UL MARK

Products are eligible to bear the UL Functional Safety Mark when a product is investigated for both UL Listing and functional safety.

The Functional Safety Listing Mark of UL on the product, or the UL symbol on the product and the Functional Safety Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Functional Safety Listing Mark for these products includes the UL Mark for Canada symbol with the words "FUNCTIONAL SAFETY" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," and the following additional information:

[PRODUCT IDENTITY*]
Control No.
ALSO INVESTIGATED TO
[STANDARD (YEAR+) ***]**
See installation manual for safety functions

* The appropriate product identity as shown in the Listing Mark for the product category

** Where a set of standards is referenced as individual parts (e.g., EN/IEC 61508-1, 61508-2, 61508-3), the standard set is shown in this format: EN/IEC 61508, Parts 1 – 3

+ Where individual parts of a set of standards have different edition dates, the latest date is used

*** Safety rating (e.g., SIL 3, PL e, Category 1); may include the words "UP TO" (e.g., UP TO SIL 3)

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATOR EQUIPMENT RELATING TO HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FSRA7)

ELEVATOR CONTROL PANELS RELATING TO HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FSSA7)

GENERAL

This category covers elevator control panels consisting of assemblies of equipment intended to control elevators, dumbwaiters, escalators, moving walks, inclined lifts, and their associated equipment.

Elevator control panels relating to hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

Elevator Control Panels Relating to Hazardous Locations Certified for Canada (FSSA7)−*Continued*

The investigation of elevator control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14 (1991), "Industrial Control Equipment."

The basic hazardous (classified) locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 157 (1992), "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELEVATOR CONTROL PANEL RELATING TO HAZARDOUS LOCATIONS
WITH INTRINSICALLY SAFE CIRCUIT EXTENSIONS
AS TO ELECTRICAL SHOCK, EXPLOSION AND FIRE HAZARD ONLY
Issue No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY LIGHTING AND POWER EQUIPMENT CERTIFIED FOR CANADA (FTBR7)

USE

This category covers electrical emergency lighting and power equipment for use in accordance with Section 46 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and the "National Building Code of Canada."

Emergency power equipment is intended to supply sufficient electrical energy for emergency luminaire operation, or to distribute and manage the electrical energy for emergency luminaires from a remote emergency supply source. Emergency power equipment with batteries has a test switch and visible or audible indicators to report the readiness of the emergency supply.

Emergency lighting equipment is intended to illuminate the means of egress, or means of egress signage, under both normal and emergency conditions.

Equipment may contain both emergency power and lighting capability, or may provide only one of the two functions.

PRODUCT TYPES

This category covers emergency luminaires, exit signs, unit equipment, inverters, central station battery systems, load control relays, and related accessories that directly facilitate or supplement the function of these devices.

This category also includes inverter/charger packs intended for factory or field installation in UL-certified luminaires. These inverter/charger packs have been evaluated by UL to determine that when installed in accordance with the manufacturer's instructions they do not adversely affect the operation of the installed luminaire. Electrical ratings, lamp compatibility, and wiring diagrams are marked on the packs and/or identified on the instructions provided. Inverter/charger packs are not suitable for installation in sealed or gasketed compartments unless investigated and marked for such applications.

RATINGS

All products have been investigated for use in dry locations only unless marked as suitable for damp or wet locations. Products marked as suitable for indoor damp or wet locations have not been investigated for UV exposure. All products have been investigated for use in ambient temperatures of 20 – 30°C (68 – 86°F) unless otherwise marked with an extended use temperature range.

Emergency power equipment with batteries provides 30 minutes (or more, if so marked) of rated power or light.

Exit signs have been investigated for visibility from 100 ft.

RELATED PRODUCTS

Exit signs intended for connection to a single source of power only are covered under Exit Fixtures Certified for Canada (FWBO7). Self-luminous and photoluminescent exit signs are covered under Exit Signs, Self-luminous and Photoluminescent Certified for Canada (FWBX7).

Kits intended to convert exit signs from one type of internal light source to another are covered under Exit Sign Conversion Kits Certified for Canada (FWCF7) or Exit Sign Retrofit Kits Certified for Canada (GGET7).

Equipment intended to transfer utilization equipment from the normal (utility) supply to an emergency supply, and back again, is covered under Automatic Transfer Switches for use in Emergency Systems Certified for Canada (WPWR7).

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 141 (2010), ''Emergency Lighting Equipment,'' or CSA-C22.2 No. 141 (2002), ''Unit Equipment for Emergency Lighting.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Emergency Lighting Equipment'' (or ''Emer. Light Eq.''), ''Emergency Power Equipment'' (or ''Emer. Power Eq.'') or ''Emergency Lighting and Power Equipment'' (or ''Emer. Light & Power Eq.'').

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENGINE GENERATORS CERTIFIED FOR CANADA (FTCA7)

This category covers electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel fueled internal combustion engines, including microturbines. The products are provided as integrated systems rated 600 V or less and may be intended for portable, permanent or mobile installations. The systems are arranged to facilitate installation and use in unclassified (ordinary) locations in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ENGINE GENERATORS FOR RECREATIONAL VEHICLES CERTIFIED FOR CANADA (FTCZ7)

GENERAL

This category covers electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal-combustion engines. The systems are intended for installation in recreational vehicles.

RELATED PRODUCTS

Engine generators intended for stationary use are covered under Engine Generators Certified for Canada (FTSR7).

Generators, also referred to as generator heads or alternators, intended for use in an engine generator are covered under Generators Certified for Canada (JZGZ7).

ADDITIONAL INFORMATION

For additional information, see Engine Generators Certified for Canada (FTCA7), Building Materials Certified for Canada (AABM7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 100 (2004), ''Motors and Generators,'' in addition to CSA-C22.2 No. 14 (2005), ''Industrial Control Equipment,'' as it applies to the product.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Engine Generator for Recreational Vehicles.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Engine Generators for Recreational Vehicles Certified for Canada (FTCZ7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY LIGHTING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTEV7)

GENERAL

This category covers automatic transfer switches designed for control of emergency lighting and power circuits in hazardous locations. The investigation of automatic transfer switches includes the determination of their suitability for transferring the load from a normal supply circuit to an immediately available emergency supply circuit.

This category also covers unit equipment, but not separate lamp heads or lighting fixtures (luminaires).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 141 (1985), ''Unit Equipment for Emergency Lighting.''

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 137 (1981), ''Electric Luminaires for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Emergency Lighting Equipment for Use in Hazardous Locations'' or ''Luminaires for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY LIGHTING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTHR7)

GENERAL

This category covers automatic transfer switches designed for control of emergency lighting and power circuits. The investigation of automatic transfer switches includes the determination of their suitability for transferring the load from a normal supply circuit to an immediately available emergency supply circuit.

This category also covers unit equipment, but not separate lamp heads or lighting fixtures (luminaires).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 141, ''Unit Equipment for Emergency Lighting.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Emergency Lighting Equipment for Use in Hazardous Locations'' or ''Luminaire for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSURES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTQH7)

GENERAL

This category covers electrical enclosures employing the flameproof ''d'' protection technique in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' These enclosures are intended for use in one or more of the following hazardous locations, as indicated on the individual product: Class I, Zone 0, 1 and 2.

Unless otherwise noted in the individual certifications, enclosures are investigated for enclosing electrical equipment intended for connection to circuits having a maximum available fault current of 10,000 rms symmetrical amperes.

This category covers only the enclosures. Devices that may be contained within these enclosures are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory) and the following additional information:

ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS
AS TO EXPLOSION AND FIRE HAZARD ONLY
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSURES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTRV7)

GENERAL

This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'': Class I, Groups A, B, C and D; Class II, Groups E, F and G.

This category covers only the enclosures. Devices that may be contained within these enclosures are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification

and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSURE ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTRX7)

GENERAL

This category covers enclosure bodies, flat, domed or window covers, window assemblies, threaded extensions, actuation mechanisms and similar subassemblies of enclosures. They are intended to be assembled at the factory or in the field to form a complete explosion-proof or dust-ignition-proof enclosure. Restrictions on the use and assembly of these devices are marked on each part.

RELATED PRODUCTS

See Enclosures for Use in Hazardous Locations Certified for Canada (FTRV7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

ENERGY USAGE MONITORING SYSTEMS CERTIFIED FOR CANADA (FTRZ7)

USE

This category covers products intended for use in metering of utility and nonutility electric power. These devices monitor power consumption on a building main supply or separate branch circuits. These devices may communicate with other devices by means of power-line carrier, satellite/radio frequency, telephone, cable or other means. Devices suitable for outdoor use are so marked.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements," and CAN3-C17, "Alternating-Current Electricity Metering" 2s referenced in the Canadian Watt-hour Meter ORD. All products in this category are investigated to the requirements of CAN/CSA-C22.2 No. 1010.1 (1992). Utility meters are additionally investigated to the safety requirements of CAN3-C17. Compliance with other requirements of CAN3-17 is as indicated in the individual certifications.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Watt-hour Meter," "Energy Usage Monitor" or "Sub-metering Equipment," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. ENGINE GENERATORS CERTIFIED FOR CANADA (FTSR7)

GENERAL

This category covers electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal combustion engines.

This category does not cover engine generator assemblies mounted on trailers intended for temporary installation.

This category does not cover engine generator assemblies intended for marine use.

Certified stationary engine generator assemblies are rated 600 V or less and are intended for installation and use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA-B149.1 (2000), "Natural Gas and Propane Installation Code."

This category does not cover electric machines for use in aircraft, marine service installations, drives for land transportation equipment, machines used in underground mining, hazardous environments or environments having abnormal temperatures.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 100, "Motors and Generators," and CSA-C22.2 No. 14, "Industrial Control Equipment," as it applies to the product.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Stationary Engine Generator Assembly," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENGRAVERS, ELECTRIC CERTIFIED FOR CANADA (FTSZ7)

USE

This category covers portable, electric motor-operated engravers, vibrating pencils and vibrating tools intended for marking or etching materials for household and commercial use.

RELATED PRODUCTS

Photoelectric engraving machines are covered under Graphic Arts Equipment Certified for Canada (KCQT7).

Stationary motor-operated engravers are covered under Tools, Stationary Certified for Canada (XKJU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Engraver" or "Vibrating Pencil," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT GROUND-FAULT PROTECTIVE DEVICES CERTIFIED FOR CANADA (FTTE7)

GENERAL

This category covers equipment ground-fault protective devices (EGFPD), whose function is to interrupt the electric circuit to the load when a fault current to ground exceeds a predetermined value that is less than that required to operate the overcurrent protective device of the circuit. The ground-fault pick-up level is limited to the range above 6 mA to 50 mA. EGFPDs are intended for installation at nominal system voltages of 600 V or less, to automatically de-energize a part of an electrical circuit.

EGFPDs are intended to be used only in electrical circuits where one of the conductors is solidly grounded.

EGFPDs are not intended to provide protection from electric shock. They are not intended to be used in place of a Class A ground-fault circuit interrupter (GFCI) where a GFCI is required by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

EGFPDs may be designed for permanent installation or may be portable types.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIRMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 144 (1991), ''Ground Fault Circuit Interrupters,'' in addition to one or more of the following as determined by the specific construction of the device:

CSA-C22.2 No. 42, ''General Use Receptacles, Attachment Plugs, and Similar Wiring Devices''
CSA-C22.2 No. 0.4, ''Bonding of Electrical Equipment''
CSA-C22.2 No. 14, ''Industrial Control Equipment''
CSA-C22.2 No. 29, ''Panelboards and Enclosed Panelboards''
CAN/CSA-C22.2 No. 94, ''Special Purpose Enclosures''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Equipment Ground-fault Protective Device'' (or ''EGFPD'').

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENGINE CONTROL EQUIPMENT AND ENGINE GENERATORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTVV7)

ENGINE CONTROLS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTWD7)

USE AND INSTALLATION

This category covers engine controls intended for use with engine-powered electrical generators for use in hazardous (classified) locations. These devices are intended to monitor and control engine functions.

FACTORS NOT INVESTIGATED

This equipment has not been investigated for use with engines or turbines that provide critical functions, such as emergency power or fire protection.

RELATED EQUIPMENT

See Ignition Controls for Use in Hazardous Locations Certified for Canada (FTWL7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Engine Control for Use in Hazardous Locations.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

IGNITION CONTROLS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FTWL7)

USE AND INSTALLATION

This category covers ignition controls for use with stationary internal-combustion engines and gas turbines in Class I, Division 2 hazardous

Ignition Controls for Use in Hazardous Locations Certified for Canada (FTWL7)−*Continued*

locations. These devices are power supplies that provide a controlled high-voltage output for igniters or other similar spark-producing devices. The igniters or other spark-producing devices are installed in the combustion chamber(s) of the engine or turbine.

The high-output-voltage levels can produce electrical shock. Care should be taken to follow the installation instructions provided with the equipment, including proper grounding of the equipment and proper output connections. Operating personnel should be carefully instructed regarding its correct operation and maintenance.

This equipment has not been investigated for use with engines or turbines that provide critical functions such as emergency power or fire protection.

ADDITIONAL INFORMATION

For additional information, see Engine Control Equipment for Use in Hazardous Locations Certified for Canada (FTVV7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), ''General Use Power Supplies.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Ignition Control for Use in Hazardous Locations.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXIT SIGNS AND EXIT APPLIANCES CERTIFIED FOR CANADA (FUDQ7)

This category covers exit signs and exit appliances as identified by the following specific product categories.

The installation and use of these devices are specified in the National Fire Code of Canada.

These products have not been investigated with reference to fire resistance.

CONTROLLED EXIT SIGNS AND EXIT APPLIANCES CERTIFIED FOR CANADA (FULA7)

USE AND INSTALLATION

This category covers devices intended for mounting on outward-swinging exit doors to facilitate the egress of persons. When the system is activated, it is intended to monitor against unauthorized egress and allow exiting within 15 seconds (30 seconds may be accepted by the Authority Having Jurisdiction). These devices are intended to allow immediate exit in case of power failure or upon activation of an automatic fire-alarm system.

The installation and use of exit doors on which this hardware is to be mounted are specified in the ''National Fire Code of Canada.''

FACTORS NOT INVESTIGATED

These devices have not been investigated with reference to fire resistance.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S533 (1987), ''Egress Door Securing and Releasing Devices.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

Controlled Exit Signs and Exit Appliances Certified for Canada (FULA7)−*Continued*

together with the word "LISTED," a control number, and the product name "Controlled Exit Panic Device."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXIT LOCKS CERTIFIED FOR CANADA (FUQV7)

USE

This category covers assemblies intended for mounting on outward swinging doors for the purpose of locking such exit doors against unauthorized egress.

RELATED PRODUCTS

For assemblies intended to facilitate safe egress of persons in case of emergency, see Panic Hardware Certified for Canada (FVSR7).

These assemblies have not been investigated for fire resistance; see Hardware Certified for Canada (GWGR7).

These assemblies have not been investigated for burglary protection.

ADDITIONAL INFORMATION

For additional information, see Exit Signs and Exit Appliances Certified for Canada (FUDQ7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S132 (1993), "Emergency Exit and Emergency Fire Exit Hardware."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exit Lock."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANIC HARDWARE CERTIFIED FOR CANADA (FVSR7)

USE AND INSTALLATION

This category covers devices intended for mounting on or integral with outward-swinging doors to facilitate the safe egress of persons in case of emergency.

The installation and use of doors on which this hardware is mounted is intended to be in accordance with the "National Fire Code of Canada."

RELATED PRODUCTS

Assemblies investigated with reference to fire resistance are covered under Fire-exit Hardware Certified for Canada (GXHX7).

Assemblies investigated with reference to access control system units are covered under Special Locking Arrangements Certified for Canada (FWAX7) or Controlled Exit Signs and Exit Appliances Certified for Canada (FULA7).

ADDITIONAL INFORMATION

For additional information, see Exit Signs and Exit Appliances Certified for Canada (FUDQ7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S132 (2007), "Standard Method of Tests for Emergency Exit and Emergency Fire Exit Hardware."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Panic Hardware."

If the complete Listing Mark is not applied to the center case so as to be visible after installation, then, in addition, the UL Mark for Canada symbol plus the letter "p" (for Panic) adjacent to it are both stamped on the device.

Panic Hardware Certified for Canada (FVSR7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIAL LOCKING ARRANGEMENTS CERTIFIED FOR CANADA (FWAX7)

USE AND INSTALLATION

This category covers assemblies intended to be mounted on door frames of outward-swinging exit doors for the purpose of locking such doors against unauthorized egress. These devices are designed to release automatically in case of a power failure or upon activation of an automatic fire alarm system.

Installation and use of doors on which these devices are normally mounted are provided in the "National Fire Code of Canada."

Authorities Having Jurisdiction should be consulted for specific use and application requirements.

ADDITIONAL INFORMATION

For additional information, see Exit Signs and Exit Appliances Certified for Canada (FUDQ7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S533, "Egress Door Securing and Releasing Devices."

UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Special Locking Arrangement."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXIT FIXTURES CERTIFIED FOR CANADA (FWBO7)

GENERAL

This category covers internally illuminated exit signs intended to be connected to a single source of power.

RATINGS

Exit fixtures have been investigated for use in dry locations only unless marked as suitable for damp or wet locations. Products marked as suitable for indoor damp or wet locations have not been investigated for UV exposure. All products have been investigated for use in ambient temperatures of 20–30°C (68–86°F) unless otherwise marked with an extended use temperature range.

Exit fixtures have been investigated for visibility from 100 ft.

RELATED PRODUCTS

Exit signs intended for connection to more than one source of power, or with an integral backup power source, are covered under Emergency Lighting and Power Equipment Certified for Canada (FTBR7). Exit signs with no connection to a source of electrical power are covered under Exit Signs, Self-luminous and Photoluminescent Certified for Canada (FWBX7).

Kits intended to convert exit signs from one type of internal light source to another are covered under Exit Sign Conversion Kits Certified for Canada (FWCF7) or Exit Fixture Retrofit Kits Certified for Canada (GGET7).

Products Verified for energy efficiency are covered under Exit Signs Verified for Energy Efficiency (ZYLC).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 141 (2002), "Unit Equipment for Emergency Lighting."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Exit Fixture.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXIT SIGNS, SELF-LUMINOUS AND PHOTOLUMINESCENT CERTIFIED FOR CANADA (FWBX7)

USE AND INSTALLATION

This category covers self-luminous and photoluminescent exit signs intended for installation in accordance with the requirements of the Authority Having Jurisdiction, the ''National Building Code of Canada,'' and other codes governing the marking of the means of egress.

These exit signs have been investigated for use in dry or damp locations only where not exposed to direct sunlight, unless marked as suitable for wet locations.

Exit signs that have been investigated for mounting near the floor are marked, where visible after installation, ''Suitable for Floor Proximity Installation'' or equivalent wording.

These exit signs have been investigated for visibility from 100 ft unless marked, where visible after installation, with a maximum viewing distance of 50 or 75 ft.

Photoluminescent exit signs have been investigated for visibility for up to 120 minutes unless marked, where visible after installation, for a maximum operating time of 90, 60 or 30 minutes.

EXTERNAL ILLUMINATION

Exit signs whose visibility is dependent on external illumination (such as photoluminescent signs) are intended for installation only where such external illumination is deemed reliable and sufficient by the Authority Having Jurisdiction and where the lighting controls are accessible only to authorized personnel. Where compliance with the visibility requirements requires external illumination greater than 1 ft-c, these signs are marked, where visible after installation, for a minimum 5 ft-c illumination, measured on the face of the sign. If specific type(s) of lighting are needed to achieve the required visibility, the lighting type is also marked on the sign where visible after installation.

REPLACEMENT DATE

Exit signs whose visibility is expected to decline over time (such as those containing self-luminous gases) are marked, where visible after installation, with a replacement date.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C924, ''Photoluminescent and Self-Luminous Exit Signs,'' or CAN/ULC-S572, ''Photoluminescent and Self-Luminous Exit Signs and Path Marking Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Self-luminous Exit Sign'' or ''Photoluminescent Exit Sign,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXIT SIGN CONVERSION KITS CERTIFIED FOR CANADA (FWCF7)

GENERAL

This category covers exit sign conversion kits, which are parts and/or subassemblies intended for field installation in specific certified exit signs (see Exit Fixtures Certified for Canada [FWBO7]) or exit lights (see Emergency Lighting and Power Equipment Certified for Canada [FTBR7]). They convert the light source from one type to another (e.g., incandescent to LED), primarily for energy-saving purposes. They have been investigated to determine that when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete exit sign. Their use is subject to the conditions indicated on the installation instructions provided with the kit.

Exit sign conversion kits are intended for use in indoor, dry locations unless marked ''Suitable for Wet Locations,'' ''Suitable for Indoor Wet Locations'' or ''Suitable for Damp Locations.''

Exit sign conversion kits containing fluorescent or electroluminescent lamps and marked as being suitable for damp or wet locations are for use in an ambient temperature not less than that marked on the product.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 141 (2002), ''Unit Equipment for Emergency Lighting.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

EXIT SIGN CONVERSION KIT
FOR USE ONLY WITH EXIT *
MODEL [No(s).] MANUFACTURED BY [Manufacturer's Name]
Control No.

* **FIXTURE** or **LIGHT**

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXIT SIGNS AND EXIT APPLIANCES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FWDD7)

EXIT SIGNS AND MARKERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (FWDJ7)

GENERAL

This category covers exit signs, inverters, central station battery systems, and related accessories that directly facilitate or supplement the function of these devices intended for use in accordance with Section 46 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and the ''National Building Code of Canada.''

This category also covers inverter/charger packs intended for factory or field installation in UL-certified luminaires. These inverter/charger packs have been investigated to determine that, when installed in accordance with the manufacturer's instructions, they do not adversely affect the operation of the installed exit sign. Electrical ratings, lamp compatibility, and wiring diagrams are marked on the packs and/or identified on the instructions provided. Inverter/charger packs are not suitable for installation in sealed or gasketed compartments unless investigated and marked for such applications.

All products have been investigated for use in dry locations only unless marked as suitable for damp or wet locations. Products marked as suitable for indoor damp or wet locations have not been investigated for UV exposure. All products have been investigated for use in ambient temperatures of -20 to +40°C unless otherwise marked with an extended use temperature range.

Exit signs with batteries provides a minimum 30 minutes of rated power or light unless specifically marked for a longer period of time.

Exit signs have been investigated for visibility from 100 ft.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 141, ''Unit Equipment for Emergency Lighting.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Exit Sign for Use in Hazardous Locations'' or ''Exit Marker for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXTINGUISHERS AND EXTINGUISHING SYSTEM UNITS CERTIFIED FOR CANADA (FWFZ7)

The following information and listings relate to Extinguishers, Extinguishing Agents and Extinguishing System Units.

Portable extinguishers are rated according to their fire extinguishing potential which is indicated by NUMERAL and LETTER designations. The LETTER designates the general class of fire for which the extinguisher is suitable, and the NUMERAL indicates the approximate relative extinguishing potential of the device.

Class A fires are defined as fires in ordinary combustible materials such as wood, cloth, and paper where the ''quenching-cooling'' effect of quantities of water or solutions containing large percentages of water is most effective in reducing the temperature of the burning material below the ignition temperature and is, therefore, of first importance.

Class B fires are defined as fires in flammable petroleum products or other similar flammable liquids, greases, etc. where the ''blanketing-smothering'' effect of oxygen-excluding extinguishing agents is most effective.

Class C fires are defined as fires involving electrical equipment where the electrical nonconductivity of the extinguishing agent is of first importance.

Class D fires are defined as fires in combustible metals, such as magnesium, titanium, zirconium, sodium, potassium, etc.

The numerical potion of Class A ratings of hand extinguishers is developed on the basis of comparative Fire Tests using various sizes of wood crib, wood panel, and excelsior fires. For example, 1-A, 2-A, 3-A and 4-A extinguishers must be capable of consistently extinguishing vertical wood panel fires having areas of 2.4×2.45 m, 3.05×3.05m, 3.65×3.65m and 4.25×4.25m, respectively. The numerical portion of Class A ratings of wheeled extinguishers is developed on the basis of wood crib fires only. The size of crib is determined by logarithmic plots of enclosed volume and exposed surface area of the lumber used in the test fires versus the Class A rating.

The numerical portion of Class B ratings of extinguishers is developed on the basis of fire test using square steel pans in specific size increments and a fuel which is essentially equal to ordinary motor fuel (regular gasoline). Indoor test fires sizes are 0.23, 0.47, 1.16, 2.32 and 4.65 sq m and outdoor fire sizes are 9.3, 18.6, 27.9, 37.2, 55.7, 74.3, 112.0 and 149.0 sq m. The fire extinguishing classification is equivalent to 40% of the area of fire consistently extinguished by an expert operator. The NUMERAL thus derived is an approximate indication of the relative fire extinguishing potential of the extinguisher. The fire extinguishing classifications of these extinguishers are developed at normal ambient temperature (approximately 21 C) and may be reduced at lower temperatures. There are no numerical components for Class C ratings of extinguishers, as only the electrical nonconducting characteristics of the agent are significant, and no effort is made to indicate the amount of electrical fire for which an extinguisher is suitable.

Extinguishers and agents for use on Class D (combustible metals) fires are rated for the amount of agent needed to control a particular quantity and type of metal.

Extinguishers listed as ''Marine Type'' have been investigated in accordance with the applicable sections of the Code of Federal Regulations, Title 46 (shipping), Chapter 1, Subchapter Q, Sub-part 162.028, in addition to the usual test conducted by UL. Listed ''Marine Type'' extinguishers are identified by the wording ''Marine Type. U.S.C.G. Type (....), Size (....),'' on the individual listings and on the Listing Mark. Extinguishing Agents and Extinguishing System Units are investigated for the protection of specific classes or types of fires or for specific hazards as indicated in the individual Listings. Prospective users should first determine from the authority having jurisdiction which type of extinguishers, extinguishing agents or extinguishing system units are acceptable for protection of the hazards. Extinguisher and extinguishing system units are intended to be installed, inspected, maintained and tested in accordance with the appropriate Standard of the National Fire Protection Association.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOAM EXTINGUISHING SYSTEM UNITS CERTIFIED FOR CANADA (GEEZ7)

This category covers equipment and liquid concentrates used in systems employing foam as the fire-extinguishing medium. Foam equipment and liquid concentrates are Listed as units of a complete system. The individual Listings under Foam Liquid Concentrates Certified for Canada (GFGV7) should be consulted for the operating limitations and compatibility with specific combinations of liquid concentrates and equipment. A liquid concentrate may be Listed for use with several types of equipment at different concentrations, as indicated in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Foam Liquid Concentrates Certified for Canada (GFGV7)

GENERAL

This category covers foam liquid concentrates, which include protein, fluoroprotein, film-forming fluoroprotein (FFFP), aqueous-film-forming foam (AFFF), or other synthetic-based materials.

Foam is generally produced by the addition of a foam liquid concentrate to water and mechanically mixing air into the foam solution. Some foam solutions may be discharged through equipment that does not mix air into the solution as indicated in the individual certifications.

Foam is suitable for use on fires involving ordinary hydrocarbon petroleum products, but may not be suitable for use on fires involving polar solvent fuels. Concentrates investigated for use on polar solvent fuels are noted in the individual certifications.

Liquid concentrates may be stored in the original shipping containers or in pressure proportioning tanks. Liquid concentrates are not intended to be stored at temperatures lower than those for which they have been certified or above 49°C. They should be stored in locations free of excessive moisture to avoid external corrosion of containers and other equipment.

The quality of foam produced is affected by proportioning and discharge equipment. The individual certifications of liquid concentrates reference all the equipment with which it may be used and the corresponding operating limitations, including foam concentrations.

There are two types of foam-discharge outlets:

Type II — Discharge devices that do not deliver foam gently onto the liquid surface but are designed to minimize submergence of the foam or agitation of the surface. Examples include foam chambers, subsurface injection equipment, or applying the foam off a backboard or the wall of a tank.

Type III — Discharge devices that deliver foam directly onto the liquid surface at an angle above the horizontal. Examples include handheld nozzles or monitors.

Unless otherwise stated in the individual certifications, the type of discharge outlet certified with a foam is Type III.

Foam concentrates investigated with certified sprinklers and fixed spray-foam nozzles are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 11, "Low-, Medium-, and High-Expansion Foam," or ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems," but in no case is the protected area per sprinkler to exceed 12.1 sq. m..

Foam extinguishing systems are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 11 and ANSI/NFPA 16.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Foam Extinguishing System Units Certified for Canada (GEEZ7), Extinguishers and Extinguishing System Units Certified for Canada (FWFZ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S564 (2006), "Standard for Categories 1 and 2 Foam Liquid Concentrates."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Foam Liquid Concentrate."

****

WETTING AGENTS CERTIFIED FOR CANADA (GOHR7)

USE

This category covers wetting agents intended for use in accordance with ANSI/NFPA 18, "Wetting Agents." Wetting agents are liquid concentrates which, when added to water in the concentrations specified in the individual certifications, reduce the surface tension and increase the wetting-agent solution's ability to penetrate and spread. Wetting-agent solutions extend the efficiency of water in protection against fire exposure and the extinguishment of Class A and Class B fires in ordinary combustibles and flammable or combustible liquids that are not soluble in water and ordinarily stored at atmospheric temperatures and pressures. Wetting agents are not intended to be stored at temperatures below 0°C (32°F) or above 49°C (120°F).

In accordance with ANSI/NFPA 18, wetting-agent concentrates have been investigated for pour point, miscibility, separation, impact of low

Wetting Agents Certified for Canada (GOHR7)−*Continued*

temperature on surface tension, pH, and viscosity test. Wetting-agent solutions have been investigated for separation on standing, Class A fire extinguishment, and Class B fire-extinguishment tests.

Wetting-agent concentrates are intended to be packaged and distributed in containers that have been investigated for accelerated storage in combination with the specific wetting-agent concentrate and are covered under UL's Follow-Up Service.

Authorities Having Jurisdiction should be consulted regarding use of these products.

FACTORS NOT INVESTIGATED

Wetting agents have not been investigated in combination with specific devices, including wetting-agent-concentrate-proportioning equipment and wetting-agent-solution distribution and discharge equipment.

Wetting-agent concentrates have not been investigated for corrosion, toxicity or biodegradability; wetting-agent solutions have not been investigated for corrosion or toxicity as described in ANSI/NFPA 18.

ADDITIONAL INFORMATION

For additional information, see Extinguishers and Extinguishing System Units Certified for Canada (FWFZ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 18, "Wetting Agents."

UL MARK

The Classification Mark of UL on the agent concentrate container specified for use with the specific concentrate is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

WETTING AGENT
IN ACCORDANCE WITH ANSI/NFPA 18
FOR PHYSICAL PROPERTIES AND FIRE EXTINGUISHMENT ONLY
Control No.

****

EXIT FIXTURE RETROFIT KITS CERTIFIED FOR CANADA (GGET7)

USE AND INSTALLATION

This category covers exit fixture retrofit kits intended for field installation in certified Exit Fixtures Certified for Canada (FWBO7) to convert the light source from one type to another (e.g., incandescent to LED) when installed in accordance with the manufacturer's instructions. These kits have been investigated only for use in stencil or panel type exit fixtures of minimum interior dimensions 15.9 (h) x 24.1 (w) x 2.2 (d) cm.

Retrofit kits are one of the following type designations:

Type EFG (Exit Fixture General) — Intended for use only in single- or double-faced stencil exit fixtures. The kit includes a light source and diffuser(s).

Type EFI (Exit Fixture Independent) — Intended for use only in single- or double-faced panel exit fixtures. The kit includes a light source, light reflecting media, enclosure, diffuser(s), legend, and (optionally) two directional indicators. It is independent of the original exit fixture except for mechanical support and electrical supply.

Type ELG (Exit Light General) — Same as Type EFG except intended for use only in UL-certified exit lights, which are energized by an ac power source in the normal mode and by an internal or external dc power source in the emergency mode.

Type ELI (Exit Light Independent) — Same as Type EFI except intended for use certified exit lights energized by an ac power source in the normal mode and by an internal or external dc power source in the emergency mode.

Exit fixture retrofit kits are intended for use in indoor, dry locations unless marked suitable for wet or damp locations. Exit fixture retrofit kits containing fluorescent or electroluminescent lamps and marked as being suitable for damp or wet locations are for use in an ambient temperature not less than that marked on the product.

These retrofit kits have been investigated to determine that when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of a certified exit fixture.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 141 (2010), ''Emergency Lighting Equipment.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FABRICS CERTIFIED FOR CANADA (GPIX7)

GENERAL

This category covers flame-resistant fabrics for tentage, awnings, special-purpose covers, draperies, decorations, and other uses under ordinary conditions.

Flame-resistant Fabrics, Impregnated — These are chemically treated fabrics, in various colors, which are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds.

The treatment may be expected to remain effective under ordinary conditions or exposure for the useful life of the fabric. Laundering or other cleaning methods will reduce the effectiveness of the treatment when so indicated in the individual Classifications.

The fabrics are processed either with or without striping as indicated.

Flame-resistant Fabrics, Plastic Coated — These fabrics are composed of plastic-coated fibers, in various colors, which are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds. Laundering or other cleaning methods will not affect the flammability of the fabrics unless indicated.

Flame-resistant Fabrics, Synthetic — These fabrics are composed of woven synthetic fibers, in various colors, which are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds. Smoldering combustion may follow flaming and may spread in folds. Laundering or other cleaning methods will not affect the flammability of the fabrics unless indicated.

Flame-resistant Fabrics, Plastic Faced — These are composed of fabrics to which a plastic film, in various colors, is laminated to one or both sides. They are comparatively difficult to ignite and do not propagate flame beyond the area exposed to the source of ignition when used in single sheets or in folds. Laundering or other cleaning methods will not affect the flammability of the fabrics unless indicated.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S109, ''Flame Tests of Flame-Resistant Fabrics and Films.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FACTORY AUTOMATION EQUIPMENT CERTIFIED FOR CANADA (GPNY7)

USE AND INSTALLATION

This category covers production equipment for attended and unattended assembly of products and subassemblies. This equipment is designed to be programmed for a specific manufacturing application, such as assembly of components, packaging, sorting, or counting or parts, or hole punching or cutting. The equipment may also incorporate manufacturing processes involving heating or cooling, drying, or gluing of parts.

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

SPECIAL CONSIDERATIONS

This equipment is not intended for the handling of hazardous materials in unattended applications, or intended for fire protection service.

RELATED PRODUCTS

Robotics and associated control equipment are covered under Robots and Robotic Equipment Certified for Canada (TETZ7).

Industrial control panels are covered under Industrial Control Panels Certified for Canada (NITW7).

Equipment intended primarily for measurement of physical or chemical properties of materials, measurement of the functional performance of a piece of equipment, qualitative or quantitative constituent analysis of substances, or preparation of materials for further analysis or measurements is covered under Laboratory Use Electrical Equipment Certified for Canada (OGTK7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14 (1995), ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Factory Automation Equipment.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FAN PARTS CERTIFIED FOR CANADA (GPPF7)

USE

This category covers fans and blowers for use in commercial and industrial applications intended to move air for the purposes of air circulation or ventilation. These products are investigated as complete assemblies but are certified as fan heads and fan stands/mounting assemblies with unique model designations. This category covers commercial/industrial fan head assemblies, pedestals, wall-mounting brackets and ceiling-mounting brackets.

This category does not cover fans intended for household or residential use, motors, blade assemblies, fan guards or grills.

PRODUCT MARKINGS

Fan parts covered under this category are marked ''For Commercial or Industrial Use Only.''

Fan heads covered under this category are marked ''CAUTION: To Reduce the Risk of Personal Injury, Use Only With Stand/Mounting Assembly Models ____, Manufactured by ____.''

Fan stands/mounting assemblies covered under this category are marked ''CAUTION: To Reduce the Risk of Personal Injury, Use Only With Fan Head Assembly Model ____, Manufactured by ____.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, "Fans and Ventilators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fan Part," or other appropriate product name as shown in the individual Listings

* *

FANS, CEILING SUSPENDED CERTIFIED FOR CANADA (GPRT7)

GENERAL

This category covers:

- Ceiling-suspended fans intended to be mounted to a ceiling outlet box or ceiling building structure, and whose blades rotate below the ceiling to move air for the purpose of air circulation.
- Light kits intended for use with ceiling-suspended fans.

Ceiling-suspended fans and accessories intended for permanent installation are provided with means for connection to permanent wiring systems.

This category does not cover ceiling-suspended fans intended to be used in hazardous (classified) locations as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I," or intended to be installed over solvents or chemically flammable liquids or vapors or located in a chemically corrosive environment.

PRODUCT MARKINGS

Ceiling-suspended fans intended for mounting beneath a ceiling structure, such as provided on porches, patios and the like, are marked as being acceptable for use in damp locations. Ceiling-suspended fans intended for outdoor use are marked as being acceptable for such use.

Fans investigated for use with solid-state fan-speed controls may be marked as being acceptable for such use.

Ceiling-suspended-fan light kits are provided with a marking on the light kit, on the packaging carton, and in the instructions to indicate the fan models with which they are suitable.

The following markings are permanent, legible, and readily visible after installation: the manufacturer's identification, model designation, electrical ratings and date code. Other markings may be required as specified above.

RELATED PRODUCTS

Fan-speed controllers for use with fans are covered under Fan-speed Controllers Certified for Canada (GQHG7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, "Fans and Ventilators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ceiling Fan," "Ceiling Suspended Fan" or "Fan Accessory," or other appropriate product name as shown in the individual Listings.

The Listing Mark for this category requires the use of a holographic label.

* *

FANS, ELECTRIC CERTIFIED FOR CANADA (GPWV7)

GENERAL

This category covers:

- Fans and blowers intended for air circulating and ventilating
- Dryer-type fans used for drying carpets or floors

This category does not cover:

- Permanently installed fans and blowers intended to move air for the purpose of air circulation, ventilation, exhaust, blending or recirculation
- Residential rangehoods for permanent connection to the power supply or for cord connection to the power supply, remote blowers intended for residential cooking-area exhaust, and self-contained downdraft ventilators
- Fans intended to be used in hazardous (classified) locations as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I," or intended to be installed over solvents or chemically flammable liquids or vapors or located in a chemically corrosive environment
- Air heaters incorporating fans, heating-ventilating units, or blower comprised of such equipment as furnaces, mechanical-refrigeration equipment or air conditioners

Fans intended for use where they will be exposed to weather, such as window fans, have been investigated to determine the effect of rain on electrical components.

PRODUCT MARKINGS

Fans intended for outdoor use are marked as being acceptable for such use.

Fans investigated for use with solid-state fan-speed controls may be marked as being acceptable for such use. Fans not investigated for use with solid-state fan-speed controls are provided with instructions indicating that the fan is not to be used with these products.

When an appliance consists of two or more subassemblies, each subassembly is marked to indicate those other subassemblies that may be used to complete an assembly.

The following markings are permanent, legible, and readily visible after installation: the manufacturer's identification, model designation, electrical ratings and date code. Other markings may be required as specified above.

RELATED PRODUCTS

Permanently installed fans are covered under Fans, Electric, Permanently Installed Type Certified for Canada (GPWX7).

Fans and blowers intended to move heated or conditioned air are covered under Ventilators, Power Certified for Canada (ZACT7).

Fans that include filters or means to control humidity or cool air are covered under Air Filtering Appliances Certified for Canada (AEDX7), Humidifiers Certified for Canada (AHIV7) or Evaporative Coolers Certified for Canada (AGNY7).

Hand dryers incorporating heaters are covered under Heaters, Specialty Certified for Canada (KSOT7).

Compressor-type inflators are covered under Compressors, Vacuum Pumps and Paint Sprayers Certified for Canada (QDGS7).

Fan-type deodorizers and fan-type air fresheners are covered under Deodorizers and Air Fresheners Certified for Canada (EOGX7).

Ionizers and fans employing ionizers are covered under Ion Generators Certified for Canada (OETX7).

Fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners Certified for Canada (AGGZ7).

"Paddle" fans whose blades rotate below the ceiling are covered under Fans, Ceiling Suspended Certified for Canada (GPRT7).

Light kits intended for use with ceiling-suspended fans are covered under Fans, Ceiling Suspended Certified for Canada (GPRT7).

Fan-speed controls intended for use with fans are covered under Fan-speed Controls Certified for Canada (GQHG7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, "Fans and Ventilators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fan," "Electric Fan" or "Fan Accessory," or other appropriate name as shown in the individual Listings.

The Listing Mark for this category requires the use of a holographic label.

* *

FANS, ELECTRIC, PERMANENTLY INSTALLED TYPE CERTIFIED FOR CANADA (GPWX7)

GENERAL

This category covers:

Permanently installed fans and blowers intended to move air for the purpose of air circulation, ventilation, exhaust, blending or recirculation

Residential rangehoods for permanent connection to the power supply or for cord connection to the power supply, remote blowers intended for residential cooking-area exhaust, and self-contained downdraft ventilators

This category does not cover:

Fans intended to be used in hazardous (classified) locations as defined by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' or intended to be installed over solvents or chemically flammable liquids or vapors or located in a chemically corrosive environment

Air heaters incorporating fans, heating-ventilating units, or blowers comprised of such equipment as furnaces, mechanical-refrigeration equipment or air conditioners

Portable, cord-connected fans

Fans and accessories intended for permanent installation are provided with means for connection to permanent wiring systems.

Fans or fan/light combinations intended to be mounted over tubs or showers have been investigated for such purposes and are marked to indicate acceptability for such installations.

Fans intended for use where they will be exposed to weather have been investigated to determine the effect of rain on electrical components.

Attic fans are normally installed with shutters and are not subjected to a rain test; similarly, wall-insert fans are not subject to a rain test, and are marked not for use in windows. Fans intended for mounting in interior walls or ceilings are marked to indicate the intended use, unless the design is such as to make the intended method of installation obvious.

Fans and accessories intended for use over cooking equipment have been investigated to determine the effect of grease on electrical parts and are marked where suitable for use in household cooking areas. These units are intended for use over electric ranges or ovens only and include hood fans intended for use over (but not mounted directly on) ranges, separate hoods provided with lights or other wiring and intended for use over ranges in conjunction with wall- or ceiling-insert fans, and oven ventilators for use over wall-insert ovens.

None of the fans covered under this category have been investigated for use over cooking appliances that use solid or liquid fuel. Fans other than the recirculating type installed in an area in close proximity to a stove, range or oven, where away from the cooking area, should be installed in such a manner as to discharge the air to the exterior of the building and not into concealed walls or ceiling spaces or into the attic.

PRODUCT MARKINGS

Fans intended for outdoor use are marked as being acceptable for such use.

Fans investigated for use with solid-state fan-speed controls may be marked as being acceptable for such use. Fans not investigated for use with solid-state fan-speed controls are provided with instructions indicating that the fan is not to be used with these products.

When an appliance consists of two or more subassemblies, each subassembly is marked to indicate those other subassemblies that may be used to complete an assembly.

The following markings are permanent, legible, and readily visible after installation: the manufacturer's identification, model designation, electrical ratings and date code. Other markings may be required as specified above.

RELATED PRODUCTS

Portable, cord-connected fans are covered under Fans, Electric (GPWV).

Fans and blowers intended to move heated or conditioned air are covered under Ventilators, Power Certified for Canada (ZACT7).

Fans that include filters or means to control humidity or cool air are covered under Air Filtering Appliances Certified for Canada (AEDX7), Humidifiers Certified for Canada (AHIV7) or Evaporative Coolers Certified for Canada (AGNY7).

Hand dryers incorporating heaters are covered under Heaters, Specialty Certified for Canada (KSOT7).

Microwaves employing cooking-area ventilation are covered under Microwave Cooking Appliances Certified for Canada (KQSQ7).

Compressor-type inflators are covered under Compressors, Vacuum Pumps and Paint Sprayers Certified for Canada (QDGS7).

Fan-type deodorizers and fan-type air fresheners are covered under Deodorizers and Air Fresheners Certified for Canada (EOGX7).

Ionizers and fans employing ionizers are covered under Ion Generators Certified for Canada (OETX7).

Fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners Certified for Canada (AGGZ7).

''Paddle'' fans whose blades rotate below the ceiling are covered under Fans, Ceiling Suspended Certified for Canada (GPRT7).

Light kits intended for use with ceiling-suspended fans are covered under Fans, Ceiling Suspended Certified for Canada (GPRT7).

Fan-speed controls intended for use with fans are covered under Fan-speed Controls Certified for Canada (GQHG7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113 (2012), ''Fans and Ventilators.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fan,'' ''Electric Fan'' or ''Fan Accessory,'' or other appropriate product name as shown in the individual Listings.

The Listing Mark for this category requires the use of a holographic label.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RANGEHOOD CORD-CONNECTION KITS CERTIFIED FOR CANADA (GQFM7)

USE AND INSTALLATION

This category covers rangehood cord-connection kits intended to adapt specific rangehoods for cord connection to the power supply. These rangehood cord-connection kits are limited to installation with specific makes and models of rangehoods as indicated on the rangehood cord-connection-kit packaging and in the installation instructions.

ADDITIONAL INFORMATION

See Fans, Electric, Permanently Installed Type Certified for Canada (GPWX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113 (2010), ''Fans and Ventilators.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RANGEHOOD CORD-CONNECTION KIT
FOR USE WITH LISTED RANGEHOOD SPECIFIED IN MARKINGS ON THE PACKAGING
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FAN-SPEED CONTROLS CERTIFIED FOR CANADA (GQHG7)

GENERAL

This category covers semiconductor, single-phase motor speed controls rated up to 300V, 20 A or less, designed to be used in circuits for the control of shaded pole, permanent split capacitor, or universal motors, and other motors suitable for use with this type of control.

These products may be outlet box mounted, cord-and-plug connected, or intended for mounting in the fan canopy. Cord-and-plug-connected controls are intended for control of cord-and-plug-connected fans only.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 156 (1987), ''Solid-State Speed Controls.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fan Speed Control'' or ''Solid-State Fan Speed Control.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FANS, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (GQJA7)

GENERAL

This category covers stationary and portable electric fans. Fans are provided with motors certified for the location in which the fan will be used.

Portable fans are sealed from terminal compartments, which have provision for connection of three-conductor, flexible, extra-hard-usage cord having a grounding conductor. Connection of portable fans to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which portable equipment is permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (1986), ''Motors and Generators for Use in Hazardous Locations,'' and/or CSA Electrical Certification Notice No. 672, ''Motors Used in Division 2 Locations'' (January 23, 1990).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Fan for Use in Hazardous Locations'' or ''Portable Electric Fan for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FANS, PORTABLE PNEUMATIC FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (GQJX7)

GENERAL

This category covers portable pneumatic fans for use in hazardous locations. This equipment has been investigated for connection to air-supply lines that are made of electrically conductive material in accordance with applicable codes. Ground terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which this portable equipment will be permitted for use. Portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (1986), ''Motors and Generators for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Portable Pneumatic Fan for Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FC CABLE CERTIFIED FOR CANADA (GQKT7)

USE AND INSTALLATION

This category covers flat cable for use in flat cable systems intended for field installation on branch circuits of not more than 600 V between conductors, in accordance with the CAN/CSA C22.1, ''Canadian Electrical Code, Part I.''

The cable is marked with the cable type designation ''Flat Cable,'' manufacturer's identification, voltage and current ratings, conductor size, and temperature rating.

Flat cable is not intended to be installed outdoors or in wet or damp locations.

A marking accompanying the cable on a tag or reel indicates the special metal raceways and specific flat cable fittings with which the cable is intended to be used. Installation instructions are supplied by the manufacturer for use by the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Technical Information Letter No. J-25A, ''Interim Certification Requirements for Flat Cable Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Flat Cable.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FC CABLE FITTINGS CERTIFIED FOR CANADA (GQRS7)

USE AND INSTALLATION

This category covers power tap and cable termination fittings intended for use with FC cable installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

A fitting is suitable for use only with cable identified for use with that fitting.

Installation instructions are provided by the manufacturer.

ADDITIONAL INFORMATION

For additional information, see FC Cable Certified for Canada (GQKT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 65 (2003), ''Wire Connectors,'' and CSA-C22.2 No. 42 (1999), ''General Use Receptacles, Attachment Plugs and Similar Wiring Devices.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with

FC Cable Fittings Certified for Canada (GQRS7)−*Continued*

the word ''LISTED,'' a control number, and the product name ''FC Cable Fitting,'' ''Power Tap'' or ''Cable Feed,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FENCE CONTROLLERS, ELECTRIC CERTIFIED FOR CANADA (GQYR7)

GENERAL

This category covers electric-fence controllers intended for use with conductive fences installed in rural locations, insulated from ground, for the containment of livestock. The fire and electric shock hazards incident to the use of these fences have been reduced to a reasonable degree, provided installation and operation are in accordance with the nameplate information.

Requirements for the operation of electric-fence controllers provide for intermittent energizing of the fence when currents of sufficient magnitude to prevent voluntary breaking of contact are involved. An ''off'' period between impulses is provided in which voluntary muscular control can be regained and contact with the fence broken. It should be recognized that failure to break contact with the fence, due to other than electrical causes, may dangerously increase the hazard related to the use of these devices.

Electric-fence controllers are classified according to the source of supply of the unit and the intended installation.

This category does not covers electric-fence controllers intended for security purposes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 103 (1992), ''Electric Fence Controllers.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Electric Fence Controller.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE DOORS CERTIFIED FOR CANADA (GSNV7)

Fire doors are classified in the following categories: Dumbwaiter, Freight Elevator, Passenger Elevator, Sliding, Special Purpose and Swinging Type Doors.

Fire doors are designed for the protection of openings in walls and partitions against fire when installed in accordance with the instructions in the National Fire Protection Association Standard for Fire Doors and Windows, NFPA 80, and the appropriate requirements contained in the National Building Code of Canada.

For the protection of openings in walls and partitions which are evaluated only to international requirements, see '' Doors Evaluated in Accordance with ISO Publications'' in the Products Evaluated in Accordance with International and Regional Standards Directory.

The rating of 3 —, 1-1/2 —, 1 —, 3/4 — hours, or 20 minutes indicates the duration of exposure to fire. A temperature rise rating of 250 C or 450 F on the Classification Marking applies to the temperature rise developed on the unexposed surface of the door after the first 30 or 60 minutes of fire exposure, as noted on the Classification Marking. Classification Markings which do not indicate a temperature rise are for doors which develop a temperature rise in excess of 250 C or 450 F on the unexposed surface of the door within the first 30 minutes of fire exposure. All doors with glass lights in excess of 0.065 sq m (100 sq in.) are not eligible for a temperature rise rating. Doors with glass light panels of 0.065 sq m (100 sq in.) or less carry the same rating as similar doors without glass vision panels.

Glazing materials covered under this category are Classified as to fire resistance only. The glazing materials are intended to be installed in the fire doors in accordance with NFPA 80 and the installation instructions provided by the manufacturer of the door, glass light frame or glazing material. See Fire-protection-rated Glazing Materials Certified for Canada (KCMZ7).

A door prepared at the factory for a glass light includes the glazing members (frame) but normally does not include the glazing itself. Glazing materials are usually provided by other than the door manufacturer and installed at the time of the door installation.

The protection of an opening depends not only upon the use of fire doors, but also upon the use of Listed door frames and other Listed accessories as specified under each door type. Prospective users should first ascertain from Authorities Having Jurisdiction which door type, mounting, Listed hardware, Listed door frame, and Listed closing mechanism are acceptable for a specific location.

While doors of the freight elevator type, rolling steel type, special purpose type and sliding type or swinging hollow-metal type exceeding the sizes recorded in the tabulations under their respective types have not been subjected to fire tests, a Certificate for Oversized Fire Door can be provided for door assemblies in compliance (except for size), with all requirements for design, materials and construction. The Oversize Certificate will be a label certificate affixed to the door assembly.

Some oversize doors bearing the Oversize Certificate may exceed the size and requirements noted in the National Building Code of Canada. Prospective users of oversize doors should first ascertain from Authorities Having Jurisdiction the acceptability of a particular size and type of door for a specific location.

Similarly, an attached Certificate for Passenger Elevator Fire Door Frame Assemblies incorporating a transom panel can be provided when such frame/transom panel assemblies, designed for use with specific Classified Passenger Elevator Fire Doors and Listed Passenger Elevator Fire Door Hardware, exceed the maximum heights which have been subjected to Standard Fire Tests. As with the oversize doors described above, prospective users should first ascertain from the Authority Having Jurisdiction whether the oversize frame assembly is acceptable for any given location.

The Classification Marking of UL (shown under the specific door type) on the product is the only method provided by UL to identify Fire Doors which have been produced under its Classification and Follow-Up Service.

A Classification Marking on a door indicates only that it has been considered from the fire protection viewpoint without reference to the electrical or accident hazard features which may be involved. The electrical and accident hazard features, if considered, are covered by separate listings. The Classification Marking reading ''(type of door) Fire Door'' pertains only to the door to which it is applied and does not pertain to the frame, hardware or other accessories with which it is installed. The Classification Marking reading ''(type of door) Frame and Fire Door Assembly'' pertains to the door, frame or guide and necessary hardware, and is applicable to those types of doors in which the mounting and operating parts are specially designed for the door and are not interchangeable. In a Frame and Fire Door Assembly the door, frame and hardware are shipped together from the door manufacturer's factory.

The Classification Marking consists of the UL Mark for Canada symbol together with the word ''CLASSIFIED'' (as illustrated in the Introduction of this Directory), a control number and one of the following statements:

CLASSIFIED
"DOOR TYPE" FIRE DOOR No._____
Rating: 3 Hr. Temp Rise — 30 Min. 250 C. Max.

''Door Type'' such as Freight Elevator or Passenger Elevator.

''Fire Door'' Classification Markings, similar to the one illustrated, are also provided with the following ratings: 3 HR, 1-1/2, or 1 HR with Temp. Rise — 30 Min — 250 C (450 F) Max; 3 HR, 1-1/2 HR or 1 HR, with Temp. Rise — 6 Min — 250 C (450 F) Max; 3 HR, 1-1/2 HR, 3/4 HR or 20 Min with no reference to temperature rise.

CLASSIFIED
"DOOR TYPE" FRAME AND FIRE DOOR ASSEMBLY
No._____
Rating: 1-1/2 Hr. Temp. Rise — 30 Min. 250 C. Max.

''Door Type'' such as Dumbwaiter.

''Frame and Fire Door Assembly'' Classification Marking, similar to the one illustrated, are also provided with the following ratings: 1-1/2 HR Temp Rise — 30 Min. — 250 C (450 F) Max., 1-1/2 HR Temp Rise — 6 Min. — 250 C (450 F) Max; or 1-1/2 HR with no reference to temperature rise.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACCESS-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSOT7)

USE AND INSTALLATION

This category covers access-type fire doors, which are assemblies consisting of single-swinging steel doors with frames, self-latching devices and closing mechanisms.

Access-type fire door assemblies are intended to be installed vertically in concrete and masonry walls unless otherwise noted in the individual certifications. Access-type fire door assemblies intended to be installed in non-masonry walls or in nonvertical altitude should be installed in accordance with the installation instructions provided with each assembly to provide the protection indicated.

Access-type fire door assemblies are intended to be installed in accordance with ANSI/NFPA 80, "Fire Doors and Other Opening Protectives," and the "National Building Code of Canada."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, "Standard Method for Fire Tests of Door Assemblies."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark covers the design and construction of the door, frame and hardware. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ACCESS FRAME AND FIRE DOOR ASSEMBLY
FIRE RESISTANCE CLASSIFICATION
*** RATING**
SEE UL FIRE RESISTANCE DIRECTORY
No.

* Includes an hourly duration, such as "1 HR," and may include a temperature rise performance statement, such as "TEMP RISE: 250°C – 30 MIN" or "TEMP RISE: 250°C – 60 MIN"

* *

CHUTE-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSPR7)

This category covers chute type fire doors.

Chute doors of the intake and discharge types are of formed steel, of the flush design, with frames, latching, and closing mechanisms.

Each door bears a Chute Frame and Fire Door Assembly Classification Marking with one of the following ratings: 1-1/2 HR Temp Rise -30 Min-250C (450 F Max); 1-1/2 HR Temp Rise-60 Min -250 C (450 F) Max; or 1-1/2 HR, 1 HR, or 3/4 HR with no reference to temperature rise. The Classification Marking on all doors of these types covers the design and construction of the door, frame, and hardware; and for service counter doors, the Classification Marking also includes the sill.

Chute doors of the intake type are Classified for openings not exceeding 914 mm (36 in.) in width and 914 mm (36 in.) in height, or 610 mm (24 in.) in diam; and discharge doors not exceeding 914 mm (36 in.) in width and 1219 mm (48 in.) in height. The requirements for chute doors intended for rubbish handling are described in the National Fire Protection Association Standard, Incinerators and Rubbish Handling NFPA 82.

Chute doors are intended to be installed in concrete and masonry walls unless otherwise noted in the individual Classifications.

Chute doors intended to be installed in non-masonry walls must be installed in accordance with the installation instructions provided with each assembly to provide the protection indicated.

For additional information and Classification Marking see Fire Doors, Guide GSNV7.

The basic standard used to investigate products in this category is CAN4-S104-80M, "Standard Method For Fire Tests Of Door Assemblies".

* *

DUMBWAITER-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSRV7)

This category covers dumbwaiter type frame and fire door assemblies.

Dumbwaiter doors are of counterbalanced and swinging types of the flush design, of formed steel and included wall guides, frame, latching, and counterbalancing mechanisms.

Each door assembly bears a "Dumbwaiter Frame and Fire Door Assembly" Classification Marking with one of the following ratings: 1-1/2 HR Temp Rise — 30 Min — 250 C (450 F) Max; 1-1/2 HR Temp Rise — 6 Min — 250 C (450 F) Max; or 1-1/2 HR or 3/4 HR with no reference to temperature rise. The Classification Marking on all these doors covers the design and construction of the door, frame, and hardware.

INSTALLATION:

For standards on the installation of hoist way doors see NFPA 80.

Sizes

Dumbwaiter doors are Classified for openings not exceeding 1245 mm (49 in.) in width and 2286 mm (90 in.) in height.

Dumbwaiter doors are intended to be installed in concrete and masonry wall unless otherwise noted in the individual Classifications.

Dumbwaiter doors intended to be installed in non-masonry walls must be installed in accordance with the installation instructions provided with each assembly to provide the protection indicated.

Glass Panels.

Dumbwaiter doors may be provided with Classified 6 mm (1/4 in.) Classified thick wired-glass vision lights not exceeding 76 mm (3 in.) in diameter per opening.

For additional information and Classification Marking see Fire Doors, Guide GSNV7.

The basic standard used to investigate products in this category is CAN4-S104-80M, "Standard Method For Fire Tests of Door Assemblies".

* *

FREIGHT-ELEVATOR-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSST7)

This category covers freight elevator fire doors of the single-swing or counterbalanced type. The doors consist of either formed steel-sheets, hollow-metal, or metal covered wood units. The counterbalanced door assembly includes the door panels, frame (optional), guides, latching device, and counterbalance mechanism.

Each door or door assembly bears a "Freight Elevator Fire Door" Classification Marking with one of the following ratings: 1-1/2 HR, Temp Rise — 30 Min — 250 C (450 F) Max or 1-1/2 HR, Temp Rise — 60 Min 250 C (450 F) Max or 1-1/2 HR with no reference to temperature rise. The Classification Marking covers the design and construction of the door or door assembly.

INSTALLATION:

Freight elevator doors are intended to be installed in concrete and masonry walls, unless otherwise noted in the individual Classifications.

For standards on the installation of hoist way doors see NFPA 80.

Sizes:

Counter-balanced steel, hollow-metal, and metal clad, freight elevator type doors are Classified for openings not exceeding 4115 mm (13 ft 6 in.) in width and 3658 mm (12 ft) in height in masonry or 3353 mm (10 ft 10 in.) in width and 3200 mm (10 ft 6 in.) in height in non-masonry walls.

Single-swing freight elevator doors are Classified for openings not exceeding 1219 mm (4 ft) wide and 2438 mm (8 ft) high in masonry or non-masonry walls.

Door Frames:

Swinging type freight elevator doors are to be installed in Listed door frames to provide the protection indicated.

Counterbalanced type freight elevator doors may be installed in concrete and masonry walls without a frame. Counter-balanced type freight elevator doors shall be installed in non-masonry walls and may be installed in concrete or masonry walls with the frame supplied with the door assembly or in a Listed frame as indicated in the individual frame listings. When a frame is used with counterbalanced doors, it is to be installed in accordance with the installation instructions provided with each door assembly to provide the protection indicated.

See "Door and Window Frames" (GVTV7).

Glass Panels:

These doors may be provided with Classified 6 mm (1/4-in.) thick Classified wired-glass vision panels. The sum of the exposed area or areas per opening does not exceed 0.065 m^2 (100 sq in.) with neither dimension exceeding 305 mm (12 in.)

For additional information and Classification Marking see Fire Doors (GSNV7).

Freight-elevator-type Fire Doors Certified for Canada (GSST7)−*Continued*

The basic standard used to investigate products in this category is CAN4-S104-80M, "Standard Method For Fire Tests of Door Assemblies".

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PASSENGER-ELEVATOR-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSUX7)

This category covers passenger elevator fire doors of the single-swing or sliding hollow-metal type. The sliding door panels may be used in single slide assemblies of the one, two, or three speed type, or they may be used in center parting assemblies of the one or two speed type.

Each door panel bears a "Passenger Elevator Fire Door" Classification Marking with the following rating: 1-1/2 HR with Temp Rise -60 min - 250 C (450 F); 1-1/2 HR with Temp Rise - 30 min - 250 C (450 F) max; 1-1/2 HR, 1 HR or 3/4 HR with no reference to temperature rise. The Classification Marking covers the design and construction of the door or door panels only.

INSTALLATION:

For standards on the installation of hoist way doors for elevators see NFPA 80.

Elevator Door Hardware:

The sliding door panels shall be installed with Listed Hardware consisting of hangers, track, header, sill, closer, and retaining clips (as indicated in the individual hardware listing). See "Passenger Elevator Door Hardware, (GZKZ7)" .

The swinging door panels shall be installed with sill, hinges, Listed frame, Listed latching device and Listed closing device. For Listed frames and latching devices see "Door Frames (GVST7)", "Single-Point Locks or Latches (GYJT7)" . Doors must be provided with hinges or pivots in accordance with the instructions in NFPA 80.

Sizes:

Sliding passenger elevator Fire doors are Classified for openings not exceeding 2438mm (8 ft) wide and 3048mm (10 ft) high.

Single-swing passenger elevator Fire doors are Classified for openings not exceeding 1219mm (4 ft) wide and 2438mm (8 ft) high.

Glass Panels:

Sliding doors may be provided with glass panels.

Single-swing doors shall be provided with glass panels.

The glass panel shall be of Classified 6mm (1/4 in.) thick wired glass. The area of a single glass panel shall be not less than 0.016m^2 (25 sq in.) and the total area of one or more glass panels shall not be more than 0.052m^2 (80 sq in.) Each glass panel shall reject a ball 152mm (6 in.) in diameter.

Door Frames

Passenger elevator fire doors used in dry wall shaft construction must be installed in Listed door frames to provide the protection indicated. When acceptable to the authority having jurisdiction Classified Passenger Elevator Fire Doors may be installed, along with Listed Passenger Elevator Door Hardware, in an oversize Passenger Elevator Fire Door Frame assembly furnished with a Certificate of Inspection. See "Door Frames" (GVST7).

INTERLOCKS

Elevator door assemblies that may be provided with an interlock and associated wiring which is operational for a minimum of 1 h when the assembly is subjected to the fire exposure described in CAN4-S104-80M, Standard Method For Fire Test of Door Assemblies, are identified in the individual door listings and on the door Classification Mark.

For additional information and Classification Marking see "Fire Doors (GSNV7)" .

The basic standard used to investigate products in this category is CAN4-S104-M80, "Standard Method For Fire Tests of Door Assemblies".

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROLLING STEEL FIRE DOORS CERTIFIED FOR CANADA (GSVV7)

USE AND INSTALLATION

This category covers rolling steel fire doors, which consist of interlocking galvanized or stainless steel slats, bottom bar, wall guides, barrel assembly, automatic release device, governor, and counterbalance mechanism. The doors may be provided with a motor drive assembly that does not interfere with the manual or automatic (fusible link, other fixed temperature release, or a rate of rise temperature release) closing of the door.

Rolling steel fire doors are intended to be installed in accordance with ANSI/NFPA 80, "Fire Doors and Other Opening Protectives," and the "National Building Code of Canada." Authorities Having Jurisdiction should be consulted before installation.

Rolling steel fire doors are intended to be installed in concrete and masonry walls, unless otherwise noted in the individual Classifications. The doors are intended to be installed in accordance with the installation instructions provided with each assembly.

Rolling steel fire doors intended to be installed as service-counter doors may be installed with either a masonry sill or a factory-built countertop as described in Miscellaneous Fire Door Accessories Certified for Canada (GVUX7). For service-counter doors of the rolling type, see Service Counter-type Fire Doors Certified for Canada (GSWT7).

Rolling Steel Fire Doors Certified for Canada (GSVV7)−*Continued*

SIZES

Two types of Classification Marks are available for rolling steel fire doors based upon the size of the door. The maximum size of a rolling steel fire door that has been subjected to a fire test is intended for an opening not exceeding 14.1 sq m (152 sq ft) in area, with no dimension exceeding 4115 mm (13 ft 6 in.). Rolling steel fire doors intended for openings not exceeding 14.1 sq m (152 sq ft) in area and with no dimension exceeding 4115 mm (13 ft 6 in.) bear the "Rolling Steel Fire Door" Classification Mark.

Rolling steel fire doors exceeding these maximum dimensions and manufactured in compliance (except for size) with UL's requirements for design, materials and construction bear the "Oversized Rolling Steel Fire Door" Classification Mark. Oversized doors are not Classified as to temperature transmission. Prospective users should ascertain from the Authority Having Jurisdiction whether the assembly is acceptable for a specific location.

GLAZING

Rolling steel fire doors may be provided with glass lights, as indicated in the individual Classifications. For additional information and Classification Mark, see Fire-protection-rated Glazing Materials Certified for Canada (KCMZ7).

BOTTOM BAR REPLACEMENT

The bottom bar of rolling steel fire doors is subject to damage from everyday use and occasionally the damage warrants replacement of the bottom bar. When the Classification Mark is attached to the bottom bar, the following method is authorized for replacement of the bottom bar. When acceptable to the Authority Having Jurisdiction, the Classification Mark may be removed from the bottom bar and returned to the door manufacturer along with a request for a new bottom bar. The door manufacturer is authorized to provide a replacement bottom bar for field installation with a Classification Mark that reads "Replacement Part for Rolling Fire Door" or "Replacement Part for Oversized Rolling Fire Door." The Classification Mark also includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a serial number, and a fire rating equal to that of the original Classification Mark that was returned to the manufacturer.

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104 (1980), "Standard Method for Fire Tests of Door Assemblies."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark covers the design and construction of the door, including the governor and automatic releasing mechanism. The Classification Mark for regular-sized rolling steel fire doors includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ROLLING STEEL FIRE DOOR
FIRE RESISTANCE CLASSIFICATION
RATING: + HR
TEMP RISE: ++
No.

The Classification Mark for oversized rolling steel fire doors includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Rolling Steel Fire Doors Certified for Canada (GSVV7)−*Continued*

OVERSIZED ROLLING STEEL FIRE DOOR
AS TO + HR FIRE RATING ONLY
SEE UL FIRE RESISTANCE DIRECTORY
No.

+ **4**, **3**, **1-1/2** or **3/4**

++ **30 MIN – 250°F MAX**, **30 MIN – 450°F MAX**, **30 MIN – 650°F MAX**, or no reference to temperature rise when the temperature rise exceeds 650°F at 30 min.

The UL Mark is generally attached to the bottom bar of the rolling steel fire door.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SERVICE-COUNTER-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSWT7)

This category covers service counter fire doors.

Service counter doors are of the single and two-speed counterbalanced types of flush design, or of the rolling type, of formed steel, and include wall guides, frame, sill latching, and counterbalancing mechanisms.

Each door bears a "Service Counter Frame and Fire Door Assembly" . Classification Marking with one of the following ratings: 1-1/2 HR Temp Rise-30 Min-250 C (450 F) Max 1-1/2 HR Temp Rise-60 Min-450 C (650 F) Max; or 1-1/2 HR, 1 HR, 3/4 HR with no reference to temperature rise. The Classification Marking on all doors of these types covers the design and construction of the door, frame, hardware, and sill.

Sizes.

Service counter doors are Classified for openings not exceeding 3048 mm (10 ft) in width and 1829 mm (6 ft) in height.

Service counter doors are intended to be installed in concrete and masonry walls unless otherwise noted in the individual Classifications.

