conduit other than liquid-tight flexible metallic or nonmetallic Type B conduit will have the marking on the carton in which the fitting is packed. It is marked "Liquid-Tight Flexible Nonmetallic Conduit Type B Only" or "LFNC-B" or "FNMC-B" or with equivalent wording.

Fittings identified with an enclosure type designation or as rain-tight on the carton are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Connectors that are also suitable for use with nonmetallic-sheathed cable, service-entrance cable, or flexible nonmetallic tubing are so identified by the appropriate marking on the carton. Connectors designated "For Use With Nonmetallic Sheathed Cable" are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations. Unless marked otherwise on the carton, the connectors are suitable for connection of only one cable per cable entry.

Hubs intended for use with conduit that serves as a service mast in accordance with the CEC are marked on the fitting or carton to indicate suitability for use with service-entrance equipment.

RELATED PRODUCTS

A hub having provision for attachment of a grounding conductor may additionally be covered as a grounding and bonding hub under Grounding and Bonding Equipment Certified for Canada (KDER7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CSA-C22.2 No. 18.3 (2004), "Conduit, Tubing, and Cable Fittings"
CAN/CSA-C22.2 No. 85 (1989), " Rigid PVC Boxes and Fittings"
CSA-C22.2 No. 211.0, "General Requirements and Methods of Testing for Nonmetallic Conduit"
CSA-C22.2 No. 211.2, "Rigid PVC (Unplasticized) Conduit"
CAN/CSA-C22.2 No. 227.2.1, "Liquid-Tight Flexible Nonmetallic Conduit"

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Conduit Fitting," "Adapter" or "Coupling," or other appropriate product name as shown in the individual Listings.

Conduit Fittings Certified for Canada (DWTT7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Retrofit Fitting Kits Certified for Use with Extruded Rigid PVC Conduit Certified for Canada (DWUC7)

USE

This category covers certified retrofit fitting kits certified for use with extruded rigid nonmetallic PVC Schedule 40 conduit. These kits are intended only for truncating conduit in concrete. They are not intended for use with conduit in open air.

The kits are provided with the tools and instructions necessary for proper installation. Separate fittings intended for use with the tools may be sold separately. The kit and installation instructions are marked "PVC Conduit Repair Fitting," or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Conduit Fittings Certified for Canada (DWTT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 85 (1989), "Rigid PVC Boxes and Fittings."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT FITTING KIT
FOR USE WITH RIGID NONMETALLIC PVC SCHEDULE 40 CONDUIT
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE CONDUIT, LIQUID-TIGHT CERTIFIED FOR CANADA (DWWY7)

Flexible Metal Conduit, Liquid-tight Certified for Canada (DXHR7)

USE AND INSTALLATION

This category covers liquid-tight flexible metal conduit in metric designators 12 to 103 inclusive (trade sizes 3/8 to 4 inclusive), for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). Liquid-tight flexible metal conduit is intended for use with conductors in circuits of 750 V nominal or less. This conduit may also be used for installation of conductors in motor circuits and for electric signs and outline lighting in accordance with the CEC.

Liquid-tight flexible metal conduit not marked with a temperature designation or marked "60 C" is intended for use at temperatures not in excess of 60°C (140°F).

Conduit intended for use in dry or oily locations at a temperature higher than 60°C (140°F) is marked "____ C dry, 75 C oil res" (or "____ C dry, 75 C oil resistant") with "75" or "105" inserted as the dry-locations temperature.

Conduit intended for use in oily locations is marked "____ C dry, 60 C oil res" (or "____ C dry, 60 C oil resistant") with "60" or "105" inserted as the dry-locations temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 56 (2004), "Flexible Metal Conduit and Liquid-Tight Flexible Metal Conduit."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing

Flexible Metal Conduit, Liquid-tight Certified for Canada (DXHR7)−*Continued*

Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-Tight Flexible Metal Conduit."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flexible Nonmetallic Conduit, Liquid-tight Certified for Canada (DXOQ7)

USE

This category covers liquid-tight flexible nonmetallic conduit in trade sizes 3/8 to 4 (metric designators 12 to 103) inclusive, intended for installation in dry, damp, or wet locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Liquid-tight flexible nonmetallic conduit is available in Types A and B constructions for use at maximum continuous operating temperature of 75°C and a minimum working temperature of -18°C.

PRODUCT MARKINGS

Liquid-tight flexible nonmetallic conduit suitable for use outdoors is marked "SR," "Sun Res" or "Sunlight Resistant."

Liquid-tight flexible nonmetallic conduit is marked with the product name in conjunction with the Certification Mark and the type of construction: "A" for layered conduit, "B" for integral conduit and "C" for corrugated conduit, or with "LFNC-A" for layered conduit, "LFNC-B" for integral conduit and "LFNC-C" for corrugated conduit.

Liquid-tight flexible nonmetallic conduit not marked with a temperature designation or marked "60 C" is intended for use at temperatures not in excess of 60°C (140°F).

Conduit for use in dry or oily locations at a temperature higher than 60°C (140°F) is marked "___C dry, 60 C wet, 70 C oil res" (or "___C dry, 60 C wet, 70 C oil resistant") with "80" or "105" inserted as the dry-locations temperature.

Conduit marked "___C dry, 60 C wet, 60 C oil res" (or "___C dry, 60 C wet, 60 C oil resistant") is for use at a temperature of 105°C (221°F) and lower temperatures in air, and at 60°C (140°F) and lower temperatures where exposed to water, oil or coolants, with "80," "90" or "105" inserted as the dry-locations temperature.

RELATED PRODUCTS

Fittings for use with liquid-tight nonmetallic conduit are covered under Conduit Fittings Certified for Canada (DWTT7) and are suitable only for the type of conduit indicated by the marking on the fitting.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 227.2.1 (2004), "Liquid-Tight Flexible Nonmetallic Conduit."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Liquid-tight Conduit."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE METAL CONDUIT CERTIFIED FOR CANADA (DXUZ7)

USE

This category covers flexible metal conduit in trade sizes 5/16 to 4 inclusive (metric designators 10 to 103), for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). This product may also be used for installation of conductors in motor circuits and for electric signs and outline lighting in accordance with the CEC.

Flexible metal conduit (steel or aluminum) should not be used underground (directly buried or in duct which is buried) or embedded in

Flexible Metal Conduit Certified for Canada (DXUZ7)−*Continued*

poured concrete or aggregate, or in direct contact with earth or where subjected to corrosive conditions. In addition, flexible aluminum conduit should not be installed in direct contact with masonry in damp locations.

PRODUCT MARKINGS

Flexible aluminum conduit is marked at intervals of not more than 0.3 m with the letters "AL."

RELATED PRODUCTS

See Conduit Fittings Certified for Canada (DWTT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 56 (2004), "Flexible Metal Conduit and Liquid-Tight Flexible Metal Conduit."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Aluminum Conduit" or "Flexible Steel Conduit."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RIGID FERROUS METAL CONDUIT CERTIFIED FOR CANADA (DYIX7)

USE AND INSTALLATION

This category covers rigid ferrous metal conduit that includes standard 3 m lengths of straight conduit, with a coupling, special lengths either shorter or longer, with or without a coupling for specific applications or uses, elbows, and nipples in trade sizes 3/8 to 6 (12 to 155 metric trade designations) inclusive, for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Corrosion Protection and Coatings

Galvanized rigid steel conduit installed in concrete does not require supplementary corrosion protection.

Galvanized rigid steel conduit installed in contact with soil does not generally require supplementary corrosion protection.

In the absence of specific local experience, soils producing severe corrosive effects are generally characterized by low resistivity (less than 2000 ohm-centimeters).

Wherever ferrous metal conduit runs directly from concrete encasement to soil burial, severe corrosive effects are likely to occur on the metal in contact with the soil.

Conduit that is provided with a metallic or nonmetallic coating, or a combination of both, has been investigated for resistance to atmospheric corrosion. Nonmetallic outer coatings that are part of the required resistance to corrosion have been additionally investigated for resistance to the effects of sunlight.

Nonmetallic outer coatings of greater than 0.254 mm thickness are investigated with respect to flame propagation detrimental effects to any underlying corrosion protection, the fit of fittings and electrical continuity of the connection of conduit to fittings.

Rigid metal conduit with or without a nonmetallic coating has not been investigated for severely corrosive conditions.

RELATED PRODUCTS

Fittings for use with unthreaded rigid metal conduit are covered under Conduit Fittings Certified for Canada (DWTT7) and are suitable only for the type of conduit indicated by the marking on the carton.

Other certifications for elbows appear under Conduit Fittings Certified for Canada (DWTT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 45.1, "Electrical Rigid Metal Conduit – Steel."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

Rigid Ferrous Metal Conduit Certified for Canada (DYIX7)−*Continued*

together with the word ″LISTED,″ a control number, and the product name ''Electrical Rigid Metal Conduit'' (or ''ERMC-S'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RIGID NONFERROUS METALLIC CONDUIT CERTIFIED FOR CANADA (DYWV7)

GENERAL

This category covers rigid nonferrous metal conduit, including straight conduit, elbows and nipples in trade sizes 3/8 to 6 (12 to 155 metric trade designations) inclusive, for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Coatings

Nonmetallic outer coatings are investigated with respect to flame propagation, the fit of couplings, and electrical continuity with couplings.

Aluminum conduit used in concrete, in contact with soil or in severely corrosive conditions requires supplementary corrosion protection.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 45.2 (2008), ''Electrical Rigid Metal Conduit – Aluminum, Red Brass, and Stainless Steel.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electrical Rigid Metal Conduit – Aluminum'' (or ''ERMC-A''), ''Electrical Rigid Metal Conduit – Red Brass'' (or ''ERMC-RB'') or ''Electrical Rigid Metal Conduit – Stainless Steel'' (or ''ERMC-SS'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REINFORCED THERMOSETTING RESIN CONDUIT CERTIFIED FOR CANADA (DZKT7)

USE AND INSTALLATION

This category covers reinforced thermosetting resin conduit and fittings intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Reinforced thermosetting resin conduit is certified in sizes 1/2 to 6 in. incl. in IPS and ID dimensions, as marked on the product. Certification includes straight conduit, elbows and other fittings, unless otherwise noted.

Reinforced thermosetting resin conduit has been investigated for use at -40°C (-40°F) to 110°C (230°F).

Reinforced thermosetting resin conduit is designed for connection to couplings, fittings and boxes by use of a suitable epoxy-type cement or drive-on bell and spigot. Instructions supplied by the epoxy-type-cement manufacturer describe the method of assembly and precautions to be followed.

The conduit is designated ''EB'' (Encased Burial) or ''DB'' (Direct Burial), which refers to specific wall thicknesses. EB conduit is suitable for encasement in concrete. DB conduit is suitable for encasement in concrete and direct burial. Conduit marked ''RTRC Type BG'' or ''Rigid Nonmetallic Conduit Underground (Reinforced Thermosetting Resin Conduit)'' has been investigated for underground use only — for direct burial, with or without being encased in concrete.

Conduit marked ''RTRC Type AG'' or ''Rigid Nonmetallic Conduit (Reinforced Thermosetting Resin Conduit)'' has been investigated for use aboveground, underground, and for direct burial with or without encasement in concrete. This conduit has been investigated for concealed or exposed work where not subject to physical damage. The conduit is designated as ''SW'' (Standard Wall) or ''HW'' (Heavy Wall), which refers to specific wall thicknesses.

Reinforced Thermosetting Resin Conduit Certified for Canada (DZKT7)−*Continued*

Reinforced thermosetting resin conduit, elbows and other fittings investigated for direct exposure to reagents are identified by the designation ''Reagent Resistant'' and are marked to indicate the specific reagents.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 211.3 (1996), ''Reinforced Thermosetting Resin Conduit (RTRC) and Fittings,'' CSA-C22.2 No. 2420 (2009), ''Belowground Reinforced Thermosetting Resin Conduit (RTRC) and Fittings,'' and CSA-C22.2 No. 2515 (2009), ''Aboveground Reinforced Thermosetting Resin Conduit (RTRC) and Fittings.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''RTRC Type BG,'' ''RTRC Type AG,'' ''Rigid Nonmetallic Conduit Underground (Reinforced Thermosetting Resin Conduit),'' ''Rigid Nonmetallic Conduit (Reinforced Thermosetting Resin Conduit),'' ''Conduit Fitting,'' ''Adapter,'' ''Coupling,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONDUIT FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (EBMB7)

GENERAL

This category covers the following types of fittings:

Conduit fittings for draining or venting are intended for mounting in existing conduit openings of conduit boxes and electrical equipment.

Conduit unions are intended for use in threaded rigid conduit systems.

Conduit unions, 90-degree box-connector type are intended for use at threaded openings in enclosures and fittings for use in hazardous (classified) locations.

Conduit unions and universal-type box-connector conduit unions are intended for use at threaded openings in enclosures and fittings for use in hazardous (classified) locations. They may be assembled at an angle greater than 90 degrees.

Flexible connection fittings are substantial fittings having an insulated inner wall and flexible-metal outer wall encased in metal braid. They are intended for use where it is necessary to employ flexible connections in threaded rigid conduit systems. Information on the minimum inside radius of bend for which these fittings have been investigated is provided with the fitting.

Authorities Having Jurisdiction should be consulted as to what conditions these flexible connection fittings will be accepted. The use of flexible fittings should be avoided whenever possible. They should be used only when conditions are such that threaded rigid conduit cannot be used.

Conduit elbows and short-radius capped elbows are intended for use where it is desirable to have a 90-degree bend and where wires may be guided when being pulled through the conduit line.

Fittings that are rain-tight or concrete-tight are so marked, or this information is provided with the fitting.

Cast-aluminum-alloy conduit fittings covered under this category are not considered acceptable for installation in concrete or cinder fill, unless protected with asphalt-base paint or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 18.3 (2004), ''Conduit, Tubing, and Cable Fittings.''

CONDUIT FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (EBMB7)

270

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Conduit Fitting for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONDUIT FITTINGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (EBNV7)

GENERAL

This category covers the following types of fittings:

Conduit fittings for draining or venting are intended for mounting in existing conduit openings of conduit boxes and electrical equipment.

Conduit fittings for sealing are intended for use only with sealing compound specified by the manufacturer in instructions furnished with the fitting. These devices are intended for use in sealing certified conductors in conduit lines. No splices of conductors should be made in the fittings. Instructions with the fitting indicate any restriction on position or location of the sealing fittings.

Conduit unions are intended for use in threaded rigid conduit systems.

Conduit unions, 90° box connector type are intended for use at threaded openings in enclosures and fittings for use in hazardous locations.

Conduit unions and universal-type box connector conduit unions are intended for use at threaded openings in enclosures and fittings for use in hazardous locations. They may be assembled at an angle greater than 90°.

Flexible connection fittings are substantial fittings having an insulated inner wall and a flexible metal outer wall encased in metal braid. They are intended for use where it is necessary to employ flexible connections in threaded rigid conduit systems. Information on the minimum inside radius of bend for which these fittings have been investigated is provided with the fitting. Authorities Having Jurisdiction should be consulted as to under what conditions these flexible connection fittings will be accepted. The use of flexible fittings should be avoided whenever possible; they should be used only when conditions are such that threaded rigid conduit cannot be used.

Conduit elbows and short radius capped elbows are intended for use where it is desirable to have a 90° bend and where wire may be guided when being pulled through the conduit line.

Fittings that are rain-tight or concrete-tight are so marked, or this information is provided with the fitting.

Cast-aluminum alloy conduit fittings covered under this category are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt base paint or the equivalent.

CONDUIT FITTINGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (EBNV7)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTAINMENT PRODUCTS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS CERTIFIED FOR CANADA (ECPR7)

This category covers various types of containment products, assemblies, accessories and components intended for the storage or transfer of flammable and/or combustible liquids with wide variations identified in the individual product categories, such as:

- nominal liquid capacity (up to approximately 75,000 gal or 284,000 L)
- types (cans, containers, tanks, portable, stationary, fixed, nonreuseable, etc.)
- special types or ratings (fire rated, process, vault, cabinet, etc.)
- general liquids (general flammables and/or combustibles, or motor vehicle fuels)
- specific liquids (specific flammables or combustibles as identified in the individual Listings)
- locations (indoor, outdoor, underground, aboveground, vault)
- uses (consumer, residential, commercial or industrial)
- materials (metallic, nonmetallic, composite)

Containment products for flammable and combustible liquids are divided into common groups with respect to some of the variations above:

Portable Tanks, Containers and Cans Certified for Canada (ECTX7) — Covers metallic and nonmetallic portable tanks, containers and cans, typically of smaller size and intended for the short-term storage and transport of fuels, chemicals, or similar flammable and/or combustible liquids.

Fixed and Stationary Storage Tanks Certified for Canada (EDQX7) — Covers metallic, nonmetallic and composite, fixed and stationary storage tanks, typically of larger size and intended for the long-term storage of fuels or similar flammable and/or combustible liquids at atmospheric pressure.

Transfer Pipe, Containment Sumps and Pipe/Sump Accessories Certified for Canada (QLVW7) — Covers transfer pipe and containment sumps typically intended for use in fuel-dispensing systems, and various pipe/sump accessories and components intended for use in the assembly of these systems.

Miscellaneous Tanks, Storage Products and Tank Accessories Certified for Canada (WWXR7) — Covers miscellaneous tanks and storage products intended for specific-use applications, and various tank accessories and components intended for use in or on completed containment products.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE TANKS, CONTAINERS AND CANS CERTIFIED FOR CANADA (ECTX7)

This category covers metallic and nonmetallic portable cans, containers and tanks, typically of smaller size and intended for the short-term storage and transport of fuels, chemicals, or similar flammable and/or combustible liquids. Reusable types are intended for continuous fill/withdraw cycles with the general liquids as indicated in the individual Listings.

Portable tanks are typically in a capacity range of 60 – 660 gal (228 – 2500 L), are not transportable without the use of equipment, and may have integral wheels, hand pumps or other accessories. Portable tanks are primarily intended to store and/or transfer flammable and combustible liquids in commercial applications, and are reusable.

Portable containers are typically in a capacity range of 8.0 – 60 gal (30 – 228 L), are transportable without the use of equipment, and may have integral wheels, handles, or other accessories. Containers are primarily intended to store and/or transfer flammable and combustible liquids in commercial applications, and are reusable.

Portable cans are typically in a capacity range of 1.0 – 8.0 gal (3.8 – 30 L) and are hand-held products with integral closures and spouts. Cans are primarily intended to transport fuel between a supply source and point of use, may be for general consumer use or special commercial use.

Portable Tanks, Containers and Cans Certified for Canada (ECTX7)−*Continued*

This category does not cover bulk containers, portable tanks or similar products intended for the commercial transport of liquid commodities by truck, rail or ship (as defined by Section 4.2.3 of the ''National Fire Code of Canada,'' in accordance with TC SOR/2008-34, ''Transportation of Dangerous Goods Regulations (TDGR),'' CSA B620, ''Highway Tanks and TC Portable Tanks for the Transportation of Dangerous Goods,'' or the ''UN Recommendations on the Transport of Dangerous Goods,'' Part 6, ''Requirements for the Construction and Testing of Packagings, Intermediate Bulk Containers (IBCs), Large Packagings, Tanks and Bulk Containers'').

This category does not cover intermediate bulk containers (IBCs) or similar products Classified for fire resistance and intended for storage in flammable liquid storage warehouses with fire-suppression systems.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Consumer-use Fuel Cans Certified for Canada (ECYT7)

GENERAL

This category covers portable, reusable, metal and plastic consumer-use cans intended for the containment and handling (filling, temporary transport, protected storage and dispensing) of up to 25 L (6.6 gal) of general-use fuels for consumer-type motor vehicles, equipment powered by small engines, and portable heaters.

The basic product construction consists of a single- or dual-compartment body with integral handle, openings, and removable closures/spout. Dual-compartment cans are intended to store fuel in the larger compartment, and oil in the smaller compartment.

These products are intended only for CAN/CGSB fuels dispensed at commercial fueling stations as identified under **TYPES AND RATINGS** below, and where filled in accordance with Part 4 of the ''National Fire Code of Canada,'' the regulations of the Authority Having Jurisdiction, and the manufacturer's instructions.