Service counter doors intended to be installed in non-masonry walls must be installed in accordance with the installation instructions provided with each assembly to provide the protection indicated.

Service counter doors of the panel type may be provided with Classified 6.35 mm (1/4 in.) thick Fire-protection-rated Glazing Material Certified for Canada (KCMZ7) vision panels not exceeding 0.065 sq m in.(100 sq in.) in an area with neither dimension exceeding 254 mm (10 in.)

For additional information and Classification Marking see Fire Doors Certified for Canada Guide GSNV7.

The basic standard used to investigate products in this category is CAN4-S104-1980, "Standard Method For Fire Tests of Door Assemblies".

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SLIDING-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSXV7)

Sliding type fire doors consist of the following constructions: Hollow-Metal.

CLASSIFICATION MARKINGS:

Each door bears the UL Mark for Canada symbol with the word "CLASSIFIED" (as illustrated in the Introduction of this directory) and "Sliding Type Fire Door," a control number and the statement:

CLASSIFIED
SLIDING TYPE FIRE DOOR No. _____
Rating: _____ +_____ Temp. Rise: _____ ++_____

3HR, 1-1/2 HR, 1HR, 3/4 HR, or 20 Min.

++30 Min — 250 C (450 F) Max, 60 Min — 250 C (450 F) Max, or no reference to temperature rise when the temperature rise exceeds 250 C at 30 min.

INSTALLATION:

Sliding type doors are intended for installation in concrete or masonry walls unless otherwise noted in the individual Classifications.

ASTRAGALS:

Center parting doors must be provided with an astragal in accordance with NFPA 80 to provide the protection indicated.

GLAZING:

Doors bearing 3 HR Classification Markings are not to be provided with glass lights.

Sliding-type Fire Doors Certified for Canada (GSXV7)−*Continued*

Doors bearing the 1-1/2 or 1 HR Classification Marking may be provided with Classified Glazing Materials for the glass lights. The sum of the exposed glass area shall not exceed 0.065m^2 (100 sq in.) per door, and the width and height shall not exceed 305 and 832mm (12 and 33 in.), respectively.

Doors bearing the 3/4 HR or 20 Min Classification Markings may be provided with one or more Classified Glazing Materials for the glass lights. The exposed area of each glass light shall not exceed 0.84m^2 (1296 sq in.) with no dimension exceeding 1372mm (54 in.)

Classified 6mm (1/4 in.) thick wired glass as well as other types of Classified glazing material are covered under Fire-protection-rated Glazing Materials Certified for Canada (KCMZ7). The glazing material is to be installed in accordance with the manufacturer's instructions to provide the protection indicated.

A door prepared at the factory for a glass light includes the glazing members (frame), but normally does not include the glass itself. The glazing material (glass) is usually provided by other than the door manufacturer and is installed in the field at the time of the door installation.

PASS DOOR:

Sliding doors may be provided with pass doors by some manufacturers as indicated by the individual Classifications.

The pass door, complete with all necessary hardware, is provided with the sliding door panel.

HARDWARE:

Sliding doors bearing the 3 HR, 1-1/2 HR, 1 HR, 3/4 HR or 20 Min must be provided with Listed fire door hardware to provide the protection indicated.

DOOR CLOSERS:

Doors must be provided with door closing devices in accordance with the instructions in NFPA 80.

DOOR TYPES AND SIZES:

The following tabulation of door sizes is provided as a reference guide and includes the maximum sizes currently Classified. The maximum door sizes will vary for each individual classification.

COMPOSITE TYPE

Composite doors include steel covered type fire doors. They consist of a manufactured core material with steel edges, and face sheets of steel. Steel covered composite doors are rated up to 3 HR.

		Max Size of Opening	
Type of Door	**Area Sq Ft**	**Width**	**Height**
Horizontal sliding, single slide or center parting	7.74m^2 (120 sq ft)	3658mm (12 ft 0 in.)	3658mm (12ft 0 in.)

HOLLOW-METAL TYPE

Hollow-metal doors consist of formed steel of the flush and paneled designs. Hollow metal doors are rated up to 3 HR.

		Max Size of Opening	
Type of Door	**Area Sq Ft**	**Width**	**Height**
Horizontal sliding, single slide or center parting	7.74m^2 (120 sq ft)	3658mm (12 ft 0 in.)	3658mm (12 ft 0 in.)

SHEET METAL TYPE

Sheet metal doors consist of formed steel of the corrugated, flush, and paneled designs. Sheet metal doors are rated up to 3 HR.

		Max Size of Opening	
Type of Door	**Area Sq Ft**	**Width**	**Height**
Horizontal sliding, single slide or center parting	7.74m^2 (120 sq ft)	3658mm (12 ft 0 in.)	3658mm (12 ft 0 in.)

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIAL-PURPOSE FIRE DOORS CERTIFIED FOR CANADA (GSXZ7)

USE AND INSTALLATION

This category covers special-purpose fire door and frame assemblies. They consist of doors, frames, latches, hinges and closers of special construction or for special use as indicated in the individual Classifications. Special-purpose doors are intended to be installed in concrete, masonry or

Special-purpose Fire Doors Certified for Canada (GSXZ7)−*Continued*

nonmasonry walls in accordance with the installation instructions provided with each assembly to provide the protection indicated.

Authorities Having Jurisdiction should be consulted before installation.

SIZES

Two types of Classification Marks are available for special-purpose fire door assemblies based upon the size of the door. The maximum size of a special-purpose fire door that has been subjected to a fire test is intended for an opening not exceeding 14.1 sq m (152 sq ft) in area, with no dimension exceeding 4115 mm (13 ft 6 in.). Special-purpose fire doors intended for openings not exceeding 14.1 sq m (152 sq ft) in area and with no dimension exceeding 4115 mm (13 ft 6 in.) bear the ''Special Purpose Fire Door and Frame Assembly'' or individual ''Special Purpose Fire Door Assembly'' and ''Special Purpose Frame Assembly'' Classification Mark.

Special purpose fire doors exceeding these maximum dimensions and manufactured in compliance (except for size) with UL's requirements for design, materials and construction may bear a Classification Mark that includes the statement ''Oversized Special Purpose Fire Door.'' Oversized doors are not Classified as to temperature transmission. Prospective users should ascertain from the Authority Having Jurisdiction whether the assembly is acceptable for a specific location.

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104-1980, ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark covers the design and construction of the door, the frame, and the hardware assembly to be installed in accordance with the installation instructions provided with each assembly. The Classification Mark for regular-sized special-purpose fire doors includes the UL Mark for Canada symbol, the word ″CLASSIFIED″ above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]
FIRE RESISTANCE CLASSIFICATION
**** RATING**
SEE UL FIRE RESISTANCE DIRECTORY
No.

* **SPECIAL PURPOSE FIRE DOOR AND FRAME ASSEMBLY**, **SPECIAL PURPOSE FIRE DOOR ASSEMBLY** or **SPECIAL PURPOSE FRAME ASSEMBLY**

** The rating includes an hourly duration, such as ''1Hr,'' and may include a temperature rise performance, such as ''Temperature rise – 250°F at 30 minutes.''

The Classification Mark for oversized special-purpose fire doors includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]
FIRE RESISTANCE CLASSIFICATION
**** RATING**
SEE UL FIRE RESISTANCE DIRECTORY
No.

* **SPECIAL PURPOSE OVERSIZED FIRE DOOR AND FRAME ASSEMBLY**, **SPECIAL PURPOSE OVERSIZED FIRE DOOR ASSEMBLY** or **SPECIAL PURPOSE OVERSIZED FRAME ASSEMBLY**

** The rating includes an hourly duration, such as ''1 Hr.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWINGING-TYPE FIRE DOORS CERTIFIED FOR CANADA (GSYX7)

GENERAL

This category covers swinging-type fire doors consisting of the following constructions: hollow-metal and steel-covered composite.

INSTALLATION

Swinging-type doors are intended for installation in concrete, masonry and nonmasonry walls.

ASTRAGALS

Doors swinging in pairs in the same direction and double-egress doors swinging in opposite directions bearing the 3 h, 1-1/2 h, 1 h, 3/4 h, or 20 min Classification Mark may be provided with or without an astragal by some manufacturers as indicated in the individual Classifications.

Swinging-type Fire Doors Certified for Canada (GSYX7)−*Continued*

GLAZING

Glazing materials referenced in this category are Classified as to fire resistance only. The glazing materials are intended to be installed in fire doors in accordance with ANSI/NFPA 80, ''Fire Doors and Fire Windows,'' and the installation instructions provided by the manufacturer of the door, glass light frame or glazing materials. See Fire Door Glass Light Frames Certified for Canada (GVVX7) and Fire-protection-rated Glazing Materials Certified for Canada (KCMZ7).

Doors bearing 3 h Classification Marks are not intended to be provided with glass lights.

Doors bearing the 1-1/2 or 1 h Classification Marks may be provided with Classified glazing materials for the glass lights. The sum of the exposed glass area should not exceed 0.065m^2 (100 sq in.) per door and the width and height should not exceed 305 and 832 mm (12 and 33 in.), respectively.

Doors bearing 3/4 h or 20 min Classification Marks may be provided with one or more Classified glazing materials for the glass lights. The exposed area of each glass light should not exceed 0.84 m^2 (1296 sq in.) with no dimension exceeding 1372 mm (54 in.).

Classified 6 mm (1/4 in.) thick wired glass, as well as other types of Classified glazing material, are covered under Fire-protection-rated Glazing Materials Certified for Canada (KCMZ7). The glazing material is intended to be installed in accordance with the manufacturer's instructions to provide the protection indicated.

A door prepared at the factory for a glass light includes the glazing members (frame), but generally does not include the glass itself. The glazing material (glass) is usually provided by other than the door manufacturer and is installed in the field at the time of the door installation.

LOUVERS

Doors bearing the 1-1/2 h, 1 h, 3/4 h or 20 min Classification Mark may be provided with a Listed fire door louvers (see GVZS7) by some manufacturers as indicated in the individual Classifications.

Authorities Having Jurisdiction should be consulted before installation.

DUTCH DOOR

Single-swing, hollow-metal, dutch-type doors bearing the 3 h, 1-1/2 h, 1 h, 3/4 h or 20 min Classification Mark may be provided by some manufacturers as indicated in the individual Classifications.

A horizontal astragal should be provided between the top and bottom door leaves.

HARDWARE

Single-swing doors bearing the 3 h, 1-1/2 h, 1 h, 3/4 h or 20 min Classification Mark should be provided with Listed single-point locks or latches with a min 18.7 mm (1/2 in.) throw (except as indicated in the individual manufacturer's Classification Mark) to provide the protection indicated. Listed mortise- or rim-type fire-exit hardware devices may also be used.

Doors swinging in pairs (same direction) bearing the 3 h, 1-1/2 h, 1 h, 3/4 h or 20 min Classification Mark should be provided with Listed single-point locks or latches with a min 19 mm (3/4 in.) throw (except as indicated in the individual manufacturer's Classification Mark) and Listed top and bottom flush bolts or surface bolts to provide the protection indicated. Listed fire-exit hardware devices may also be used.

Double-egress doors (doors swinging in pairs – opposite direction) bearing the 3 h, 1-1/2 h, 1 h, 3/4 h or 20 min Classification Mark should be provided with the Listed vertical-rod fire-exit hardware devices to provide the protection indicated.

HINGES

Doors should be provided with hinges, pivots or olive knuckles in accordance with the specifications in ANSI/NFPA 80.

DOOR FRAMES

Doors should be installed in Listed door frames to provide the protection indicated. See Fire Door and Window Frames Certified for Canada (GVTV7).

DOOR CLOSERS

Doors should be provided with door closers in accordance with the instructions in ANSI/NFPA 80.

For Listings of closing devices, refer to the following categories:

- Combination Fire Door Closers and Holders Certified for Canada (GTIS7)
- Fire Door Operators Certified for Canada (GUCZ7)
- Fire Door Operators with Automatic Closers Certified for Canada (GUJY7)
- Swinging Fire Door Closers Certified for Canada (GVEV7)

DOOR TYPES AND SIZES

The following tabulation of doors is provided as a reference guide and includes the maximum sizes currently Classified. The maximum door sizes will vary for each individual Classification.

Composite Type

Swinging-type Fire Doors Certified for Canada (GSYX7)−*Continued*

Composite doors include steel-covered fire doors. They consist of a manufactured core material with steel edges, and face sheets of steel. Steel-covered composite doors are rated up to 3 h.

Sizes:

Type of Door	Maximum Size of Opening	
	Width	Height
Swinging, single (steel-covered)	1219 mm (4 ft, 0 in.)	3048 mm (10 ft, 0 in.)
Swinging in pairs (steel-covered)	2438 mm (8 ft, 0 in.)	3048 mm (10 ft, 0 in.)

Hollow-metal Type

Hollow-metal doors consist of formed steel of the flush and paneled designs. Hollow-metal doors are rated up to 3 h.

Sizes:

Type of Door	Maximum Size of Opening	
	Width	Height
Swinging, single	1219 mm (4 ft, 0 in.)	3048 mm (10 ft, 0 in.)
Swinging in pairs	2438 mm (8 ft, 0 in.)	3048 mm (10 ft, 0 in.)

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104-1980, ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SWINGING TYPE FIRE DOOR NO. ____
MINIMUM LATCH THROW: + IN.
RATING: ++ TEMP RISE: +++
No.

\+ **1/2**, **5/8** or **3/4**

++ **3 HR**, **1-1/2 HR**, **1 HR**, **3/4 HR** or **20 MIN**

+++ **30 MIN – 250 C (450 F) MAX**, **60 MIN – 250 C (450 F) MAX**, or no reference to temperature rise when the temperature rise exceeds 250°C at 30 min.

In addition, some manufacturers can furnish doors bearing the notation ''FIRE DOOR TO BE EQUIPPED WITH FIRE EXIT HARDWARE'' in lieu of the notation ''MINIMUM LATCH THROW: + IN.,'' as indicated in the individual Classifications.

The Classification Mark is applied on the hinge edge of the door or on the head (top edge) of the door when the door is intended for use with a continuous hinge.

****

Finishers of Fire Doors Certified for Canada (GSZC7)

GENERAL

This category covers finishers of fire doors. Finishers are identified as distributors in the steel door industry and machiners in the wood door industry.

Finishers receive fire doors from the primary manufacturer. These fire doors have a unique marking signifying the door was manufactured in compliance with UL's Follow-Up Service requirements. The finisher may modify the fire door to satisfy site-specific requirements for items such as vision panels and hardware.

RELATED PRODUCTS

See Swinging-type Fire Doors Certified for Canada (GSYX7) for Listings of primary manufacturers.

ADDITIONAL INFORMATION

For additional information, see Swinging-type Fire Doors Certified for Canada (GSYX7), Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification

Finishers of Fire Doors Certified for Canada (GSZC7)−*Continued*

and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SWINGING TYPE FIRE DOOR
CAN/ULC-S104
MINIMUM LATCH THROW: + IN.
RATING: ++
TEMP RISE: +++

\+ 1/2 in., 5/8 in. or 3/4 in.

++ 4 h, 3 h, 1-1/2 h, 1 h, 3/4 h, 30 min or 20 min

+++ 30 min – 250°F max, 30 min – 450°F max, 30 min – 650°F max, or 30 min > 650°F

In addition, some manufacturers can furnish doors bearing the notation ''FIRE DOOR TO BE EQUIPPED WITH FIRE EXIT HARDWARE'' in lieu of the notation ''MINIMUM LATCH THROW: + IN.,'' as indicated in the individual Classifications.

FIRE DOOR CLOSERS, HOLDERS AND OPERATORS CERTIFIED FOR CANADA (GTBT7)

USE

This category covers fire door closers, holders and operators intended for installation in accordance with ANSI/NFPA 80, ''Fire Doors and Other Opening Protectives.''

Fire doors must be in the fully closed position to perform their intended function. The protection of an opening depends not only upon the use of a labeled door of the proper type, but also upon the use of a labeled frame, Listed hardware, Listed door closer, and coordinators, if required, as well as the correct installation of such equipment.

Authorities Having Jurisdiction should be consulted as to which type of mounting and Listed holding and closing mechanisms are acceptable for any given location.

RELATED PRODUCTS

See Swinging Fire Door Closers Certified for Canada (GVEV7).

****

Combination Fire Door Closers and Holders Certified for Canada (GTIS7)

USE AND INSTALLATION

This category covers combination fire door closers and holders intended for use with swinging fire doors. They are designed to hold the door in the open position under normal usage and release and automatically close the door under fire conditions. They incorporate an integral electromagnetic holder mechanism designed for use with certified automatic fire detectors, provided with normally closed switching contacts.

Combination fire door closers and holders with integral latches are suitable for use with single-swinging fire doors having a 20 min fire rating. Doors incorporating such devices are not required to have any other means of latching.

These devices have been investigated from an electrical as well as fire protection standpoint.

Authorities Having Jurisdiction should be consulted to ensure that the door, combination closer and holder, and automatic fire detector or other combination of system units are acceptable for any given location.

ADDITIONAL INFORMATION

For additional information, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7), Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN4-S104 (1980), ''Standard Method for Fire Tests of Door Assemblies,'' CAN/ULC-S133 (1990), ''Door Closers Intended for Use with Swinging Doors,'' and, where applicable for releasing-service detectors, CAN/ULC-S529 (2002), ''Smoke Detectors for Fire Alarm Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product

Combination Fire Door Closers and Holders Certified for Canada (GTIS7)−*Continued*

name "Combination Door Closer and Holder" or "Combination Door Closer and Holder with Integral Latch for Use with Doors of 20 Min Fire Rating."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fire Door Holders Certified for Canada (GTPR7)

GENERAL

This category covers door holders intended for use with swinging, sliding, or rolling fire doors. They are designed to hold doors in the open position under normal usage and release the doors under fire conditions. They are intended for use with a suitable door closer and automatic operating devices or systems.

The door holders intended for use with automatic operating devices or system units have been investigated from an electrical as well as fire protection standpoint.

Authorities Having Jurisdiction should be consulted that the door, door holders, door closer, and automatic operating device or other combination of system units are acceptable for any given location.

RELATED PRODUCTS

Automatic operating devices or systems consist of releasing devices, thermostats for releasing-device service, or smoke-automatic fire detectors, for use with releasing-device equipment.

For information on door closers, see Fire Door Accessories Certified for Canada (GVUW7) and Fire Door Closers, Holders and Operators Certified for Canada (GTBT7).

ADDITIONAL INFORMATION

For additional information, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C228 (1994), "Door Closers and Holders."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Door Holder."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fire Door Operators Certified for Canada (GUCZ7)

USE AND INSTALLATION

This category covers fire door operators investigated for fire and electrical protection.

Fire door operators are intended for single-slide and center parting level and inclined track fire doors. These devices consist of an electric-powered operator that opens and closes the door during normal usage, and a mechanical release which, under fire conditions, disconnects the door from the powered operator and permits it to close by either a certified sliding-door closer or a system of suspended weights, as described in ANSI/NFPA 80, "Fire Doors and Other Opening Protectives."

Fire door operators are intended for installation in accordance with the instructions provided with the product.

ADDITIONAL INFORMATION

For additional information, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN4-S104, "Standard Method for Fire Tests of Door Assemblies," and CAN/CSA-C22.2 No. 247 (1992), "Operators and Systems of Doors, Gates, Draperies and Louvres."

UL MARK

Fire Door Operators Certified for Canada (GUCZ7)−*Continued*

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door Operator."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fire Door Operators with Automatic Closers Certified for Canada (GUJY7)

USE AND INSTALLATION

This category covers fire door operators with automatic closers investigated for fire and electrical protection.

Sliding fire door operators with automatic closers are intended for single-slide and center parting level track hollow-metal and steel-covered composite type doors. These devices consist of a pneumatic, hydraulic or electric-powered operator that opens and closes the door during normal usage, and a heat-actuated releasing device which, under fire conditions, releases the pneumatic power and permits the suspended weights on level arms to close the door.

Swinging fire door operators are intended for use on a pair of certified hollow-metal fire doors swinging in the same or opposite (double egress) direction. The doors incorporate certified fire exit hardware consisting of a concealed vertical rod device. These devices consist of a pneumatic-powered operator that opens and closes the doors during normal operation, electric solenoids with actuators mounted in the head of the frame that allows the top and bottom bolts of the vertical rod device to engage the strikes and latch the doors in the event of a fire, and a certified heat or smoke detector which, under fire conditions, allows the integral closer to bring the doors to the closed position and the actuator to latch the top and bottom bolts.

Single-swing fire door operators are intended for use on single-swing hollow-metal fire doors. The door incorporates a certified single-point latch. These devices consist of a powered operator that opens and closes the doors during normal operation, a certified electric strike in the jamb that engages the single-point latch in the event of a fire, and a certified heat or smoke detector which, under fire conditions, allows the integral closer to bring the door to the closed position and the electric strike to engage the latch.

Fire door operators with automatic closers are intended for installation in accordance with the instructions provided with the product.

ADDITIONAL INFORMATION

For additional information, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN4-S104, "Standard Method for Fire Tests of Door Assemblies," and CAN/CSA-C22.2 No. 247 (1992), "Operators and Systems of Doors, Gates, Draperies and Louvres."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door Operator with Automatic Closer."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Retrofit Rolling Steel Fire Door Operators Certified for Canada (GUNL7)

USE

This category covers retrofit rolling steel fire door operators intended to replace door operator and governor systems used on exiting certified rolling steel fire doors as identified in the individual certifications. Retrofit door operators/governors have been investigated to determine that when installed in accordance with the manufacturer's installation instructions, the door operators/governors do not adversely affect the operation or fire resistance of certified rolling steel fire doors.

ADDITIONAL INFORMATION

Retrofit Rolling Steel Fire Door Operators Certified for Canada (GUNL7)−*Continued*

For additional information, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

Sliding Fire Door Closers Certified for Canada (GUQX7)

USE AND INSTALLATION

This category covers door closers for single-slide and center-parting level and inclined track fire doors. These devices consist either of a fixed weight suspended from an operating mechanism or a spring-operated pusher assembly.

Upon manual release or automatic release performed by an integral system within the device or by a separate releasing device, the door is pulled or pushed to a closed position.

The sliding door closer is intended to be installed in accordance with the directions furnished with the device.

ADDITIONAL INFORMATION

For additional information, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN4-S104, ''Standard Method for Fire Tests of Door Assemblies,'' and ULC/ORD-C228, ''Door Closers and Holders.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Sliding Door Closer.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Swinging Fire Door Closers Certified for Canada (GVEV7)

USE AND INSTALLATION

This category covers door-closing mechanisms of the self-closing and automatic types for swinging doors.

Self-closing door closers of either the surface mounted, floor mounted, concealed, semi-concealed, or spring-hinge type return the door to the closed position when opened.

Automatic door closers of either the surface mounted, concealed, or semi-concealed type employ a hold-open arm with a fusible link, which permits the door to close when a fire occurs. Fusible links on door closers are somewhat slower in action than links located at the top of the opening and at the ceiling.

The swinging-door closer is intended to be installed in accordance with the installation instructions packaged with the device. The use of sex bolts or through bolts to mount the closer to the door is required for wood or

Swinging Fire Door Closers Certified for Canada (GVEV7)−*Continued*

plastic-faced composite-type fire doors unless an alternate method is identified in the individual door manufacturer's certifications (and installation instructions). The use of sex bolts to mount the closers to the door is required for steel-covered composite type, sheet-metal type or hollow-metal-type fire doors provided without closer reinforcements. The use of steel machine screws to mount the closer to the door is required for steel-covered composite type, sheet-metal type or hollow-metal-type fire doors incorporating steel closer reinforcements. The use of wood screws, sheet-metal screws, sex bolts or through bolts to mount the closer to the door are required for metal-clad (Kalamein) type or wood-core-type fire doors. Some special closers are intended for use only in doors or door frames other than fire doors or fire door frames. The manufacturer of the product should be consulted to determine suitability of mounting the closer in the fire door or fire door frame.

ADDITIONAL INFORMATION

For additional information, see Fire Door Closers, Holders and Operators Certified for Canada (GTBT7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S133, ''Door Closers Intended for Use with Swinging Doors.'' Door closers of the spring-hinge type are investigated using the endurance test in CAN/ULC-S133.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Door Closer Body,'' ''Door Closer Arm,'' ''Door Closer Hold-Open Arm'' or ''Door Closer Body Accessory – For Use With Model XXX Door Closer Body.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE DOOR AND WINDOW FRAMES CERTIFIED FOR CANADA (GVTV7)

USE AND INSTALLATION

This category covers fire door and window frames intended for the protection of openings in walls when installed in accordance with ANSI/NFPA 80, ''Standard for Fire Doors and Other Opening Protectives,'' and as specified in the installation instructions provided with the fire door or window frame.

Glazing Materials

Glazing materials referenced in this category are Classified as to fire-protection rating only. The glazing materials are intended to be installed in the fire doors in accordance with ANSI/NFPA 80 and the installation instructions provided by the manufacturer of the door, glass light frame or glazing material. See Fire-protection-rated Glazing Materials Certified for Canada (KCMZ7).

DOOR FRAMES

Door frames bearing a UL Mark are intended (when provided with the required wall anchors) for installation in designated fire-rated walls.

Elevator door frames, frames of the slip-on type and other special-use frames as identified in the individual Listings are intended for installation only in the walls of the types shown in the installation instructions accompanying the door frame.

Door frames bearing a UL Mark with a specific rating that are used with labeled fire doors or hardware having a lesser or greater rating will provide the degree of fire protection afforded by the lesser rating of either frame, door or hardware.

Standard door frames are of the single-unit or two-section type and consist essentially of steel head and jamb members, including hardware reinforcements, wall anchors, door stops, and provisions for anchoring to the floor.

Door frames may be provided with mullions, transom panels, or transom lights. In addition to the steel head and jamb members, these frames are equipped with a steel mullion, transom bar, steel-covered composite transom panel, and glazing beads. Most transom panel frames are for use with doors rated up to and including 1-1/2 h. Transom light frames glazed with labeled glazing material are intended for use with doors rated a maximum of 3/4 h.

Some manufacturers can provide labeled transom panel frames for use with doors rated up to and including 3 h as indicated in the individual Listings. Some manufacturers can provide labeled transom frames with

Fire Door and Window Frames Certified for Canada (GVTV7)−*Continued*

hollow-metal transom panels with or without a transom bar. Transoms of solid construction are for use with doors rated up to and including 1-1/2 h, (unless otherwise noted for 3 h in the individual Listings). Some manufacturers can provide labeled door frames with side panels or sidelights. Frames with side panels are for use with doors rated up to and including 1-1/2 h. Frames with sidelights glazed with labeled glazing material are intended for use with doors rated a maximum of 3/4 h.

Special frames are constructed of materials other than steel and are intended for use with doors rated less than 3 h. The hourly ratings for special frames are shown in the individual Listings.

Some special frames are intended for use with Classified fire doors and Listed transom panels of a specific design. These frames and the labeled components are identified in the individual Listings.

Double-egress frames are intended for use with double-egress door designs as identified in the individual Listings.

Elevator door frames are intended for use with sliding freight or passenger elevator fire door designs for use in drywall or masonry shaft construction, as identified in the individual Listings for door frames.

WINDOW FRAMES

Fire window frames consist of sash and mullions of various designs. Fire window frames are Listed for a 3/4 h or a 20-minute fire rating except as noted in the individual Listings and on the Listing Marks (labels). The exposed area of individual glazing lights is limited to 0.84 sq m (1296 sq in.) with no dimension to exceed 1374 mm (54 in.) unless otherwise stated in individual Listings.

Fire window frames are intended to be installed in masonry-type walls unless otherwise identified in the individual Listings.

Fire window frames intended to be installed in drywall construction and supported directly by a noncombustible floor bear the supplemental marking "Fire Window Frame for Installation on Noncombustible Floor with Base Anchor Provided on Frame."

Fire window frames intended to be installed above the floor in drywall construction should be installed as specified by the installation instructions provided with the window frame.

The window frame prepared at the factory for the glazing material does not normally include the glazing material. Classified glazing material is usually provided by other than the window frame manufacturer and installed after installation of the window frame in the building.

The protection of an opening depends not only upon the use of doors or glazing of the proper type, but also upon the use of Listed door or window frames, Listed hardware, and other Classified or Listed accessories, as needed. Authorities Having Jurisdiction should be consulted as to which door type, door frame, window frame, glazing, hardware and other Classified or Listed accessories are acceptable for any given location.

CERTIFICATES

Freight elevator, passenger elevator and swing-type fire door frames incorporating transom panels exceeding the heights eligible for Listing and which have not been subjected to Standard fire tests can be provided with a Certificate for Oversized Frame Assemblies that are otherwise found to be in compliance (except for size) with all requirements for design, materials and construction. These oversized frame assemblies are intended for use with specific Classified freight elevator fire doors, passenger elevator fire doors, or swing fire doors. Authorities Having Jurisdiction should be consulted as to whether the assembly is acceptable for a specific location. The Oversize Certificate is a label certificate affixed to the assembly.

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate door frames in this category is CAN4-S104-1980, "Standard Method for Fire Tests of Door Assemblies."

The basic standard used to investigate window frames in this category is CAN4-S106-1980, "Standard Method for Fire Tests of Window and Glass Block Assemblies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the rating, and one of the following product names: "Fire Door Frame," "Fire Door Frame for Lights," "Fire Door Frame with Panels," "Transom Panel" or "Fire Window Frame."

When the Listing Mark of UL is stamped into the frame, one of the following abbreviated product identities may be used:

- "FDF" and the rating in lieu of "Fire Door Frame"
- "FDF-L" in lieu of "Fire Door Frame for Lights Rated 3/4 H"
- "FDF-P" in lieu of "Fire Door Frame with Panels Rated 1-1/2 H"

Fire Door and Window Frames Certified for Canada (GVTV7)−*Continued*

- "FDF-20" in lieu of "Fire Door Frame Fire Rating 20 Minutes"

All knocked-down fire door frame parts bear the supplementary statement "Knocked-Down Frame Part for Listed Fire Door Frame." Also, the jamb bears the supplementary statement "Listed Fire Door Frame." The supplementary statement on each part identifies the Listed frame parts.

* *

Finishers of Fire Door Frames and Fire Window Frames Certified for Canada (GVUP7)

GENERAL

This category covers finishers of fire door frames and fire window frames.

Finishers receive frame parts from the primary manufacturer. These frame parts have a unique marking signifying they were manufactured in compliance with UL's Follow-Up Service requirements. The finisher assembles the parts to satisfy site-specific requirements, such as size and location of vision panels.

Finishers are identified as distributors in the steel door industry and machiners in the wood door industry.

RELATED PRODUCTS

FIRE DOOR ACCESSORIES CERTIFIED FOR CANADA (GVUW7)

USE AND INSTALLATION

This category covers fire door accessories intended for installation with Classified fire doors and/or Listed fire door frames as identified in the individual Classifications. The accessories have been investigated to determine that when installed in accordance with the manufacturer's instructions, the accessories do not adversely affect the fire-resistance performance of the Classified fire door and/or Listed fire door frame.

Miscellaneous Fire Door Accessories Certified for Canada (GVUX7)

USE AND INSTALLATION

This category covers miscellaneous fire door accessories intended for installation with certified fire doors and/or certified fire door frames as identified in the individual certifications. The accessories have been investigated to determine that when installed in accordance with the manufacturer's instructions, the accessories do not adversely affect the fire rating of the fire door and/or fire door frame.

ADDITIONAL INFORMATION

For additional information, see Fire Door Accessories Certified for Canada (GVUW7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, "Standard Method for Fire Tests of Door Assemblies."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. Cladding Materials for Fire Doors and Frames Certified for Canada (GVUZ7)

GENERAL

This category covers cladding materials intended for installation on certified fire doors and fire door frames as specified in the individual certifications. The cladding material is intended to be installed in accordance with the installation instructions packaged with the material.

The cladding material may be installed at the fire door or frame manufacturer's plant or in the field. The cladding material is applied in such a manner that the Certification Mark on the door or on the frame is visible after the material is installed.

Cladding materials have been investigated only with respect to the determination that the materials do not adversely affect the fire rating of the fire doors and door frames when installed.

RELATED PRODUCTS

See Miscellaneous Fire Door Accessories Certified for Canada (GVUX7).

ADDITIONAL INFORMATION

Fire Door Coordinators Certified for Canada (GVVR7)

USE AND INSTALLATION

This category covers coordinators used to control the sequence of closing and latching of pairs of fire doors. These coordinators are intended for installation on certified fire door frames in accordance with the installation instructions packaged with the device. The coordinator is used with a pair of swinging fire doors with an astragal to allow the inactive door to close and latch before the active door closes and latches.

The installation of fire door coordinators does not require a modification of the fire door frames, since they are designed as a bolt-on-type attachment.

ADDITIONAL INFORMATION

For additional information, see Fire Door Accessories Certified for Canada (GVUW7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

Fire Door Glass Light Frames Certified for Canada (GVVX7)

USE AND INSTALLATION

This category covers glass light frames intended for installation in certified swinging fire doors rated up to and including 1-1/2 hrs as provided by door manufacturers indicated in the individual certifications.

Glass light frames consist essentially of steel or wood framing members and their mounting fasteners. The maximum size of the glass light frames should not exceed:

Framing Member Material	Max Width mm (in.)	Max Height mm (in.)	Max Area m^2 ($in.^2$)	Max Door Rating
Wood+	762 (30)	1016 (40)	0.78 (1200)	20 min
Steel	1372 (54)	1372 (54)	0.84 (1296)	3/4 hr
Steel	254 (10)	838 (33)	0.065 (100)	1-1/2 hr

Values in parentheses are explanatory or approximate information.

Fire Door Glass Light Frames Certified for Canada (GVVX7)−*Continued*

Framing Member Material	Max Width mm (in.)	Max Height mm (in.)	Max Area m^2 ($in.^2$)	Max Door Rating

+ Glass light frames consisting of wood framing members and their mounting fasteners are only intended for use in 20 min. wood-core doors.

The glass light frames are intended to be installed in accordance with the installation instructions packaged with the device. The use of steel sex-bolts or steel sheet-metal screws to install the glass light frame in the door is required, depending on the type of door and the design of light frame. The fasteners are furnished as part of the light frame.

The glass light frames may be installed in certified swinging fire doors by some manufacturers at the door manufacturer's plant or in the field. When the light frame is intended to be installed in the field, the cutout in the door is made at the door manufacturer's plant and the door bears a marking indicating the manufacturer and model designation of the certified glass light frame to be installed in the door.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Door Accessories Certified for Canada (GVUW7), Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, "Standard Method for Fire Tests of Door Assemblies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door Glass Light Frame" or "Fire Door Glass Light Frame for Use Only on 20 Min Wood Core Doors."

Gasketing Materials for Fire Doors Certified for Canada (GVWZ7)

GENERAL

This category covers gasketing materials intended for installation on certified fire doors and/or certified fire door frames or in their thresholds, as specified in the individual certifications. The gasketing material is intended to be installed in accordance with the installation instructions packaged with the material.

Gasketing materials consist of a metal frame or a flexible material, either mechanically secured within a metal frame or housing or applied by means of a pressure-sensitive adhesive to the perimeter of the certified fire door and/or certified fire door frame or installed within their thresholds, as specified in the individual certifications.

The gasketing material may be installed on the certified fire doors at the fire door and/or frame manufacturer's plant or at the job site.

Gasketing materials for fire doors have been investigated only with respect to determination that the materials do not adversely affect the fire rating of fire doors in which they are installed.

ADDITIONAL INFORMATON

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXUV7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, "Standard Method for Fire Tests of Door Assemblies."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CLASSIFIED GASKETING MATERIALS FOR FIRE DOORS INTENDED FOR APPLICATION TO ___ TYPE FIRE DOORS RATED UP TO ___ HRS
Control No.
*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE DOOR LOUVERS CERTIFIED FOR CANADA (GVZS7)

USE AND INSTALLATION

This category covers fire door louvers intended for installation in certified swinging fire doors rated up to and including 1-1/2 h as provided by door manufacturers indicated by the individual certifications in the Fire Door categories.

Fire door louvers consist essentially of steel framing members, adjustable steel blades, operating lever, a fusible link and a system for automatically closing the blades when the link is activated. The maximum size of the automatic closing louver assembly should not exceed 0.3759 m (576 sq in.) with no dimension exceeding 610 mm (24 in.).

The fire door louver is intended to be installed in accordance with the installation instructions packaged with the device. The use of steel sex-bolts or steel sheet metal screws to install the louver in the door is required, dependent upon the type of door and design of the louver. The fasteners are furnished as part of the louver.

The fire door louver may be installed in the certified swinging fire doors by some manufacturers at the door manufacturer's plant or in the field. When the louver is intended to be installed in the field, the cutout in the door shall be made at the door manufacturer's plant and the door will bear a marking indicating the manufacturer and model designation of certified fire door louver to be installed in the door.

Authorities Having Jurisdiction should be consulted before installation of louvers in fire doors.

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, "Standard Method for Fire Tests of Door Assemblies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Door Louver."

HARDWARE CERTIFIED FOR CANADA (GWGR7)

Builders hardware, fire door hardware and elevator door hardware for different types of fire doors is intended to be installed in accordance with the Standard of the National Fire Protection Association for Fire Doors and Windows, NFPA 80. The protection of an opening depends not only upon the use of a labeled door of the proper type but also upon the use of labeled frames, listed hardware, and the installation. Prospective users should first ascertain from authorities having jurisdiction which type, mounting, and listed closing mechanisms are acceptable for any given location.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Builders' Hardware Certified for Canada (GWTZ7)

Builders hardware for swinging fire doors of the composite, hollow-metal, metal clad, sheet metal and wood-core types are listed in the following categories: Auxiliary locks, Electric strikes, Fire Exit Hardware, Automatic type flush or surface bolts, Manual type flush or surface bolts, Self-Latching type flush or surface bolts, Single-Point locks or latches, Electrically controlled single point locks or latches and Two or Three-Point locks or latches.

Accessories for Single-point Locks and Latches and Fire-exit Hardware Certified for Canada (GWVW7)

USE AND INSTALLATION

This category covers accessories for use with single-point locks and latches and fire-exit hardware consisting of trim parts and rated locks or latches, as identified in the individual Classifications, intended for field retrofitting.

These products may also be provided with the Listing Mark for Fire-exit Hardware Certified for Canada (GXHX7) or Single-point Locks and Latches Certified for Canada (GYJT7). Trim parts and rated locks and latches are intended for installation on fire-exit hardware or single-point locks and latches having a rating up to and including 3 h, as indicated in the individual Listings and Classifications.

Trim parts and rated locks and latches are intended to be installed only as shown in the installation instructions.

The installation of the trim parts does not require a modification of the hardware, since they are designed as a bolt-on-type attachment. The installation of the rated lock or latch does not require a modification to the lock assembly since it is designed to be retrofitted to the specific lock assembly model referenced in the individual Listings or installation instructions.

ADDITIONAL INFORMATION

For additional information, see Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY+]
FOR INSTALLATION ON
[TYPE OF RETROFITTED HARDWARE+]
Control No.

+ as noted in the individual Classifications

For those products which are also Listed, the marking includes the Listing Mark in addition to the Classification Mark when the product is intended for use in retrofit applications.

In addition, the UL symbol, the letter ''F'' and any qualifications as to the part's hourly rating are cast or stamped on the exposed surface of each trim part and/or rated lock or latch assembly if the entire Classification Mark is not visible after installation of the product.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Auxiliary Locks Certified for Canada (GWXT7)

USE AND INSTALLATION

This category covers auxiliary locks intended for use on swinging fire doors having a rating up to and including 3 h, unless a reduced rating is otherwise indicated in the individual Listings.

Auxiliary locks are intended for installation on Listed fire door frames and/or Classified swinging fire doors in accordance with the installation instructions packaged with the device. These locks are intended to be used on fire doors and/or frames in addition to the primary latching device required for use on fire doors and/or frames.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104-1980, ''Standard Method for Fire Tests of Door Assemblies.''

Where applicable, products may additionally be investigated to CAN/ULC-S533-2002, ''Egress Door Securing and Releasing Devices.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name

Auxiliary Locks Certified for Canada (GWXT7)−*Continued*

''Auxiliary Lock'' or ''Auxiliary Lock Subassembly,'' and any qualifications to the product hourly rating. In addition, the UL Mark for Canada symbol, the letter ''F,'' and any qualifications to the product hourly rating are cast or stamped on the exposed surface if the whole Listing Mark is not visible after installation of the product.

Door Hinges Certified for Canada (GWZQ7)

USE

This category covers door hinges intended for use on swinging-type fire doors of the type specified in the individual Listings.

These hinge designs have been investigated with respect to their fire protection and cycling characteristics. They have been investigated for use on fire doors installed in accordance with ANSI/NFPA 80, ''Fire Doors and Windows,'' and the manufacturer's installation instructions.

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104-1980, ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Door Hinge'' or ''Door Pivot,'' and any qualifications to the product hourly rating. In addition, the UL Mark for Canada symbol, the letter ''F'' and any qualifications to the product hourly rating are cast or stamped on the exposed surface if the whole Listing Mark is not visible after installation of the product.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Electric Strikes Certified for Canada (GXAY7)

USE

This category covers electric strikes intended to replace the strike plate used in fire door frames of the single section or two section type.

Electric strikes have been investigated under fire exposure for use with fire door frames and fire doors having a rating up to and including 3 h. Electric strikes have also been investigated for electric features for devices to be used in Class 1 or Class 2 CEC circuits. Only momentary contact switching (energized only when push button is held depressed) should be used with electric strikes for use with fire door frames and fire doors.

Electric strikes are for use with cylindrical or mortise type latches when such latches are mounted in single swing doors.

ADDITIONAL INFORMATION

For additional information, see Builders Hardware Certified for Canada (GWTZ7), Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104-80M, ''Standard Method for Fire Tests of Door Assemblies''.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Electric Strike for Fire Door,'' and any qualifications to the product hourly rating. In addition, the UL symbol and the letter ''F'' and any qualifications to the product hourly rating are cast or stamped on the exposed surface if the whole Listing Mark is not visible after installation of the product.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fire-exit Hardware Certified for Canada (GXHX7)

GENERAL

This category covers exit hardware devices for swinging fire doors, which are intended to facilitate the safe egress of persons in the case of emergency, as well as provide fire protection for door assemblies. They have been investigated from the standpoint of fire and panic protection.

Fire-exit hardware of the single-point-latch type (mortise or rim devices) with 19 mm (3/4 in.) latch bolts and the vertical rod type (surface mounted or concealed devices) and mullion assemblies are for use on fire doors having a rating up to and including 3 hrs (unless otherwise noted in the individual certifications). In general, fire-exit hardware devices are for use on hollow-metal, composite (steel, wood, or plastic-covered), sheet-metal, wood core and metal-clad (Kalamein), type fire doors. Fire-exit hardware of the single-point-latch type (mortise or rim devices) are intended for use on swinging doors not exceeding 1220 mm (4 ft) in width and 2440 mm (8 ft) in height. Mortise-type fire-exit hardware devices can be used on the active door of doors swinging in pairs in openings not exceeding 2440 (8 ft) in width and 2440 (8 ft) in height (unless otherwise noted in the individual certifications).

Vertical-rod-type exit devices are intended for use on swinging fire doors mounted in pairs, wherein one door of the pair is equipped with a mortise-latch-type exit device. Both doors of a pair may incorporate vertical rod devices as indicated in the individual fire door certifications. See the individual fire door certifications for manufacturers eligible to provide doors swinging in pairs (same direction) equipped with vertical rod devices and without an astragal and double egress doors.

Fire-exit hardware devices are intended to be installed in accordance with the installation instructions packaged with the device. The use of sex bolts or through bolts to mount the devices to the door is required for composite (wood or plastic-covered) and wood-core-type fire doors unless an alternate mounting method is identified in the individual door manufacturer's certifications (and installation instructions). The use of sex bolts to mount the devices to the door is required for steel-covered composite type, sheet-metal type or hollow-metal-type fire doors provided without reinforcements. The use of steel machine screws to mount the devices to the door is required for steel-covered composite type, sheet-metal type or hollow-metal-type fire doors incorporating steel reinforcements.

Doors prepared at the factory for this hardware bear the marking, ''Fire Door to be Equipped with Fire Exit Hardware.''

RELATED PRODUCTS

Certifications for panic hardware applications only are covered under Panic Hardware Certified for Canada (FVSR7).

ADDITIONAL INFORMATION

For additional information, see Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/ULC-S132 (2007), ''Standard Method of Tests for Emergency Exit and Emergency Fire Exit Hardware,'' and CAN/ULC-S104, ''Standard Method for Fire Tests of Door Assemblies.''

Where indicated in the individual certifications, products have additionally been investigated to ANSI/BHMA A156.3, ''Exit Devices.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fire Exit Hardware.''

* *

Flush and Surface Bolts, Automatic Certified for Canada (GXOW7)

GENERAL

This category covers automatic flush and surface bolt assemblies intended to secure the inactive door of swinging fire doors mounted in pairs, with the active door provided with a certified single-point latch.

The bolt assemblies have been investigated for fire protection for a period of 3 h on doors mounted in pairs not exceeding 2438 mm (8 ft) in either dimension, unless identified in the individual manufacturer's certification. For certifications of self-latching flush and surface bolts, see Flush and Surface Bolts Self-Latching Type Certified for Canada (GXVV7) and for certifications of manual flush and surface bolts, see Flush and Surface Bolts, Manual Type Certified for Canada (GXSR7).

These assemblies consist of individual self-latching top and bottom flush bolt units actuated by a trigger mechanism. In addition to the self-latching feature, these bolts also incorporate an auxiliary automatic unlatching feature whereby when the active door is opened, the inactive door opens by pushing on that door. The assemblies also include the necessary strikes, mounting screws, and installation instructions. A coordinator may be provided.

Authorities Having Jurisdiction should be consulted before installation.

Flush and Surface Bolts, Automatic Certified for Canada (GXOW7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104 (1980), ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Hardware — Automatic Flush or Surface Bolt,'' and any qualifications to the product hourly rating. In addition, the UL Mark for Canada symbol, the letter ''F,'' and any qualifications to the product hourly rating are cast or stamped on the exposed surface if the whole Listing Mark is not visible after installation of the product.

* *

Flush and Surface Bolts, Manual Type Certified for Canada (GXSR7)

GENERAL

This category covers manual flush and surface bolt assemblies with 3/4-in. minimum throw intended to secure the inactive door of swinging fire doors mounted in pairs, with the active door provided with a certified single-point latch.

These assemblies have been investigated only for fire protection for a period of 3 h on the inactive leaf of doors mounted in pairs not exceeding 2438 mm (8 ft) in width or 3048 mm (10 ft) in height (unless otherwise noted in the individual certifications).

These assemblies consist of individual top and bottom flush bolt or surface bolt units, manually actuated strikes, the necessary mounting screws and installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Flush and surface bolt assemblies investigated for both fire protection and panic features are covered under Fire-exit Hardware Certified for Canada (GXHX7).

ADDITIONAL INFORMATION

For additional information, see Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104 (1980), ''Fire Tests of Door Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Manual Flush Bolt'' or ''Manual Surface Bolt,'' and any qualifications to the product hourly rating. In addition, the UL Mark for Canada symbol, the letter ''F,'' and any qualifications to the product hourly rating are cast or stamped on the exposed surface if the whole Listing Mark is not visible after installation of the product.

Flush and Surface Bolts, Self-latching Type Certified for Canada (GXVV7)

USE AND INSTALLATION

This category covers self-latching flush and surface bolt assemblies intended to secure the inactive door of swinging fire doors mounted in pairs with the active door provided with a certified single-point latch.

They have been investigated only for fire protection for a period of 3 h on doors mounted in pairs not exceeding 2438 mm (8 ft) in either dimension (unless otherwise noted in the individual certifications).

Flush and Surface Bolts, Self-latching Type Certified for Canada (GXVV7)−*Continued*

These assemblies consist of either individual self-latching top and bottom flush bolt units actuated by a trigger mechanism or concealed and surface-mounted vertical rod mechanisms with top and bottom bolts, a release lever, operating handle, or thumb turn, strikes, the necessary mounting screws, and installation instructions. A coordinator may also be provided.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Self-latching Flush or Surface Bolt.'' In addition, the UL Mark for Canada symbol, the letter ''F,'' and any qualifications to the product hourly rating are cast or stamped on the exposed surface if the whole Listing Mark is not visible after installation of the product.

Single-point Locks and Latches Certified for Canada (GYJT7)

GENERAL

This category covers single-point locks and latches of either the bored (cylindrical and tubular) mortise or preassembled (unit and mono) type for use on swinging fire doors having a rating up to and including 3 h, unless otherwise noted in the individual certifications.

Locks and latches are intended to be provided as complete units including housing/bodies, latch bolts, strikes and trim.

They have been investigated with respect to their fire-protection characteristics only.

In general, single-point locks and latches of the bored (cylindrical and tubular), mortise, or preassembled (unit and mono) types are for use on hollow-metal or composite (steel) type swinging fire doors (unless otherwise noted in the individual certifications). They are installed in single-swing doors not exceeding 1219 mm (4 ft) in width and 2438 mm (8 ft) in height, and the active door of doors mounted in pairs not exceeding 2438 mm (8 ft) in either dimension (unless otherwise noted in the individual certifications).

In general, single-point locks and latches with 12.7 mm (1/2-in.) minimum latch throw are intended for single-swing doors, and latches with 19 mm (3/4-in.) minimum latch throw are intended for the active door of doors mounted in pairs with the inactive door provided with top and bottom flush or surface bolts of the manual, automatic, or self-latching type.

Single-point locks and latches should not be provided with lever handles or paddles (unless otherwise noted in the individual certifications).

Some manufacturers can provide fire doors mounted in pairs with a minimum latch throw of less than 19 mm (3/4 in.) The door Classification Mark specifies the minimum latch throw required for the individual door.

ADDITIONAL INFORMATION

For additional information, see Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104 (1980), ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

Single-point Locks and Latches Certified for Canada (GYJT7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Electrically Controlled Single-point Locks and Latches Certified for Canada (GYQS7)

GENERAL

This category covers electrically controlled single-point locks and latches of either the cylindrical (bored), mortise unit (pre-assembled) or frame-jamb-mounted types. They have been investigated under fire exposure for use on fire doors having a fire rating up to and including 3 h.

The locks and latches are intended to be provided as complete units, including housings/bodies, latch bolts, strikes and trim.

The locks and latches have also been investigated for electrical features for devices to be used in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

For frame-jamb-mounted lock sets, only momentary contact switching (energized only when the push button is depressed) is intended to be used. The frame-jamb-mounted lock sets are provided with solenoids for remote unlocking of the latch.

Electrically controlled single-point locks and latches are provided with solenoids for remote locking or unlocking of the operating knob or handle on one side of the latch case.

In general, electrically controlled single-point locks and latches are intended for installation in swinging fire doors of the hollow metal, composite (steel, wood or plastic-covered), sheet-metal, and wood-core types (unless otherwise noted in the individual certifications), prepared at the factory for such installation of the lock and associated wiring.

The locks and latches are intended for use on single-swing doors up to and including 1219 mm (4 ft) in width and 2438 mm (8 ft) in height, and the active door of doors mounted in pairs not exceeding 2438 mm (8 ft) in either width or height (unless otherwise noted in the individual certifications).

Authorities Having Jurisdiction should be consulted before installation.

Two- and Three-point Locks and Latches Certified for Canada (GYXR7)

GENERAL

This category covers two- and three-point locks and latches for hollow-metal doors of the mortise type consisting of operating, retaining, and releasing mechanisms mounted on a common bearing plate. They have been investigated only from a fire-protection viewpoint, not as panic hardware.

Three-point latches are designed for single-swing doors and the active door of doors swinging in pairs, and the two-point latches for the inactive door of doors swinging in pairs. A coordinator may be provided.

RELATED PRODUCTS

See Panic Hardware Certified for Canada (FVSR7).

Assemblies investigated for both fire and panic protection are covered under Fire-exit Hardware Certified for Canada (GXHX7).

ADDITIONAL INFORMATION

For additional information, see Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

Elevator Fire Door Hardware, Passenger Certified for Canada (GZKZ7)

GENERAL

This category covers passenger elevator door hardware designed for use with sliding passenger elevator fire doors of the single-, two-, and three-speed, and single- and two-speed center opening types. The hardware consists of a header, track, hangers, pendent bolts, aluminum sill, sill support plates, sill brackets, retaining angles, and closer assemblies.

Hanger assemblies may be provided in lieu of hanger components. They consist of a header, hangers, pendant bolts, track, and attachments mounted together so that the assembly may be handled as a complete unit.

Some passenger elevator doors may be provided with an integral hanger, in which case the hanger assembly consists of a header and track. For integral hangers, the doors Certification Mark covers the details of the hanger and attachments.

Closer assemblies are of the hand operated, overhead pneumatic, side arm pneumatic, and electric types. They consist of a closer for each door assembly, each comprising a cylinder, links, and attachments. The closer mechanism is operated manually by a handle, or by pneumatic or electric operators.

Certification Marks are applied to each header, track, hanger, aluminum sill, sill support plate, sill bracket, retaining angle, and closer assembly.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S104, ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Passenger Elevator Door Hardware'' or ''Passenger Elevator Door Hardware Closer Assembly.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fire Door Hardware Certified for Canada (GZYX7)

GENERAL

This category covers fire door hardware intended for use with composite (steel-covered only) hollow-metal, sheet-metal, and tin-clad fire doors. These doors are usually prepared for a specific set of hardware on the job site.

To provide the degree of fire protection to a wall opening as indicated by the fire door label, this hardware must be applied and the resulting door-hardware assembly installed in accordance with the recommendations contained in ANSI/NFPA 80, ''Fire Doors and Other Opening Protectives.''

This hardware is of two types: hardware intended for use with sliding doors, and hardware intended for use with swinging doors.

Fire Door Hardware Certified for Canada (GZYX7)−*Continued*

Sliding Type

Hardware for horizontally sliding composite (steel-covered) and hollow-metal doors, and horizontally and vertically sliding sheet-metal doors, is essentially the same as for tin-clad doors, with minor differences to conform to the constructions of various manufacturers.

Hardware for horizontally sliding tin-clad, sheet-metal, and hollow-metal doors, mounted singly or center parting, and single-sliding composite (steel-covered) doors is designed for openings not exceeding 11.1 sq mm (120 sq ft) with no dimension exceeding 3660 mm (12 ft).

Each complete set of certified hardware for horizontally single-slide tin-clad doors contains: (1) One track, length equal to twice the width of the opening plus 533 mm (21 in.), punched for wall bolts. (2) Two hangers for openings 1829 mm (6 ft) and less in width; three hangers for openings wider than 1829 mm (6 ft); and bolts for attaching hanger to door. (3) Two front binders for openings 2489 mm (8 ft) and less in height; three front binders for openings higher than 2489 mm (8 ft); one rear binder and binder pocket for openings 3048 mm (10 ft) and less in height; two rear binders and binder pockets for openings higher than 3048 mm (10 ft.) (4) One stay roll with attachment bolts suitable for the form of sill used. (5) One bracket for each track bolt. (6) Two half-oval chafing strips for back of door; two flat strips for front of door opposite half-oval strips; bolts for fastening above strips together through door; length of strips to be 102 mm (4 in.) less than width of door. Doors exceeding 2489 mm (8 ft) in height require three chafing strip assemblies. (7) One strip 127 mm (5 in.) less than width of door to take wear of stay roll; and wood screws for attachment. (8) One wedge with screws for attachment. (9) Handles with bolts and screws for attachment. (10) One front bumper and one back bumper. (11) Four bumper shoes and screws for attachment; each bumper shoe may be made in two pieces. (12) Washers for all wall bolts. (13) Instructions for installation.

Hardware for vertically sliding tin-clad and sheet-metal doors is designed for openings not exceeding 7.4 sq mm (80 sq ft) in area, with no dimension exceeding 3660 mm (12 ft.)

Each complete set of certified hardware for vertically sliding tin-clad and sheet-metal door contains: (1) Two 89 by 9.5 mm (3-1/2 by 3/8 in.) tracks, length equal to twice the height of the opening plus 229 mm (9 in.) punched for wall bolts. (2) One cast-iron bracket for each track bolt. (3) Two malleable-iron track guides for each track for openings 1524 mm (5 ft) or less in height and an additional guide for each track for each 762 mm (2-1/2 ft) or fraction thereof in excess of 1524 mm (5 ft.) (4) One bumper bolted to top of each track with wall bolt. (5) Four bumper shoes and screws for attachment. (6) Two wrought-iron or steel cables, not less than 7.9 mm (5/16-in.) diameter. (7) Two cable brackets. (8) Four cable fasteners and thimbles. (9) Two cable pulleys, with malleable-iron frames and sheaves. (10) Counterweights. (11) Two 19 by 6.4 mm (3/4 by 1/4 in.) half-oval chafing strips for back of door; length 51 mm (2 in.) less than height of door; strips held by 6.4 mm (1/4 in.) bolts or machine screws with countersunk heads, passing through door and bearing against washers. (12) Handles with bolts and screws for attachment. (13) Necessary washers, rivets, bolts, and screws to properly fasten the hardware to the door and wall. (14) Instructions for installation.

Certification Marks are applied to each hanger, binder, bumper, flush pull, stay roll, and to each section of track in a set of certified single-slide hardware, and for center-parting doors, Certification Marks are applied to each track section, center floor binder, center track binder, and center latch assembly.

Swinging Type

Swinging hardware is designed for single-swing sheet-metal and three-ply tin-clad doors not exceeding 1829 mm (6 ft) in width and 3660 mm (12 ft) in height and doors swinging in pairs not exceeding 3048 mm (10 ft) in width and 3660 mm (12 ft) in height and two-ply tin-clad doors swinging single not exceeding 1829 mm (6 ft) in width and 3048 mm (10 ft) in height and doors swinging in pairs not exceeding 3048 mm (10 ft) in width and 3048 mm (10 ft) in height.

Each complete set of certified hardware for single-swing door includes wall strips (except for openings supplied with standard steel frames), hinge brackets, hinges, catches, latches, latch keepers, connecting bar, operating handle mechanism, latch spring, and necessary washers, rivets, and bolts to mount hardware on door and wall. For doors mounted in pairs — above members, top and bottom bolts and top and bottom bolt keepers for standing doors.

Hardware for sheet metal doors is essentially the same as tin-clad doors with minor differences to conform to the door construction of various manufacturers.

Certification Marks are applied to each hinge strap, hinge bracket, connecting bar, and catch for single doors, and for doors in pairs, also to each latch, each top and bottom bolt and keeper for the standing door, and to each hinge wall strap.

ADDITIONAL INFORMATION

See Fire Doors Certified for Canada (GSNV7) and Fire-resistance Ratings Certified for Canada (BXRH7).

Fire Door Hardware Certified for Canada (GZYX7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, ''Standard Method For Fire Tests of Door Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Hardware.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fire Door Viewers Certified for Canada (HAAU7)

GENERAL

This category covers fire door viewers intended for use with certified fire doors rated up to and including 1 h unless otherwise specified in the individual certifications.

They have been investigated with respect to their fire-protection characteristics only.

They require a hole be drilled through the fire door of a diameter to provide a tight fit. Certified fire doors can be provided from the factory with appropriately sized holes for field installation of one or two of the fire door viewers. See the installation instructions accompanying the fire door viewer.

ADDITIONAL INFORMATION

For additional information, see Hardware Certified for Canada (GWGR7), Fire Doors Certified for Canada (GSNV7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S104, ''Standard Method for Fire Tests of Door Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fire Door Viewer.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE MAIN EQUIPMENT CERTIFIED FOR CANADA (HAMV7)

This category covers devices and equipment intended for use in fire protection service in accordance with National Fire Protection Association Standards.

These products have not been investigated for use in potable water systems.

INDICATOR POSTS, GATE VALVE CERTIFIED FOR CANADA (HCBZ7)

USE AND INSTALLATION

This category covers indicator posts, including wall and underground types, intended for use in operating gate valves of the inside-screw pattern and for indicating the position of the gates in the valves.

Gate valve indicator posts are intended for use with gate valves controlling water supplies to sprinkler, deluge, water spray, foam, and standpipe systems used in fire service.

Unless otherwise noted, these gate valve indicator posts are of the telescopic-barrel type intended for use with gate valves 101 to 355 mm in size. Indicator posts intended for use with valves larger than 355 mm, and those intended for use with valves in pits, are indicated in the individual certifications.

Gate valve indicator posts are intended to be installed in accordance with the manufacturer's installation instructions and the Standards of the National Fire Protection Association for the installation of fire protection systems employing water, such as:

Indicator Posts, Gate Valve Certified for Canada (HCBZ7)−*Continued*

ANSI/NFPA 11, ''Low-, Medium-, and High-Expansion Foam''
ANSI/NFPA 13, ''Installation of Sprinkler Systems''
ANSI/NFPA 14, ''Installation of Standpipe and Hose Systems''
ANSI/NFPA 24, ''Installation of Private Fire Service Mains and Their Appurtenances''

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C789 (1975), ''Guide for the Investigation of Indicator Posts for Fire Protection Service.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fire Main Indicator Post.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIPE CERTIFIED FOR CANADA (HEFR7)

Cross-linked Polyethylene Pipe Certified for Canada (HESG7)

USE AND INSTALLATION

This category covers cross-linked polyethylene (PEX) pressure pipe intended for use in underground fire-service systems where the working pressure does not exceed that indicated in the individual certifications. This pipe is intended to be installed in accordance with the manufacturer's installation instructions, ANSI/NFPA 24, ''Installation of Private Fire Service Mains and Their Appurtenances,'' and the ''National Building Code of Canada.''

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C1285, ''Piping and Couplings, Polyvinyl Chloride (PVC) for Underground Fire Service,'' and ULC/ORD-C1713, ''Pressure Pipe and Couplings, Glass Fiber-Reinforced for Underground Fire Service.''

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''PEX Pipe for Underground Water Mains.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Chlorinated Polyvinyl Chloride Pipe Certified for Canada (HFYH7)

USE AND INSTALLATION

This category covers chlorinated polyvinyl chloride (CPVC) pressure pipe intended for use in underground fire-service systems where the working pressure does not exceed that indicated in the individual certifications. This pipe is intended to be installed in accordance with the manufacturer's installation instructions, ANSI/NFPA 24, ''Installation of Private Fire Service Mains and Their Appurtenances,'' and the ''National Building Code of Canada.''

ADDITIONAL INFORMATION

For additional information, see Fire Main Equipment Certified for Canada (HAMV7) and Fire Protection Equipment Certified for Canada (AAFP7).

Chlorinated Polyvinyl Chloride Pipe Certified for Canada (HFYH7)−*Continued*

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C1285, "Piping and Couplings, Polyvinyl Chloride (PVC) for Underground Fire Service,", and ULC/ORD-C1713, "Pressure Pipe and Couplings, Glass Fiber-Reinforced, for Underground Fire Service".

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "CPVC Pipe for Underground Water Mains."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIPE FITTINGS CERTIFIED FOR CANADA (HHJZ7)

This category covers fittings intended for use in fire service systems and connections to such systems where the working pressures do not exceed those for which the fittings are rated.

Authorities Having Jurisdiction should be consulted before installation.

These products have not been investigated for use in potable water systems.

Fittings, Cast Iron, Ductile Iron, Malleable Iron and Bronze Certified for Canada (HHXX7)

USE AND INSTALLATION

This category covers iron and bronze fittings intended for use in water-supply piping systems and fire-suppression-system piping in accordance with National Fire Protection Association Standards, including the following:

ANSI/NFPA 13, "Installation of Sprinkler Systems"
ANSI/NFPA 14, "Installation of Standpipe and Hose Systems"
ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
ANSI/NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances"

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

These products have not been investigated this product for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Fire Main Equipment Certified for Canada (HAMV7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The products in this category have been investigated for compliance with the dimensional requirements specified in the following standards (where applicable), and for the pressure ratings as indicated in the individual certifications:

ANSI/AWWA C110/A21.10, "Ductile-Iron and Gray-Iron Fittings for Water, 3 in. Through 48 in. (76 mm Through 1219 mm)"
ANSI/AWWA C153/A21.53, "Ductile-Iron Compact Fittings for Water Service"
ANSI/ASME B16.1, "Cast Iron Pipe Flanges and Flanged Fittings, Classes 25, 125 and 250"
ANSI/ASME B16.3, "Malleable Iron Threaded Fittings, Classes 150 and 300"
ANSI/ASME B16.4, "Gray Iron Threaded Fittings, Classes 125 and 250"
ANSI/ASME B16.5, "Pipe Flanges and Flanged Fittings NPS 1/2 Through NPS 24"
ANSI/ASME B16.14, "Ferrous Pipe Plugs, Bushings, and Locknuts with Pipe Threads"
ANSI/ASME B16.15, "Cast Bronze Threaded Fittings, Classes 125, and 250"
ISO 49, "Malleable Cast Iron Fittings Threaded to ISO 7-1"
BSI BS 143 & 1256, "Threaded Pipe Fittings in Malleable Cast Iron and Cast Copper Alloy"
BS EN 10242, "Threaded Pipe Fittings in Malleable Cast Iron"

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is

Fittings, Cast Iron, Ductile Iron, Malleable Iron and Bronze Certified for Canada (HHXX7)−*Continued*

the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Cast Iron Fitting" (or "CI"), "Ductile Iron Fitting" (or "DI"), "Malleable Iron Fitting" (or "MI") or "Bronze Fitting" (or "BRZ").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fittings, Retainer Type Certified for Canada (HJKF7)

USE AND INSTALLATION

This category covers fittings consisting of mechanical joint retainer devices and flange adapters intended for use with underground metallic and/or nonmetallic piping, as indicated in the individual certifications. These fittings are intended to be installed in fire service systems in accordance with the manufacturer's installation instructions.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C194, "Guide for the Investigation of Gasketed Joints for Cast iron Pressure Pipe and Fittings."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mechanical Joint Retainer Gland," "MJ Gland" or "Flange Adaptor."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRAINERS, PIPELINE CERTIFIED FOR CANADA (HLCV7)

USE AND INSTALLATION

This category covers devices intended for use in fire-service systems, such as automatic sprinkler systems and fixed water-spray systems, where protection against clogging of water discharge openings is needed.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

These devices have not been investigated for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C321, "Pipeline Strainers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Main Pipeline Strainer."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES CERTIFIED FOR CANADA (HLQT7)

Ball Valves, System Control Certified for Canada (HLUG7)

GENERAL

This category covers system-control ball valves intended for use in piping systems supplying water or air for fire-protection service. These valves are intended for a minimum working pressure of 1206 kPa for 305 mm or smaller, and 1034 kPa for sizes 356 mm and larger.

All valves are equipped with a worm gear or traveling-nut actuator to minimize the occurrence of water hammer. Valves that may be provided with a factory-installed or field-installed valve-position-signal attachment are noted in the individual certifications.

System-control ball valves may be provided with an assembly consisting of a supervisory switch having electrical signaling contacts for the purpose of indicating an abnormal condition and the restoration to normal of such valves. These supervisory-switch assemblies are intended for mounting directly to the valve-actuating mechanism and are noted in the individual certifications.

These valves are intended to be installed in accordance with the manufacturer's installation instructions, in addition to the following:

ANSI/NFPA 11, "Low-, Medium-, and High-Expansion Foam"
ANSI/NFPA 13, "Installation of Sprinkler Systems"
ANSI/NFPA 14, "Installation of Standpipe and Hose Systems"
ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems"
ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection"
ANSI/NFPA 22, "Water Tanks for Private Fire Protection"
ANSI/NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances"

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

These valves have not been investigated for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1091, "Preliminary Standard for Butterfly Valves for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "System Control Ball Valve."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Butterfly Valves Certified for Canada (HLXS7)

USE AND INSTALLATION

This category covers butterfly valves intended for use in fire-service systems for working pressures not exceeding 1210 kPa for sizes 12 NPS or smaller and 1034 or 1210 kPa for sizes larger than 12 NPS. Some valves are rated for pressures greater than 1210 kPa as indicated in individual certifications. All valves are equipped with a worm gear or traveling-nut actuator to minimize the occurrence of water hammer. Valves with indicators suitable for underground fire-service systems and valves provided with a valve-position-signal attachment (actuators equipped with a valve-position supervisory switch) or indicator posts are noted in the individual certifications.

When a butterfly valve is in the open position, the disc may extend beyond the end of the valve body. During installation, it should be verified that the valve disc does not interfere with the operation of system components installed immediately adjacent to the butterfly valve.