These products have not been investigated for hazards associated with vehicle transport between fueling stations and point of use. These products have also not been investigated for effectiveness of child-resistant closures, or measured for vapor-permeation rates associated with air-quality regulations.

These products are not intended for regular transport, outdoor storage, or for use as marine fuel cans, special-purpose cans or safety cans that may have different applications and/or liquid ratings.

TYPES AND RATINGS

Petroleum fuel (red) — Investigated to CSA B376, ''Portable Containers for Gasoline and Other Petroleum Fuels,'' and intended for one of the following petroleum fuel Class and Types.

Flammable-spark-ignition automotive fuels such as gasoline and low-blend ethanol (max E10) compliant with CAN/CGSB 3.511, ''Oxygenated Automotive Gasoline Containing Ethanol,'' and gas/oil mixtures for 2-cycle engines. Dual-compartment cans are intended for separate storage of gas and oil.

Combustible-compression-ignition automotive fuels such as diesel and low-blend biodiesel (max B5) compliant with CAN/CGSB 3.517, ''Automotive (On-Road) Diesel Fuel,'' CAN/CGSB 3.520, ''Automotive Diesel Fuel Containing Low Levels of Biodiesel (B1 – B5),'' or CAN/CGSB 3.6, ''Off-Road Diesel Fuel.'' Dual-compartment cans are intended for separate storage of diesel and oil.

Kerosene (blue) — Investigated to CSA B376 and intended only for combustible heating-appliance fuels such as K1 or K2 compliant with CAN/CGSB 3.3, ''Kerosene.''

RELATED PRODUCTS

Safety-type flammable and combustible liquids cans investigated to ULC/ORD-C30, ''Safety Containers,'' are covered under Safety Cans Certified for Canada (EDBY7).

ADDITIONAL INFORMATION

For additional information, see Portable Tanks, Containers and Cans Certified for Canada (ECTX7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B376 (1980), ''Portable Containers for Gasoline and Other Petroleum Fuels.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PORTABLE CONTAINER FOR GASOLINE AND OTHER PETROLEUM FUELS IN ACCORDANCE WITH CSA B376
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Safety Cans Certified for Canada (EDBY7)

GENERAL

This category covers portable, reusable metal or plastic safety cans intended for containment and handling (filling, temporary transport, protected storage and dispensing) of up to 25.0 L (6.6 gal) or hazardous liquids (as identified under **TYPES AND RATINGS** below), typically used in commercial applications. The basic product construction consists of a single-compartment body with integral handle, pressure relief, openings, lids, spouts, strainers, and other features identified under **TYPES AND RATINGS** below.

These products are intended for filling and use in accordance with Part 4 of the ''National Fire Code of Canada,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' regulations of the Authority Having Jurisdiction, and the manufacturer's instructions.

These products have not been investigated for hazards associated with vehicle transport and commercial operations or processes. These products have also not been investigated for effectiveness of child-resistant closures, or measured for vapor-permeation rates associated with air-quality regulations.

These products are not intended for regular transport, outdoor storage, or use as TC safety cans, consumer fuel cans, marine fuel cans or special-purpose cans that may have different applications and/or liquid ratings.

TYPES AND RATINGS

Type I — Cans from 0.5 L to 25 L provided with a single combined opening with short-valved spout and self-closing cap adapted for both pour and fill operations.

Type II — Cans from 5.0 L to 25 L provided with separate openings for fill (with self-closing vent cap) and pour (with self-closing nozzle) operations.

Plastic — Intended only for general-use fuels# for motor vehicles, equipment powered by engines, and portable heaters.

Metal — Intended for general-use fuels# and similar liquids* used in commercial applications.

General-use fuels = Commercially available fuels covered by and compliant with CAN/CGSB fuel specifications for general-purpose commercial engines (SI or CI) and heating/burning appliances, including CAN/CGSB 3.511 gasoline and gasohol blends (max E10); CAN/CGSB 3.517 on-road diesel, CAN/CGSB 3.520 low-sulfur diesel or CAN/CGSB 3.520 low-sulfur diesel with biodiesel (max B5); CAN/CGSB 3.2 heating oil; and CAN/CGSB 3.3 kerosene.

* Similar liquids = Any stable flammable or combustible liquid with chemical properties similar to the general-use fuels described and having generally accepted chemical compatibility with the metals used in the product, such as heptane, naptha, turpentine, acetone, ketone, etc.

RELATED PRODUCTS

General-use fuel cans investigated to CSA B376, ''Portable Containers for Gasoline and Other Petroleum Products,'' are covered under Consumer-use Fuel Cans Certified for Canada (ECYT7).

ADDITIONAL INFORMATION

For additional information, see Portable Tanks, Containers and Cans Certified for Canada (ECTX7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C30, ''Safety Containers.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Safety Can'' or ''Nonmetallic Safety Can for Petroleum Products,'' as shown in the individual Listings.

Safety Cans Certified for Canada (EDBY7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIXED AND STATIONARY STORAGE TANKS CERTIFIED FOR CANADA (EDQX7)

This category covers metallic, nonmetallic and composite, fixed and stationary storage tanks, typically of larger size and intended for the long-term storage of fuels or similar flammable and/or combustible liquids at atmospheric pressure. These tanks are not intended to be moved with regular frequency (stationary), or are buried, or connected to structures or piping (fixed).

Underground tanks are fixed-type vessels constructed from metallics, nonmetallics or composites and are intended for direct-burial applications. Underground tanks may also include integral upgrade systems or lining/coating systems for specific fuels.

Aboveground tanks are stationary or fixed-type vessels constructed from metallics and are intended for above-grade applications. Aboveground tanks may also include limited mechanical accessories or special uses.

Below-grade vaults are fixed-type compartments constructed from nonmetallics and intended for the watertight, below-grade storage of aboveground tanks with provisions for access, venting monitoring and optional secondary containment.

Fire-rated tanks are stationary or fixed-type aboveground or underground tanks provided with structural support and thermal insulation intended for the physical and fire protection of the core tank, supports and stored liquid.

This category does not cover portable tanks intended for the commercial transport of liquid commodities by truck, rail or ship (as defined by Chapter 6.2 of ANSI/NFPA 30, "Flammable and Combustible Liquids Code," in accordance with 49CFR, Subchapter C, "USDOT Hazardous Materials Regulations," or the "UN Recommendations on the Transport of Dangerous Goods," Part 6, "Requirements for the Construction and Testing of Packagings, Intermediate Bulk Containers (IBCs), Large Packagings and Portable Tanks").

This category does not cover aboveground flammable liquid tank systems (fuelers) that include a base tank with integral pressure or vacuum pump, liquid-level device, leak-monitoring device, hose, nozzle or other dispensing equipment.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Aboveground Flammable-liquid Tanks Certified for Canada (EEEV7)

USE AND INSTALLATION

This category covers general-purpose, shop-fabricated, steel primary, secondary and diked containment-type tank constructions intended for aboveground storage of noncorrosive, stable, flammable and combustible liquids of maximum 1.0 spg at atmospheric pressure in capacities from approximately 225 L to 200,000 L.

These tanks are intended for fixed or stationary installation and use in accordance with Part 4 of the "National Fire Code of Canada," CSA B139, "Installation Code for Oil-Burning Equipment," "CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products," and/or other requirements of the Authority Having Jurisdiction (AHJ).

This category covers only the basic tank constructions and optional tank accessories specifically identified in the individual certifications that are investigated to additional requirements under the base tank standards.

This category does not cover field-erected tanks or portable/mobile tanks intended for shipping and transport, which are covered under separate requirements or regulations from the American Petroleum Institute, U.S. Department of Transportation, etc., or United Nations publications; or special-purpose tanks, such as utility or used oil.

These products have not been investigated for resistance to or use after hurricanes, tornadoes, earthquakes, floods or other natural disasters; or vehicle and similar impacts; and fire.

TANK TYPES

The following types of steel tank basic-containment constructions, designs and optional supports are indicated in the individual certifications:

Aboveground Flammable-liquid Tanks Certified for Canada (EEEV7)−*Continued*

Aboveground tank for flammable liquids (#) — Single-wall steel primary-containment tank.

Secondary-containment aboveground tank for flammable liquids (#) — Steel primary-containment tank within a steel secondary-containment shell forming an interstitial space capable of being pressurized and monitored for leakage.

(*) Diked aboveground tank for flammable liquids (#) — Steel primary-containment tank within a steel containment dike vessel capable of being monitored for leakage, but not capable of being pressurized.

(#) **"on supports"** — Optionally provided with supports to elevate and stabilize the tank above grade that are investigated for structural integrity.

(*) Diked tank designs are limited to only **"Closed-top"** (also known as contained tank assemblies) — dikes provided with covers that resist rain or debris entering the dike.

TANK ACCESSORIES

The following optional accessories noted in the individual certifications and investigated to additional requirements in CAN/ULC-S601, "Shop Fabricated Steel Aboveground Tanks for Flammable and Combustible Liquids," or CAN/ULC-S653, "Aboveground Steel Contained Tank Assemblies for Flammable and Combustible Liquids," may also be attached to the base tank:

Lifting devices — Structural lugs, hooks or others means to facilitate lifting of the tank during fabrication, transport or installation.

Heating devices — Heating coils or hot wells provided within the tank for heating liquids in the tank.

Supplementary equipment — Stick gauges and gauge charts used to facilitate measuring of the liquid height and calculating capacity.

FEATURES COVERED

The basic features of tanks covered under this category include all containment spaces and their respective openings (manways, emergency vents, normal vents, fill/withdraw, gauging, monitoring and other functional openings) with connections (threaded- or flanged-type fittings), and the tank accessories identified above.

All primary-tank compartment(s) are provided with normal and emergency vent openings. All secondary-tank interstitial space(s) are provided with emergency vent openings. It is anticipated the continued venting will be provided when installed in accordance with the applicable code.

In addition to vent openings, all primary-tank compartment(s) are provided with openings to accommodate filling, withdrawing, and inventory control; and all secondary-tank interstitial spaces are provided with openings for leak-detection monitoring.

All tank-containment compartments have been factory leak-tested by the manufacturer before shipping.

ACCESSORIES/FEATURES NOT INVESTIGATED

This category covers only the accessories and features specifically identified in the individual certifications. Any other accessories or components that are shipped with the tanks, attached to the tanks, or added to the tanks are not included in the scope of the tank certification. It is intended that the AHJ approve the use and/or installation of any such accessories independent of the tank certification.

Protected Aboveground Tanks for Flammable and Combustible Liquids Certified for Canada (EELU7)

USE AND INSTALLATION

This category covers protected aboveground tanks for flammable and combustible liquids intended for the aboveground storage of flammable and combustible liquids at atmospheric pressure. The tank constructions are provided with integral secondary containment and are designed to reduce the heat transferred to the primary tank should the construction be exposed to a hydrocarbon-pool fire.

Protected aboveground tanks for flammable and combustible liquids, such as gasoline, fuel oil, or similar products with a specific gravity not greater than 1.0 are intended for stationary installation and use in accordance with Part 4 of the "National Fire Code of Canada," CSA B139, "Installation Code for Oil-Burning Equipment," the "CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products," and the requirements of the Authority Having Jurisdiction.

FACTORS NOT INVESTIGATED

These tanks have not been investigated to determine acceptability for use after fire exposure, impact by vehicles, or small-arms attack.

RELATED PRODUCTS

This category does not cover concrete-encased tanks constructed in accordance with ULC/ORD-C142.5, "Concrete Encased Aboveground Tank Assemblies for Flammable and Combustible Liquids."

ADDITIONAL INFORMATION

Oil-burner-fuel Tanks Certified for Canada (EFGR7)

USE AND INSTALLATION

This category covers steel tanks of the atmospheric type intended primarily for the storage of fuel oil for supplying oil burners and similar equipment. They are intended for installation and use in accordance with Part 4 of the "National Fire Code of Canada," and CSA B139, "Installation Code for Oil-Burning Equipment."

ADDITIONAL INFORMATION

For additional information, see Fixed and Stationary Storage Tanks Certified for Canada (EDQX7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

Special-purpose Tanks Certified for Canada (EFVT7)

USE AND INSTALLATION

This category covers special-purpose, shop-fabricated, steel primary, secondary and diked containment-type tank constructions intended for aboveground storage of noncorrosive, stable, flammable and/or combustible liquids of maximum 1.0 spg at atmospheric pressure as indicated in the individual certifications.

These tanks are intended for fixed or stationary installation and use in accordance with Part 4 of the "National Fire Code of Canada," CSA B139, "Installation Code for Oil-Burning Equipment," "CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products," and/or other requirements of the Authority Having Jurisdiction (AHJ).

This category covers only the basic tank constructions and optional tank accessories specifically identified in the individual certifications that are investigated to additional requirements under the base tank standards.

This category does not cover field-erected tanks or portable/mobile tanks intended for shipping and transport, which are covered under separate requirements or regulations from the American Petroleum Institute, U.S. Department of Transportation, etc., or United Nations publications; or general-purpose tanks.

These products have not been investigated for resistance to or use after hurricanes, tornadoes, earthquakes, floods or other natural disasters; or vehicle and similar impacts; and fire.

TANK TYPES

The following types of steel tank basic-containment constructions and special-purpose designs are indicated in the individual certifications:

Generator base tank (#) — Tank used for combined combustible fuel storage and structural support for diesel- or turbine-engine power genera-

Special-purpose Tanks Certified for Canada (EFVT7)−*Continued*

tors. These tanks are rectangular and of maximum 100,000 L capacity for combustible fuels typically of Class II types, such as diesel, kerosene, or turbine oils.

Secondary-containment generator base tank (#) — Generator base tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

(*) Diked generator base tank (#) — Generator base tank of a diked containment (contained assembly) type (aboveground storage tank within a steel containment dike vessel that is capable of being monitored for leakage, but not capable of being pressurized).

Fire-resistant generator base tank (#) — Generator base tank encased in concrete that provides thermal insulation to keep the primary tank liquid temperature to no more than a 50°C increase during a one-hour hydrocarbon-pool-fire exposure, in addition to general impact and vandalism resistance.

Fire-resistant secondary-containment generator base tank (#) — Fire-resistant generator base tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

Protected secondary-containment generator base tank (#) — Generator base tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage) that provides thermal insulation to keep the primary tank shell temperature at no more than 144°C (max avg rise) and 204°C (max point) during a two-hour 2000°F fire exposure, in addition to vehicle- and projectile-impact resistance.

Work-top (or Workbench) tank (#) — Tank used for combined combustible-liquid storage and work-top (or workbench) surface. These tanks are of maximum 2500 L capacity for combustible liquids limited to Class IIIB types, such as new/used lube oils, hydraulic/transmission, or similar working fluids.

Secondary-containment work-top (or workbench) tank (#) — Work-top (or workbench) tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

Lube-oil tank (#) — Tank used for storage of unused lubricating oils. These tanks are of maximum 2500 L capacity for lube oils limited to Class IIIA or IIIB types, such as motor crankcase oils, hydraulic/transmission oils, machine/cutting oils, or similar working fluids.

Secondary-containment lube-oil tank (#) — Lube-oil tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

Used-oil tank (#) — Tank used for storage of used lubricating oils. These tanks are of maximum 2500 L capacity for used oils limited to Class IIIA or IIIB types, such as motor crankcase oils, hydraulic/transmission oils, machine/cutting oils, or similar fluids.

Secondary-containment used-oil tank (#) — Lube-oil tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

Utility tank (#) — Tank of capacities up to 5000 L and intended for temporary or backup supply of fuel for engine-driven equipment such as pumps or generators, and fuel-burning appliances such as furnaces or heaters, or other equipment used in farm, construction, mining, forestry, or similar applications.

Secondary-containment utility tank (#) — Utility tank of a secondary-containment type (constructed with two shells that form an interstitial space capable of being pressurized and monitored for leakage).

(#) **"on supports"** — Optionally provided with supports to elevate and stabilize the tank above grade that are investigated for structural integrity.

(*) Diked tank designs are limited to only **"Closed-top"** (also known as contained tank assemblies) — dikes provided with covers that resist rain or debris entering the dike.

TANK ACCESSORIES

The following optional accessories noted in the individual certifications and investigated to additional requirements in the standards noted under **REQUIREMENTS** may also be attached to the base tank:

Lifting devices — Structural lugs, hooks or others means to facilitate lifting of the tank during fabrication, transport or installation.

Heating devices — Heating coils or hot wells provided within the tank for heating liquids in the tank.

Supplementary equipment — Stick gauges and gauge charts used to facilitate measuring of the liquid height and calculating capacity.

FEATURES COVERED

The basic features of tanks covered under this category include all containment spaces and their respective openings (manways, emergency vents, normal vents, fill/withdraw, gauging, monitoring and other functional openings) with connections (threaded- or flanged-type fittings), and the tank accessories identified above.

CONTAINMENT PRODUCTS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS CERTIFIED FOR CANADA (ECPR7)

Special-purpose Tanks Certified for Canada (EFVT7)−*Continued*

All primary-tank compartment(s) are provided with normal and emergency vent openings. All secondary-tank interstitial space(s) are provided with emergency vent openings. It is anticipated the continued venting will be provided when installed in accordance with the applicable code.

In addition to vent openings, all primary-tank compartment(s) are provided with openings to accommodate filling, withdrawing, and inventory control; and all secondary-tank interstitial spaces are provided with openings for leak-detection monitoring.

All tank-containment compartments have been factory leak-tested by the manufacturer before shipping.

ACCESSORIES/FEATURES NOT INVESTIGATED

This category covers only the accessories and features specifically identified in the individual certifications. Any other accessories or components that are shipped with the tanks, attached to the tanks, or added to the tanks are not included in the scope of the tank certification. It is intended that the AHJ approve the use and/or installation of any such accessories independent of the tank certification.

RELATED PRODUCTS

See Oil-burner-fuel Tanks Certified for Canada (EFGR7) for aboveground tanks intended for fuel oils and lube oils and investigated to CAN/ULC-S602, "Aboveground Steel Tanks for Fuel Oil and Lubricating Oil."

See Protected Aboveground Tanks for Flammable and Combustible Liquids Certified for Canada (EELU7) for protected tank assemblies intended for flammable and combustible liquids and investigated to ULC-S655, "Aboveground Protected Tank Assemblies for Flammable and Combustible Liquids."

See Aboveground Flammable-liquid Tanks Certified for Canada (EEEV7) for general-purpose tanks constructed of steel and intended for flammable and combustible liquids used in general applications and investigated to CAN/ULC-S601, "Shop Fabricated Steel Aboveground Tanks for Flammable and Combustible Liquids."

ADDITIONAL INFORMATION

For additional information, see Fixed and Stationary Storage Tanks Certified for Canada (EDQX7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The requirements used to investigate the specific special-purpose tanks, basic tank-containment type and optional accessories in this category are based on:

Generator base tanks are investigated to CAN/ULC-S601, "Shop Fabricated Steel Aboveground Tanks for Flammable and Combustible Liquids" (primary and secondary types), or CAN/ULC-S653, "Aboveground Steel Contained Tank Assemblies for Flammable and Combustible Liquids" (closed-top diked types), and if so marked:

Fire-resistant generator base tanks are additionally investigated to ULC/ORD-C142.5, "Concrete Encased Steel Aboveground Tank Assemblies for Flammable and Combustible Liquids."

Protected secondary-containment generator base tanks are additionally investigated to ULC-S655, "Aboveground Protected Tank Assemblies for Flammable and Combustible Liquids."

The basic standard used to investigate work-top (or workbench) tanks and utility tanks in this category is CAN/ULC-S601 (primary and secondary types).

The basic standard used to investigate lube-oil tanks in this category is CAN/ULC-S602, "Aboveground Steel Tanks for Fuel Oil and Lubricating Oil" (primary and secondary types).

The basic standard used to investigate used-oil tanks in this category is CAN/ULC-S652, "Tank Assemblies for the Collection, Storage and Removal of Used Oil" (primary and secondary types).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate tank construction as indicated in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Underground Tanks Certified for Canada (EGHX7)

GENERAL

This category covers shop-fabricated horizontal cylindrical tanks intended for the fixed underground storage of noncorrosive, stable, flam-

Underground Tanks Certified for Canada (EGHX7)−*Continued*

mable and combustible liquids at atmospheric pressure in capacities of up to 250,000 L (66,045 U.S. gal) and diameters of up to 4.0 m (13.1 ft). The combinations of construction materials, containment types, designs, options and liquid ratings are described under **TYPES AND RATINGS** below.

These tanks are intended for installation and use in accordance with Part 4 of the ''National Fire Code of Canada,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' API 1615, ''Installation of Underground Petroleum Storage Systems,'' ''CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products,'' and/or other requirements of the Authority Having Jurisdiction, and the manufacturer's instructions.

These tanks are provided with one or more containment shells and/or compartments, top openings for pipe connections (for fill, withdraw, monitor, etc.), striker plates, and may optionally be provided with manway openings, connecting rings and lift lugs. Access risers, sumps, piping and other accessories that may be connected to the tank are not covered under this category.

These tanks are not provided with an internal-corrosion-protection, upgrade or lining system investigated by UL, and do not cover field erected or refurbished types, pressure vessels or processing applications that may occur in tanks.

TYPES AND RATINGS

The tank materials, containment types, designs, options and liquid ratings, as indicated in the individual Listings, are defined as follows:

(+) ''Steel'' or ''Fiberglass'' tank material identification as applicable, and

(++) ''Secondary Containment'' or ''Double Wall'' as applicable per the appropriate standard's engineering markings.

Steel Tanks

These are all-steel tanks constructed and investigated to ULC-S603, ''Steel Underground Tanks for Flammable and Combustible Liquids,'' and are not provided with an external corrosion-protection system investigated by UL. These tank constructions may be primary (single wall) or secondary (double wall) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the **(*)** liquid ratings:

(+) underground tank for (*) — A steel primary-containment (single wall) tank with one or more compartments.

(+) (++) underground tank for (*) — A steel primary-containment tank directly (in contact with primary) or indirectly (separated by standoffs from primary) wrapped in a secondary-containment (double wall) steel shell to at least 300° and 100% of the heads. The external shell provides both secondary containment and interstitial monitoring.

Fiberglass Tanks

These are all-fiberglass tanks constructed and investigated to ULC-S615, ''Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids.'' These tank constructions may be primary (single wall) or secondary (double wall) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the **(#)** liquid ratings:

(+) underground tank for (#) — A fiberglass primary-containment (single wall) tank with one or more compartments.

(+) (++) underground tank for (#) — A fiberglass primary-containment tank directly (in contact with primary) or indirectly (separated by standoffs from primary) wrapped in a secondary-containment (double wall) fiberglass shell to at least 300° and 100% of the heads. The external shell provides both secondary containment and interstitial monitoring.

Corrosion-resistant Tanks

These are base steel tanks (ULC-S603 primary or secondary types) provided with an external corrosion-protection system constructed and investigated in accordance with CAN/ULC-S603.1, ''External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids.'' These tank constructions may be Cathodic (Section 5), Composite (Section 6), Jacketed (Section 7) or Coated (Section 8) types, and are suitable for containment of general fuels and similar flammable and combustible liquids, as identified in the **(*)** liquid ratings:

Cathodically protected underground tank for (*) — A steel primary (single wall) tank with a pre-engineered, galvanic-type cathodic protection system (anode pack with connecting wires and dielectric coating and bushings) that provides external corrosion protection.

Cathodically protected (++) underground tank for (*) — A steel secondary containment (double wall) tank with a pre-engineered, galvanic-type cathodic protection system (anode pack with connecting wires and dielectric coating and bushings) that provides external corrosion protection.

Coated underground tank for (*) — A steel primary (single wall) tank covered directly (bonded) with a thin nonmetallic cladding (min 1.8 mm PUR) which provides external corrosion protection.

Coated (++) underground tank for (*) — A steel secondary-containment (double wall) tank covered directly (bonded) with a thin nonmetallic cladding (min 1.8 PUR) which provides external corrosion protection.

Underground Tanks Certified for Canada (EGHX7)−*Continued*

Composite underground tank for (*) — A steel primary (single wall) tank covered directly (bonded) with a thick nonmetallic cladding (min 2.5 FRP) which provides external corrosion protection.

Composite (++) underground tank for (*) — A steel secondary-containment (double wall) tank covered directly (bonded) with a thick nonmetallic cladding (min 2.5 FRP) which provides external corrosion protection.

Jacketed underground tank for (*) — A steel single-wall primary tank completely contained within a nonmetallic external tank jacket (min 2.5 mm FRP, PUR, PE or Polyurea) which provides secondary containment, interstitial leak monitoring and external corrosion protection.

Liquid Ratings

The above tank types are additionally rated in the individual Listings for either one or more general fuel blend ranges, or flammable liquids as follows:

(#) Petroleum Products, Oxygenated Fuel Blends and Oxygenates — Combines all of the following ratings for commercially available fuels covered by CGSB fuel regulations and compliant with CGSB fuel specifications for general-purpose commercial engines (SI or CI) and heating/burning appliances:

Petroleum Products — Includes petroleum hydrocarbon fuels without bio-blends CGSB 3.511 gasoline (E0), CGSB 3.517 diesel (B0), CGSB 3.2 fuel oil (B0), CGSB 3.3 kerosene (K1 and K2); and similar flammable or combustible liquid petroleum derivatives, such as fuel components (cetane, hexane, heptane, iso-octane, etc.), and oils (lube, hydraulic, machine, etc.).

Oxygenated Fuel Blends — Includes all ''Petroleum Products'' liquids; plus petroleum hydrocarbon fuels with low-biofuels blends, such as CGSB 3.511 gasoline and ethanol blends (max E10), CGSB 3.520 diesel and biodiesel blends (max B5), CGSB 3.2 fuel oil and bioheat blends (max B5).

Oxygenates — Includes all ''Oxygenated Fuel Blends'' liquids; plus higher-blend oxygenated fuels mixing CGSB 3.511 gasoline and ethanol, such as E85, and common-fuel-blend stocks and components, such as pure or denatured methanol and ethanol.

(*) Flammable Liquids — Includes all liquids in the three ''General Fuels'' ratings above; plus other stable flammable or combustible liquids with chemical properties similar to the general fuels and liquids described above having generally accepted chemical compatibility with the materials used in the product, such as other alcohols and solvents (pentane, hexanol, acetone, ketone, etc.), or other petroleum derivatives (xylene, toluene, naphtha, turpentine, etc.).

RELATED PRODUCTS

See Underground Tank Lining Systems (EGAYC) for nonmetallic internal tank lining and coating systems.

See Underground Tank Upgrade Systems (EGSJC) for nonmetallic internal tank containment and rating upgrade systems.

ADDITIONAL INFORMATION

For additional information, see Fixed and Stationary Storage Tanks Certified for Canada (EDQX7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is one or more of the following:

Steel tanks: ULC-S603, ''Steel Underground Tanks for Flammable and Combustible Liquids''

Fiberglass tanks: ULC-S615, ''Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids''

Corrosion-resistant tanks: CAN/ULC-S603.1, ''External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids,'' with specific requirements for:

Cathodic systems per Section 5, ''Cathodically Protected Tanks''

Coated tanks per Section 8, ''Coated Tanks''

Composite tanks per Section 6, ''Composite Tanks (Clad)''

Jacketed tanks per Section 7, ''Jacketed Tanks''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the appropriate tank construction for the individual Listings as indicated in **TYPES AND RATINGS** above.

The standard number(s) for the applicable tank type as indicated under **REQUIREMENTS** above may also be identified in the UL Mark.

* *

TRANSFER PIPE, CONTAINMENT SUMPS AND PIPE/SUMP ACCESSORIES CERTIFIED FOR CANADA (QLVW7)

This category covers transfer pipe and containment sumps typically intended for use in fuel-dispensing systems, and various pipe/sump accessories and components intended for use in the assembly of these systems as described below.

Piping is intended for the transfer of fuel between storage tanks and dispensing devices, and includes underground pipe types for use only in underground applications or connector pipe types for use in either sump or aboveground applications.

Sumps are intended for the containment of fuel from leaks or spills in tanks, piping, dispensers or bulk carriers, and includes tank, transition, and dispenser types for use below grade with access at grade.

Accessories covered under this category are typically intended for the assembly of pipe and sumps in fueling systems at the installation site, and may include mechanical devices such as frames, brackets, covers and fittings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flexible Connectors for Flammable Liquids Certified for Canada (QLWV7)

USE AND INSTALLATION

This category covers metallic and nonmetallic flexible connectors intended for use primarily by manufacturers and installers of flammable-liquid systems such as dispensing systems for gasoline and motor fuels.

The connectors have a maximum length of 2.43 m (8 ft) and are for one or more uses in making connections in underground piping, underground sumps or aboveground flammable-liquid tanks.

Flexible connectors in aboveground applications are intended to be provided with protection from physical damage.

The connectors are intended for use only with those liquids specified in the individual Listings and on the Listing Mark on the product, at pressures not in excess of that marked on the product.

These connectors are intended to be installed and used underground, in underground sumps and aboveground in accordance with the manufacturer's instructions, the regulations of the Authority Having Jurisdiction, and the following documents: Part 4 of the ''National Fire Code of Canada,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' and the ''CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products.''

ADDITIONAL INFORMATION

For additional information, see Transfer Pipe, Containment Sumps and Pipe/Sump Accessories Certified for Canada (QLVW7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate metallic flexible connectors in this category is ULC/ORD-C536-1974, ''Flexible Metallic Hose.''

The basic standard used to investigate nonmetallic flexible connectors in this category is CAN/ULC-S633, ''Flexible Underground Hose Connectors for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one or more of the following product names: ''Underground Flexible Connector,'' ''Flexible Connector in Underground Sumps'' or ''Aboveground Flexible Connector for Flammable Liquid Tanks,'' followed by one of the following: ''for Petroleum Products Only,'' ''for Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures'' or ''for Petroleum Products and Gasohol (Unleaded Gasoline and 10 Percent Maximum Ethyl).''

If more than one product name is used, the words ''Also Suitable for Use as'' will connect the product names.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTAINMENT PRODUCTS FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS CERTIFIED FOR CANADA (ECPR7)

Piping, Flammable Liquid, Underground Certified for Canada (QLXT7)

USE AND INSTALLATION

This category covers underground pipe and fittings (piping system) of metallic or nonmetallic constructions intended for use in the distribution and/or secondary containment of flammable liquids, and for the transmission of flammable vapors within fuel-dispensing systems.

These products are intended to be installed and used in accordance with the manufacturer's instructions, the ''National Fire Code of Canada,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' the ''CCME Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum and Allied Petroleum Products,'' and regulations of the Authority Having Jurisdiction.

PIPING SYSTEM TYPES

The types of underground metallic or nonmetallic piping system constructions as indicated in the individual Listings are defined as follows ($ prefix = ''Underground Metallic'' or ''UGM'' or ''Underground Nonmetallic'' or ''UGN,'' and # suffix = ''System,'' ''Pipe'' or ''Fitting'' as appropriate):

$ Primary Carrier # or $ PC # — Pipe and/or fittings intended for continuous contact with the flammable liquids in a system under normal use conditions.

$ Secondary Containment # or $ SC # — Pipe and/or fittings intended to contain flammable liquids in a system during abnormal use conditions (such as primary carrier pipe leaks and sump spills).

$ Integral Primary/Secondary # or $ PS # — A single pipe and/or fitting constructed at the manufacturer that combines both primary carrier and secondary containment with an interstitial space that can be monitored for leakage.

$ Normal Vent # or $ NV # — Pipe and/or fittings intended to transfer displaced air or fuel vapors from an underground tank to grade during filling and provide atmospheric pressure equalization.

$ Vapor Recovery # or $ VR # — Pipe and/or fittings intended to transfer collected air and fuel vapors in a pressure or vacuum system to an underground tank during dispensing.

FUEL TYPES

The types of flammable-liquid fuels for underground systems as indicated in the individual Listings are defined as follows:

Motor Vehicle Fuels (or MV Fuels) — Petroleum-based hydrocarbon fuels typically found in consumer dispensing stations, such as gasoline or diesel, including blended fuels with max 15% MTBE, 15% Methanol or 30% Ethanol (as identified in Table 3 of CAN/ULC-S660, ''Nonmetallic Underground Piping for Flammable and Combustible Liquids'').

High Blend Fuels (or HB Fuels) — Motor vehicle fuels with higher than normal gasoline blends with max 50% Methanol or 50% Ethanol (as identified in Table 3 of CAN/ULC-S660).

Concentrated Fuels (or CT Fuels) — Motor vehicle and alternate unblended fuels for up to 100% concentrations of Toluene, Methanol and Ethanol (as identified in Table 3 of CAN/ULC-S660).

Aviation & Marine Fuels (or A&M Fuels) — Motor vehicle and specialty aviation or marine use fuels for up to 100% kerosene or leaded gasoline (as identified in Table 3 of CAN/ULC-S660).

RATINGS, MARKINGS AND INSTRUCTIONS

The piping is intended for use only with the flammable and combustible liquids or vapors as specified in the individual Listings and in the Listing Mark at the pressure and/or vacuum not exceeding that marked on the product.

The piping is intended to be assembled and installed only by persons qualified by the manufacturer. This piping is intended for underground use only in soil that has not been exposed to flammable liquids or other contaminants.

RELATED PRODUCTS

See Flexible Connectors for Flammable Liquids Certified for Canada (QLWV7) and Tank Accessories for Flammable and Combustible Liquids Certified for Canada (EGVV7).

ADDITIONAL INFORMATION

For additional information, see Transfer Pipe, Containment Sumps and Pipe/Sump Accessories Certified for Canada (QLVW7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic requirements used to investigate metallic constructions in this category are contained in UL Subject 971A, ''Outline of Investigation for Metallic Underground Fuel Pipe.''

The basic standard used to investigate nonmetallic constructions in this category is CAN/ULC-S660, ''Nonmetallic Underground Piping for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the pipe and/or fitting smallest package unit is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these prod-

MISCELLANEOUS TANKS, STORAGE PRODUCTS AND TANK ACCESSORIES CERTIFIED FOR CANADA (WWXR7)

This category covers miscellaneous tanks and storage products intended for specific-use applications, and various tank accessories and components intended for use in or on completed containment products as described below.

Process tanks are intended only for the processing and storage uses described in the individual Listings, which include oil/water separators and septic tanks with or without integral accessories or components.

Miscellaneous storage products include devices that indirectly contain flammable and/or combustible liquids, such as storage cabinets and waste containers, but may have secondary containment and fire-resistance ratings.

Accessories covered under this category are typically intended for the assembly of tanks at the installation site, and may include complete accessories (such as risers, platforms, supports, dikes, vents, liners, etc.) or smaller components (such as fittings, flanges, connectors, brackets, plugs, lugs, etc.).

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flammable-liquid Storage Cabinets Certified for Canada (EDJZ7)

USE

This category covers cabinets intended for the storage of flammable liquids as permitted by the relevant sections of the "National Fire Code of Canada." The cabinets are tested to determine their ability to withstand a 10-minute standard fire exposure without developing an internal temperature rise in excess of 139°C above ambient.

RELATED PRODUCTS

For larger capacity liquid storage, see Storage Tanks Certified for Canada (EDQX7).

ADDITIONAL INFORMATION

For additional information, see Miscellaneous Tanks, Storage Products and Tank Accessories Certified for Canada (WWXR7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in "National Fire Code of Canada," and ULC/ORD-C1275 (1984), "ULC Guide for the Investigation of Storage Cabinets for Flammable Liquid Containers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flammable Liquid Storage Cabinet."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Tank Accessories for Flammable and Combustible Liquids Certified for Canada (EGVV7)

GENERAL

This category covers accessories intended for use with flammable and combustible liquid tanks as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Miscellaneous Tanks, Storage Products and Tank Accessories Certified for Canada (WWXR7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S631 (1984), "Isolating Bushings for Steel Underground Tanks Protected with External Corrosion Protection Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flammable and Combustible Liquid Tank Accessory."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Burner-fuel Liquid-level Gauges Certified for Canada (JYJZ7)

USE

This category covers devices that are either direct- or remote-reading gauges designed for use in tanks of the vented nonpressure type handling oil-burner fuel, unless otherwise indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Miscellaneous Tanks, Storage Products and Tank Accessories Certified for Canada (WWXR7), Containment Products for Flammable and Combustible Liquids Certified for Canada (ECPR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C180 (1997), "Liquid Level Gauges and Indicators for Fuel Oil and Lubricating Oil Tanks."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-level Gauge."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL DAMPERS CERTIFIED FOR CANADA (EIMZ7)

GENERAL

This category covers control dampers intended for installation in air-handling spaces (plenums) as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These dampers have been subjected to tests to determine the peak rate of heat release, and the maximum peak and average normalized optical smoke density. The performance of the dampers with regard to operability has not been investigated.

Sizes — The maximum sizes expressed in inches representing the maximum width and maximum height, or maximum diameter, are shown in the individual certifications for each damper model.

Abbreviations — The following abbreviations are used in the individual certifications:

- H – Horizontal

● V – Vertical

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Additional products investigated to ULC/ORD-C2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces," are covered under Discrete Products Installed in Air-handling Spaces – Plenums Certified for Canada (BHZF7).

Fire dampers, smoke dampers, combination fire and smoke dampers, and corridor dampers are covered under Dampers for Fire Barrier and Smoke Applications Certified for Canada (EMME7).

Dampers intended for installation in air-handling openings penetrating fire-resistive-membrane ceilings are covered under Ceiling Firestop Flap Assemblies Certified for Canada (CABS7).

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

Products covered under this category have demonstrated the following rate of heat release and smoke optical density values, through tests conducted in accordance with ULC/ORD-C2043:

1. A peak rate of heat release of 100 kW or less,
2. A peak normalized optical density of 0.50 or less, and
3. An average normalized optical density of 0.15 or less.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CONTROL DAMPER
AS TO HEAT RELEASE RATE AND SMOKE OPTICAL DENSITY
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONVEYORS CERTIFIED FOR CANADA (EJJR7)

USE

This category covers electrically operated machinery intended for the transport of articles or materials within a building structure. It does not cover machinery intended for the transport of persons.

Conveyors are required to employ guards, safety releases, brakes, interlocks, etc., to reduce the likelihood of accidents with respect to the moving mechanism.

Accessory equipment intended for use with conveyors, such as utility distribution systems and electric raceways, is also covered under this category.

RELATED PRODUCTS

Conveyors forming a component part of other equipment are covered under the product category of the particular end product. For example, dishwasher systems having an integral conveyor are covered under Dishwashers, Commercial Certified for Canada (DMGR7); conveyors used in check-out stands are covered under Motor-operated Check-out Stands Certified for Canada (DBNT7); and conveyors used in conjunction with an automated manufacturing process are covered under Factory Automation Equipment Certified for Canada (GPNY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68 (1989), "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CORD SETS AND POWER-SUPPLY CORDS CERTIFIED FOR CANADA (ELBZ7)

GENERAL

This category covers (1) general-use extension-cord sets, (2) heater-cord sets, (3) miscellaneous cord sets, (4) special-use-cord sets, (5) power-supply cords, (6) power-supply-cord kits, and (7) replacement-type power-supply cords.

This category also covers bulk certified power-supply cords that are repackaged from their original packaging.

CORD SETS

General-use Extension-cord Set — An assembly consisting of a suitable length of flexible cord, not smaller than 16 AWG, provided with a general-purpose attachment-plug cap at one end and a cord-connector body having the same configuration as the attachment-plug cap at the other end of the cord. All rounded, jacketed cords are of an outdoor type.

The length of a cord set is 6 ft (1.8 m) maximum for 16 AWG cords having an average insulation thickness of 45 mils (e.g., SPT-2); 15 ft (4.5 m) maximum for 16 AWG and larger cords of other than a rounded jacketed construction (e.g., Type SPT-2, HPN, PXWT); 100 ft (30.4 m) maximum for 16 AWG and larger cords of round jacketed cords (outdoor-type cords only being permitted).