Requirements for the installation and use of these valves are included in National Fire Protection Association standards for the installation of water-based fire-protection systems, including:

ANSI/NFPA 11, "Low-, Medium-, and High-Expansion Foam"
ANSI/NFPA 13, "Installation of Sprinkler Systems"
ANSI/NFPA 14, "Installation of Standpipe and Hose Systems"
ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection"
ANSI/NFPA 22, "Water Tanks for Private Fire Protection"

Butterfly Valves Certified for Canada (HLXS7)–*Continued*

ANSI/NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances"

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

These valves have not been investigated for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1091, "Preliminary Standard for Butterfly Valves for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Butterfly Valve."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Check Valves Certified for Canada (HMER7)

USE AND INSTALLATION

This category covers check valves for use in fire-service systems for working pressures not exceeding 1206 kPa for sizes 2 to 12 in. inclusive, and 1034 kPa for sizes larger than 12 in. Some valves are rated for pressures greater than 1206 kPa as indicated in the individual certifications.

Regular-type check valves are iron or brass bodied and may have metal-to-metal or rubber-faced checks as noted in the individual certifications. They may be provided with threaded, cut groove, flanged, or hub ends or wafer style appropriate to the size of the valve and the intended use. They may be installed in either horizontal or vertical positions.

Detector-type check valves are iron or brass bodied with a weighted clapper and have provisions for connection of a bypass meter around the check.

In the open position, the disc of a wafer- or lug-style check valve may extend beyond the end of the valve body. During installation, it should be determined that the check-valve disc does not interfere with the operation of system components installed immediately adjacent to the check valve.

Requirements for the installation and use of these valves are included in National Fire Protection Association standards for the installation of fire-protection systems employing water, such as:

ANSI/NFPA 11, "Low-, Medium-, and High-Expansion Foam"
ANSI/NFPA 13, "Installation of Sprinkler Systems"
ANSI/NFPA 14, "Installation of Standpipe and Hose Systems"
ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection"
ANSI/NFPA 22, "Water Tanks for Private Fire Protection"
ANSI/NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances"

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

These valves have not been investigated for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C312, "Check Valves for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Check Valve" or "Detector Check Valve."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Check Valves Certified for Canada (HMER7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gate Valves Certified for Canada (HMRZ7)

USE AND INSTALLATION

This category covers gate valves intended for use in fire-service systems for working pressures not exceeding 1210 kPa for sizes 12 in. or smaller, and 1030 kPa for sizes larger than 12 in. Some valves are rated for 1720 or 2070 kPa working pressures as indicated in the individual certifications.

The valves may be provided with threaded, flanged, hub or other end configurations appropriate to the size of valve and the intended use and installed in either horizontal or vertical positions.

Gate valves may be of the outside-screw-and-yoke type or of the inside-screw type, the latter for installation either above or below ground. Gate valves of the outside-screw-and-yoke type are intended for use with pipe of 1/2 in. or larger sizes.

Gate valves of the inside-screw type are intended for use with pipe of 2-1/2 in. or larger sizes.

If valves are suitable for use with indicator posts, it is so indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

These products have not been investigated for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Fire Main Equipment Certified for Canada (HAMV7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C262 (1992), ''Gate Valves for Fire Protection Service.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fire Main Gate Valve.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE ALARM CABLE CERTIFIED FOR CANADA (HNGV7)

POWER-LIMITED FIRE ALARM CABLE CERTIFIED FOR CANADA (HNIR7)

USE

This category covers power-limited fire alarm cable, which is a single and multiple conductor cable intended for use within buildings in fire alarm and signal systems in accordance with Sections 16 and 32 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' This cable is rated 300 V maximum and has a 60°C minimum temperature rating.

PRODUCT MARKINGS

Power-limited fire alarm cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes the flame rating ''FT1,'' ''FT4'' or ''FT6,'' in addition to one of the following Type designations:

FAS — Indicates cable rated 60°C maximum.
FAS90 — Indicates cable rated 90°C maximum.
FAS105 — Indicates cable rated 105°C maximum.
FAS150 — Indicates cable rated 150°C maximum.
FAS200 — Indicates cable rated 200°C maximum.

Cable marked ''sunlight resistant'' or ''sun res'' or ''SR'' may be exposed to the direct rays of the sun.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 208, ''Fire Alarm and Signal Cable.''

Power-limited Fire Alarm Cable Certified for Canada (HNIR7)−*Continued*

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Power-limited Fire Alarm Cable.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE-RESISTIVE DUCT ASSEMBLIES CERTIFIED FOR CANADA (HNKN7)

GENERAL

A fire-resistive duct assembly is a construction consisting of a duct and materials designed to protect the duct for a specified hourly rating. The specifications for the materials in the fire-resistive duct assembly and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual assemblies. The hourly ratings apply only to the complete assemblies. Individual components are designated for use in a specific assembly to achieve specific ratings. The individual components are not assigned ratings and are not intended to be interchanged between assemblies.

RELATED PRODUCTS

For a description of ventilation duct assemblies investigated for fire resistance, see Ventilation Duct Assemblies Certified for Canada (HNLJ7).

VENTILATION DUCT ASSEMBLIES CERTIFIED FOR CANADA (HNLJ7)

GENERAL

This category covers the fire-resistive performance of ventilation duct assemblies investigated in accordance with ISO 6944-1985, ''Fire Resistance Tests – Ventilation Ducts.'' The purpose of this test is to measure the ability of a representative ventilation duct assembly to resist the spread of fire from one compartment to another without the aid of fire dampers.

ISO 6944 defines performance requirements for ventilation duct assemblies in terms of insulation, integrity and stability. Stability is the measurement of a ventilation duct assembly's ability to resist collapse, which would prevent the ventilation duct assembly from performing its intended function. Integrity is the measurement of the ventilation duct assembly's ability to resist the passage of flames and hot gases into a nonfire environment. Insulation is the measurement of the ventilation duct assembly's ability to limit the temperature rise on the surface of the ventilation duct assembly in a nonfire environment from reaching an average temperature rise of 140°C (252°F) and a maximum temperature rise of 180°C (324°F).

ISO 6944 is applicable to vertical and horizontal ducts, with or without branches, taking into account the joints, air supply and exhaust openings, as well as the basic duct construction.

ISO 6944 contains requirements for two types of ventilation duct assemblies, identified as Duct A and Duct B. The requirements for Duct A are intended for ventilation duct assemblies that pass through the fire environment without openings. The requirements for Duct B are intended for ventilation duct assemblies where the duct contains openings within the fire environment. ISO 6944 recommends the ventilation duct assembly tested represent the maximum width-to-height ratio intended for use. ISO 6944 also recommends the tested duct be 250 mm by 1000 mm. The Classification for all ventilation duct assemblies is based upon data from fire tests on 250 mm by 1000 mm ducts unless reported otherwise.

Ventilation duct assemblies have been investigated for a flame spread rating of 25 or less and a smoke developed rating of 50 or less in accordance with the ''Canadian National Building Code,'' and ANSI/NFPA 90A, ''Installation of Air-Conditioning and Ventilating Systems.''

Ventilation duct assemblies are intended to be installed in accordance with the manufacturer's installation instructions provided with the product. Where a ventilation duct assembly penetrates a fire-rated floor or wall assembly, the resulting opening around the ventilation duct assembly should be firestopped with a firestop system tested in accordance with CAN/ULC-S115, ''Standard Method of Fire Tests of Firestop Systems.'' Each individual ventilation duct assembly includes reference to one or more through-penetration firestop systems described in Through-penetration Firestop Systems Certified for Canada (XHEZ7).

Ventilation Duct Assemblies Certified for Canada (HNLJ7)−*Continued*

The FT or FTH ratings of the firestop system should be equal to or greater than the hourly insulation rating of the ventilation duct assembly.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified assemblies.

ADDITIONAL INFORMATION

For additional information, see Fire-resistive Duct Assemblies Certified for Canada (HNKN7) and Fire Resistance Ratings Certified for Canada (BXRH7).

UL MARK

Those materials identified by an (*) in the assembly description text are eligible to be produced under UL's Follow-Up Service Program. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COATED DUCTS CERTIFIED FOR CANADA (HNNX7)

USE AND INSTALLATION

This category covers duct sections, which are factory coated with materials intended to provide fire-resistive properties.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

Properties of these ducts, other than the degree of fire resistance of specific duct assemblies, have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Fire-resistive Duct Assemblies Certified for Canada (HNKN7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate the fire-resistive duct assemblies in which these products are installed is ISO 6944-1985, "Fire Resistance Tests – Ventilation Ducts."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word " CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

COATED DUCT
FOR USE IN FIRE RESISTIVE DUCT ASSEMBLIES
SEE UL FIRE RESISTANCE DIRECTORY
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METALLIC COMPOSITE DUCTS CERTIFIED FOR CANADA (HNOE7)

USE AND INSTALLATION

This category covers duct sections fabricated from panel units of a cementitious core mechanically bonded to metallic face sheets intended to provide fire-resistive properties.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

Properties of these ducts, other than the degree of fire resistance of specific duct assemblies, have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Fire-resistive Duct Assemblies Certified for Canada (HNKN7) and Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate the fire-resistive duct assemblies in which these products are installed is ISO 6944 (1985), "Fire Resistance Tests – Ventilation Ducts."

Metallic Composite Ducts Certified for Canada (HNOE7)−*Continued*

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FITTINGS CERTIFIED FOR CANADA (HSNX7)

Fittings as listed in the following include adapters, connectors, pigtails, etc. commonly used in the assembly of appliances, equipment or piping for the handling of flammable gases or liquids. The various categories and listings identify such fluids.

ADAPTERS, COUPLINGS AND FITTINGS CERTIFIED FOR CANADA (HTBV7)

Adapters, couplings and fittings include filler and vapor-return hose couplings, gauge adapter fittings, quick-connect couplings, sight flow indicators, and other types of fittings intended to be used for making various types of connections in piping systems.

Anhydrous-ammonia Adapters and Miscellaneous Fittings Certified for Canada (HTPT7)

USE

This category covers various adapters, couplings and fittings intended for use with anhydrous-ammonia systems and related equipment utilized for industrial processes or agricultural soil fertilization. They are for use where the working pressure does not exceed 1720 kPa.

Anhydrous-ammonia reacts rapidly with copper, zinc, and their alloys. Therefore, users are cautioned against employing any parts of such metals for handling anhydrous-ammonia.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C125 (1992), "Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief)."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Adapter or Fitting for Anhydrous Ammonia" (or "Adapter or Fitting for NH_3").

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-GAS ADAPTERS AND MISCELLANEOUS FITTINGS CERTIFIED FOR CANADA (HVEX7)

USE

This category covers various adapters, couplings, connection devices and miscellaneous fittings intended for use primarily by manufacturers and

LP-Gas Adapters and Miscellaneous Fittings Certified for Canada (HVEX7)−*Continued*

distributors of LP-gas systems. They are intended for use with domestic, commercial, or industrial types of systems where the working pressure does not exceed 1720 kPa.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate pipe-connecting fittings and adapters in this category is ULC/ORD-C567, ''Guide for the Investigation of Pipe Connectors for Flammable Liquids and LP-Gas.''

The basic standard used to investigate Type I and Type II connection devices in this category is ANSI Z21.81/CSA 6.25, ''Cylinder Connection Devices.''

The basic standard used to investigate excess flow check and shutoff mechanisms of fittings and adapters in this category is ULC/ORD-C125, ''Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief).''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Adapter for LP-Gas'' or ''Fitting for LP-Gas.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE HOSE CONNECTORS CERTIFIED FOR CANADA (HXVX7)

USE AND INSTALLATION

This category covers flexible hose connectors consisting of a length of reinforced elastomeric or thermoplastic hose not over 152.4 cm (60 in.) long with a fitting attached to each end. They are intended for use in accordance with CAN/CSA-B149.1, ''Natural Gas and Propane Installation Code,'' or the applicable local code requirements, at temperatures down to -40°C (-40°F).

Hose connectors are rated for low-pressure or high-pressure applications. Hose connectors rated for low-pressure applications are intended for making connection between the outlet of an LP-gas regulator and the service piping where the maximum working pressure does not exceed 0.15 kPa (1 psig), and are also suitable for use in natural gas applications where pressures do not exceed 0.15 kPa (1 psig). Hose connectors rated for high-pressure applications are suitable for making connection between an LP-gas cylinder valve and a control manifold or regulator where pressures do not exceed 2400 kPa gauge (350 psig).

RELATED PRODUCTS

See LP-Gas Hose for Flexible Connectors Certified for Canada (MWOS8).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CGA-8.1 (1986), ''Elastomeric Composite Hose and Hose Couplings for Conducting Propane and Natural Gas,'' and CSA/CAN1-8.3 (1977), ''Thermoplastic Hose and Hose Couplings for Conducting Propane and Natural Gas.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Flexible Hose Connector for Propane [or LP-Gas]'' or ''Flexible Hose Connector for Propane [or LP-Gas] and Natural Gas,'' and the appropriate CGA Type if shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

QUICK-DISCONNECT DEVICES CERTIFIED FOR CANADA (HXWS7)

USE AND INSTALLATION

This category covers hand-operated quick-disconnect devices intended for use in LP-gas, natural gas, manufactured gas and mixed-gas supply lines to provide a means for connecting and disconnecting appliances or appliance connectors. These devices are intended for indoor and outdoor use at pressures not exceeding 3.5 kPa gauge. These devices are provided with an automatic means to shut off the flow of gas from the supply when the mating parts of the device are disconnected. The mating parts are provided with a positive locking means or a straight-pull disconnection means to prevent accidental disconnection of the device.

These devices are intended for installation and use in accordance with CSA B149.1, ''Natural Gas and Propane Installation Code.'' Only persons trained in the maintenance, hazards and testing procedures of the gas system should perform the installation.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.41/CSA 6.9 (2011), ''Quick Disconnect Devices for Use with Gas Fuel Appliances.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Quick-disconnect Device for Gas Fuel Appliances,'' and the statement ''IN ACCORDANCE WITH ANSI Z21.41/CSA 6.9.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES AND FITTINGS CERTIFIED FOR CANADA (HYXT7)

USE

This category covers complete luminaires intended for general and special-purpose illumination, and component fittings and retrofits intended for field assembly to or into complete units.

SPECIAL-USE LUMINAIRES

Cooking Hood Luminaires — Luminaires intended for use in nonresidential occupancies in exhaust ducts or hoods above cooking equipment are marked **"SUITABLE FOR USE WITHIN COMMERCIAL COOKING HOODS"** and **"MOUNT A MINIMUM OF 1.2 M (4 FT) ABOVE COOKING SURFACE."**

Recessed cooking hood luminaires are additionally marked with a minimum spacing marking: **"INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___MM (___ INCHES); B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___MM (___ INCHES); AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___MM (___ INCHES)."** The recessed cooking hood is intended to be installed in a hood that maintains these minimum spacings.

Air-handling Luminaires — Luminaires suitable for air-handling use are marked **"SUITABLE FOR AIR HANDLING USE."** Some recessed air-handling luminaires are restricted to certain applications because of certain features and are marked as follows: **"VENTILATING OR COOLING AIR ONLY," "ONLY FOR USE IN CEILING PLENUM OF NONCOMBUSTIBLE CONSTRUCTION OR WITH AIR HANDLING PARTS THAT COVER VENT OPENINGS."**

LUMINAIRE INSTALLATION MARKINGS

Unless otherwise indicated under the category for a specific type of luminaire, all luminaires are marked indicating the location where they can be used:

Luminaires marked **"DRY LOCATIONS ONLY"** are intended to be installed in indoor dry locations.

Luminaires marked **"SUITABLE FOR DAMP LOCATIONS"** are intended to be installed in damp or dry locations.

Luminaires marked **"SUITABLE FOR WET LOCATIONS"** are intended to be installed in wet, damp or dry locations.

The locations are defined in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

In addition to the dry-, damp- or wet-location markings, a luminaire may be optionally investigated and marked for ingress protection in accordance with IEC 60529, ''Degrees of Protection Provided by Enclosures (IP Code).'' IP code markings are supplemental and not intended to replace dry-, damp- or wet-location markings.

Luminaires investigated for or restricted to a particular mounting location for suitability to wet locations are additionally marked **"SUITABLE FOR MOUNTING WITHIN 1.2 M (4 FT) OF THE GROUND," "SUITABLE FOR GROUND-MOUNTED RECESSED," "LIMIT RANGE OF ADJUSTMENT TO (instruction)"** or **"COVERED CEILING MOUNT ONLY."**

Luminaires investigated for or restricted to a particular mounting location are marked **"WALL MOUNT ONLY," "FOR CEILING MOUNTING ONLY"** or **"MOUNTING ORIENTATION"** (such as ''This End Up'').

Luminaires are marked with a supply wire temperature rating **"MIN ___C SUPPLY CONDUCTORS,"** if intended for greater than 75°C supply wiring. Luminaires rated for over 90°C supply wiring are additionally marked **"NOT FOR USE IN DWELLING."**

Luminaires that include an integral raceway are marked **"SUITABLE FOR USE AS RACEWAY"** and are additionally marked to include the maximum number, size and type of conductors they are intended to accommodate. See Surface Metal Raceways Certified for Canada (RJBT7) for raceways that can be assembled and installed as lighting units.

Some luminaires are only suitable for use with specific lamp types and are so marked. However, luminaires are not investigated or intended for use with sun lamps.

Luminaires containing components that require the luminaire to be connected only to an alternating-current circuit are marked **"60 Hz"** or **"AC ONLY."**

Luminaires designed for connection to a proprietary wiring system will specify the name and part number of the proprietary system and all cautionary or other markings required for the system. These systems are covered under Manufactured Wiring Systems Certified for Canada (QQVX7).

Luminaires designed for connection to other than nominal 120 V supply and/or a 2-wire branch circuit are marked to identify the voltage supply or type of branch circuit or both.

RELATED PRODUCTS

Fire-resistant Luminaires — Luminaires intended for recessed installation in ceilings that have been shown to provide a degree of fire resistance with the floor or roof assembly with which they have been tested are covered under Luminaires, Luminaire Assemblies and Luminaire Enclosures Classified for Fire Resistance Certified for Canada (CDHW7).

Emergency Lighting — Luminaires intended for simultaneous connection to normal and emergency power circuits, as well as luminaires with integral batteries for emergency illumination, are covered under Emergency Lighting and Power Equipment Certified for Canada (FTBR7).

Exit Lighting — Luminaires that illuminate an integral legend ''Exit'' are covered under Exit Fixtures Certified for Canada (FWBO7).

Electric Signs — Products that illuminate an integral legend other than ''Exit'' are covered under Signs Certified for Canada (UXYT7).

Suntan Lamps — Lighting products that employ suntan lamps are covered under Sun and Heat Lamps Certified for Canada (QPDY7) or Personal Sun and Heat Equipment Certified for Canada (QGRX7).

Submersible Luminaires — Luminaires intended for installation under water in accordance with Section 68 of the CEC are covered under Submersible Luminaires Certified for Canada (IFEV7) if intended for decorative fountains and similar locations, or Luminaires and Forming Shells Certified for Canada (WBDT7) if intended for installation in swimming pools and similar locations.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES AND FITTINGS, SPECIAL PURPOSE, MISCELLANEOUS CERTIFIED FOR CANADA (IETR7)

GENERAL

This category covers special-purpose luminaires and fittings that are parts and/or subassemblies of special-purpose luminaires intended for final assembly into special-purpose luminaires in the field.

PRODUCT MARKINGS

All luminaires and fittings are marked indicating the location where they can be used:

Luminaires and fittings marked **"DRY LOCATIONS ONLY"** are intended to be installed in indoor, dry locations.

Luminaires and fittings marked **"SUITABLE FOR DAMP LOCATIONS"** are intended to be installed in damp or dry locations.

Luminaires and fittings marked **"SUITABLE FOR WET LOCATIONS"** are intended to be installed in wet, damp or dry locations.

All luminaires and fittings bear a model, catalog or series number (or similar designation) adjacent to the Certification Mark.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, ''Luminaires.''

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Miscellaneous Luminaire,'' ''Floodlight'' or ''Inspection Light,'' or other appropriate product name as shown in the individual Listings.

UL MARK

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRE CONVERSIONS, RETROFIT CERTIFIED FOR CANADA (IEUQ7)

USE AND INSTALLATION

This category covers retrofit devices or kits consisting of parts and/or subassemblies intended for field installation in UL-certified luminaires, office furnishing luminaires or portable luminaires. These products have been investigated by UL to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit.

This category includes reflector kit retrofits and other retrofit devices. Reflector kits are intended to be used to add or replace reflectors in fluorescent luminaires and may also involve relocation, removal or replacement of wiring, lampholders and ballasts. Reflector kits are not intended to be installed on luminaires used as air-handling registers unless the accompanying reflector kit installation instructions specify this combination as suitable.

This category also includes retrofit kits consisting of light-emitting-diode (LED) light sources intended to replace a fluorescent lamp and where it is necessary to modify the luminaire. The modification may involve removing the fluorescent lamp ballast or rewiring lampholders within the luminaire in order to power the LED light source. A luminaire that is modified so it can no longer accept the original lamp has a label affixed (provided by the retrofit kit manufacturer) indicating the luminaire has been modified and can no longer operate the originally intended lamp(s).

RELATED PRODUCTS

Retrofit devices used to convert incandescent exit luminaires to fluorescent exit luminaires are covered under Exit Sign Conversion Kits Certified for Canada (FWCF7).

LED light sources intended to replace fluorescent lamps and where it is not necessary to modify the luminaire are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0 (2008), ''Luminaires,'' and CSA Technical Information Letter No. B-64, ''Interim Certification Requirements for Retrofit Assemblies for Use in Fluorescent Luminaires.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

For reflector kits:

LUMINAIRE CONVERSION, RETROFIT
FOR USE ONLY WITH + IDENTIFIED IN MANUFACTURER'S INSTRUCTIONS
Control No.

For nonreflector kits:

Luminaire Conversions, Retrofit Certified for Canada (IEUQ7)−*Continued*

The Classification Mark for retrofit devices that are other than reflector kits includes the Classification Mark elements detailed above and the following additional information:

LUMINAIRE CONVERSION, RETROFIT
(WITH RESPECT ONLY TO *)
FOR USE ONLY WITH +
Control No.

+ **FLUORESCENT LUMINAIRES**, **INCANDESCENT LUMINAIRES**, **HID LUMINAIRES**, **OFFICE FURNISHING LUMINAIRES** or **PORTABLE LUMINAIRES**

* **RISK OF FIRE** or **RISK OF SHOCK** (the entire parenthetical phrase is provided only if found applicable by UL)

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLUORESCENT-LAMP-TYPE LUMINAIRES CERTIFIED FOR CANADA (IEUT7)

This category covers surface and recessed luminaires containing only fluorescent lamps or fluorescent and incandescent lamps. Luminaires that contain high-intensity-discharge lamps in combination with fluorescent lamps are Listed under High-intensity-discharge-lamp-type Luminaires Certified for Canada (IEWX7).

All luminaires employ a Class P thermally protected ballast except that luminaires intended for use with straight tubular lamps and/or marked for **"OUTDOOR USE ONLY"** incorporate a Class P thermally protected or a non-Class P ballast of the simple reactance type.

For additional information see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

SPECIAL USE LUMINAIRES

Luminaires intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Extra-low-voltage Luminaires for Recreational Vehicle Use Certified for Canada (IFDQ7).

Luminaires intended for use with germicidal lamps (germicidal lamps should not be used in ordinary luminaires) are marked **"THIS LUMINAIRE IS DESIGNED FOR USE WITH GERMICIDAL LAMPS AND MUST BE INSTALLED IN COMPLIANCE WITH COMPETENT TECHNICAL DIRECTIONS SO THAT THE USER'S EYE AND BARE SKIN WILL NOT BE SUBJECTED TO INJURIOUS RAYS."**

LUMINAIRE INSTALLATION MARKINGS

All luminaires except those intended for use with a remote ballast are marked with their electrical ratings excluding any convenience receptacle provided, stating the voltage, current or volt-amperes and frequency.

As an alternative to a marked volt-ampere rating, the luminaire line volt-amperes can be determined by the following markings: **"FOR LINE VOLT-AMPERES MULTIPLY TOTAL LAMP WATTAGE BY 1.5"** for luminaires with high power factor preheat or rapid start ballasts; **"FOR LINE VOLT-AMPERES MULTIPLY TOTAL LAMP WATTAGE BY 2.5"** for luminaires with low power factor preheat or rapid start ballasts; or **"FOR LINE VOLT-AMPERES MULTIPLY ALL LAMPS IN INCHES BY ___"** for luminaires with instant start ballasts and where the blank corresponds to a multiplying factor based on supply voltage.

Luminaires with a ballast output circuit voltage exceeding 1000 V are marked **"NOT FOR USE IN DWELLING."**

Luminaires intended to be field connected to a remote ballast are marked **"USE BALLAST FOR ___ WATT ___ TYPE LAMP"** and **"USE THERMALLY PROTECTED BALLAST FOR TYPE LAMPS."**

Luminaires are suitable for use with 60°C field wiring unless (1) the field wiring is routed within 3 inches (76 mm) of the ballast, in which case 90°C rated wire is to be used, or (2) the luminaire is marked with a supply wire rating.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fluorescent Surface-mounted Luminaires Certified for Canada (IEUZ7)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, undercabinet-, cabinet- and pole-mounted luminaires. Ceiling-

Fluorescent Surface-mounted Luminaires Certified for Canada (IEUZ7)−*Continued*

mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Cabinet luminaires investigated for only surface mounting inside a cabinet and not intended for recessed mounting are marked **"SUITABLE FOR SURFACE MOUNTING ONLY."** Cabinet luminaires are not intended for installation in recessed walls or ceilings.

LUMINAIRE INSTALLATION MARKINGS

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) Luminaires obviously not designed for ceiling use or if marked **"WALL MOUNT ONLY"** are not acceptable for mounting on ceilings, and (2) luminaires marked **"NON-COMBUSTIBLE SURFACE ONLY."**

All luminaires provided with a power-supply cord are intended for chain, hook, or similar suspension means only and are marked **"FOR CHAIN OR HOOK SUSPENSION ONLY."**

Luminaires intended for undercabinet mounting are marked **"SUITABLE FOR UNDER-CABINET MOUNTING."**

Luminaires intended for continuous-row mounting are marked **"SUITABLE FOR CONTINUOUS ROW MOUNTING."**

Luminaires weighing more than 11.3 kg (25 lbs) and intended for outlet box connection are marked **"THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX."**

Cabinet luminaires have been investigated for mounting in accordance with the clearances marked on the product. Cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

Cabinet luminaires of all types should not be located less than 30.5 cm (12 in.) apart and should be allowed a 13 mm (1/2 in.) minimum clearance between the top and any horizontal surface unless the instructions indicate a lesser spacing.

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Fluorescent," "Wired Fluorescent Channel" or "Wired Fluorescent Reflector" adjacent to the Certification Mark.

RELATED PRODUCTS

Undercabinet portable luminaires of the attachment-plug equipped, cord-connected type or direct-plug-in type are covered under Luminaires, Portable Certified for Canada (QOWZ7).

Portable cabinet luminaires of the attachment-plug equipped, cord-connected type or direct-plug-in type are covered under Portable Cabinet Luminaires Certified for Canada (QOVJ7).

ADDITIONAL INFORMATION

For additional information, see Fluorescent Lamp-type Luminaires Certified for Canada (IEUT7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, "Luminaires."

The basic standard used to investigate undercabinet and cabinet luminaires in this category is CSA-C22.2 No. 9.0, "General Requirements for Luminaires."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

The Listing Mark for this category requires the use of a holographic label.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fluorescent Recessed Luminaires Certified for Canada (IEVV7)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

TYPES OF RECESSED LUMINAIRES

Fluorescent Recessed Luminaires Certified for Canada (IEVV7)−*Continued*

TYPE IC LUMINAIRE — Luminaires marked **"TYPE IC"** may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire.

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. (76 mm) from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. (13 mm) from the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity not closer than 1/2 in. (13 mm) from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. (25 mm) from adjacent luminaires.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked **"FOR USE IN CONCRETE ONLY."**

A Type IC or Non-IC luminaire that is sealed to prevent the entry of concrete may be installed in concrete providing it is marked **"SUITABLE FOR USE IN POURED CONCRETE."**

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires, except those marked for use in concrete only, are suitable for use in suspended ceilings and may be marked **"SUITABLE FOR SUSPENDED CEILING."**

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked **"SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."**

A ground-mounted recessed luminaire suitable for installation in non-fire-resistant mediums, such as a wooden deck, is marked **"SUITABLE FOR GROUND-MOUNTED RECESSED."**

LUMINAIRE INSTALLATION MARKINGS

A luminaire with an integral junction box or wiring compartment and investigated for any heat contribution added by branch-circuit conductors is marked **"MAXIMUM OF ___ NO. ___ AWG BRANCH CIRCUIT CONDUCTORS SUITABLE ___ C PERMITTED IN BOX."** A luminaire suitable for branch-circuit conductors, but not for pulling wires though conduit, is additionally marked **"FOR CABLE USE ONLY – NOT FOR PULLING WIRES."**

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked **"ACCESS ABOVE CEILING REQUIRED," "ACCESS BEHIND WALL REQUIRED"** or **"ACCESS NONCOMBUSTIBLE CEILING PLENUM ONLY."**

Luminaires provided with polymeric recessed housings are marked **"FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY"** and **"FOR USE IN NON-FIRE RATED INSTALLATIONS ONLY."**

Luminaires provided with recessed housings with openings that do not close off the room side to ceiling opening are marked **"FOR USE IN NON-FIRE RATED INSTALLATIONS ONLY."**

Luminaires that consist of 1) a luminaire housing and trims or 2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

(1) For luminaire housing and trims, the housing is marked **"USE WITH [manufacturer's name] [catalog number] TRIMS"** and each trim is marked with the manufacturer's name and catalog number;

(2) For rough-in and finishing sections, the rough-in section is marked **"ROUGH-IN SECTION FOR USE WITH FINISHING SECTION ___,"** where the blank refers to the type or catalog number. The finishing section is marked in the same manner stating **"FINISHING SECTION FOR USE WITH ROUGH-IN SECTION ___."**

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Recessed Fluorescent," "Recessed Fluorescent Channel," "Wired Recessed Fluorescent Luminaire Reflector," "Wired Recessed Fluorescent Channel" or "Wired Fluorescent Recessed Section" adjacent to the Certification Mark.

ADDITIONAL INFORMATION

For additional information, see Fluorescent Lamp-type Luminaires Certified for Canada (IEUT7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

HIGH-INTENSITY-DISCHARGE-LAMP-TYPE LUMINAIRES CERTIFIED FOR CANADA (IEWX7)

GENERAL

This category covers surface- and recessed-lighting luminaires containing high-intensity-discharge lamps and may contain fluorescent and incandescent lamps.

LUMINAIRE INSTALLATION MARKINGS

All luminaires except those intended for use with a remote ballast are marked with their electrical ratings excluding any convenience receptacle provided, stating the voltage, current or volt-amperes and frequency.

Luminaires intended to be field connected to a remote ballast are marked **"USE BALLAST FOR __ WATT __ TYPE LAMP"** and **"USE THERMALLY PROTECTED BALLAST FOR TYPE LAMPS."**

Luminaires intended for use with metal halide lamps and not provided with a suitable lamp containment barrier, are marked **"DO NOT USE A LAMP IDENTIFIED FOR USE IN ENCLOSED LUMINAIRES."**

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

High-intensity-discharge Surface-mounted Luminaires Certified for Canada (IEXT7)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, and pole-mounted luminaires. Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked **"SUITABLE FOR OPERATION IN AMBIENTS NOT EXCEEDING __ C,"** where the blank is filled in with the intended elevated ambient.

LUMINAIRE INSTALLATION MARKINGS

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked **"WALL MOUNT ONLY"** are not acceptable for mounting on ceilings, and (2) luminaires marked **"NON-COMBUSTIBLE SURFACE ONLY."**

All luminaires provided with a power-supply cord are intended for chain, hook, or similar suspension means only and are marked **"FOR CHAIN OR HOOK SUSPENSION ONLY."**

Luminaires intended for undercabinet mounting are marked **"SUITABLE FOR UNDER-CABINET MOUNT."**

Luminaires intended for continuous-row mounting are marked **"SUITABLE FOR CONTINUOUS ROW MOUNTING."**

Luminaires weighing more than 11.3 kg (25 lbs) and intended for outlet box connection are marked **"THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX."**

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "HID" or "Wired HID Section" adjacent to the Certification Mark.

High-intensity-discharge Surface-mounted Luminaires Certified for Canada (IEXT7)−*Continued*

High-intensity-discharge Recessed Luminaires Certified for Canada (IEXZ7)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

TYPES OF RECESSED LUMINAIRES

TYPE IC LUMINAIRE — Luminaires marked **"TYPE IC"** may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire.

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. (76 mm) from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. (13 mm) from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the lamp(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. (13 mm) from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. (25 mm) from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked **"INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___MM (___INCHES); B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___MM (___INCHES); AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___MM (___ INCHES)."** The marked-spacing luminaire should be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 3 in. from the luminaire, and other structural support members may be in the cavity area above the luminaire, provided (1) they are not closer than 1/2 in. (13 mm) from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity sidewalls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked **"FOR USE IN CONCRETE ONLY."**

A Type IC or non-IC luminaire that is sealed to prevent the entry of concrete may be installed in concrete providing it is marked **"SUITABLE FOR USE IN POURED CONCRETE."**

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires, except those marked for use in concrete only, are suitable for use in suspended ceilings and may be marked **"SUITABLE FOR SUSPENDED CEILING."**

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

High-intensity-discharge Recessed Luminaires Certified for Canada (IEXZ7)−*Continued*

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked **"SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."**

A ground-mounted recessed luminaire suitable for installation in non-fire-resistant mediums, such as a wooden deck, is marked **"SUITABLE FOR GROUND-MOUNTED RECESSED."**

LUMINAIRE INSTALLATION INSTRUCTIONS

All recessed luminaires, except those marked **"FOR USE IN POURED CONCRETE ONLY,"** are marked **"BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING."**

Luminaires that produce temperatures in excess of 90°C at points of mounting to the building structure are marked **"INSTALL IN BUILDINGS OF FIRE-RESISTIVE CONSTRUCTION – MOUNT ON NON-COMBUSTIBLE MATERIAL."**

Only those luminaires with an integral junction box or wiring compartment marked **"MAXIMUM OF NO. __ AWG BRANCH CIRCUIT CONDUCTOR SUITABLE FOR __ C PERMITTED IN BOX,"** have been investigated for any heat contribution added by branch-circuit conductors.

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked **"ACCESS ABOVE CEILING REQUIRED"** or **"ACCESS BEHIND WALL REQUIRED."**

Luminaires provided with polymeric recessed housings are marked **"FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY"** and **"FOR USE IN NON-FIRE RATED INSTALLATIONS."**

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

(1) For luminaire housing and trims, the housing is marked **"USE WITH [manufacturer's name] [catalog number] TRIMS"** and each trim is marked with the manufacturer's name and catalog number;

(2) For rough-in and finishing sections, the rough-in section is marked **"ROUGH-IN SECTION FOR USE WITH FINISHING SECTION,"** where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label. The finishing section is marked in the same manner stating **"FINISHING SECTION FOR USE WITH ROUGH-IN SECTION."**

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words ''Recessed HID,'' ''Recessed HID Type IC,'' ''Rough-In Section for Recessed HID,'' ''Rough-In Section for Recessed HID Type IC,'' ''Finishing Section for Recessed HID'' or ''Wired Recessed HID Section'' adjacent to the Certification Mark.

ADDITIONAL INFORMATION

For additional information, see High-intensity-discharge-lamp-type Luminaires Certified for Canada (IEWX7) Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, ''Luminaires.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Luminaire.''

The Listing Mark for this category requires the use of a holographic label.

INCANDESCENT-LAMP-TYPE LUMINAIRES CERTIFIED FOR CANADA (IEYV7)

GENERAL

This category covers surface and recessed luminaires containing only incandescent lamps.

Incandescent-lamp-type Luminaires Certified for Canada (IEYV7)−*Continued*

Luminaires provided with electrical loads other than lampholders directly connected to a 120 V, 2-wire branch circuit supply are marked with the total current rating for the luminaire, excluding any convenience receptacle provided.

Luminaires provided with medium- or mogul-base lampholders are investigated for use with Types A or PS lamps unless marked otherwise. Also, some luminaires are only suitable for use with specific lamp types and are so marked.

A luminaire intended for use with a tungsten-halogen lamp and that does not require an additional lamp containment barrier is marked **"USE LAMP MARKED 'SUITABLE FOR USE IN OPEN LUMINAIRES'."**

Luminaires are not intended for use with infrared or grow lamps unless so marked.

RELATED PRODUCTS

Luminaires that contain fluorescent or high-intensity-discharge lamps in combination with incandescent lamps are covered under Fluorescent-lamp-type Luminaires Certified for Canada (IEUT7) and High-intensity-discharge-lamp-type Luminaires Certified for Canada (IEWX7), respectively.

Luminaires intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Extr-low-voltage Luminaires for Recreational Vehicle Use Certified for Canada (IFDQ7).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Incandescent Surface-mounted Luminaires Certified for Canada (IEZR7)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, undercabinet-, cabinet- and pole-mounted luminaires.

Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked **"SUITABLE FOR OPERATION IN AMBIENTS NOT EXCEEDING __ C,"** where the blank is filled in with intended elevated ambient.

Cabinet luminaires investigated for only surface mounting inside a cabinet and not intended for recessed mounting are marked **"SUITABLE FOR SURFACE MOUNTING ONLY."** Cabinet luminaires are not intended for installation in recessed walls or ceilings.

LUMINAIRE INSTALLATION MARKINGS

If the required rating of the field wiring supplying the luminaire requires the installer to push the supply conductors from the luminaire into the outlet box, the luminaire is marked **"PUSH CONDUCTORS INTO JUNCTION BOX."**

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked **"WALL MOUNT ONLY"** are not acceptable for mounting on ceilings, and (2) luminaires marked **"NON-COMBUSTIBLE SURFACE ONLY."**

Luminaires intended for undercabinet mounting are marked **"SUITABLE FOR UNDER-CABINET MOUNTING."**

Luminaires intended for continuous-row mounting are marked **"SUITABLE FOR CONTINUOUS ROW MOUNTING."**

Luminaires weighing more than 11.3 kg (25 lbs) and intended for outlet-box connection are marked **"THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX."**

Cabinet luminaires have been investigated for mounting in accordance with the clearances marked on the product. Cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

Cabinet luminaires of all types should not be located less than 30.5 cm (12 in.) apart and should be allowed a 13 mm (1/2 in.) minimum clearance between the top and any horizontal surface, unless the instructions indicate a lesser spacing.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the word "Incandescent" adjacent to the Certification Mark.

RELATED PRODUCTS

Incandescent Recessed Luminaires Certified for Canada (IEZX7)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

SPECIAL-USE LUMINAIRES

Recessed-type luminaires suitable for optional use with infrared heating lamps are marked and rated for 250 W reflector-type lamps. Recessed units suitable only for use with one or more infrared heating lamps are covered under Air Heaters, Room, Fixed and Location-dedicated Certified for Canada (KKWS7).

TYPES OF RECESSED LUMINAIRES

TYPE IC LUMINAIRE — Luminaires marked **"TYPE IC"** may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire. Type IC luminaires are provided with thermal protection to deactivate the lamp should the luminaire be mislamped.

INHERENTLY-PROTECTED LUMINAIRE — A recessed luminaire which does not exceed temperatures greater than 90°C on outside surfaces even when covered with insulation and mislamped or overlapped is identified by being marked **"INHERENTLY PROTECTED."**

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. (76 mm) from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. (13 mm) from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the lamp(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. (13 mm) from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. (25 mm) from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked **"INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___MM (___ INCHES); B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___MM (___ INCHES); AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___MM (___ INCHES)."** The marked-spacing luminaire is to be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 3 in. (76 mm) from the luminaire and other structural support members may be in the cavity area above the luminaire provided (1) they are not closer than 1/2 in. (13 mm) from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not

Incandescent Recessed Luminaires Certified for Canada (IEZX7)−*Continued*

seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity sidewalls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked **"FOR USE IN CONCRETE ONLY."**

A Type IC or Non-IC luminaire sealed to prevent the entry of concrete may be installed in concrete providing it is marked **"SUITABLE FOR USE IN POURED CONCRETE."**

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires except those marked for use in concrete only are suitable for use in suspended ceilings and may be marked **"SUITABLE FOR SUSPENDED CEILING."**

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked **"SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."**

A ground-mounted recessed luminaire that is suitable for installation in non-fire-resistant mediums such as a wooden deck is marked **"SUITABLE FOR GROUND-MOUNTED RECESSED."**

LUMINAIRE INSTALLATION MARKINGS

All recessed luminaires except those marked **"FOR USE IN POURED CONCRETE ONLY"** are marked **"BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING."**

Luminaires that produce temperatures in excess of 90°C at points of mounting to the building structure are marked **"INSTALL IN BUILDINGS OF FIRE RESISTANT CONSTRUCTION."**

Only those luminaires with an integral junction box or wiring compartment marked **"MAXIMUM OF NO. __ AWG BRANCH CIRCUIT CONDUCTOR SUITABLE FOR __ C PERMITTED IN BOX,"** have been investigated for any heat contribution added by branch circuit conductors.

Luminaires which, by their construction, do not permit access to or inspection of field wiring connections from the front of the luminaire, after installation, are marked **"ACCESS ABOVE CEILING REQUIRED"** or **"ACCESS BEHIND WALL REQUIRED."**

Luminaires that are provided with polymeric recessed housings are marked **"FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY"** and **"FOR USE IN NON-FIRE RATED INSTALLATIONS."**

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

(1) (1) For luminaire housing and trims, the housing is marked **"USE WITH [manufacturer's name] [catalog number] TRIMS"** and each trim is marked with the manufacturer's name and catalog number.

(2) (2) For rough-in and finishing sections, the rough-in section is marked **"ROUGH-IN SECTION FOR USE WITH FINISHING SECTION,"** where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label. The finishing section is marked in the same manner stating **"FINISHING SECTION FOR USE WITH ROUGH-IN SECTION."**

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Recessed Incandescent," "Recessed Incandescent Type IC," "Rough-In Section for Recessed Incandescent," "Rough-In Section for Recessed Incandescent Type IC" or "Finishing Section for Recessed Fixture" adjacent to the Certification Mark.

Incandescent Recessed Luminaires, Convertible, Non-IC/IC Certified for Canada (IFAH7)

GENERAL

This category covers luminaires for installation in recessed cavities in walls, ceilings and similar locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These products may be installed in either IC or non-IC applications. The same rough-in section or luminaire housing is used for both IC and non-IC applications. The choice of finishing section/trim and light source (lamp) determine whether the completed luminaire is suitable for Type IC installations or non-IC installations.

Details for making the proper choice of finishing section/trim and lamp appropriate for the application are contained in the installation instructions packaged with the rough-in section/luminaire housing. All luminaires employ a thermal protective device to deactivate the lamp(s) in the event increased temperature conditions result where the installation instructions are not followed.

TYPE IC INSTALLATIONS — Refer to Incandescent Recessed Luminaires Certified for Canada (IEZX7) sections entitled "Type IC Luminaires."

TYPE NON-IC INSTALLATIONS — Refer to Incandescent Recessed Luminaires Certified for Canada (IEZX7) sections entitled "Type Non-IC Luminaires."

LUMINAIRE INSTALLATION MARKINGS

The rough-in section or the luminaire housing of a convertible recessed luminaire is marked with the following two statements:

A. **"BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING"**

B. **"DO NOT INSTALL INSULATION WITHIN 76 MM (3 IN.) OF ANY PART OF THE LUMINAIRE"**

The marking in item B is on a peel-off label that is removed when the luminaire is installed in a Type IC installation.

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

(1) For luminaire housing and trims, the housing is marked **"USE WITH [manufacturer's name] [catalog number] TRIMS,"** and each trim is marked with the manufacturer's name and catalog number.

(2) For rough-in and finishing sections, the rough-in section is marked **"ROUGH-IN __ SECTION FOR CONVERTIBLE RECESSED LUMINAIRE"** and a correlation marking for the trims **"TYPE IC TRIMS/FINISHING SECTIONS: AA, BB, CC, etc."** or **"TYPE IC/NON-IC TRIMS/FINISHING SECTIONS: AA, BB, CC, etc."** The finishing section is marked in the same manner stating **"FINISHING SECTION FOR USE WITH ROUGH-IN SECTION ___."**

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Recessed Incandescent Convertible Non-IC/IC," "Recessed Incandescent Convertible Non-IC/IC Rough-In Section" or "Recessed Incandescent Convertible Non-IC/IC Finishing Section" adjacent to the Certification Mark.

RELATED PRODUCTS

See Incandescent Recessed Luminaires Certified for Canada (IEZX7).

ADDITIONAL INFORMATION

For additional information, see Incandescent-lamp-type Luminaires Certified for Canada (IEYV7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, "Luminaires."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Incandescent Recessed Luminaires, Convertible, Non-IC/IC Certified for Canada (IFAH7)−*Continued*

Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ″Luminaire.″

The Listing Mark for this category requires the use of a holographic label.

* *

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHT-EMITTING-DIODE LUMINAIRES CERTIFIED FOR CANADA (IFAK7)

GENERAL

This category covers surface- and recessed-lighting luminaires containing only light-emitting-diode (LED) light sources.

Luminaires are not intended for use with infrared or ultraviolet LED light sources unless so marked.

RELATED PRODUCTS

Luminaires that contain incandescent lamps in combination with an LED light source are covered under Incandescent Surface-mounted Luminaires Certified for Canada (IEZR7), Incandescent Recessed Luminaires Certified for Canada (IEZX7) and Incandescent Recessed Luminaires, Convertible, Non-IC/IC Certified for Canada (IFAH7).

Luminaires that contain fluorescent lamps in combination with an LED light source are covered under Fluorescent Surface-mounted Luminaires Certified for Canada (IEUZ7) and Fluorescent Recessed Luminaires Certified for Canada (IEVV7).

Luminaires that contain high-intensity-discharge lamps in combination with an LED light source are covered under High-intensity-discharge Surface-mounted Luminaires Certified for Canada (IEXT7) and High-intensity-discharge Recessed Luminaires Certified for Canada (IEXZ7).

Luminaires with an LED light source intended to be connected to a non-integral power source rated 30 V ac (60 V dc) or less are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7).

Luminaires with an LED light source connected to a nonintegral power source rated 15 V ac (30 V dc) or less and intended to be part of a low-voltage landscape lighting system are covered under Landscape Lighting Systems, Low Voltage Certified for Canada (IFDH7).

Luminaires with an LED light source intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Extra-low-voltage Luminaires for Recreational Vehicle Use Certified for Canada (IFDQ7).

Light-emitting-diode Surface-mounted Luminaires Certified for Canada (IFAM7)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling- and pole-mounted luminaires.

Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet-box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked ″SUITABLE FOR OPERATION IN AMBIENT NOT EXCEEDING __ C,″ where the blank is filled in with the intended elevated ambient.

LUMINAIRE INSTALLATION MARKINGS

If the required rating of the field wiring supplying the luminaire requires the installer to push the supply conductors from the luminaire into the outlet box, the luminaire is marked ″PUSH CONDUCTORS INTO JUNCTION BOX.″

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked ″WALL MOUNT ONLY″ are not acceptable for mounting on ceilings, and (2) luminaires marked ″NON-COMBUSTIBLE SURFACE ONLY.″

Luminaires intended for continuous-row mounting are marked ″SUITABLE FOR CONTINUOUS ROW MOUNTING.″

Wall-mounted luminaires weighing more than 11.3 kg (25 lbs) and ceiling-mounted luminaires weighing more than 22.7 kg (50 lbs) intended for outlet box connection are marked ″THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX.″

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number or similar designation.

Light-emitting-diode Surface-mounted Luminaires Certified for Canada (IFAM7)−*Continued*

RELATED PRODUCTS

Cord-connected undercabinet light-emitting-diode (LED) luminaires with an attachment plug or a direct-plug-in power supply are covered under Light-emitting-diode Luminaires, Portable Certified for Canada (QOVZ7).

LED cabinet luminaires are covered under Portable Cabinet Light-emitting-diode Luminaires Certified for Canada (QOVA7).

ADDITIONAL INFORMATION

For additional information, see Light-emitting-diode Luminaires Certified for Canada (IFAK7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, ″Luminaires.″

Light-emitting-diode Recessed Luminaires Certified for Canada (IFAO7)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of CAN/CSA-C22.1, ″Canadian Electrical Code, Part I.″

RECESSED LUMINAIRE TYPES

Type IC Luminaire — Luminaires marked ″TYPE IC″ may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire. Type IC luminaires are provided with thermal protection to deactivate the lamp should the luminaire be mislamped.

Inherently-protected Luminaire — A recessed luminaire that does not exceed temperatures greater than 90°C on outside surfaces even when covered with insulation and mislamped or overlapped is identified by the marking ″INHERENTLY PROTECTED.″

Type Non-IC Luminaire — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 76 mm (3 in.) from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 13 mm (1/2 in.) from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the light source(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 13 mm (1/2 in.) from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 25 mm (1 in.) from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked ″INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___ MM (___ INCHES); B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___ MM (___ INCHES); AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___ MM (___ INCHES).″ The marked-spacing luminaire is intended to be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 76 mm (3 in.) from the luminaire, and other structural support members may be in the cavity area above the luminaire, provided (1) they are not closer than 13 mm (1/2 in.) from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity

Light-emitting-diode Recessed Luminaires Certified for Canada (IFAO7)−*Continued*

sidewalls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

Concrete-only Luminaire — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "FOR USE IN CONCRETE ONLY."

A Type IC or Non-IC luminaire sealed to prevent the entry of concrete may be installed in concrete providing it is marked "SUITABLE FOR USE IN POURED CONCRETE."

Suspended-ceiling Luminaire — All recessed luminaires except those marked for use in concrete only are suitable for use in suspended ceilings and may be marked "SUITABLE FOR SUSPENDED CEILING."

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

Ground-mounted Recessed Luminaire — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."

A ground-mounted recessed luminaire suitable for installation in non-fire-resistant mediums, such as a wooden deck, is marked "SUITABLE FOR GROUND-MOUNTED RECESSED."

LUMINAIRE INSTALLATION MARKINGS

All recessed luminaires, except those marked "FOR USE IN POURED CONCRETE ONLY," are marked "BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING."

Luminaires that produce temperatures in excess of 90°C at points of mounting to the building structure are marked "INSTALL IN BUILDINGS OF FIRE RESISTANT CONSTRUCTION."

Only those luminaires with an integral junction box or wiring compartment marked "MAXIMUM OF NO. __ AWG BRANCH CIRCUIT CONDUCTOR SUITABLE FOR __ C PERMITTED IN BOX," have been investigated for any heat contribution added by branch circuit conductors.

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked "ACCESS ABOVE CEILING REQUIRED" or "ACCESS BEHIND WALL REQUIRED."

Luminaires provided with polymeric recessed housings are marked "FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY" and "FOR USE IN NON-FIRE RATED INSTALLATIONS."

Luminaires that consist of (1) a luminaire housing and trims, or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

(1) For luminaire housing and trims, the housing is marked "USE WITH [manufacturer's name] [catalog number] TRIMS" and each trim is marked with the manufacturer's name and catalog number.
(2) For rough-in and finishing sections, the rough-in section is marked "ROUGH-IN SECTION FOR USE WITH FINISHING SECTION," where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label. The finishing section is marked in the same manner stating "FINISHING SECTION FOR USE WITH ROUGH-IN SECTION."

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number or similar designation.

ADDITIONAL INFORMATION

For additional information, see Light-emitting-diode Luminaires Certified for Canada (IFAK7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Light-emitting-diode Recessed Luminaires Certified for Canada (IFAO7)−*Continued*

LIGHT-EMITTING-DIODE RETROFIT LUMINAIRE CONVERSION KITS CERTIFIED FOR CANADA (IFAR7)

GENERAL

This category covers light-emitting-diode (LED) retrofit kits intended for field installation in certified luminaires and office-furnishing lights.

This category does not cover retrofit reflector kits and luminaire conversion lamps intended for direct replacement of existing lamps without the need for modification, rewiring or component replacement in the luminaire.

The retrofit kits consist of LED light sources, installation instructions, subassemblies, luminaire marking labels, and assembly aids (where appropriate) to facilitate the replacement of the existing light source in complete luminaires. The retrofit installation may require modifications to the luminaire in accordance with the installation instructions provided with the retrofit kits.

The LED retrofit kits have been investigated to determine that, when installed in accordance with the manufacturer's instructions, they do not adversely affect the operation of the luminaire. A luminaire that is modified so it can no longer accept the original lamp has a label provided by the retrofit kit manufacturer affixed to the luminaire where visible during relamping that indicates the luminaire has been modified and can no longer operate the originally-intended lamp(s).

LUMINAIRE MARKINGS

LED retrofit luminaire conversion kits that permit the insertion of the original lamp types are provided with a marking for installation by the kit installer on the retrofitted luminaire. This marking is visible during relamping and states, "This luminaire has been modified and can no longer operate the originally intended lamp," and additionally identifies the replacement LED lamp type/model to be used, together with the manufacturer's name and ordering information.

LED retrofit luminaire conversion kits using linear tubular LED lamp conversions are provided with a marking for installation by the kit installer visible during relamping that indicates in text or wiring diagram how the supply connections are made to the lampholders.

RELATED PRODUCTS

Retrofit reflector kits intended for installation on fluorescent luminaires are covered under Luminaire Conversions, Retrofit Certified for Canada (IEUQ7).

Retrofit devices used to convert incandescent exit luminaires to fluorescent exit luminaires are covered under Exit Sign Conversion Kits Certified for Canada (FWCF7).

LED light sources intended to replace fluorescent lamps where it is not necessary to modify the luminaire are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CSA Technical Information Letter No. B-79 (4-28-2010), "Supplemental Requirements for Retrofitted Luminaires and LED Retrofit Kits for Installation into Previously Installed Luminaires," in addition to CSA-C22.2 No. 250.0 (2008), "Luminaires."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LIGHT-EMITTING-DIODE RETROFIT LUMINAIRE CONVERSION KITS FOR COMMERCIAL REFRIGERATORS AND FREEZERS CERTIFIED FOR CANADA (IFAS7)

GENERAL

This category covers light-emitting-diode (LED) retrofit kits intended for field installation in certified commercial refrigerators and freezers.

This category does not cover luminaire conversion lamps intended for direct replacement of existing lamps without the need for modification, rewiring or component replacement in the commercial refrigerator or freezer.

The retrofit kits consist of LED light sources, installation instructions, subassemblies, end-product luminaire marking labels, and assembly aids (where appropriate) to facilitate the replacement of the existing light source in complete commercial refrigerators and freezers. The retrofit installation may require modifications to the end product in accordance with the installation instructions provided with the retrofit kits.

The LED retrofit kits have been investigated to determine that, when installed in accordance with the manufacturer's instructions, they do not adversely affect the operation of the commercial refrigerator or freezer. A luminaire within the end product that is modified so it can no longer accept the original lamp has a label provided by the retrofit kit manufacturer affixed to the end product where visible during relamping that indicates the luminaire has been modified and can no longer operate the originally-intended lamp(s).

LUMINAIRE MARKINGS

LED retrofit luminaire conversion kits that permit the insertion of the original lamp types are provided with a marking for installation by the kit installer on the end product. This marking is visible during relamping and states, ''This luminaire has been modified and can no longer operate the originally intended lamp,'' and additionally identifies the replacement LED lamp type/model to be used, together with the manufacturer's name and ordering information.

LED retrofit luminaire conversion kits using linear tubular LED lamp conversions are provided with a marking for installation by the kit installer visible during relamping that indicates in text or wiring diagram how the supply connections are made to the lampholders.

RELATED PRODUCTS

SPECIAL-PURPOSE LUMINAIRES CERTIFIED FOR CANADA (IFAT7)

Canopy Luminaires Certified for Canada (IFAW7)

GENERAL

This category covers luminaires for installation in cavities in outdoor canopies and marquees such as used over gas station pumping islands and similar locations in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These luminaires are not intended for indoor use or in outdoor installations where thermal insulation would be installed.

PRODUCT MARKINGS

Canopy luminaires are marked **"CANOPY LUMINAIRE – NOT THERMALLY PROTECTED."**

All luminaires are suitable for wet locations and may be subjected to water and precipitation from the back side unless marked **"FOR COVERED CEILING MOUNT ONLY."**

A recessed canopy luminaire is intended to be installed not closer than 1/2 in. (13 mm) from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. (25 mm) from adjacent luminaires. A recessed canopy luminaire marked **"OPEN CEILING MOUNT ONLY"** is intended for an uncovered ceiling only.

All luminaires bear a model, catalog or series number (or similar designation) or the words ''Incandescent Canopy,'' ''Fluorescent Canopy'' or ''HID Canopy,'' or other appropriate product type adjacent to the Certification Mark.

RELATED PRODUCTS

Luminaires intended for recessed indoor use, or areas where thermal insulation could be installed, are covered under Fluorescent Recessed Luminaires Certified for Canada (IEVV7), High-intensity-discharge Recessed Luminaires Certified for Canada (IEXZ7) and Incandescent Recessed Luminaires Certified for Canada (IEZX7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, ''Luminaires.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Luminaire.''

The Listing Mark for this category requires the use of a holographic label.

Canopy Luminaires Certified for Canada (IFAW7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Electric-discharge Lighting Systems, Cold Cathode Certified for Canada (IFAY7)

USE

This category covers lighting systems that incorporate electric discharge tubing with ferrule type end caps, commonly referred to as cold cathode lighting, which is electrically connected to the output of a transformer, power supply or ballast by ferrule type lampholders. Each transformer or power supply in the system is not rated for more than 120 mA operating current (150 mA rated output current) when the open circuit voltage is over 7500 V, and not more than 240 mA operating current (300 mA rated output current) when the open circuit voltage is 7500 V or less. These systems are for installation in accordance with Part 1, Section 30 of the Canadian Electrical Code.

These lighting systems may incorporate transformers, power supplies or ballasts that have a marked output voltage greater than 1000 V. Such systems are not intended for use in dwellings in accordance with Part 1, Section 30 of the Canadian Electrical Code.

These lighting systems provide general illumination in accordance with Part 1, Section 30 of the Canadian Electrical Code.

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Electric discharge lighting systems are provided as a system of parts that are field-installed. These systems are installed using tools and techniques only available to an electrician. The systems are provided with installation instructions which define the scope of the system and method for installation. It is intended that the system installation instructions be retained with the installation to which they apply.

The Listing of a lighting system does not constitute approval of the design which is the responsibility of the manufacturer and the Authority Having Jurisdiction nor approval of the installation. The final acceptance of the field-installed lighting system is the responsibility of the Authority Having Jurisdiction.

PRODUCT MARKING

These lighting systems may incorporate ballasts that have marked output voltages 1000 V or less. Such systems are intended for use in dwellings and other premises when provided with circuit interrupting lampholders that de-energize the circuit during lamp replacement, unless they are marked "Not for Dwelling Use."

These systems are intended for permanent installation in indoor, dry locations unless marked in combination with the Listing Mark "Suitable for Damp Locations" or "Suitable for Wet Locations."

RELATED PRODUCTS

This category does not cover neon tubing for display windows, outline lighting or signs which are covered under Signs Certified for Canada (UXYT7).

This category does not cover field assembled neon systems in display windows, outline lighting, or skeletal neon signs which are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled Certified for Canada (UZBL7).

This category does not cover field installed neon outline lighting systems that outline or call attention to architectural details of a room or building. Those products are covered under Field Installed Neon Outline Lighting Systems Certified for Canada (UYAM7).

Outline lighting of the incandescent, HID or fluorescent type fabricated in factory-built sections is covered under Signs Certified for Canada (UXYT7).

Lighting systems operating at 1000 V or less are covered under Fluorescent Luminaires Certified for Canada (IEUZ7), HID Luminaires Certified for Canada (IEXT7) and Incandescent Luminaires Certified for Canada (IEZR7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA C22.2 No. 207-M89, "Portable and Stationary Signs and Displays."

UL MARK

The Listing Mark of UL on each transformer and transformer enclosure, and the containers in which the remaining lighting system parts are packaged, or on the remaining lighting system parts themselves, referencing a specific field installed System Number, is the only method provided by UL to identify these lighting systems covered under its Listing and Follow-Up Services. The Listing Mark for these systems includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the words "LISTED," a control number, the product name "Field-Installed Electric Discharge Lighting System Part," and the words "The Listing of this lighting system is contingent upon installation according to the specifications of (Listee's Name), System No. _____ and the Canadian Electrical Code."

Electric-discharge Lighting Systems, Cold Cathode Certified for Canada (IFAY7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Landscape Lighting Systems, Low Voltage Certified for Canada (IFDH7)

USE

This category covers low-voltage landscape lighting systems and individual components. A lighting system consists of a power supply, a number of luminaires and the interconnecting cable for the low-voltage circuit. The individual components include power supplies, luminaires and all other items needed to install a complete system in accordance with the product ratings, instructions and markings.

Recessed luminaires (lighting units) intended for installation in a building wall or similar application are provided with a means to connect conduit and may be installed such that insulation is (and other combustible materials are) in contact with the luminaire (lighting unit) unless marked for installation in or on noncombustible surfaces only.

Certified components from the same company or from different companies may be used to form a complete lighting system as long as the components are used in accordance with the product ratings, markings and instructions.

The low-voltage wire or cable used to connect the power unit to the individual luminaires and fittings is intended to be certified PXWT, CXWT, LVLL, ULEC or SPT-3 (units rated less than 100 VA may use SPT-2). Wiring of luminaire assemblies to this cable is intended to be of a type suitable for wet locations.

RATINGS

Each power-unit output circuit is rated 30 V rms ac (42.4 V peak) or less, 25 A or less, and 300 VA or less. The total load connected to each output circuit of the power unit, determined by adding the wattages of the individual luminaires, is not intended to exceed the marked maximum permitted total lamp wattage. Two or more output circuits from the same or different power units are not intended to be connected in parallel or series.

PRODUCT MARKINGS

Power units and luminaires are intended for outdoor use only. Power units and luminaires marked "Suitable for Ground Installation" are suitable for mounting at a height less than 0.3 m above ground. Luminaires marked "Suitable for In-Ground Recessed Installation" are suitable for mounting below the ground plane. Luminaires marked "Suitable for Outside Recessed Wall Mounting Only. Do Not Mount On Ceilings" are suitable for installation in decks or similar structures.

Luminaires intended for use only with a Class 2 power unit are marked "Use on Class 2 Circuit Only."

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.7 (2007), "Extra-Low-Voltage Landscape Lighting Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the word "Landscape," followed by the product name "Power Supply," "Power Unit," "Lighting Unit," "Luminaire" or "Fitting," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Luminaires, Luminaire Assemblies and Luminaire Enclosures Certified for Fire Resistance Certified for Canada (IFDL7)

USE

This category covers luminaires, luminaire assemblies and luminaire enclosures investigated for use in fire-resistance designs as detailed in Fire-resistance Ratings – ANSI/UL 263 (BXUV). The luminaires, assemblies and enclosures (in conjunction with a luminaire) are intended for recessed installation in ceilings in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." They have been shown to provide a degree of fire resistance with the floor or roof assemblies with which they have been tested.

The luminaires and luminaire assemblies have been investigated and found to comply with applicable electrical requirements and are so labeled.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7), Fire-resistance Ratings Certified for Canada (BXRH7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S101, "Standard Methods of Fire Endurance Tests of Building Constructions and Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] CLASSIFIED FOR FIRE RESISTANCE
FIRE RESISTANCE CLASSIFICATION
DESIGN NO(S). ____
SEE UL FIRE RESISTANCE DIRECTORY
Issue No.
or

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Extra-low-voltage Luminaires for Recreational Vehicle Use Certified for Canada (IFDQ7)

USE

This category covers extra-low-voltage luminaires, rated 24 V or less, ac or dc, intended for use in recreational vehicles, supplied by a transformer, battery converter or similar power supply source.

This category does not cover vehicular lighting, such as clearance lights, side marker lights, etc.

PRODUCT MARKINGS

These luminaires are intended for indoor use only, unless marked "Indoor/Outdoor Use" or "Outdoor Use Only."

These luminaires have been investigated for ceiling mounting as surfaced or recessed types. Luminaires for either ceiling or wall mounting are marked "Ceiling/Wall Mount." Fixtures limited to wall mounting are marked "Wall Mount Only," unless so constructed that they are obviously intended for wall mounting.

These luminaires are marked with the minimum temperature rating for supply conductors, except when integral lead wire is provided for connection to the supply conductors. The integral leads are of sufficient length for field splices to be located behind the ceiling or wall panel. After field splices are completed, it is intended the splices be positioned in a space not affected by the luminaire lamp heat.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Extra-low-voltage Luminaires for Recreational Vehicle Use Certified for Canada (IFDQ7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0 (2008), "Luminaires" (Annex H).

Products employing LED light sources are additionally investigated to CAN/CSA-C22.2 No. 250.13 (2012), "Light Emitting Diode (LED) Equipment for Lighting Applications."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "RV Luminaire."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7)

USE

This category covers extra-low-voltage luminaires, extra-low-voltage lighting power units, and extra-low-voltage luminaire systems. This category also covers luminaire fittings that are parts and/or subassemblies intended for final assembly into extra-low-voltage luminaires in the field.

These luminaires and fittings are rated 30 V (42.4 V peak) or less, for connection to an isolating type power unit rated 30 V (42.4 V peak) or less and 1000 VA maximum, limited and protected in accordance with Section 16 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). Sets of extra-low-voltage luminaires may include the power supply and interconnecting cabling, to make up an extra-low-voltage luminaire system.

Cable Lighting Systems — This category also covers cable lighting systems, defined in the CEC as complete, extra-low-voltage lighting systems that comprise an isolating type transformer with bare secondary conductors for connection to one or more luminaire heads. The luminaires may be repositionable along the bare secondary conductors that also support the luminaire. The power unit for these systems is provided with integral protection that de-energizes the output upon overloading or inadvertent shorting of exposed uninsulated live parts of the system.

INSTALLATION INSTRUCTIONS

Installation instructions accompanying the product describe the wiring method intended to be used to supply the luminaires and power units.

Where a fixed wiring method is indicated below, it is intended it be a wiring method that complies with the wiring method requirements of Section 12 and other applicable sections of the CEC.

Except for extra-low-voltage circuits of a cable lighting system, it is intended that Class 1 and Class 2 extra-low-voltage circuits of a system be installed in accordance with the requirements for Class 1 and Class 2 Circuits in Section 16 of the CEC. The extra-low-voltage circuits that are not part of a cable lighting system or of a Class 1 or Class 2 system are intended to be installed with a fixed wiring method. The extra-low-voltage circuits of cable lighting systems are intended to be installed as specified in the manufacturer's installation instructions, including that:

(a) Cable lighting systems be installed only in dry locations,
(b) Cable lighting systems not be installed in bathrooms,
(c) Conductors of extra-low-voltage circuits be rigidly supported,
(d) Conductors not be installed in contact with combustible materials and not run through walls, ceilings, floors or partitions, and
(e) Uninsulated conductors not be installed less than 2.2 m from the floor.

Power units intended to supply Class 2 luminaire circuits or an exposed conductor, cord, rail or track that supports the luminaires are intended to be connected to the branch circuit either with a factory-connected power supply cord or by a fixed wiring method. These power units are intended to be connected to the output circuit by (a) a wiring method consistent with that involved with the supplied luminaire, or (b) a fixed wiring method. All other power units are designed for connection to the branch circuit and the output circuit with a fixed wiring method.

Luminaires intended for recessed or undershelf installation into a cabinet are provided with installation instructions depicting the intended use.

Some lighting systems include track or rail types of sections that (a) support and provide power to extra-low-voltage luminaires, and (b) are intended to be bent by the installer as needed for the installation. Care should be taken to bend these system parts following the method identi-

Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7)–*Continued*

fied in the installation instructions and so that no part damage occurs. The radii of bends should be no less than specified by the manufacturer.

Care should be taken to adhere to all manufacturer-specified minimum spacings between a luminaire and a nearby object or surface that can be damaged from heat from the luminaire or that can adversely affect natural air movement around the luminaire. Examples include the ceiling above a wall-mounted luminaire, the adjoining wall of an inside corner, the wall near a ceiling-mounted luminaire, alcove surfaces, a valance, and curtains. Where minimum spacings are not specified by the manufacturer or the specific field configuration of a nearby wall, ceiling, or other object is not addressed in the manufacturer's installation instructions, care should be taken to minimize the heating of nearby objects and air movement around the luminaire.

PRODUCT MARKINGS

Luminaires and fittings not provided with an integral interconnecting means between the luminaire and the power supply source have means for installation in accordance with CEC Class 2 or power-limited Class 1 circuits as identified by product marking or installation instructions.