Heater-cord Set — An assembly consisting of a suitable length of heater cord incorporating an attachment-plug cap on one end of the cord with or without a thermostatically controlled mechanism on the other end of the cord. The overall length of the cord set, including the fittings but excluding the blades of the attachment-plug cap, is not less than 6 ft, (1.8 m) except that a minimum length of 3 ft (0.9 m) is acceptable for a cord set intended for use with a computer-top appliance.

Miscellaneous Cord Set — Consists of nondetachable special-use-cord sets of the type not intended for general sale, such as nondetachable TV types, probe-type heating appliance cord sets, vacuum cleaner cord sets, etc.

Miscellaneous extension-cord sets consist of a suitable length of flexible cord with an attachment-plug cap on one end and either a female connector or no connector on the other end. At least one of the cap or connector is a special-use type. In the case where no connector is provided, a strain-relief or anti-kink molding or bushing may be incorporated.

Special-use-cord Set — An assembly consisting of a suitable length of flexible cord of a type and size acceptable for the particular application, incorporating an attachment-plug cap on one end of the cord and a special-use fitting suitable for connection to the equipment with which it is intended to be used on the other end of the cord.

Power-supply Cord — An assembly consisting of a suitable length of flexible cord incorporating an attachment-plug cap or cord connector assembled on one end of the cord and may include a through-cord switch, a strain-relief method or connection terminals on the free ends.

Power-supply-cord Kit — Intended for use on ranges or clothes dryers, and consists of a suitable power-supply cord, strain-relief clamp, installation hardware and instructions.

The flexible cord is Type DR or DRT, four conductors, 8 AWG for use with a range and 10 AWG for use with a dryer, or larger if so required by the amp rating of the appliance.

The attachment-plug cap is a right-angle, general-purpose, nonlocking, 3-pole, 4-wire grounding type rated at 50 A, 125/250 V for use on a range and 30 A, 125/250 V for a dryer.

Replacement-type Power-supply Cord — An assembly consisting of a suitable length of two-conductor flexible cord incorporating a molded on or separately attached parallel-blade attachment-plug cap on one end, and with the other end of the cord having the conductors separated for a maximum length of 1 in. (25.4 mm). Replacement power-supply cords are intended for sale to the public for the replacement of original power-supply cords on such items as table and bed lamps, radios, desk and window fans, mantel and wall clocks, and household vacuum cleaners and floor polishers.

The flexible cord is a 6-ft (1.8 m) or 8-ft (2.4 m) length or two-conductor 18 AWG, Type SPT-1 for the table and bed lamps, radios, desk and window fans, mantel and wall clocks, and an 18 ft (5.5 m) or 22 ft (6.7 m) length of two-conductor 18 AWG, Type SV or SVT for household vacuum cleaners and household polishers.

RELATED PRODUCTS

Power-supply cords intended for use with waste disposers are investigated to CSA-C22.2 No. 21, "Cord Sets and Power Supply Cords," and

covered under Waste Disposers, Sink Mounted Certified for Canada (ZDII7). Only those power-supply cords covered under ZDII7 are permitted to be marked "Garbage Disposal Cord," or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II"
CAN/CSA-C22.2 No. 18, "Outlet Boxes, Conduit Boxes, Fittings and Associated Hardware"
CSA-C22.2 No. 21, "Cord Sets and Power Supply Cords"
CSA-C22.2 No. 42, "General Use Receptacles, Attachment Plugs and Similar Wiring Devices"
CSA-C22.2 No. 57, "Appliance Plugs for Heater Cord Sets"
CAN/CSA-C22.2 No. 61, "Household Cooking Ranges"
CAN/CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances"
CAN/CSA-C22.2 No. 112, "Electric Clothes Dryers"
CSA-C22.2 No. 182.1, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type"
CSA-C22.2 No. 182.2, "Industrial Locking Type, Special Use Attachment Plugs, Receptacles and Connectors"
CSA-C22.2 No. 182.3, "Special Use Attachment Plugs, Receptacles and Connectors"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate:

"General Use Extension Cord Set"
"Heater Cord Set"
"Miscellaneous Cord Set"
"Power Supply Cord Kit"
"Power Supply Cord"
"Power Supply Cord (Replacement Type)"
"Special Use Cord Set"

All Listing Marks are applied to each individual piece except for "Power Supply Cord." These products are bulk labeled (label applied to smallest container indicating number of pieces) and are not intended for field application.

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTDOOR SEASONAL-USE CORD-CONNECTED WIRING DEVICES CERTIFIED FOR CANADA (ELEI7)

USE AND INSTALLATION

This category covers cord-connected two-pole, three-wire (5 – 15R) wiring device configurations intended for temporary outdoor use only. These devices are intended for use with outdoor equipment, Christmas tree and other seasonal decorative-lighting outfits. They are provided with integral overcurrent protection and may be provided with clock-operated and/or photoelectric switches.

These devices are not intended for permanent installation.

ADDITIONAL INFORMATION

For additional information, see Cord Sets and Power-supply Cords Certified for Canada (ELBZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CSA Technical Information Letter No. A-32, "Interim Certification Requirements for Outdoor Portable Multiple Receptacle Extension Boxes." Within that document there are references to the following:

CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II"
CAN/CSA-C22.2 No. 18 (1998), "Outlet Boxes, Conduit Boxes, Fittings and Associated Hardware"
CSA-C22.2 No. 21 (1995), "Cord Sets and Power Supply Cords"
CSA-C22.2 No. 42 (1999), "General Use Receptacles, Attachment Plugs, and Similar Wiring Devices"

UL MARK

Outdoor Seasonal-use Cord-connected Wiring Devices Certified for Canada (ELEI7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outdoor Seasonal Use Cord-connected Wiring Device."

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. SEASONAL-USE CORD SETS CERTIFIED FOR CANADA (ELEV7)

USE AND INSTALLATION

This category covers cord sets intended for indoor use only, and indoor and outdoor use with Christmas tree and similar seasonal decorative-lighting outfits. They are provided with integral overcurrent protection and may incorporate outlet fittings that are factory assembled onto the flexible cord between the end fittings.

These cord sets are not intended for permanent installation or for use with other than seasonal lighting products.

PRODUCT MARKINGS

Each indoor-use individual cord set is marked in a permanent manner with the following: "CAUTION: FOR DRY INDOOR USE ONLY AT TEMPERATURES ABOVE 0°C."

Each indoor- and outdoor-use individual cord set is marked in a permanent manner with the following: "SUITABLE FOR INDOOR/OUTDOOR USE – Store Indoors While Not in Use."

ADDITIONAL INFORMATION

For additional information, see Cord Sets and Power-supply Cords Certified for Canada (ELBZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CSA Technical Information Letter No. A-29A, "Seasonal Use Cord Sets." Within that document there are references to the following:

CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II"
CAN/CSA-C22.2 No. 18 (1998), "Outlet Boxes, Conduit Boxes, Fittings and Associated Hardware"
CSA-C22.2 No. 21 (1995), "Cord Sets and Power Supply Cords"
CSA-C22.2 No. 42 (1999), "General Use Receptacles, Attachment Plugs, and Similar Wiring Devices"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Seasonal Use Cord Set."

CORROSION-MEASURING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ELHN7)

USE AND INSTALLATION

This category covers corrosion-measuring equipment, including control units, indicators, sensors, probes and auxiliary devices used as part of corrosion-measuring systems.

CORROSION-MEASURING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ELHN7)

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

UNEVALUATED FACTORS

The accuracy of the equipment covered under this category has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Corrosion Measuring Equipment for Use in Hazardous Locations'' or ''Corrosion Measuring Equipment (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CORROSION-MEASURING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ELHS7)

GENERAL

This category covers corrosion-measuring equipment, including control units, indicators, sensors, probes and auxiliary devices used as part of corrosion-measuring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division I and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Corrosion Measuring Equipment for Use in Hazardous Locations'' or ''Corrosion Measuring Equipment (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CRANE AND HOIST ELECTRIFICATION SYSTEMS CERTIFIED FOR CANADA (ELPX7)

GENERAL

This category covers crane and hoist electrification systems designed to provide electrical power from a fixed source to moving equipment.

CRANE AND HOIST ELECTRIFICATION SYSTEMS CERTIFIED FOR CANADA (ELPX7)

Rigid electrification systems consist of insulated contact conductors, collectors and feed-in devices, together with supports by which the system may be mounted on tram rails, crane bridges or hoist runways.

INSTALLATION

These systems are intended for installation in accordance with Section 40 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, Authorities Having Jurisdiction and others concerned with the installation.

RATINGS

The maximum voltage rating is 600 V. Each system is rated in volts, frequency and continuous current. Some systems are duty cycle as well as continuous rated. These systems have been tested for a one minute ''on,'' one minute ''off'' cycle. The applicable ampere ratings are marked on the contact conductor or its sheath. Conductor overcurrent protection should not exceed the duty cycle rating.

ENVIRONMENTAL CONDITIONS

Some rigid systems are suitable for outdoor use and are so marked on a main nameplate. See Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) for additional information on environmental conditions and ratings.

SPECIAL CONSIDERATIONS

Crane and hoist electrification systems have not been investigated for mechanical load-carrying ratings. Systems marked with a mechanical load-carrying rating also bear the following marking: ''Mechanical load carrying ratings have not been investigated by UL.''

Crane and hoist electrification systems have not been investigated for use in corrosive atmospheres.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 33, ''Construction and Test of Electric Cranes and Hoists.''

UL MARK

The Listing Mark of UL on each part or on the smallest unit container in which the complete system is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name on each part (e.g., ''Conductor,'' ''Collector,'' ''Insulator'') or the name ''Crane and Hoist Electrification System'' on the smallest complete system container.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CURRENT TAPS AND ADAPTERS CERTIFIED FOR CANADA (EMDV7)

GENERAL

This category covers devices for providing two or three electrical outlets from a single outlet, such as parallel-blade cube taps and kitchen taps. Devices may contain electronic components for surge suppression and/or filtering, in which case up to six outlets may be provided.

This category does not cover adapters that adapt one form or size of connection to another.

PRODUCT MARKINGS

These devices are marked as follows:

a. Listee's name or identification on device and carton
b. Catalog number or equivalent on device or carton
c. Complete electrical rating

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 42 (1999), ''General Use Receptacles, Attachment Plugs and Similar Wiring Devices.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Current Tap,'' ''Tap'' or ''Cube Tap.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CUSTOM-BUILT KIOSKS CERTIFIED FOR CANADA (EMHH7)

GENERAL

This category covers kiosks, rated 240 V or less, normally found in malls, retail stores, offices and business establishments, educational facilities and other similar environments.

These kiosks are intended but not limited for business applications, electronic point-of-sale, information and product exchange, Internet access or ticket dispensing.

Kiosks may also be provided with electronic access control of storage lockers for the exchange of mail, parcels, packages and the like.

Kiosks consist of a that typically contains a power-supply adapter(s), monitor(s), computer(s), currency-processing equipment, printer(s), fan(s) and speaker(s).

Kiosks are provided with assemblies or subassemblies, consisting of components such as amplifiers, cabling, CD-ROM drive and a floppy drive, clock, keyboard, CPU/monitor, DVD player or from a database on network-server computer, ethernet card (dial-up connection or network link), input devices: trackball, number pad, light-pen/stylus, (magnetic strip) card reader, bar code reader, character keyboard (physical or virtual), Internet connectivity, light sensor enables automatic adjustment of the monitor intensity, modems, monitor (touch screen capacity), movement detector used to call attention of the passersby, multimedia machine with ample RAM and fast hard drive access, power supply, printer: laser, dot matrix, and thermal, serial ports (touch screen), serial and printer ports for any peripheral device like modems or ISDN boards for communications and digital or analog I/O board used to control different kinds of processes, stereo speakers, telecommunications, telephone accessories, "Watched" timer that can ensure that the system resets in unlikely case of hang-ups, UPS or video graphics card.

EQUIPMENT TYPES

Assemblies and subassemblies may include but are not limited to central processing units, disk drives, fiber optic transceivers, monitors, personal computers, plotters, printers, point-of-sale kiosks, scanners, including portable bar code scanners, tape drives, workstations, multimedia equipment/accessories: digital cameras, microphones, speakers, video conferencing systems, network connection equipment. Assemblies and subassemblies may include telecommunication equipment: telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems. Assemblies and subassemblies may include reproduction equipment: copiers or duplicating machines.

Interconnecting cable assemblies: cable assemblies intended for use within the kiosk.

INSTALLATION

Kiosks are intended to be installed in an indoor environment unless identified otherwise in the individual certifications. Kiosks have been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions. Kiosks may be cord-and-plug connected or configured for permanent wiring methods. Some kiosks may not be provided with a complete enclosure and are intended for building into a structure as specified in the equipment's installation instructions.

FACTORS NOT INVESTIGATED

Kiosks have not been investigated for security (card readers, badge readers, currency-processing equipment, storage of mail, parcels or packages, and similar equipment) unless specifically identified in the individual certifications. Kiosks are not intended to dispense merchandise.

The physiological effects of chemical substances used in or with this equipment have not been investigated. The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

RELATED EQUIPMENT

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems Certified for Canada (TPEU7).

Automated teller machines (ATMs) which have not been investigated for security and burglary resistance are covered under Bank Equipment Certified for Canada (BALT7).

Machines for vending nonrefrigerated food and beverages, general merchandise, etc., are covered under Vending Machines Certified for Canada (YWXV7).

Machines for vending refrigerated food and beverages are covered under Vending Machines, Refrigerated Certified for Canada (SQMX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1 (2007), "Information Technology Equipment – Safety – Part 1: General Requirements." Products intended for outdoor use only are additionally investigated to CAN/CSA-C22.2 No. 60950-22 (2007), "Information Technology Equipment Safety - Part 22: Equipment to be Installed Outdoors."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Custom-built Kiosk," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DAMPERS FOR FIRE BARRIER AND SMOKE APPLICATIONS CERTIFIED FOR CANADA (EMME7)

GENERAL

This category covers fire dampers, smoke dampers (leakage-rated dampers), and combination fire and smoke dampers (fire and leakage-rated dampers).

Installation — All dampers covered under this category are intended to be installed in accordance with the installation instructions provided with the dampers. Authorities Having Jurisdiction should be consulted before installation. Unless otherwise indicated in the installation instructions, the annular space between the sleeves of fire dampers and combination fire and smoke dampers and the wall opening should not be filled with firestop materials such as fill, void or cavity materials.

Air-flow and Pressure Ratings — Fire dampers for use in dynamic systems, smoke dampers, and combination fire and smoke dampers are marked with the maximum air flow and static pressure HVAC system conditions for which the damper has been investigated. The air-flow (velocity) ratings are established based on test conditions with the damper in the full open position. The static pressure ratings are established based on test conditions with the damper in the full closed position.

Sizes — The maximum sizes expressed in millimeters representing the maximum width and maximum height are shown in the individual certifications for each fire damper model, for both single sections and multiple section assemblies.

Abbreviations — The following abbreviations are used in the individual certifications:

Fire-protection Rating

- HR Class — Hourly Classification

Damper-mounting Position

- V — Vertical
- H — Horizontal
- V, H — Vertical & Horizontal

Maximum Damper Size

- W — Width
- H — Height

FIRE DAMPERS

Fire dampers are intended for installation where air ducts penetrate or terminate at openings in walls or partitions; in air transfer openings in partitions; and where air ducts extend through floors as specified in the "National Building Code of Canada."

Fire dampers have been investigated for fire-protection ratings of 1-1/2 or 3 h as indicated in the individual certifications.

Fire Dampers for Use in Dynamic Systems — Fire dampers for use in dynamic systems are intended for use in dynamic HVAC systems that remain operational during a fire, and may also be employed in static systems.

Fire Dampers for Use in Static Systems — Fire dampers for use in static systems are intended for use only in static HVAC systems that are automatically shut down in the event of a fire.

SMOKE DAMPERS

Smoke dampers (leakage-rated dampers) are intended for the protection of openings in smoke barriers, or in engineered smoke-control systems as specified in ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems."

Leakage ratings for smoke dampers are identified as Class Designation I, II or III as shown in the following table. Leakage ratings of the dampers are established at a minimum differential pressure of 0.995 kPa, across the closed damper. Leakage rates may also be established at higher differential pressures as indicated.

Maximum Leakage ($M^3/S/M^2$)

Class	0.995 kPa	1.49 kPa	1.99 kPa	2.49 kPa	2.99 kPa
I	0.041	0.048	0.056	0.064	0.071
II	0.102	0.123	0.143	0.160	0.179
III	0.408	0.489	0.571	0.064	0.714

Leakage ratings for smoke dampers are determined at ambient temperature after exposing the dampers to temperature degradation at elevated temperatures. The selected temperatures are in increments of 55.6°C with the minimum degradation temperature being 121°C. Alternatively, leakage ratings for smoke dampers can be established based on elevated temperatures at test conditions using heated air flow.

COMBINATION FIRE AND SMOKE DAMPERS

Combination fire and smoke dampers (fire and leakage-rated dampers) are intended for use in locations that are designated as both fire barriers and smoke barriers. Combination fire and smoke dampers have been investigated for both a fire-protection rating of 1-1/2 or 3 h, and a leakage rating as defined under **SMOKE DAMPERS**.

MAINTENANCE

Fire dampers, smoke dampers, and combination fire and smoke dampers may require periodic maintenance to ensure continued proper operation. The level of maintenance required is dependent on several factors including the product manufacturer's and system designer's recommendations, code requirements, and the complexity of the system in which the damper is installed.

It is recommended that periodic maintenance of dampers include at least the following:

- Removal of debris buildup from the damper and surrounding area
- Manual cycling of dampers released by fusible links
- Cycling of damper and actuator assemblies

Additional information on periodic inspection, testing, and maintenance of fire dampers, combination fire and smoke dampers, and ceiling dampers can be found in ANSI/NFPA 80, "Fire Doors and Other Opening Protectives."

Additional information on periodic inspection, testing, and maintenance of smoke dampers and combination fire and smoke dampers can be found in ANSI/NFPA 105, "Installation of Smoke Door Assemblies and Other Opening Protectives."

Additional information on periodic testing of smoke-control systems can be found in ANSI/NFPA 92, "Smoke Control Systems."

RELATED PRODUCTS

For dampers intended for installation in air-handling openings penetrating fire-resistive membrane ceilings, see Ceiling Firestop Flap Assemblies Certified for Canada (CABS7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate fire dampers for use in dynamic systems and fire dampers for use in static systems in this category is CAN/ULC-S112, "Standard Method of Fire Test of Fire-Damper Assemblies."

The basic standard used to investigate smoke dampers in this category is CAN/ULC-S112.1, "Standard for Leakage Rated Dampers for Use in Smoke Control Systems."

Combination fire and smoke dampers are investigated to both CAN/ULC-S112 and CAN/ULC-S112.1.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DATA PROCESSING EQUIPMENT, ELECTRONIC CERTIFIED FOR CANADA (EMRT7)

USE AND INSTALLATION

This category covers equipment, appliances and systems rated 600 V or less, normally found in computer/data processing rooms, offices, other business establishments, educational facilities, residences, and other similar environments. The equipment may be electromechanical or electronic in design or any combination thereof. Various groupings of equipment are included in this category, such as:

Data processing equipment: Computers, disk drives, memories, modems, tape drives, terminals.

Desk-top aides: Typewriters, staplers, tape dispensers, pencil sharpeners, erasers, calculators, adding machines, dictation and transcribing machines, microfilm readers, display units.

Mailing, banking and currency-handling equipment: Cash registers, coin counters, feeders and dispensers, accounting machines, check writers, signers and daters, mailing, inserting, numbering and stamping machines, writing machines.

Office aids: File cabinets, collators, sorters, shredders, deleavers, cutters, stackers, bursters, conveyors, folding, embossing and sealing machines.

Reproduction equipment: Duplicating machines, copiers, reproduction printers, microfilm printers, exposure machines, processors, enlargers, transparency makers, facsimile machines.