These luminaires and fittings are intended for surface mounting or suspended installation and are marked for either dry, damp or wet locations. A luminaire or fitting marked for wet locations is rated 15 V (21.2 V peak) maximum unless live parts are made inaccessible to contact during normal use. See Luminaires and Fittings Certified for Canada (HYXT7) for additional installation markings.

Recessed units (luminaires and power units) marked "Type IC" or "Inherently Protected" may be installed in accordance with CEC Rule 30-906, such that insulation and other combustible materials are in contact with and over the top of the unit.

All recessed units not marked "Type IC" or "Inherently Protected" are intended to be installed such that insulation is not placed over the top or within 76 mm of the sides of the unit, and other combustible materials are spaced, except at the points of support, at least 13 mm inch from the unit.

Power units shipped separately from the bare conductor lighting system are marked to identify the associated bare conductor system series number and manufacturer.

RELATED PRODUCTS

Extra-low-voltage landscape lighting systems consisting of a remote power supply source, flexible cord, interconnecting means and relocatable outdoor use lighting assemblies are covered under Landscape Lighting Systems, Low Voltage Certified for Canada (IFDH7).

Luminaires incorporating an integral transformer or power supply for supplying the luminaire's low-voltage lamp are covered under Luminaires, Portable Certified for Canada (QOWZ7) or Portable Cabinet Luminaires Certified for Canada (QOVJ7) if portable, and Incandescent Surface-mounted Luminaires Certified for Canada (IEZR7) if not portable.

Extra-low-voltage luminaires intended for connection only to 24 V or less source of supply in recreational vehicles are covered under Extra-low-voltage Luminaires for Recreational Vehicle Use Certified for Canada (IFDQ7).

Low-voltage flexible lighting products are covered under Flexible Lighting Products Certified for Canada (ILGJ7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category, except for low-voltage cabinet and undercabinet-type luminaries, is CSA-C22.2 No. 250.0, "Luminaires."

The basic standard used to investigate low-voltage cabinet and undercabinet-type luminaires in this category is CSA-C22.2 No. 9.0, "General Requirements for Luminaires."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Low Voltage Luminaire," "Low Voltage Recessed Luminaire," "Low Voltage Cabinet Luminaire," "Low Voltage Luminaire Power Supply," "Low Voltage Lighting System," "Low Voltage Luminaire System," "Low Voltage Luminaire Fitting," or other appropriate product name as shown in the individual Listings.

The term "Fixture" may be used in lieu of "Luminaire" in the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Medical/dental Luminaires Certified for Canada (IFDT7)

GENERAL

This category covers task-lighting products, such as examination room lights, illuminated eye charts and the like, intended for installation and use in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, outside the defined patient vicinity. The patient vicinity is as specified in CSA Z32, "Electrical Safety and Essential Electrical Systems in Health Care Facilities," or CSA Z317.5, "Illumination Systems in Health Care Facilities," or in Provincial installation codes.

These lighting products have been investigated from the standpoint of electrical, fire and casualty hazards only. Lighting products investigated as patient care equipment, with respect to the isolation and leakage current requirements of CAN/CSA-C22.2 No. 601.1, "Medical Electrical Equipment – Part 1: General Requirements for Safety," are covered under Medical Equipment Certified for Canada (PIDF7). Other hazards, including those which may result from use of this equipment in the presence of flammable anesthetics, have not been investigated. The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) adjacent to the Certification Mark.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, "Luminaires."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Examining Room Light" or "Eye Chart," or the name of the specific type of product as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Stage and Studio Luminaires, Accessories and Connector Strips Certified for Canada (IFDZ7)

USE

This category covers stage and studio luminaires, accessories and connector strips rated 600 V or less for use in theaters, studios and similar locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Connector strips are defined as a wireway mounted on rigging or to the building structure above or adjacent to the luminaires it supplies. Stage and studio luminaires, accessories and connector strips are not intended for residential use.

LUMINAIRE INSTALLATION MARKINGS

Stage and studio luminaires, accessories and connector strips are marked "NOT FOR HOUSEHOLD USE" and "IMPROPRE A L'UAGE DOMESTIQUE."

Incandescent stage luminaires are marked with a lamp replacement marking stating "MAX ____ WATTS, TYPE ____" or an equivalent phrase where the first and second blanks are filled in with the wattage and lamp type, respectively. If an equivalent phrase is used, it appears in English and French.

Luminaires are marked "WET LOCATIONS" and "EMPLACEMENTS MOUILLES," "DAMP LOCATIONS" and "EMPLACEMENTS HUMIDES," or "DRY LOCATIONS" and "EMPLACEMENTS SECS" as applicable according to the intended use.

RELATED PRODUCTS

Stage and Studio Luminaires, Accessories and Connector Strips Certified for Canada (IFDZ7)−*Continued*

Stage and studio luminaires and accessories employing or associated with light-emitting-diode (LED) illumination are covered under Light-emitting-diode Stage and Studio Luminaires and Accessories Certified for Canada (IFEC7).

ADDITIONAL INFORMATION

For additional information, see Special-purpose Luminaires Certified for Canada (IFAT7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate luminaires and accessories in this category is CSA-C22.2 No. 166 (1983), ''Stage and Studio Luminaires.''

The basic standards used to investigate connector strips in this category are CSA-C22.2 No. 21 (1995), ''Cord Sets and Power Supply Cords,'' and CSA-C22.2 No. 62 (1993), ''Surface Raceway Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Stage Luminaire,'' ''Stage Border Luminaire,'' ''Stage Luminaire Accessory,'' ''Connector Strip,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Light-emitting-diode Stage and Studio Luminaires and Accessories Certified for Canada (IFEC7)

USE

This category covers light-emitting-diode (LED) stage and studio luminaries and accessories rated 600 V or less, intended for use in theaters, studios and similar locations in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' LED stage and studio luminaries and accessories are not intended for residential use.

LUMINAIRE INSTALLATION MARKINGS

LED stage and studio luminaires and accessories are marked ''NOT FOR HOUSEHOLD USE'' and ''IMPROPRE A L'UAGE DOMESTIQUE.''

LED luminaires are marked ''WET LOCATIONS'' and ''EMPLACEMENTS MOUILLES,'' or ''DAMP LOCATIONS'' and ''EMPLACEMENTS HUMIDES,'' or ''DRY LOCATIONS'' and ''EMPLACEMENTS SECS,'' as applicable according to the intended use.

RELATED PRODUCTS

Stage and studio luminaires and accessories employing or related to light sources other than light-emitting diodes are covered under Stage and Studio Luminaires, Accessories and Connector Strips Certified for Canada (IFDZ7).

All connector strips intended for use in stage and studio applications are covered under Stage and Studio Luminaires, Accessories and Connector Strips Certified for Canada (IFDZ7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 166 (1983), ''Stage and Studio Luminaires.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate:

''Light-emitting-diode Stage Luminaire'' (or ''LED Stage Luminaire'')

''Light-emitting-diode Stage Border Luminaire'' (or ''LED Stage Border Luminaire'')

''Light-emitting-diode Stage Luminaire Accessory'' (or ''LED Stage Luminaire Accessory'')

''Light-emitting-diode Studio Luminaire'' (or ''LED Studio Luminaire'')

''Light-emitting-diode Studio Luminaire Accessory'' (or ''LED Studio Luminaire Accessory'')

Light-emitting-diode Stage and Studio Luminaires and Accessories Certified for Canada (IFEC7)−*Continued*

Retrofit Low-voltage-luminaire Conversion Kits Certified for Canada (IFES7)

GENERAL

This category covers retrofit kits intended for field installation in certified luminaires to provide conversion to a low-voltage lighting system.

This category does not cover luminaire conversion lamps intended for direct replacement of existing lamps without the need for modification, rewiring or component replacement in the luminaire.

The retrofit kits may consist of light sources, electronic subassemblies (ballasts, LED drivers, or controllers), luminaire components, installation instructions and marking labels, and assembly aids (where appropriate) to facilitate the conversion. Modifications may include provisions for connection of one or more luminaires to an isolating-type power unit with outputs rated within the Class 2 voltage limits of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC). The power unit is not necessarily supplied with the retrofit kit.

The retrofit kits have been investigated to determine that, when installed in accordance with the manufacturer's instructions, the retrofitted luminaire fully complies with the applicable requirements (see **REQUIREMENTS** below). A kit that modifies a luminaire so it can no longer accept the original lamp includes a label to be affixed to the luminaire, where visible during relamping, that indicates the luminaire has been modified and can no longer operate the originally intended lamp(s).

INSTALLATION INSTRUCTIONS

Installation instructions accompanying the product describe the wiring method intended to be used to supply the luminaires and power units. These luminaires and fittings are rated 30 V (42.4 V peak) or less, for connection to an isolating-type power unit rated 30 V (42.4 V peak) or less and 1,000 VA maximum, limited and protected in accordance with Section 16 of the CEC. Sets of extra-low-voltage luminaires may include the power supply and interconnecting cabling, to make up an extra-low-voltage luminaire system.

Some retrofit kits are intended to adapt the luminaire to be used with a certified suspended-ceiling-grid low-voltage lighting system. The applicable lighting system is identified on certain parts of these kits and in the installation instructions. The wiring method intended for all other luminaires is either (a) that required for Class 2 circuits, when the circuit is supplied by a Class 2 power unit, or (b) fixed wiring.

Power units intended to supply Class 2 luminaire circuits or a certified suspended-ceiling-grid low-voltage lighting system are intended to be connected to the branch circuit either with a factory-connected power-supply cord or by fixed wiring. These power units are intended to be connected to the low-voltage lighting system or individual luminaires, as applicable, by (a) wiring means consistent with that involved with the supplied luminaire or suspended-ceiling-grid low-voltage lighting system, or (b) fixed wiring. Power units with other than Class 2 output are designed for connection to the branch circuit and the output circuit with a fixed wiring means.

LUMINAIRE MARKINGS

Retrofit luminaire conversion kits that replace the original lamp and still permit the insertion of the original lamp types are provided with a marking for installation by the kit installer on the retrofitted luminaire. This marking is visible during relamping and states, ''This luminaire has been modified and can no longer operate the originally intended lamp,'' and additionally identifies the replacement lamp type/model to be used, together with the manufacturer's name and ordering information.

LED retrofit luminaire conversion kits using linear tubular LED lamp conversions are provided with a marking for installation by the kit installer visible during relamping that indicates in text or wiring diagram how the supply connections are made to the lampholders.

RELATED PRODUCTS

Retrofit reflector kits intended for installation on fluorescent luminaires are covered under Luminaire Conversions, Retrofit Certified for Canada (IEUQ7).

Retrofit kits used to convert luminaires to LED illumination systems in accordance with CSA-C22.2 No. 250.0, ''Luminaires,'' and that are provided with integral LED power supplies or power modules are covered under Light-emitting-diode Retrofit Luminaire Conversion Kits Certified for Canada (IFAR7).

Retrofit devices used to convert light sources from one type to another in exit luminaires such as converting incandescent to LED are covered under Exit Sign Conversion Kits Certified for Canada (FWCF7).

Retrofit Low-voltage-luminaire Conversion Kits Certified for Canada (IFES7)−*Continued*

LED light sources intended to replace fluorescent lamps where it is not necessary to modify the luminaire are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV7).

Retrofit kits may include parts to adapt luminaires for use with a suspended-ceiling-grid low-voltage lighting system. These parts and the resulting converted luminaire are additionally investigated under Suspended-ceiling-grid Low-voltage System Accessories Certified for Canada (IFFC7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 250.0 (2008), "Luminaires," and CSA Technical Information Letter No. B-64, "Interim Certification Requirements for Retrofit Assemblies for Use in Fluorescent Luminaires."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Submersible Luminaires Certified for Canada (IFEV7)

USE

This category covers submersible luminaires intended for installation in accordance with Section 68 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons. For certifications of luminaires intended for use in swimming pools, spas, hot tubs and other vessels intended to accommodate persons, see Luminaires and Forming Shells Certified for Canada (WBDT7).

This category also covers submersible junction boxes intended for use with submersible luminaires and other submersible fountain equipment.

Luminaires investigated for operation only while submersed in water are marked "Submerse Before Lighting," or with equivalent wording, and such marking is visible after installation of the luminaire.

Submersible luminaires have been investigated for both outdoor and indoor use.

Dry-niche Submersible Luminaire — These luminaires are intended for permanent installation only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are designed for servicing from the rear in a passageway behind the fountain wall or, if mounted in the bottom of the fountain, in a tunnel underneath the fountain. For purposes of installation, maintenance or servicing, the luminaire may consist of two separable parts. One part includes a factory-installed length of flexible cord terminating in an attachment plug, and the second part includes a receptacle for the attachment plug and a splice compartment in which the branch-circuit conductors are connected.

Wet-niche Submersible Luminaire — These luminaires are intended to be installed only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are intended for installation in a permanently installed luminaire housing (forming shell) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper housings with which they are to be used. These luminaires are provided with a factory-installed, permanently attached flexible cord with an exposed length of not less than 12 ft. The flexible cord is confined in the luminaire housing by the luminaire and permits the luminaire to be removed from the luminaire housing and to be lifted to the fountain deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 12-ft.-long cord will not permit luminaire removal from the luminaire housing and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the luminaire housing.

Submersible Luminaires Certified for Canada (IFEV7)−*Continued*

Forming Shell (Housing) for Wet-niche Submersible Luminaires — These are structures designed to support a mating wet-niche luminaire, for mounting in a fountain structure. Forming shells are marked to indicate the luminaires with which they have been investigated for use.

No-niche Submersible Luminaire — These luminaires are intended to be installed only on the walls of a fountain unless accompanying installation instructions describe the additional option of installation on the bottom of the fountain. These luminaires are mounted to a bracket permanently secured in or on the wall or bottom with the luminaire completely surrounded by water, and are marked to indicate the mounting brackets for which they have been investigated for use. These luminaires are provided with a factory-installed, permanently attached flexible cord with an exposed length of not less than 12 ft. that is confined by the luminaire and fountain wall or bottom. The flexible cord permits the luminaire to be removed from the mounting bracket and to be lifted to the fountain deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 12-ft.-long cord will not permit luminaire removal from the mounting bracket and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored between the luminaire and fountain wall.

Mounting Brackets for No-niche Submersible Luminaires — These are structures designed to support a mating no-niche luminaire, for mounting in or on a fountain structure. Mounting brackets are marked to indicate the luminaires with which they have been investigated for use.

Special-use Submersible Luminaire — These luminaires are intended to rest directly on the fountain floor or may be otherwise located in the fountain. The luminaires are provided with a permanently attached exposed flexible cord intended to be routed into a submersible junction box, or the luminaires have other means for permanent connection to the supply circuit.

ACCESSORIES

This category also covers accessory devices and kits intended to be field installed for the purpose of modernizing a luminaire, such as to convert the luminaire from incandescent to LED technology. These accessories include instructions that identify the specific luminaire(s) for which the accessory is intended and that do not require special knowledge or skills beyond that normally required for user maintenance activities, such as lamp replacement. After installation of a certified accessory, the installed luminaire is expected to comply with the same requirements and perform in a comparable manner as a new luminaire, relative to safety risks.

REBUILT PRODUCTS

This category also covers submersible luminaires that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt submersible luminaires are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt submersible luminaires are subject to the same requirements as new submersible luminaires.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 89 (1976), "Swimming-Pool Luminaires, Submersible Luminaires and Accessories."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Mounting Bracket for No-Niche Lumi-

Submersible Luminaires Certified for Canada (IFEV7)−*Continued*

naire,'' ''Housing for Wet-Niche Luminaire,'' ''Wet-Niche Submersible Luminaire,'' ''Dry Niche Submersible Luminaire,'' ''No-Niche Submersible Luminaire,'' ''Special Use Submersible Luminaire,'' ''Submersible Junction Box,'' ''Submersible Luminaire Accessory,'' or other appropriate product name as shown in the individual Listings. Alternatively, the luminaires may be designated ''Submersible Luminaire, (Wet-) (Dry-) (No-) Niche Type,'' as appropriate.

For rebuilt products, the word ''Rebuilt'' precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Suspended-ceiling-grid Low-voltage Systems Certified for Canada (IFFA7)

USE

This category covers low-voltage systems intended for permanent installation and use in a suspended-ceiling grid in accordance with Section 30 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

These systems are intended to be installed in a suspended-ceiling grid that provides mechanical support for the ceiling tiles and provides electrical connections between the low-voltage power supply and low-voltage luminaires or other accessories.

These systems consist of the following system components:

1. An isolating-type low-voltage power supply operating at 30 V (42.4 V peak) or less and not exceeding Class 2 power limits.
2. A grid-rail power distribution system with uninsulated busbar conductors, similar to track lighting, to provide power from the Class 2 power supply to one or more Class 2 powered luminaires.
3. Class 2 powered luminaires or other accessories that may be recessed into the suspended ceiling, surface mounted on the room side of the ceiling, or located below the suspended ceiling.

These systems are intended for indoor dry locations and commercial use only and may be used in air-handling spaces when identified for such use.

The system components also include interconnecting cables and connectors unless the connectors are suitable for field wiring.

Suspended-ceiling-grid low-voltage systems are not intended for use in:

1. Hazardous (classified) locations as specified in CEC Section 18.
2. General patient-care areas or critical patient-care areas as defined by CEC Section 24.
3. Emergency systems as specified in CEC Section 46.

Suspended-ceiling-grid low-voltage systems are not intended for contact with thermal insulation as specified in CEC Section 30.

Suspended-ceiling-grid rails with uninsulated busbar conductors are not intended for field cutting unless identified for such use.

INSTALLATION INSTRUCTIONS

These products are intended for installation in accordance with Section 30 of the CEC. Installation instructions accompanying the product describe the Class 2 wiring method intended to be used between the Class 2 power supply, the low-voltage grid-rail power distribution system, and the low-voltage luminaires or other accessories in accordance with Sections 30 and 16 of the CEC. The Class 2 power supply is intended for permanent installation in accordance with the wiring methods in Section 12 of the CEC.

All electrical connections are intended for installation by qualified electrical installers.

The mechanical components of the system, including support of the grid rails, is intended to be in accordance with the ''Canadian National Building Code'' (CNBC).

Each smallest unit package or carton is provided with installation instructions that contain a) a product description, b) a statement to identify the suspended-ceiling low-voltage system, c) a description of the part(s) intended to be used, and d) instructions describing how the part(s) are intended to be installed.

Each unit package or carton of suspended-ceiling low-voltage system grid-rail-bus section is provided with installation instructions that identify the system series number or model name and model or catalog number of the system. The installation instructions also specify the electrical ratings of the system and identify the method of mounting.

PRODUCT MARKINGS

All suspended-ceiling-grid low-voltage system components are marked with:

1. Listee's name, trade name, trademark or other descriptive marking by which the manufacturer responsible for the product may be identified.
2. A distinctive catalog number or the equivalent.
3. The electrical rating (at both power-feed connector installation points).
4. The date or other dating period of manufacture of the product not exceeding any three consecutive months.

Air-handling Use — Each suspended-ceiling-grid low-voltage system component (e.g., accessory, grid rail, connector) suitable for installation in air-handling spaces is marked ''Suitable for Use in Air-handling Spaces,'' or equivalent wording. Products that bear this marking are suitable for installation in accordance with CEC Section 12-010 and Section 3.6.4.3 of the CNBC.

Class 2 Luminaires — In addition to the required markings specified above for all components, each luminaire is marked with the specific suspended-ceiling-grid low-voltage system for which it is intended to be used.

Class 2 Power Supplies — In addition to the required markings specified above for all components, each power supply is marked with the specific suspended-ceiling-grid low-voltage system for which it is intended to be used.

Connectors — In addition to the required markings specified above for all components, the connectors are marked with:

1. The connector type (e.g., ceiling-grid load connector, in-plane load connector, power-feed connector) and a distinctive catalog number or the equivalent.
2. Electrical rating in volts and amperes (watts or VA is optional).
3. For a direct-current (dc) system, the polarity of the specific conductor opening in the connector: ''Positive,'' ''Pos.'' or ''+'' and ''Negative,'' ''Neg.'' or ''-.''

RELATED PRODUCTS

See Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S2577, ''Suspended Ceiling Grid Low Voltage Systems and Equipment.''

Discrete components of suspended-ceiling-grid low-voltage systems marked suitable for use in air-handling spaces have been additionally investigated to ULC/ORD-C2043, ''Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.''

Suspended-ceiling-grid rails incorporating nonmetallic components intended to be installed in air-handling spaces have been additionally investigated to CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.'' The specific ceiling-finish materials are investigated as a ceiling-grid system and the system components are described in the individual certifications and in the installation instructions. The system is comprised of materials with a flame spread of not over 25 without evidence of continued progressive combustion and a smoke-developed index of not over 50.

Suspended-ceiling-grid rails incorporating nonmetallic components forming the finished ceiling have been additionally investigated to CAN/ULC-S102. The specific ceiling-finish materials are investigated as a ceiling-grid system and the system components are described in the individual certifications and in the installation instructions. The system is comprised of materials with a flame spread of not over 25 without evidence of continued progressive combustion and a smoke-developed index of not over 450.

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Grid Bus Rail,'' ''Low-voltage Suspended-ceiling Power Supply,'' ''Low-voltage Suspended-ceiling Luminaire,'' ''Low-voltage Suspended-ceiling Recessed Luminaire,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Suspended-ceiling-grid Low-voltage System Accessories Certified for Canada (IFFC7)

USE

This category covers suspended-ceiling low-voltage system accessories that are parts and/or subassemblies intended for field installation in specific suspended-ceiling-grid low-voltage systems. They include low-voltage Class 2 power supplies, power and load connector assemblies, low-voltage luminaires, and other accessories intended for installation in a specific suspended-ceiling-grid low-voltage system of another manufacturer in accordance with the accessory unit manufacturer's instructions.

These accessories have been investigated to determine that, when installed and used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete suspended-ceiling-grid low-voltage system.

RELATED PRODUCTS

For information on product markings, installation instructions and other requirements, see Suspended-ceiling-grid Low-voltage Systems Certified for Canada (IFFA7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S2577, "Suspended Ceiling Grid Low Voltage Systems and Equipment."

Discrete nonmetallic components of suspended-ceiling-grid low-voltage systems marked suitable for use in air-handling spaces have been additionally investigated to ULC/ORD-C2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Track Lights and Tracks Certified for Canada (IFFR7)

USE

This category covers track-lighting systems for installation on or recessed into ceilings and walls and intended to be connected to a source of supply by a fixed wiring method.

These track-lighting systems are intended for installation in dry locations only.

Track-lighting systems consist of the following parts, each bearing a Certification Mark: 1) track sections, 2) connectors to connect track sections together and/or track sections to the supply, 3) end caps that insert into the last track sections in a run, 4) lighting assemblies, 5) electrical accessory parts such as low-voltage adapters and 6) accessory parts such as mounting hardware, track section hooks and fixture assembly light deflectors.

The following components are not part of the certified track-lighting system and are not acceptable for use with a certified track-lighting system: 1) receptacle adapters that when inserted into a track section will accommodate attachment-plug-connected products and 2) power-supply-cord connectors that when inserted into the end of a track section enables the track system to serve as a power-supply cord connected to its source of supply.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

Track Lights and Tracks Certified for Canada (IFFR7)−*Continued*

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 9 (1989), "Luminaires."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Track Lighting Fitting." The French translation "Ajustages D' E'Clairage" may also be used in conjunction with the preceding product name, e.g., "Track Lighting Fitting (Ajustages D' E'Clairage)."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRE FITTINGS CERTIFIED FOR CANADA (IFFX7)

GENERAL

This category covers luminaire fittings, which are incomplete parts and/or subassemblies of luminaires, intended for final assembly into luminaires in the field. Completely assembled luminaires incorporating luminaire fittings may be submitted to UL as part of the Factory Inspection and Follow-Up Service Program for Fluorescent, Incandescent and High Intensity Discharge Luminaires and, if found suitable, certified as luminaires. Smoothness and thickness of wireways, methods for connection to a recognized wiring system, suitability of splice enclosure and means for inspecting splices are typical considerations given to the completed luminaire which cannot be judged until the fittings are assembled into a complete luminaire.

A complete luminaire assembled from certified luminaire fittings will bear the luminaire Certification Mark appropriate to the luminaire category if produced under UL's Factory Inspection and Follow-Up Service Program. The determination of the acceptability of an assembly not so labeled rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

All fittings are marked indicating the location where they can be used:

Fittings marked **"DRY LOCATIONS ONLY"** are intended to be installed in indoor dry locations.

Fittings marked **"SUITABLE FOR DAMP LOCATIONS"** are intended to be installed in damp or dry locations.

Fittings marked **"SUITABLE FOR WET LOCATIONS"** are intended to be installed in wet, damp or dry locations.

The locations are defined in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

All luminaire fittings bear a model, catalog or series number (or similar designation) adjacent to the Certification Mark.

RELATED PRODUCTS

Certain devices in the categories of Sign Accessories Certified for Canada (UYMR7), Surface Metal Raceways Certified for Canada (RJBT7), Surface Nonmetallic Raceways Certified for Canada (RJTX7), Surface Metal Raceway Fittings Certified for Canada (RJPR7) and Surface Nonmetallic Raceway Fittings Certified for Canada (RJYT7) are also suitable for use with luminaire fittings.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 250.0, "Luminaires," in addition to standards applicable to the device(s) constituting the fitting.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire Fitting," "Swivel Joint" or "Disconnect Fitting," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fixture Fittings for Track Lighting Certified for Canada (IFGT7)

USE

This category covers fixture fittings that are parts and/or subassemblies intended for field installation in specific track-lighting systems, identified by catalog number and company name. They include track-lighting-fixture units intended for installation in specific existing field-installed tracks of another manufacturer in accordance with the fixture unit manufacturer's instructions.

These fittings have been investigated to determine that when installed and used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete track-lighting system.

ADDITIONAL INFORMATION

For additional information, see Luminaire Fittings Certified for Canada (IFFX7), Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 9 (1989), ''Luminaires.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RECESSED LUMINAIRE TRIMS CERTIFIED FOR CANADA (IFGW7)

USE

This category covers trims intended for field installation in specified recessed incandescent luminaires. These products have been investigated to determine that, when used in accordance with the manufacturer's instructions, they comply with the appropriate requirements for the complete luminaire.

This category covers trims for use with newly installed luminaires and as retrofit devices intended to be used to replace existing trims. The specified luminaires with which the trims have been investigated are identified in the Certification Mark on the trim.

PRODUCT MARKINGS

Each trim is marked with its catalog number and manufacturer. Each trim is also marked with the lamp-replacement markings, and may include the blinking-light-warning marking.

RELATED PRODUCTS

Reflector retrofit kits used to add or replace reflectors in fluorescent luminaires are covered under Luminaire Conversions, Retrofit Certified for Canada (IEUQ7).

Retrofit devices used to convert incandescent exit fixtures to fluorescent exit fixtures are covered under Exit Sign Conversion Kits Certified for Canada (FWCF7).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings Certified for Canada (HYXT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate retrofit luminaire trim conversions in this category is CSA-C22.2 No. 250.0 (2008), ''Luminaires.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products

Recessed Luminaire Trims Certified for Canada (IFGW7)−*Continued*

includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LUMINAIRES AND FITTINGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (IFGZ7)

LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (IFUX7)

GENERAL

This category covers incandescent lamp, fluorescent lamp and high-intensity-discharge lamp-type luminaires.

Seals are provided in the luminaires for Class I, Division 1 hazardous locations between lamp chambers and wiring chambers for supply line connections. The luminaires have been tested with respect to safe maximum external temperatures.

Luminaires certified for use in any of the groups under Class II, Divisions 1 and 2 hazardous locations have been tested for dusttightness and safe operation in the presence of the specific combustible dusts. The equipment should be kept clean and should be carefully maintained so as not to allow combustible dust to accumulate on equipment or in buildings. The operating temperature of any parts which may be in contact with the combustible dust is marked on the luminaires if this temperature exceeds 100°C. Certifications of luminaires for Class I, Division 2 only, of no specific hazardous location groups or of one or more of the hazardous location groups are included below. Such certifications are under hazardous location group headings with the suffix ''Division 2 only'' or under the heading ''Class I, Division 2 only.''

Luminaires without guards should be used only where not subject to breakage.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 137 (1981), ''Electric Luminaires for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Electric Lighting Fixture for Hazardous Locations,'' ''Electric Fixture for Hazardous Locations,'' ''Luminaire for Hazardous Locations'' or ''Electric Luminaire for Hazardous Locations.''

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES, RECESSED TYPE FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (IGBW7)

USE AND INSTALLATION

This category covers incandescent lamp and electric-discharge-lamp-type luminaires intended for recessed installation in walls and ceilings of haz-

Luminaires, Recessed Type for Use in Hazardous Locations Certified for Canada (IGBW7)−*Continued*

ardous locations in accordance with the provisions of the Canadian Electrical Code, Part I. Unless marked "Suitable for damp locations" or "Suitable for wet locations," recessed luminaires are only suitable for dry locations.

Recessed luminaires are marked with the required minimum temperature rating of wiring supplying the luminaire. Unless marked "maximum of ____ No. ____ AWG branch circuit conductors suitable for at least ____ C (____ F) permitted in junction box," no allowance has been made for any heat contributed by branch-circuit conductors which pass through, or supply and pass through, an outlet box or other splice compartment which is part of the luminaire. The operating temperature is marked on the luminaire if this temperature exceeds 100°C.

Recessed luminaires certified for any of the groups under Class I, Divisions 1 and 2 hazardous locations are designed to operate without causing ignition of surrounding flammable gas or vapor-air atmosphere covered by the group under which it is certified. Seals are provided in luminaires for Class I, Division 1 hazardous locations between lamp chambers and wiring chambers for supply line connections. The luminaires have been tested with respect to maximum external operating temperatures.

Recessed fluorescent luminaires that include raceways are marked, in combination with the Certification Mark, "Suitable for use as Raceways" and are marked to indicate the maximum number, size, and type conductors they are intended to accommodate.

Recessed luminaires suitable for such use may be marked "Suitable for installation in poured concrete" except that recessed luminaires suitable only for installation in poured concrete are marked "For installation only in poured concrete."

Recessed luminaires known to produce temperatures in excess of 90°C at a distance of 12.7 mm (1/2 in.) from the enclosure walls, and which therefore are only suitable for installation in fire-resistive constructions are marked "This luminaire is suitable for installation only in buildings of fire-resistive construction, where the luminaire is not mounted on or adjacent to combustible material."

Certifications of recessed luminaires for Class I, Division 2 only, of no specific hazardous location groups or of one or more of the hazardous location groups are included below. Such certifications are under hazardous location group headings with the suffix "Division 2 only" or under the heading "Class I, Division 2 only." The luminaire should not be installed in any location where the ignition temperature of the gas of vapor-air mixture which may be present is less than the operating temperature marked on the luminaire.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 137 (1981), "Electric Luminaires for Use in Hazardous Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Recessed Type Electric Lighting Fixture (Luminaire) for Hazardous Locations," "Recessed Type Electric Fixture (Luminaire) for Hazardous Locations" or "Recessed Luminaire for Hazardous Locations."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRE FITTINGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (IGIV7)

USE

This category covers subassemblies of luminaires intended for final assembly into luminaires in the field. Information or instructions are provided specifying the subassemblies that may be used to assemble a luminaire in the field.

Also included are conduit boxes and bodies with threaded hubs, adjustable hangers, and flexible luminaire fittings with threaded hubs, for support of luminaires. Information on restrictions in the use of these fittings and as applicable to the assembled luminaire is marked on the fittings or provided with the fittings.

LUMINAIRES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (IHTF7)

USE

This category covers incandescent lamp, fluorescent lamp, high-intensity-discharge lamp or surgical-type luminaires.

Luminaires without guards should be used only where not subject to breakage.

Luminaires suitable for wet locations are so marked.

Luminaires marked ''Suitable for use in suspended ceilings,'' in combination with the Certification Mark, are intended to be mounted in openings of a suspended ceiling. They are marked with the minimum spacings between adjacent luminaires to side walls and to the structural ceiling above the luminaires. The space between the suspended ceiling and the structural ceiling must contain relatively unobstructed air space around the luminaires equal to the marked spacings. Fluorescent-lamp-type luminaires are suitable for end-to-end mounting. The test conditions do not anticipate external heat sources in the ceiling area such as steam pipes, heating ducts, and the like.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 9, ''Luminaires.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Lighting Fixture for Hazardous Locations'' or ''Luminaire for Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLASHLIGHTS AND LANTERNS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (IJRF7)

USE

This category covers flashlights and lanterns for use in any of the groups under Class I, Zone classified hazardous locations. They have been investigated with respect to use in the presence of specific flammable gas or vapor-air atmospheres. The tests have been conducted using specific lamp and battery combinations. The lamp designation and the number, type, size and voltage of the batteries to be used are marked on the product.

Safety of operation in the presence of explosive mixtures may be endangered if replacement parts other than those specified on the product are used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Flashlight for Use in Hazardous Locations'' or ''Lantern for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLASHLIGHTS AND LANTERNS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (IKBR7)

GENERAL

This category covers flashlights and lanterns investigated with respect to use in the presence of specific flammable gas or vapor-air atmospheres (for any of the groups under Class I hazardous locations) and specific combustible dusts (for any of the groups under Class II hazardous locations). The tests have been conducted using specific lamp and battery combinations. The lamp designation and the number, type, size and voltage of the batteries intended to be used are marked on the product.

These products are provided with a filament-disconnect mechanism or other type of construction to protect against ignition of the specified hazardous atmosphere. The filament-disconnect mechanism is intended to disconnect the lamp bulb from the circuit when the glass bulb or envelope surrounding the lamp filament is broken.

The safety of operation in the presence of explosive mixtures may be compromised if replacement parts other than those specified on the product are used.

Flashlights and lanterns are not intended for use in hospital operating rooms unless so marked on the device.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Flashlight for Use in Hazardous Locations'' or ''Lantern for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLASHLIGHTS AND LANTERNS, RECHARGEABLE AND AUTOMATIC CERTIFIED FOR CANADA (IKIQ7)

USE

This category covers flashlights and lanterns of the rechargeable and/or automatic type.

Rechargeable flashlights and lanterns may incorporate a battery charger within the same enclosure that houses the battery and/or lamp, or may be provided with a separate battery charger.

Automatic flashlights and lanterns incorporate a switching device which, when the unit is connected to a line voltage supply, will maintain an open circuit between the battery and lamp and, upon loss of the line voltage supply, will close the circuit between the battery and the lamp. Some units may incorporate ''power on'' lights, ''night lights'' or other features. Automatic flashlights and lanterns may be provided with dry-cell batteries (nonrechargeable) or rechargeable batteries and battery charger.

FACTORS NOT INVESTIGATED

Automatic flashlights and lanterns have not been investigated with regard to duration or amount of light output and should not be employed in lieu of Emergency Lighting and Power Equipment Certified for Canada (FTBR7), where emergency lighting equipment is required.

RELATED PRODUCTS

Direct-plug-in nightlights are covered under Nightlights Certified for Canada (QOYX7).

Cord-connected nightlights and portable luminaires are covered under Luminaires, Portable Certified for Canada (QOWZ7).

Emergency backup lighting is covered under Emergency Lighting and Power Equipment Certified for Canada (FTBR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, ''Portable Luminaries,'' and CAN/CSA-C22.2 No. 223, ''Power Supplies with Extra-Low-Voltage Class 2 Outputs,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Rechargeable Flashlight,'' ''Rechargeable Lantern,'' ''Automatic Flashlight,'' ''Automatic Lantern,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAT CONDUCTOR CABLE FITTINGS CERTIFIED FOR CANADA (IKMW7)

USE AND INSTALLATION

This category covers flat conductor cable fittings, which include all those items needed to install flat conductor cable, Type FCC (see IKKT7) in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' This category includes top and bottom shields, connectors, transition assemblies, fittings and insulators.

A fitting is suitable for use with a specific Type FCC cable in a particular flat conductor cable wiring system and is so identified.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, electrical inspector and others concerned with the installation.

This category does not cover wiring harnesses for equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0 (2010), ''General Requirements – Canadian Electrical Code, Part II,'' and CSA-C22.2 No. 222 (1986), ''Type FCC Under-Carpet Wiring System.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Flat Conductor Cable Fitting.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLATIRONS AND GARMENT-FINISHING APPLIANCES CERTIFIED FOR CANADA (IKOZ7)

GENERAL

This category covers household and commercial flatirons and domestic ironing machines.

This category also covers devices provided with mechanical and/or air-inflatable forms to form garments during the steaming operation.

Ironing machines of the automatic type and flatirons have some form of automatic temperature control (usually a thermostatic control) that operates automatically within predetermined temperature limits to open and close the circuit through the heating element. Flatirons and ironing machines may be of the automatic or nonautomatic type.

Some ironing machines use steam and/or air for the purpose of forming and/or removing wrinkles from garments. The steam is supplied by electric steam generators integral with the unit or from external steam lines. The air is supplied from external air lines.

Ironing machines are investigated from the standpoint of personal injury as well as electrical hazards. To reduce the likelihood of accidents, rotary-type devices are required to employ a readily operable safety-release mechanism, which is independent of the connection of the machine to the electrical power supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

CAN/CSA-C22.2 No. 81 (1990), ''Electric Irons''

CAN/CSA-E60335-1/4E (2003), ''Household and Similar Electrical Appliances – Safety – Part 1: General Requirements''

CAN/CSA-E60335-2-3 (2006), ''Household and Similar Electrical Appliances – Safety – Part 2-3: Particular Requirements for Electric Irons''

CSA-C22.2 No. 99 (1954), ''Construction and Test of Domestic Ironing Machines''

CAN/CSA-C22.2 No. 64 (2010), ''Household Cooking and Liquid-Heating Appliances''

Additional standards may be applicable based on the features employed. In addition, CSA Technical Information Letter No. C-37, ''Input Ratings for Cord-Connected Heating and Cooking Appliances, Hairdressing Equipment and Electric Irons for Household Use'' (issued 2-28-05), may also be used as applicable.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLATIRON ACCESSORIES CERTIFIED FOR CANADA (ILCX7)

USE AND INSTALLATION

This category covers (1) cord sets assembled to or mounted on a cord holder, stand or similar device, and (2) ironing boards for permanent installation.

The cord sets have an attachment-plug cap on one end and a cord connector body or flatiron plug on the other, and are usually provided with a clip or clamp for securing to the end of an ironing board. They have a current-carrying capacity of at least 10 A.

The ironing boards are provided with wiring, a receptacle for connection of a flatiron, and means for conduit connection.

ADDITIONAL INFORMATION

For additional information, see Flatirons and Garment-finishing Appliances Certified for Canada (IKOZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

Flatiron Accessories Certified for Canada (ILCX7)−*Continued*

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 81 (1990), ''Electric Irons.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Flatiron Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE LIGHTING PRODUCTS CERTIFIED FOR CANADA (ILGJ7)

USE

This category covers flexible lighting products that are cord connected and rated not more than 12 A, 120 V. Flexible lighting products and light sculptures may incorporate controller units. Flexible lighting products and light sculptures have been investigated for use in wet locations.

A flexible lighting product incorporates nonreplaceable series or series/parallel incandescent lamps or light emitting diodes, enclosed within a flexible polymeric tube or extrusion. Flexible lighting products are not intended for field cutting or splicing.

This category also covers flexible light sculptures which are intended for decorative use and consist of a polymeric or rigid frame to which a flexible light is attached. The flexible light attached to the light sculpture provides outline lighting of the figure or object created by the frame.

Flexible lighting products are marked ''SUITABLE FOR WET LOCATIONS'' and may be mounted with the optional: ''SUITABLE FOR OUTDOOR USE.'' Flexible lighting products are provided with additional markings and installation which indicate their intended use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, ''Canadian Electrical Code, Part II – General Requirements,'' and CSA Technical Information Letter No. B-39, ''Interim Certification Requirements for Flexible Light Cable Systems'' (effective date March 1, 2002).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Flexible Light,'' ''Flexible Light Cable System'' or ''Flexible Light Sculpture,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLOOR-FINISHING MACHINES CERTIFIED FOR CANADA (IMSR7)

USE

This category covers cord-connected floor-finishing machines for commercial and household uses, such as floor polishers, scrubbers, sanders, scrapers, tile removers, rug shampooers, rug and floor washers, and similar appliances. This category includes floor-finishing machines with vacuum attachments, but does not include vacuum cleaning machines, permanently connected machines or cord-connected machines intended to be fastened in place or located in a dedicated space.

Some machines are for use with floor-care products intended for machine application.

Except where specified as ''double insulated'' in the individual certifications, all machines intended for use in damp or wet locations are provided with means for grounding. Appliances specified as ''double insulated'' are constructed with a special insulating system in lieu of grounding and are distinctively marked ''Double-Insulated'' or ''Double Insulation.''

Suitable precautions should be taken during the use of floor-sanding machines to prevent formation of combustible mixtures of sanding dust and air.

REBUILT PRODUCTS

This category also covers floor-finishing machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt floor-finishing machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt floor-finishing machines are subject to the same requirements as new floor-finishing machines.

FACTORS NOT INVESTIGATED

Any health hazards that may be associated with the use of floor-finishing machines, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate commercial products in this category is CSA-C22.2 No. 10, ''Electric Floor Surfacing and Cleaning Machines.''

The basic standard used to investigate household products in this category is CSA-C22.2 No. 243, ''Vacuum Cleaners, Blower Cleaners and Household Floor Finishing Machines.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Floor-finishing Machine,'' or other appropriate product name as shown in the individual Listings.

For rebuilt products the word ''Rebuilt,'' ''Refurbished'' or ''Remanufactured'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINOUS EGRESS-PATH-MARKING SYSTEMS CERTIFIED FOR CANADA (IMZI7)

USE AND INSTALLATION

This category covers photoluminescent and self-luminous egress-path-marking systems intended to visually identify the path of egress and significant egress-path features, such as doors, stair banisters, obstacles, or information placards.

These products are intended for installation and use in accordance with the ''National Building Code of Canada.''

Path-marking systems intended to be installed on the floor have additionally been subjected to commercial cleaning operations representative of those specified in the manufacturer's instructions. Path-marking-system components intended to be installed on a stair nosing have additionally been subjected to a slip-resistance investigation and are permitted to be marked ''Suitable for Stair Nosings,'' or equivalent wording.

Photoluminescent products may include adhesive-backed or mechanically secured, rigid or flexible tapes or sheet materials for field application in accordance with the manufacturer's instructions. Paint or pigment material must be pre-applied (at the manufacturing facility) to a substrate; field application of photoluminescent pigment (by painting, spraying, or similar method) directly to building materials or surfaces is not permitted due to uncontrolled application variables deemed significant for product performance. Photoluminescent products require exposure to light for activation of their luminescent properties, and their instructions identify the minimum amount and type of illumination to achieve their full intended functionality.

Self-luminous products, typically containing tritium gas, are marked with a replacement date, and must also comply with the requirements of the Canadian Nuclear Regulatory Commission.

RELATED PRODUCTS

Photoluminescent and self-luminous exit signs are covered under Exit Signs, Self-luminous and Photoluminescent Certified for Canada (FWBX7).

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S572, "Photoluminescent and Self-Luminous Exit Signs and Path Marking Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminous Egress-path-marking System" or "Luminous Egress-path Marker."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOOD-PREPARING MACHINES CERTIFIED FOR CANADA (IPNX7)

FOOD-PREPARING MACHINES, COMMERCIAL CERTIFIED FOR CANADA (IPST7)

USE AND INSTALLATION

This category covers electrically operated machines used or located in commercial kitchens associated with restaurants, hospitals or other business establishments where they are not ordinarily accessible to the general public. They are used in the processing or combination processing and serving of foods and food products and may be provided with such miscellaneous attachments as bowls, sieves, droppers, etc., not involving moving or cutting parts. Attachments that perform functions other than intended by the basic design have not been investigated unless specifically noted in the individual certifications and covered in the installation and use instructions.

Commercial food-preparing machines such as meat- and bread-slicing machines, choppers, meat saws, etc., employing knives, screw- or worm-type feeding mechanisms, etc., are investigated for personal injury, electric shock and fire. These machines are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of accidents. In determining the need for protection against the risk of personal injury, consideration is given to the required utility of the product in a commercial application and the fact that experienced operators will most likely use the product.

Some products in this category have cutting or moving parts, presenting certain risks of personal injury that cannot be wholly eliminated by practical design features; such risks have been reduced to an acceptable degree.

If a product is suitable for built-in installation, side-by-side mounting or stacking, it is so indicated in the installation instructions.

If a product is of a type designed for permanent connection to water supply or waste disposal lines at the point of installation, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

Some equipment may be designed to accept accessories in the field. In such cases, both the commercial food-preparing machine and the accessory (attachment) are marked to relate the two for proper installation.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installation or use, warnings or special instructions are on the equipment visible after installation and during use where applicable.

REBUILT PRODUCTS

This category also covers commercial motor-operated food-preparing machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial motor-operated food-preparing machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial motor-operated food-preparing machines are subject to the same requirements as new commercial motor-operated food-preparing machines.

FACTORS NOT INVESTIGATED

The sanitation of these products has not been investigated.

RELATED PRODUCTS

Refrigerated beverage and/or ice dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers Certified for Canada (SFWY7).

Food-preparing Machines, Commercial Certified for Canada (IPST7)−*Continued*

Refrigerated ice cream makers are covered under Ice Cream Makers Certified for Canada (SINX7).

Custom-built food-preparation or serving equipment consisting of drop-in components, shelf heaters, plate warmers or heated food displays, etc., is covered under Commercial Cooking Appliances Certified for Canada (KNGT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category, except for ice dispensers and/or nonrefrigerated beverage dispensers, is CSA-C22.2 No. 195 (1987), "Motor Operated Food Processing Appliances (Household and Commercial)," or CAN/CSA-E60335-1/4E (2003), "Household and Similar Electrical Appliances – Safety – Part 1: General Requirements," and CAN/CSA-E60335-2-64 (2001), "Safety of Household and Similar Electrical Appliances – Part 2-64: Particular Requirements for Commercial Electric Kitchen Machines."

The basic standard used to investigate ice dispensers and/or nonrefrigerated beverage dispensers in this category is CAN/CSA-C22.2 No. 120 (1991), "Refrigeration Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Food-preparing Machine" or "Meat Slicer," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOOD-PREPARING MACHINES, HOUSEHOLD CERTIFIED FOR CANADA (IPWZ7)

USE

This category covers electrically operated machines used or located in a household or similar environment where they are ordinarily accessible to the general public. They are used in the processing or combination processing and serving of foods and food products and may be provided with such miscellaneous attachments as bowls, sieves, droppers, etc., not involving moving or cutting parts. Attachments that perform functions other than intended by the basic design have not been investigated unless specifically noted in the individual certifications and covered in the installation and use instructions.

Household food-preparing machines such as meat- and bread-slicing machines, choppers, meat saws, etc., employing knives, screw- or worm-type feeding mechanisms, etc., have been investigated for risk or personal injury, electric shock and fire. These machines are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of accidents. In determining the need for protection against the risk of personal injury, consideration is given to the required utility of the product in a household application and the fact that persons will most likely have no previous experience in operating the product.

Certain products in this category have cutting or moving parts, presenting certain risks of personal injury that cannot be wholly eliminated by practical design features. Such risks have been reduced to an acceptable degree.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food prepared by the use of these machines has been investigated.

RELATED PRODUCTS

Ice cream makers including refrigeration are covered under Ice Cream Makers Certified for Canada (SINX7).

Motor-operated cleaning machines intended for cleaning food are covered under Cleaning Machines, Motor Operated Certified for Canada (DMGK7).

Combination products including features for food preparation and cooking, such as breadmakers and coffee grinders/makers are covered under Household Cooking Appliance Certified for Canada (KNUR7).

ADDITIONAL INFORMATION

Food-preparing Machines, Household Certified for Canada (IPWZ7)−*Continued*

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 1335.1, ''Portable Electrical Motor-Operated and Heating Appliances: General Requirements,'' and CSA-C22.2 No. 1335.2.14 ''Portable Electrical Motor-Operated and Heating Appliances: Particular Requirements for Electrical Motor-Operated Kitchen Appliances.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, one of the following product names: ''Food-preparing Machine,'' ''Meat Chopper,'' ''Meat Slicer,'' ''Ice Crusher,'' or the name of the specific type of product as shown in the individual Listings, and ''Household Use Only'' or ''Household Type'' or the like.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOUNTAINS, SMALL DECORATIVE CERTIFIED FOR CANADA (IQRW7)

GENERAL

This category covers electrically operated, decorative, portable, self-contained fountains.

RELATED PRODUCTS

Similar equipment for stationary or fixed installations is covered under Architectural and Floating Fountains Certified for Canada (AWEG7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial).''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fountain, Decorative.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FUEL EQUIPMENT CERTIFIED FOR CANADA (IRMT7)

COMPRESSED NATURAL GAS ACCESSORIES, AUTOMOTIVE TYPE CERTIFIED FOR CANADA (IRTS7)

USE AND INSTALLATION

This category covers accessories designed for use on compressed natural gas (CNG) fueled automotive vehicles. The use does not imply that the vehicle itself is Listed.

These accessories are constructed and may be installed in accordance with Amendment 1 of CSA B149.1 (1991), ''Natural Gas and Propane Installation Code.''

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

Compressed Natural Gas Accessories, Automotive Type Certified for Canada (IRTS7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/AGA NGV3.1/CGA NGV 12.3 (1995), ''Fuel System Components for Natural Gas Powered Vehicles.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Regulator,'' ''Shutoff Valve,'' ''Refueling Valve'' or ''Control Valve.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-gas Accessories for Engine Fuel Systems Certified for Canada (ITPV7)

USE AND INSTALLATION

This category covers devices and equipment intended for use in LP-gas engine fuel systems on vehicles or engine generators. Use of this equipment does not imply that the vehicle or generator itself is certified.

These accessories are intended for installation and use in accordance with CAN/CSA-B149.2, ''Propane Storage and Handling Code.''

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA 12.2 (1992), ''Propane Fuel System Components for Use on Highway Vehicles.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Filter,'' ''Fuel-Lock Filter,'' ''Regulator,'' ''Vaporizer-Regulator,'' ''Immersion Vaporizer,'' ''Automatic Shut-Off Valve,'' ''Low-Pressure Shut-Off Valve,'' ''Control Valve,'' ''Filter Hydrostatic Relief Valve,'' ''Quick-Connect Coupling,'' ''Liquid-Level Gauge,'' ''Automatic Liquid-Level Control Valve,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FUEL GAS BOOSTER COMPRESSOR EQUIPMENT CERTIFIED FOR CANADA (IUXX7)

GENERAL

This category covers fuel gas booster compressor equipment designed to increase the pipeline pressure of a fuel gas, such as natural gas, from a low-fuel gas pressure (nominally 1.72 to 34.5 kPa) to a higher outlet pressure (such as 207 to 793 kPa). This higher-pressure fuel gas is then supplied to an external product, such as a microturbine. The equipment is intended for either indoor or outdoor use.

The equipment consists of a motor-compressor or an open-type compressor, internal gas piping, wiring and a combination of associated electrical and mechanical assemblies and controls on a common frame in an overall enclosure.

Equipment containing a motor compressor connected to a flammable fuel gas piping system has been investigated to determine that flame will not propagate beyond the inlet and outlet fuel gas connections of the equipment, should an electrical fault occur within the motor compressor when a flammable gas/air mixture is present.

FUEL GAS BOOSTER COMPRESSOR EQUIPMENT CERTIFIED FOR CANADA (IUXX7)

These units are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II."

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, inlet gas pressure (minimum and maximum) and maximum discharge gas pressure.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 140.2, "Hermetic Refrigerant Motor-Compressors," and CSA-C22.2 No. 100 (1995), "Motors and Generators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuel Gas Booster" or "Fuel Gas Booster Compressor."

****

FURNISHINGS CERTIFIED FOR CANADA (IYMR7)

GENERAL

This category covers electrical (rated 750 V ac or less) and/or nonelectrical furnishings, and includes:

1. Motor-operated furniture, such as motor-operated beds and chairs, merchandise displays and furniture-mounted video support systems
2. Electrified furniture, such as lighted curio cabinets, microwave carts and bed headboards
3. Nonseasonal electrical decorations, such as wave machines, lava lamps and neon sculptures
4. Home and individual office furnishings, such as study carrels, consoles and desks
5. Commercial product and informational displays, such as shelving units, motorized carpet displays and product platforms
6. Electrified building components, such as windows
7. Other similar miscellaneous furnishings intended for use in dwelling units or commercial environments

USE AND INSTALLATION

Products marked for household or residential use are intended to be used in dwelling units and guest rooms of hotels and motels. Hotel common areas such as the lobby or restaurant are considered commercial. Household or residential furnishings may be used in commercial settings, such as individual offices, where the number of people using the furnishings will be limited.

Products marked for commercial use are used where business is transacted, such as an office building, factory, warehouse, or similar location, and which is not a dwelling unit. These locations are where a large number of different people may be using the furnishings or are near the furnishings (such as customers near a display furnishing).

Products covered under this category are provided with installation and use instructions.

These units are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

UNEVALUATED FACTORS

The physiological or psychological effects on a person, beneficial or otherwise, which may be produced through the use of this equipment either singularly or with any other apparatus have not been investigated.

RELATED PRODUCTS

Office furnishings are covered under Office Furnishings Certified for Canada (QAWZ7).

Cord-connected multiple outlet strips intended for general use (e.g., relocatable power taps) are covered under Relocatable Power Taps Certified for Canada (XBYS7). Cord-connected multiple-outlet strips intended for permanent mounting (e.g., furniture power distribution units) are covered under Furniture Power Distribution Units Certified for Canada (IYNC7).

Lighted display cases and cabinets used in commercial applications are covered under Wired Cabinets Certified for Canada (ZNXR7). Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated Certified for Canada (AAVU7).

Furnishings used for patient care are covered under Medical Equipment Certified for Canada (PIDF7).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, and the like are covered under Custom-built Kiosks Certified for Canada (EMHH7).

Furnishings intended for support of audio or video equipment and provided with casters or secured to the building structure are covered under Carts and Stands for Household, Commercial and Professional Use Certified for Canada (CZUV7) or Carts, Tall Institutional Certified for Canada (CZWK7).

Portable lamps are covered under Luminaires, Portable Certified for Canada (QOWZ7) or Portable Cabinet Luminaries Certified for Canada (QOVJ7).

Decorative products intended for seasonal, temporary use such as lighted sculptures, molded figurines, and the like are covered under Outfits, Decorative Certified for Canada (DGXW7). Decorative lighting strings or electric ornaments intended for seasonal use are covered under Strings, Decorative Lighting Certified for Canada (DGZZ7) and Electric Ornaments Certified for Canada (DGXC7).

****

BUILDING COMPONENTS CERTIFIED FOR CANADA (IYMT7)

GENERAL

This category covers building components, such as heated windows, electrochromatic windows, motorized structure-mounted mirrors, and nonmotorized structure-mounted shelving and shelving support systems.

For commercial units that (1) have a surface area greater than 0.93 m^2 (10 sq ft) and are intended to be adjacent to other furnishings, or (2) are greater than 1.86 m^2 (20 sq ft) and intended to stand alone, the surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

These building components have not been investigated for use as components of fire-resistive assemblies.

These products are provided with installation and use instructions.

These systems are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

These products are marked with the Listee's name, trademark or UL File Number, a unique model designation, a date code, and any electrical ratings.

Products intended for use only in dwelling units are marked "Household Use Only"; products intended for use only in commercial settings are marked "Commercial Use Only." If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

ADDITIONAL INFORMATION

For additional information, see Furnishings Certified for Canada (IYMR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, "Portable Luminaires," CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)," CSA-C22.2 No. 250, "Luminaires," CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," and CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies," in addition to the requirements contained in CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Building Component," "Heated Glazing," "Electrified Glazing," "Shelving System" or "Articulating Mirror."

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL DISPLAYS CERTIFIED FOR CANADA (IYMX7)

USE AND INSTALLATION

This category covers commercial merchandise displays such as lighted and powered shelving units, luminary store displays, motorized rotating merchandise displays and motorized carpet flooring displays. A commercial display is a furnishing other than a display case or cabinet that is used in a commercial establishment to display jewelry or similar merchandise.

Commercial merchandise displays may be permanently connected or may be cord-and-plug connected with up to two power-supply cords.

For commercial units that (1) have a surface area greater than 0.93 m^2 (10 sq ft) and are intended to be adjacent to other furnishings, or (2) units that are greater than 1.86 m^2 (20 sq ft) and intended to stand alone, the surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

These products are provided with installation and use instructions.

These systems are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

UL-certified commercial displays are marked "Certification of this Listed Commercial Display does not include the products that are on display."

Products intended for use only in commercial settings are marked "Commercial Use Only."

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

RELATED PRODUCTS

Illuminated display showcases and cabinets used in commercial applications are covered under Wired Cabinets Certified for Canada (ZNXR7).

Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated Certified for Canada (AAVU7).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, Internet communication stands and the like are covered under Custom-built Kiosks Certified for Canada (EMHH7).

ADDITIONAL INFORMATION

For additional information, see Furnishings Certified for Canada (IYMR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, "Portable Luminaires," CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)," CSA-C22.2 No. 250.0, "Luminaires," CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," and CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies," in addition to the requirements contained in CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Display."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DECORATIVE FURNISHINGS CERTIFIED FOR CANADA (IYNA7)

USE AND INSTALLATION

This category covers furnishings intended to be used year-round (nonseasonal) that exist for aesthetic enjoyment or an ornamental purpose, such as lava lamps, low-wattage illuminated sculptures, glitter lamps, scrolling scenes, neon sculptures, strobe lamps, mirror balls, plasma lighting globes, motorized sculptures, optical fiber sculptures and wave machines.

Decorative Furnishings Certified for Canada (IYNA7)−*Continued*

These products are typically portable cord-and-plug connected but may be permanently connected.

These products are provided with use instructions and, if permanently connected, installation instructions are also provided.

These products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked "Household Use Only"; products intended for use only in commercial settings are marked "Commercial Use Only." If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

RELATED PRODUCTS

This category does not cover portable lamps (cord-connected portable luminaires (lamps), whose primary function is task or ambient illumination, and that can be moved to a new location without the use of tools). Tiffany-type portable lamps and similar lighted decorative lamps are portable lamps rather than a decorative furnishing. Portable lamps are covered under Luminaires, Portable Certified for Canada (QOWZ7) or Portable Cabinet Luminaires Certified for Canada (QOVJ7).

This category does not cover decorative outfits intended for seasonal, temporary use, not to exceed 90 days per year, providing a seasonal theme, such as wreaths, stars, tree-top units, sprays, light sculptures, molded figures, such as a pumpkin or a snowman, candles or candle sets without lamp shades, tree stands, and motorized decorative displays having illumination or other decorative effects. Decorative-lighting strings provided with lamp shades or diffusers over the lamps are also considered decorative outfits. Decorative outfits are intended for connection to a receptacle by means of an attachment plug and are portable. Seasonal, temporary-use decorative products, such as lighted sculptures and molded figurines, are covered under Outfits, Decorative Certified for Canada (DGXW7).

This category does not cover fountains; see Fountains, Small Decorative Certified for Canada (IQRW7) or Architectural and Floating Fountains Certified for Canada (AWEG7).

ADDITIONAL INFORMATION

For additional information, see Furnishings Certified for Canada (IYMR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, "Portable Luminaires," CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)" CSA-C22.2 No. 250.0, "Luminaires," and CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," in addition to the requirements contained in CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Decorative Furnishing."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FURNITURE, POWERED AND NONPOWERED CERTIFIED FOR CANADA (IYNE7)

USE AND INSTALLATION

This category covers furnishings provided with or without electrical power typically for lighting and convenience receptacle outlets. They include lighted make-up mirrors, study carrels, consoles, lighted curio cabinets, entertainment centers, headboards, bookcases, desks, tables, laboratory and work benches, and the like.

These products are provided with use instructions and installation instructions when intended for permanent connection.

These systems are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

Furniture, Powered and Nonpowered Certified for Canada (IYNE7)−*Continued*

Products intended for use only in dwelling units are marked ''Household Use Only''; products intended for use only in commercial settings are marked ''Commercial Use Only.'' If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked ''Suitable for Outdoor Use.''

RELATED PRODUCTS

Furnishings intended for support of audio or video equipment and provided with casters or secured to the building structure are covered under Carts and Stands for Household, Commercial and Professional Use Certified for Canada (CZUV7) or Carts, Tall Institutional Certified for Canada (CZWK7).

Furnishings intended to be used in an office environment and that must be connected together both mechanically and electrically are covered under Office Furnishings Certified for Canada (QAWZ7).

Interconnected tables provided with convenience receptacle outlets are covered under Powered Table Systems Certified for Canada (IYNI7).

ADDITIONAL INFORMATION

For additional information, see Furnishings Certified for Canada (IYMR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, ''Portable Luminaires,'' CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial),'' CSA-C22.2 No. 250.0, ''Luminaires, '' and CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Powered Furniture'' or ''Nonpowered Furniture.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORIZED FURNISHINGS CERTIFIED FOR CANADA (IYNG7)

GENERAL

This category covers motor-operated furniture, such as nonpatient care beds and lift chairs. This category also covers video display mounts incorporated as part of a furnishing (CRT, plasma, LCD and the like) intended to rest directly on the floor without casters, wheels, etc.

These products are provided with installation and use instructions when intended for permanent connection.

These systems are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked ''Household Use Only''; products intended for use only in commercial settings are marked ''Commercial Use Only.'' If a product marking is not provided, the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked ''Suitable for Outdoor Use.''

RELATED PRODUCTS

Furnishings with casters or wheels intended for use with audio/video equipment are covered under Carts and Stands for Household, Commercial and Professional Use Certified for Canada (CZUV7).

Tall carts with casters or wheels intended for use with audio/video equipment are covered under Carts, Tall Institutional Certified for Canada (CZWK7).

Furnishings supplied with all of the video and/or audio components by the manufacturer of those components are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7) and Audio/Video Apparatus Certified for Canada (AZSQ7).

Furnishings used for patient care or an individual under medical care are covered under Medical Equipment Certified for Canada (PIDF7).

ADDITIONAL INFORMATION

Motorized Furnishings Certified for Canada (IYNG7)−*Continued*

For additional information, see Furnishings Certified for Canada (IYMR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, ''Portable Luminaires,'' and CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial),'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Motorized Chair,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWERED TABLE SYSTEMS CERTIFIED FOR CANADA (IYNI7)

USE AND INSTALLATION

This category covers tables intended to be electrically interconnected with each other (two or more) and frequently reconfigured. These tables are provided with receptacles for communication, power and/or video connection. They are used in conference rooms, in an office, library, home, or school setting.

This category also covers powered table systems with powered tables connected to one 15 A, 120 V branch circuit, intended for use in unclassified locations in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

These units are provided with installation and use instructions, and are intended to be installed in accordance with the CEC.

PRODUCT MARKINGS

Each powered table system component (such as a table top or electrical accessory that is shipped separately from the major powered table unit to which it is to be connected) is identified with respect to its intended use and interrelationship with the powered table system (e.g., ''For Use with Powered Table System Series ____''). If separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

These products are marked ''Commercial Use Only.''

RELATED PRODUCTS

Furnishings intended to be used in an office environment and that must be connected together both mechanically and electrically are covered under Office Furnishings Certified for Canada (QAWZ7).

ADDITIONAL INFORMATION

For additional information, see Furnishings Certified for Canada (IYMR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CSA Technical Information Letter No. A-30, ''Interim Certification Requirements for Power Table Systems for Residential and Commercial Use'' (February 27, 2004), and CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Powered Table System'' or ''Powered Table System Part for Use with [Company name] Powered Table System.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FURNITURE POWER DISTRIBUTION UNITS CERTIFIED FOR CANADA (IYNC7)

USE AND INSTALLATION

This category covers cord-connected furniture power distribution units rated 250 V ac or less, 16 A ac or less, intended for indoor use. These units consist of single- or multiple-outlet wiring devices that provide power for and are intended to be installed in commercial or household (residential) portable or stationary furnishings only. These units provide outlet receptacles for computers, audio and video equipment, and other equipment that is mounted on or in commercial or household (residential) portable or stationary furnishings. These units are provided with an attachment-plug cap and a flexible cord terminated in an enclosure in which are mounted one or more receptacles, which could include power, phone, data or video receptacles.

Furniture power distribution units may be provided with suitable fuses or other supplementary overcurrent protection, switches and indicator lights singularly or in any combination. These units may also employ surge suppression components (TVSS), electromagnetic interference (EMI) filter components and/or uninterruptible power-supply components. These units are intended only to be used by original equipment manufacturers (OEMs).

These units are not intended to function as general use relocatable power taps (RPTs), nor are they intended for use in fixed furnishings.

These units are intended to be directly connected to a branch circuit receptacle, and are not intended to be series connected (daisy chained) to other furniture power distribution units, extension cords, or similar devices.

RELATED PRODUCTS

Cord-connected multiple-outlet strips intended for general use (e.g., relocatable power taps) are covered under Relocatable Power Taps Certified for Canada (XBYS7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 21 (1990), ''Cord Sets and Power Supply Cords.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Furniture Power Distribution Unit,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WALL AND CEILING MOUNTS AND ACCESSORIES CERTIFIED FOR CANADA (IYNW7)

USE

This category covers shelves, brackets, and similar devices that provide structural support for the mounting of audio/video equipment, information technology equipment, and similar products, to the building structure. They are intended for indoor use only unless marked ''Suitable for Outdoor Use.''

This category also covers accessories that are used to expand the capability of a mounting device. Accessories that are used to secure the mounting device to a wall, ceiling, suspended ceiling, truss, joist, ''I'' beam, or other building structural component specified by the manufacturer and the accessories used to secure equipment to the mount are covered. Examples of these products include extension columns, extension arms, ceiling plates, floor plates, ceiling brackets, fastener kits and VCR/DVD brackets.

INSTRUCTIONS AND PRODUCT MARKINGS

Cathode ray television (CRT) mounts are marked with the diagonal screen size and corresponding maximum weight of the television they are intended to support. Flat panel television or monitor mounts are marked with the maximum weight of the television they are intended to support. The intended load of all other supporting surfaces are identified in the instructions.

Mounts provided with electrical features are marked with their electrical ratings.

Mounting systems suitable for outdoor use are marked ''Suitable for Outdoor Use.''

Installation instructions are provided with each mount. The type of wall, ceiling or floor with which the mounting system was investigated for use is specified in the instructions (e.g., wood stud, steel stud, concrete, concrete block, clay brick, gypsum wallboard, lath, plaster).

RELATED PRODUCTS

Wall- and ceiling-mount supports supplied with the video and/or audio equipment by the video and/or audio equipment manufacturer are covered under Audio/Video Apparatus Certified for Canada (AZSQ7) or Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7) and are investigated to CAN/CSA-C22.2 No. 60065, ''Audio, Video and Similar Electronic Apparatus – Safety Requirements,'' or CAN/CSA-C22.2 No. 60950-1, ''Information Technology Equipment – Safety – Part 1: General Requirements,'' respectively.

Information technology and communications equipment cabinet, enclosure and rack systems are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7) and are investigated to CAN/CSA-C22.2 No. 60950-1.

Custom-built telecommunications equipment cabinets and racks are covered under Custom-built Telecommunications Equipment Certified for Canada (WYKM7) and are investigated to CSA-C22.2 No. 225, ''Telecommunication Equipment,'' or CAN/CSA-C22.2 No. 60950-1, ''Information Technology Equipment – Safety – Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60950-21, ''Information Technology Equipment – Safety – Part 21: Remote Power Feeding.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60065 (2003), ''Audio, Video and Similar Electronic Apparatus – Safety Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Audio/Video Wall-mount Assembly,'' ''Audio/Video Ceiling-mount Assembly'' or ''Audio/Video Mount Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FURNISHINGS, HOUSEHOLD AND COMMERCIAL CERTIFIED FOR CANADA (IYQX7)

USE

This category covers miscellaneous furnishings intended for use in homes and/or commercial establishments.

These furnishings are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and the manufacturer's markings and installation instructions.

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked ''Household Use Only''; products intended for use only in commercial settings are marked ''Commercial Use Only.'' If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked ''Suitable for Outdoor Use.''

RELATED PRODUCTS

Furnishings intended for installation in building structures or equivalent locations are covered under Building Components Certified for Canada (IYMT7).

Furnishings intended for the display of merchandise are covered under Commercial Displays Certified for Canada (IYMX7).

Furnishings intended to be used year-round (nonseasonal) that exist for an aesthetic enjoyment or ornamental purpose, such as lava lamps, low-wattage illuminated sculptures, glitter lamps, scrolling scenes, neon sculptures, strobe lamps, mirror balls, plasma lighting globes, motorized sculptures, optical fiber sculptures and wave machines are covered under Decorative Furnishings Certified for Canada (IYNA7).

FURNISHINGS, HOUSEHOLD AND COMMERCIAL CERTIFIED FOR CANADA (IYQX7)

Furnishings provided with or without power for such items as lighting and convenience receptacles incorporated within study carrels, consoles, curio cabinets, entertainment centers, headboards, bookcases, desks, and the like are covered under Furniture, Powered and Nonpowered Certified for Canada (IYNE7).

Motor-operated furniture, such as nonpatient care beds, lift chairs, video display mounts incorporated as part of a furnishing (CRT, plasma, LCD and the like) intended to rest on the floor and not incorporating casters, wheels, etc., is covered under Motorized Furnishings Certified for Canada (IYNG7).

Furnishings with casters or wheels intended for use with audio/video equipment are covered under Carts and Stands for Household, Commercial and Professional Use Certified for Canada (CZUV7).

Tall carts with casters or wheels intended for use with audio/video equipment are covered under Carts, Tall Institutional Certified for Canada (CZWK7).

Audio and video equipment mounting systems intended for mounting to walls, ceilings or another permanent part of a building are covered under Carts and Stands for Household, Commercial and Professional Use Certified for Canada (CZUV7).

Furnishings supplied with all of the video and/or audio components by the manufacturer of those components are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7) and Audio/Video Apparatus Certified for Canada (AZSQ7).

Furnishing tables intended to be electrically interconnected with each other (two or more), frequently reconfigured and provided with receptacles for communication, power and/or video connection. for use in conference rooms, in an office, library, or school setting are covered under Powered Table Systems Certified for Canada (IYNI7).

Equipment intended for use in hospitals or equivalent locations is covered under Medical Equipment Certified for Canada (PIDF7).

Other types of furnishings are covered under Tables, Utility Certified for Canada (WWJT7) and Massage and Exercise Machines Certified for Canada (PGXX7).

Motor-operated check-out stands (and associated foot and knee controls) intended for use in retail stores to facilitate tally and packing operations are covered under Motor-operated Check-out Stands Certified for Canada (DBNT7).

ADDITIONAL INFORMATION

For additional information, see Furnishings Certified for Canada (IYMR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, ''Portable Luminaires,'' CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial),'' CSA-C22.2 No. 250.0, ''Luminaires,'' and CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FUSED POWER-CIRCUIT DEVICES CERTIFIED FOR CANADA (IYSR7)

GENERAL

This category covers the following devices:

- Enclosed fused power-circuit devices in which the switch is integral with the enclosure
- Open-type fused power-circuit devices intended for mounting in other equipment, such as switchboards, or in a separately shipped enclosure
- Enclosures intended for mounting open-type fused power-circuit devices

These fused power-circuit devices are either bolted-pressure contact switches or high-pressure butt-type contact switches, each defined as follows:

Bolted-pressure contact switch — A device in which the blade-jaw connections have an additional pressure or clamping action provided at both ends of the switch blades when the blades are in the fully closed position.

High-pressure butt-type contact switch — A device having butt-type contacts and a spring-charged mechanism.

USE AND INSTALLATION

Fused power-circuit devices suitable for use as service switches are marked ''Suitable for Use as Service Equipment.''

Some fused power-circuit devices incorporate neutrals factory bonded to the frame or enclosure. Such units are marked ''Suitable Only for Use as Service Equipment.''

Fused power-circuit devices marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system, or for a second building.

Electrically tripped and/or operated fused power-circuit devices may be provided with ground-fault sensing and relaying equipment.

Devices suitable for ground-fault protection but the ground-fault protection sensors or relaying equipment (or both) are located in a separate enclosure are marked ''Suitable for Ground Fault Protection When Combined with Class ____ (or Manufacturer and Cat. No.) Ground Fault Sensing Element'' or the equivalent.

Devices for use with Class I ground-fault sensing and relaying equipment include those that are capable of interrupting 12 times their rated current or that have integral means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability.

Devices for use with Class II ground-fault sensing and relaying equipment are capable of interrupting 10 times their rated current and are intended for use in ground-fault protection systems where means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability are incorporated within the ground-fault sensing and relaying equipment.

Fused power-circuit devices have been investigated for connection to either busbars or pressure wire connectors. Unless the switch is marked ''For busbar connection only'' or the equivalent, it is provided with pressure wire connectors or marked for use with specific pressure wire connectors. Terminals are intended for use with copper conductors only unless the device is marked to indicate that terminals are also suitable for aluminum conductors.

RATINGS

These devices accommodate Class L or T fuses rated 600 V or less (ac or dc) and have been investigated for use at 100% of their marked ampere rating. The continuous-current rating of a fused power-circuit device is 800, 1200, 1600, 2000, 2500, 3000, 4000, 5000 or 6000 A.

These devices are intended for use on circuits having available fault currents of 100,000, 150,000 or 200,000 rms symmetrical amps or 20,000, 50,000, 100,000, 150,000 or 200,000 amps dc as indicated on the device.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 4, ''Enclosed and Dead-Front Switches.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Fused Power Circuit Device,'' ''Enclosed Fused Power-Circuit Device,'' ''Enclosed Fused Power-Circuit Device Suitable for Use as Service Equipment'' or ''Fused Power-Circuit Device Enclosure.''

On fused power-circuit devices with integral enclosures the Listing Mark is applied to the enclosure. On devices for use in other enclosures (open type) the Listing Mark is applied to the switching unit.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FUSEHOLDERS CERTIFIED FOR CANADA (IYXV7)

FUSEHOLDERS, CARTRIDGE FUSE CERTIFIED FOR CANADA (IZLT7)

GENERAL

This category covers fuseholders intended for use with Type CC, G, H, J, K, R, T and HRC fuses, special-purpose fuses, supplementary fuses, rejectors for Type C fuses, and adapters for Type S fuses.

An interrupting rating on a fuseholder included in a piece of equipment does not automatically qualify the equipment in which the fuseholder is installed for use on circuits with higher available currents than the rating of the equipment itself.

PRODUCT MARKINGS

Fuseholders are permanently marked with the name, trademark or other recognized symbol of identification of the manufacturer and the current and voltage for which they are constructed. The marked current rating of a fuseholder or adapter for a Type S fuse is so located that it is plainly visible after installation.

Rejectors for Type C noninterchangeable plug fuses are marked with the name, trademark, trade name or other recognized symbol of identification of the manufacturer, the type designation "C" and the rating in amperes.

A fuseholder with wiring terminals intended for use with copper or aluminum conductors is marked "CU-AL" (or equivalent).

A fuseholder with wiring terminals intended for use with aluminum conductors only is marked "AL" (or equivalent).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 4248.1, "Fuseholders – Part 1: General Requirements," in addition to one of the following as applicable:

CSA-C22.2 No. 4248.4, "Fuseholders – Part 4: Class CC"
CSA-C22.2 No. 4248.5, "Fuseholders – Part 5: Class G"
CSA-C22.2 No. 4248.6, "Fuseholders – Part 6: Class H"
CSA-C22.2 No. 4248.8, "Fuseholders – Part 8: Class J"
CSA-C22.2 No. 4248.9, "Fuseholders – Part 9: Class K"
CSA-C22.2 No. 4248.12, "Fuseholders – Part 12: Class R"
CSA-C22.2 No. 4248.15, "Fuseholders – Part 15: Class T"

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuseholder" or "Cartridge Fuseholder."

****

FUSES CERTIFIED FOR CANADA (JCQR7)

BRANCH-CIRCUIT FUSES CERTIFIED FOR CANADA (JCSA7)

This category covers fuses suitable to provide protection for branch and feeder circuits as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These fuses include:

Cartridge Fuses, Nonrenewable Certified for Canada (JDDZ7)
Cartridge Fuses, Renewable Certified for Canada (JDRX7)
Plug Fuses Certified for Canada (JEFV7)

Cartridge Fuses, Nonrenewable Certified for Canada (JDDZ7)

GENERAL

This category covers nonrenewable, cartridge-enclosed fuses, rated as follows:

Cartridge Fuses, Nonrenewable Certified for Canada (JDDZ7)−*Continued*

250 V	0 – 600 A
300 V	0 – 1200 A
600 V	0 – 6000 A

The fuse classes are further categorized as follows:

Class	In (A)	V	DC Rating	Interrupting Rating (kA)		Time Delay	Current-limiting	Body Sizes
				DC	AC			
CA	0 – 30	600	Optional	10, 20, 50, 100, 150 or 200	200	No	Yes	1
CB	0 – 60	600	Optional	10, 20, 50, 100, 150 or 200	200	No	Yes	2
CC	0 – 30	600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	1
CD	31 – 60	600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	1
G	0 – 20 21 – 60	600 480	Optional	10, 20, 50 or 100	100	Optional	Yes	4
H	0 – 600	250 or 600	Optional	10	10	Optional	No	6
J	0 – 600	600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	6
K	0 – 600	250 600	Optional	10, 20, 50, 100, 150 or 200	50, 100 or 200	Optional	No	6 6
L	601 – 6000	600	Optional	20, 50, 100, 150 or 200	200	Optional	Yes	9
R	0 – 600	250 600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	6 6
T	0 – 1200 0 – 800	300 600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	8 7

These fuses are intended for use on ac circuits only, unless also marked with a dc voltage rating. These fuses are suitable for branch circuit, feeder and service overcurrent protection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The term "current-limiting" indicates that a fuse, when tested on a circuit capable of delivering a specific short-circuit current (rms amperes symmetrical) at rated voltage, will start to melt within 90 electrical degrees and will clear the circuit within 180 electrical degrees (1/2 cycle).

Because the time required for a fuse to melt is dependent on the available current of the circuit, a fuse that may be current-limiting when subjected to a specific short-circuit current (rms amperes symmetrical) may not be current-limiting on a circuit of lower maximum available current.

Class K fuses incorporate dimensional features equivalent to, and are thus interchangeable with, Class H fuses.

Class R fuses incorporate features that permit their insertion into Class H and K fuseholders. They are also provided with a feature that allows their insertion into rejection-type fuseholders designed to accept only Class RK1 or RK5 fuses.

All classes covered under this category (with the exception of Class H) are further classified as to their maximum peak let-through current (I_p) and maximum clearing ampere-squared seconds (I^2t) as follows. These tables indicate the maximum permissible let-through values obtained when the fuse is connected to a circuit capable of providing the indicated available current.

Maximum Peak Let-through Current (I_p amperes) and Clearing I^2t (ampere-squared seconds)

Class CA Fuses

Rating (A)	$I_p \times 10^3$ (A)	$I^2t \times 10^3$
0 – 60	8	6

Class CB Fuses

Rating (A)	$I_p \times 10^3$ (A)	$I^2t \times 10^3$
1 – 30	10	10
31 – 60	15	60

Class CC Fuses

Cartridge Fuses, Nonrenewable Certified for Canada (JDDZ7)−*Continued*

Rating (A)	Between Threshold & 50 kA		100 kA		200 kA	
	$I_p \times 10^3$ (A)	$I^2t \times 10^3$	$I_p \times 10^3$ (A)	$I^2t \times 10^3$ (A)	$I_p \times 10^3$ (A)	$I^2t \times 10^3$
0 – 15	3	2	3	2	4	3
16 – 20	3	2	4	3	5	3
21 – 30	6	7	7.5	7	12	7

Class CD Fuses

Rating (A)	Between Threshold & 50 kA		100 kA		200 kA	
	$I_p \times 10^3$ (A)	$I^2t \times 10^3$	$I_p \times 10^3$ (A)	$I^2t \times 10^3$	$I_p \times 10^3$ (A)	$I^2t \times 10^3$
31 – 60	8	30	10	30	16	30

Class G Fuses

Rating (A)	$I_p \times 10^3$ (A)	$I^2t \times 10^3$
0 – 1	1	0.8
2 – 3	1.5	1.2
4 – 6	2	1.8
7 – 10	3	2.8
11 – 15	4	3.8
16 – 20	5	5
21 – 25	6	6
26 – 30	7	7
31 – 35	8	14
36 – 40	8.5	17
41 – 45	9	18.5
46 – 50	9.5	21
51 – 60	10.5	25

Class H fuses have an interrupting rating of 10,000 A (rms symmetrical) and are not classified as to their maximum peak let-through current (I_p) or maximum clearing ampere-squared seconds (I^2t).

Class J Fuses

Rating (A)	Between Threshold & 50 kA		100 kA		200 kA

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer's name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes
5. The device class or classification

Class H fuses rated 250 V, 15 – 60 A are designated as low-melting-point fuses and are identified by the symbol "P."

Cartridge Fuses, Nonrenewable Certified for Canada (JDDZ7)−*Continued*

When a fuse has a dc rating, it is marked with the dc voltage and interrupting rating.

Equipment (a switch, motor starter, panelboard, etc.) investigated for use with these fuses is marked with the class of fuse intended to be used in the equipment, and available current rating applicable to that piece of equipment. The equipment, with these fuses installed, is suitable for use on circuits having a maximum available fault current up to the short-circuit rating of the equipment, or the interrupting rating of the fuse, whichever is lower.

An interrupting rating on a fuse included in a piece of equipment does not automatically qualify the equipment in which the fuses are installed for use on circuits with higher available currents than the rating of the equipment itself.

Class CC, CD, G, H, J, K, L, R and T fuses may be marked as having a time-delay characteristic, such as "Time Delay," "Dual Element," or other equivalent designation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CSA-C22.2 No. 248.1, "Low-Voltage Fuses – Part 1: General Requirements"
CSA-C22.2 No. 248.3, "Low-Voltage Fuses – Part 3: Class CA and CB Fuses"
CSA-C22.2 No. 248.4, "Low-Voltage Fuses – Part 4: Class CC Fuses"
CSA-C22.2 No. 248.5, "Low-Voltage Fuses – Part 5: Class G Fuses"
CSA-C22.2 No. 248.6, "Low-Voltage Fuses – Part 6: Class H Nonrenewable Fuses"
CSA-C22.2 No. 248.8, "Low-Voltage Fuses – Part 8: Class J Fuses"
CSA-C22.2 No. 248.9, "Low-Voltage Fuses – Part 9: Class K Fuses"
CSA-C22.2 No. 248.10, "Low-Voltage Fuses – Part 10: Class L Fuses"
CSA-C22.2 No. 248.12, "Low-Voltage Fuses – Part 12: Class R Fuses"
CSA-C22.2 No. 248.15, "Low-Voltage Fuses – Part 15: Class T Fuses"

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse."

****

Cartridge Fuses, Renewable Certified for Canada (JDRX7)

GENERAL

This category covers nonrenewable, cartridge-enclosed fuses, rated as follows:

Class	In (A)	V	DC Rating	Interrupting Rating (kA)		Time Delay	Current-limiting	Body Sizes
H	0 – 600	250	Optional	DC	AC	Optional	No	6
		600		10	10			6

These fuses are intended for use on ac circuits only unless also marked with a dc voltage rating.

These fuses are suitable for branch circuit, feeder and service overcurrent protection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Renewable fuses of a given voltage rating or current rating range are not interchangeable in the same fuseholder with fuses of a different voltage rating or current rating range.

Each line of renewable links has been investigated only with the same line of fuses from the same manufacturer.

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer's name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes
5. The device class or classification
6. The word "Renewable"

In addition, each renewal element covered under this category is marked with:

1. The manufacturer's name or trademark (or both)

Cartridge Fuses, Renewable Certified for Canada (JDRX7)−*Continued*

2. The current rating
3. The voltage rating

When a fuse has a dc rating, it is marked with the dc voltage and interrupting rating.

Equipment (a switch, motor starter, panelboard, etc.) that has been investigated for use with these fuses is marked with the class of fuse intended to be used in the equipment, and available current rating applicable to that piece of equipment. The equipment, with these fuses installed, is suitable for use on circuits having a maximum available fault current up to the short-circuit rating of the equipment, or the interrupting rating of the fuse, whichever is lower.

An interrupting rating on a fuse included in a piece of equipment does not automatically qualify the equipment in which the fuses are installed for use on circuits with higher available currents than the rating of the equipment itself.

Fuses may be marked as having a time-delay characteristic, such as "Time Delay," "Dual Element," or other equivalent designation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 248.1 (2000), "Low-Voltage Fuses – Part 1: General Requirements," and CSA-C22.2 No. 248.7 (2000), "Low-Voltage Fuses – Part 7: Class H Renewable Fuses."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse" or "Fuse Renewal."

The Listing Mark for fuses is marked on the product; the Listing Mark for fuse renewals is marked on each carton containing fuse renewals, with or without the UL Mark for Canada symbol on the renewal.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Plug Fuses Certified for Canada (JEFV7)

GENERAL

This category covers nonrenewable Type C and Type S plug fuses.

These fuses have the following characteristics:

Type	I_N (A)	V	DC Rating	Interrupting Rating (kA)	Time Delay	Current-limiting	Body Types
Type C	0 – 30	125	Optional	10	Optional	No	3
Type S							3

PRODUCT MARKINGS

The devices covered under this category, at a minimum, are marked with:

1. The manufacturer's name or trademark (or both)
2. The device current rating
3. Plug fuses designated as low-melting-point fuses are identified by the symbol "P"
4. Plug fuses designated as time-delay fuses are identified by the symbol "D"

In addition, these devices are not marked "Current-limiting."

Devices rated 15 A or less have a prominent hexagonal feature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 248.1 (2000), "Low-Voltage Fuses – Part 1: General Requirements," and CSA-C22.2 No. 248.11 (2000), "Low-Voltage Fuses – Part 11: Plug Fuses."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse."

* *

Plug Fuses Certified for Canada (JEFV7)−*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DEFINED-USE FUSES CERTIFIED FOR CANADA (JDUA7)

This category covers fuses intended for specific and defined use. These fuses include:

Special-purpose Fuses Certified for Canada (JFHR7)

Special-purpose Fuses Certified for Canada (JFHR7)

GENERAL

This category covers fuses rated 0 – 6,000 A, 0 – 1,000 V with interrupting ratings up to 300,000 A. These fuses are designed for special-purpose applications such as in combination with low-voltage power circuit breakers, in combination with TVSS devices or in combination with capacitors. If they do not incorporate dimensional or other rejection features which make them noninterchangeable with certified classes of renewable and nonrenewable fuses, then they have been investigated and found to comply with all of the performance requirements applicable to certified classes of renewable and nonrenewable fuses for which they may be substituted.

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer's name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes (when not so marked, the interrupting rating is 10,000 A (rms symmetrical)
5. The words "Time Delay" (for qualifying fuses only)
6. The words "Current-limiting" (for qualifying fuses only)
7. These devices may also be marked to indicate if their performance is dependent upon the equipment with which they are designed to be used
8. Fuses that comply with all of the dimensional and performance requirements applicable to a certified class of cartridge fuse may be marked "This fuse may substitute for a Listed Class ___ Fuse," where the appropriate fuse class is placed in the blank
9. Fuses that comply with all of the performance requirements applicable to a certified class of cartridge fuse, but do not comply with the dimensional requirements for that fuse may be marked "This fuse meets the performance specifications for a Class ___ Fuse," or the equivalent

RELATED PRODUCTS

For classes of renewable and nonrenewable cartridge fuses, see Cartridge Fuses, Nonrenewable Certified for Canada (JDDZ7), Cartridge Fuses, Renewable Certified for Canada (JDRX7) and Plug Fuses Certified for Canada (JEFV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FUSES, SUPPLEMENTAL CERTIFIED FOR CANADA (JDYX7)

GENERAL

This category covers supplemental fuses, which are also described as miscellaneous, miniature, and micro fuses. These fuses provide supplemental protection in end-use equipment to provide protection for components or internal circuits. They are not suitable for branch or feeder circuit use. Physical dimensions are not specified, but dimensional limitations apply to prevent insertion of supplementary protection fuses into branch or feeder circuit fuseholders intended to accommodate branch or feeder circuit fuses of the Class CA, CB, CC, CD, G, H, J, K, L, R or T Type.

Micro fuses are supplemental fuses with no principal dimension (length, width, height or diameter) exceeding 10 mm (excluding leads).

The devices covered under this category are rated as follows:

Type	I_N (A)	V	DC Rating	Min Interrupting Rating (kA)	Time Delay	Current-limiting
Miscellaneous or Miniature fuse	0 – 60	<125	Optional	>I_N	Optional	No
Miscellaneous or Miniature fuse	0 – 60	125	Optional	10, 50 or 100	Optional	No
Miscellaneous or Miniature fuse	0 – 1	125/250	Optional	10, 50 or 100 at 125 V 0.035 at 250 V	Optional	No
Miscellaneous or Miniature fuse	1.1 – 3.5	125/250	Optional	10, 50 or 100 at 125 V 0.10 at 250 V	Optional	No
Miscellaneous or Miniature fuse	3.6 – 10	125/250	Optional	10, 50 or 100 at 125 V 0.20 at 250 V	Optional	No
Miscellaneous or Miniature fuse	10.1 – 15	125/250	Optional	10, 50 or 100 at 125 V 0.75 at 250 V	Optional	No
Miscellaneous or Miniature fuse	15.1 – 30	125/250	Optional	10, 50 or 100 at 125 V 1.5 at 250 V	Optional	No
Miscellaneous or Miniature fuse	30 – 60	125/250	Optional	10, 50 or 100 at 125 V 10, 50 or 100 at 250 V	Optional	No
Micro fuse	0 – 60	Any	Optional	0.050	Optional	No

PRODUCT MARKINGS

Devices covered under this category are marked as follows:

Fuses, Supplemental Certified for Canada (JDYX7)−*Continued*

Type	Required Fuse Markings		Required Smallest Package Markings
Miscellaneous or Miniature fuse	Manufacturer's name or trademark (or both) Device current rating Device voltage rating Device interrupting rating The words "Time Delay" or the letter "D" if device is a time delay type	or or	Manufacturer's name or trademark (or both) Device current rating Device voltage rating Device interrupting rating The words "Time Delay" or the letter "D" if device is a time delay type
Micro fuse	Device current rating		Manufacturer's name or trademark (or both) Device current rating Device voltage rating Device interrupting rating The words "Time Delay" or the letter "D" if device is a time delay type

If a color code is used to mark a micro fuse to designate voltage, interrupting rating or time delay type, the color code scheme is marked on the smallest package.

Devices covered under this category are not marked "Current-limiting."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 248.1 (2000), "Low-Voltage Fuses – Part 1: General Requirements," and CSA-C22.2 No. 248.14 (2000), "Low-Voltage Fuses – Part 14: Supplemental Fuses."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Supplemental Fuse," "Miscellaneous Fuse," "Miniature Fuse" or "Micro Fuse."

****

FUSIBLE LINKS CERTIFIED FOR CANADA (JGIX7)

USE AND INSTALLATION

This category covers fusible links intended for use in connection with automatic closing devices for doors and windows, and other automatic devices requiring fusible links. The response characteristics of these links may be either Standard Response or Quick Response. Links are Standard Response unless otherwise specified in the individual certifications.

These devices are intended for installation under load conditions within the ranges specified in the individual certifications.

TEMPERATURE RATINGS

Links are marked with the temperature ratings. The common temperature ratings of fusible links are as follows:

Temp Class	Max Ambient Temp, °C	Temp Rating, °C
Low	32	52-54
Ordinary	38	57-77
Intermediate	66	79-107
High	107	121-149
Extra High	149	163-191
Very Extra High	191	204-246
Ultra High	246	260-302

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7), Fire Resistance Ratings Certified for Canada (BXRH7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S505, "Fusible Links for Fire Protection Service".

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fusible Link" or "Heat Responsive Link."

****

GARAGE EQUIPMENT CERTIFIED FOR CANADA (JGWV7)

USE AND INSTALLATION

This category covers electrically operated equipment, rated 600 V or less, intended primarily for use in servicing and repairing automobiles. Such equipment is intended to be used mainly in commercial garages and gasoline dispensing and service stations. Unless specifically marked for hazardous locations use, products are intended for use in an area that is considered unclassified based on the classification in CAN/CSA-C22.1 (1998), "Canadian Electrical Code, Part I" (CEC).

Some of the equipment covered under this category incorporates parts that tend to produce arcs or sparks and, therefore, when installed in commercial garages and gasoline dispensing and service stations, should be in areas or enclosures suitable for the purpose in accordance with the provisions of the CEC. Products incorporating arcing or sparking parts located above 50 mm (2 inches) from floor level (i.e., in an area considered unclassified by the CEC) are provided with instructions which specify that the equipment is not to be installed in a recessed floor area. Products such as dynamometers, incorporating arcing or sparking parts located below 50 mm (2 inches) from the floor, or below floor level, are marked for use in a Class I, Zone 2 location.

RELATED PRODUCTS

Battery chargers are covered under Battery Chargers, Nonautomotive Type Certified for Canada (BBML7).

Refrigerant recyclers and air-conditioning charging stations are covered under Refrigerant Recovery/Recycling Equipment, Automotive Certified for Canada (SCMA7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 68 (1992), "Motor Operated Appliances" and CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

UL MARK

This Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GARDENING APPLIANCES CERTIFIED FOR CANADA (JHKT7)

USE

This category covers motor-operated gardening appliances, such as lawn mowers of the reel and rotary walking types, hedge trimmers, edgers, trimmers, edger-trimmers, grass shears, cultivators, shredder-baggers, etc., for use on nominal system voltages of 250 V and less in unclassified locations and designed to be used in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

This category does not cover sprayers, foggers, and other specific appliances not covered by CAN/CSA-C22.2 No. 147 (1990), "Motor-Operated Gardening Appliances."

Except for gardening appliances marked "double insulated," all gardening appliances are provided with means for grounding. Double-insulated gardening appliances require normal care in handling. They should not be used under conditions that would be considered hazardous with gardening appliances of conventional construction, i.e., with either the gardening appliance or user in contact with water.

SPECIAL CONSIDERATIONS

These products have been investigated from the standpoint of risk of personal injury and fire.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

FACTORS NOT INVESTIGATED

Any potential health effects that may be associated with the use of gardening appliances, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category, with the exception of hedge trimmers, is CAN/CSA-C22.2 No. 147 (1990), "Motor-Operated Gardening Appliances."

The basic standards used to investigate hedge trimmers in this category are CAN/CSA-C22.2 No. 60745-1 (2007), "Hand-Held Motor-Operated Electric Tools – Safety – Part 1: General Requirements," and CAN/CSA-C22.2 No. 60745-2-15 (2010), "Hand-Held Motor-Operated Electric Tools – Safety – Part 2-15: Particular Requirements for Hedge Trimmers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gardening Appliance."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS APPLIANCE ELECTRIC ACCESSORIES CERTIFIED FOR CANADA (JHYR7)

GENERAL

This category covers electric accessories for use solely on or with gas appliances and that can be applied without alteration to the appliance.

They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Electric accessories suitable for use in gas appliances but also suitable for use in electric and/or oil appliances are included under the category applicable to the specific accessory.

PRODUCT MARKINGS

Gas appliance electric accessories are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit Certified for Canada (MBPR7), Controls, Primary Safety Certified for Canada (MCCZ7) or Switches Certified for Canada (MFHX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

CSA-C22.2 No. 24, "Temperature-Indicating and -Regulating Equipment"

CAN/CSA-C22.2 No. 199, "Combustion Safety Controls and Solid-State Igniters for Gas- and Oil-Burning Equipment"

ANSI Z21.77/CSA 6.23, "Manually Operated Piezo-Electric Spark Gas Ignition Systems and Components"

ANSI Z21.92/CSA 6.29, "Manually Operated Electric Gas Ignition Systems and Components"

The standard designation is noted in the individual certification reports.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas Appliance Electric Accessory," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GASOLINE-POWERED EQUIPMENT CERTIFIED FOR CANADA (JOKP7)

CHAIN SAWS CERTIFIED FOR CANADA (JOOW7)

USE

This category covers Type 1 fuel-powered chain saws. These chain saws are divided into three broad groups:

Class 1A – Professional chain saws — Intended for use by trained workers, where the operator is expected to use the chain saw for extended periods of time on a daily basis.

Class 1B – Industrial chain saws — For tree-service work, limited to a maximum dry weight of 4.3 kg (9.5 lb), and intended for use by trained workers, where the operator is expected to use the chain saw for extended periods of time on a daily basis.

Class 1C – Consumer chain saws — Intended for general use by homeowners, cottagers, campers, etc., and for general applications such as clearing, pruning, and cutting firewood.

SPECIAL CONSIDERATIONS

These products are investigated from the standpoint of risk of personal injury and fire.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifcations and covered in the installation and use instructions.

FACTORS NOT INVESTIGATED

Chain Saws Certified for Canada (JOOW7)–*Continued*

Any potential health effects that may be associated with the use of chain saws, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

RELATED PRODUCTS

Saw chain intended for use on gasoline-powered chain saws is covered under Saw Chain Certified for Canada (TSZQ7).

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-Z62.1 (2011), ''Chain Saws,'' and CSA-Z62.3 (2011), ''Chain Saw Kickback.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Chain Saw'' or ''Gasoline Powered Chain Saw.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS SYSTEMS, COMPRESSED CERTIFIED FOR CANADA (JOVV7)

ACCESSORIES, GAS SYSTEM CERTIFIED FOR CANADA (JPJT7)

The various accessories following are for use primarily by manufacturers and distributors of compressed gas systems and are adapted to the type of gas and working pressures encountered in general use. Other accessories for gas systems are separately classified under Fittings, Gauges, Regulators, Valves, etc.

Vaporizers, LP-gas System Certified for Canada (JRMV7)

USE AND INSTALLATION

This category covers vaporizers intended for use in conjunction with aboveground LP-gas storage containers for converting the liquid phase of LP-gas to the vapor phase by means other than atmospheric heat transfer through the surface of the container. They may be direct fired, indirect fired, waterbath, or electric types, as indicated in the individual certifications.

Vaporizers are intended to be installed in accordance with CSA B149.2, ''Propane Storage and Handling Code.''

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''LP-Gas System Vaporizer.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (JTNQ7)

GAS AND VAPOR DETECTION EQUIPMENT ENCLOSURES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (JTOL7)

USE

This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'': Class I, Groups A, B, C and D; Class II, Groups E, F and G.

This category covers only the enclosures. Gas sensors or other devices that may be contained within these enclosures are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS
AS TO FIRE AND EXPLOSION HAZARD ONLY
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS AND VAPOR DETECTION EQUIPMENT CLASSIFIED FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (JTPD7)

sa

USE AND INSTALLATION

This category covers gas and vapor detectors and associated equipment designed for detecting specific gases and vapors that may be present in the atmosphere, incidental to operations or from accidental release, and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' or (3) intended for installation in panel assemblies in accordance with the instructions provided.

These detectors have been investigated for risk of explosion, fire and electric shock only. Additionally, detectors intended for detection of combustible gases and vapors are investigated for performance. They have not been investigated for performance relative to their ability to detect other gases or vapors, such as toxic gases, or for oxygen depletion.

RELATED PRODUCTS

Gas detectors investigated for their performance relative to their ability to detect gas are covered under Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations Certified for Canada (JTPX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are CSA-C22.2 No. 14 (1985), ''Industrial Control Equipment,'' and CSA-C22.2 No. 152 (1984), ''Combustible Gas Detection Instruments.''

Gas and Vapor Detection Equipment Classified for Use in Hazardous Locations Certified for Canada (JTPD7)−*Continued*

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY
Control No.
or

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY
Control No.

* **(COMBUSTIBLE) GAS DETECTOR** or **(COMBUSTIBLE) VAPOR DETECTOR** (the word ''Combustible'' in the product identity is optional)

The words ''Hazardous Locations'' may be abbreviated ''Haz. Loc.'' or ''Haz. Locs.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS AND VAPOR DETECTION EQUIPMENT LISTED FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (JTPX7)

GENERAL

This category covers gas and vapor detectors and associated equipment intended for detecting specific gases and vapors that may be present in the atmosphere incidental to operations or from accidental release and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' or (3) intended for installation in panel assemblies in accordance with the instructions provided.

These products have been investigated with respect to risk of explosion, fire, electric shock and injury to persons.

Gas and vapor detectors in any of the groups under Class I hazardous locations have been tested with respect to safety of operation of the instrument in the presence of flammable and explosive mixtures of representative gases and vapors with air. The flame arresters provided in the intake and suction lines of these instruments have been tested in the presence of flammable and explosive mixtures representative of the gases and vapors that the instruments are designed to detect and of the hazardous locations for which the detector has been certified. Associated equipment may not necessarily be suitable for use in hazardous locations.

These instruments, when installed, maintained and operated in compliance with the manufacturer's instructions, indicate the percentage of concentration or percentage of the lower flammable limits of the specific gases and vapors. In some cases, meter readings must be interpreted in accordance with calibration data furnished by the manufacturer.

Gas and vapor detectors should be calibrated and inspected by the operator in compliance with the manufacturer's instructions, as performance of the instruments will depend on proper maintenance. The instruments should be calibrated with known gas- or vapor-air mixtures at intervals, and particularly after replaceable sensors incorporated in the detecting unit are replaced. Certain gases and vapors may adversely affect (poison) the sensors, and the use of the instruments in sampling atmospheres containing gases or vapors for which they have not been previously calibrated should, therefore, be avoided.

Minor variations in the flow of sample aspirated to the detecting unit do not affect the operation of these instruments to any great extent. However, as the instruments become inoperative in the event of clogging of sampling lines, flame arresters or filters, precautions should be taken to keep these components clean and free from obstructions. Where condensation of vapors occurs in the detecting unit, or in the sampling lines and fittings, erroneously low indications by the instrument may result. Absorption of appreciable amounts of certain gases and vapors by nonmetallic tubing used as sampling lines may also result in incorrect indications by the instrument.

Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations Certified for Canada (JTPX7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are CSA-C22.2 No. 14 (1985), ''Industrial Control Equipment,'' and CSA-C22.2 No. 152 (1984), ''Combustible Gas Detection Instruments.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''(Combustible) Gas Detector for Hazardous Locations'' or ''(Combustible) Vapor Detector for Hazardous Locations,'' or other appropriate product name as shown in the individual Listings. The word ''Combustible'' in the product name is optional.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAUGES CERTIFIED FOR CANADA (JUDV7)

GAUGES, HIGH-PRESSURE GAS CERTIFIED FOR CANADA (JURT7)

USE

This category covers bourdon tube gauges intended for use in connection with apparatus using gases under high pressure, including oxygen, hydrogen, and other hydrocarbon gases, nitrous oxide and other gases which do not seriously affect materials of gauges. These gauges usually have pressure ranges of 0 – 1500, 0 – 2000, 0 – 3000, or 0 – 4000 psi. Gauges are constructed so that if bursts of the elastic element, or its means for joining occur, due to an internal explosion or other application of excessive pressure, no part of the gauge is propelled or thrown from the assembly.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C404 (1974), ''Guide for the Investigation of Gauges, Indicating Pressure for Compressed Gas Service.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''High Pressure Gas Gauge for [type of gas].''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIQUID-LEVEL GAUGES CERTIFIED FOR CANADA (JXIT7)

Anhydrous-ammonia Liquid-level Gauges Certified for Canada (JXWR7)

USE

This category covers liquid-level gauges and liquid-level vent valves intended for use in nonrefrigerated systems in installations covered by CSA B51, "Boiler, Pressure Vessel, and Pressure Piping Code," where the maximum working pressure does not exceed 1720 kPa gauge pressure.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C565 (1975), "Guide for the Investigation of Liquid-Level Gauges and Indicators for Anhydrous Ammonia and LP-Gas."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-level Gauge for Anhydrous Ammonia" or "Liquid-level Vent Valve for Anhydrous Ammonia."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-gas Liquid-level Gauges Certified for Canada (JYXX7)

USE

This category covers liquid-level gauges and liquid-level vent valves intended to be installed and used in accordance with CSA B149.1, "Natural Gas and Propane Installation Code," on LP-gas systems other than those supplying fuel to internal combustion engines, where the maximum working pressure does not exceed 1720 kPa. Those suitable for use at pressures in excess of 1720 kPa are marked with the maximum pressure.

RELATED PRODUCTS

For LP-gas liquid-level gauges intended for use on engine fuel systems, see LP-Gas Accessories, Automotive Type Certified for Canada (ITPV7).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C565 (1975), "Indicators for Anhydrous Ammonia and LP-Gas."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid Level Gauge for LP-Gas" or "Liquid Level Vent Valve for LP-Gas."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GENERATORS CERTIFIED FOR CANADA (JZGZ7)

GENERAL

This category covers generators (also referred to as generator heads). They are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS/INSTALLATION INSTRUCTIONS

An enclosed-type generator has the enclosure type designation marked on the generator for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7). The generator may also be marked "Raintight" or "Rainproof."

An enclosed-type generator is not intended to be installed in an enclosure unless a marking on the generator, the installation instructions, or a stuffer sheet provided with the generator states that the generator may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open-type generator is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the generator, provided in the installation instructions, or as a stuffer sheet provided with the generator.

A generator that has running heating and locked-rotor protection is marked "Thermally Protected."

Generators are marked for use in a 40°C (104°F) or higher ambient.

All generators are provided with installation instruction information, which indicate the proper methods to secure the generator, electrically connect the generator to the prime mover, and connect it to the generator drive. The instructions also provide information concerning the type of load the generator can operate.

FIELD-EVALUATED PROVISIONS

Suitability of guards for the shaft or other moving parts must be determined in the end-use application.

If a generator does not have thermal protection as described above, protection needs to be provided in the end-use application, such as an overload relay. The generator has a marking indicating that the generator is not provided with thermal protection.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 100, "Motors and Generators," and CSA-C22.2 No. 77, "Motors with Overheating Protection."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to CSA-C22.2 No. 0.2, "Insulation Coordination."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Generator" or "Generator Head."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GLASS BLOCKS CERTIFIED FOR CANADA (KCJU7)

GENERAL

This category covers glass blocks certified for a 3/4 h fire exposure and intended for installation in openings not exceeding 7.74 m sq (120 sq ft) in area nor 3658 mm (12 ft) in width or height, unless otherwise noted in the individual certifications.

Glass blocks are designed for the protection of openings in masonry walls unless otherwise noted in the individual certifications against fire when installed in accordance with ANSI/NFPA 80, "Fire Doors and Other Opening Protectives," and as specified in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S106, "Standard Method for Fire Tests of Window and Glass Block Assemblies."

UL MARK

The Classification Mark of UL on the product or carton is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

GLASS BLOCKS
AS TO 3/4 HR FIRE RATING ONLY
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GLASS BLOCK INSTALLATION MATERIALS CERTIFIED FOR CANADA (KCLK7)

USE

This category covers glass block installation materials certified for a 3/4-h fire exposure and intended for installation with certified Glass Blocks Certified for Canada (KCJU7).

Glass blocks and glass block installation materials are designed for the protection of openings in masonry walls, unless otherwise noted in the individual certifications, against fire, when installed in accordance with ANSI/NFPA 80, "Fire Doors and Other Opening Protectives," and as specified in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN4-S106, "Standard Method for Fire Tests of Window and Glass Block Assemblies."

UL MARK

The Classification Mark of UL on the product or carton is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

GLASS BLOCK INSTALLATION MATERIAL
+ or -
CLASSIFIED
AS TO 3/4 HR FIRE RATING ONLY

+ Type of installation material

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE-PROTECTION-RATED GLAZING MATERIALS CERTIFIED FOR CANADA (KCMZ7)

USE

This category covers fire-protection-rated glazing materials certified for 1/3 h (20 min), 3/4 h (45 min), 1 h (60 min), 1-1/2 h (90 min), and 2 h (120 min) fire ratings as indicated in the individual certifications.

Fire-protection-rated glazing materials are intended for installation in fire windows, fire doors, and fire door frames with transoms and/or sidelights that are provided with suitable glazing frame members.

Fire-protection-rated glazing materials are intended to be installed in accordance with ANSI/NFPA 80, "Fire Doors and Fire Windows," and/or the "National Building Code of Canada," in addition to the installation instructions provided by the manufacturer. The installation of glazing materials is intended to be in accordance with the local building code as determined by the Authority Having Jurisdiction.

Authorities Having Jurisdiction should be consulted before installation.

Fire-protection-rated glazing materials are not generally provided by the fire door, fire door frame or fire window frame manufacturer. These glazing materials are normally installed on the job site after the fire door, fire door frame, or fire window frame is installed in the building.

For 6.3 mm (1/4 in.) thick wired glass, the maximum exposed area for an individual light should not exceed 0.84 sq m (1296 sq in.) with no dimension of exposed wired glass greater than 1372 mm (54 in.), unless otherwise indicated in the individual certifications. The groove depth formed by the framing members used for retaining wired glass should have a minimum depth as shown in the following tabulation.

Max Area of Exposed Glazing Material	Min Depth of Groove
0.064 sq m (100 sq in.)	12.7 mm (1/2 in.)
0.323 sq m (500 sq in.)	15.9 mm (5/8 in.)

Max Area of Exposed Glazing Material	Min Depth of Groove
0.387 sq m (600 sq in.)	17.5 mm (11/16 in.)
0.840 sq m (1296 sq in.)	19.0 mm (3/4 in.)

Wired glass, 6.35 mm (1/4 in.) thick, is rated for 3/4 h (45 min) for an exposed area not exceeding 0.84 sq m (1296 sq in.) and rated for 1-1/2 h (90 min) for an area not exceeding 0.064 sq m (100 sq in.)

For fire-protection-rated glazing materials other than 6.35 mm (1/4 in.) thick wired glass, the maximum exposed area for an individual light, the minimum groove depth, and the rating should be as indicated in the individual certifications.

Unless otherwise indicated in the individual certifications, these glazing materials have not been investigated as safety glazing.

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate fire-protection-rated glazing materials for doors and door frames is CAN4-S104 (1980), "Standard Method for Fire Tests of Door Assemblies."

The basic standard used to investigate fire-protection-rated glazing materials for window frames is CAN4-S106 (1980), "Standard Method for Fire Tests of Window and Glass Block Assemblies."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FIRE-PROTECTION-RATED GLAZING MATERIAL

GRAPHIC ARTS EQUIPMENT CERTIFIED FOR CANADA (KCQT7)

GENERAL

This category covers pieces of complete equipment, control assemblies and accessories that are directly related to the graphics arts industry and used primarily in printing establishments.

Such equipment includes offset printing presses and controls, composing and typesetting machines and accessories, plate exposure machines, plate processors, exposure lamps, color graphic printers or plotters.

RELATED PRODUCTS

Office-type duplicating equipment, such as white printers, photocopy machines, typewriters, and desk-type reproducers are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CSA-C22.2 No. 9.0, "General Requirements for Luminaires"
CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)"
CSA-C22.2 No. 142, "Process Control Equipment"
CAN/CSA-C22.2 No. 60950 or 60950-1, "Information Technology Equipment"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Graphic Arts Equipment," "Collator," "Paper Cutter," "Photocomposer," "Type Setter," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND-FAULT CIRCUIT INTERRUPTERS CERTIFIED FOR CANADA (KCXS7)

GENERAL

This category covers ground-fault circuit interrupters (GFCI) intended for installation at nominal system voltages of 600 V or less, to de-energize automatically some part of an electrical circuit.

A GFCI is a device whose function is to interrupt the electric circuit to the load, within a predetermined time, when a fault current to ground exceeds a predetermined value that is less than that required to operate the overcurrent protective device of the circuit.

GFCIs are intended to be used only in electrical circuits where one of the conductors is solidly grounded.

Class A GFCIs are intended to provide protection from electric shock as specified in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

GFCIs may be designed for permanent installation or may be portable types. They may also be combined with circuit breakers or receptacles.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 144.1 (2006), ''Ground-Fault Circuit-Interrupters,'' in addition to one or more of the following as determined by the specific construction of the device:

CSA-C22.2 No. 42, ''General Use Receptacles, Attachment Plugs and Similar Wiring Devices''
CSA-C22.2 No. 0.4, ''Bonding of Electrical Equipment''
CSA-C22.2 No. 5, ''Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures''
CSA-C22.2 No. 14, ''Industrial Control Equipment''
CSA-C22.2 No. 29, ''Panelboards and Enclosed Panelboards''
CAN/CSA-C22.2 No. 94, ''Special Purpose Enclosures''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Ground Fault Circuit Interrupter Class A'' (or ''GFCI CL A'' or ''GFCI A'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND-FAULT SENSING AND RELAYING EQUIPMENT CERTIFIED FOR CANADA (KDAX7)

USE

This category covers ground-fault-current-sensing devices, relaying equipment, or combinations of ground-fault-current-sensing devices and relaying equipment, rated 750 V maximum, which operates to cause a disconnecting means to function at predetermined values of ground-fault current in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

This equipment is intended to provide ground-fault protection of equipment at services and feeders.

This equipment is intended to operate devices with shunt-trip coils, such as fused power-circuit devices, molded-case circuit breakers, molded-case switches and the like, which constitute the disconnecting means. Ground-fault-sensing and relaying equipment does not incorporate means to prevent opening of a disconnecting device at any level of fault current. Therefore it is necessary that ground-fault-sensing and relaying equipment be coordinated with a disconnecting device to prevent the disconnecting device from interrupting a fault current that exceeds the interrupting capability of the disconnecting means.

This category covers enclosed equipment and also open-type equipment intended for use in certified equipment, such as panelboards, switchboards and the like, where the acceptability of the combination has been determined by UL.

PRODUCT MARKINGS

Ground-fault-sensing and relaying equipment is marked to indicate the maximum inrush and sealed current ratings of the output circuit. These values should be compatible with the ratings of the tripping coils of the associated disconnecting devices.

Ground-fault-sensing and relaying equipment is marked to indicate the maximum available fault currents it is capable of withstanding without damage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CSA-C22.2 No. 14, ''Industrial Control Equipment''
CAN/CSA-C22.2 No. 5 (Appendix E), ''Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures''
CAN/CSA-C22.1, ''Canadian Electrical Code, Part I''
CAN/CSA-C22.2 No. 144, ''Ground Fault Circuit Interrupters''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Ground Fault Sensing and Relaying Equipment.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUNDING AND BONDING EQUIPMENT CERTIFIED FOR CANADA (KDER7)

USE

This category covers bonding devices, ground clamps, grounding and bonding bushings and locknuts, ground rods, armored grounding wire, protector grounding wire, grounding wedges, ground clips for securing the ground wire to an outlet box, water-meter shunts, and similar equipment.

Some devices are to be assembled to wire using a special tool specified by the manufacturer. Such special tooling is identified by appropriate marking on or within the device shipping carton.

Armored Grounding Wire — Armored grounding wire consisting of a single corrosion-resistant copper or aluminum conductor within helically-formed steel armor is marked with the size of the conductor and ''Bare Armored Grounding Wire.''

Ground Rods — Solid ground rods of nonferrous metal or solid ground rods of steel with a nonferrous metal or stainless-steel jacket not less than 12.7 mm (1/2 in.) in diameter are suitable for use as grounding electrodes in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC), and are also suitable for use in installation of lightning protection equipment.

Plate Electrodes — Plate electrodes are suitable for use as grounding electrodes for concrete encasement in accordance with the CEC.

Plate electrodes are bare or conductively coated iron or steel, or solid uncoated nonferrous metal (other than aluminum).

Plate electrodes are marked with the manufacturer's name, trade name, or both within 50 mm of the top.

Ground Clamps — Strap-type ground clamps are not suitable for attachment of the grounding conductor of an interior wiring system to a grounding electrode.

Ground clamps and other connectors suitable for use where buried in earth or embedded in concrete are marked for such use. The marking may be abbreviated ''DB'' (for ''Direct Burial'').

Ground clamps are also suitable for telecommunication applications, such as telephone, radio, CATV and the like, in accordance with the CEC, in addition to those covered under Grounding and Bonding Equipment, Communication Certified for Canada (KDSH7).

Ground clamps are intended for use with ground rods and/or pipe electrodes in accordance with the CEC and are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked ''Copper Water Tubing,'' or the equivalent, preceded or followed by the size of tubing. Ground rods, pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.

Ground clamps intended for use with re-bar are marked with the size of re-bar with which the clamp is intended. Re-bar sizes may be specified in

fractions, such as 1/2, 5/8, etc., or a number, such as 3, 4, 5, etc., where the number represents the numerator of the fraction when stated in eighth-inch increments, e.g., 4 = 4/8.

Grounding and Bonding Bushings — Bonding bushings for use with conduit fittings, tubing (EMT) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit are provided with means (usually one or more set screws) for reliably bonding the bushing (and the conduit on which it is attached) to the metal equipment enclosure or box. They provide the electrical continuity required by the CEC at service equipment and for circuits rated over 250 V. Means for connecting a grounding or bonding conductor are not provided and if there is need for such a conductor a grounding bushing should be used.

Grounding bushings for use with conduit fittings, tubing (EMT) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit have provision for the connection of a bonding or grounding wire or have means for mounting a wire connector available from the manufacturer. Such a bushing may also have means (usually one or more set screws) for reliably bonding the bushing to the metal equipment enclosure or box in the same manner that this is accomplished by a bonding bushing. Grounding bushings provide the electrical continuity required by the CEC at service equipment and for circuits rated over 250 V. They may be used with or without a bonding or grounding conductor as determined by the bonding or grounding function that is intended to be accomplished.

Insulating throat liners in grounding or bonding bushings are suitable for temperatures of 150°C if they are black or brown in color. Unless otherwise marked, insulating throat liners of any other color are suitable for temperatures of 90°C.

Grounding and Bonding Locknuts — Grounding and bonding locknuts serve in a similar manner to grounding and bonding bushings except they do not provide abrasion protection for the conductor at the end of the conduit.

Grounding and Bonding Hubs — Grounding and bonding hubs are certified hubs (see DWTT7) provided with a certified grounding or bonding locknut. They serve in a manner similar to grounding and bonding bushings except they are only for use with threaded rigid metal and intermediate metal conduit. Grounding hubs provide the electrical continuity required by Article 10 of the CEC at service equipment and the electrical continuity required by Article 10 of the CEC for circuits rated over 250 V.

Ground Clips — Ground clips are intended to be pressed on the flat surface of a square, rectangular, or octagonal box to hold a grounding conductor against the sidewall of the box. Ground clips are not intended for use with round boxes. Ground clips are typically used for connecting the grounding conductor of various wiring methods to outlet boxes or for connecting the bonding jumper from a receptacle, switch or other device to an outlet box.

Ground Mesh — The ground mesh consists of a copper wire mesh that is intended to be installed in ground or embedded in concrete and bonded to the grounding electrode system for the purpose of improving ground planes. Ground mesh is not intended to serve as a required grounding electrode.

Fittings — A fitting such as a hub, bushing or locknut intended to provide a raintight or liquidtight connection is marked "Raintight," "Type 3R," "Type 4" or "Wet Locations."

Protector Grounding Wires — Protector grounding conductors wires are intended for use in accordance with Section 60 of the CEC. They are marked with the manufacturer's name, size, and "Protector Grounding Wire."

Water-meter Shunts — Consists of a 4 AWG or larger solid copper wire connected between two ground clamps that comply with requirements for such ground clamps.

Grounding Couplings — Grounding couplings are certified rubber-gasketed fittings (see VIZM7) that have been additionally investigated for grounding/bonding in a 200 A maximum service-entrance capacity.

Miscellaneous Devices — Grounding and bonding equipment not specifically mentioned above, such as bonding locknuts, gaskets, grounding wedge lugs, adapters, grounding grids and the like, are investigated under the intent of the requirements in the standard.

PRODUCT MARKINGS

Some of the markings referred to above may be on a tag attached to the product.

RELATED PRODUCTS

Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment, Communication Certified for Canada (KDSH7).

Grounding and bonding hubs may additionally be covered as a hub under Conduit Fittings Certified for Canada (DWTT7).

Grounding couplings are additionally covered under Fittings, Rubber Gasketed Certified for Canada (VIZM7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 41, "Grounding and Bonding Equipment."

UL MARK

The Listing Mark of UL on the product, on a tag securely attached to the product or container, or on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Grounding Equipment," "Bonding Equipment," "Bonding Jumper," "Ground Clamp," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUNDING AND BONDING EQUIPMENT, COMMUNICATION CERTIFIED FOR CANADA (KDSH7)

USE

This category covers grounding devices intended for use in telecommunication applications, such as telephone, radio, CATV and the like, in accordance with Section 60 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Strap-type ground clamps constructed of perforated or expanded metal are suitable for grounding conductor connections to electrodes for indoor telecommunications purposes only. Where permitted by the CEC, they are also suitable in both indoor and outdoor applications when used for bonding purposes only.

Strap-type ground clamps are intended for use with pipe electrodes in accordance with the CEC and are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked "Copper Water Tubing" or the equivalent, preceded or followed by the size of tubing. Pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.

PRODUCT MARKINGS

The required marking may be on a tag attached to the product.

Communication ground clamps are marked either "RADIO" or "COMM."

RELATED PRODUCTS

Ground clamps covered under Grounding and Bonding Equipment Certified for Canada (KDER7) are also suitable for use in applications as specified in this product category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 41 (1987), "Grounding and Bonding Equipment."

UL MARK

The Listing Mark of UL on the product, on a tag securely attached to the product or container, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Clamp – Communication."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HAIR-CLIPPING AND -SHAVING APPLIANCES CERTIFIED FOR CANADA (KEFX7)

USE

This category covers hair-clipping and -shaving appliances intended for household or commercial use on persons or animals, and includes such appliances as lather makers and barber shop vacuum cleaners for use on persons. Commercial appliances are intended for use in beauty salons, barber shops and the like. Hair clippers intended for household use are clearly marked as such.

This category does not cover manicure, pedicure or personal grooming appliances used for similar purposes.

RELATED PRODUCTS

Hair-clipping and -shaving appliances investigated to CAN/CSA-E60335-1/4E, "Safety of Household and Similar Electrical Appliances, Part 1: General Requirements," and CAN/CSA-E60335-2-8, "Household and Similar Electrical Appliances – Safety – Part 2-8: Particular Requirements for Shavers, Hair Clippers and Similar Appliances," are covered under Shavers, Hair Clippers and Similar Appliances Certified for Canada (NBKG7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEALTH CARE FACILITIES EQUIPMENT CERTIFIED FOR CANADA (KEVQ7)

GENERAL

This category covers appliances, utilization equipment and construction materials that have been judged to be particularly applicable to a health care facility.

The general information under the specific categories indicate the areas in which the individual Listings are intended to apply in health care facility installations.

This equipment, unless otherwise indicated, is for installations in unclassified (ordinary) areas of health care facilities.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ISOLATED POWER SYSTEMS EQUIPMENT CERTIFIED FOR CANADA (KEWV7)

GENERAL

This category covers isolated power centers that incorporate complete assemblies of isolation transformers and one or more isolated secondary circuits terminated in integrally mounted grounding-type load receptacles in an overall enclosure which are intended for use in health care facilities where it is considered desirable to minimize available leakage and short-circuit currents. Line isolation monitors may be included in the assembly to indicate the "condition" of the isolated circuit and its connected components with respect to electrical ground.

Other distribution panels certified as isolated power panelboards incorporate the same features as described above except that they may be supplied with power from a separate isolation transformer. They are connected by an approved wiring method to remote receptacles located in operating rooms or other anesthetizing location areas of health care facilities.

This category also covers accessory equipment, such as terminal assemblies located in patient care areas.

Isolated Power Systems Equipment Certified for Canada (KEWV7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Products included as part of isolated power systems equipment that are not separately certified are investigated to the appropriate end-product standard.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Power Systems Equipment."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ISOLATED POWER WALL MODULES CERTIFIED FOR CANADA (KEXS7)

GENERAL

This category covers isolated power wall modular sections for use in, within, or as part of health care facilities, and may be part of a building structure. They are designed for permanent connection to the building wiring in accordance with Section 24 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). These sections incorporate factory-installed wiring and equipment comprising part of an isolated power system such as the components of an isolated power center or an isolated power panelboard, or accessory equipment such as terminal assemblies located in patient care areas. In addition, they may incorporate various combinations of gas outlets, lighting fixtures, elapsed-time indicators, clocks, intercommunication equipment, etc.

These sections do not contain any grounded power systems except those necessary for connection to the primary of an isolating transformer, if provided. Sections intended for use with grounded power systems are covered under Sections and Units Certified for Canada (QQXX7).

The pre-installed components and wiring of a prefabricated section may be concealed and, except for the branch-circuit connections, may not be accessible for inspection at the inspection site.

The isolated power wall module sections have not been investigated to determine conformance with one or more model building or plumbing codes. They have been investigated to determine compliance with the CEC. These wall modular sections are intended for installation subject to approval by the Authority Having Jurisdiction.

RELATED PRODUCTS

See Isolated Power Systems Equipment Certified for Canada (KEWV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Products included as part of a wall module that are not separately certified are investigated to the appropriate end-product standard.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Power Wall Module."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED MEDICAL HEADWALLS AND MEDICAL SUPPLY UNITS CERTIFIED FOR CANADA (KEZR7)

USE

This category covers prefabricated medical headwalls and medical supply units that are factory-built assemblies for use in, within, or part of health care facilities, and may be part of a building structure. These assemblies may incorporate certified equipment and pre-installed materials that are usually concealed and may not be accessible for inspection at the installation site. The certified equipment incorporated in these assemblies includes, but is not limited to, receptacles, switches, clocks, timing devices, patient monitors, vacuum stations and gas fittings.

These assemblies, including any field wiring for units which are not factory wired, are intended for installation subject to approval by the Authority Having Jurisdiction.

INSTALLATION CODES

Materials, including the methods used for the installation of electrical, mechanical, heating, and plumbing components included in these assemblies have been judged under requirements which are based on CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and the ''National Building Code of Canada.''

RATINGS

The fire hazard of building materials employed in the assemblies is judged to be no greater than that of ordinary lumber used in site-constructed buildings. Finished surfaces are of materials having flame-spread and smoke-developed ratings of 200 or less. Products with a rating less than 200 indicated in the individual certifications may be included as part of the product marking.

Structural requirements vary with type of building construction and occupancy, and stability is to a large measure dependent upon the attachment of the assemblies to field-erected or existing structures. Therefore, Authorities Having Jurisdiction should be consulted with respect to local requirements.

RELATED EQUIPMENT

Prefabricated assemblies for use in locations other than health care facilities are covered under Prefabricated Assemblies, Sections and Units Certified for Canada (QQXX7) and Wiring Assemblies Certified for Canada (QQYZ7).

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment Certified for Canada (KEVQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' CSA-C22.2 No. 0.4, ''Bonding of Electrical Equipment,'' and CSA Z305.2, ''Low-Pressure Connecting Assemblies for Medical Gas Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name, such as ''Medical Headwall,'' ''Medical Supply Unit,'' ''Dental Unit'' or proprietary descriptive product name with further description where necessary.

One Listing Mark is applied to each assembly.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL WASTE DISPOSAL SYSTEMS, EQUIPMENT AND ACCESSORIES CERTIFIED FOR CANADA (KFCC7)

The function of these products as indicated by the manufacturer is to neutralize or collect biological or medical waste. These products are intended for use in hospitals, nursing homes, medical care centers, medical and dental offices and similar professional health care facilities. They include, but are not limited to syringe destroyers, waste disposers and similar equipment.

UL's investigation is limited to Classification as to electrical fire, shock and mechanical hazards only. The environmental impact and health aspects associated with the use of these products and their ability to collect, identify, or neutralize biological and medical waste have not been investigated by UL. This limitation is specified in the instruction manual for all products covered under this category.

Medical Waste Disposal Systems, Equipment and Accessories Certified for Canada (KFCC7)−*Continued*

Unless otherwise noted, these products have not been investigated for use in the presence of flammable materials.

The basic standards used to investigate products in this category are C22.2 No. 1010.0-92, ''Saftey Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use: Part 1; General Requirements'', and C22.2 No. 68, ''Motor Operated Appliances (Household and Commercial)''.

The Classification Mark of UL on the product is the only method provided by UL to identify Medical Waste Disposal Systems, Equipment, and Accessories which have been produced under its Classification and Follow-Up Service.

The Classification Mark for these products includes the UL Mark for Canada symbol (as illustrated in the introduction of this Directory) together with the word ''CLASSIFIED'', a control number and the following statement as shown below.

(Product Name)
CIASSIFIED AS TO ELECTRICAL SHOCK,
FIRE AND MECHANICAL HAZARDS ONLY.
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES FOR USE IN HEALTH CARE FACILITIES CERTIFIED FOR CANADA (KFCG7)

USE

This category covers indoor-use power supplies having input ratings not more than 600 V, direct and alternating current, intended for use with professional medical and dental equipment in ordinary locations of a health care facility in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Power supplies not provided with standard output receptacles are marked for use with the intended end-use equipment, the combination of which has been investigated for compliance with CAN/CSA-C22.2 No. 601.1, ''Medical Electrical Equipment – Part 1: General Requirements for Safety.'' Consideration should be given for the combination of products to be evaluated under Medical Equipment Certified for Canada (PIDF7).

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

FACTORS NOT INVESTIGATED

These products have not been investigated for the effects they may have on the systems or the equipment to which they are connected.

RELATED PRODUCTS

Power supplies not provided with standard output receptacles and not marked for use with intended end-use equipment are covered under Power Supplies, Medical and Dental Certified for Canada (QQHM8).

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment Certified for Canada (KEVQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 601.1, ''Medical Electrical Equipment – Part 1: General Requirements for Safety.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Supply,'' ''Power Conditioner,'' etc., preceded by ''Hospital,'' ''Health Care Facility,'' ''Medical'' or ''Dental'' as appropriate.

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Power Supplies for Use in Health Care Facilities Certified for Canada (KFCG7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEVISION/VIDEO EQUIPMENT FOR USE IN HEALTH CARE FACILITIES CERTIFIED FOR CANADA (KFCV7)

GENERAL

This category covers power-operated television and video equipment intended for entertainment purposes in health care facilities. Equipment suitable for use in oxygen-enriched atmospheres is so indicated in the individual certifications.

Entertainment centers consisting of combinations of a television receiver and a radio receiver and/or other audio or video equipment are investigated to the requirements for television equipment.

This category also covers accessory equipment, including carts, stands, supporting arms and/or wall-mounting brackets, intended for use with television and video equipment in health care facilities.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, ''Audio, Video, and Similar Electronic Equipment,'' or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, ''Audio, Video and Similar Electronic Apparatus – Safety Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''TV'' or ''TV Stand,'' or other appropriate product name as shown in the individual Listings, preceded by the words ''Hospital'' or ''Health Care Facility.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNINTERRUPTIBLE POWER SUPPLIES FOR USE IN HEALTH CARE FACILITIES CERTIFIED FOR CANADA (KFFG7)

USE

This category covers indoor-use uninterruptible power supplies that may be portable, stationary or fixed. The equipment is rated not more than 600 V ac, and is intended for use with professional medical and dental equipment in health care facilities in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

An uninterruptible power supply is used to provide alternating-current power to a load for a period of time marked on the unit in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

Uninterruptible power supplies provided with nonstandard output receptacles are marked for use with the intended end-use equipment.

Unless marked ''Essential Electrical System,'' these uninterruptible power supplies have not been investigated with respect to the requirements for essential electrical systems as defined in Section 24 of the CEC.

REBUILT PRODUCTS

This category also covers uninterruptible power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt uninterruptible power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt uninterruptible power supplies are subject to the same requirements as new uninterruptible power supplies.

FACTORS NOT INVESTIGATED

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Uninterruptible Power Supplies for Use in Health Care Facilities Certified for Canada (KFFG7)−*Continued*

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 107.1, ''General Use Power Supplies,'' and CSA-C22.2 No. 601.1/60601-1-1, ''Medical Electrical Equipment – Part 1: General Requirements for Safety,'' in addition to CSA-C22.2 No. 66, ''Specialty Transformers,'' and/or CSA-C22.2 No. 0.4, ''Bonding and Grounding of Electrical Equipment (Protective Grounding),'' as appropriate.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Uninterruptible Power Supply,'' preceded by ''Hospital,'' ''Health Care Facility,'' ''Medical'' or ''Dental,'' as appropriate.

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (KFHT7)

HEATERS, AIR FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (KFVR7)

GENERAL

This category covers natural convection, radiant heating, and fan-assisted-type air heaters. Heaters intended for surface mounting should be installed in a horizontal position and should not be recessed, obstructed or placed on or under shelves. Installation is intended to be in accordance with the instructions furnished with the heater.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 46 (1988), ''Electric Air-Heaters.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Air Heater for Hazardous Location.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT TRACING CABLE SYSTEMS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (KGFR7)

USE

This category covers heat tracing cable systems intended for pipeline or vessel heat tracing. A heat tracing system is composed of heat tracing cable and connection kits, which are used for connecting power, connecting multiple heat tracing cables, terminating cables or other product specific uses as described in the individual certifications.

Heat Tracing Cable Systems for Use in Hazardous Locations Certified for Canada (KGFR7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are CSA-C22.2 No. 0.4 (1982), ''Bonding of Electrical Equipment,'' and CAN/CSA-C22.2 No. 130 (2003), ''Requirements for Electrical Resistance Heating Cables and Heating Device Sets.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Heat Tracing Cable Set for Use in Hazardous Locations'' or ''Heat Tracing Cable System for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, INDUSTRIAL AND LABORATORY FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (KGIZ7)

GENERAL

This category covers paint heaters, ovens, hot plates, and other types of products as described in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 88 (1958), ''Construction and Test of Industrial Heating Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial and Laboratory Heater for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

HEATERS AND HEATING EQUIPMENT CERTIFIED FOR CANADA (KKBV7)

This category covers equipment rated up to 600 V intended for household, industrial or commercial installations.

These products have not been investigated for outdoor use unless they are marked ''For Outdoor Use'' or the equivalent, in which case they are acceptable for both outdoor and indoor use.

AIR HEATERS, MOVABLE AND WALL OR CEILING HUNG CERTIFIED FOR CANADA (KKPT7)

USE AND INSTALLATION

This category covers cord-and-plug-connected air heaters of the natural convection and fan-assisted movable types, and also wall-hung (other than at the baseboard level) and ceiling-hung types.

Movable and wall- or ceiling-hung heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area.

Some movable and wall- or ceiling-hung heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. In accordance with product markings and instructions for the user, such heaters should be placed so as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Use that does not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

Certain air heaters subjected to the equivalent of a beating rain are considered to be acceptable for outdoor installation and are marked accordingly.

RELATED PRODUCTS

Fixed and location-dedicated electric room heaters are covered under Air Heaters, Room, Fixed and Location Dedicated Certified for Canada (KKWS7).

Permanently-mounted heaters having provisions for drawing in outside air are certified as room fan heater units under Heating and Cooling Equipment Certified for Canada (LZFE7).

Portable baseboard heaters and accessories are covered under Baseboard Heaters Certified for Canada (KLDR7) and Baseboard Heater Accessories Certified for Canada (KLQZ7), respectively.

These heaters have not been investigated for their acceptability when used in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications. Steam and dry-bath units are covered under Steam Bath Equipment Certified for Canada (KQBZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 46 (1988), ''Electric Air-Heaters.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Movable Heater,'' ''Movable Fan Type Heater,'' ''Wall-Hung Heater,'' ''Ceiling-Hung Heater,'' ''Wall- or Ceiling-Hung Heater,'' ''Movable Radiant Glass Heater,'' ''Movable Floor Mounted Air Heater,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR HEATERS, ROOM CERTIFIED FOR CANADA (KKWM7)

USE AND INSTALLATION

This category covers electric air heaters of the portable, fixed and stationary room type, intended for indoor use in household and commercial applications. They may be cord-and-plug connected, or provided with field-wiring terminals for permanent connection to the electrical supply.

These heaters are of the radiant, natural convection and fan-assisted types intended for mounting in various positions, such as on or in a wall, on, in or suspended from a ceiling, or inserted in a floor. Combination units that include lights have been investigated with regard to their suitability for use as luminaires. Commercial types include heaters intended to be suspended from a ceiling or wall, or to provide an air curtain in a doorway.

Heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area.

Some heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. In accordance with product markings and instructions for the user, such heaters should be placed so as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Use that does not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

RELATED PRODUCTS

Movable and wall- or ceiling-hung heaters are covered under Air Heaters, Movable and Wall or Ceiling Hung Certified for Canada (KKPT7).

Fixed and location-dedicated electric room heaters are covered under Air Heaters, Room, Fixed and Location Dedicated Certified for Canada (KKWS7).

Portable baseboard heaters and accessories are covered under Baseboard Heaters Certified for Canada (KLDR7) and Baseboard Heater Accessories Certified for Canada (KLQZ7), respectively.

Permanently-mounted heaters having provisions for drawing in outside air are certified as room fan heater units under Heating and Cooling Equipment Certified for Canada (LZFE7).

These heaters have not been investigated for their acceptability when used in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications. Steam and dry-bath units are covered under Steam Bath Equipment Certified for Canada (KQBZ7).