The category also covers computer power centers and power distribution units which are investigated as part of the computer system. These units are supplied by a branch circuit and distribute power to other units in the computer system by means of interconnecting cable assemblies.

Many of these units and systems require special installation, such as separate transformer and branch-circuit power, power supplies, special grounding methods, high-frequency motor generator equipment, air conditioning, etc. Such features are covered in the manufacturer's installation instructions.

The individual units comprising a system installation are designed to be interconnected and installed by one of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

When certified equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is separately provided.

ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either specific or generic Listed equipment specified in the markings or instructions.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 220 (1991), "Information Processing and Business Equipment."

As of April 1, 2000, new product submittals for electronic data processing equipment are investigated to CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements,"

and are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Main Frame Computer,'' ''Power Distribution Unit,'' ''Personal Computer,'' ''Data Processing Equipment,'' ''Electronic Data Processing Equipment'' (or ''E.D.P. Equipment''), ''Card Punch,'' ''Card Reader,'' ''Computer,'' ''Data Set,'' or the name of the specific type of product as shown in the individual Listings.

The Listing Mark for field-installed accessories includes the word ''Accessory.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DATA PROCESSING EQUIPMENT, ELECTRONIC FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ENWS7)

GENERAL

This category covers individual units and systems, primarily electronic in function and design, which are intended to accumulate, process or store data, and which are intended for use in or have circuits or system units intended for use in areas classified as hazardous locations.

Many of these units and systems require special installation, such as a separate transformer and branch circuit power, power supplies, special grounding methods, high-frequency motor generator equipment, etc. Such features are covered in the manufacturer's installation instructions.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

RECONDITIONED PRODUCTS

This category also covers data processing equipment that is reconditioned by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills (reconditioned data processing equipment may also be referred to as rebuilt). Reconditioned data processing equipment is reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned parts. Reconditioned data processing equipment is subject to the same requirements as new data processing equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Data Processing Equipment for Use in Hazardous Locations,'' ''Electronic Data Processing Equipment for Use in Hazardous Locations,'' (or ''E.D.P. Equipment for Use in Hazardous Locations''), ''Data Processing Equipment with Circuits for Use in Hazardous Locations,'' ''Electronic Data Processing Equipment with Circuits for Use in Hazardous Locations'' (or ''E.D.P. Equipment with Circuits for Use in Hazardous Locations''), ''Data Processing Equipment (Associated Apparatus),'' ''Electronic Data Processing Equipment (Associated Apparatus)'' (or ''E.D.P. Equipment (Associated Apparatus)''), or the name of the specific type of product as shown in the individual Listings.

For reconditioned products, the word ''Reconditioned'' or ''Rebuilt'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DATA PROCESSING EQUIPMENT, ELECTRONIC FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ENYB7)

GENERAL

This category covers individual units and systems, primarily electronic in function and design, which are intended to accumulate, process or store data, and which are intended for use in or have circuits or system units intended for use in areas classified as hazardous locations.

Many of these units and systems require special installation, such as a separate transformer and branch-circuit power, power supplies, special grounding methods, high-frequency motor-generator equipment, etc. Such features are covered in the manufacturer's installation instructions.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Data Processing Equipment for Use in Hazardous Locations,'' ''Electronic Data Processing Equipment for Use in Hazardous Locations'' (or ''E.D.P. Equipment for Use in Hazardous Locations''), ''Data Processing Equipment with Circuits for Use in Hazardous Locations,'' ''Electronic Data Processing Equipment with Circuits for Use in Hazardous Locations'' (or ''E.D.P. Equipment with Circuits for Use in Hazardous Locations''), ''Data Processing Equipment (Associated Apparatus),'' ''Electronic Data Processing Equipment (Associated Apparatus)'' (or ''E.D.P. Equipment (Associated Apparatus)''), or the name of the specific type of product as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DEODORIZERS AND AIR FRESHENERS CERTIFIED FOR CANADA (EOGX7)

GENERAL

This category covers cord-connected or direct-plug-in appliances intended for deodorizing or scenting air, or both, by the dispersal of chemicals, fragrances, or both, in relatively small areas. Air fresheners may or may not have mechanical filters.

This category also covers air fresheners and deodorizers employing heating elements, electronic circuits, motor-operated fans (or combinations thereof) and mechanical filters.

FACTORS NOT INVESTIGATED

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Products covered under this category have not been investigated for use as insect-repellent dispensers. Such products are covered under Insect- and Rodent-control Equipment Certified for Canada (NYKX7).

Products covered under this category have not been investigated as electrostatic air cleaners. Such products are covered under Electrostatic Air Cleaners Certified for Canada (AGGZ7).

Products covered under this category have not been investigated as air-filtering appliances. Such products are covered under Air-filtering Appliances Certified for Canada (AEDX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113 (1984), ''Fans and Ventilators,'' and/or CAN/CSA-C22.2 No. 64 (2010), ''Household Cooking and Liquid-Heating Appliances.''

Direct-plug-in air fresheners and deodorizers provided with illumination are additionally investigated to CSA-C22.2 No. 256 (2005), ''Direct Plug-In Nightlights.''

Additional standards may be applicable based on the features employed. In addition, CSA Technical Information Letter C-37, ''Input Ratings for Cord-Connected Heating and Cooking Appliances, Hairdressing Equipment and Electric Irons for Household Use'' (issued 2-28-05), may also be used as applicable.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Air Freshener,'' ''Deodorizer'' or ''Fan Type Deodorizer.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DECORATIVE GAS-FIRED APPLIANCES CERTIFIED FOR CANADA (EOHS7)

DECORATIVE GAS-FIRED APPLIANCES FOR INSTALLATION IN VENTED FIREPLACES CERTIFIED FOR CANADA (EOIM7)

USE AND INSTALLATION

This category covers gas-fired decorative appliances for installation in factory-built or masonry sold-fuel-burning fireplaces. These appliances are self-contained, freestanding appliances whose primary function lies in the aesthetic effect of the flame. These appliances are provided with means of automatic ignition (such as a pilot), but are not thermostatically controlled.

Gas-fired appliances are intended to be installed only in solid-fuel-burning factory-built or masonry fireplaces in accordance with the manufacturer's installation instructions and the markings on the appliance. The appliance is intended to be connected to a gas supply of the type specified on the appliance. Equipment is intended to be installed in accordance with the current edition of ANSI Z223.1/NFPA 54,''National Fuel Gas Code,'' and CAN/CGA-B149, ''Canadian Installation Code.''

RELATED PRODUCTS

See Decorative Gas-fired Fireplaces Certified for Canada (EOJH7) and Gas Fireplace Heaters, Vented Certified for Canada (LPPM7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.60/CGA 2.26, ''Decorative Gas Appliances for Installation in Solid-Fuel Burning Fireplaces.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z21.60(+) CGA 2.26(+)-(++) Decorative Appliance for Installation in Solid-Fuel Burning Fireplaces.''

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

* *

Decorative Gas-fired Appliances for Installation in Vented Fireplaces Certified for Canada (EOIM7)−*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DECORATIVE OUTDOOR GAS-FIRED FIREPLACES CERTIFIED FOR CANADA (EOJA7)

USE AND INSTALLATION

This category covers gas-fired fireplaces intended for outdoor installation only. These appliances are self-contained appliances whose primary function lies in the aesthetic effect of the flame.

Gas-fired decorative appliances are intended to be installed in accordance with the markings on the appliance and intended to be connected to a gas supply of the type with which the appliance is intended to be fired. Equipment is intended to be installed in accordance with the current edition of CSA-B149.1, ''Natural Gas and Propane Installation Code.''

RELATED PRODUCTS

See Decorative Gas-fired Appliances for Installation in Vented Fireplaces Certified for Canada (EOIM7), Decorative Vented Gas-fired Fireplaces Certified for Canada (EOJH7), and Gas Fireplace Heaters, Vented Certified for Canada (LPPM7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of the CSA International Requirement CR-97-003, ''Requirements for Outdoor Gas Fireplaces.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''CGA-CR-97-003, Outdoor Fireplace.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DECORATIVE VENTED GAS-FIRED FIREPLACES CERTIFIED FOR CANADA (EOJH7)

USE AND INSTALLATION

This category covers vented gas-fired fireplaces. These appliances allow for the viewing of the flame and provides the simulation of a solid-fuel fireplace. The circulation of heated room air may be by gravity forces or by mechanical means. A vented gas fireplace may be freestanding, recessed or zero clearance, or a gas fireplace insert. The fireplaces may be direct vented, gravity vented or power vented.

Gas-fired decorative appliances are intended to be installed in accordance with the installation instructions and markings on the appliance, and intended to be connected to a gas supply of the type specified on the appliance. Equipment is intended to be installed in accordance with the current edition of ANSI Z223.1/NFPA 54, ''National Fuel Gas Code,'' and CAN/CGA-B149, ''Canadian Installation Code.''

RELATED PRODUCTS

See Decorative Gas-burning Appliances for Installation in Vented Fireplaces Certified for Canada (EOIM7) and Vented Gas Fireplace Heaters Certified for Canada (LPPM7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.50/CSA 2.22, ''Vented Gas Fireplaces.''

UL MARK

Decorative Vented Gas-fired Fireplaces Certified for Canada (EOJH7)−*Continued*

DIE-CUTTING DEVICES CERTIFIED FOR CANADA (EOUG7)

USE

This category covers manually operated die-cutting devices, such as offset presses and similar manually fed mechanical die-cutting equipment. They are typically intended for use in household and light commercial applications, such as arts and crafts shops.

This category does not cover industrial devices.

SPECIAL CONSIDERATIONS

These devices are investigated with respect to accessibility to pinch points, sharp edges and stability.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II'' (General Requirements Clauses 4.4 – 4.6).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Manual Cutting Device'' or ''Die-cutting Device.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DIMMERS CERTIFIED FOR CANADA (EOVZ7)

DIMMERS, COMMERCIAL CERTIFIED FOR CANADA (EOXT7)

USE

This category covers incandescent and fluorescent commercial dimmers intended for mounting in flush device boxes or on outlet box covers (wall box), unless otherwise stated in the individual certifications. They are intended for control of single- or multi-output lighting circuits. They are intended only for the control of permanently installed luminaires.

RELATED PRODUCTS

Dimmers intended for use in residential applications are covered under Dimmers, General Use Switch Certified for Canada (EOYX7). Additional special-application dimmers are covered under Dimmers, Theater Certified for Canada (EPAR7) and Dimmers, Theater, Controls Certified for Canada (EPCT7).

Dimmers, Commercial Certified for Canada (EOXT7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Commercial Dimmer.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DIMMERS, GENERAL-USE SWITCH CERTIFIED FOR CANADA (EOYX7)

GENERAL

This category covers dimmers for mounting in flush device boxes or on outlet box covers (wall box), unless otherwise stated in the individual certifications. They are intended only for the control of permanently installed luminaires.

RATINGS

Dimmers are rated maximum 600 V ac (120 V ac for touch dimmers) and are intended for installation on a 20 A or less branch circuit. Dimmers are rated for lamp or lamp control loads from 300 W or 300 VA to a maximum of 2000 W or 2000 VA. They have been investigated for use in nominal 25°C environments, unless otherwise stated in the individual certifications.

PRODUCT MARKINGS

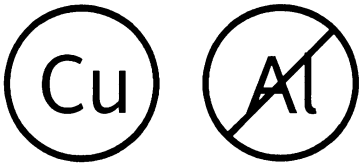
Dimmers may include one or more of the following installation-related markings:

On the dimmer:

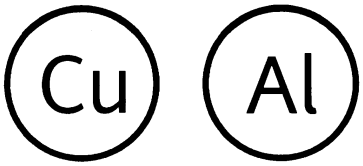
''For Control of Permanently Installed _____ Lamp Fixtures Only,'' or the equivalent. The blank identifies the type of lighting (luminaire) load, such as ''Incandescent,'' ''Fluorescent'' or ''Low Voltage.''

''Use _____ wire only,'' where the blank indicates ''copper'' or ''CU,'' ''aluminum'' or ''AL,'' or both. If symbols are used, they shall be as follows:

For a terminal rated for copper wire only:



For a terminal rated for use with both copper and aluminum wire:



On the dimmer, on a separate instruction sheet packaged with the dimmer, or on the smallest unit packaging provided with the dimmer, the word ''CAUTION'' followed by one of the statements or equivalent as indicated below based upon the intended load:

For dimmers controlling a ballast — ''To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, a Motor-operated Appliance, or a Transformer-supplied Appliance,'' or

For dimmers controlling a tungsten-filament load — ''To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, a Motor-operated Appliance, a

Dimmers, General-use Switch Certified for Canada (EOYX7)−*Continued*

Fluorescent Lighting Fixture, or a Transformer-supplied Appliance,'' or

For dimmers controlling a low-voltage transformer — ''To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, or a Motor-operated Appliance''

Additionally, one or more of the following markings may appear on the dimmer, on a separate instruction sheet packaged with the dimmer, or on the smallest unit packaging provided with the dimmer:

''For multiple ganged installations apply derating factor''

''For use with _____,'' where the blank identifies specific manufacturers and models of electronic ballast, electronic power supply or low-voltage supply.

''For use with magnetic ballast _____,'' where the blank identifies specific manufacturers and models. If no specific manufacturer or model is specified, the dimmer is rated for control of any magnetic ballast.

''For use with Class 2 supply only''

''For splicing _____ wires, sized _____ AWG, use the provided wire splicing connector. Strip conductors to _____ length'' (or equivalent description), where the blanks indicate the number of conductors, maximum size and length of prepared striped conductor, respectively.

''For supply connection, use wires rated minimum 75°C''

RELATED PRODUCTS

Dimmers used for special applications are covered under Dimmers for Commercial Use Certified for Canada (EOXT7), Dimmers for Theater Use Certified for Canada (EPAR7) and Controls for Theater Dimming Equipment Certified for Canada (EPCT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 184, ''Solid-State Lighting Controls.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Dimmer.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DIMMERS, THEATER CERTIFIED FOR CANADA (EPAR7)

USE

This category covers luminaire dimmers intended for use in motion picture and television studios as well as theater and similar locations. The dimmers may be intended for portable use, rack mounting, or be suitable for permanent installation. This category also covers theater dimming modules intended for mounting in theater switchboards.

RELATED PRODUCTS

Dimmers not intended for motion picture and television studio or theater stage use are covered under Dimmers, Commercial Certified for Canada (EOXT7).

For theater switchboards incorporating removable dimming modules, see Switchboards, Special Purpose Certified for Canada (WFJX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14 (1991), ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Theater Dimmer.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. Dimmers, Theater Certified for Canada (EPAR7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Dimmers, Theater, Controls Certified for Canada (EPCT7)

GENERAL

This category covers control units intended to interface with stage, studio and theater lighting dimming equipment.

These units may be provided with various user controls. The units are provided with a number of control outputs to operate different types of dimming equipment and associated equipment, such as moving luminaires and special effects equipment. They may be provided with integral computer systems.

OUTPUT CONNECTORS/CIRCUITS

All low-voltage output circuits, including those associated with the Universal Serial Bus (USB), IEEE 1394 bus, PS/2 connectors, MIDI and DMX512, as well as those for local task lighting, comply with requirements for Class 2 circuits in accordance with Section 16 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and are marked ''Class 2.''

ADDITIONAL INFORMATION

For additional information, see Dimmers, Theater Certified for Canada (EPAR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950, ''Safety of Information Technology Equipment,'' or CAN/CSA-C22.2 No. 60950-1, ''Information Technology Equipment – Safety – Part 1: General Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Theater Lighting Control Console,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DIRECT-PLUG-IN AND CORD-CONNECTED CLASS 2 POWER UNITS CERTIFIED FOR CANADA (EPBU7)

USE

This category covers indoor and outdoor use Class 2 power supplies and battery chargers intended for use on alternating-current branch circuits with a maximum potential of 150 V to ground. Products covered are (1) direct-plug-in units provided with 15 A blade configurations for use on nominal 120 V branch circuits, and (2) cord-and-plug-connected units for use on nominal 120 or 240 V branch circuits.

These units utilize an isolating transformer and may incorporate components to provide an alternating- or direct-current output. These products have been investigated only for general use (unless otherwise marked) in unclassified locations. Each output complies with Class 2 voltage, current and volt-ampere limits as specified in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Maximum output voltage does not exceed 42.4 V peak or direct current.

PRODUCT MARKINGS

If indicated for a specific end use in the individual certifications (such as for use with audio, radio, and television-type equipment), the products are so marked and have also been investigated to additional requirements found in the appropriate end-use product standard.

Class 2 power units intended for use with specific end-use product types that may involve mechanical hazards (such as gardening appliances or tools) are covered as part of the certified appliance or tool.

RELATED PRODUCTS

Class 2 power units intended for permanent electrical connection to the supply source are covered under Power Supplies, Specialty Certified for Canada (QQIJ7) or Transformers, Class 2 Certified for Canada (XOKV7).

Class 2 power units intended for use with medical and dental equipment are covered under Power Supplies for Use in Health Care Facilities Certified for Canada (KFCG7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 223, ''Power Supplies with Extra-Low-Voltage Class 2 Outputs.''

Products suitable for outdoor use are also investigated to CSA Technical Information Letter No. I-42, ''Interim Certification Requirements for Direct Plug-In and Cord-Connected Power Supplies with Extra-Low-Voltage Class 2 Output for Outdoor Use.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Class 2 Power Supply,'' ''Class 2 Transformer,'' ''Class 2 Power Unit,'' ''Class 2 Battery Charger,'' or other appropriate product name as shown in the individual Listings. The word ''Transformer'' may be abbreviated ''XFMR,'' ''XFRMR'' or ''XFORMER.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISPENSING DEVICES CERTIFIED FOR CANADA (EPWR7)

This category covers dispensing devices intended for flammable and combustible liquids and LP-gas in the liquid stage. Flammable and combustible liquids include the common gasoline and diesel engine fuels and the lighter heating oils.

These devices are intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

DISPENSING-DEVICE ACCESSORIES CERTIFIED FOR CANADA (EQJZ7)

Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7)

USE AND INSTALLATION

This category covers equipment intended for use in service-station environments for the control and monitoring of flammable liquid and LP-gas dispensing devices and related delivery systems, and is intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Control and monitoring equipment includes products such as transmitters, receivers, pressure actuators, power-reset units and money-acceptance consoles used in the assembly of or in conjunction with dispensing devices to initiate, record, program, actuate or monitor the operation of the dispensing device or remotely-located accessories.

Monitoring equipment also includes products intended to monitor aboveground and underground fuel storage tanks for liquid level, and to monitor aboveground and underground fuel storage tanks, related piping and the surrounding environment for leaks. Unless indicated otherwise in the individual certifications, the leak-detection capability of the product has not been investigated.

This category also covers auxiliary equipment not intended to control or monitor dispensing devices used in unclassified locations over or adjacent to Class I, Group D, Division 2 hazardous (classified) locations.

These devices are intended for use in unclassified locations that may or may not be over a hazardous (classified) location, as indicated in the individual certifications.

This category does not cover safety or emergency controls that automatically or manually interrupt the operation of a dispensing device.

When the product is intended for use with specifically identified equipment, this is shown in the installation instructions or marking, and in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices Certified for Canada (EPWR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

Emergency Breakaway Couplings Certified for Canada (ERBY7)

USE AND INSTALLATION

This category covers emergency breakaway couplings intended for use in the assembly of dispensing systems to reduce the risk of damage to a dispensing device in the event of the fueled vehicle being driven away with the hose nozzle valve still in the fill-pipe opening. These devices are either single line or coaxial vapor recovery constructions and are for use with the type of liquids indicated in the individual certifications.

The design of the emergency breakaway coupling and the configuration of the dispensing device with which it is used may involve restrictions in the mounting location. These limitations are detailed in the installation instructions provided with each coupling.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S644, ''Emergency Breakaway Fittings for Flammable and Combustible Liquids.''

Emergency breakaway couplings provided with a swivel connector are additionally investigated to CAN/ULC-S634, ''Hose Swivel Connectors for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Emergency Breakaway Coupling for Flammable Liquids'' or ''Vapor Recovery Emergency Breakaway Coupling for Flammable Liquids,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Swivel Connectors Certified for Canada (ERLV7)

USE AND INSTALLATION

This category covers swivel connectors intended for use in the assembly of dispensing devices to facilitate handling the hose nozzle valve without

Swivel Connectors Certified for Canada (ERLV7)−*Continued*

subjecting the hose to twisting or torsional stress. These devices are either single-line or coaxial vapor-recovery construction and are for use with the types of liquids indicated in the individual certifications. Those for flammable liquids, which includes combustible liquids, are for use with gasoline, fuel oil, kerosene, and similar fuels where the working pressure does not exceed 345 kPa.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S634, ''Hose Swivel Connectors for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Swivel Connector for Flammable Liquids'' or ''Vapor Recovery Swivel Connector for Flammable Liquids,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Valves Certified for Canada (ERZT7)

Hose Nozzle Valves Certified for Canada (ESNR7)

Flammable Liquid Hose Nozzle Valves Certified for Canada (ETAZ7)

USE AND INSTALLATION

This category covers flammable liquid hose nozzle valves of the self-closing type intended for dispensing flammable liquids. Hose nozzle valves classified as ''interchangeable service-station type'' are intended for use with service-station-type dispensing devices. Valves so classified are suitable for use with any power-operated dispensing device for flammable liquids when the marking on the dispensing device includes the statement, ''For use only with Interchangeable Service-Station Type Hose Nozzle Valve Certified for Canada.''

Hose nozzle valves which are not so classified include types intended for use on farms and isolated construction projects, vapor-recovery-type hose nozzle valves, and those intended to be factory furnished with the dispenser by the dispenser manufacturer.

Hose nozzle valves are also designated as ''automatic closing type with latch-open device,'' ''automatic closing type without latch-open device'' or ''manual'' type. An automatic-closing type without a latch-open device and a manual type must be manually held open during the dispensing operation.

REBUILT PRODUCTS

This category also covers hose nozzle valves that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt hose nozzle valves are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt hose nozzle valves are subject to the same requirements as new hose nozzle valves.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices Certified for Canada (EPWR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S620 (2007), ''Hose Nozzle Valves for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Interchangeable Service Station Type Hose Nozzle Valve for Flammable Liquids,'' ''Hose Nozzle Valve for Flammable Liquids'' or ''Vapor Recovery Type Hose Nozzle Valve for Flammable Liquids,'' or other appropriate product name as shown in the individual Listings.

Flammable Liquid Hose Nozzle Valves Certified for Canada (ETAZ7)−*Continued*

For rebuilt products, the word ''Rebuilt'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Shutoff Valves, Emergency Certified for Canada (EUCV7)

USE

This category covers emergency shutoff valves intended for use with power-operated dispensing devices handling flammable liquids (other than LP-gas). They incorporate a thermal element and are designed to close automatically in the event of breakoff resulting from severe impact or fire exposure.

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices Certified for Canada (EPWR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S651 (2007), ''Emergency Valves for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Emergency Shut-Off Valve for Flammable Liquids.''

If the Listing Mark is cast or molded into the product, the product identity may be omitted. However, the complete Listing Mark, including the product identity, will also be provided on the smallest unit container in which the product is packaged.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Dispensing-device Accessories, Miscellaneous Certified for Canada (EUQT7)

GENERAL

This category covers equipment intended to be installed as individual devices or in conjunction with other service-station equipment.

This equipment is intended for use with the following fuels:

a) Gasoline
b) Gasoline/ethanol blends designated as ''gasohol'' (E10 maximum)
c) Diesel fuel
d) Fuel oil
e) Kerosene

ADDITIONAL INFORMATION

For additional information, see Dispensing Devices Certified for Canada (EPWR7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

ULC/ORD-C842, ''Guide for the Investigation of Valves for Flammable and Combustible Liquids''
CAN/ULC-S634, ''Hose Swivel Connectors for Flammable and Combustible Liquids''
ULC-S651, ''Emergency Valves for Flammable and Combustible Liquids''
CSA B346, ''Power-Operated Dispensing Devices for Flammable Liquids''
CSA-C22.2 No. 30, ''Explosion-Proof Enclosures for Use in Class I Hazardous Locations''
CSA-C22.2 No. 142, ''Process Control Equipment''
CSA-C22.2 No. 145, ''Motors and Generators for Use in Hazardous Locations''
CAN/CSA-C22.2 No. 157, ''Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations''

UL MARK

Dispensing-device Accessories, Miscellaneous Certified for Canada (EUQT7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Dispensing Device Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-OPERATED DISPENSING DEVICES CERTIFIED FOR CANADA (EWFX7)

This category covers power-operated dispensing devices intended primarily for dispensing motor fuels or other flammable liquids at service stations. They consist essentially of a power-operated pumping unit, strainer, metering device, valves, single or multiple dispensing outlets, etc., with control apparatus designed to stop the discharge of liquid automatically when the hand control is released by the operator. They may comprise complete self-contained units mounted in a suitable pedestal and housing or separate assemblies with controls and other apparatus mounted on a panel or in a pedestal installed remote from pumping unit.

These devices are designed to comply with requirements for installation either inside or outside of buildings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flammable Liquid Dispensing Devices, Power Operated Certified for Canada (EWTV7)

USE

This category covers power-operated dispensing devices intended for use with the following fuels:

a) Gasoline
b) Gasoline/ethanol blends designated as ''gasohol'' (E10 maximum)
c) Diesel fuel
d) Fuel oil
e) Kerosene

A power-operated dispensing device establishes hazardous locations in and around the product as a result of its design and construction and is not intended to be used in hazardous locations resulting from external factors, such as installation near aboveground tanks, LP gas or CNG dispensers. The dispensing device has Class I, Zone 1 and 2 locations within it but may also contain areas that are nonhazardous because of the dispenser construction. Dispensers with nonhazardous areas within them are not suitable for use in a Zone 2 location that is based on external factors. Dispensers suitable for use in Zone 2 locations that are based on external factors are marked to identify this use.

These products are intended for installation and use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Power-operated Dispensing Devices Certified for Canada (EWFX7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- CSA B346, ''Power-Operated Dispensing Devices for Flammable Liquids''
- CSA-C22.2 No. 22, ''Electrical Equipment for Flammable and Combustible Fuel Dispensers''
- CSA-C22.2 No. 25 (1966), ''Enclosures for Use in Class II Groups E, F and G Hazardous Locations''
- CSA-C22.2 No. 30, ''Explosion-Proof Enclosures for Use in Class I Hazardous Locations''
- CAN/CSA-C22.2 No. 157, ''Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power-operated Dispensing Device for Flammable Liquids'' or ''Power-operated Dispensing Device for Flammable Liquids for Use in Class I, Zone 2 Hazardous Locations.''

Flammable Liquid Dispensing Devices, Power Operated Certified for Canada (EWTV7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FCHD7)

PHOTOVOLTAIC CHARGE CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FCJC7)

USE AND INSTALLATION

This category covers permanently connected photovoltaic charge controllers that control the state of charge of storage batteries used in photovoltaic power systems.

Photovoltaic charge controllers are rated 600 V dc or less and are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code.''

These products include photovoltaic charge controller subassemblies for field installation in the terminal compartment of a photovoltaic module, in accordance with the instructions supplied with the subassembly. The markings identify the modules in which the subassemblies may be installed. The modules and subassemblies are products of the same manufacturer.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), ''General Use Power Supplies.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Photovoltaic Charge Controller for Use in Hazardous Locations'' or ''Photovoltaic Charge Controller Subassembly for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FCJU7)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames.

Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

Photovoltaic Modules and Panels for Use in Hazardous Locations Certified for Canada (FCJU7)−*Continued*

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to power conditioning units that convert the dc power the modules and panels generate to other types of power compatible with the intended loads. In addition to their voltage, current, and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, power conditioning unit or controller is intended to be in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels." In addition, CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Module for Use in Hazardous Locations" or "Photovoltaic Panel for Use in Hazardous Locations."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DOOR, DRAPERY, GATE, LOUVER AND WINDOW OPERATORS AND SYSTEMS CERTIFIED FOR CANADA (FDDR7)

USE AND INSTALLATION

This category covers electrical and pneumatic door and gate systems, and door, drapery, gate, louver, window and turnstile operators, together with controls and accessories for use with such operators and similar devices.

This category covers door operators that have been investigated from an electrical and casualty viewpoint only. For door operators that have been additionally investigated for use on fire doors, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7).

This category does not cover the glass portions of the partitions, panels, or sections, associated with the operators and/or controls, unless indicated in the individual certifications.

Door and gate systems include doors or gates, operators and controls tested as complete units. Components of a system are specifically designated in the installation instructions provided with the system.

Residential door operators are intended for intermittent use on counterbalanced doors, usually of the overhead type, in residential buildings of one to four single-family occupancies. When provided, external entrapment-protection devices, such as photoelectric sensors or door-edge sensors, should be installed in accordance with the installation instructions provided. In addition, all installation instructions, including the installation of warning labels adjacent to the wall-mounted actuating switch, should be followed.

Accessories for residential garage door operators, such as external entrapment-protection devices, should be installed and used only on door operators for which they are intended as marked on the installation instructions and/or packaging.

Commercial and industrial door operators are not intended to be installed in applications where the load exceeds the maximum power in foot-pounds per second or the maximum pull in pounds marked on the appliance. Light-duty, commercial vehicular door or door operators are not intended to be installed in locations where the number of operations per hour exceed that marked on the appliance.

Operators intended for use with other than counter-balanced types of doors, gates or windows are tested in conjunction with the doors, gates or windows for which they are designed.

Residential drapery operators are intended for intermittent use, controlling a maximum drapery weight of one pound per foot, unless otherwise marked.

Commercial drapery operators are intended for intermittent use, controlling drapery of the maximum weight marked on the assembly.

It has been determined that the casualty hazards inherent in the products covered under this category have been reduced to an acceptable degree; however, the ultimate safety is dependent upon proper installation. Authorities Having Jurisdiction should be consulted prior to installation. Installation should be performed by a qualified installer using the manufacturer's instructions. Special care should be exercised during installation of all operators to ensure that recommended safety devices, such as photoelectric sensors or reversing-edge switches, are properly installed. When so marked, industrial door operators should be mounted a minimum of 2.44 m (8 ft) above the floor.

This category does not cover the burglary- and theft-protection features of vault doors or burglary-resistant, electrically operated door mechanisms intended to control the opening and closing of cell doors in a prison or institution.

RELATED PRODUCTS

This category does not cover door operators incorporated as integral parts of walk-in panel units for use with refrigerator cooler installations; see Door Panel Assemblies Certified for Canada (FDIT7).

This category does not cover door or gate systems or other assemblies including break-out or hinged sections intended to facilitate safe egress of persons in case of emergency; see Panic Hardware Certified for Canada (FVSR7), Fire Door Closers, Holders and Operators Certified for Canada (GTBT7) and Fire Door Operators with Automatic Closers Certified for Canada (GUJY7).

This category does not cover industrial control panels used for motor-control functions; see Motor Controllers, Magnetic Certified for Canada (NLDX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 247 (1992), "Operators and Systems of Doors, Gates, Draperies and Louvres."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Door Operator," "Gate Operator," "Drapery Operator," "Window Operator," "Louver Operator," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DOOR HOLDERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FDGF7)

GENERAL

This category covers door holders intended for use with swinging, sliding or rolling fire doors as indicated in the individual certifications. They are designed to hold doors in the open position under normal usage and release the doors under fire conditions. They are intended to be used with a suitable door closer and automatic operating devices or systems.

Authorities Having Jurisdiction should be consulted to determine the acceptability of the door, door holders, door closer and automatic operating device or other combination of system units for any given location.

RELATED PRODUCTS

For information on door closers, see Fire Door Accessories Certified for Canada (GVUW7) and Fire Door Closers, Holders and Operators Certified for Canada (GTBT7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ULC/ORD-C228 (1995), ''Door Closers and Holders.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Door Holder for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DOOR PANEL ASSEMBLIES CERTIFIED FOR CANADA (FDIT7)

GENERAL

This category covers ''walk-in'' and ''reach-in'' door panel assemblies and related auxiliary devices intended for use with environmental, freezer or cooler rooms and cabinets.

The equipment is intended for permanent connection to alternating-current circuits rated at not more than 750 V.

Panel assemblies and auxiliary devices are provided with an electrical system which serves to provide one or more of the following functions: illumination, prevention of ice formation, prevention of condensation, motor drives for opening and closing doors, etc.

Auxiliary devices consist of equipment other than door panel assemblies associated with the foregoing apparatus or functions, including insulated panels with electrical components.

Door panel assemblies identified with an enclosure type designation or as ''Rain tight'' or ''Rainproof'' are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Door Panel Assembly'' or ''Auxiliary Insulated Panel.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRILLING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FDJJ7)

This category covers products specifically intended for installation on oil rigs and drilling platforms.

MARINE SHIPBOARD CABLE FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FDJR7)

USE

This category covers combination termination and sealing fittings for threaded connection of marine shipboard cable to equipment. They are intended for use only with the sealing compound as specified by the manufacturer in instructions furnished with the fittings. No splices of conductors are intended to be made in the fitting. Restrictions on application, position, and/or location of the fitting are indicated in the manufacturer's instructions.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. Investigations of these fittings include an evaluation for conformity to the installation and use provisions of Section 26, Subsections 7(a) and 7(b) of TP127E, ''Ship Safety Electrical Standards,'' as applied by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Marine Shipboard Cable Fitting for Use in Hazardous Locations'' or ''Marine Shipboard Cable Sealing Fitting for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRILLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FDJZ7)

This category covers products specifically intended for installation on oil rigs and drilling platforms.

DRILLING INSTRUMENTATION FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FDKX7)

USE AND INSTALLATION

This category covers drilling equipment consisting of instruments, sensors and transducers intended to measure, record and monitor drilling variables and to control the drilling process.

Intrinsically safe circuits and equipment are intended to be installed and interconnected in accordance with the instructions provided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Drilling Instrumentation for Hazardous Locations'' or ''Drilling Instrumentation (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

* *

Drilling Instrumentation for Use in Hazardous Locations Certified for Canada (FDKX7)−*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARINE SHIPBOARD CABLE SEALING FITTINGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FDLW7)

USE

This category covers combination termination and sealing fittings for threaded connection of marine shipboard cable to equipment in hazardous (classified) locations. They are for use only with sealing compound as specified by the manufacturer in instructions furnished with the fittings. No splices of conductors are permitted to be made in the fitting. Restrictions on application, position, and/or location of the sealing fitting are indicated in the manufacturer's instructions.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. The investigation of these fittings includes an evaluation for conformity to the installation and use provisions of the Ships Electrical Standards, TP 127 E, Section 26, ''Hazardous Locations,'' as applied by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 174 (1984), ''Cables and Cable Glands for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Marine Shipboard Cable Sealing Fitting for Use in Hazardous Locations,'' or other appropriate product name as indicated in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRINKING WATER SYSTEM COMPONENTS CERTIFIED FOR CANADA (FDNP7)

GENERAL

This category covers drinking water system products and materials including, but not limited to, barrier materials (coatings, liners, tanks, etc.), joining and sealing materials (gaskets, solvent cements, etc.), mechanical devices (valves, pumps, etc.), mechanical plumbing devices (faucets, aerators, etc.), pipes and related products (pipes, fittings, etc.), and process media (activated carbon, sand, etc.) that come into contact with drinking water or drinking water treatment chemicals in drinking water distribution systems. These components are intended to be installed and used in accordance with applicable plumbing codes.

The investigation of drinking water system components is conducted with respect to contaminants that can be introduced into the drinking water supply from their base metal alloy, plastic resin, or other nonmetallic parts such as gaskets, seals, coatings, adhesives, filter media, cement linings or the like. Unless otherwise indicated in the individual Classifications, mechanical plumbing devices have been evaluated for residential use only.

In the individual Classifications, a 23°C water-use temperature indicates that the product has been investigated at 23°C and its use is limited to cold-temperature applications where the product is exposed continuously to water whose temperature is not intentionally raised above ambient. Where individual Classifications indicate a water-use temperature higher than 23°C, the specified temperature is the maximum water-use temperature established for the product. Products certified for hot-water applications have been investigated using the intermittent hot protocol, unless otherwise indicated in the individual Classifications.

RELATED PRODUCTS

Water coolers, drinking water fountains and remote chillers may also be covered under Drinking Water Coolers Certified for Canada (SRJX7).

Faucets and related plumbing fixture fittings may also be covered under Plumbing Fixture Fittings Certified for Canada (QNSQ7).

Submersible well pumps may also be covered under Pumps, Electrically Operated, Liquid Certified for Canada (REUZ7).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 61 (2008), ''Drinking Water System Components – Health Effects.''

Products additionally investigated for a weighted average lead content ≤0.25% were investigated to Annex G of NSF/ANSI 61 (2008).

UL MARK

The Water Quality Classification Mark of UL on the product or on the smallest container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. For process media shipped in bulk quantities, the Classification Mark may appear on a Bill of Lading or a Bulk Shipment Certificate. The Water Quality Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol and the words ''WATER QUALITY'' below the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY+]
ANSI/NSF 61
Control No.

+ **DRINKING WATER SYSTEM COMPONENT**, **PIPE**, **PIPE FITTING**, **JOINING AND SEALING MATERIAL**, **BARRIER MATERIAL**, **PROCESS MEDIA**, **VALVE**, **FAUCET**, or other appropriate product name as shown in the individual Classifications

The Classification Mark may be abbreviated as follows:

UND. LAB. INC. CLASSIFIED
NSF 61
Control No.
or
UND. LAB. INC. CLFD
NSF 61
Control No.

For products Classified by UL in accordance with Annex G of NSF/ANSI 61 (2008), the words ''Annex G'' may be used with the Classification Mark.

For products that are also Listed or Classified by UL under another category, as an alternative to the complete Classification Mark described above, the words ''ALSO CLASSIFIED'' (or ''ALSO CLFD'') and the text ''NSF 61'' may be used adjacent to the applicable UL Mark.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRINKING WATER TREATMENT CHEMICALS CERTIFIED FOR CANADA (FDPH7)

GENERAL

This category covers drinking water treatment chemicals intended to be introduced into the drinking water supply at treatment plant facilities for disinfection, filtration, scale, corrosion or pH control, softening, coagulation and flocculation, or other treatment purposes. This category also covers chemical products that are introduced into the drinking water supply at wells, but not intended to be present in the finished water.

These chemicals are intended to be used in accordance with the Maximum Use Level and other use limitations specified in the individual Classifications.

Plant locations where UL Classified products are manufactured or distributed are indicated in the individual Classifications.

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 60 (2009a),"Drinking Water Treatment Chemicals – Health Effects."

UL MARK

The Water Quality Classification Mark of UL on the smallest container in which the product is packaged, or for product that is bulk shipped, on a Bill of Lading, Bulk Shipment Certificate or Bulk Shipment Document, is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Water Quality Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol and the words "WATER QUALITY" below the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]*
ANSI/NSF 60
Control No.

* **DRINKING WATER TREATMENT ADDITIVE** or **DRINKING WATER TREATMENT CHEMICAL**, or other appropriate product name as shown in the individual Classifications

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC VEHICLE SYSTEMS CERTIFIED FOR CANADA (FFQM7)

USE

This category covers products and systems intended for use with or installation on automotive-type vehicles for highway use, such as passenger automobiles, buses, trucks, vans, and the like, primarily powered by an electric motor that draws current from a rechargeable storage battery.

UNEVALUATED FACTORS

The physiological effects of chemical substances or gases associated with the recharging of storage batteries have not been investigated.

ELECTRIC VEHICLE CABLE CERTIFIED FOR CANADA (FFSO7)

GENERAL

This category covers flexible cord constructed and certified for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Electric vehicle cable consists of two or more insulated conductors, with or without grounding conductors, with an overall jacket.

The cable is used to supply power, signal, and control to electric vehicles during the charging process. It is rated 60 to 105°C (140 to 221°F) dry; 60°C (140°F) wet; 60°C (140°F) where exposed to oil, and for use where exposed to the direct rays of the sun. For cable so marked, a gasoline-immersion rating is also assigned. The term "wet" indicates that the cable is acceptable for immersion in water. Electric vehicle cable employs flexible stranded copper conductors.