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-E60335-1/4E, ''Household and Similar Electrical Appliances – Safety – Part 1: General Requirements,'' and CAN/CSA-E60335-2-30, ''Safety of Household and Similar Electrical Appliances – Part 2: Particular Requirements for Room Heaters.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Radiant Heater,'' ''Panel Heater,'' ''Liquid-filled Heater,'' ''Fan Heater,'' ''Convector Heater,'' ''Tubular Heater,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR HEATERS, ROOM, FIXED AND LOCATION DEDICATED CERTIFIED FOR CANADA (KKWS7)

USE AND INSTALLATION

This category covers electric air heaters of the fixed and location-dedicated room type for residential, commercial and industrial applications. These heaters are of the radiant, natural convection and fan-assisted types intended for mounting in various positions, such as on or in a wall, (except at the baseboard level), on, in or suspended from a ceiling or inserted in a floor. Combination units that include lights have been investigated with regard to their suitability for use as fixtures. Commercial-industrial types include heaters intended to be suspended from a ceiling or wall, or to provide an air curtain in a doorway.

These air heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area. These units have not been investigated for their acceptability when installed in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications.

Some air heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. Such heaters are intended to be installed as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Installations that do not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

Certain room heaters have been investigated for outdoor use and are marked accordingly. All other heaters have been investigated for indoor

Air Heaters, Room, Fixed and Location Dedicated Certified for Canada (KKWS7)−*Continued*

installation only. The acceptability of such heaters when installed in semi-protected or otherwise shielded locations is determined by the Authority Having Jurisdiction.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

RELATED PRODUCTS

Movable and wall- or ceiling-hung heaters are covered under Air Heaters, Movable and Wall or Ceiling Hung Certified for Canada (KKPT7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Room Heater,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BASEBOARD HEATERS CERTIFIED FOR CANADA (KLDR7)

USE AND INSTALLATION

This category covers space heaters of the portable and permanently mounted types intended to be positioned or installed on or in the wall at the baseboard level, or on the floor.

Baseboard heaters have been investigated and found to incorporate suitable safeguards against establishment of fire hazards that might result from contact with draperies, furniture, carpeting, bedding and the like; however, discoloration or scorching (but no glowing embers or flaming) may result on adjacent materials.

Heaters, other than those marked to indicate that they are not for residential use, have been investigated to determine that the accessible surface temperatures are low enough to reduce the likelihood of burns from accidental contact.

Electrical cords, drapes, and other furnishings should be kept away from baseboard heaters. To reduce the likelihood of cords contacting the heater, the heater should not be located beneath electrical receptacles. Receptacle accessories for use with individual manufacturers' baseboard heaters are covered under Baseboard Heater Accessories Certified for Canada (KLQZ7).

Baseboard-mounted equipment consists of two types: (1) Complete units intended for individual mounting in specific locations, and (2) complete systems, which include accessories to enable the heating units to be interconnected around the perimeter of a room (see KLQZ7). With reference to these systems, each manufacturer is required to furnish detailed instructions covering the assembly of the basic units and accessories, and indicating the method in which ground continuity is intended to be maintained between adjacent sections.

Electrical fittings are provided with each heater of a system to ensure ground continuity between adjacent units and to protect interconnecting wiring, unless investigation shows that the standard fittings which are available in the field will accomplish the same result.

A system which is factory furnished with all interconnecting wiring, fittings, raceways, etc., to complete the installation is considered suitable for connection to a single-outlet branch circuit.

ADDITIONAL INFORMATION

Baseboard Heaters Certified for Canada (KLDR7)−*Continued*

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 46 (1988), ''Electric Air-Heaters.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. ****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Baseboard Heater Accessories Certified for Canada (KLQZ7)

USE AND INSTALLATION

This category covers accessories intended to be used in conjunction with individual manufacturers' certified baseboard heater systems (see KLDR7). Accessories include wiring components for interconnection of individual units, corner, blank and filler sections, to facilitate perimeter installation, temperature-regulating components and other general- and special-use receptacle and switch components to be mounted in line with baseboard heater installations.

Attachment plug receptacle sections of baseboard heating systems provided for installation, together with the other components of baseboard air heating systems, are intended to be supplied by means of conventional wiring methods from separate branch circuits not interconnected with the heating system.

Combination transfer switch-receptacle sections of baseboard heating systems which permit the use of either the heating system by itself, or a separate room air conditioner by itself, are intended to be connected to a single branch circuit of appropriate size.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 46 (1988), ''Electric Air-Heaters.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Baseboard Heater Accessory.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CLOTHES DRYERS CERTIFIED FOR CANADA (KMEX7)

USE AND INSTALLATION

This category covers clothes dryers intended for use only where water has been used as the cleaning agent. Unless specifically marked or indicated in the installation instructions, these clothes dryers are intended for freestanding installation with no spacing required between the back and any side to combustible wall surfaces, but are not intended to be operated in closets, alcoves, or other confined areas, nor stacking one unit above another.

A wall-insert clothes dryer is considered to be an appliance intended to be mounted permanently in a wall or other vertical surface of a building, or in a cabinet. A wall-insert clothes dryer is considered to be suitable for installation as a recessed clothes dryer, or as a freestanding clothes dryer.

A recessed clothes dryer is considered to be an appliance intended (1) to be supported by the floor, (2) to rest against a wall in the rear, (3) to rest against a wall, a cabinet, or another appliance on one side, and (4) to rest against a cabinet or other appliance on the other side. If the design per-

Clothes Dryers Certified for Canada (KMEX7)−*Continued*

mits, a countertop may cover the clothes dryer and the adjacent cabinets and appliances. A recessed clothes dryer is not intended for permanent attachment to the building structure or to adjacent cabinets or appliances. A recessed clothes dryer is considered suitable for installation as a free-standing clothes dryer.

A clothes dryer intended to be installed in a closet should be installed in accordance with the marked required clearances to all adjacent surfaces and the required ventilation in the door.

Clothes dryers are provided with means of connection of the metallic parts of the enclosure to ground.

Motor-overcurrent protection is included in motor-operated dryers if adequate protection would not be provided by branch circuits to which they would properly be connected.

Clothes dryers, other than condenser-type clothes dryers, are intended to be connected to a clothes dryer exhaust duct to the outdoors. The maximum duct length and number of bends is intended to be in accordance with the clothes dryer installation instructions.

The operation of condenser-type clothes dryers is such that air from the heater of the dryer is circulated across the clothes and then across a condenser. The condenser transforms the vapor to water, which collects in a reservoir in the clothes dryer. As the vapor changes to a liquid, it carries the lint with it to an internal reservoir. The air that passes across the condenser then recirculates across the heater in the clothes dryer in a continuous operation until the clothes are dry. There is no venting of moisture/lint-laden air to the outside. All moisture/lint-laden air is continuously recirculated.

Provision should be made for the periodic removal of accumulation of lint that results from normal operation of this type of equipment.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installation or use, the necessary special instructions are provided on or with the equipment. An individual branch circuit should be provided for each clothes dryer.

RELATED PRODUCTS

For dryers other than electrically heated types, see Dryers Certified for Canada (LEFZ7), Gas-fired Clothes Dryers, Type 1 Certified for Canada (LETA7) and Gas-fired Clothes Dryers, Type 2 Certified for Canada (LETX7).

For combination washer/dryers, see Washing Machines Certified for Canada (ZCTT7).

Products Verified for energy efficiency are covered under Clothes Dryers, Household Electric Verified for Energy Efficiency (ZYFX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 112, "Electric Clothes Dryers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clothes Dryer."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. HEATERS, COOKING APPLIANCES CERTIFIED FOR CANADA (KMSV7)

Commercial Cooking Appliances Certified for Canada (KNGT7)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial use, such as coffee machines, espresso coffee makers (single or grouped dispensers), conductive cookers, food warmers including heated food servers, fryers, griddles, nut warmers, ovens, popcorn machines, steam kettles, ranges, and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is dispensed.

This category also covers custom-built food preparation and/or serving equipment consisting of drop-in components, shelf heaters, plate warmers, lighted and/or heated food displays, etc.

Commercial Cooking Appliances Certified for Canada (KNGT7)−*Continued*

These appliances are intended for commercial use in unclassified locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and are required to comply with the "National Building Code of Canada."

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

If a product is suitable for built-in installation, side-by-side mounting or stacking, it is indicated in the installation instructions.

PRODUCT MARKINGS

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the CEC must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power-supply conductors unless marked "Use Copper Wire Only For Power Supply Connections."

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

RELATED PRODUCTS

Appliances provided with integral ventilation or recirculating equipment have been investigated to the construction requirements of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations," and are covered under Commercial Cooking Equipment with Integral Recirculating Ventilation Systems Certified for Canada (KNKG7).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment Certified for Canada (KKBV7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 109, "Commercial Cooking Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Cooking Appliance" or "Cooking Appliance," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial Cooking Appliance Assemblies Certified for Use with Other Manufacturers' Appliances Certified for Canada (KNJA7)

USE AND INSTALLATION

This category covers commercial cooking appliance assemblies intended for retrofit installation on other manufacturers' certified commercial cooking appliances.

The devices consist of a controller assembly that is designed for use with a specific manufacturer and model of a commercial cooking appliance.

PRODUCT MARKINGS

The markings on and the literature provided with the controller indicate the specific end-use appliance for which it is intended to be used.

FACTORS NOT INVESTIGATED

The operation of the appliance utilizing these controllers is intended to be identical to the operation with the factory-supplied control; however, any programming functions that vary from the original control have not been investigated.

RELATED PRODUCTS

See Commercial Cooking Appliances Certified for Canada (KNGT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

Commercial Cooking Appliances with Integral Recirculating Ventilation Systems Certified for Canada (KNKG7)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial use, such as deep fat fryers, griddles and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is prepared. Each appliance covered under this category is manufactured with an integral recirculating ventilation system.

The integral recirculating ventilation systems of these appliances consist of a fan, collection hood, and an air filtering system consisting of a grease filter, and may also incorporate other air filtering devices. These hoods incorporate an automatic fire extinguisher unit which has been investigated with the cooking equipment section.

Integral recirculating ventilation systems are intended for venting captured and filtered air back into the room in which the equipment is located. These products are not intended for connection to a ducted exhaust system.

These appliances are intended for commercial use in unclassified locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and are required to comply with the "National Building Code of Canada." The "National Building Code of Canada" requires that systems for the ventilation of commercial cooking equipment comply with the construction and installation requirements of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the CEC must be observed in installation or use, suitable warning or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power-supply conductors unless marked "Use Copper Wire Only For Power Supply Connections."

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances have been investigated.

RELATED PRODUCTS

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Cooking Appliance" or "Cooking Appliance," or other appropriate product name as shown in the individual Listings, together with the words "With Integral Recirculating Ventilation System" or "With Ductless Hood."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air Certified for Canada (KNLZ7)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial use, such as pressurized deep fat fryers and other appliances for use in commercial kitchens, restaurants or other business establishments where food is prepared. Each appliance covered in this category is manufactured with an integral system feature to limit the emission of grease-laden air from the cooking process to the room ambient.

These appliances have been investigated for the limit of 5 mg/m^3 for the emission of grease-laden air to the room ambient in accordance with the recommendations of ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations," using the EPA-202 test method prescribed for cooking appliances provided with integral recirculating air systems.

These products are not intended for connection to a ducted exhaust system.

Appliances in this category are not provided with an integral fire extinguishing system. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to fire extinguishing systems, such as the need for field installed systems in accordance with ANSI/NFPA 96.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installations or use, suitable warning or special instructions are marked on the equipment.

Commercial cooking appliances of certain types are designed for permanent connections to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

RELATED PRODUCTS

For products with integral recirculating systems including fire extinguishing systems, see Commercial, with Integral Recirculating Systems Certified for Canada (KNKG7).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment Certified for Canada (KKBV7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 109, "Commercial Cooking Appliances".

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Cooking Appliance" or "Cooking Appliance," or other appropriate product name as shown in the individual Listings, together with the words "with integral system for limiting the emission of grease-laden air."

****

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Custom-built Food Service Equipment Certified for Canada (KNNS7)

GENERAL

This category covers custom-built commercial food serving and/or cooking equipment that includes various combinations of electric broilers, food warmers including heated food servers, fryers, griddles, ranges, ovens, lighted and/or heated food displays, shelf heaters, plate warmers, convenience receptacles, and the like. It may also include refrigerated beverage cooler/dispensers, drinking water coolers, freezers, ice makers, ice cream makers, refrigerators, soda fountain units, and the like.

INSTALLATION

Certain types of custom-built food service equipment are designed for permanent connections to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

It is considered desirable from the standpoint of safety to persons that the framework of this equipment be permanently and securely grounded.

INSTALLATION INSTRUCTIONS

Custom-built food service equipment of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each section is required to bear a "Custom-built Food Service Equipment Section" Certification Mark and is marked "Section _____ of _____." The first blank space is filled with the number of the section. The second blank space is filled with a number indicating the total number of custom-built food service equipment sections that constitute the complete custom-built food service equipment. The custom-built food service equipment has suitable installation instructions describing or illustrating the proper assembly, mounting and connection of the numbered custom-built food service equipment sections. The acceptability of the assembled sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

This equipment includes factory-built assemblies incorporating preinstalled materials and components which after installation are usually concealed and may not be accessible for inspection at the installation site. Electrical connections made during installation, other then supply connections, are identified by markings on the product.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Equipment in this category is suitable for wiring with either copper or aluminum power-supply conductors unless marked "Use copper wire only for power supply connections."

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared or served by use of this equipment has been investigated.

RELATED PRODUCTS

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment Certified for Canada (KKBV7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 109, "Commercial Cooking Appliances," and CSA-C22.2 No. 120, "Refrigeration Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Custom-built Food Service Equipment" or "Custom-built Food Service Equipment Section," or other appropriate product name related to commercial preparation/serving of food such as "Food Kiosk" or "Food Service Work Table."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Custom-built Food Service Equipment Certified for Canada (KNNS7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Filters for Cooking Oil, Commercial Certified for Canada (KNRF7)

GENERAL

This category covers cooking-oil filters rated 600 V or less, intended for commercial use. This category covers portable filters and fixed filters whether intended for use with specific fryers or for general use.

These appliances filter the cooking oil used in deep-fat fryers usually found in commercial kitchens, restaurants, or other business establishments where food is prepared. They include a pump and may include an integral oil heater.

Filters suitable for built-in installation, side-by-side mounting or stacking are indicated in the installation instructions for the filter.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

These appliances are suitable for wiring with either copper or aluminum power-supply conductors unless marked "Use copper wire only for power supply connections" or the equivalent.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared using filtered oil from these appliances has been investigated.

RELATED PRODUCTS

Cooking-oil filters that form an integral part of another appliance are covered under:

Commercial Cooking Appliances Certified for Canada (KNGT7)
Commercial Cooking Appliances with Integral Recirculating Ventilation Systems Certified for Canada (KNKG7)
Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air Certified for Canada (KNLZ7)
Custom-built Food Service Equipment Certified for Canada (KNNS7)
Gas-fired Food Service Equipment Certified for Canada (LGQX7)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 109, "Commercial Cooking Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Filter for Cooking Oil," or other appropriate product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Household Cooking Appliances Certified for Canada (KNUR7)

USE AND INSTALLATION

This category covers appliances intended for household use that are designed to heat or cook food products for human consumption.

This category also covers:

Products combining features for food preparation and cooking, such as bread makers and coffee grinder/makers
Cord-connected pet food cookers and pet treat makers intended for indoor household use that are designed to heat or cook food for pet consumption

In cases where the nature or construction of equipment is such that special safety precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installation or use of the appliances, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

FACTORS NOT INVESTIGATED

Household Cooking Appliances Certified for Canada (KNUR7)−*Continued*

Neither the toxicity of coatings nor the physiological effects consuming food prepared by use of these appliances has been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CSA-C22.2 No. 64, ''Household Cooking and Liquid-Heating Appliances''

or

CSA-C22.2 No. 1335.1 (1993), ''Portable Electrical Motor-Operated and Heating Appliances: General Requirements,''
CSA-C22.2 No. 1335.2.9 (1993), ''Portable Electrical Motor-Operated and Heating Appliances: Particular Requirements for Portable Electric Cooking Appliances,'' and
CSA-C22.2 No. 1335.2.15 (1993), ''Portable Electrical Motor-Operated and Heating Appliances: Particular Requirements for Liquid-Heating Appliances''

or

CAN/CSA-E335-1 (1994, 2nd ed.), ''Safety of Household and Similar Electrical Appliances – Part 1: General Requirements,'' or CSA-E335-1/3E (1994, 3rd ed.), ''Safety of Household and Similar Electrical Appliances – Part 1: General Requirements,'' in conjunction with:
CAN/CSA-E60335-2-9 (1994), ''Household and Similar Electrical Appliances – Safety – Part 2-9: Particular Requirements for Grills, Toasters and Similar Portable Cooking Appliances,'' or
CAN/CSA-E60335-2-13 (1994), ''Household and Similar Electrical Appliances – Safety – Part 2-13: Particular Requirements for Deep Fat Fryers, Frying Pans and Similar Appliances,'' or
CAN/CSA-E60335-2-15 (1994), ''Household and Similar Electrical Appliances – Safety – Part 2-15: Particular Requirements for Appliances for Heating Liquids''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Bun Warmer,'' ''Corn Popper,'' ''Griddle,'' ''Coffee Maker,'' ''Household Cooking Appliance,'' ''Pet Food Cooker,'' ''Pet Treat Maker,'' or the name of the specific type of product as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DE-ICING AND SNOW-MELTING EQUIPMENT CERTIFIED FOR CANADA (KOBQ7)

GENERAL

This category covers fixed, outdoor, electric de-icing and snow-melting systems for use in accordance with Section 62 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC). The equipment is provided with means for permanent wiring connections, except that equipment rated 20 A or less and 150 V ac or less to ground may be of cord-and-plug-connected construction.

To supplement the general requirements in the CEC, the manufacturer is required to provide specific installation instructions concerning any limitations of the installation and/or use of the equipment.

PRODUCT MARKINGS

These products are marked with a Designation Code according to the following table:

Designation	Intended Use
2B	Snow melting
2C	Animal pens
2D	Pool decks
2E	Roof de-icing

RELATED PRODUCTS

Pipe-heating cable is covered under Mobile/Manufactured Home Pipe-heating Cable Certified for Canada (KQVU7), Industrial and Commercial Pipe-heating Cable Certified for Canada (KQXR7) and Residential Pipe-heating Cable Certified for Canada (KQYI7).

ADDITIONAL INFORMATION

De-icing and Snow-melting Equipment Certified for Canada (KOBQ7)−*Continued*

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 130 (2003), ''Requirements for Electrical Resistance Heating Cables and Heating Device Sets.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''De-icing and Snow-Melting Equipment'' or ''Roof De-icing Equipment,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DUCT HEATERS, ELECTRIC CERTIFIED FOR CANADA (KOHZ7)

GENERAL

This category covers fixed electric duct heaters and remote control assemblies, rated 600 V or less, typically used in the air stream of a ducted system.

A duct heater is a self-contained heater (external to the air-moving unit), field installed in the air stream of a ducted system. It is designed to be installed where an adequate flow of air from a separate interlocked fan or blower system is provided. Such a heater may be located in the main supply duct of an air heating system or in one of the branch ducts. Two or more duct heaters may be installed in a group (in proximity to one another in the duct) if tests indicate acceptable results when the heaters are installed in accordance with the manufacturer's instructions.

A duct heater intended to be employed in conjunction with another source of heat is judged on the basis of its compliance with CSA-C22.2 No. 155-1986, ''Electric Duct Heaters,'' and further examination and tests to determine whether or not the combination is acceptable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests and Table 2 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' (CEC), as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and **ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

INSTALLATION

This equipment is intended to be installed in accordance with the CEC.

Wiring Diagrams

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

Electric Heat Considerations

In duct heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent devices are either included as an integral part of the heater or are furnished as a separate assembly. If the overcurrent devices are furnished as a separate assembly, the heater is marked to specify that it is to be used with that particular separate assembly.

Unless specifically indicated in the individual certifications as ''Suitable for zero clearance installation,'' the duct heater units are intended to be installed in ducts with the clearances to combustible materials as specified in the manufacturer's installation instructions and marked on the duct heater unit itself. Care should be taken to ensure that duct heaters are positioned properly (horizontal air flow or vertical air flow) since required clearances are affected by the position of the duct work in some instances.

Unless otherwise indicated, the designated clearances (other than ''zero'') are based on tests of units with uninsulated sheet-metal ducts attached. Under these conditions, temperatures below established criteria

Duct Heaters, Electric Certified for Canada (KOHZ7)−*Continued*

have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit and ducts.

Each duct heater incorporates integral limit controls intended to protect against abnormal operating conditions that might arise from blocked inlets, blocked outlets, or fan failures. Magnetically-operated switching devices or similar components required for use with these limit controls are either included as an integral part of the heater or are furnished as a separate assembly as described above. Supplementary controls are not necessarily supplied as part of the duct heater.

A separate room thermostat must be provided to control the room air temperatures. For certifications of thermostats and similar devices, see Temperature-indicating and -Regulating Equipment Certified for Canada (XAPX7). Provision for an interlock circuit, to ensure operation of the separate blower when the duct heater is energized, is included in the heater or in the separate assembly as described above.

Tests have indicated that no adverse thermal effects are obtained when duct heaters marked to indicate that they are suitable for use with heat pumps, or central cooling air conditioners or fan-coil units are installed with certain of these units [See Heating and Cooling Equipment Certified for Canada (LZFE7)], provided the duct heater is used only in horizontal or upflow systems, and the duct heater is located downstream at least 4 ft from the nearest surfaces of the heat pump, central cooling air conditioner, or fan-coil unit.

Unit Installation

Duct heaters are intended for installation in noncombustible ducts and are designed to be used individually and in groups as supplementary heat sources in air-heating systems or as primary heat sources with separate blowers where the available heat from the duct heaters is sufficient for local conditions.

Duct heaters suitable for outdoor installation are so marked. Heaters not marked as suitable for outdoor installation are for indoor use only.

The manufacturer's application and installation instructions furnished with each heater should be consulted to determine the factors applicable to the particular installation, including required distances between the heater and turns in the duct, changes in duct sizes, air filters, humidifiers, etc. Unless these instructions specify other distances for horizontal or upflow installations, (1) turns in the duct on the inlet side of the heater should be located at least 4 ft from the heater, (2) turns in the duct on the outlet side of the heater should be located at least 2 ft from the heater, and (3) changes in duct sizes, air filters, humidifiers, etc., should be located at least 4 ft from either side of the heater. Duct heaters having instructions describing particular design characteristics and/or installations are investigated for those specific characteristics and/or installations.

The proper installation of these heaters requires careful consideration of the individual manufacturer's design characteristics, taking into consideration the number of heaters employed, the volume of air passing through the heaters, and the ambient temperatures and source of the air on the input side of the heater installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 155 (1986), "Electric Duct Heaters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Duct Heater."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, SAUNA AND STEAM BATH CERTIFIED FOR CANADA (KPJV7)

Sauna Heating Equipment Certified for Canada (KPSX7)

USE AND INSTALLATION

Sauna Heating Equipment Certified for Canada (KPSX7)−*Continued*

This category covers heating equipment intended for concentrated heating at elevated temperatures in relatively confined areas with or without the addition of moisture.

Particular attention should be paid to the heater installation restrictions, such as warning markings, remote thermostats and control installations, guards, minimum size of room, and distance from adjacent surfaces that are marked on the heater.

This equipment is intended for permanent connection to the supply source, except for some sauna heater-room combination units that may be cord connected as specifically indicated.

FACTORS NOT INVESTIGATED

The physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the heater is installed have not been investigated.

RELATED PRODUCTS

Steam bath equipment is covered under Steam Bath Equipment Certified for Canada (KQBZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 164, "Electric Sauna Heating Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sauna Heater" or "Sauna," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Steam Bath Equipment Certified for Canada (KQBZ7)

USE AND INSTALLATION

This category covers steam bath generators combination room and steam generator systems, and steam bath cabinets intended for high-humidity concentrated heating at elevated temperatures for personal bathing.

Steam bath equipment accessories, such as gangable steam units, timer options, and drain options, are also covered under this category. These accessories are intended for installation only on certified equipment as designated in the individual certifications. The accessories are intended primarily for field installation, but may be factory installed.

Information concerning field-wiring connections, mounting location, installation clearances, end-use equipment catalog numbers, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

Particular attention should be paid to installation instructions of the steam generator and markings on the product for restrictions, such as minimum distances to adjacent surfaces, valving of the steam outlet, etc.

Steam generators covered under this category have not been investigated for their suitability as a source of steam for space-heating purposes or for industrial or commercial use.

FACTORS NOT INVESTIGATED

The physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the steam is discharged or where the steam bath is installed have not been investigated.

RELATED PRODUCTS

Sauna heating equipment is covered under Sauna Heating Equipment Certified for Canada (KPSX7).

Steam generators for industrial or commercial use are covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Steam Bath Equipment Certified for Canada (KQBZ7)−*Continued*

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Steam Bath Heater,'' ''Steam Bath Equipment,'' ''Steam Bath Cabinet,'' ''Shower/Steamer Unit,'' or other appropriate product name as shown in the individual Listings.

The Listing Mark for accessories may appear on the smallest unit container in which the product is packaged.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITALITY-USE APPLIANCES CERTIFIED FOR CANADA (KQDA7)

Hospitality-use Drip-type Coffee Makers Certified for Canada (KQDJ7)

USE AND INSTALLATION

This category covers hospitality-use drip-type coffee makers and other similar drip-type brewing appliances intended for use by the general public in hotel sleeping areas and office environments.

Hospitality-use drip-type coffee makers are subject to the same requirements as household drip-type coffee makers and are grounded.

In cases where the nature or construction of component equipment is such that special precautions beyond the requirements of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' must be observed in installation or use of the appliances, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects of consuming food prepared by use of these appliances has been investigated.

RELATED PRODUCTS

Drip-type coffee makers intended for commercial use that are found in commercial kitchens, restaurants, or other business establishments where food is dispensed are covered under Commercial Cooking Appliances Certified for Canada (KNGT7).

Drip-type coffee makers intended for household residential use are covered under Household Cooking Appliances Certified for Canada (KNUR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 64 (2010), ''Household Cooking and Liquid-Heating Appliances.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Hospitality-use Drip-type Coffee Maker'' or ''Hospitality-use Coffee Maker.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

IMMERSION-TYPE LIQUID HEATERS, INDUSTRIAL CERTIFIED FOR CANADA (KQGV7)

USE AND INSTALLATION

This category covers immersion-type liquid heaters intended for heating water-based liquids. The corrosion resistance of the immersed parts has been investigated on the basis of water. The degree of corrosion resistance to acidic, alkaline, etc., water-based liquids may vary depending on the material and/or coating on the immersed parts and the type and strength of the solution. The heater manufacturer's information should be consulted in selecting a heater for an application.

Immersion-type Liquid Heaters, Industrial Certified for Canada (KQGV7)−*Continued*

Through-the-wall heaters should be operated only while the heating element is completely immersed in a water-based liquid. Other immersion-type liquid heaters should be immersed to a depth as marked on the product or as indicated in the installation and use instructions.

The heaters incorporate a temperature-limiting device that responds to the temperatures created by the heater; or the heater is marked to specify that a low-liquid-level cutoff control should be installed and connected to de-energize the heater upon a low-liquid-level condition.

Heaters intended to be installed through the wall of a vessel have means for permanent wiring connections to the electrical supply. Other immersion-type liquid heaters may have either a power-supply cord for cord-and-plug connection or provision for permanent wiring connections to the electrical supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 72, ''Heater Elements,'' and CSA-C22.2 No. 88, ''Construction and Test of Industrial Heating Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Immersion Type Liquid Heater.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, INDUSTRIAL AND LABORATORY CERTIFIED FOR CANADA (KQLR7)

USE AND INSTALLATION

This category covers heating appliances rated 600 V or less and intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC), for industrial and laboratory applications.

Heating appliances covered under this category include branding irons, brazers, dental laboratory heaters, electric kilns, etchers, glue pots, heat guns, heating cable, hot plates, incubators of the air flow and water types, laboratory furnaces and dryers, mobile drying ovens, soldering guns and irons, soldering stations and tools, vacuum ovens and water baths.

Portable electric heating devices of the soldering iron-type present certain inherent hazards. The temperatures necessary for their normal use are high enough to cause fire if they are left in contact with combustible materials.

Infrared heating equipment has not been investigated for use in hazardous (classified) locations as defined in the CEC.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the CEC must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

Industrial and laboratory hot plates, ovens and other similar products have not been investigated for explosion and fire hazards involved in the heating of chemicals.

Vapor degreasers are intended for use only with the specific cleaning fluids. Adequate ventilation is required for this equipment and the manufacturer's installation and operation instructions should be followed. The physiological effects of the cleaning fluids intended for use with the degreasing equipment have not been investigated.

An explosion hazard may exist in steam generators because of the accumulation of oxygen and hydrogen in an unvented system operated under standby conditions for long periods of time, or to which condensate is returned. Suitable venting devices should be installed and such systems should be purged frequently.

Steam generators and boilers have not been investigated for their suitability as a source of hot water or steam for space-heating purposes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

Heaters, Industrial and Laboratory Certified for Canada (KQLR7)−*Continued*

CSA-C22.2 No. 88, "Construction and Test of Industrial Heating Equipment"
CSA-C22.2 No. 122, "Hand-Held Electrically Heated Tools"
CSA-C22.2 No. 221, "Electrically Heated Hobby and Educational Type Kilns"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Laboratory Hot Plate," "Soldering Iron," "Laboratory Incubator," "Water Bath," "Branding Iron," or the name of the specific type of product as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE COOKING APPLIANCES CERTIFIED FOR CANADA (KQSQ7)

GENERAL

This category covers cooking equipment incorporating one or more microwave generators capable of generating less than 25 kW of microwave power operating in the normal ISM bands above 890 MHz. This equipment includes portable and stationary microwave cooking appliances employing resistive-type heating elements for baking, broiling, browning, convection cooking, or similar operations.

This category also covers combination microwave oven vent-hood fans, and kits for converting counter-top units to built-in, under-cabinet, wall-mounted or similar installations.

These appliances are intended for use in homes, restaurants, food vending or service establishments, and similar locations, in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

All microwave cooking appliances, cord-connected and permanently connected, have provision for being properly grounded.

Products specifically designed for field installation in or on a microwave cooking appliance or to adapt a microwave cooking appliance from one type of installation to another are indicated in the individual certifications and are marked to identify the microwave cooking appliance(s) with which they have been investigated.

Counter-top and under-cabinet mounted units have been investigated individually in two-sided right-angle alcoves.

These microwave cooking appliances are provided with a marking indicating whether they are intended for household use, commercial use, or both.

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances have been investigated.

REBUILT PRODUCTS

This category also covers microwave cooking appliances which are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt microwave cooking appliances are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt microwave cooking appliances are subject to the same requirements as new microwave cooking appliances.

RELATED PRODUCTS

Household electric ranges and built-in ovens incorporating a microwave cooking feature are covered under Ranges, Household Electric Certified for Canada (KRMX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 150 (1989), "Microwave Ovens."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Microwave Oven," "Microwave Food Warmer," "Microwave Cooking Appliance," "Microwave/Oven Vent Hood Fan," or other appropriate product name as shown in the individual Listings.

Microwave Cooking Appliances Certified for Canada (KQSQ7)−*Continued*

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIPE-HEATING CABLE CERTIFIED FOR CANADA (KQUF7)

GENERAL

This category covers electric heating cable, either as an unfinished resistance heating cable or a discrete unit or cable set, or a parallel heating set. This cable may be for cord or permanent connection, for commercial, industrial and residential applications, for use outdoors or indoors.

Indoor uses include soil heating, animal-pen heating and frost protection. Outdoor uses are soil heating, water-pipe frost protection and pipeline heat tracing.

To supplement the general requirements in CAN/CSA-C22.1, "Canadian Electrical Code, Part I," the manufacturer is required to provide specific installation instructions concerning any limitations of the installation and/or use of the equipment.

These products are marked with a Designation Code for their intended use.

The certifications appear separately under the following subcategories: Mobile/Manufactured Home Pipe Heating Cable Certified for Canada (KQVU7), Industrial and Commercial Pipe Heating Cable Certified for Canada KQXR7() and Residential Pipe Heating Cable Certified for Canada (KQYI7).

RELATED PRODUCTS

For de-icing and snow melting equipment, see De-icing and Snow Melting Equipment Certified for Canada (KOBQ7).

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Mobile/manufactured Home Pipe-heating Cable Certified for Canada (KQVU7)

USE AND INSTALLATION

This category covers electric heating cable intended to reduce the likelihood of water freezing in exposed pipes of mobile/manufactured homes. The cable is provided with an attachment plug and intended to be connected to a ground-fault circuit interrupter (Class A type) protected receptacle outlet on the underside of the mobile/manufactured home.

This category applies to heating cable for installation and use in accordance with Section 70 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," on systems having nominal voltages of 250 V or less. Pipe-heating cable is intended to be installed in accordance with the manufacturer's installation instructions.

Unless specifically indicated otherwise by marking on the heating cable or in the installation instructions, this heating cable is intended for use only on metallic pipes.

RELATED PRODUCTS

Heating cable for use as fixed outdoor electric de-icing and snow-melting systems is covered under De-icing and Snow-melting Equipment Certified for Canada (KOBQ7).

Heating cable for use to reduce the likelihood of water freezing in residential pipes is covered under Residential Pipe-heating Cable Certified for Canada (KQYI7).

ADDITIONAL INFORMATION

For additional information, see Pipe-heating Cable Certified for Canada (KQUF7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 130 (2003), "Requirements for Electrical Resistance Heating Cables and Heating Device Sets."

UL MARK

Mobile/manufactured Home Pipe-heating Cable Certified for Canada (KQVU7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Mobile Home Pipe Heating Cable'' or ''Mobile/Manufactured Home Pipe Heating Cable.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Industrial and Commercial Pipe-heating Cable Certified for Canada (KQXR7)

USE AND INSTALLATION

This category covers electric heating cable for pipe and vessel heat tracing in industrial and commercial locations, designed to be installed in accordance with Section 62 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

PRODUCT MARKINGS

These products are marked with a Designation Code according to the following table:

Designation	Intended Use
2A	Soil heating
3A	Pipe and vessel tracing (fixed)
3B	Pipe and vessel tracing (fixed)
3C	Pipe and vessel tracing (fixed)
3D	Pipe and vessel tracing (cord-connected)
4A	Heating sets installed in metal pipe, tanks, etc.
4B	Heating sets installed in thermoplastic pipe, tanks, etc.
5A	Pipe and vessel tracing (fixed), damp location
5B	Pipe and vessel tracing (fixed), wet location

RELATED PRODUCTS

See Pipe-heating Cable Certified for Canada (KQUF7).

ADDITIONAL INFORMATION

For additional information, see Pipe-heating Cable Certified for Canada (KQUF7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 130 (2003), ''Requirements for Electrical Resistance Heating Cables and Heating Device Sets.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Heating Cable'' or ''Pipe Heating Cable,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Residential Pipe-heating Cable Certified for Canada (KQYI7)

USE

This category covers electric heating cable intended to reduce the likelihood of water freezing in residential pipes. The cable is provided with a flexible cord and attachment plug and is intended specifically for residential pipe-heating uses, such as sprinkler systems and in crawl spaces, basements, well houses, and the like.

This category applies to heating cable for installation and use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' on systems having nominal voltages of 600 V or less.

This cable is intended for use in accessible locations only.

HEATERS AND HEATING EQUIPMENT CERTIFIED FOR CANADA (KKBV7)

Residential Pipe-heating Cable Certified for Canada (KQYI7)−*Continued*

This cable is suitable for use on metal and rigid plastic water-filled pipes. Some units incorporate a thermostat that automatically turns on the heating cable when the temperature drops below a predetermined value. The ability of the heating cable to maintain temperatures of liquids in pipes has not been investigated; it depends upon ambient temperature conditions. Heating cable is intended to be installed in accordance with the manufacturer's installation instructions.

ADDITIONAL INFORMATION

For additional information, see Pipe-heating Cable Certified for Canada (KQUF7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 130 (2003), ''Requirements for Electrical Resistance Heating Cables and Heating Device Sets.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Residential Pipe Heating Cable.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIANT HEATING EQUIPMENT CERTIFIED FOR CANADA (KQYZ7)

USE AND INSTALLATION

This category covers electric heating cable, cable on a carrier, and flexible and rigid electric heating panels and heating panel sets, intended to be installed as fixed equipment for radiant space heating and/or floor warming in accordance with Section 62 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC). These products form an integral part of the building construction after on-site assembly, installation and connection.

The manufacturer is required to provide with the heating devices specific installation instructions concerning any limitations of the installation and/or use of the equipment. These supplement the installation requirements for electric space-heating systems in the CEC. Failure to comply with all installation instructions may result in a risk of fire or electric shock.

The instructions for heating devices intended for burial in concrete specifically indicate that the slab must be a double pour (poured in two parts) if that is the only acceptable means of installation. If such a limitation is not specifically mentioned, either a single or double pour may be used. Cable units are provided with a tag attached to the nonheating leads, which supplement the installation instructions.

Heating products include instructions concerning the intended method of connection to building power, and if additional protection (e.g., conduit) of nonheating leads is anticipated during installation.

Connectors to be assembled to wire or panel busbars in the field using a special tool are intended to be assembled using the tool specified by the manufacturer.

Stapling guns, if used in the installation of heating cable devices require specially designed heads to prevent damage to the conductor insulation. Only those guns recommended by the cable unit manufacturer should be used for this purpose.

PRODUCT MARKINGS

Radiant heating panels and heating panel sets are marked ''Radiant Ceiling Heating Panel,'' ''Radiant Floor Heating Panel,'' ''Radiant Heating Panel'' or ''Radiant Concrete Heating Panel,'' or equivalent, as appropriate. Heating cable sets for installation in ceilings are marked as being specifically intended for this application. Heating devices intended for concrete installation are further marked ''Concrete Installation Only.''

The Certification Mark (as noted under **UL MARK** below) is provided on the product by the manufacturer, or is included with the above marking and is shipped with the product, for attachment to the nonheating leads 3 in. (75 mm) from the source of supply during installation.

The Certification Mark will not appear on other field-applied labels provided with the radiant heating equipment, such as labels for the panel, heating controls, or any other device.

RELATED PRODUCTS

Cable intended for pipe heating is covered under Pipe Heating Cable Certified for Canada (KQUF7).

Radiant Heating Equipment Certified for Canada (KQYZ7)−*Continued*

Heating devices intended for snow melting and de-icing are covered under De-icing and Snow-melting Equipment Certified for Canada (KOBQ7).

Heating panels intended to be installed in a dropped or suspended ceiling are covered under Air Heaters, Room, Fixed and Location Dedicated Certified for Canada (KKWS7).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment Certified for Canada (KKBV7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' and CAN/CSA-C22.2 No. 130-03 (2008), ''Requirements for Electrical Resistance Heating Cables and Heating Devices Sets.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Radiant Heating Cable,'' ''Radiant Heating Panel Unit'' or ''Radiant Heating Embedded Unit,'' or other appropriate product name as shown in the individual Listings, preceded by the words ''Radiant Heating.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RANGES, HOUSEHOLD ELECTRIC CERTIFIED FOR CANADA (KRMX7)

GENERAL

This category covers household-type, electric freestanding, cord-connected ranges, and permanently connected built-in ranges, ovens and counter-mounted cooking units, or any combination of the above, having a rating not exceeding 250 V and 21 kW, and designed to be installed and used in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Cooking equipment is investigated to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

This category does not cover cooking equipment/refrigerator combinations, hot plates or rangettes.

REBUILT PRODUCTS

This category also covers household electric ranges that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household electric ranges are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household electric ranges are subject to the same requirements as new household electric ranges.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

RELATED PRODUCTS

Products Verified for energy efficiency are covered under Ranges, Household Electric Verified for Energy Efficiency (ZZKM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 61, ''Household Cooking Ranges.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate:

''Electric Range,'' with any of the following as an optional prefix, suffix or modifier: ''Counter-level,'' ''Built-in,'' ''Eye Level,'' ''Drop-in,'' ''Set-in,'' ''Free-standing,'' ''Cooking,'' ''Convection,'' ''Unit.''

Ranges, Household Electric Certified for Canada (KRMX7)−*Continued*

''Electric Oven,'' with any of the following as an optional prefix, suffix or modifier: ''Built-in,'' ''Convection,'' ''Wall-mounted,'' ''Unit.''

''Electric Counter-mounted Cooking Unit,'' ''Electric Counter Cooking Unit'' or ''Electric Cook Top,'' with any of the following as an optional prefix, suffix or modifier: ''Built-in,'' ''Surface,'' ''Radiant,'' ''Smooth Top.''

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER HEATERS CERTIFIED FOR CANADA (KSAV7)

Commercial Storage Tank and Booster Water Heaters Certified for Canada (KSBZ7)

USE AND INSTALLATION

This category covers water heaters intended to supply hot water for commercial or industrial use, and intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These water heaters are equipped with a temperature-regulating control that limits the water temperature to a maximum of 93°C (200°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 99°C (210°F) should the regulating control fail.

A combination temperature-pressure relief value is supplied or factory installed on these heaters. When supplied separately, instructions for mounting the valve are provided with the heater.

ADDITIONAL INFORMATION

For additional information see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 110 (1994), ''Construction and Test of Electric Storage-Tank Water Heaters.''

For commercial water heaters having storage tanks with an inside diameter of 610 mm or greater, the tank is additionally required to meet the applicable pressure vessel requirements of CSA B51 (2009), ''Boiler, Pressure Vessel, and Pressure Piping Code.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Commercial Storage Tank Water Heater'' or ''Booster Water Heater,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Water Heaters, Space Heating Certified for Canada (KSDR7)

USE AND INSTALLATION

This category covers water heaters intended for the heating of water and storage of hot water for space-heating purposes, to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' These heaters are for use in jurisdictions that permit the use of hot water space-heating systems that do not employ tanks constructed and stamped in accordance with the ''Boiler and Pressure Vessel Act of a Province or Territory of Canada.'' Authorities Having Jurisdiction should be consulted before installation.

These heaters are equipped with temperature-regulating devices that allow a water temperature not higher than 90°C (194°F) and also with temperature-limiting devices that limit the water temperature to a maximum of 99°C (210°F).

Water Heaters, Space Heating Certified for Canada (KSDR7)−*Continued*

A temperature-pressure relief mechanism is provided as part of the certified space-heating water heater.

RELATED PRODUCTS

Pressurized electric water heaters intended for space-heating applications that are constructed and marked in accordance with the "Boiler and Pressure Vessel Act of a Province or Territory of Canada" are covered under Boilers, Electric Certified for Canada (BDJS7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 165, "Electric Boilers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Space-heating Water Heater," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Household Water Heaters, Storage Tank Certified for Canada (KSDT7)

USE AND INSTALLATION

This category covers storage tank water heaters rated 600 V or less and 12 kW or less and having a tank capacity of more than 3.78 liters and not more than 454.2 liters.

These water heaters are intended for household use and permanent connection to the supply source in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Household storage tank water heaters are equipped with a temperature-regulating control intended to restrict the water temperature to a maximum of 90°C (194°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 96°C (205°F) should a regulating control fail.

Safety devices, such as temperature-pressure-relief mechanisms, are not required to be furnished as part of the certified water heater, but markings and instructions accompany each water heater indicating that a suitable safety device which complies with the local plumbing codes shall be connected to the heater at the time it is installed.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 110 (1990), "Electric Storage Tank Water Heaters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Storage Tank Water Heater," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Immersion Water Heaters Certified for Canada (KSFX7)

GENERAL

This category covers immersion water heaters, both cord-connected and for permanent connection.

Immersion Water Heaters Certified for Canada (KSFX7)−*Continued*

Some immersion water heaters intended for permanent connection incorporate thermostats and auxiliary switches which respond to the temperatures created by the immersion water heaters. The acceptability of thermostats or auxiliary switch construction; as temperature regulating and/or safety controls when incorporated in the ultimate equipment assembly for which they are intended, must be determined in accordance with the requirements applicable to that equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 72 (1984), "Heater Elements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Immersion Heater," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Miscellaneous Water Heaters Certified for Canada (KSGR7)

GENERAL

This category covers instantaneous heaters, strap-on-type heaters, heaters for sink or water-cooler mounting, and other water heaters not covered under Household Water Heaters, Storage Tank Certified for Canada (KSDT7), Commercial Storage Tank and Booster Water Heaters Certified for Canada (KSBZ7) or Immersion Water Heaters Certified for Canada (KSFX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 64 (1991), "Household Cooking and Liquid-Heating Appliances," or CSA-C22.2 No. 88 (1958), "Industrial Heating Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Instantaneous Water Heater" or "Water Heater," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Alternative-energy Water-storage Tanks and Multi-energy Water Heaters Certified for Canada (UZWZ7)

USE AND INSTALLATION

This category covers water-storage tanks intended for use as components of alternative-energy, such as geothermal or solar, heating systems to provide potable hot water for domestic and/or commercial use. Installation is intended to be in accordance with the manufacturer's instructions employing the heat-transfer fluid(s) specified by the manufacturer.

This category also covers multi-energy water heaters which, in addition to their use as components of alternative-energy heating systems, employ an integral energy source, such as electricity, gas or oil, to supplement the alternative-energy source for heating the water.

Alternative-energy Water-storage Tanks and Multi-energy Water Heaters Certified for Canada (UZWZ7)−*Continued*

For domestic-use, alternative-energy water-storage tanks, safety devices, such as temperature-pressure-relief mechanisms, may not be furnished as part of the certified water-storage tank. However, markings and instructions accompany each tank indicating that a suitable safety-relief device that complies with the local plumbing codes is intended to be connected to the heater at the time it is installed. Alternative-energy water-storage tanks used in commercial applications are factory supplied with a combination temperature-pressure-relief valve.

Multi-energy water heaters are equipped with pressure- and temperature-relief devices to prevent rupture of the storage tank due to internal pressure. Other safety controls, such as a thermostat and a high-limit control, are also provided in accordance with the applicable standard, as noted below.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate alternative-energy water-storage tanks in this category is CAN/CSA-C22.2 No. 110 (1994), ''Construction and Test of Electric Storage-Tank Water Heaters.''

The basic standards used to investigate multi-energy water heaters in this category are:

Electric: CAN/CSA-C22.2 No. 110 (1994)

Gas-fired: ANSI Z21.10.1/CSA 4.1 (2009), ''Gas Water Heaters – Volume I, Storage Water Heaters with Input Ratings of 75,000 Btu Per Hour or Less,'' or ANSI Z21.10.3/CSA 4.3 (2004), ''Gas Water Heaters – Volume III, Storage Water Heaters with Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous''

Oil-fired: CSA B140.12 (2003), ''Oil-Burning Equipment: Service Water Heaters for Domestic Hot Water, Space Heating, and Swimming Pools''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Alternative-energy Water-storage Tank'' or ''Multi-energy Water Heater.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, SPECIALTY CERTIFIED FOR CANADA (KSOT7)

USE

This category covers heating appliances rated 600 V or less for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC). This includes heating appliances intended for household and industrial applications, as well as products that generate steam for other than space-heating purposes, and have an electrical power rating of 15 kW or less per steam-generating vessel. A heating appliance is defined as an electrically energized product that directly or indirectly generates heat to perform its intended function.

Heating devices may present certain inherent hazards. The temperature necessary for their normal use can be high enough to cause fire if they are left in contact with combustible materials.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the CEC must be observed in installation or use, necessary special instructions are marked on the equipment.

REBUILT PRODUCTS

This category also covers steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features are subject to the same requirements as new steam-cleaning machines, steam-cleaning machines with sweeper features and steam-cleaning machines with vacuum features.

Heaters, Specialty Certified for Canada (KSOT7)−*Continued*

Rebuilt products are required to be provided with a date code indicating the date of rebuilding.

RELATED PRODUCTS

Fan-type hand warmers are covered under Fans, Electric Certified for Canada (GPWV7).

Industrial and laboratory heaters, including mobile drying ovens, soldering stations and tools, laboratory furnaces, incubators, hot plates, electric kilns, dental laboratory heaters, and the like are covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7).

Devices intended for vaporization of water, certain medicaments in water solution and glycol are covered under Vaporizers Certified for Canada (YEIV7).

Incubators and brooders intended for use on farms and commercial hatcheries are covered under Incubators and Brooders Certified for Canada (NHYZ7).

Heated air deodorizers and air fresheners are covered under Deodorizers and Air Fresheners Certified for Canada (EOGX7).

Instantaneous water heaters, strap-on heaters, heaters for sink or water-cooler mounting are covered under Miscellaneous Water Heaters Certified for Canada (KSGR7).

Heaters intended for installation in or adjacent to swimming pools or spas are covered under Heaters Certified for Canada (WBRR7).

Household vacuum cleaners provided with a steam-cleaning feature, where the vacuum cleaner is the appliance's primary function, are covered under Vacuum Cleaning Machines and Blower Cleaners Certified for Canada (DMLW7).

Steam-cleaning machines with sweeper features, where the sweeper function is the appliance's primary function, are covered under Cleaning Machines, Motor Operated Certified for Canada (DMGK7).

High-pressure cleaning machines provided with steam-cleaning features, where the high-pressure-cleaning function is the appliance's primary function, are covered under High-pressure Cleaning Machines, Electrically Operated Certified for Canada (DMKK7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

CSA-C22.2 No. 122, ''Hand-Held Electrically Heated Tools''

CSA-C22.2 No. 36, ''Hairdressing Equipment''

CAN/CSA-C22.2 No. 191, ''Engine Heaters and Battery Warmers''

CAN/CSA-C22.2 No. 64, ''Household Cooking and Liquid-Heating Appliances''

Pet-warming mats and pet beds are investigated to CAN/CSA-C22.2 No. 15, ''Electrically Heated Warming Pads.''

Steam-cleaning machines with vacuum-cleaning features, where the steam cleaner is the appliance's primary function, are additionally investigated to CSA-C22.2 No. 243, ''Vacuum Cleaners, Blower Cleaners and Household Floor Finishing Machines.''

Steam-cleaning machines with sweeper features, where the steam cleaner is the appliance's primary function, are additionally investigated to CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial).''

Steam-cleaning machines with high-pressure-cleaning features, where the steam cleaner is the appliance's primary function, are additionally investigated to CAN/CSA-C22.2 No. 68.

Additional standards may be applicable based on the features employed. In addition, the following requirements are also used as applicable:

CSA Technical Information Letter No. C-37, ''Input Ratings for Cord-Connected Heating and Cooking Appliances, Hairdressing Equipment and Electric Irons for Household Use'' (issued 2-28-05)

CSA Technical Information Letter No. C-38, ''Guidelines Regarding Selection of Thermostats for Testing'' (issued 6-20-05)

CSA Technical Information Letter No. C-40, ''Hair Straighteners and Crimpers Intended for Household Use'' (issued 8-16-06)

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Hand Dryer,'' ''Pet Dryer,'' ''Embosser,'' ''Stock Tank Heater,'' ''Charcoal Igniter,'' or the name of the specific type of product as shown in the individual Listings.

For rebuilt products, the word ''Rebuilt,'' ''Refurbished'' or ''Remanufactured'' precedes the product name.

Heaters, Specialty Certified for Canada (KSOT7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS, EMITTER TYPE, CERTIFIED FOR USE IN SPECIFIED EQUIPMENT CERTIFIED FOR CANADA (KSSG7)

USE

This category covers heaters intended for installation on specific models of UL-certified heating equipment that are shipped from the factory without heaters installed. These heaters have been investigated by UL in specific models identified in markings or instructions to determine that, when used in accordance with the manufacturer's instructions, the complete product complies with applicable requirements.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 72, ''Heater Elements.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]
FOR USE WITH [identification of specified UL Listed product]
Control No.
*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING APPLIANCES CERTIFIED FOR CANADA (KTCR7)

GENERAL

This category covers heating appliances intended for installation and use in accordance with appropriate standards as required by the province in which the appliance is being installed, such as:

- CAN/CSA-B139-1991, ''Installation Code for Oil-Burning Equipment''
- CAN/CGA-B149.1-1991, ''Natural Gas Installation Code''
- CAN/CGA-B149.2-1991, ''Propane Installation Code''
- CAN/CGA-B149.4-1991, ''Natural Gas for Vehicles Installation Code''
- CAN/CSA-C22.1, ''Canadian Electrical Code, Part I''
- CAN/CSA-A405-1987, ''Design and Construction of Masonry Chimneys and Fireplaces''
- ''National Building Code of Canada''

Heating appliances are investigated to determine the suitability of the construction and performance of the appliances as an assembly and of the fuel-burning apparatus, controls, electrical features and other parts furnished by the manufacturer as part of the Listed assembly. It is also determined that combustible walls and surfaces adjacent to or in contact with the appliance will not attain unsafe temperatures when the appliance is installed and used as directed.

Heating appliances are marked to indicate minimum clearances in mm (inches), type of flooring, when they may be installed in an alcove or closet, and the total free area of the required air openings into a closet. Unless otherwise indicated, the designated clearances (other than ''zero'') are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

When the Listing Mark on an appliance includes the statement ''For Operation Only In Presence of Competent Attendant,'' such appliances are not furnished with primary safety controls and are intended for operation only in the presence of a competent attendant.

The Listing Mark applied to an oil-burning appliance designates the ANSI/ASTM D396 grade number of the fuel oil, or other fuel, for which the appliance is Listed.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ABSORPTION AIR CONDITIONING EQUIPMENT CERTIFIED FOR CANADA (KTFV7)

USE

This category covers unitary-type equipment rated 600 V or less employing an absorption type refrigeration system. The equipment is intended for air conditioning or liquid heating and cooling for air conditioning and similar purposes. This category includes equipment intended for indoor and/or outdoor use.

The direct energy source for cooling and heating is a gas-, oil-, or gas-oil-fired burner(s) and may additionally include hot fluid (such as gas, liquid or steam) as obtained from an external source such as a solar-heat system or waste-heat. The oil- or gas-oil-fired burners are intended to burn standard grade fuel oils as specified in CAN/CGSB 3.2, ''Heating Fuel Oil.''

INSTALLATION

This equipment is intended to be installed in accordance with the markings on the equipment and the installation instructions provided with the equipment, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, as well as the current editions of the following, as applicable:

- CSA B139, ''Installation Code for Oil-Burning Equipment''
- CSA B149.1, ''Natural Gas and Propane Installation Code''
- CAN/CGA-B149.2, ''Propane Storage and Handling Code''
- CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC)
- CSA B140.0, ''Oil-Burning Equipment: General Requirements''
- CAN/CGSB 3.2, ''Heating Fuel Oil''
- ''National Building Code of Canada''

Unitary absorption air conditioning equipment consists of one or more factory-built sections. If the equipment is provided in two or more sections, each such section is designed for field interconnection with a matched section(s) to make the absorption air conditioning assembly. Equipment provided in two or more sections is marked to identify the appropriate sections for proper installation.

In units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor circuit components and wiring are investigated on the basis of compliance with the motor branch circuit, short-circuit and ground-fault protection requirements of the CEC. Such multi-motor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating which does not exceed the value marked on the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable.

This equipment is marked with information specifying the type(s) of gas supply and/or grade of fuel oil supply to which it is intended to be connected. It is also marked with the type of refrigerant used.

Units suitable for outdoor installation are so marked. Sections not marked as suitable for outdoor installation are intended for indoor use only.

RELATED PRODUCTS

For absorption air conditioning equipment that utilizes only a hot fluid (such as gas, liquid or steam) as the direct-energy source for cooling and heating, see Heating and Cooling Equipment Certified for Canada (LZFE7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 236-2005, ''Heating and Cooling Equipment,'' in addition to the applicable standards noted in the following table:

Equipment	Gas-fired Input Rating	Standard
Gas-fired	≤ 400,000 Btu/h (117.23 kW)	ANSI Z21.40.1/CGA 2.91[1]

Absorption Air Conditioning Equipment Certified for Canada (KTFV7)−*Continued*

Equipment	Gas-fired Input Rating	Standard
Gas-fired	≥ 400,000 Btu / h (117.23 kW)	CSA / CAN1-3.1[2]
Gas-Oil-fired	≤ 400,000 Btu / h (117.23 kW)	ANSI Z21.40.1 / CGA 2.91[1] and CSA B140.7[3]
Gas-Oil-fired	≥ 400,000 Btu / h (117.23 kW)	CSA / CAN1-3.1[2] and CSA B140.7[3]
Oil-fired	—	CSA B140.7[3]

[1] Refers to the current edition and effective addenda thereto of the American National Standards Institute / CGA Standard, "Gas-Fired, Heat Activated Air-Conditioning and Heat Pump Appliances"

[2] Refers to the Standard for "Industrial and Commercial Gas-Fired Package Boilers"

[3] Refers to the Standard for "Oil-Burning Equipment: Steam and Hot-Water Boilers"

UL MARK

(Gas Only and Gas-Oil Equipment)

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name "Gas-fired (or Gas-Oil-fired) Absorption Air Conditioning Equipment," and

1

(a) for equipment with gas-fired inputs up to and including 400,000 Btu / h (117.23 kW), the standard designation "ANS Z21.40.1(+) CGA 2.91(+)-(++)"
(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

or

(b) for equipment with gas-fired inputs over 400,000 Btu / h (117.23 kW), no standard reference

and

2

(a) for gas-fired equipment designed for installation of the burner in the field or at another factory, the statement "For Use Only with [Company Name] Listed Gas-Burner Model(s) ____, Max Input ____ BTU Per Hour. Refer to Burner Label for Control and Fuel Specifications."

or

(b) for gas-oil-fired equipment designed for installation of the burner in the field or at another factory, the statement "For Use Only with [Company Name] Listed Gas-Oil Burner Model(s) ____, Max Input-Oil ____ Gals Per Hour, Gas ____ BTU Per Hour. Refer to Burner Label for Control and Fuel Specifications."

For 2 (a) and 2 (b) above, the UL Listing Mark on the air conditioning equipment covers the air conditioning equipment only. The burner bears a separate UL Listing Mark as described under Domestic Gas Conversion Burners Certified for Canada (KXSB7), Commercial / Industrial Gas Burners Certified for Canada (KXWT7) or Gas-Oil Burners Certified for Canada (KYKR7).

UL MARK

(Oil Only Equipment)

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Oil-fired Absorption Air Conditioning Equipment," and for oil-fired equipment designed for installation of the burner in the field or at another factory(+), the statement "For Use Only with [Company Name] Listed Oil Burner Model(s) _____, Max Input _____ Gals Per Hour. Refer to Burner Label for Control and Fuel Specifications."

(+) For this situation, the UL Listing Mark on the air conditioning equipment covers the air conditioning equipment only. The burner bears a separate UL Listing Mark as described under Oil Burners Certified for Canada (KYXZ7).

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACCESSORIES FOR BURNERS CERTIFIED FOR CANADA (KTJQ7)

USE AND INSTALLATION

Accessories for Burners Certified for Canada (KTJQ7)−*Continued*

This category covers accessories intended for gas and / or oil burners as identified in the individual certifications. They have been investigated only to determine that when installed in accordance with the manufacturer's instructions, they do not adversely affect the operation of the specified certified burner.

RELATED PRODUCTS

See Domestic Gas Conversion Burners Certified for Canada (KXSB7), Commercial / Industrial Gas Burners Certified for Canada (KXWT7), Gas-Oil Burners Certified for Canada (KYKR7) and Oil Burners Certified for Canada (KYXZ7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA B140.0, "Oil-Burning Equipment: General Requirements," CSA B140.2.1 (1990), "Atomizing-Type Oil Burners," and CSA / CGA 3.4, "Industrial and Commercial Gas-Fired Conversion Burners."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]
FOR USE WITH LISTED [TYPE OF BURNER] ONLY
Control No.

*** ***

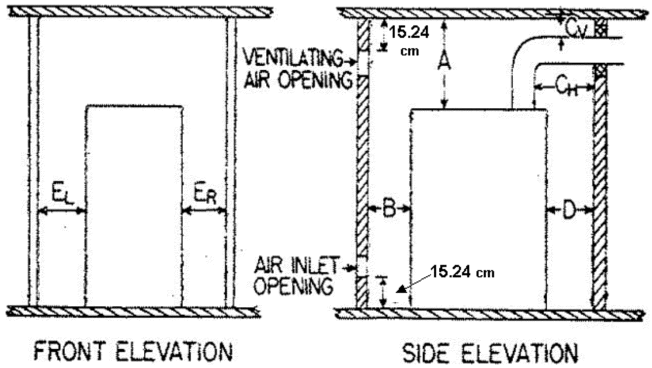
UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOILER ASSEMBLIES CERTIFIED FOR CANADA (KVFT7)

USE AND INSTALLATION

This category covers gas-, gas-oil-, and oil-fired boiler assemblies intended for installation on the type of floors and with clearances to combustible construction not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated in the boiler assembly Listing Mark or in the burner Listing Mark and with limit controls.

The sketches, dimension symbols and abbreviations as illustrated below are referenced in the individual Listings to indicate minimum clearances in cm (inches), type of flooring, when an appliance may be installed in an alcove or closet, and the total free area of the required air openings into a closet. This information is also marked on the appliance. The clearances so designated are the minimums required to avoid overheating; additional clearances may be needed for accessibility.



Installation Symbols and Abbreviations

Descriptions of symbols and abbreviations applicable to the installation of boiler assemblies are as follows:

A – Clearance above top of boiler

B – From front of boiler. Prefix "C" to numeral indicates suitability for closet or alcove installations; prefix "A" indicates suitability for alcove installation only

C_H – From chimney or vent connector measured horizontally or below pipe

C_V – From chimney or vent connector measured vertically above pipe

Boiler Assemblies Certified for Canada (KVFT7)−*Continued*

D – From back of boiler
E_L – From left side of boiler
E_R – From right side of boiler
F – Indicates type of flooring: NC = Noncombustible, C = Combustible
G – Total minimum free area, in square mm (square inches), of air openings into a closet

Typical Installation Clearances for Gas-, Gas-Oil-, and Oil-fired Boiler Assemblies

When a gas-, gas-oil-, or oil-fired boiler assembly is Listed for typical installation clearances, the individual Listings may refer to the Form designation. Form designations for typical installation clearances for these types of boiler assemblies installed in rooms are indicated in the table below. Clearances may be indicated in the individual Listings. If a boiler assembly Listed for alcove or closet installation is installed in a room which is large in relation to the size of the boiler assembly, it may be installed at the minimum clearances specified for closet and alcoves or as indicated by the designated optional Form.

Form	Standard Minimum Clearances, cm (in.)							
	A	B	C_H	C_V	D	E_L	E_R	F
II	15.24 (6)	60.96 (24)	42.74 (18)	42.74 (18)	15.24 (6)	15.24 (6)	15.24 (6)	NC
IIa	15.24 (6)	60.96 (24)	42.74 (18)	42.74 (18)	15.24 (6)	15.24 (6)	15.24 (6)	C
III	42.74 (18)	121.92 (48)	42.74 (18)	42.74 (18)	42.74 (18)	42.74 (18)	42.74 (18)	NC
IIIa	42.74 (18)	121.92 (48)	42.74 (18)	42.74 (18)	42.74 (18)	42.74 (18)	42.74 (18)	C
IV	121.92 (48)	243.84 (96)	91.44 (36)	91.44 (36)	91.44 (36)	91.44 (36)	91.44 (36)	NC
IVa	121.92 (48)	243.84 (96)	91.44 (36)	91.44 (36)	91.44 (36)	91.44 (36)	91.44 (36)	C
XII	15.24 (6)	42.74 (18)	15.24 (6)	15.24 (6)	15.24 (6)	15.24 (6)	15.24 (6)	NC
XIIa	15.24 (6)	42.74 (18)	15.24 (6)	15.24 (6)	15.24 (6)	15.24 (6)	15.24 (6)	C

Gas-, gas-oil-, and oil-fired boiler assemblies Listed for Forms II, IIa, III, and IIIa are low-heat appliances; those Listed for Forms IV and IVa are medium-heat appliances, all of which are intended to be flue connected to suitable chimneys

Gas-, gas-oil-, and oil-fired boiler assemblies Listed for Forms XII and XIIa and those Listed for Form III and IIIa equipped with draft hoods are low-heat gas appliances suitable for venting to Type B vents for gas appliances

Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

* *

Gas-fired Boiler Assemblies Certified for Canada (KVTR7)

USE AND INSTALLATION

This category covers factory-built, gas-fired boiler assemblies with inputs of more than 400,000 Btu/hr intended for commercial and industrial use.

These boiler assemblies are intended to be installed in accordance with the markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to local codes.

The minimum clearance markings may be in the form of symbols, Form designations (for typical installations) and abbreviations as noted under Boiler Assemblies Certified for Canada (KVFT7). This information is also included in the individual Listings.

RELATED PRODUCTS

See Commercial/Industrial Gas Burners Certified for Canada (KXWT7), Gas-fired Low-pressure Steam and Hot Water Boilers Certified for Canada (KVUY7) and Oil-fired Boiler Assemblies Certified for Canada (KWUX7).

ADDITIONAL INFORMATION

For additional information, see Boiler Assemblies Certified for Canada (KVFT7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

Gas-fired Boiler Assemblies Certified for Canada (KVTR7)−*Continued*

The basic standard used to investigate products in this category is CSA/CAN1-3.1, "Industrial and Commercial Gas-Fired Package Boilers."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names and information as appropriate:

(A) "Gas-fired Boiler Assembly. For Use With Integral Primary Safety Controls."

(B) "Boiler Assembly. For Use Only With [Company Name] Listed Gas Burner Model(s) ____. Max Input ____ BTU Per Hour. Refer to Burner Label for Control and Fuel Specifications."

A gas-fired boiler assembly that includes the burner assembly as part of the factory-furnished assembly bears a Listing Mark with the product name and information similar to (A).

A boiler assembly designed for installation of the burner in the field or at another factory bears a Listing Mark with the product name and information similar to (B), which covers the boiler only.

The burner bears a separate Listing Mark as described for gas burners (see KXWT7). The proper assemblies of boilers and burners to make unit assemblies are as specified in the boiler Listing Mark.

* *

Gas-fired Low-pressure Steam and Hot Water Boilers Certified for Canada (KVUY7)

USE AND INSTALLATION

This category covers self-contained gas-fired boilers with integral burners, rated 12,500,000 Btu/h or less and 3.45 kPa inlet pressure or less, for supplying hot water or steam primarily intended for space-heating purposes as identified in the individual certifications. Hot water boilers are limited to 1.10 MPa water pressure and 121°C water temperature. Low-pressure -steam boilers are limited to 103.42 kPa steam pressure.

Gas-fired, low-pressure steam and hot water boilers in this category are intended to be installed in accordance with the instructions and markings, including specified gas supply, on the appliance and with the current edition of CAN/CSA-B149.1, "Natural Gas and Propane Installation Code." CAN/CSA-B149.1 specifies that vents constructed using plastic piping shall comply with ULC-S636, "Type BH Gas Venting Systems." This requirement includes standard vents and vent fittings, including but not limited to, transitions and termination kits.

BOILER CATEGORIES

Boilers of other than the direct-vent type are divided into four categories based on the pressure produced in the vent and the flue loss:

Category I – A boiler that operates with a non-positive vent static pressure and with a flue loss no less than 17%.
Category II – A boiler that operates with a non-positive vent static pressure and with a flue loss less than 17%.
Category III – A boiler that operates with a positive vent static pressure and with a flue loss no less than 17%.
Category IV – A boiler that operates with a positive vent static pressure and with a flue loss less than 17%.

Boilers may also be of the direct-vent type.

ADDITIONAL INFORMATION

For additional information, see Boiler Assemblies Certified for Canada (KVFT7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.13/CSA 4.9, "Gas-Fired Low Pressure Steam and Hot Water Boilers."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation "ANS Z21.13(+) CSA 4.9(+)-(++) Low-Press. Boiler."

(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

Gas-oil-fired Boiler Assemblies Certified for Canada (KWGZ7)

USE AND INSTALLATION

This category covers factory-built, gas-oil-fired boiler assemblies intended for commercial or industrial use and for use with standard fuel gases, such as propane and natural gas, and standard grade fuel oils as specified in ANSI/ASTM D396, ''Standard Specification for Fuel Oils.'' A gas-oil-fired boiler assembly may be furnished either as a unit assembly with a factory-installed gas-oil burner or in two segments, one the boiler assembly and the other the gas-oil burner, each factory built to accommodate the other.

These boiler assemblies are intended to be installed in accordance with the markings on the equipment and the installation instructions provided with the equipment, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate local installation codes.