Type EV — Rated 600 V, contains two or more 18 AWG to 500 kcmil thermoset-insulated circuit conductors under a thermoset jacket, and may employ one or more insulated grounding conductors. The cable may contain hybrid data, signal, communications, and/or optical fiber cable in any AWG size.

Type EVT (TPE) — Rated 600 V, same as Type EV except that the cable employs thermoplastic-elastomer-insulated conductors and jacket.

Type EVT — Rated 600 V, same as Type EV except that the cable employs thermoplastic (PVC) insulated conductors and jacket.

Type EVJ — Rated 300 V, contains two to six 18–12 AWG thermoset-insulated circuit conductors under a thermoset jacket, and may employ one or more insulated grounding conductors. The cable may contain hybrid data, signal, communications, and/or optical fiber cable in any AWG size.

Type EVJT (TPE) — Rated 300 V, same as Type EVJ except that the cable employs thermoplastic-elastomer-insulated conductors and jacket.

Type EVJT — Rated 300 V, same as Type EVJ except that the cable employs thermoplastic (PVC) insulated conductors and jacket.

PRODUCT MARKINGS

Cord is marked with the organization responsible for the cord, type designation, temperature rating, voltage rating, number and size of conductors.

"VW-1" indicates that the finished cord and the individual conductors comply with a vertical flame test.

"FT1" indicates that only the finished cord complies with a vertical flame test.

"FT2" indicates that only the finished cord complies with a horizontal flame test.

Electric Vehicle Cable Certified for Canada (FFSO7)–*Continued*

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems Certified for Canada (FFQM7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 49, "Flexible Cords and Cables," or CSA Technical Information Letter No. J-39 (2011), "Interim Certification Requirements for Electric Vehicle Cables, Rated 600V Maximum."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Vehicle Cable."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC VEHICLE CHARGING SYSTEM EQUIPMENT CERTIFIED FOR CANADA (FFTG7)

USE AND INSTALLATION

This category covers charging system equipment, either conductive or inductive, intended for use with electric vehicles. The equipment is located off board the vehicle, and is intended for indoor or outdoor use.

This equipment is rated 600 V or less. The equipment is intended to be connected to the vehicle by means of a flexible cord and an electric vehicle connector, and intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

RELATED PRODUCTS

See Battery Chargers, Automotive Type Certified for Canada (BBGQ7).

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems Certified for Canada (FFQM7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1, "General Use Power Supplies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Charging System Equipment," "Battery Charger," "Charge Port," "Charge Controller," or other appropriate product name as shown in the individual Listings, preceded by "Electric Vehicle" (or "EV").

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC VEHICLE SUPPLY EQUIPMENT CERTIFIED FOR CANADA (FFWA7)

USE

This category covers electric vehicle supply equipment rated 250 V ac or less, intended for indoor or outdoor use where power is required for the recharging of electric vehicle storage batteries. These products are intended to provide power to an on-board charger. These products include electric vehicle charging stations, electric vehicle power outlets and electric vehicle cord sets for use with electric vehicles in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Electric vehicle cord sets are rated a maximum of 125 V ac, 20 A, such that they can be cord-connected devices and used outdoors. All other cord-connected products covered under this category are intended for indoor use only. Permanently connected products may be used either indoors or outdoors as indicated. All products are provided with a marking indicating the enclosure type rating, which corresponds to the indoor or outdoor use of the product.

Electric Vehicle Supply Equipment Certified for Canada (FFWA7)–*Continued*

Products covered under this category are marked to indicate that they are for use with electric vehicles.

RELATED PRODUCTS

Electric vehicle charging equipment with a dc output voltage rated up to 600 V dc is covered under Electric Vehicle Charging System Equipment Certified for Canada (FFTG7).

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems Certified for Canada (FFQM7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1, ''General Use Power Supplies,'' CSA Technical Information Letter No. A-35 (2011), ''Interim Certification Requirements for Electric Vehicle Cord Sets and Power Supply Cords,'' or CSA Technical Information Letter No. I-44 (2011), ''Interim Certification Requirements for Supply Equipment for Electric Vehicles with Inputs and Outputs Rated 600 V or Less.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Vehicle Power Outlet'' (or ''EV Power Outlet''), ''Electric Vehicle Charging Station'' (or ''EV Charging Station'') or ''Electric Vehicle Cord Set'' (or ''EV Cord Set'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL AND ELECTRONIC MEASURING AND TESTING EQUIPMENT CERTIFIED FOR CANADA (FHCW7)

GENERAL

This category covers equipment intended primarily for the metering and testing of electrical and electronic circuits, such as ammeters, voltmeters, power meters, frequency counters, chart recorders, oscilloscopes, etc. This category also covers equipment designed to provide electrical or electronic signals for test purposes, such as signal generators or injectors, frequency synthesizers, etc.

These products have been investigated with respect to risk of fire, electric shock, and personal injury.

FACTORS NOT INVESTIGATED

The accuracy of the equipment has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 231 Series (1989), ''Electrical and Electronic Measuring and Test Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electrical and Electronic Measuring and Testing Equipment,'' or the name of the specific type of product as shown in the individual Listings, or combinations of the preceding identities.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL AND ELECTRONIC MEASURING AND TESTING EQUIPMENT ACCESSORIES CERTIFIED FOR CANADA (FHGQ7)

USE

This category covers products such as cabinets, carts and racks; patch cord, probe or test lead assemblies; termination adapters or attenuators designed to be used with certified electrical and electronic measuring and testing equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 231 Series (1989), ''CSA Safety Requirements for Electrical and Electronic Measuring and Test Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Electrical and Electronic Measuring and Testing Equipment Accessory,'' ''Measuring Equipment Accessory,'' ''Test Equipment Accessory,'' ''Instrument Accessory,'' or the name of specific type of product as shown in the individual Listings, or combinations of the preceding identities.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL METALLIC TUBING CERTIFIED FOR CANADA (FJMX7)

GENERAL

This category covers electrical metallic tubing (EMT), including lengths of straight tubing and elbows, with or without integral couplings or other integral fittings, manufactured in trade sizes 1/2 to 4 (metric designators 16 to 103) inclusive. EMT is intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' This tubing is intended for installation and use in accordance with the following information.

Galvanized steel EMT installed in concrete on grade level or above generally requires no supplementary corrosion protection. Galvanized steel EMT in concrete slab below grade level may require supplementary corrosion protection.

In general, galvanized steel EMT in contact with soil requires supplementary corrosion protection. Where galvanized steel EMT without supplementary corrosion protection extends directly from concrete encasement to soil burial, severe corrosive effects are likely to occur on the metal in contact with the soil.

Galvanized steel EMT that is provided with a metallic or nonmetallic coating, or a combination of both, has been investigated for resistance to atmospheric corrosion. Nonmetallic outer coatings that are part of the required resistance to corrosion have been additionally investigated for resistance to the effects of sunlight.

Nonmetallic outer coatings of greater than 0.254-mm (0.010-in.) thickness are investigated with respect to flame propagation detrimental effects to any underlying corrosion protection, the fit of fittings, and electrical continuity of the connection of tubing to fittings.

Galvanized steel EMT with or without a nonmetallic coating has not been investigated for severely corrosive conditions.

Aluminum EMT used in concrete or in contact with soil requires supplementary corrosion protection.

RELATED PRODUCTS

Fittings certified for use with EMT are covered under Electrical Metallic Tubing Fittings Certified for Canada (FKAV7) and Conduit Fittings Certified for Canada (DWTT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 83, ''Electrical Metallic Tubing,'' and CAN/CSA-C22.2 No. 83.1, ''Electrical Metallic Tubing – Steel.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electrical Metallic Tubing'' (or ''EMT'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL METALLIC TUBING FITTINGS CERTIFIED FOR CANADA (FKAV7)

GENERAL

This category covers electrical metallic tubing fittings such as connectors, couplings and expansion fittings, made in sizes from 1/2 to 4 (metric designators 16 to 103) inclusive trade sizes, and are intended for installation and use in accordance with the following information and the limitations specified in Electrical Metallic Tubing Certified for Canada (FJMX7). These products are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

All male threaded fittings have only been investigated for use with locknuts.

Indentor Fittings — Indentor-type fittings are for use with metallic-coated electrical metallic tubing only and require a special tool supplied by the manufacturer for proper installation. Diametrically opposed indentor-type tools require two sets of indentations nominally 90° apart. Triple-indent tools require one set of indentations.

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT MARKINGS

Fittings suitable for use in poured concrete or where exposed to rain are so indicated on the device or carton. The term ''raintight,'' ''wet location'' or the equivalent on the carton indicates suitability for use where directly exposed to rain. The term ''concretetight'' or equivalent on the carton indicates suitability for use in poured concrete.

Fittings have been tested for use only with steel tubing unless marked on the device or carton to indicate suitability for use with aluminum or other material.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 18.3 (2004), ''Conduit, Tubing, and Cable Fittings.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Electrical Metallic Tubing Fitting'' (or ''EMT Fitting''), ''Connector'' or ''Coupling,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL NONMETALLIC TUBING CERTIFIED FOR CANADA (FKHU7)

USE AND INSTALLATION

This category covers electrical nonmetallic tubing (ENT) in trade sizes 1/2 to 2 (metric designators 16 to 53) inclusive intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' This tubing is intended for installation and use in accordance with the following information.

Fittings — The outside diameters of ENT are such that standard connectors, couplings and outlet boxes for rigid PVC conduit can be employed for ENT that is also constructed of PVC. Installation instructions are provided with each bundle or coil of ENT outlining the procedure to be used when employing cemented-on PVC conduit fittings and outlet boxes.

These techniques include the specific cement to be used as well as its application method. Other fittings are covered under Electrical-nonmetallic-tubing Fittings (FKKY).

ENT with mechanical fittings identified for the purpose or with cemented-on fittings is suitable for use in poured concrete.

ENT with cemented-on PVC fittings is suitable for use in:

1. Indoor locations where walls are frequently washed, and
2. Concrete slabs in direct contact with the earth.

PRODUCT MARKINGS

The product is provided with marking on the package, in combination with the UL Mark (every 10 ft), specifying the wire temperature rating, minimum installation temperature of -20°C (-4°F), and maximum ambient temperature 50°C (122°F). The 3/4 and 1 trade sizes may be marked ''CDN'' on the product and carton, indicating that they have been crushed with a force of 3470 N (780 lbf) and 3380 N (760 lbf), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 227.1, ''Electrical Nonmetallic Tubing.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electrical Nonmetallic Tubing.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL NONMETALLIC TUBING FITTINGS CERTIFIED FOR CANADA (FKKY7)

GENERAL

This category covers electrical-nonmetallic-tubing (ENT) fittings made in trade sizes 1/2 to 2 (metric designators 16 to 53). These fittings are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

CARTON MARKINGS

Unless otherwise marked on the carton, fittings are suitable for use with any certified ENT of the appropriate trade size. If a fitting is suitable for use with only specific manufacturer's ENT, the smallest unit carton of the fittings identifies the ENT manufacturer(s). Classified ENT (see FKMT7) is suitable for use with compatible certified ENT fittings, as identified on the ENT smallest unit carton. This compatibility marking appends any compatibility marking on the fitting carton.

Fittings suitable for use in concrete are identified by a marking on the carton. A fitting that is taped completely (from the raceway to the box or raceway-to-raceway) is concrete-tight, when the product carton is marked with ''CONCRETE-TIGHT WHEN TAPED.''

ADDITIONAL INFORMATION

For additional information, see Electrical Nonmetallic Tubing Certified for Canada (FKHU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 227.1 (2006), ''Electrical Nonmetallic Tubing.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Electrical Nonmetallic Tubing Fitting'' (or ''ENT Fitting'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC DISCHARGE LAMP CONTROL EQUIPMENT CERTIFIED FOR CANADA (FKOT7)

DRIVERS FOR LIGHT-EMITTING-DIODE ARRAYS, MODULES AND CONTROLLERS CERTIFIED FOR CANADA (FKSZ7)

GENERAL

This category covers light-emitting-diode (LED) drivers providing a regulated output for an LED array or LED module, with or without an LED controller (control module). The output has LEDs connected in parallel or connected in series.

LED drivers are intended for connection to be powered from alternating-current-supply branch circuits rated 600 V or less in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC); from low-voltage supplies; or from alternative sources, such as batteries, photovoltaic modules or fuel cells. A direct-plug-in, cord-and-plug, or field-wiring compartment is provided for connection to the branch circuit or other supplies.

LED drivers are not intended for recessed installation where direct contact with thermal insulation may occur.

PRODUCT MARKINGS

LED drivers are marked with:

a) Input voltage, either the supply (line) voltage or a low voltage (ac or dc)
b) Input current
c) Input wattage, power factor or both (optional)
d) Output maximum voltage
e) Output current (the maximum current that could be supplied by the driver)
f) Output volt-amperes or wattage
g) Output type (isolated, direct or Class 2)
h) Environmental location (dry, damp or wet)

The output type is used in determining the type of compatible LED array, a function of LED array construction. Output type "Isolated" refers to the output being electrically isolated from the supply circuit by insulation. Output type "Direct" refers to the output being electrically derived from the supply circuit without a separation by insulation.

LED drivers marked "Class 2" indicate that the output meets the construction, performance, and marking requirements specified in CAN/CSA-C22.2 No. 223, "Power Supplies with Extra-Low-Voltage Class 2 Outputs," and that Class 2 wiring methods may be used. A driver may have one or more outputs marked "Class 2."

LED drivers marked "Suitable for Class 2 Wiring" indicate that the output meets the voltage, current, and isolation criteria specified for Class 2 circuits in the CEC, and that Class 2 wiring methods may be used. A driver may have one or more outputs marked "Suitable for Class 2 Wiring."

LED drivers are marked for environmental locations as defined in the CEC and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7). The marking indicates the following uses:

Dry location — Suitable for indoor, dry locations.

Damp (outdoor) location — Suitable for use in (1) luminaires intended for wet or damp locations, (2) wet location signs if the driver is within an overall electrical enclosure, or, (3) other equipment or appliances. The interior of a luminaire or sign intended for wet locations is considered a damp location. The LED drivers are also suitable for indoor use.

Wet location — Suitable for use where water or other liquid can drip, splash, or flow on or against the device. The LED drivers are also suitable for indoor or damp location use.

LED drivers marked "High Power Factor" operate at 90% or higher power factor under the intended operating conditions or otherwise indicate those conditions that result in less than 90% power factor. Drivers marked "Power Factor Corrected" indicates the value of the power factor.

RELATED PRODUCTS

Power supplies that can be employed as LED drivers may also be covered under:

Direct-plug-in and Cord-connected Class 2 Power Units Certified for Canada (EPBU7)
Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7)
Power Supplies, General Purpose Certified for Canada (QQFU7) or Power Supplies, Specialty Certified for Canada (QQIJ7)
Sign Accessories Certified for Canada (UYMR8)

LED arrays, modules and controllers are covered under:

Light-emitting-diode Arrays, Modules and Controllers Certified for Canada (OOQA8)
Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7)

Drivers for Light-emitting-diode Arrays, Modules and Controllers Certified for Canada (FKSZ7)–*Continued*

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II"
CSA-C22.2 No. 107.1, "General Use Power Supplies"
CAN/CSA-C22.2 No. 207, "Portable and Stationary Electric Signs and Displays"
CAN/CSA-C22.2 No. 223, "Power Supplies with Extra-Low-Voltage Class 2 Outputs"
CSA-C22.2 No. 250.0, "Luminaires"
CSA-C22.2 No. 250.13 (2012), "Light Emitting Diode (LED) Equipment for Lighting Applications"
CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements"
CSA Technical Information Letter No. O-18, "Power Supplies Having Output Voltage Greater Than 30V ac or 42.4V Peak or DC (i.e., Not Class 2), or Output Power Greater Than 100VA or Leakage Current Greater Than 0.5mA"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "LED Driver."

* *

FLUORESCENT LAMP BALLASTS CERTIFIED FOR CANADA (FKVS7)

GENERAL

This category covers fluorescent lamp ballasts for both alternating and direct current. The ballasts are high-frequency electronic, resistor, choke (reactor) coil, or transformer of the isolating or auto type and are for controlling the starting and operating voltages and currents of a fluorescent lamp. These ballasts are intended for connection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," to branch circuits rated 600 V or less. The output voltages are 2500 V or less.

Ballasts provided with integral thermal protection prevent ballast overheating as required in applications such as luminaires and signs. The protection has been investigated to Part 1 of CAN/CSA-C22.2 No. 74, "Equipment for Use with Electric Discharge Lamps." These ballasts are generally provided with an enclosure but may be an open-type construction if the ballast is a simple-reactance type.

Some ballasts exhibit an inrush of current at the moment of initial operation, unless internal circuitry is provided to minimize the inrush. The inrush is similar to that exhibited in tungsten-filament incandescent lighting. Accordingly, it is recommended that lighting controls meet the tungsten-load requirement or be rated for use with the ballast in order to minimize incompatibility. (Refer to the particular lighting control category for more information on how the controls are marked regarding tungsten inrush.)

PRODUCT MARKINGS

Ballasts are marked with an output voltage when the output is over 300 V. The output voltage will be the maximum voltage existing between any two lead wires. Ballasts may additionally be marked with the maximum voltage to ground when it would aid in selecting lampholders. The voltage to ground will be the maximum voltage existing in any one lampholder and should be less than the rating of the lampholder.

Fluorescent lamp ballasts are restricted in use as indicated below:

Open Type — Open core-and-coil constructions (i.e., ballasts without complete metal enclosures) are intended for use within suitable enclosures.

Indoor Ballasts — Indoor ballasts are suitable for use in indoor, dry locations only.

Outdoor Ballasts — Outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) outdoor signs if the ballasts are within an overall electrical enclosure. Ballasts of this type are marked "Outdoor."

Weatherproof Ballasts — Weatherproof ballasts are suitable for use where completely exposed to the weather without an additional enclosure and are marked "Weatherproof" or "WP."

Fluorescent Lamp Ballasts Certified for Canada (FKVS7)−*Continued*

RELATED PRODUCTS

Devices for controlling HID lamps are covered under High-intensity-discharge Lamp Ballasts Certified for Canada (FLCR7).

Suitable controls intended for use with ballasts for dimming fluorescent lamps are covered under Dimmers, General Use Switch Certified for Canada (EOYX7) and Dimmers, Commercial Certified for Canada (EOXT7).

Ballasts within an integral enclosure with a compact fluorescent lampholder and a bi-pin or screw base are covered under Lamps, Self-Ballasted and Lamp Adapters Certified for Canada (OOLR7).

Devices for controlling electric sign gas tubes are covered under Neon Transformers and Power Supplies Certified for Canada (PWIK7).

Products Verified for energy efficiency are covered under Fluorescent Lamp Ballasts Verified for Energy Efficiency (ZYMV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II"

Part 1 of CAN/CSA-C22.2 No. 74, "Equipment for Use With Electric Discharge Lamps."

CSA Technical Information Letter No. B-68, "Interim Certification Requirements for Ballasts for Use with Fluorescent Lamps."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fluorescent Lamp Ballast," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HIGH-INTENSITY-DISCHARGE LAMP BALLASTS CERTIFIED FOR CANADA (FLCR7)

GENERAL

This category covers high-intensity-discharge (HID) lamp ballasts. The ballasts are high-frequency electronic, choke (reactor) coil, or transformer of the isolating or auto type, and are for controlling the starting and operating voltages and currents for the following lamp types: mercury vapor, metal halide, high-pressure sodium and low-pressure sodium. These ballasts are intended for connection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," to branch circuits rated 600 V or less. The output voltages are 1000 V or less.

PRODUCT MARKINGS

Independent ballasts are ballasts that can be mounted separately outside a luminaire. Independent ballasts are marked "Suitable for Indoor Use" or "Suitable for Outdoor Use." An independent ballast enclosure suitable for special purposes is marked in accordance with CAN/CSA-C22.2 No. 74, "Equipment for Use with Electric Discharge Lamps."