The minimum clearance markings may be in the form of symbols, Form designations (for typical installations) and abbreviations as noted under Boiler Assemblies Certified for Canada (KVFT7). This information is also included in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Boiler Assemblies Certified for Canada (KVFT7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-B140.7, ''Oil-Burning Equipment: Steam and Hot Water Boilers,'' and CSA/CAN1-3.1, ''Industrial and Commercial Gas-Fired Package Boilers.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names and information as appropriate:

(A) ''Gas-Oil-fired Boiler Assembly. For Use With Integral Primary Safety Controls.''

(B) ''Boiler Assembly. For Use Only With [Company Name] Listed Gas-Oil Burner Model(s) ____. Max Input – Oil ____ Gals Per Hour, Gas ____ BTU Per Hour. Refer to Burner Label for Control and Fuel Specifications.''

A gas-oil-fired boiler assembly that includes the burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information similar to (A).

A boiler assembly designed for installation of the burner in the field or at another factory bears a Listing Mark with the product name and information similar to (B), which covers the boiler only. The burner bears a separate Gas-fired Listing Mark as described for gas-oil burners (see KYKR7). The proper assemblies of boilers and burners to make unit assemblies are as specified in the boiler Listing Mark.

Oil-fired Boiler Assemblies Certified for Canada (KWUX7)

USE AND INSTALLATION

This category covers factory-built, oil-fired boiler assemblies intended for commercial and industrial use and for use with standard grade fuel oils as specified in CSA B140.0, ''Oil-Burning Equipment: General Requirements,'' and CAN/CGSB 3.2, ''Heating Fuel Oil.'' An oil-fired boiler assembly may

Oil-fired Boiler Assemblies Certified for Canada (KWUX7)−*Continued*

be furnished either as a unit assembly with a factory-installed oil burner or in two segments, one the boiler assembly and the other the oil burner, each factory built to accommodate the other.

These boiler assemblies are intended to be installed in accordance with the markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate Canadian installation codes and standards and local codes.

The minimum clearance markings may be in the form of symbols, Form designations (for typical installations) and abbreviations as noted under Boiler Assemblies Certified for Canada (KVFT7). This information is also included in the individual Listings.

RELATED PRODUCTS

See Oil Burners Certified for Canada (KYXZ7) and Gas-Oil-fired Boiler Assemblies Certified for Canada (KWGZ7).

ADDITIONAL INFORMATION

For additional information, see Boiler Assemblies Certified for Canada (KVFT7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B140.7, ''Oil-Burning Equipment: Steam and Hot Water Boilers.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names and information as appropriate:

(A) ''Oil-fired Boiler Assembly. For Use With Integral Primary Safety Controls. Oil Not Heavier Than No. ____.''

(B) ''Boiler Assembly. For Use Only With [Company Name] Listed Oil Burner Model(s) ____. Max Input ____ Gals Per Hour. Refer to Burner Label for Control and Fuel Specifications.''

An oil-fired boiler that includes the burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information similar to (A).

A boiler assembly designed for installation of the burner in the field or at another factory bears a Listing Mark with the product name and information similar to (B), which covers the boiler only. The burner bears a separate Listing Mark as described for oil burners (see KYXZ7). The proper assemblies of boilers and burners to make unit assemblies are as specified in the boiler Listing Mark.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Solid-fuel-fired Hydronic Heating Appliances and Boiler Assemblies Certified for Canada (KXBW7)

USE AND INSTALLATION

This category covers factory-built, manually and/or automatically fueled, solid-fuel-fired hydronic heating appliances and boiler assemblies intended to burn solid fuels, such as wood, coal, or any other biomass fuel, as specified by the manufacturer and as indicated in the individual certifications. These appliances are provided with an integral chimney and termination or intended for connection to an approved chimney, suitable for use with residential type and building heating appliances that burn solid fuel. They are intended for installation in accordance with CAN/CSA-B365, ''Installation Code for Solid Fuel Burning Appliances and Equipment.''

A hydronic heating appliance is defined as an appliance that maintains a constant atmospheric internal working pressure (nonpressurized vessel) and is designed to heat a liquid, such as water, that is circulated between a heating load and the heating source (appliance).

A boiler is defined as a closed vessel in which water or some other liquid is heated or in which steam is generated or superheated, under pressure or vacuum, by direct application of heat.

The installation is intended to be accomplished by a qualified agency (one who is engaged in, and is responsible for, or is thoroughly familiar with the installation and operation of solid-fuel-burning heating appli-

Solid-fuel-fired Hydronic Heating Appliances and Boiler Assemblies Certified for Canada (KXBW7)−*Continued*

ances, who is experienced in such work, familiar with all precautions required, and has complied with all the requirements of the Authority Having Jurisdiction).

The installation is intended to be in strict accordance with the manufacturer's installation instructions furnished with the solid-fuel-fired appliance, and with the clearances to combustible material not less than marked on the unit. The type of floor (combustible or noncombustible) on which the appliance may be installed is also marked.

When the boiler assembly is permitted to be installed on a combustible floor, the floor beneath the boiler assembly is to be covered with insulating, noncombustible floor protection as specified in the manufacturer's instructions and in CAN/CSA-B365.

The chimney connector of the appliance should be installed to provide clearances to combustible material not less than specified in the individual certifications and marked on the unit.

ADDITIONAL INFORMATION

For additional information, see Boiler Assemblies Certified for Canada (KVFT7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-B366.1, "Solid-Fuel-Fired Central Heating Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydronic Heating Appliance," "Solid Fuel Boiler" or "Solid Fuel-fired Boiler Assembly."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial/industrial Gas Burners Certified for Canada (KXWT7)

USE AND INSTALLATION

This category covers commercial/industrial gas burners with input ratings over 400,000 Btu/h (117.23 kW) intended for installation in heating appliances, such as boilers, furnaces, heaters, ovens, water heaters, incinerators, etc. These gas burners are provided with primary safety controls as indicated in the Listing Mark, permitting their operation without a competent attendant being present while the burner is firing.

These burners may be a one-piece assembly or may include subassemblies such as a main electrical control panel, etc., intended for remote mounting as indicated in the individual Listings. When a burner includes subassemblies intended for remote mounting, the subassemblies specifically Listed are intended to be employed unless otherwise specified on the marking on the burner.

These burners are intended to be installed in accordance with the markings on the burner and the installation instructions provided with the burner, and the following as applicable:

- the current edition of CAN/CSA-B149.1, "Natural Gas and Propane Installation Code"
- the current edition of CAN/CSA-C22.1, "Canadian Electrical Code, Part I"
- local codes

These burners are marked with information specifying the type(s) of gas supply to which the burner is intended to be connected.

RELATED PRODUCTS

See Domestic Gas Conversion Burners Certified for Canada (KXSB7), Gas-Oil Burners Certified for Canada (KYKR7) and Oil Burners Certified for Canada (KYXZ7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA/CGA 3.4, "Industrial and Commercial Gas-Fired Conversion Burners."

UL MARK

Commercial/industrial Gas Burners Certified for Canada (KXWT7)−*Continued*

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name "Commercial/Industrial Gas Burner," and the statement "For Use With Integral Primary Safety Controls."

The Listing Mark of UL on subassemblies intended for remote mounting is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Panel Section of Gas Burner," or other appropriate product name as shown in the individual Listings.

The Listing Marks cover only the burner and appurtenant subassemblies and do not cover any appliance to which the burner may be applied.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-oil Burners Certified for Canada (KYKR7)

USE AND INSTALLATION

This category covers both domestic and commercial/industrial gas-oil burners intended for installation in heating appliances, such as boilers, furnaces, heaters, ovens, water heaters, incinerators, etc. These gas-oil burners are provided with primary safety controls as indicated in the Listing Mark, permitting their operation without a competent attendant being present while the burner is firing. These burners are intended to burn standard grade fuel oils as specified in CSA B140.0, "Oil-Burning Equipment: General Requirements."

These burners may be a one-piece assembly or may include subassemblies such as a main electrical control panel, oil or air pump set, etc., intended for remote mounting as indicated in the individual Listings. When a burner includes subassemblies intended for remote mounting, the subassemblies specifically Listed are intended to be employed unless otherwise specified on the marking on the burner.

These burners are intended to be installed in accordance with the markings on the burner and the installation instructions provided with the burner, and the following as applicable:

- the current edition of CSA B149.1, "Natural Gas and Propane Installation Code"
- the current edition of CSA B139, "Installation Code for Oil-Burning Equipment"
- the current edition of CAN/CSA-C22.1, "Canadian Electrical Code, Part I"
- local codes

These burners are marked with information specifying the type(s) of gas supply and the heaviest grade of fuel oil supply to which the burner is intended to be connected.

RELATED PRODUCTS

See Domestic Gas Conversion Burners Certified for Canada (KXSB7) and Oil Burners Certified for Canada (KYXZ7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate domestic gas-oil burners with gas-fired inputs up to and including 400,000 Btu/h (117.23 kW) are the current edition and effective addenda thereto of ANSI Z21.17/CSA 2.7, "Domestic Gas Conversion Burners," and the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA B140.2.1-1990, "Atomizing-Type Oil Burners."

The basic standards used to investigate commercial/industrial gas-oil burners with gas-fired inputs over 400,000 Btu/h (117.23 kW) are the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA/CGA 3.4, "Industrial and Commercial Gas-Fired Conversion Burners," and the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA B140.2.1-1990.

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes

Gas-oil Burners Certified for Canada (KYKR7)−*Continued*

the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name "Gas-Oil Burner," the statement "For Use With Integral Primary Safety Controls. Oil Not Heavier Than No. ____," and

(a) for gas-oil burners with inputs up to and including 400,000 Btu/h (117.23 kW), the standard designation "ANS Z21.17(+) CSA 2.7(+)-(++) Conversion Burner"
(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

or

(b) for gas-oil burners with inputs over 400,000 Btu/h (117.23 kW), the standard designation "CSA/CGA 3.4."

The Listing Mark of UL on subassemblies intended for remote mounting is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Panel Section of Gas-Oil Burner" or "Oil Pump Section of Gas-Oil Burner," or other appropriate product name as shown in the individual Listings.

The Listing Marks cover only the burner and appurtenant subassemblies and do not cover any appliance to which the burner may be applied.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Oil Burners Certified for Canada (KYXZ7)

USE AND INSTALLATION

This category covers oil burners intended for installation in heating appliances such as boilers, furnaces, heaters, ovens, water heaters, incinerators, etc. These oil burners are provided with primary safety controls as indicated in the Listing Mark, permitting their operation without a competent attendant being present while the burner is firing. These burners are intended to burn standard grade fuel oils as specified in CSA B140.0, "Oil-Burning Equipment: General Requirements," and CAN/CGSB 3.2, "Heating Fuel Oil."

These burners may be a one-piece assembly or may include subassemblies, such as a main electrical control panel, oil or air pump set, etc., intended for remote mounting as indicated in the individual Listings. When a burner includes subassemblies intended for remote mounting, the subassemblies specifically Listed are intended to be employed unless otherwise specified on the burner marking.

These burners are intended to be installed in accordance with the markings on the burner and in the installation instructions provided with the burner, and the following as applicable:

- the current edition of CSA B139, "Installation Code for Oil-Burning Equipment"
- the current edition of CAN/CSA-C22.1, "Canadian Electrical Code, Part I"
- local codes

These burners are marked with information specifying the heaviest grade of fuel oil supply to which the burner is to be connected.

RELATED PRODUCTS

BURNERS CERTIFIED FOR CANADA (KXIV7)

Domestic Gas Conversion Burners Certified for Canada (KXSB7)

USE AND INSTALLATION

This category covers domestic gas conversion burners, rated 400,000 Btu/h or less, for installation in heating appliances such as boilers, furnaces, heaters, ovens, water heaters, incinerators, etc.

The burners are intended to be installed and used in accordance with the manufacturer's instructions and CAN/CSA-B149.1, "Natural Gas and Propane Installation Code," and CAN/CSA-B149.2, "Propane Storage and Handling Code."

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.17/CSA 2.7, "Domestic Gas Conversion Burners."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation "ANS Z21.17(+) CSA 2.7(+)-(++) Conversion Burner."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CENTRAL FURNACES CERTIFIED FOR CANADA (KZLX7)

USE AND INSTALLATION

This category covers central furnaces designed for connection to a warm air supply duct system. These are independent or supplementary furnaces designed to burn gas, oil, gas or oil, solid fuel (such as wood, coal or biomass) or solid fuel in combination with electric, gas-fired, gas- or oil-fired, or oil-fired capability as indicated in the individual product categories.

These central furnaces are intended for installation on the type of floor and with clearances to combustible construction not less than indicated in the marking on the furnace. The minimum clearance markings may be in form of the following symbols and abbreviations to indicate the minimum clearances in centimeters (inches), type of flooring, when a furnace may be installed in an alcove or closet, and the total free area of the required air openings into a closet. The specified clearances are the minimum required to avoid overheating; additional clearances may be needed for accessibility. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

These furnaces are not intended for attic or outdoor installation unless so designated in the individual Listings.

Central Furnaces Certified for Canada (KZLX7)−*Continued*

These central furnaces are intended for installation in accordance with current editions of the appropriate standards as required by the province in which the appliance is being installed, such as:

- CAN/CSA-B149.1, "Natural Gas and Propane Installation Code"
- CAN/CSA-B139-2000, "Installation Code for Oil Burning Equipment"
- CAN/CSA-C22.1, "Canadian Electrical Code, Part I"
- CAN/CSA A405-1987, "Design and Construction of Masonry Chimneys and Fireplaces"
- National Building Code of Canada

Horizontal gas-, oil-, and gas-oil-fired furnaces that may be used in garages are also intended to be installed in accordance with the above referenced standards.

Installation Symbols and Abbreviations

Descriptions of symbols and abbreviations applicable to the installation of central furnaces are as follows:

A - – Clearance above top of furnace casing, bonnet or plenum

A_D - – Clearance from horizontal warm-air duct within 0.91 m (3 ft) of furnace

B - – Clearance from front of furnace. Prefix "C" to numeral indicates suitability for closet or alcove installation; prefix "A" indicates suitability for alcove installation only

C_H - – Clearance from single wall metal chimney or vent connector measured horizontally or below connector

C_V - – Clearance from single wall metal chimney or vent connector measured vertically or above connector

D - – Clearance from back of furnace

E_L - – Clearance from left side of furnace

E_R - – Clearance from right side of furnace

E_P - – Clearance from any side of furnace plenum (downflow furnaces have plenum beneath furnace). **E_P** is only specified for furnaces to be equipped with external plenums for connection to duct systems; its omission indicates furnace equipped with integral plenum and if furnace is otherwise installed, clearances specified are not valid

F - – Indicates type of flooring: NC = Noncombustible, C = Combustible; numeral indicates minimum clearance below suspended appliances to combustible material

G - – Total minimum free area, in square mm (square inches), of air openings into a closet

Typical Installation Clearances for Gas-, Gas-Oil-, or Oil-fired Central Furnaces

When a gas-, gas-oil-, or oil-fired central furnace is Listed for typical installation clearances, the Listing may refer to the Form designation. Form designations for typical installation clearances for these types of furnaces installed in rooms are indicated in the table below. Clearances may be indicated in the individual Listings. If a furnace designated as suitable for alcove or closet installation is installed in a room which is large in relation to the size of the furnace, it may be installed at the minimum clearances specified for closets and alcoves or as indicated by the designated optional Form.

Form	Standard Minimum Clearances (cm)									
	A	A_D	B	C_H	C_V	D	E_L	E_R	E_P	F
I	2.54	2.54	60.96	45.72	45.72	15.24	15.24	15.24	2.54*	NC
Ia	2.54	2.54	60.96	45.72	45.72	15.24	15.24	15.24	2.54*	C
IIa	15.24	2.54	60.96	45.72	45.72	15.24	15.24	15.24	2.54	C or 0
IIb	15.24	2.54	60.96	45.72	45.72	15.24	15.24	15.24	2.54	15.24
III	45.72	45.72	121.92	45.72	45.72	45.72	45.72	45.72	45.72	NC
IIIa	45.72	45.72	121.92	45.72	45.72	45.72	45.72	45.72	45.72	C
IIIb	45.72	45.72	121.92	45.72	45.72	45.72	45.72	45.72	45.72	45.72
XI	2.54	2.54	45.72	15.24	15.24	15.24	15.24	15.24	2.54*	NC
XIa	2.54	2.54	45.72	15.24	15.24	15.24	15.24	15.24	2.54*	C
XIIa	15.24	2.54	45.72	15.24	15.24	15.24	15.24	15.24	2.54	C or 0
XIIb	15.24	2.54	45.72	15.24	15.24	15.24	15.24	15.24	2.54	15.24

* For downflow furnaces the minimum clearance is 15.24 cm unless otherwise indicated in the individual Listings

Furnaces Listed for Forms I, Ia, IIa, IIb, III, IIIa and IIIb are low-heat appliances intended for flue connection to suitable chimneys

Furnaces Listed for Forms XI, XIa, XIIa and XIIb are low-heat gas appliances suitable for venting to Type B gas vents

* *

Gas-fired Central Furnaces Certified for Canada (KZZV7)

USE

Gas-fired Central Furnaces Certified for Canada (KZZV7)−*Continued*

This category covers automatically operating, gas-fired central furnaces designed to supply heated air through ducts to spaces remote from or adjacent to the furnace location, and intended for use in residential, commercial, and industrial structures. This includes furnaces for direct vent and outdoor installations with inputs up to and including 400,000 Btu/h (117.23 kW). A cooling unit may be included with these furnaces.

INSTALLATION

These central furnaces are intended to be installed in accordance with the markings on the appliance and in the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate Canadian installation codes and standards, and local codes. CAN/CSA-B149.1, "Natural Gas and Propane Installation Code," specifies vents constructed using plastic piping shall comply with ULC-S636, "Type BH Gas Venting Systems." This requirement includes standard vents and vent fittings, including but not limited to, transitions and termination kits.

The minimum clearance markings may be in the form of symbols and abbreviations as noted under Central Furnaces Certified for Canada (KZLX7). This information is also included in the individual Listings.

These furnaces are marked with information specifying the type(s) of gas supply to which the product is intended to be connected.

These furnaces may be furnished either as a unit assembly with a factory-installed gas burner or in two segments, one the central furnace and the other the gas burner, each factory-built to accommodate the other. If furnished in two segments, the proper assembly of furnace and burner to make a unit assembly is specified on the cross-reference marking described under **UL MARK** below.

Furnaces with inputs up to and including 400,000 Btu/h (117.23 kW) that are suitable for installation indoors only, outdoors only, or either are so indicated by a marking on the product.

RELATED PRODUCTS

See Heating and Cooling Equipment Certified for Canada (LZFE7), Gas-Oil-fired Central Furnaces Certified for Canada (LANT7), Oil-fired Central Furnaces Certified for Canada (LBBR7), Solid Fuel Combination Central Furnaces Certified for Canada (LBEV7) and Solid-fuel-fired Central Furnaces Certified for Canada (LBHZ7).

Products Verified for energy efficiency are covered under Furnaces, Gas and Oil Fired Verified for Energy Efficiency (ZYOD).

ADDITIONAL INFORMATION

For additional information, see Central Furnaces Certified for Canada (KZLX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate gas-fired central furnaces with inputs up to and including 400,000 Btu/h (117.23 kW) is the current edition and effective addenda thereto of ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces."

The basic standard used to investigate gas-fired central furnaces with inputs over 400,000 Btu/h (117.23 kW) is the current edition and effective addenda thereto of CGA 3.2-1976, "Industrial and Commercial Gas-Fired Package Furnaces."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and

1

(a) for furnaces with inputs up to and including 400,000 Btu/h (117.23 kW), the standard designation "ANS Z21.47(+) CSA 2.3(+)-(++) Central Furn"

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

or

(b) for furnaces with inputs over 400,000 Btu/h (117.23 kW), the standard designation "CGA 3.2-1976" and the product name "Central Furnace"

and

2

(a) for gas-fired central furnaces that include the burner as part of the factory-furnished assembly, the statement "Gas-Fired Furnace. For Use With _____ Primary Safety Controls."

or

(b) for gas-fired central furnaces designed for installation of the burner in the field or at another factory, the statement "Gas-Fired Furnace For Use Only With [Company Name] Labeled Gas Burner Model(s) _____, Max Input _____ BTU Per Hour. Refer to Burner Label for Control and Fuel Specifications."

Gas-fired Central Furnaces Certified for Canada (KZZV7)−*Continued*

For this situation, the UL Listing Mark on the furnace covers the furnace only. The burner bears a separate UL Listing Mark as described under Domestic Gas Conversion Burners Certified for Canada (KXSB7) or Commercial/Industrial Gas Burners Certified for Canada (KXWT7).

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-fired Crop-drying Equipment Certified for Canada (LABI7)

USE AND INSTALLATION

This category covers direct-gas-fired equipment with inputs up to and including 10,000,000 Btu/hr (3000 kW) intended for drying farm crops.

The complete crop dryers are intended to be installed in accordance with the installation instructions and markings on the appliance, and are intended to be connected to a gas supply of the type specified on the appliance. The equipment is intended to be installed in accordance with the current edition of CSA B149.1, ''Natural Gas and Propane Installation Code.''

ADDITIONAL INFORMATION

For additional information, see Central Furnaces Certified for Canada (KZLX7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of CSA 3.8, ''Gas-Fired Equipment for Drying Farm Crops.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Crop Dryer.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-oil-fired Central Furnaces Certified for Canada (LANT7)

USE AND INSTALLATION

This category covers gas-oil-fired central furnaces, including forced-air furnaces of the downflow, horizontal, and upflow types, for indoor and outdoor installations.

These central furnaces are intended to be installed in accordance with the markings on the appliance and in the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate Canadian installation codes and standards, and local codes.

The minimum clearance markings may be in the form of symbols and abbreviations as noted under Central Furnaces Certified for Canada (KZLX7). This information is also included in the individual Listings.

These furnaces may be furnished either as a unit assembly with a factory-installed gas-oil burner or in two segments, one the central furnace and the other the gas-oil burner, each factory built to accommodate the other. If furnished in two segments, the proper assembly of furnace and burner to make a unit assembly is specified on the cross-reference marking described under **UL MARK** below.

Furnaces suitable for indoor or outdoor installation or for outdoor installation only are so indicated by a marking on the product. Also, furnaces with gas-fired inputs up to and including 400,000 Btu/h (117.23 kW) that are suitable for installation indoors only are so indicated by a marking on the product.

Products Verified for energy efficiency are covered under Furnaces, Gas and Oil Fired Verified for Energy Efficiency (ZYOD).

ADDITIONAL INFORMATION

For additional information, see Central Furnaces Certified for Canada (KZLX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate gas-oil-fired central furnaces with gas-fired inputs up to and including 400,000 Btu/h (117.23 kW) are the current edition and effective addenda thereto of ANSI Z21.47/CSA 2.3, ''Gas-Fired Central Furnaces,'' and the current edition and effective addenda, Amendments, Bulletins, Notices, Technical Information Letters thereto of CSA B140.4 (1974), ''Oil-Fired Warm Air Furnaces.''

The basic standard used to investigate gas-oil-fired central furnaces with gas-fired inputs over 400,000 Btu/h (117.23 kW) are the current edition and effective addenda thereto of CGA 3.2 (1976), ''Industrial and Commercial Gas-Fired Package Furnaces,'' and the current edition and effective addenda, Amendments, Bulletins, Notices, Technical Information Letters thereto of CSA B140.4 (1974).

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and

1

(a) for furnaces with inputs up to and including 400,000 Btu/h (117.23 kW), the standard designation ''ANS Z21.47(+) CSA 2.3(+)-(++) Central Furn''
(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

or

For Use Only With [Company Name] Listed Gas-Oil Burner Model(s) _____. Max Input – Oil _____ Gals Per Hour, Gas _____ BTU Per Hour. Refer to Burner Label for Control and Fuel Specifications.''
For this situation, the UL Listing Mark on the furnace covers the furnace only. The burner bears a separate UL Listing Mark as described under Gas-Oil Burners Certified for Canada (KYKR7).

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Oil-fired Central Furnaces Certified for Canada (LBBR7)

USE AND INSTALLATION

This category covers oil-fired central furnaces, including forced-air furnaces of the downflow, horizontal and upflow types, for indoor and outdoor installations.

These central furnaces are intended to be installed in accordance with the markings on the appliance and in the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate Canadian installation codes and standards, and local codes.

The minimum clearance markings may be in the form of symbols and abbreviations as noted under Central Furnaces Certified for Canada (KZLX7). This information is also included in the individual Listings.

These furnaces may be furnished either as a unit assembly with a factory-installed oil burner or in two segments, one the central furnace and the other the oil burner, each factory built to accommodate the other.

Oil-fired Central Furnaces Certified for Canada (LBBR7)−*Continued*

If furnished in two segments, the proper assembly of furnace and burner to make a unit assembly is specified on the cross-reference marking described under **UL MARK** below.

Furnaces suitable for indoor or outdoor installation or for outdoor installation only are so indicated by a marking on the product.

Products Verified for energy efficiency are covered under Furnaces, Gas and Oil Fired Verified for Energy Efficiency (ZYOD).

ADDITIONAL INFORMATION

For additional information, see Central Furnaces Certified for Canada (KZLX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda, Amendments, Bulletins, Notices, Technical Information Letters thereto of CSA B140.4-1974, ''Oil-Fired Warm Air Furnaces.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and

(a) for oil-fired central furnaces that include the burner as part of the factory-furnished assembly, the product name and statement ''Oil-fired Furnace. For Use With Integral Primary Safety Controls. Oil Not Heavier Than No. _____.''

or

(b) for oil-fired central furnaces designed for installation of the burner in the field or at another factory, the product name and statement ''Furnace. For Use Only With [Company Name] Listed Oil Burner Model(s) _____. Max Input _____ Gals Per Hour. Refer to Burner Label for Control and Fuel Specifications.''

For this situation, the Listing Mark on the furnace covers the furnace only. The burner bears a separate Listing Mark as described under Oil Burners Certified for Canada (KYXZ7).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Oil-fired Crop-drying Equipment Certified for Canada (LBDG7)

USE AND INSTALLATION

This category covers indirect-fired crop-drying equipment only. These appliances may be either complete units or retrofit units.

Retrofit crop-dryer units are intended to be installed only in the crop-dryer models identified in the installation instructions. The complete crop dryers are intended to be installed in accordance with the installation instructions and markings on the appliance, and are intended to be connected to an oil supply of the type specified on the appliance. The equipment is intended to be installed in accordance with the current edition of CSA B139, ''Installation Code for Oil-Burning Equipment.''

ADDITIONAL INFORMATION

For additional information, see Central Furnaces Certified for Canada (KZLX7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

Products in this category comply with the requirements outlined in Technical Information Letter R-12, dated August 22, 2001.

The basic standards used to investigate products in this category are the current edition and effective addenda thereto of CSA B140.4, ''Oil-Fired Warm Air Furnaces,'' and CSA B140.0, ''Oil-Burning Equipment: General Requirements.''

The following sections of CSA B140.4 are waived: 4.16.3 Simulated Life Test, 7.3.1.1 Rated Output Capacity and 7.3.1.2 Maximum Flue Gas Loss. The following section of CSA B140.4 is revised: 7.3.1.1 Air Temperature Rise - The air temperature rise shall be as recommended by the manufacturer when the appliance is tested in accordance with the procedures of clause 7.3.2.

UL MARK

Oil-fired Crop-drying Equipment Certified for Canada (LBDG7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Retrofit Crop-dryer Unit'' or ''Crop Dryer.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Solid-fuel-combination Central Furnaces Certified for Canada (LBEV7)

USE AND INSTALLATION

This category covers combination electric and solid-fuel-fired, gas- and solid-fuel-fired, or oil- and solid-fuel-fired central furnaces designed for connection to a supply and return air duct system. The installation should be accomplished by a qualified agency (one who is engaged in, and is responsible for, or is thoroughly familiar with the installation and operation of solid-fuel-burning heating appliances, who is experienced in such work, familiar with all precautions required, and has complied with all the requirements of the Authority Having Jurisdiction). The type of solid fuel (wood and/or coal) and the combination fuel (gas or oil) which the appliance is designed to burn is indicated in the individual Listings.

The combination gas- and solid-fuel-fired central furnaces covered under this category are provided with a manual reset device that will shut off gas to the main burner in the event of sustained flue gas spillage.

The installation should be in strict accordance with the manufacturer's installation instructions furnished with the solid-fuel-combination central furnace. The chimney connectors must be connected to a chimney suitable for use with residential type and building-heating appliances that burn solid fuel.

When the furnace is permitted to be installed on a combustible floor, the floor beneath the furnace is to be covered over an area extending at least 450 mm (18 in.) beyond the fuel charging area and 200 mm (8 in.) beyond other sides with brick, concrete, hollow metal, stone, tile or other appropriate material as required by the current edition of CAN/CSA-B365, ''Installation Code for Solid-Fuel-Burning Appliances and Equipment.''

ADDITIONAL INFORMATION

For additional information, see Central Furnaces Certified for Canada (KZLX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are the current editions of CAN/CSA-B366.1, ''Solid-Fuel-Fired Central Heating Appliances,'' CAN/CSA-C22.2 No. 23.1, ''Electric Furnaces in Combination with Solid Fuel Fired Furnaces,'' and ANSI Z21.47/CSA 2.3, ''Gas-Fired Central Furnaces.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names and information as appropriate:

(A) ''Electric and Solid Fuel-fired Central Furnace.''

(B) ''Gas-Solid Fuel-fired Central Furnace. For Use With Integral Primary Safety Controls.''

(C) ''Gas-Solid Fuel-fired Central Furnace. For Use Only With [Company Name] Listed Gas Burner Model(s) ____. Max Input ____ BTU Per Hour. Refer to Burner Marking for Control and Fuel Specifications.''

(D) ''Oil-Solid Fuel-fired Central Furnace. For Use With Integral Primary Safety Controls. Oil Not Heavier Than No. ____. ''

(E) ''Oil-Solid Fuel-fired Central Furnace. For Use Only With [Company Name] Listed Oil Burner Model(s) ____. Max Input ____ Gal Per Hour. Refer to Burner Marking for Control and Fuel Specifications.''

(F) ''Gas- or Oil- and Solid Fuel-fired Central Furnace. For Use Only With Listed [Company Name and Model] Gas Burner or [Company Name and Model] Oil Burner. Max Input Firing Gas ____ BTU Per Hour, Firing Oil _____ Gal Per Hour. Refer to Burner Marking for Control and Fuel Specifications.''

A combination-solid-fuel central furnace that includes an electric heater(s) bears a Listing Mark with the product name similar to (A).

Solid-fuel-combination Central Furnaces Certified for Canada (LBEV7)−*Continued*

A combination-solid-fuel central furnace that includes the gas or oil burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information similar to (A) or (C), as applicable.

A combination-solid-fuel central furnace designed for installation of only a gas burner or only an oil burner in the field or at another factory bears a Listing Mark with the product name and information similar to (B) or (D), as applicable.

A combination-solid-fuel central furnace designed for installation of either a gas or oil burner in the field or at another factory bears a Listing Mark with the product name and information similar to (E).

The Listing Marks (B), (D) and (E) cover the furnace only. The burner bears a separate Listing Mark as described for gas burners (see KXWT7) or oil burners (see KYXZ7). The proper assembly of a furnace and burner to make up a unit assembly is as specified in the furnace Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Solid-fuel-fired Central Furnaces Certified for Canada (LBHZ7)

USE AND INSTALLATION

This category covers solid-fuel-burning air heaters designed for connection to a supply-and-return air duct system. Solid fuel is considered to be wood, coal or shelled corn fuels. The type of solid fuel which the appliance is designed to burn is indicated in the individual certifications.

The installation is intended to be accomplished by a qualified agency (one who is engaged in, and is responsible for, or is thoroughly familiar with the installation and operation of solid-fuel-burning heating appliances, who is experienced in such work, familiar with all precautions required, and has complied with all the requirements of the Authority Having Jurisdiction).

The installation is intended to be in strict accordance with the manufacturer's installation instructions furnished with the solid-fuel-fired central furnace. The chimney connector should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

When the furnace is permitted to be installed on a combustible floor, the floor beneath the furnace should be covered over an area extending at least 450 mm (18 in.) beyond the fuel-charging area, and 200 mm (8 in.) beyond other sides with brick, concrete, hollow metal, stone, tile or other appropriate material as required by CAN/CSA-B365 (1991), ''Installation Code for Solid-Fuel-Burning Appliances and Equipment.''

RELATED PRODUCTS

See Solid-fuel Combination Central Furnaces Certified for Canada (LBEV7).

ADDITIONAL INFORMATION

For additional information, see Central Furnaces Certified for Canada (KZLX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-B366.1 (1991), ''Solid-Fuel-Fired Central Heating Appliances.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Solid Fuel-fired Central Furnace.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COOKING APPLIANCES, GAS FIRED, HOUSEHOLD CERTIFIED FOR CANADA (LCCZ7)

USE

This category covers cooking appliances intended for household use, using only gas or a combination of gas and electric for cooking. These include ranges, ovens, broilers, griddles, counter-mounted cooking units, and the like, as well as combinations of these in one appliance as identified in the individual certifications. These appliances are suitable for use in manufactured (mobile) homes or recreational park trailers.

This category does not cover compact cooking gas appliances intended for use in recreational vehicles (including recreational park trailers) as defined in the current edition and effective addenda thereto of ANSI Z21.1, ''Household Cooking Gas Appliances.''

This category does not cover cooking gas appliances intended for use in a marine environment such as aboard boats or ships.

Cooking Appliances, Gas Fired, Household Certified for Canada (LCCZ7)−*Continued*

INSTALLATION

Gas-fired household cooking appliances are intended to be installed in accordance with the markings on the appliance and in the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, spacings between individual appliances, proper vent installation, the specific type of gas vent to be used, and clearances from a vent, and the following as applicable:

- the current edition of CSA B149.1, ''Natural Gas and Propane Installation Code,''
- the current edition of CAN/CSA C22.1, ''Canadian Electrical Code, Part I'' (CEC),
- the current edition of CAN/CSA-Z240 MH, ''Mobile Homes,''
- the current edition of ANSI A119.5, ''Standard for Recreational Park Trailers,''
- local codes.

These appliances may be floor-supported, built-in, drop-in, or slide-in units.

These appliances are marked with information specifying the type(s) of gas supply to which the product is intended to be connected.

Appliances with electrical equipment have a current limitation of 20 A. Appliances using only gas for cooking are designed for connection to a nominal 120 V electrical supply. Appliances using gas and electric for cooking are designed for connection to either a nominal 120 V, 240 V or less, or 120/240 V or less (four-wire) electrical supply.

The flexible metallic conduit and high temperature insulated leads provided with some appliances are evaluated as a component part of the appliance. Unless a conduit fitting or outlet box is installed at the factory, tape or other means is provided at the end of the conduit to protect the conductors during shipment. This protection is not intended to take the place of a conduit bushing or fitting which is required by the CEC.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by the use of these appliances has been investigated.

The thermal efficiency of these appliances has not been investigated (see Products Verified for Energy Efficiency in Accordance with Canadian Regulations or Standards [ZYAA]).

RELATED PRODUCTS

For household-type, all-electric, freestanding, cord-connected ranges and permanently connected built-in ranges, ovens and counter-mounted cooking units, or any combination of the above, having a rating not exceeding 250 V and 21 kW, see Heaters, Ranges, Household Electric Certified for Canada (KRMX7).

For cooking equipment intended for commercial indoor use, see Commercial Cooking Appliances Certified for Canada (KNGT7).

For custom-built commercial food serving and/or cooking equipment that includes various combinations of electric cooking and food warming appliances, see Custom-built Food Service Equipment Certified for Canada (KNNS7).

For gas-fired food service equipment intended for commercial use, see Gas-fired Food Service Equipment Certified for Canada (LGQX7).

For microwave cooking appliances that have been investigated and found suitable for built-in installation, side-by-side mounting, stacking or field installation over electric or gas appliances, see Microwave Cooking Appliances Certified for Canada (KQSQ7).

For fans and accessories intended for use over residential gas and electric cooking equipment, see Fans, Electric Certified for Canada (GPWV7).

For electric or gas cooking equipment-refrigerator combinations, see Kitchen Units, Refrigerated Certified for Canada (SJPT7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

Cooking Appliances, Gas Fired, Household Certified for Canada (LCCZ7)−*Continued*

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.1, ''Household Cooking Gas Appliances,'' supplemented by CGA Interim Requirement 58 (IR 58). Gas-fired cooking appliances that also use electrical energy for cooking are also investigated to UL 858, ''Household Electric Ranges,'' per a reference in ANSI Z21.1.

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designations ''ANS Z21.1(+)-(++) Household Cooking Appl.'' and ''CGA IR 58, 1995 Household Cooking Appl.''

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COOKING APPLIANCES, GAS FIRED, OUTDOOR CERTIFIED FOR CANADA (LCGL7)

USE AND INSTALLATION

This category covers gas-fired cooking appliances intended for outdoor use only. These include barbecues, broilers, grills, top and surface units (side burners), or any combination thereof, as identified in the individual certifications. These appliances may be either portable or stationary, and are provided with a means of support by the manufacturer, as part of the appliance.

This category also covers outdoor cooking gas appliances intended for mounting to the exterior of a recreational vehicle for connection to the recreational vehicle's low-pressure LP-gas supply system. It does not cover outdoor cooking gas appliances intended for installation in the interior living space of a recreational vehicle.

These appliances are not intended for installation in or on boats.

Outdoor cooking gas appliances are intended to be installed in accordance with the markings on the appliance pertaining to clearance and types of surfaces. Appliances suitable for built-in installation or side-by-side mounting are indicated in the installation instructions. These appliances are intended for connection to a fixed fuel piping system or a self-contained liquefied petroleum gas supply system. Appliances intended for connection to a self-contained liquefied petroleum gas supply system with an integral cylinder mounting means are designed to accommodate a single cylinder, vertically mounted, with a maximum size of:

20 lb (9.1 kg) of fuel for outdoor cooking gas appliances with input ratings less than 80,000 Btu/h

30 lb (13.6 kg) of fuel for outdoor cooking gas appliances with input ratings greater than or equal to 80,000 Btu/h

Applicable codes and Authorities Having Jurisdiction should be consulted as to the requirements for these appliances with respect to installation and connection to the fuel supply.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by the use of these appliances has been investigated.

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.58/CSA 1.6, ''Outdoor Cooking Gas Appliances.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z21.58(+) CSA 1.6(+)-(++) Outdoor Cooking Gas Appliances.''

COOKING APPLIANCES, GAS FIRED, OUTDOOR, SPECIALTY CERTIFIED FOR CANADA (LCGQ7)

USE AND INSTALLATION

This category covers cooking specialty gas appliances for outdoor use only. These include smokers, table-top grills, or any combination thereof, as identified in the individual certifications. These appliances may be either portable or stationary, and are provided with a means of support by the manufacturer, as part of the appliance.

Outdoor cooking specialty gas appliances are to be installed in accordance with the marking on the appliance pertaining to clearance and types of surfaces. Appliances suitable for built-in installation or side-by-side mounting are indicated in the installation instructions. These appliances are intended for connection to a fixed fuel piping system or a self-contained liquefied petroleum gas supply system. Appliances for connection to a self-contained system incorporate means for attachment of a single cylinder with a maximum size of 20 lbs (9.1 kg) of fuel. Applicable codes and Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to installation and connection to the fuel supply.

These products are not intended for installation in or on recreational vehicles and/or boats.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by the use of these appliances has been investigated.

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.89/CSA 1.18, ''Outdoor Cooking Specialty Gas Appliances.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z21.89(+) CSA 1.18(+)-(++) Outdoor Cooking Specialty Gas Appliance.''

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CAMPING EQUIPMENT, GAS FIRED, PORTABLE TYPE CERTIFIED FOR CANADA (LCHF7)

USE AND INSTALLATION

This category covers portable type gas-fired camp heaters, lights and stoves intended solely for use outdoors as camping equipment, as noted in the individual certifications. These products are intended for use with propane, butane, liquefied petroleum gas and any combination thereof as marked on the appliance. Camp heaters and lights have input ratings of 12,000 Btu/h (3.5 kW) or less per burner.

These appliances are not intended for indoor use. These products are not intended for installation in or on recreational vehicles and/or boats.

These appliances are intended to be used in accordance with the marking on the appliance pertaining to clearance to combustible materials. These appliances are intended for connection to self-contained disposable

Camping Equipment, Gas Fired, Portable Type Certified for Canada (LCHF7)−*Continued*

fuel cylinders, self-contained refillable fuel cylinders, or to remote fuel cylinders. These appliances are not intended for connection to a fixed fuel piping system.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by the use of these appliances has been investigated.

COOKING APPLIANCES, WOOD FIRED CERTIFIED FOR CANADA (LCJX7)

USE AND INSTALLATION

This category covers wood-fired cooking appliances, including broilers, ranges, rotisseries, ovens, and the like, as identified in the individual Listings, and intended for use in commercial establishments such as restaurants or for outdoor residential use. These appliances are intended to burn solid wood only, including particulate wood products. Some equipment may be provided with door assemblies, floor protectors and wall shields, adjustable flue gas dampers, or other optional features as specified in the manufacturer's installation and operating instructions.

This equipment is intended to be installed in accordance with appropriate installation standards, such as the current editions of:

-
- CAN/CSA-B365-2001, "Installation Code for Solid-Fuel-Burning Appliances and Equipment"
- CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC)
- "National Building Code of Canada"
- Local codes

Installation is intended to be accomplished by a qualified agency – one who is engaged in and is responsible for (or is thoroughly familiar with) the installation and operation of solid fuel-burning heating and/or cooking appliances and who is experienced in such work, familiar with all precautions required, and has complied with all the requirements of the Authority Having Jurisdiction.

Installation is intended to be in strict accordance with the markings on the appliance and the manufacturer's installation instructions furnished with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation. Equipment suitable for built-in installation, side-by-side mounting, or stacking is indicated in the installation instructions. Some equipment is intended to be placed on noncombustible floors, or on combustible floors covered with an insulating, noncombustible floor protector as specified in the manufacturer's installation instructions and CAN/CSA-B365-2001, as applicable.

All equipment, but especially equipment that may emit grease laden vapors, is intended to be provided with an exhaust ventilating system in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations." See Exhaust Hoods with Exhaust Dampers Certified for Canada (YXZR7), Exhaust Hoods Without Exhaust Dampers Certified for Canada (YYCW7) or Grease Ducts for Restaurant Cooking Appliances Certified for Canada (YYGQ7). Exhaust hood assemblies covered under these categories are intended to be installed in accordance with the manufacturer's installation instructions, and ANSI/NFPA 96 and the CEC, as applicable. All exhaust hoods are marked relative to minimum exhaust airflow and maximum supply airflow directed into the hood and/or out the bottom (if provided). Airflow rates are established under draft-free laboratory conditions. Greater exhaust and/or lesser supply airflow rates may be required for each specific installation to obtain complete vapor and smoke removal.

Cooking Appliances, Wood Fired Certified for Canada (LCJX7)−*Continued*

UNEVALUATED FACTORS

The structural and sanitation properties of the appliance, the toxicity of the products of combustion, the physiological effects on persons consuming food products prepared or served by use of these appliances, the structures in which the appliance may be installed, and the toxicity of coatings have not been investigated.

RELATED PRODUCTS

See Gas-Wood-fired Food Service Equipment Certified for Canada (LGRC7), Gas-fired Food Service Equipment Certified for Canada (LGQX7) and Heaters, Ranges, Household, Electric Certified for Canada (KRMX7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are the current editions of ULC-S627-2000, "Space Heaters for Use with Solid Fuels," and ULC/ORD-C1482-1990, "Space Heaters for Use with Particulate Solid Fuels."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name, such as "Wood-fired Oven," or other appropriate product name as shown in the individual Listings, and for appliances that require additional parts to complete the installation, the statement "For Use With [Company Name] Listed Wood-fired Equipment Parts." (+)

(+) Each additional part includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wood-fired Equipment Part."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DIRECT-FIRED INDUSTRIAL HEATERS CERTIFIED FOR CANADA (LCQV7)

USE AND INSTALLATION

This category covers direct-fired industrial heaters intended for use exterior to buildings or in well-ventilated commercial or industrial occupancies where unvented open-flame combustion equipment is permitted. All air to the heater is intended to be ducted directly from outdoors and the products of combustion generated by the heater are released into the air stream being heated.

These heaters are intended to be permanently installed in accordance with the installation instructions and markings on the appliance, the current edition of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and local codes.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-burning Direct-fired Industrial Heaters Certified for Canada (LDET7)

USE

This category covers gas-burning, direct-fired heaters intended for industrial or commercial use and whose purpose is to offset building heat loss by heating only incoming outdoor air. These heaters are complete packaged heaters with integral air-moving components and are intended to discharge air at a temperature of 160°F (71°C) or less. These heaters are not intended for use in any area containing sleeping quarters.

INSTALLATION

Gas-burning, direct-fired heaters are intended to be installed in accordance with the installation instructions and markings on the heater, including markings and instructions pertaining to clearances and types of adjacent surfaces, and the current edition of CSA B149.1, ''Natural Gas and Propane Installation Code.''

These heaters are marked with information specifying the type(s) of gas supply to which the product is to be connected. Heaters suitable for installation indoors only, outdoors only, or either are so indicated by a marking on the product.

PRODUCT MARKINGS

These heaters are marked ''Direct Industrial Air Heater'' and ''For Industrial/Commercial Use.'' These heaters are also marked to indicate the minimum ambient air temperature, maximum discharge air temperature, and maximum temperature rise for which the heater has been certified.

RELATED PRODUCTS

See Gas-fired Construction Heaters Certified for Canada (LGNH7).

ADDITIONAL INFORMATION

For additional information, see Direct-fired Industrial Heaters Certified for Canada (LCQV7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z83.4/CSA 3.7, ''Non-Recirculating Direct Gas-Fired Industrial Air Heaters.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z83.4(+) CSA 3.7(+)-(++) Non-Recirculating Direct Industrial Air Htr.''

(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS-FIRED DUCT FURNACES CERTIFIED FOR CANADA (LDUT7)

USE AND INSTALLATION

This category covers gas-fired duct furnaces with inputs up to and including 10,000,000 Btu/h (2931 kW) intended for commercial or industrial use. These furnaces are intended for use with natural gas with inlet gas pressures up to and including 34.5 kPa (5.0 psi) and/or liquefied petroleum (LP) gas.

These furnaces are intended to be installed in accordance with the markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, as well as the current editions of the following, as applicable:

- CSA B149.1, ''National Gas and Propane Installation Code''
- ''International Fuel Gas Code''
- ANSI/NFPA 211, ''Chimneys, Fireplaces, Vents, and Solid Fuel-Burning Appliances''
- ''International Mechanical Code''
- Local codes

The minimum clearances are included in the individual Listings.

These furnaces are marked with information specifying the type(s) of gas supply and/or grade of fuel oil supply to which it is intended to be connected. Furnaces suitable for installation outdoors are so indicated by a marking on the product.

ADDITIONAL INFORMATION

Gas-fired Duct Furnaces Certified for Canada (LDUT7)−*Continued*

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current editions and effective addenda thereto of ANSI Z83.8/CSA 2.6, ''Gas Unit Heaters, Gas Packaged Heaters, Gas Utility Heaters and Gas-Fired Duct Furnaces.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the designation ''ANS Z83.8(+) CSA 2.6(+)-(++) Duct Furnace for Industrial/Commercial Use.''

(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRYERS CERTIFIED FOR CANADA (LEFZ7)

USE AND INSTALLATION

This category covers dryers intended for use only in removing excess water or moisture from the product being dried. The normal use of a dryer creates a large volume of humid air, which is to be exhausted to the outside in accordance with the manufacturer's instructions. Unless so exhausted, this moisture could affect electrical wiring or other electrical devices in the vicinity.

These dryers are intended to be installed in accordance with the installation instructions and markings on the appliance, and the current edition of CSA B149.1, ''Natural Gas and Propane Installation Code,'' the current edition of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and local codes, as applicable.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-fired Clothes Dryers, Type 1 Certified for Canada (LETA7)

USE

This category covers gas-fired Type 1 clothes dryers, which are appliances used to dry wet laundry by means of heat derived from the combustion of fuel gases. These appliances are intended for use only with water washed fabrics. Type 1 clothes dryers can be household or commercial, classified as follows:

Type 1 Household:

1. Intended for use in residential homes.
2. Gas supply pressure not exceeding 3.5 kPa.

Type 1 Commercial:

1. Intended for intermittent duty in common laundry facilities of multi-family dwellings, with or without payment collection means.
2. May include installations requiring the appliance to be fastened to the building structure.
3. Gas supply pressure not exceeding 3.5 kPa.

Type 1 clothes dryers may be for use with natural gas, manufactured gas, mixed gas, propane gas, liquefied petroleum gases, or LP gas-air mixture as marked on the dryer rating plate, and/or for mobile home installation as marked on the dryer rating plate.

These appliances are provided with means for disposal of moisture and lint.

INSTALLATION

Type 1 clothes dryers are intended to be installed in accordance with the marking on the dryer and in the installation instructions provided with the dryer, including markings and instructions pertaining to clearances, closet installation (if applicable), and types of adjacent surfaces. Type 1 household clothes dryers are provided with installation, operating and maintenance instructions. Type 1 commercial clothes dryers are provided with installation and maintenance instructions.

Gas-fired Clothes Dryers, Type 1 Certified for Canada (LETA7)−*Continued*

These appliances may be connected to an existing permanent duct system provided as part of the building structure.

Clothes dryers suitable for installation in a mobile home are intended to be installed in accordance with the current edition of CAN/CSA-Z240 MH, "Mobile Homes."

FACTORS NOT INVESTIGATED

Unless specifically indicated by a marking on the machine, the burglary and theft protection features of payment-operated machines have not been investigated.

RELATED PRODUCTS

For electric clothes dryers, see Clothes Dryers Certified for Canada (KMEX7).

ADDITIONAL INFORMATION

For additional information, see Dryers Certified for Canada (LEFZ7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.5.1/CSA 7.1, "Gas Clothes Dryers, Volume I – Type 1 Clothes Dryers."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation "ANS Z21.5.1(+) CSA 7.1(+)-(++) Clothes Dryers, Vol. I."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. Gas-fired Clothes Dryers, Type 2 Certified for Canada (LETX7)

USE

This category covers gas-fired Type 2 clothes dryers, which are appliances used to dry wet laundry by means of heat derived from the combustion of fuel gases. These appliances are intended for use only with water washed fabrics. Type 2 clothes dryers are classified as follows:

1. Intended for continuous duty in multiple family and commercial applications, with or without a payment collection means.
2. May include installations requiring the appliance to be fastened to the building structure.
3. Gas supply pressure not exceeding 3.5 kPa.

Type 2 clothes dryers may be for use with natural gas, manufactured gas, mixed gas, propane gas, liquefied petroleum gases, or LP gas-air mixture as marked on the dryer rating plate.

These appliances are provided with means for disposal of moisture and lint.

INSTALLATION

Type 2 clothes dryers are intended to be installed in accordance with the marking on the dryer and in the installation instructions provided with the dryer, including markings and instructions pertaining to clearances and types of adjacent surfaces. Type 2 clothes dryers are provided with instructions for field assembly, installation, use, operation, and operator maintenance of the dryer.

FACTORS NOT INVESTIGATED

Unless specifically indicated by a marking on the machine, the burglary and theft protection features of payment-operated machines have not been investigated.

CONSTRUCTION HEATERS CERTIFIED FOR CANADA (LGMM7)

Gas-fired Construction Heaters Certified for Canada (LGNH7)

USE AND INSTALLATION

This category covers gas-fired construction heaters of the direct-fired type with rated inputs up to and including 10,000,000 Btu/h (2930 kW). These appliances are primarily intended for temporary use in heating buildings or structures under construction, alteration or repair.

Gas-fired construction heaters are intended to be installed in accordance with the marking on the appliance pertaining to clearance and types of surfaces. These appliances are self-contained heaters with or without integral means for air circulation and not intended for connection to other than that provided by the manufacturer. They may also be forced draft, fan-equipped heaters provided with duct systems supplied by the manufacturer.

Applicable codes and Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to its installation and use.

RELATED PRODUCTS

See Gas-burning Direct-fired Industrial Heaters Certified for Canada (LDET7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z83.7/CSA 2.14, "Gas-Fired Construction Heaters."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation "ANS Z83.7 CSA 2.14(+)-(++) Construction Heater."

GAS-FIRED FOOD SERVICE EQUIPMENT CERTIFIED FOR CANADA (LGQX7)

USE AND INSTALLATION

This category covers gas-fired food service equipment intended for commercial use, including unit broilers, baking and roasting ovens, coffee brewers, food warmers, deep-fat fryers, griddles, ranges, steam generators, and the like, as identified in the individual certifications.

Gas-fired food service equipment is intended to be installed in accordance with markings on the equipment pertaining to clearances and types of surfaces. Equipment suitable for built-in installation, side-by-side mounting or stacking is indicated in the installation instructions. Equipment provided with a flue collar is intended to be vent connected. These appliances are intended to be connected to a gas supply of the type speci-

Gas-fired Food Service Equipment Certified for Canada (LGQX7)−*Continued*

fied on the appliance. Equipment is intended to be installed in accordance with the current editions of ANSI Z223.1/NFPA 54, ''National Fuel Gas Code,'' and CAN/CGA-B149, ''Natural Gas and Propane Installation Code.''

Commercial cooking equipment that may emit grease-laden vapors is intended to be provided with exhaust ventilating systems in accordance with ANSI/NFPA 96, ''Ventilation Control and Fire Protection of Commercial Cooking Operations.''

Food service equipment of certain types is designed for permanent connection to water supply and sewer lines at the point of installation. Applicable codes and Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Equipment or section(s) of the equipment suitable for outdoor installation are so marked. Units not so marked are intended for indoor use only.

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared or served by use of this equipment has been investigated.

RELATED PRODUCTS

For electric cooking appliances, see Commercial Cooking Appliances Certified for Canada (KNGT7).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z83.11/CSA 1.8, ''Gas Food Service Equipment.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z83.11(+) CSA 1.8(+)-(++) Food Service Equip.''

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS-WOOD-FIRED FOOD SERVICE EQUIPMENT CERTIFIED FOR CANADA (LGRC7)

USE

This category covers combination gas-wood-fired food service equipment intended for commercial use, including broilers, ranges, rotisseries, ovens, and the like, as identified in the individual certifications. This equipment is intended to burn solid wood, including particulate wood products, as well as gas. Some equipment may be provided with door assemblies, floor protectors and wall shields, adjustable flue gas dampers, or other optional features as specified in the manufacturer's installation and operating instructions.

INSTALLATION

This equipment is intended to be installed in accordance with appropriate installation standards, such as the current editions of:

- CAN/CSA-B149.1, ''Natural Gas and Propane Installation Code''
- CAN/CSA C22.1, ''Canadian Electrical Code, Part I'' (CEC)
- CAN/CSA-A405-M87, ''Design and Construction of Masonry Chimneys and Fireplaces''
- CAN/CSA-B365-01, ''Installation Code for Solid-Fuel-Burning Appliances and Equipment''
- ''National Building Code of Canada''
- Local codes

Installation is intended to be accomplished by a qualified agency – one who is engaged in and is responsible for (or is thoroughly familiar with) the installation and operation of solid-fuel-burning heating and/or cooking appliances and who is experienced in such work, familiar with all precautions required, and has complied with all the requirements of the Authority Having Jurisdiction.

Gas-Wood-fired Food Service Equipment Certified for Canada (LGRC7)−*Continued*

Installation is intended to be in strict accordance with the markings on the equipment and the manufacturer's installation instructions furnished with the equipment, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation. Equipment suitable for built-in installation, side-by-side mounting, or stacking is indicated in the installation instructions. Some equipment is intended to be placed on noncombustible floors, or on combustible floors covered with an insulating, noncombustible floor protector as specified in the manufacturer's installation instructions, CAN/CSA-B365-01 and CAN/CSA-A405-M87, as applicable. Equipment provided with flue collars is intended to be vent connected.

The equipment is intended to be connected to a gas supply of the type(s) specified on the equipment.

Food service equipment of certain types is designed for permanent connection to water supply and sewer lines at the point of installation. Applicable codes and Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

All equipment, but especially equipment that may emit grease laden vapors, is intended to be provided with an exhaust ventilating system in accordance with NFPA 96, ''Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.'' See Exhaust Hoods with Exhaust Dampers Certified for Canada (YXZR7), Exhaust Hoods Without Exhaust Dampers Certified for Canada (YYCW7), or Grease Ducts for Restaurant Cooking Appliances Certified for Canada (YYGQ7). Exhaust hood assemblies covered under these categories are intended to be installed in accordance with the manufacturer's installation instructions and ANSI/NFPA 96 and the CEC, as applicable. All exhaust hoods are marked relative to minimum exhaust airflow and maximum supply airflow directed into the hood and/or out the bottom (if provided). Airflow rates are established under draft-free laboratory conditions. Greater exhaust and/or lesser supply airflow rates may be required for each specific installation to obtain complete vapor and smoke removal.

FACTORS NOT INVESTIGATED

The toxicity of coatings, the physiological effects on persons consuming food products prepared or served by use of this equipment, the structural and sanitation properties of the equipment, the toxicity of the products of combustion, and the structures in which the equipment may be installed have not been investigated.

RELATED PRODUCTS

See Gas-fired Food Service Equipment Certified for Canada (LGQX7), Cooking Appliances, Wood Fired Certified for Canada (LCJX7) and Commercial Cooking Appliances Certified for Canada (KNGT7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are the current edition and effective addenda thereto of ANSI Z83.11/CSA 1.8, ''Gas Food Service Equipment,'' the current edition of ULC-S627, ''Space Heaters for Use with Solid Fuels,'' and ULC/ORD C1482, ''Space Heaters for Use with Particulate Solid Fuels.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name ''Gas-Wood-fired Oven'' or other appropriate product name as shown in the individual Listings, the standard designation ''ANS Z83.11(+) CSA 1.8(+)-(++) Food Service Equip.,'' and for equipment that requires additional parts to complete the installation, the statement ''For Use With [Company Name] Listed Wood-fired (or Gas-Wood-fired) Equipment Parts.'' (+++)

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

(+++) Each additional part includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas-Wood-fired Equipment Part.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS-FIRED PROCESS TUBE HEATERS CERTIFIED FOR CANADA (LGTY7)

USE AND INSTALLATION

This category covers gas-fired process tube heaters with a maximum rating of more than 400,000 Btu/h, and intended for commercial or industrial installation. The heating medium for which the device is intended for use (water, glycol, thermal fluid or other) is specified in the individual Listings.

The process tube heater may be furnished either with an integral burner or intended for installation in the field with a separate burner designed for use with the process tube heater as indicated in the individual Listings. The process tube heater is marked to identify burner usage as indicated below.

Authorities Having Jurisdiction should be consulted with regard to the inspection of process tube heater assemblies in a particular area.

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN1-3.1-77, "Industrial and Commercial Gas-Fired Package Boilers."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the following product name and information as appropriate:

(A) "Gas-fired Process Tube Heater Assembly"

(B) "Gas-fired Process Tube Heater Assembly. For Use Only With [Company Name] Listed Gas Burner Model(s) _____, Max Input ____ BTU Per Hour."

A gas-fired process tube heater assembly that includes the burner assembly as part of the factory-furnished assembly bears a Gas-fired Listing Mark as noted in (A).

A process tube heater assembly designed for installation of the burner in the field or at another factory bears a Gas-fired Listing Mark and information as noted in (B), which covers the process tube heater only.

A field-installed burner bears a separate Listing Mark as described for gas burners (see KXWT7). The proper assemblies of process tube heater and burners to make unit assemblies are as specified on the process tube heater Gas-fired Listing Marks.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED HOME AND RECREATIONAL VEHICLE APPLIANCES CERTIFIED FOR CANADA (LHKX7)

USE AND INSTALLATION

This category covers fuel-burning appliances, such as space-heating appliances, cooking appliances, and water heaters designed specifically for installation in manufactured (mobile) homes, recreational vehicles and/or recreational park trailers. These appliances are designed to burn only gas or gas fuel in combination with electric heating capability as indicated in the individual product categories, and are equipped with primary safety controls.

These appliances are intended for installation in accordance with appropriate installation standards, such as the current editions of:

CAN/CSA-B149.1, "Natural Gas and Propane Installation Code"
CAN/CSA-B139-00, "Installation Code for Oil Burning Equipment"
CAN/CSA-C22.1, "Canadian Electrical Code, Part I"
CAN/CSA-Z240 MH Series-1992, "Mobile Homes"
CAN/CSA-Z240 RV Series-1999, "Recreational Vehicles"
CAN/CSA-Z241 Series-1992, "Park Model Trailers"
CAN/CSA-A405-1987, "Design and Construction of Masonry Chimneys and Fireplaces"
"National Building Code of Canada"

Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7)−*Continued*

These appliances may be installed on combustible surfaces with clearances to combustible construction not less than indicated in the marking on the appliance. The minimum clearance markings used in the individual Listings indicate minimum clearances in centimeters. The specified clearances are the minimums required to avoid overheating; additional clearances may be needed for accessibility.

These appliances are intended to be secured to the manufactured home or recreational vehicle structure. Above or under-the-floor warm air ducts may be connected to heating appliances if the appliances are factory built for the attachment of ducts, in which case the clearances are intended to be not less than those specified on the appliance and in the individual Listings. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

These appliances should be placed so that doors, window treatments, privacy curtains, or other materials cannot be placed or swung closer to or above the appliance than the specified clearances to the appliance. Placing fabrics on appliances for drying may be dangerous.

Figure 1 — Typical Alcove Installation

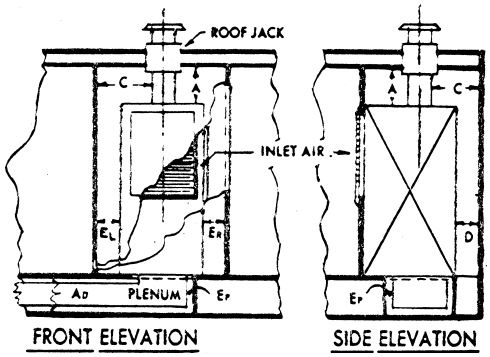

Figure 2 — Typical Closet Installation

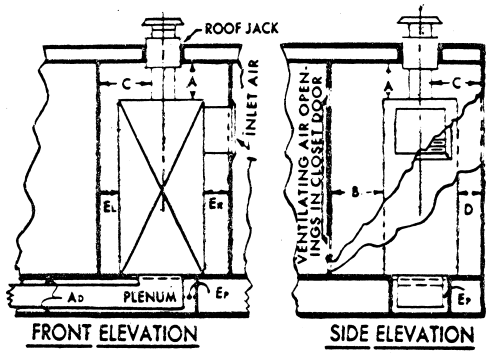


Installation Symbols and Abbreviations (See Figures 1 and 2)

Descriptions of symbols and abbreviations for heating appliances used in Figures 1 and 2 are as follows:

A - – Clearance above top of appliance

A_D - – Clearance from horizontal warm-air duct within 0.91 m (3 ft) of appliance designed for connection of ducts. If not specified, appliance is not designed for ducts.

B - – Clearance from front of appliance. Prefix "C" to numeral indicates suitability for closet or alcove installation; prefix "A" indicates suitability for alcove installation only. No prefix indicates installation to be in a room only, but not for closet or alcove installation.

C - – Clearance from flue gas outlet assembly

D - – Clearance from back of appliance

E_L - – Clearance from left side of appliance

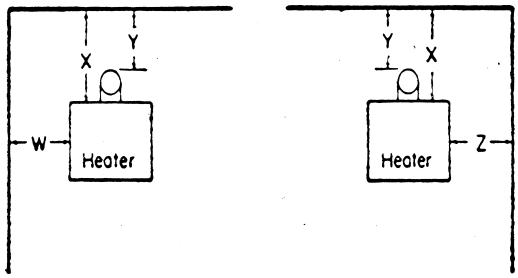
E_R - – Clearance from right side of appliance

E_P - – From any side of appliance plenum (downflow appliances have plenum beneath floor). $\mathbf{E_P}$ is only specified for appliances to be equipped with external plenums for connection to duct systems. Its omission when $\mathbf{A_D}$ is specified indicates the appliance is equipped with an integral plenum and if appliance is otherwise installed, clearances specified are not valid.

Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7)−*Continued*

G - – Total minimum free area, in square centimeters, of air openings into a closet

Figure 3 — Typical Room Heater Installation

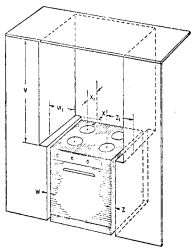


Installation Symbols and Abbreviations (See Figure 3)

Descriptions of symbols and abbreviations for room heaters used in Figure 3 are as follows:

V - – Clearance from top of heater (not shown in figure)
W - – Clearance from left side of heater
X - – Clearance from back of heater
Y - – Clearance from vent pipe
Z - – Clearance from right side of heater

Figure 4 — Typical Freestanding and Framed-in Range Installation



Installation Symbols and Abbreviations (See Figure 4)

Descriptions of symbols and abbreviations for ranges used in Figure 4 are as follows:

V - – Clearance from cooking top to underside of cabinets or ceiling above
W - – Clearance from left side of range
Z - – Clearance from right side of range
X - – Clearance from back of range (clearance established by integral spacers)
W1 - – Clearance from centerline of left burner
Z1 - – Clearance from centerline of right burner
X1 - – Clearance from centerline of rear burner

The clearance to combustible material from the front of the range is intended to be not less than 61 cm (24 in.), unless otherwise designated in the individual Listings.

Clearance from counter trim and integral spacers below counter of framed-in range may be zero.

Counter Units

For counter units, only V, W1, X1 and Z1 of the above dimensions are designated. Counter surface units are suitable for placing upon combustible counters. Counter recessed units are suitable for insertion into a combustible counter top with clearances to and below the counter top as established by spacers integral with the unit.

Gas-fired Manufactured Home and Recreational Vehicle Space-heating Appliances Certified for Canada (LHVR7)

USE AND INSTALLATION

Gas-fired Manufactured Home and Recreational Vehicle Space-heating Appliances Certified for Canada (LHVR7)−*Continued*

This category covers gas-fired, space-heating appliances intended for manufactured (mobile) homes and recreational vehicles. This includes space-heating appliances intended for outdoor use.

This category does not cover space-heating appliances intended for use in a marine environment, such as aboard boats or ships.

These appliances are intended to be installed in accordance with the (a) markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, (b) appropriate Canadian installation codes and standards, and (c) local codes.

The information pertaining to safe placement indicated in the individual certifications is designated in accordance with the figures, symbols and abbreviations given under Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7).

These appliances are marked with information specifying the type(s) of gas supply to which the product is intended to be connected. Appliances that are suitable for installation indoors only, outdoors only, or either are so indicated by a marking on the product.

RELATED PRODUCTS

ADDITIONAL INFORMATION

For additional information, see Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name "Gas-fired Space-heating Appliance for Mobile Home or Recreational Vehicle," and the standard designation "ANS Z21.47(+) CSA 2.3(+)-(++) Central Furn."

(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-fired Manufactured Home and Recreational Vehicle Water Heaters Certified for Canada (LHYV7)

USE AND INSTALLATION

This category covers water heaters using only gas or a combination of gas and electric for heating and intended for manufactured (mobile) homes and recreational vehicles. This includes automatic-type storage water heaters intended for use with combination potable water/space heating applications and water heaters intended for outdoor use.

This category does not cover water heaters intended for use in a marine environment, such as aboard boats or ships.

These appliances are intended to be installed in accordance with the (a) markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances and proper vent installation, (b) appropriate Canadian installation codes and standards, and (c) local codes.

The information pertaining to safe placement when indicated in the individual Listings is designated in accordance with the figures, symbols and abbreviations given under Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7).

These appliances are marked with information specifying the type(s) of gas supply to which the product is intended to be connected. Appliances suitable for outdoor installation only are so indicated by a marking on the

Gas-fired Manufactured Home and Recreational Vehicle Water Heaters Certified for Canada (LHYV7)−*Continued*

product. CAN/CSA-B149.1, ''Natural Gas and Propane Installation Code,'' specifies vents constructed using plastic piping shall comply with ULC-S636, ''Standard for Type BH Gas Venting Systems.'' This requirement includes standard vents and vent fittings, including but not limited to, transitions and termination kits.