Ballasts may be provided with thermal protection. If the ballasts are provided with thermal protection, they are marked "Thermally Protected" or the equivalent. The effectiveness of such protection has not been investigated.

HID lamp ballasts are restricted in use as indicated below:

Built-in Type — Open core-and-coil constructions (i.e., ballasts without complete metal enclosures) are intended for use within suitable enclosures.

Indoor Ballasts — Indoor ballasts are suitable for use in indoor, dry locations only.

Outdoor Ballasts — Outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) an outdoor sign if the ballasts are within an overall electrical enclosure. Ballasts of this type are marked "Outdoor." These ballasts are also suitable for indoor use.

Weatherproof Ballasts — Weatherproof ballasts are suitable for use where completely exposed to the weather without an additional enclosure and are marked "Weatherproof" or "WP." These ballasts are suitable for indoor and outdoor use.

HOLDERS FOR AUTOMATIC STARTERS CERTIFIED FOR CANADA (FLPZ7)

USE

This category covers separate holders for automatic starters that are intended for use with electric discharge (fluorescent) lamps. Unless otherwise noted, they are rated 660 W, 250 V.

RELATED PRODUCTS

Holders in combination with or designed to be assembled with lampholders are covered under Lampholders, Electric Discharge, 1000 V or Less Certified for Canada (OKCT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, "Lampholders."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Starter Holder."

ELECTRIC DISCHARGE LAMP CONTROL EQUIPMENT, SPECIALTY CERTIFIED FOR CANADA (FNFT7)

GENERAL

This category covers ballasts for special industrial lamps, controls for auxiliary tungsten lamps, electromagnetic interference filters, fluorescent ballast and lamp power reducers, fluorescent lamp life extenders, high-intensity-discharge (HID) lamp high-low dimmers, HID lamp ignitors, time-out circuits for HID lamp ballasts, and related devices. These devices are for factory or field installation, in accordance with their installation instructions, into certified luminaires employing discharge lamps.

Fluorescent power-reducer devices are limited to installation only in luminaires employing thermally-protected ballasts and are marked as such. The devices are designed for high-power-factor rapid-start ballasts, or high-power-factor instant-start ballasts, and marked as appropriate, unless marked for additional ballast types. These devices have not been investigated for use on emergency lighting equipment or with dimming ballasts, unless marked otherwise.

HID lamp high-low dimmers are limited to installation only in or with luminaires employing the lamp wattage and type, together with the ballast type and capacitor rating agreeing with the installation instructions provided with the dimmer.

RELATED PRODUCTS

Devices for controlling HID lamps are covered under High-intensity-discharge Lamp Ballasts Certified for Canada (FLCR7).

Devices for controlling fluorescent lamps are covered under Fluorescent Lamp Ballasts Certified for Canada (FKVS7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 74, ''Equipment for Use with Electric Discharge Lamps,'' and CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate product name as shown in the individual Listings.

ELECTROMAGNETIC INTERFERENCE FILTERS CERTIFIED FOR CANADA (FOKY7)

GENERAL

This category covers electromagnetic interference (EMI) filters factory installed in equipment connected to 600 V or lower potential circuits, and installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Such filters are used to attenuate unwanted radio-frequency signals (such as noise or interference) generated from electromagnetic

sources. These filters consist of capacitors and inductors used alone or in combination with each other and may be provided with resistors.

Included in this category are cord-connected filters, direct-plug-in filters and facility filters.

This category does not cover transient-voltage surge suppressors (that is, devices for repeated limiting of voltage surges on power circuits such as thyrectors, metal oxide varistors, and spark-gaps), or EMI filters for outdoor use or filters having a rating of more than 125 A.

Filter Types

Filters are designated one of the following types:

Cord-connected filter — A filter provided with a supply cord having an attachment plug for connecting the filter to a branch circuit receptacle. It is also provided with a receptacle for distribution of the filtered voltage to an external (appliance or other equipment) load.

Direct-plug-in filter — A filter provided with blades at the filter body that plug directly into a 15 A, 120 V branch circuit receptacle. It is also provided with a receptacle for the distribution of the filtered voltage to an external (appliance or other equipment) load.

Facility filter — A filter installed as part of the service, feeders, or branch circuitry of a building wiring system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 8, ''Electromagnetic Interference (EMI) Filters.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name, as appropriate: ''Facility, Cord connected or Direct plug-in EMI Filter.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATOR EQUIPMENT CERTIFIED FOR CANADA (FQKR7)

Products Listed under this category include Elevator Controls and Accessories, Elevator Control Panels, Elevator Relays, Elevator Switches, Elevator Door Locking Devices and Contacts, Passenger Elevator Car Enclosures and Elevator Oil Buffers.

ELEVATOR CONTROLS AND ACCESSORIES CERTIFIED FOR CANADA (FQMW7)

GENERAL

This category covers elevator accessories such as push buttons, indicator lights and lighting fixtures, and elevator controls such as power supplies (motor and door operators) intended for use in elevator applications.

Some devices are open type (without enclosures), which means that such devices are for use as parts of certified equipment where the acceptability of the combination has been determined by UL or where open-type devices are acceptable.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14 (1991), ''Industrial Control Equipment.''

Seismic switches are additionally investigated to Clause 8.4.10.1.2 of ANSI/ASME A17.1/CSA B44 (2010), ''Safety Code for Elevators and Escalators.''

Where indicated in the individual Listings, elevator controls and accessories have additionally been investigated to CSA B44, ''Safety Code for Elevators and Escalators,'' and CSA B44.1, ''Elevator and Escalator Electrical Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Elevator Control'' or ''Elevator Accessory.''

Elevator Controls and Accessories Certified for Canada (FQMW7)−*Continued*

Products additionally investigated to CSA B44 and CSA B44.1 may also be marked, ''Also Evaluated in Accordance with CAN/CSA B44, and B44.1.''

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATOR CONTROL PANELS CERTIFIED FOR CANADA (FQPB7)

USE

This category covers elevator control panels consisting of assemblies of equipment intended to control elevators, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment.

ADDITIONAL INFORMATION

For additional information, see Elevator Equipment Certified for Canada (FQKR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 14-M91, ''Industrial Control Equipment.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

*** ELEVATOR CONTROL PANEL**
+
No.

* **OPEN** or **ENCLOSED**

\+ One of the following statements, as applicable:

Statement No. 1: **AS TO ELECTRICAL SHOCK AND FIRE HAZARD ONLY. CLASSIFICATION DOES NOT INCLUDE EVALUATION WITH RESPECT TO CAN/CSA B44 OR B44.1.**

Statement No. 2: **AS TO ELECTRICAL SHOCK AND FIRE HAZARD, AND IN ACCORDANCE WITH CAN/CSA B44 AND B44.1.**

Equipment that has been investigated with respect to electrical shock and fire hazards only is marked with Statement No. 1.

Equipment that has been investigated in accordance with the requirements of CAN/CSA B44, ''Canadian National Standard Safety Code for Elevators, Escalators, Dumbwaiters, Moving Walks, and Freight Platform Lifts'' and CAN/CSA B44.1, ''Canadian National Standard Safety Code for Elevator and Escalator Electrical Equipment'' is marked with Statement No. 2.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATOR DOOR-LOCKING DEVICES AND CONTACTS CERTIFIED FOR CANADA (FQXZ7)

GENERAL

This category covers designed for installation and operation in accordance with CAN/CSA B44, ''Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks.''

Elevator hoistway door interlocks are intended to prevent the operation of the driving machine by the normal operating device unless the hoistway door is locked in the closed position, and to prevent the opening of the hoistway door from the landing side unless the car is within the landing zone and is either stopped or being stopped.

Retiring cams are not covered under this category and their acceptability must be determined at the point of installation by the Authority Having Jurisdiction.

Elevator hoistway door combination mechanical locks and electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the hoistway door is in the closed position, and to lock the hoistway door in the closed position and prevent it from being opened from the landing side unless the car is within the landing zone.

Elevator Door-locking Devices and Contacts Certified for Canada (FQXZ7)−*Continued*

Elevator hoistway door, car door or gate electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the door or gate is in the closed position.

These devices are investigated for misalignment conditions when properly installed as recommended by the manufacturer. Their acceptability is to be determined at the point of installation by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA B44, ''Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Elevator Interlock,'' ''Elevator Interlock Retiring Cam Required,'' ''Elevator Combination Mechanical Lock and Electric Contact,'' ''Elevator Electric Contact,'' or other appropriate product name as shown in the individual Listings.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATOR OIL BUFFERS CERTIFIED FOR CANADA (FQZD7)

GENERAL

This category covers products intended for installation under elevator cars having a rated speed in excess of 50 ft/min in order to stop a descending car beyond its normal limit of travel.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is paragraph 201.4g of CAN/CSA B44, ''Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]

ELEVATOR SWITCHES CERTIFIED FOR CANADA (FRAH7)

USE AND INSTALLATION

This category covers switches intended for use with elevator system cars or shafts. The switches are designed for installation and operation in accordance with CSA B44, ''Safety Code for Elevators and Escalators.''

These switches have been investigated for proper operation when installed as recommended by the manufacturer. Their acceptability is determined at the point of installation by the Authority Having Jurisdiction.

RELATED PRODUCTS

Elevator Switches Certified for Canada (FRAH7)−*Continued*

Elevator door-locking devices and contacts are covered under Elevator Door-locking Devices and Contacts Certified for Canada (FQXZ7).

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Elevator Limit Switch'' or ''Elevator Slack Cable Switch,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATOR EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FRZV7)

This category covers hoistway door interlocks, hoistway limit switches, hoistway-door combination mechanical locks and electric contacts, hoistway-door or car door or gate electric contacts, and elevator control panels.

ELEVATOR DOOR-LOCKING DEVICES AND CONTACTS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FSNT7)

GENERAL

This category covers devices designed for use in elevators and intended for installation and operation in accordance with the requirements of CSA-B44 (1990), ''Safety Code for Elevators and Escalators.''

Elevator hoistway door interlocks are intended to prevent the operation of the driving machine by the normal operating device unless the hoistway door is locked in the closed position, and to prevent the opening of the hoistway door from the landing side unless the car is within the landing zone and is either stopped or being stopped.

Interlocks that do not require the use of a retiring cam bear the product name (A) under **PRODUCT IDENTITY**.

Interlocks that require the use of a retiring cam bear the product name (B) under **PRODUCT IDENTITY**.

This category does not cover retiring cams. Their acceptability must be determined at the point of installation by the Authority Having Jurisdiction.

Elevator hoistway door combination mechanical locks and electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the hoistway door is in the closed position, and to lock the hoistway door in the closed position and prevent it from being opened from the landing side unless the car is within the landing zone. These locks and contacts bear the product name (C) under **PRODUCT IDENTITY**.

Elevator hoistway door, car door or gate electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the door or gate is in the closed position. These contacts bear the product name (D) under **PRODUCT IDENTITY**.

These devices have been investigated for misalignment conditions when properly installed as recommended by the manufacturer. Their acceptability is to be determined at the point of installation by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

ENERGY AND INDUSTRIAL SYSTEMS CERTIFIED FOR FUNCTIONAL SAFETY CERTIFIED FOR CANADA (FSPC7)

GENERAL

This category covers energy and industrial systems, such as photovoltaic systems, wind turbines, power conversion equipment, utility interactive devices, motor controllers, battery management systems, battery chargers, proximity switches, elevator control panels, etc., that have been certified for functional safety.

Functional safety relates to all functions, such as control, protection and monitoring, that are intended to reduce the risk of fire, electric shock or injury to persons.

Functional-safety investigations cover a product's programmable electronics (i.e., hardware and embedded software), but also products with hardware-implemented functions only.

Software may be the embedded instructions that reside in a programmable component and that perform some of the functions of the product under investigation. Software may be application-specific, i.e., the software is limited to a specific, dedicated, designated use. The software to be investigated may include operating systems, support tools, firmware and application systems.

In addition to electronic hardware and software, functional-safety investigations may include other technologies such as mechanical, hydraulic, pneumatic, and combinations thereof.

Functional-safety investigations may also be conducted for systems and / or subsystems of multiple products. These investigations often include the following elements:

- Review of the engineering documentation produced during the development, operation and maintenance of the product or system
- Risk analysis, including Hazard-based Safety Engineering (HBSE) Analysis
- Safety life-cycle management

The functional-safety investigation may result in attributing functional-safety ratings such as a safety integrity level (SIL) or performance level (PL) to the different safety-related functions. It is the responsibility of the customer to determine and specify these safety functions, the functional-safety standards to which the products are intended to be certified, and the desired functional-safety ratings.

The product manual and individual Listing should be consulted for detailed information and instructions about a particular product.

ABBREVIATIONS AND TERMS

The following abbreviations and terms are used in the individual Listings:

Abbreviation/Term	Definition
ASIL	**Automotive safety integrity level** — One of four levels (A through D) to specify an item's or element's necessary requirements of ISO / Draft International Standard 26262-1 through 26262-10, and safety measures for avoiding an unreasonable residual risk, with ''D'' representing the most stringent level and ''A'' the least stringent level.
Beta Factor	The measure for susceptibility of Common Cause Failure (see **CCF** below).

ENERGY AND INDUSTRIAL SYSTEMS CERTIFIED FOR FUNCTIONAL SAFETY CERTIFIED FOR CANADA (FSPC7)

Abbreviation/Term	Definition
Category	Classification of the safety-related parts of a control system with respect to their resistance to faults and their subsequent behavior in the fault condition, and which is achieved by the structural arrangement of the parts and/or their reliability. There are five categories (b, 1, 2, 3, 4) with "b" representing the lowest level of resistance and "4" representing the highest level of resistance.
CCF	**Common cause failure** — Failure as the result of one or more events, causing concurrent failures of two or more separate channels in a multiple-channel system, leading to system failure.
Class	CSA-C22.2 No. 0.8 defines Control Classes, but are often referred to only as "class." A designation of "B" or "C" is used to identify the specific safety level assigned to the control function of the equipment under test (EUT). **Class B**: A control function intended to prevent unsafe operation of the controlled equipment where the failure of the controlled equipment will not directly lead to a hazard. **Class C**: A control function intended to prevent unsafe operation of the controlled equipment where the failure of the controlled equipment could directly lead to a hazard.
Diagnostic Coverage	The measure of the effectiveness of diagnostics, which may be determined as the ratio between the failure rate of detected dangerous failures and the failure rate of total dangerous failures. Instead of a precise percentage value, EN ISO/ISO 13849-1 defines four percentage ranges for diagnostic coverage: None, Low, Medium and High.
HFT	**Hardware fault tolerance** — The ability of a system to continue nonstop when a hardware failure occurs. 0 = susceptible at a single fault 1 = susceptible at two faults 2 = susceptible at three faults
$MTTF_d$	**Mean time to failure (dangerous)** — A measure of reliability of a piece of equipment, given the average time before the first failure.
PFD_{avg}	**Average probability of a dangerous failure on demand of the safety function** — Safety unavailability of an electrical/electronic/programmable electronic (E/E/PE) safety-related system to perform the specified safety function when a demand occurs from the equipment under control (EUC) or EUC control system.
PFH_{avg}	**Average frequency of a dangerous failure of the safety function per hour** — The average frequency of a dangerous failure of an E/E/PE safety-related system to perform the specified safety function over a given period of time.
PL	**Performance level** — A discrete level used to specify the ability of safety-related parts of a control system to perform a safety function under foreseeable conditions. There are five levels (a through e), with "a" representing the lowest ability level and "e" the highest ability level.
SFF	**Safe failure fraction** — The property of a safety-related element defined by the ratio of the average failure rates of safe plus dangerous detected failures and safe plus dangerous failures.
SIL	**Safety integrity level** — A discrete level (one out of a possible four) corresponding to a range of safety integrity values, where safety integrity level 4 has the highest level of safety integrity and safety integrity level 1 has the lowest.
SIL Capability	Defined by EN/IEC 61800-5-2: The maximum SIL that can be claimed to have been achieved by the design of a power drive system suitable for use in safety-related applications in terms of the systematic safety integrity and the architectural constraints on hardware safety integrity. There are three levels, where SIL capability 3 has the highest level of safety integrity and SIL capability 1 has the lowest. Certification of a safety function to a certain SIL capability will, in addition to systematic safety integrity and architectural constraints, also include the PFH of the safety function.
SIL CL	**SIL Claim Limit** — Defined by EN/IEC 62061: The maximum SIL that can be claimed for a safety-related subsystem in relation to architectural constraints and systematic safety integrity. There are three levels, where SIL claim limit 3 has the highest level of safety integrity and SIL claim limit 1 has the lowest. Certification of a safety function to a certain SIL claim limit will, in addition to systematic safety integrity and architectural constraints, also include the PFH of the safety function.
Type	Defined by CAN/CSA E61496-1: A measure of performance (2, 3 or 4) of electro-sensitive protective equipment in the presence of faults and under influences from environmental conditions. Types 2, 3 and 4 are similarly defined as the Categories 2, 3 and 4 of EN ISO/ISO 13849-1, respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7), Marine Products Certified for Canada (AAMP7) and Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The following standards are used to investigate products in this category for functional safety, as noted in the individual Listings:

ANSI/ASME A17.1/CSA B44 (2007), "Safety Code for Elevators and Escalators"
CSA-C22.2 No. 0.8 (2009), "Safety Functions Incorporating Electronic Technology"
CAN/CSA E61496-1 (2004), "Safety of Machinery – Electro-Sensitive Protective Equipment – Part 1: General Requirements and Tests"
EN 50271 (2010), "Electrical Apparatus for the Detection and Measurement of Combustible Gases, Toxic Gases or Oxygen – Requirements and Tests for Apparatus Using Software and/or Digital Technologies"
IEC 60335-1 (2010), "Household and Similar Electrical Appliances – Safety – Part 1: General Requirements"
IEC 60730-1 (2010), "Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements"
EN/IEC 61508-1 (2010), "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 1: General Requirements"
EN/IEC 61508-2 (2010), "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 2: Requirements for Electrical/Electronic/Programmable Electronic Safety-Related Systems"
EN/IEC 61508-3 (2010), "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 3: Software Requirements"
EN/IEC 61508-4 (2010), "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 4: Definitions and Abbreviations"
EN/IEC 61508-5 (2010), "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 5: Examples of Methods for the Determination of Safety Integrity Levels"
EN/IEC 61508-6 (2010), "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 6: Guidelines on the Application of IEC 61508-2 and IEC 61508-3"
EN/IEC 61508-7 (2010), "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 7: Overview of Techniques and Measures"
EN/IEC 61511-1 (2003), "Functional Safety – Safety Instrumented Systems for the Process Industry Sector – Part 1: Framework, Definitions, System, Hardware and Software Requirements"
EN/IEC 61511-2 (2003), "Functional Safety – Safety Instrumented Systems for the Process Industry Sector – Part 2: Guidelines for the Application of IEC 61511-1"
EN/IEC 61511-3 (2003), "Functional Safety – Safety Instrumented Systems for the Process Industry Sector – Part 3: Guidance for the Determination of the Required Safety Integrity Levels"
EN/IEC 61800-5-2 (2007), "Adjustable Speed Electrical Power Drive Systems – Part 5-2: Safety Requirements – Functional"
EN/IEC 62061 (2005), "Safety of Machinery – Functional Safety of Safety-Related Electrical, Electronic, and Programmable Electronic Control Systems"
EN ISO/ISO 13849-1 (2006), "Safety of Machinery – Safety-Related Parts of Control Systems – Part 1: General Principles for Design"
ANSI/RIA/ISO 10218-1 (2007), "Robots for Industrial Environments – Safety Requirements – Part 1: Robot"
ISO/Draft International Standard 26262-1 (2009), "Road Vehicles – Functional Safety – Part 1: Vocabulary"

ISO/Draft International Standard 26262-2 (2009), "Road Vehicles – Functional Safety – Part 2: Management of Functional Safety"
ISO/Draft International Standard 26262-3 (2009), "Road Vehicles – Functional Safety – Part 3: Concept Phase"