RELATED PRODUCTS

ADDITIONAL INFORMATION

For additional information, see Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7), Heating Appliances Certified for Canada (KTCR7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7), and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are the current editions and effective addenda thereto of ANSI Z21.10.1/CSA 4.1, ''Gas Water Heaters, Volume I, Storage Water Heaters With Input Ratings of 75,000 Btu Per Hour or Less,'' and ANSI Z21.10.3/CSA 4.3, ''Gas Water Heaters, Volume III, Storage Water Heaters With Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous,'' and the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CAN/CSA-C22.2 No. 110-94, ''Construction and Test of Electric Storage-Tank Water Heaters.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and

(1) (a) for water heaters with inputs up to and including 75,000 Btu/h (21.98 kW), the standard designation ''ANS Z21.10.1(+) CSA 4.1(+)-(++)''

or

(b) for water heaters with over 75,000 Btu/h (21.98 kW), the standard designation ANS Z21.10.3(+) CSA 4.3(+)-(++)

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

and

(2) one of the following product names:

(a) ''Gas-fired or Gas-Electric Automatic Storage Water Heater''

(b) ''Gas-fired or Gas-Electric Automatic Circulating Tank Water Heater''

(c) ''Gas-fired or Gas-Electric Nonautomatic Circulating Tank Water Heater''

(d) ''Gas-fired Automatic Instantaneous Water Heater''

and

(3) one of the following texts as applicable for the intended use:

(a) ''For Installation in a Manufactured Home (Mobile Home)''

(b) ''For Installation in a Recreational Vehicle''

(c) ''For Installation in a Manufactured Home (Mobile Home) or Recreational Vehicle''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-fired Recreational Vehicle Cooking Appliances Certified for Canada (LIBN7)

USE AND INSTALLATION

This category covers propane-fired cooking appliances intended primarily for recreational vehicles. These include ranges, ovens, broilers, griddles, surface units, and the like, as well as combinations of these in one appliance as identified in the individual certifications. Gas-fired cooking appliances intended for manufactured (mobile) homes or household use are covered under Cooking Appliances, Gas Fired, Household Certified for Canada (LCCZ7).

This category does not cover cooking appliances intended for outdoor use or use in a marine environment, such as aboard boats or ships, or for use with other fuel gases.

These appliances are intended to be installed in accordance with (a) the markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances and proper vent installation, (b) appropriate installation codes and standards, and (c) local codes.

Gas-fired Recreational Vehicle Cooking Appliances Certified for Canada (LIBN7)−*Continued*

The information pertaining to safe placement indicated in the individual certifications is designated in accordance with the figures, symbols and abbreviations given under Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7).

These appliances are marked ''For Use With Propane Only'' to specify the type of gas supply to which the product is intended to be connected.

Appliances are designed for connection only to a 125 V or less electrical supply.

The flexible metallic conduit and high temperature insulated leads provided with some appliances are investigated as a component part of the appliance. Unless a conduit fitting or outlet box is installed at the factory, tape or other means is to be provided at the end of the conduit to protect the conductors during shipment. This protection may not necessarily take the place of any conduit bushing or fitting required by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

FACTORS NOT INVESTIGATED

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by the use of these appliances has been investigated.

The thermal efficiency of these appliances has not been investigated (see Products Verified for Energy Efficiency in Accordance with Canadian Regulations or Standards [ZYAA]).

Gas-fired Toilets Certified for Canada (LICI7)

USE AND INSTALLATION

This category covers gas-fired toilets designed for the disposal of human waste. They are intended for installation in accordance with CAN/CSA-B149.1, ''Natural Gas and Propane Installation Code,'' CAN/CSA-Z240.4, ''Gas-Equipped Recreational Vehicles and Mobile Housing,'' CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' and CAN/CSA-Z240 RV Series, ''Recreational Vehicles.'' They are for use with natural or propane gas and may use direct or alternating current as an auxiliary energy source.

Gas-fired toilets are intended to be installed in accordance with markings on the product pertaining to clearance and types of adjacent surfaces. They are of the vented type and can be used in manufactured (mobile) homes or recreational vehicles as indicated in the individual certifications.

Applicable local codes and Authorities Having Jurisdiction should be consulted with respect to installation, use, connection to the fuel supply, and sanitation.

ADDITIONAL INFORMATION

Gas-fired Toilets Certified for Canada (LICI7)−*Continued*

For additional information, see Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7), Heating Appliances Certified for Canada (KTCR7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of CGA 5.2, ''Gas-Fired Waterless Toilets.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''CGA 5.2(+)-(++) Gas-fired Waterless Toilet.''

(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Oil-fired and Oil-to-gas-fired Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LJAR7)

USE AND INSTALLATION

This category covers oil-fired and oil-to-gas-fired heating appliances, such as space-heating appliances, water heaters and room heaters, intended for manufactured (mobile) homes, recreational vehicles and recreational park trailers. This includes heating appliances intended for outdoor use.

This category does not cover heating appliances intended for use in a marine environment, such as aboard boats or ships.

These appliances are intended to be installed in accordance with the (a) markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances and proper vent installation, (b) appropriate Canadian installation codes and standards, and (c) local codes.

The information pertaining to safe placement indicated in the individual Listings is designated in accordance with the figures, symbols and abbreviations given under Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7).

These appliances are marked with information specifying the kind of fuel supply to which the product is intended to be connected. Appliances suitable for installation outdoors are so indicated by a marking on the product.

Appliances factory equipped with a Listed oil burner that are eligible for field conversion with a Listed gas burner are marked with the manufacturer's name and model number of the gas burner for which the appliance is intended to be used, as indicated in the individual Listings.

RELATED PRODUCTS

See Gas-fired Manufactured Home and Recreational Vehicle Space-heating Appliances Certified for Canada (LHVR7), Gas-fired Manufactured Home and Recreational Vehicle Water Heaters Certified for Canada (LHYV7), Central Furnaces Certified for Canada (KZLX7), Water Heaters Certified for Canada (LURX7) and Room Heaters Certified for Canada (LPJX7).

ADDITIONAL INFORMATION

For additional information, see Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LHKX7), Heating Appliances Certified for Canada (KTCR7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition of CSA B140.10, ''Oil-Fired Warm Air Heating Appliances for Mobile Housing and Recreational Vehicles.''

Space-heating appliances are additionally investigated to the current edition of CAN/CSA B140.4, ''Oil-Fired Warm Air Furnaces.''

Water heaters are additionally investigated to the current edition of CSA B140.12, ''Oil-Burning Equipment: Service Water Heaters for Domestic Hot Water, Space Heating, and Swimming Pools.''

Room heaters are additionally investigated to the current edition of CSA B140.3, ''Oil Burning Stoves and Water Heaters.''

UL MARK

Oil-fired and Oil-to-gas-fired Manufactured Home and Recreational Vehicle Appliances Certified for Canada (LJAR7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and

(a) for an appliance factory equipped to burn oil only, the product name ''Oil-fired Water Heater for Mobile Home or Recreational Vehicle,'' ''Oil-fired Space-heating Appliance for Mobile Home or Recreational Vehicle'' or ''Oil-fired Room Heater for Mobile Home or Recreational Vehicle'';

or

(b) for an appliance factory equipped with a Listed oil burner but which may be converted by installation in the field of a factory-furnished Listed gas burner, the product name ''Gas- or Oil-fired Water Heater for Mobile Home or Recreational Vehicle,'' ''Gas- or Oil-fired Space-heating Appliance for Mobile Home or Recreational Vehicle'' or ''Gas- or Oil-fired Room Heater for Mobile Home or Recreational Vehicle.'' For this situation, each burner bears a separate UL Listing Mark as described under Domestic Gas Conversion Burners Certified for Canada (KXSB7) and Oil Burners Certified for Canada (KYXZ7).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE HEATERS CERTIFIED FOR CANADA (LJNZ7)

Infrared Patio Heaters, Gas Fired, Outdoor Certified for Canada (LKQA7)

USE AND INSTALLATION

This category covers heating gas appliances for outdoor use only. These include patio heaters, table heaters and the like, as identified in the individual certifications. These appliances may be either portable or stationary and are provided with a means of support by the manufacturer as part of the appliance.

Infrared patio heaters are intended for connection to:

1. A fixed fuel piping system operating at inlet gas pressures not exceeding 3.5 kPa (1/2 psi); or
2. An integral self-contained liquefied petroleum (propane) gas supply system, provided the appliance incorporates mounting means for the attachment of a maximum of one cylinder limited to a maximum of 9.1 kg (20 lb) of fuel:
   a. Operating at a regulated outlet pressure not exceeding 2.75 kPa (11 in wc); or
   b. Operating at regulated outlet pressures in excess of 2.75 kPa (11 in wc) but not greater than 34.5 kPa (5 psi).

These heating gas appliances are intended to be installed in accordance with the marking on the appliance pertaining to clearance and types of surfaces. Appliances suitable for overhead suspension, overhead angle mounting, wall mounting, or floor mounting are indicated in the installation instructions. Applicable codes and Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to installation and connection to the fuel supply.

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z83.26/CSA 2.37, ''Gas-Fired Outdoor Infrared Patio Heaters.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z83.26/C2.37 (+)-(++) Gas-Fired Outdoor Infrared Patio Heater.''

(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

Infrared Patio Heaters, Gas Fired, Outdoor Certified for Canada (LKQA7)−*Continued*

RADIANT HEATERS, COMMERCIAL CERTIFIED FOR CANADA (LLDT7)

Gas-fired Radiant Heaters, Commercial Certified for Canada (LLRR7)

USE AND INSTALLATION

This category covers gas-fired low-intensity and high-intensity infrared heaters with inputs up to and including 400,000 Btu/h (117.23 kW) per burner and intended for use in outdoor spaces or nonresidential indoor spaces where flammable gases or vapors are not generally present.

These heaters are intended to be installed in accordance with the installation instructions and markings on the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, and the following as applicable:

- the current edition of CSA B149.1, ''Natural Gas and Propane Installation Code''
- the current edition of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I''
- local codes

These heaters may be suspended overhead, angle-mounted overhead, wall mounted or floor mounted and are marked with information specifying the type(s) of gas supply to which the product is intended to be connected. Heaters suitable for installation indoors only, outdoors only, or either are so indicated by a marking on the product.

PRODUCT MARKINGS

These heaters are marked ''Low-Intensity Infrared Heater,'' ''Infrared Radiant Tube Heater'' or ''High-Intensity Infrared Heater,'' as applicable.

RELATED PRODUCTS

See Gas-fired Construction Heaters Certified for Canada (LGNH7) and Gas-burning Direct-fired Industrial Heaters Certified for Canada (LDET7).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate low-intensity infrared heaters is the current edition and effective addenda thereto of ANSI Z83.20/CSA 2.34, ''Gas-Fired Low-Intensity Infrared Heaters.''

The basic standard used to investigate high-intensity infrared heaters is the current edition and effective addenda thereto of ANSI Z83.19/CSA 2.35, ''Gas-Fired High-Intensity Infrared Heaters.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z83.20(+) CSA 2.34(+)-(++) Low-Intensity Infrared Htr.'' or ''ANS Z83.19(+) CSA 2.35(+)-(++) High-Intensity Infrared Htr.''

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

REFRIGERATORS USING GAS FUEL CERTIFIED FOR CANADA (LPHR7)

USE AND INSTALLATION

This category covers gas-fired refrigerators having refrigerated spaces for (1) storage of foods, (2) storage of foods and making of ice, (3) storage of frozen foods and making of ice, or (4) storage of foods and the storage of frozen foods and making of ice. These appliances are for use with natural or propane gas and may use direct or alternating current as an auxiliary energy source. These appliances use Group 2 refrigerants (flammable types) not exceeding 6.0 lbs (2.27 kg) as defined in ASHRAE 34, ''Designation and Safety Classification of Refrigerants.'' Group 2 refrigerants include, but are not limited to, the following:

Refrigerators Using Gas Fuel Certified for Canada (LPHR7)−*Continued*

Refrigerant Designation	ANSI/ASHRAE 34	
Ammonia	NH3	717
Dichloroethylene	C2H2C12	1130
Ethyl chloride	C2H5CI	160
Methyl chloride	CH3CI	40
Methyl formate	HC00CH3	611
Sulphur dioxide	SO2	764

Gas-fired refrigerators are intended to be installed in accordance with the marking on the appliance pertaining to clearance and types of surfaces. These appliances can be of the vented, direct vented or unvented type and can be used in manufactured (mobile) homes, recreational vehicles or permanent dwellings as indicated in the individual certifications. Authorities Having Jurisdiction and applicable codes should be consulted as to the requirements for this equipment with respect to installation and use. Such codes include: CSA-B149.1, ''Natural Gas and Propane Installation Code,'' CSA-Z240.4, ''Gas-Equipped Recreational Vehicles and Mobile Housing,'' CAN/CSA-C22.1 Parts I and II, ''Canadian Electrical Code,'' CSA-Z240 RV Series, ''Recreational Vehicles Code,'' and CSA-B52, ''Mechanical Refrigeration Code.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOM HEATERS CERTIFIED FOR CANADA (LPJX7)

GENERAL

This category covers room heaters that may be freestanding, wall mounted, or intended for installation in noncombustible fireplaces. Unless otherwise marked, freestanding room heaters may be placed on combustible floors. All heaters are intended to be installed with clearances to combustible material not less than indicated in the individual Listings, and on the heater or in the directions furnished with the heater.

Unless otherwise indicated, gas heaters are of the vented type and are equipped with integral primary safety controls. Kerosene heaters are of the unvented type. Kerosene and oil heaters are equipped with integral antiflooding device or are designed to prevent overflow of oil in the event of flame extinguishment.

The sketches, dimension symbols, and abbreviations are used in the individual Listings to indicate minimum clearances in inches. The clearances so designated are only the minimum required to avoid overheating; additional clearances may be needed for accessibility.

All kerosene- and oil-fired heaters should be installed with sufficient clearance to provide direct and easy access to the fuel tank.

See the individual Listings for clearances to combustibles. The vertical clearance above the top of a heater should not be less than 914 mm (36 in.) to combustible material unless otherwise indicated. Also, room heaters should be so placed that a door, drapes, or similar objects cannot be nearer than the specified clearance to the sides of the heater.

Room Heaters Certified for Canada (LPJX7)−*Continued*

Oil-fired room heaters of the vented type are low-heat appliances intended to be flue connected to suitable chimneys. Gas-fired room heaters may be connected to Type B gas vents.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-fired Room Heaters, Vented Certified for Canada (LPNH7)

USE AND INSTALLATION

This category covers vented gas-fired room heaters. These appliances are self-contained, nonrecessed, gas-burning appliances furnishing warm air by gravity or fan circulation to the space where installed. They are not provided with any duct connection and may be freestanding or installed overhead.

Gas-fired decorative appliances are intended to be installed in accordance with the installation instructions and markings on the appliance, and are intended to be connected to a gas supply of the type specified on the appliance. Equipment is intended to be installed in accordance with the current edition of ANSI Z223.1/NFPA 54, ''National Fuel Gas Code,'' and CAN/CGA-B149, ''Canadian Installation Code.''

ADDITIONAL INFORMATION

For additional information, see Room Heaters Certified for Canada (LPJX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.86/CSA 2.32, ''Vented Gas-Fired Space Heating Appliances.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z21.86(+) CSA 2.32(+)-(++) Vented Room Heater.''

Gas Fireplace Heaters, Vented Certified for Canada (LPPM7)

USE AND INSTALLATION

This category covers vented gas-fired fireplace heaters. These appliances allow the view of flames and provide the simulation of a solid-fuel fireplace, and furnish warm air to the space in which it is installed directly from the appliance, with or without duct connections. The design of a vented gas-fired fireplace heater is such that it will comply with minimum thermal efficiency requirements and may be controlled by an automatic thermostat. A vented gas fireplace heater may be freestanding, wall mounted, recessed or zero clearance, or a gas fireplace insert. The fireplaces may be direct vented, gravity vented or power vented.

Gas-fired decorative appliances are intended to be installed in accordance with the installation instructions and markings on the appliance, and are intended to be connected to a gas supply of the type specified on the appliance. Equipment is intended to be installed in accordance with the current edition of ANSI Z223.1/NFPA 54, ''National Fuel Gas Code,'' and CAN/CGA-B149, ''Canadian Installation Code.''

Oil-fired Room Heaters Certified for Canada (LQZR7)

USE AND INSTALLATION

This category covers oil-fired room heaters intended for use with ANSI/ASTM D396 No. 1 and No. 2 fuel oils.

The information pertaining to placement indicated in the individual certifications is designated in accordance with the sketches, symbols, and abbreviations given under Room Heaters Certified for Canada (LPJX7). This information is also marked on the appliance or included in the instructions furnished with the heater. Additional requirements for the installation and use of oil-burning equipment are included in CAN/CSA B139, ''Installation Code for Oil-Burning Equipment.''

RELATED PRODUCTS

See Kerosene-fired Room Heaters Certified for Canada (LQLT7).

ADDITIONAL INFORMATION

For additional information, see Room Heaters Certified for Canada (LPJX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-B140.3, ''Oil Burning Stoves and Water Heaters.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Unvented Alcohol-fuel-burning Decorative Appliances Certified for Canada (LRBA7)

USE AND INSTALLATION

This category covers unvented self-contained ethyl alcohol-fuel burning appliances. These appliances are intended for decorative purposes, though there may be limited radiant and convection-air comfort heating. They are not provided with means for duct connection nor is there electrical/mechanical assist of heated air movement, such as a fan-blower assembly.

The ethyl alcohol fuels for use with these appliances are required to meet the Health Canada Consumer Chemicals and Containers Regulations and the EcoLogo program requirements. The appliances are investigated for use only with the specific fuel marked on the appliance nameplate. Use of fuels other than those specified for the appliance may result in risk of asphyxiation and fire hazard. Refueling is intended to be accomplished in accordance with markings on the appliance and only from containers indicated as suitable for the purpose.

Installation is intended to be in accordance with local codes, the manufacturer's installation instructions and any markings on the appliance. These appliances may be floor mounted or wall mounted. They may be installed in a solid-fuel-burning fireplace adapted for the purpose and, when so marked, in a factory-built solid-fuel-burning fireplace in accordance with the manufacturer's instructions. They are not intended for use in bathrooms or bedrooms nor for institutional use.

Unvented alcohol-fuel-burning appliances require fresh air infiltration into the room in which the appliances are installed. Refer to markings on the appliance and the manufacturer's instructions for information on ventilation.

ADDITIONAL INFORMATION

For additional information, see Room Heaters Certified for Canada (LPJX7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C627.1, ''Unvented Ethyl Alcohol Fuel Burning Decorative Appliances.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Unvented Alcohol-fuel-burning Decorative Appliance.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA HEATERS CERTIFIED FOR CANADA (LSBZ7)

Gas-fired Swimming Pool and Spa Heaters Certified for Canada (LSEV7)

USE

This category covers gas-fired appliances intended for indoor or outdoor use for heating nonpotable water stored at atmospheric pressure, such as water in swimming pools, spas, hot tubs, and similar applications.

INSTALLATION

These heaters are intended to be installed in accordance with the markings on the appliance and in the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, closet installation, types of adjacent surfaces, and proper vent installation, and the following as applicable:

Gas-fired Swimming Pool and Spa Heaters Certified for Canada (LSEV7)−*Continued*

- the current edition of CAN/CSA-B149.1, ''Natural Gas and Propane Installation Code''
- the current edition of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I''
- local codes

These heaters are marked with information specifying the type(s) of gas supply to which the product is to be connected. Heaters suitable for installation indoors only, outdoors only, or either are so indicated by a marking on the product. Heaters suitable for installation at a distance less than 5 feet (1.52 m) from the inside surface of a pool or spa (defined as close proximity heaters) are so indicated by a marking on the product.

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z21.56/CSA 4.7, ''Gas-Fired Pool Heaters.'' In addition, spa heaters are investigated to CAN/CSA-C22.2 No. 218.1 (1989), ''Spas, Hot Tubs and Associated Equipment.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''ANS Z21.56(+) CSA 4.7(+)-(++) Pool Heater.''

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT HEATERS CERTIFIED FOR CANADA (LSOV7)

USE AND INSTALLATION

This category covers fuel-fired, self-contained, automatically-controlled unit heaters equipped with an integral fan or blower for circulation of air and may also be equipped with louvers or face extensions. These heaters are designed to burn gas as indicated in the individual product categories, and are provided with primary safety controls and with limit controls.

These heaters are intended for installation on the type of floor and with clearances to combustible construction not less than indicated in the marking on the heater. The minimum clearance markings used in the individual Listings to indicate minimum clearances in centimeters and type of flooring may be in the form of symbols and abbreviations, as noted below. The specified clearances are the minimums required to avoid overheating; additional clearances may be needed for accessibility.

These heaters are intended for installation in accordance with the appropriate standards as required by the province in which the appliance is being installed, such as the current editions of:

- CAN/CSA-B149.1, ''Natural Gas and Propane Installation Code''
- CAN/CSA-C22.1, ''Canadian Electrical Code, Part I''
- CAN/CSA-A405-1987, ''Design and Construction of Masonry Chimneys and Fireplaces''
- ''National Building Code of Canada''

Installation Symbols and Abbreviations

Descriptions of symbols and abbreviations applicable to the installation of unit heaters are as follows:

A - – Clearance above top of heater

B - – Clearance from burner if externally mounted on heater

C_H - – Clearance from flue or vent pipe measured horizontally or below flue or pipe

C_V - – Clearance from flue or vent pipe measured vertically or above flue or vent pipe

D - – Clearance from back of heater

E_L - – Clearance from left side of heater

E_R - – Clearance from right side of heater

F - – Indicates type of flooring: NC = Noncombustible, C = Combustible; numeral indicates minimum clearance below suspended appliances to combustible material

Unit Heaters Certified for Canada (LSOV7)−*Continued*

Typical Installation Clearances for Unit Heaters

When a unit heater is Listed for typical installation clearances, the Listing may refer to the Form designation. Form designations for typical installation clearances for unit heaters installed in rooms are indicated in the table below. Clearances are indicated in the individual Listings.

Form	Standard Minimum Clearances (cm)							
	A	B	C_H	C_V	D	E_L	E_R	F
III	45.72	121.92	45.72	45.72	45.72	45.72	45.72	NC
IIIa	45.72	121.92	45.72	45.72	45.72	45.72	45.72	C
IIIb	45.72	121.92	45.72	45.72	45.72	45.72	45.72	45.72
V	15.24	60.96	45.72	45.72	45.72	45.72	45.72	45.72
XV	15.24	45.72	15.24	15.24	45.72	45.72	45.72	30.48

Unit heaters Listed for Forms III, IIIa, IIIb and V are low-heat appliances intended for connection to suitable chimneys

Unit heaters Listed for Form XV are low-heat gas appliances suitable for venting to Type B vents for gas appliances

* *

Gas-fired Unit Heaters Certified for Canada (LTCT7)

USE

This category covers gas-fired, vented unit heaters with inputs up to and including 10,000,000 Btu/h (2931 kW). These heaters are intended for commercial or industrial use and for use with natural gas with inlet gas pressures up to and including 5.0 psi (34.5 kPa) and/or liquefied petroleum (LP) gas. These heaters are intended for use indoors or outdoors in locations where flammable gases or vapors are not generally present. Unless installed outdoors, these heaters are intended for use in the space being heated. These heaters may be used in aircraft hangars, parking structures and repair garages.

CATEGORIES

Unit heaters are of either the low- or high-static pressure type and are divided into four categories as noted below based on the pressure produced in the vent and the difference between actual vent gas temperature and the dew point temperature:

Category I - – Operates with a non-positive vent pressure and with a vent gas temperature at least 140°F (78°C) above its dew point.

Category II - – Operates with a non-positive vent pressure and with a vent gas temperature less than 140°F (78°C) above its dew point.

Category III - – Operates with a positive vent pressure and with a vent gas temperature at least 140°F (78°C) above its dew point.

Category IV - – Operates with a positive vent pressure and with a vent gas temperature less than 140°F (78°C) above its dew point.

INSTALLATION

These heaters are intended to be installed in accordance with the markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate Canadian installation codes and standards, and local codes.

The minimum clearance markings may be in the form of symbols, Form designations (for typical installations), and abbreviations as noted under Unit Heaters Certified for Canada (LSOV7). This information is also included in the individual certifications.

These heaters may be suspended or floor-mounted. Heaters suitable for installation outdoors only or either indoors or outdoors are so indicated by a marking on the product. These heaters are marked with information specifying the type(s) of gas supply to which the product is intended to be connected.

PRODUCT MARKINGS

In addition to the markings noted under **INSTALLATION** above, these heaters are marked with the category of the appliance as well as the statement "For Industrial/Commercial Use."

ADDITIONAL INFORMATION

For additional information, see Unit Heaters Certified for Canada (LSOV7), Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addenda thereto of ANSI Z83.8/CSA 2.6, "Gas Unit Heaters and Gas-Fired Duct Furnaces."

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and

Gas-fired Unit Heaters Certified for Canada (LTCT7)−*Continued*

Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the standard designation "ANS Z83.8(+) CSA 2.6(+)-(++) Unit Heater," and the statement "For Use With _____ Primary Safety Controls."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

USED-OIL-BURNING APPLIANCES CERTIFIED FOR CANADA (LUQH7)

USE AND INSTALLATION

This category covers heating appliances, such as oil burners, central furnaces, room heaters, unit heaters and the like, intended for use with used petroleum-based oils, such as crankcase oils as the fuel, and intended for use only in commercial and industrial occupancies. The specific types of fuels and appliances are identified in the individual certifications. Synthetic lubricants that contain chlorinated hydrocarbons, such as transformer, capacitor and hydraulic oils, are not covered under this category.

Used crankcase oils may vary considerably in their chemical and physical properties. They normally consist of a mixture of different grades of used automotive (crankcase) oil, transmission oil, brake fluid, and gasoline. Reference should be made to CSA B139, "Installation Code for Oil-Burning Equipment," for the safe handling, storage, and burning of used crankcase oils.

If an appliance has also been tested for use with standard commercial grade fuel oils, the grade(s) of oil that may be used with the appliance is also indicated in the nameplate marking and in the installation and operating instructions.

The investigation of the used-oil-burning appliances does not include a measure of emission of pollutants other than smoke density. Authorities Having Jurisdiction should be consulted with regard to the installation and use of the used-oil-burning appliances in a particular area.

The installation and use of used-oil-burning appliances is intended to be in strict accordance with the instructions furnished with the appliances and the standards as required by the Province in which the appliance is being installed, such as CSA-B139, CAN/CSA-C22.1, "Canadian Electrical Code, Part I," CAN/CSA A405, "Design and Construction of Masonry Chimneys and Fireplaces," and the "National Building Code of Canada." For additional information regarding the installation of the type of appliance identified in the individual certifications, refer to the product categories under **ADDITIONAL INFORMATION**.

WATER HEATERS CERTIFIED FOR CANADA (LURX7)

These are storage tank type water heaters intended for installation on the kind of floors and with clearances to combustible construction not less than indicated on the heater. They are provided with primary safety controls and limit controls.

Dimension symbols, and abbreviations are used in listings, published on 3 by 5 in. buff cards available from the Listee, to indicate minimum clearances in mm (inches), kind of flooring, when an appliance may be installed in an alcove or closet, and the total free area of the required air openings into a closet. The clearances so designated are only the minimums required to avoid overheating; additional clearances may be needed for accessibility.

Water heaters of a size greater than 100 Canadian gal capacity and/or with fuel input greater than 200,000 BTU per hr are furnished with tanks built in accordance with the ASME Boiler and Pressure Vessel Code.

None of these water heaters have been investigated for suitability to provide hot water for space heating purposes.

Each clearance is indicated by the appropriate symbols in the listing. If a water heater listed for alcove or closet installation is installed in a room which is large in relation to the size of the water heater it may be installed at the minimum clearances specified for closets and alcoves.

Description of dimension symbols and abbreviations.

A - Clearance above top of water heater.

B - From front of heater. Prefix "C" to numeral indicates suitability for closet or alcove installation; prefix "A," suitability for alcove installation but not for closet.

CH - From flue pipe measured horizontally or below pipe.

CV - From flue pipe measured vertically above pipe.

D - From back of heater.

EL - From left side of heater.

ER - From right side of heater.

F - Indicates type of flooring: "NC" for noncombustible; "C" for combustible.

G - Total minimum free area in square mm (square inches) of air openings into a closet.

Water heaters are intended to be flue connected to suitable chimneys.

****

Gas-fired Storage Water Heaters with Input Ratings of 75,000 Btu Per Hour or Less Certified for Canada (LUVB7)

USE AND INSTALLATION

This category covers gas-fired storage water heaters having input ratings of 75,000 Btu/h (21,980 W) or less and intended for residential or commercial installation.

Gas-fired water heaters are intended to be installed in accordance with the instructions and markings, including specified gas supply, on the appliance. They are intended to be installed in accordance with the current edition of CAN/CSA-B149.1, "Natural Gas and Propane Installation Code." CAN/CSA-B149.1 specifies that vents constructed using plastic piping shall comply with ULC-S636, "Type BH Gas Venting Systems." This requirement includes standard vents and vent fittings, including but not limited to, transitions and termination kits.

WATER HEATER TYPES

A water heater is a vessel in which water is heated and withdrawn for use external to the vessel and includes all controls and devices necessary to prevent water temperatures from exceeding 210°F (99°C). Water heaters include the following types and features:

1. **Counter Type**

   Concealed Type — A water heater designed for flush installation beneath a counter 36 in. (91.4 cm) high, wherein the entire heater is concealed.

   Flush Type — A water heater designed primarily for installation in conjunction with or adjacent to a counter 36 in. (91.4 cm) high, wherein the front and top of the heater casing are exposed.

   Recessed Type — A water heater that is for installation beneath a counter 36 in. (91.4 cm) high, wherein the front of the heater casing is exposed.

2. **Direct Vent** — A system consisting of (a) a water heater for indoor installation, (b) combustion air connections between the water heater and the outside atmosphere, (c) flue gas connections between the water heater and the vent cap, and (d) vent cap for installation outdoors, supplied by the manufacturer, and constructed so that all air for combustion is obtained from the outside atmosphere and all flue gases are discharged to the outside atmosphere.

Gas-fired Storage Water Heaters with Input Ratings of 75,000 Btu Per Hour or Less Certified for Canada (LUVB7)−*Continued*

3. **Automatic Storage** — A water heater that heats and stores water within the vessel at a thermostatically controlled temperature for delivery on demand, and which has an input rating of less than 4,000 Btu/h/gal of stored water.

RELATED PRODUCTS

Gas-fired Storage Water Heaters with Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous Certified for Canada (LUVK7)

USE AND INSTALLATION

This category covers gas-fired automatic storage water heaters having input ratings above 75,000 Btu/h (21,980 W) and intended for residential or commercial installation, instantaneous water heaters, circulating water heaters and booster water heaters.

Gas-fired water heaters are intended to be installed in accordance with the instructions and markings, including specified gas supply, on the appliance. They are intended to be installed in accordance with the current edition of CAN/CSA-B149.1, "Natural Gas and Propane Installation Code." CAN/CSA-B149.1 specifies that vents constructed using plastic piping shall comply with ULC-S636, "Type BH Gas Venting Systems." This requirement includes standard vents and vent fittings, including but not limited to, transitions and termination kits.

WATER HEATER TYPES

A water heater is a vessel in which water is heated and withdrawn for use external to the vessel and includes all controls and devices necessary to prevent water temperatures from exceeding 210°F (99°C). Water heaters include the following types and features:

Circulating — Furnishes hot water to be stored in a separate vessel. Circulating may be either gravity or forced. An automatic circulating water heater is controlled by a thermostat which is an integral part of the water heater. A nonautomatic circulating water heater is controlled by a thermostat installed in the storage vessel.

Instantaneous — Has an input rating of at least 4,000 Btu/h/gal of stored water.

Tank Type — Has a water storage vessel which has a heat transfer surface(s) of internal fire-tube(s) or exterior surface(s) of the vessel, or both.

Water-tube Type — Tubes contain water and heat is applied to their outside surfaces.

Automatic Storage — Heats and stores water within the appliance at a thermostatically controlled temperature for delivery on demand, and which has an input rating of less than 4,000 Btu/h/gal of stored water.

Direct Vent — A system consisting of (1) a water heater for indoor installation, (2) combustion air connections between the water heater and

Gas-fired Storage Water Heaters with Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous Certified for Canada (LUVK7)−*Continued*

the outside atmosphere, (3) flue gas connections between the water heater and the vent cap, and (4) a vent cap for installation outdoors, supplied by the manufacturer and constructed so that all air for combustion is obtained from the outside atmosphere and all flue gases are discharged to the outside atmosphere.

Booster Type — Intended only for use in conjunction with commercial dishwashers that raises the temperature of the preheated water supplied to the unit typically between 110°F and 140°F (43.3° – 60.0°C) to 180 – 195°F (82.2 – 90.6°C).

ADDITIONAL INFORMATION

For additional information, see Water Heaters Certified for Canada (LURX7), Heating Appliances Certified for Canada (KTCR7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.10.3/CSA 4.3, "Gas Water Heaters, Volume III, Storage Water Heaters, with Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous."

Oil-fired Water Heaters Certified for Canada (LVFV7)

USE AND INSTALLATION

This category covers oil-fired water heaters. An oil-fired water heater may be furnished either as a unit assembly with a factory-installed oil burner or in two segments, one the water heater and the other the oil burner, each factory built to accommodate the other.

These appliances are intended to be installed in accordance with the (a) markings on the appliance and the installation instructions provided with the appliance, including (as applicable) markings and instructions pertaining to clearances and proper vent installation, (b) appropriate installation codes and standards, and (c) local building and plumbing codes.

The information pertaining to safe placement indicated in the individual Listings is designated in accordance with the figures, symbols and abbreviations given under Water Heaters Certified for Canada (LURX7).

These appliances are marked with information specifying the type(s) of standard grade fuel oils as specified in CSA B140.0, "Oil-Burning Equipment: General Requirements," and CAN/CGSB 3.2, "Heating Fuel Oil," with which the product is intended to be used. Appliances suitable for outdoor installation only are so indicated by a marking on the product.

Oil-fired Water Heaters Certified for Canada (LVFV7)−*Continued*

Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information as appropriate:

(A) "Oil-fired Water Heater. For Use Only With Integral Primary Safety Controls. Oil Not Heavier Than No. ____."

(B) "Water Heater. For Use Only With [Company Name] Listed Oil Burner Model(s) ____. Max Input ____ Gals Per Hour. Refer to Burner Label for Fuel Specifications."

An oil-fired water heater that includes the burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information similar to (A).

A water heater designated for installation of the burner in the field or at another factory bears a Listing Mark with the product name and information similar to (B), which covers the water heater only. The burner bears a separate Listing Mark as described for oil burners (see KYXZ7). The proper assemblies of water heaters and burners to make unit assemblies are as described in the water heater Listing Marks.

Solid-fuel-fired Water Heaters Certified for Canada (LVHO7)

USE

This category covers water heaters designed to burn solid fuel, such as wood, coal, or any other biomass fuel, and intended for use in household, commercial, industrial or institutional occupancies.

INSTALLATION

These water heaters are intended to be installed in accordance with the instructions provided with the appliance and markings on the appliance, and with the appropriate installation standards, such as the current editions of:

- CAN/CSA B365, "Installation Code for Solid-Fuel-Burning Appliances and Equipment"
- CAN/CSA-C22.1, "Canadian Electrical Code, Part I"
- "National Building Code of Canada"
- Local codes

RELATED PRODUCTS

See Gas-fired Storage Water Heaters with Input Ratings of 75,000 Btu Per Hour or Less Certified for Canada (LUVB7), Gas-fired Storage Water Heaters with Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous Certified for Canada (LUVK7) and Oil-fired Water Heaters Certified for Canada (LVFV7).

ADDITIONAL INFORMATION

For additional information, see Water Heaters Certified for Canada (LURX7), Heating Appliances Certified for Canada (KTCR7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are the current editions and effective addenda thereto of CAN/CSA B366.1, "Solid-Fuel-Fired Central Heating Appliances," ULC-S627, "Space Heaters for Use with Solid Fuels," and CSA B140.12, "Oil-Burning Equipment: Service Water Heaters for Domestic Hot Water, Space Heating, and Swimming Pools."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solid-fuel-fired Household Water Heater," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIALTY HEATING APPLIANCES CERTIFIED FOR CANADA (LVTT7)

GENERAL

This category covers specialty fuel-fired heating appliances, such as outdoor gas fireplaces, outdoor gas log sets, infrared patio heaters, commercial rotisseries and the like, as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Heating Appliances Certified for Canada (KTCR7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is one of the following as appropriate:

CSA-CAN1 3.1-77, "Industrial and Commercial Gas-Fired Package Boilers"

CSA International Requirement 3.90 U.S., "Requirements for Outdoor Portable Camp Cook Stoves for Use with Butane Gas"

CSA International Requirement 4.96 U.S., "Requirements for Outdoor Gas Fireplaces"

CSA International Requirement 5.90 U.S., "Requirements for Gas-Fired Infrared Patio Heaters"

CSA International Requirement 7.94 U.S., "Requirements for Manually Lighted, Natural Gas Decorative Appliances for Installation in Solid-Fuel Burning Fireplaces"

ANSI Z21.50/CSA 2.22, "Vented Gas Appliances"

ANSI Z21.86/CSA 2.32, "Vented Gas-Fired Space Heating Appliances"

ANSI Z21.88/CSA 2.33, "Vented Gas Fireplace Heaters"

ANSI Z21.60/CSA 2.26, "Decorative Gas Appliances for Installation in Solid-Fuel Burning Fireplaces"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND COOLING EQUIPMENT CERTIFIED FOR CANADA (LZFE7)

GENERAL

This category covers various types of heating and cooling equipment typically used for space conditioning.

Individual categories following the **GENERAL INFORMATION** section below are identified for each type of equipment. Not all statements in **GENERAL INFORMATION** are applicable to all types of equipment covered under this category; only the statements that are identified are applicable. Refer to the individual categories for the general information that is applicable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 2 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC) as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **IV. INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and **VIII. ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

GENERAL INFORMATION

Product Types

1. The following defines the types of systems covered in the individual categories below:

A. **Self-contained** — Refrigeration system in one section, factory assembled, with refrigerant charge and tested for leaks.

B. **Compressor Unit** — Includes one or more compressors with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit, and to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate. (The term is applicable both to refrigeration equipment of any size and also to air conditioning equipment. The term "air conditioning systems equipment, compressor unit" is used for air conditioning equipment rated over 135,000 Btu/h.)

C. **Compressor Condenser Unit** — Includes one or more compressors and condensers with interconnecting refrigerant piping and with associated controls and wiring. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (The term is applicable to air conditioning systems equipment only.)

D. **Compressor-Evaporator (Cooler) Unit** — Includes one or more compressors and evaporators (coolers) with interconnecting refrigerant tubing or piping and with associated controls and wiring. The unit is factory assembled and tested for leaks. The refrigerant type is marked on the unit and the operating refrigerant charge may or may not be provided as indicated on the unit nameplate.

These units are intended for field connection to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate. (The term "compressor-evaporator" is applicable to air conditioning systems equipment and special purpose air conditioners, and the term "compressor-cooler" is applicable to liquid chillers.)

E. **Compressor Evaporator/Condenser** — Refrigeration system in two sections, one including the compressor and the evaporator and the other, the condenser. The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the compressor evaporator unit nameplate. Each section is tested for leaks. (The term is applicable to central cooling air conditioners and special purpose air conditioners.)

F. **Condensing Unit/Evaporator (Outdoor/Indoor Unit)** — Refrigeration or air conditioning system in two sections, the condensing unit (or outdoor) section including the compressor and condenser and the other section the evaporator (indoor section). The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the condensing unit nameplate.

Each section is tested for leaks. (The term "condensing unit/evaporator" is applicable to central cooling air conditioners and special purpose air conditioners, and the term "outdoor/indoor unit" is applicable to heat pumps.)

G. **Heating, Cooling and Ventilating Equipment** — Intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately Listed. Unless indicated in the individual Listings for the other equipment, this equipment has not been investigated for operation when combined with other Listed equipment in a complete system assembled in the field.

H. **Condensing Unit** — Includes one or more compressors and air- or water-cooled condensers with interconnecting refrigerant piping and with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (Same as "C" above, except the term is applicable to refrigeration equipment or to air conditioning equipment of any size.)

2. Heating and cooling equipment of the unitary type consists of one or more factory-built sections. If the equipment is provided in two or more sections, each such section is designed for field interconnection with a matched section(s) to make the heating and/or cooling equipment. Equipment provided in two or more sections is either marked to identify the appropriate sections for proper installation, or the designations of the sections comprising the assembly are shown in the individual Listings. Where so designated, a separately Listed electric central heating furnace, fan-coil unit or fan unit may serve as a portion of the assembly.

3. Listed equipment is rated 600 V or less. Centrifugal type units as identified in the individual Listings are rated 7200 V or less.

Installation Codes

4. This equipment is intended to be installed in accordance with the requirements of the CEC.

5. Equipment with gas-, oil-, or gas-oil-fired heating means is intended to be installed in accordance with the appropriate standards as required by the province in which the appliance is being installed, such as CAN/CSA-B149.1, "Natural Gas and Propane Installation Code," CAN/CSA-B139, "Installation Code for Oil-Burning Equipment," CAN/CSA-A405, "Design and Construction of Masonry Chimneys and Fireplaces," and the National Building Code of Canada.

6. Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in CSA-B52, "Mechanical Refrigeration Code," but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The

use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in CSA-B52, UL's Listing Reports (available from the manufacturer) identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems," for currently used refrigerants.

The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable.

Wiring Diagrams

7. The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking required to be attached to the equipment.

Units Used with Duct Heaters

8. Unless otherwise indicated in the individual Listings, Listed duct heaters that may be installed in conjunction with the equipment covered in the Listings are intended to be installed at least 1.2 m downstream from the equipment.

Field-installed Accessories

9. Heating and cooling equipment investigated for use with Listed field-installed accessories, such as electric resistance heaters (including duct heaters), are specifically indicated in the individual Listings. See Accessories, Air Conditioning Equipment Certified for Canada (ABFY7).

10. Units investigated for use with field-installed steam, hot water, or refrigerant coils or with electric resistance heaters (including Listed accessories or duct heaters as noted in paragraph 8 above) are marked to so indicate.

Electric Heat Considerations

11. Units that incorporate factory-installed electric resistance heaters are identified in the individual Listings.

12. Where a through-air clearance to combustible materials is required, this clearance is marked on the heating and/or cooling equipment and is designated in the individual Listings. The clearances are the minimum required to avoid overheating; additional clearances may be required for accessibility.

When zero clearance is specified, temperatures are measured directly on the unit cabinet with uninsulated sheet metal ducts and plenum attached. When clearances other than zero are specified, temperatures are measured on a wood test enclosure spaced at the specified clearances from the unit cabinet, ducts and plenum.

13. In heating and cooling equipment employing electric resistance heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected by overcurrent devices at not more than 60 A.

The overcurrent devices are either included as an integral part of the heating and cooling equipment or furnished as a separate assembly. If the overcurrent devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies specifically recognized for use with electric space heaters provided as part of this equipment, see **CONTROL PANELS FOR SPECIFIC ELECTRIC SPACE-HEATING EQUIPMENT** below. Other Listed separate assemblies, as referenced on a marking on the heating and cooling equipment, may also be used.

Unit Installation

14. Unless otherwise specified in the marking on the equipment, the unit may be installed on combustible flooring.

15. Attic type units are so indicated in the individual Listings. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the marking or instructions provided on the unit.

16. Units/Sections suitable for outdoor installation are so marked and identified in the individual Listings either by the term "outdoor section" or by an appropriate footnote. Units/Sections not marked as suitable for outdoor installation are for indoor use only.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 236, "Heating and Cooling Equipment."

This category also covers products that have been investigated in accordance with CAN/CSA-E60335-2-40, "Requirements for Electric Heat Pumps, Air Conditioners and Dehumidifiers."

Alternatively, air conditioning systems, central cooling air conditioners (packaged and split system), heat pumps (packaged and split system), heat pump water heaters, accessories for heating and cooling equipment, accessories for air conditioning equipment, electric heater assemblies, dehumidifiers, and miscellaneous heating and cooling equipment single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to CAN/CSA-C22.2 No. 60335-1 (2011), "Safety of Household and Similar Electrical Appliances, Part 1: General Requirements," and CAN/CSA-C22.2 No. 60335-2-40 (2012), "Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers."

Other standards may also be used where specifically indicated in the individual categories below.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as shown in the following individual categories or in the individual Listings.

The Gas-fired Listing Mark of UL for gas-fired products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product identity, and the standard designation as shown in the following individual categories or in the individual Listings.

ABSORPTION AIR CONDITIONING EQUIPMENT

GENERAL INFORMATION paragraphs 1A, 2, 3, 4, 5, 6 and 16 are applicable to this equipment.

This category covers equipment of the unitary type employing an absorption type refrigeration system, and intended for commercial or domestic cooling, or heating and cooling of a liquid such as water or a water-antifreeze solution. This equipment is intended primarily, but not exclusively, for air conditioning application.

The direct energy source for cooling and heating is a hot fluid (such as gas, liquid or steam) as obtained from a source such as a solar-heat system or waste-heat, and/or gas-, oil-, or gas-oil-fired burners.

AIR CONDITIONING SYSTEMS EQUIPMENT, SELF-CONTAINED UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COOLING PORTION OF SELF-CONTAINED UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR-EVAPORATOR UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR-CONDENSER UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR UNITS

GENERAL INFORMATION paragraphs 1A, 1B, 1C, 1D, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, 14 and 16 are applicable to this equipment.

This category covers equipment with a rated cooling capacity exceeding 135,000 Btu/h, intended for commercial or industrial central cooling applications. For equipment rated 135,000 Btu/h or less, see **AIR CONDITIONERS, CENTRAL COOLING** or **CONDENSING UNITS** below. For additional self-contained units incorporating gas-, oil-, or gas-oil-fired burners, see **HEATING AND COOLING UNITS** below.

Self-contained units and compressor-evaporator units may include heating means, including electric resistance heaters, gas-, oil-, or gas-oil-fired burners, or hot water or steam coils.

A gas-fired heating portion included in this category is for use only in the same manufacturer's specified air conditioning systems equipment as marked on the heating portion and as indicated in the individual Listings.

The basic standard used to investigate the refrigeration portion of the products in this category is CSA-C22.2 No. 236. The basic standard used to investigate the gas heating portion of the products in this category with gas heating inputs up to and including 400,000 Btu/h (117.23 kW) is ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces." The basic standard used to investigate the gas heating portion of the products in this category with gas heating inputs over 400,000 Btu/h (117.23 kW) is CGA 3.2, "Industrial and Commercial Gas-Fired Package Furnaces."

The Gas-fired Listing Mark is provided either on a Listed self-contained unit or on a Listed gas-fired heating section or portion of a Listed self-contained unit.

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the words "Gas Heating Portion," and

(a) for gas-fired heating portions with inputs up to and including 400,000 Btu/h (117.23 kW), the standard designation "ANS Z21.47(+) CSA 2.3(+)-(++) Central Furn"
(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

or

(b) for gas-fired heating portions with inputs over 400,000 Btu/h (117.23 kW), the standard designation "CGA 3.2-1976" and the product name "Central Furnace."

AIR CONDITIONERS AND CENTRAL COOLING AIR CONDITIONERS

SECTIONS OF CENTRAL COOLING AIR CONDITIONERS
ACCESSORIES FOR AIR CONDITIONERS

GENERAL INFORMATION paragraphs 1A, 1E, 1F, 2, 3, 4, and 6 through 16 inclusive are applicable to this equipment.

This category covers equipment of the unitary type, for commercial or domestic applications.

Unitary air conditioners consist of one or more factory-made sections, as described under **GENERAL INFORMATION**. Unless so indicated in the individual Listings, the evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or furnished as a separate section.

CONDENSING UNITS
COMPRESSOR UNITS
ACCESSORIES FOR CONDENSING UNITS
ACCESSORIES FOR COMPRESSOR UNITS
ACCESSORIES FOR CONDENSING OR COMPRESSOR UNITS

GENERAL INFORMATION paragraphs 1B, 1H, 3, 4, 6, 10 and 16 are applicable to this equipment.

This category covers units intended for refrigeration service of any Btu per hour capacity. For units intended primarily for air conditioning applications, see **AIR CONDITIONING SYSTEMS EQUIPMENT** (rated more than 135,000 Btu/h) or **CENTRAL COOLING AIR CONDITIONERS** above.

This equipment is intended to be installed in air conditioning and refrigeration systems.

Some condensing units or compressor units included in this category are intended for field connection to multiple refrigeration systems and include multiple condensing units, compressor units or compressors, with single or multiple condensers, with associated piping, controls, and wiring, mounted on a common frame or in a common housing.

The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

These units are intended to be used only in systems with the specified refrigerant and operating at pressures not in excess of those indicated by the marked test pressures.

GENERAL-PURPOSE CONTROL PANELS FOR ELECTRIC SPACE-HEATING EQUIPMENT
CONTROL PANELS FOR SPECIFIC ELECTRIC SPACE-HEATING EQUIPMENT

GENERAL INFORMATION paragraphs 3 and 4 are applicable to this equipment.

This category covers electrical panels incorporating control and/or overcurrent devices intended specifically for remote use with electric space-heating equipment, including air conditioning equipment with electric resistance space heaters.

Unless otherwise specified in the manufacturer's installation instructions, these panels are intended to be mounted remote from the space-heating equipment, in a location where they will not be affected by heat or condensation from operation of the equipment.

The proper installation of these panels requires careful consideration of the manufacturer's installation instructions and wiring diagrams.

General purpose panels are not limited to use with specific makes and models of space-heating equipment. These panels are provided with installation instructions and wiring diagrams showing supply connections, connections to the space-heating equipment, and control-circuit connections to be completed at the time of installation.

General purpose panels containing only overcurrent devices or only magnetically operated switching devices are covered under Panelboards Certified for Canada (QEUY7) and Industrial Control Equipment Certified for Canada (NIMX7), respectively.

Panels to be used only with specific Listed equipment are so identified and the equipment marked to require the particular panel. The installation instructions and wiring diagrams for these panels may be provided with the panel or may be provided only with the Listed space-heating equipment.

For control panels for specific electric space-heating equipment, see the equipment nameplate and installation instructions.

DEHUMIDIFIERS

GENERAL INFORMATION paragraphs 1A, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, 14, 15 and 16 are applicable to this equipment. This category covers duct-mounted and permanently connected, self-contained household, commercial and industrial dehumidifiers for use in removing moisture from the air. These dehumidifiers employ hermetic refrigerant motor-compressors and may also incorporate electric air heaters.

ELECTRIC CENTRAL HEATING FURNACES
SECTIONS OF ELECTRIC CENTRAL HEATING FURNACES

GENERAL INFORMATION paragraphs 2, 4, 6, 12, 13 and 16 are applicable to this equipment.

This category covers electrically operated central heating furnaces intended for use in space-heating applications in homes and other types of buildings, including mobile homes and recreational vehicles, as indicated in the manufacturer's installation instructions.

HEATING AND COOLING EQUIPMENT CERTIFIED FOR CANADA (LZFE7)

Warm-air furnaces have provision for connection to a duct system except furnaces intended only for installation in a single story residence need not have provision for connection of a return air duct.

Each electric central heating furnace is provided with an individual marking and instructions. If a noncombustible floor material is required, the necessary clearances to combustible constructions and proper installation in an alcove or closet are specified in the marking and/or instructions.

Furnaces consist of one or more factory-built sections. Equipment provided in more than one section is designed for field interconnection of matched sections to make the complete assembly. The individual sections that comprise the assembly are identified in the individual Listings and by a cross-reference marking on at least one of the sections.

Furnaces investigated for use with a field-installed refrigerant coil are so identified in the individual Listings and the refrigerant coil(s) for such use are identified by a marking on the furnace. Tests of furnaces with these field-installed coils intended for cooling, or with integral factory-installed coils intended for cooling, have indicated no adverse effects on the furnace.

The assembly of a furnace with a field- or factory-installed refrigerant coil to a condensing unit of a central cooling air conditioner has been investigated only for those specific combinations identified in the individual Listings as "Air Conditioners, Central Cooling," or for those specific condensing units identified by a marking on the furnace.

The assembly of a furnace with a field- or factory-installed refrigerant coil to an outdoor section of a heat pump has been investigated only for those specific combinations identified in the individual Listings as "Heat Pumps." The effect of refrigerant heating on the furnace has not been investigated for other combinations.

ENVIRONMENTAL AIR TERMINAL UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 6, 7, 8, 9, 10, and 12 through 16 inclusive are applicable to this equipment.

This category covers fixed appliances that include a motor-operated fan or blower with or without electric resistance heaters. The appliances are intended to be installed in accordance with the manufacturer's installation instructions in plenums above hung (suspended) ceilings where the inlet air to the appliance is taken from this plenum space in accordance with Section 12-010(3) of the CEC.

The air outlet may be free discharge or be ducted to ceiling diffusers.

FAN-COIL UNITS
SECTIONS OF FAN-COIL UNITS
ACCESSORIES FOR FAN-COIL UNITS

GENERAL INFORMATION paragraphs 1G, 2, 3, 4, 6, and 7 through 16 inclusive are applicable to this equipment.

This category covers appliances that include a motor-operated fan or blower together with a cooling coil, a heating coil, or both and may also include an electric heater. The fan or blower is designed to recirculate air or to draw in outside air, or both. The coil may be designed for refrigerant cooling, for refrigerant heating, for chilled water cooling, for hot water heating, for steam heating, or for combinations of these functions.

A fan-coil unit is intended to be piped to a remote source of heat, of cooling, or of both. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

Equipment intended for use with hot water is marked for a maximum inlet water temperature.

Equipment intended for use with steam is marked for a maximum inlet steam pressure.

A fan-coil unit containing a refrigerant coil that has been additionally investigated as part of a specific split-system cooling air conditioner, special purpose air conditioner or heat pump, is also identified as part of that system in the individual Listings as "Air Conditioners, Central Cooling," "Air Conditioners, Special Purpose" or "Heat Pumps."

A fan-coil unit, as covered by these requirements, may be designed for free delivery of air to the room or may be provided with means for duct connection. Representative types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert (built-in) units.

A room-type unit is designed to circulate air to the conditioned space directly, or by means of duct work having a static-pressure drop not exceeding 1.27 mm of water.

Units that are similar to fan-coil units with electric resistance heaters, but not provided with a refrigerant, steam or water coil, are identified in the individual Listings as "Room Fan Heater Units."

FAN UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 6, 7, 9, 10, and 12 through 16 inclusive are applicable to this equipment.

This category covers equipment intended to be connected to a duct system that supplies conditioned air for environmental heating and/or cooling. The units consist of a motor-operated fan or blower and may have air control dampers. The units may be thermostatically operated by integral or remote controls. The units do not include factory-installed heat exchangers or other integral heating or cooling means.

Fan units with field-installed heater accessories as detailed in paragraph 9 under **GENERAL INFORMATION** are the equivalent of "Electric Central Heating Furnaces."

Units intended for use in duct systems with air temperatures exceeding normal room ambient temperature are marked with the maximum inlet air temperature rating.

Other types of fans for duct connection are covered under Fans, Electric Certified for Canada (GPWV7) and Ventilators, Power Certified for Canada (ZACT7).

HEAT PUMPS
SECTIONS OF HEAT PUMPS
ACCESSORIES FOR HEAT PUMPS

GENERAL INFORMATION paragraphs 1A, 1F, 2, 3, 4, and 6 through 16 inclusive are applicable to this equipment.

This category covers reverse cycle unitary air conditioning systems for comfort heating and cooling (or for comfort heating only), if so indicated in the individual Listings.

HEAT PUMP WATER HEATERS
HEAT PUMP SWIMMING POOL HEATERS
HEAT PUMP SPA HEATERS
SECTIONS OF HEAT PUMP WATER HEATERS
ACCESSORIES FOR HEAT PUMP WATER HEATERS

GENERAL INFORMATION paragraphs 2, 3, 4, 6, 7 and 16 are applicable to this equipment.

This category covers products intended to heat water utilizing the heat of rejection from a mechanical refrigeration system and optional accessories for these products. These products are designed to restrict the outlet water temperature to a maximum of 85°C (185°F) under normal operation conditions and to a maximum of 99°C (210°F) under abnormal conditions.

See Heaters Certified for Canada (WBRR7) for additional information on heat pump pool and spa heaters.

HEATING AND COOLING UNITS
COOLING PORTIONS OF HEATING AND COOLING UNITS

GENERAL INFORMATION paragraphs 1A, 3, 4, 5, 6, 7, 9, 10, 12 and 16 are applicable to this equipment.

This category covers self-contained assemblies manufactured for installation as a package. They include all the necessary components needed for both heating and cooling. Heating is by gas-, oil-, or gas-oil-fired burner(s), and by incorporating a heat pump system. Cooling and heat-pump heating is by mechanical refrigeration with any rated cooling/heating capacity.

The information pertaining to safe placement is indicated in the individual Listings.

The name and amount of refrigerant, test pressure, and electrical rating appear on the unit.

A gas-fired heating portion included in this category is for use only in the same manufacturer's specified air conditioning or heat pump systems equipment as marked on the heating portion and as indicated in the individual Listings.

The basic standard used to investigate the gas heating portion of the products in this category with gas heating inputs up to and including 400,000 Btu/h (117.23 kW) is ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces." The basic standard used to investigate the gas heating portion of the products in this category with gas heating inputs over 400,000 Btu/h (117.23 kW) is CGA 3.2, "Industrial and Commercial Gas-Fired Package Furnaces."

The Gas-fired Listing Mark is provided either on a Listed heating and cooling unit or on a Listed gas-fired heating section or portion of a Listed heating and cooling unit.

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the words "Gas Heating Portion," and

(a) for gas-fired heating portions with inputs up to and including 400,000 Btu/h (117.23 kW), the standard designation "ANS Z21.47(+) CSA 2.3(+)-(++) Central Furn"
(+) Suffix letter of latest addendum if applicable
(++) Issue year of latest addendum or standard

or

(b) for gas-fired heating portions with inputs over 400,000 Btu/h (117.23 kW), the standard designation "CGA 3.2-1976" and the product name "Central Furnace."

LIQUID CHILLERS, SELF-CONTAINED UNITS
LIQUID CHILLERS, COMPRESSOR-COOLER UNITS
AIR CONDITIONING LIQUID CHILLERS
SECTIONS OF AIR CONDITIONING LIQUID CHILLERS

GENERAL INFORMATION paragraphs 1A, 1D, 2, 3, 4, 5, 6, 7, 15 and 16 are applicable to this equipment.

This category covers equipment intended for cooling of liquid, such as water or water-antifreeze solutions. The equipment is intended primarily, but not exclusively for, air conditioning application.

Air conditioning liquid chillers rated 135,000 Btu/h or less are of the unitary type. Liquid chillers with a rated cooling capacity exceeding 135,000 Btu/h may be either self-contained units or compressor-cooler units.

Drinking water coolers, commercial processing water coolers, and other liquid chillers investigated only for commercial refrigeration applications other than air conditioning are covered under Refrigeration Equipment Certified for Canada (SCER7).

Absorption air conditioning equipment that utilizes hot fluid (such as gas, liquid or steam) as the direct energy source for cooling and heating is identified in the individual Listings as "Absorption Air Conditioning Equipment."

MECHANICAL DRAFT WATER COOLING TOWERS
ACCESSORIES FOR MECHANICAL DRAFT WATER COOLING TOWERS

GENERAL INFORMATION paragraphs 1G, 3, 4, 6, 7, 15 and 16 are applicable to this equipment.

This category covers equipment intended for use with water-cooled air conditioning and refrigeration equipment. The water used as a cooling medium may contain antifreeze, and is circulated through the tower via either a finned tube assembly or a system that is open to the atmosphere. The tower includes a motor-driven fan or blower and may also include circulation pumps.

Equipment investigated for use with Listed accessories, such as pump assemblies, is marked to identify the accessories and is also identified in the individual Listings.

REFRIGERANT CONDENSERS

GENERAL INFORMATION paragraphs 3, 4, 6, 7, 15 and 16 are applicable to this equipment.

This category covers finned tube assemblies incorporating a motor-driven fan that are intended to liquefy refrigerant vapor by removal of heat.

Evaporative or water-cooled devices are covered under Condensers, Refrigerant Certified for Canada (SLSV7).

ROOM AIR TERMINAL UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 6, 7, 9, 10, and 12 through 16 inclusive are applicable to this equipment.

This category covers units designed to be connected to the terminal end of a single duct or duct system supplying air from a remotely located air-handling unit for the purpose of providing heating, ventilation and/or cooling.

The unit types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert constructions.

Units incorporating electric heat have an automatic resetting temperature limiting control that is intended to protect against abnormal operating conditions and, in addition, each unit is provided with a replaceable thermal cutoff or a manually resettable temperature limiting control. In addition to CSA-C22.2 No. 236, the standard used to investigate units incorporating electric heat is CSA-C22.2 No. 155, "Electric Duct Heaters."

The proper installation of these units requires careful consideration of the individual manufacturer's design characteristics, taking into consideration the volume of air passing through the units and the temperature of the input air.

The manufacturer's application and installation instructions furnished with each unit should be consulted to determine the factors appropriate to the particular installation including required distances between the unit and turns in the duct, changes in duct sizes, air filters, humidifiers, etc. Unless these instructions specify other distances for horizontals or upflow installations, 1) turns in the duct on the inlet side of the unit should be at least 4 ft from the unit, 2) turns in the duct on the outlet side of the unit should be at least 2 ft from the unit, and 3) changes in duct size, air filters, humidifiers, etc. should be located at least 4 ft from either side of the unit.

Units incorporating electric heat may have provision for interlocking the air supply and the electric element circuit.

Units may include provision for a coil designed for cooling by refrigerant or chilled water, or heating by steam or hot water, or for combinations of such coils.

ROOM FAN HEATER UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 6, 7, 8, 9, 10, and 12 through 16 inclusive are applicable to this equipment.

This category covers fixed appliances that include a motor-operated fan or blower and electric resistance heater, or an electrically heated heat exchanger.

These appliances are designed to serve a single room or space. Included are units similar to fan-coil units with electric resistance heaters but which are not provided with a refrigerant, steam or water coil, and units similar to air heaters, but which draw in air from outside the heated space. Air heaters are covered under Air Heaters, Room, Fixed and Location Dedicated Certified for Canada (KKWS7).

A room fan heater may be designed for free delivery of air to the room, or may be provided with a means for connection of a short extension duct. Representative types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert (built-in) units.

Information concerning required installation clearances, etc. is designated in markings and/or installation instructions as indicated under **GENERAL INFORMATION**. This information also appears in the individual Listings.

SPECIAL PURPOSE AIR CONDITIONERS
SECTIONS OF SPECIAL PURPOSE AIR CONDITIONERS
ACCESSORIES FOR SPECIAL PURPOSE AIR CONDITIONERS

GENERAL INFORMATION paragraphs 1A, 1D, 1E, 1F, 2, 3, 4, 6, 7, 9, 12, 13, 14 and 16 are applicable to this equipment.

This category covers equipment designed for special purposes, such as environmental control of computer rooms.

This equipment consists of one or more factory-made sections, as described under **GENERAL INFORMATION**. Unless so indicated in the individual Listings, the evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or be furnished as a separate section.

Computer room air conditioners are intended for installation in accordance with ANSI/NFPA 75, "Fire Protection of Information Technology Equipment." These air conditioners are generally installed on the raised floors of computer rooms and have not been investigated for connection to ducts unless so specified in the individual Listings.

Factory-installed electric heaters and humidifiers have been investigated for this application.

VENTILATING UNITS
SECTIONS OF VENTILATING UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 6, 7, 8, 9, 10, and 12 through 16 inclusive are applicable to this equipment.

This category covers units that consist of electric resistance heaters and a motor-operated blower. The units may also incorporate means for evaporative cooling. These units are intended to supply heated and/or cooled air to commercial and industrial buildings from which air is being exhausted by other equipment. There is no provision for return-air circulation on these units.

Information concerning required installation clearances, etc. is designated in markings and/or installation instructions as indicated under **GENERAL INFORMATION**. This information also appears in the individual Listings.

MISCELLANEOUS HEATING AND COOLING EQUIPMENT

GENERAL INFORMATION paragraph 4 is applicable to this equipment.

This category covers miscellaneous heating and cooling equipment.

HEATING AND COOLING EQUIPMENT ACCESSORIES

GENERAL INFORMATION paragraph 4 is applicable to this equipment.

This category covers accessories intended for installation only on Listed heating and cooling equipment as designated in the individual Listings of the equipment and accessories. The accessories are intended primarily for field installation, but may be factory installed.

The equipment on which these accessories may be field installed is marked to indicate that it is Listed for use with the specific accessory as designated by model, catalog number, part number, etc. in this section. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed.

Information concerning field wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

The basic standards used to investigate products in this category are the standards applicable to the equipment on which the accessories are intended to be installed.

RELATED PRODUCTS

Products Verified for energy efficiency are covered under Heating and Cooling Equipment Verified for Energy Efficiency (ZYQL).

****

DUCTLESS HEATING AND COOLING EQUIPMENT, LARGE, OPEN BUILDING CERTIFIED FOR CANADA (LZPG7)

GENERAL

This category covers ductless heating and cooling equipment intended to serve a single, large, open area, such as a warehouse. These are encased assemblies designed as a unit and intended as the prime source of heating, cooling and dehumidification.

Ductless Heating and Cooling Equipment, Large, Open Building Certified for Canada (LZPG7)–*Continued*

INSTALLATION

This equipment is rated 600 V ac or less and is intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Ductless heating and cooling equipment is custom built to the customer's specifications. This equipment may be installed in the conditioned airspace or outdoors; when installed outdoors, provisions, such as a short duct, are provided for serving the adjacent space. This equipment has a heating range from 10,000 to 18,000,000 Btu's, a cooling capacity range up to 1,000 tons, and an air circulation of 1,000 to 200,000 cfm. The heat sources include electric, gas, hot water, oil or steam. Each unit provided with electric, gas-fired or oil-fired heat incorporates integral limit controls intended to protect against abnormal operating conditions, which might arise from blocked inlets, blocked outlets, or fan failures. The limit control will not allow a discharge air temperature during all the normal, abnormal and back-up tests of 150°F (65.56°C).

After assembly on the production line, each unit will have tests conducted before it leaves the factory, and additional tests will be performed again once the unit has been installed a the site by a factory representative.

Ductless heating and cooling equipment is made up of three basic modules and optional extensions that are field erected in a stacked configuration. By design, the equipment consists of factory-built subassemblies or modules and furnished with appropriate controls and detailed instructions to accommodate assembly and installation with applicable codes.

The lowermost module is the **air base**, containing one or more propeller fans lying horizontal and, if specified, optional inlet filters. The air base unit has prewired power and control panel(s). These panels contain a power disconnect switch and motor starters, control relays and temperature controls. The selector controls and toggle switches are generally located inside of the control panel or vertically mounted on the side.

The second module is the **heat/cool section** that may consist of a cooling portion and/or a heating portion. The cooling portion consists of a refrigeration or chilled water heat exchanger coil. The heating portion may consist of one of the following options: (1) a certified commercial/industrial gas burner (see Commercial/Industrial Gas Burners Certified for Canada [KXWT7]), oil burner (see Oil Burners Certified for Canada [KYXZ7]) or gas-oil burner (see Gas-Oil Burners Certified for Canada [KYKR7]) with an air-to-air heat exchanger, or (2) a hot water or steam heat exchanger. The boiler may be furnished either with an integral burner or intended for installation with a factory-built burner to accommodate the boiler as indicated in the individual certifications.

Normally the third module in the stacked configuration is the **air outlet** module; however, an **extension(s)** is frequently used to raise the discharge above items that surround the unit. The air outlet module is the uppermost module of the stacked configuration and may contain optional louvers that are capable of directing air in a specific direction.

This equipment is intended to employ other equipment and components, which are separately certified. Each piece of equipment has been factory tested prior to leaving the manufacturer's facility, and a factory-trained technician conducts the startup of each unit.

For fuel-fired heaters, the minimum clearance to combustible materials is 48 in. from the front side (burner side) and 18 in. from all other sides, including the top side. Fuel-fired heaters should not be mounted directly on a combustible floor.

For electric-duct-heater-supplied units, the minimum clearance to combustible materials is 48 in. from the front side (control panel side) and 18 in. from all other sides, including the top side. Electric-duct-heater-supplied units should not be mounted directly on a combustible floor.

Unless otherwise specified in the individual certifications and product marking, the unit may be installed on combustible flooring.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at no more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it be used with that particular separate assembly. Other certified separate assemblies, as referenced on the equipment marking, may also be used.

Equipment suitable for outdoor installation is so marked. Equipment not marked as suitable for outdoor installation is for indoor use only.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 2 of the CEC as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Ductless Heating and Cooling Equipment, Large, Open Building Certified for Canada (LZPG7)−*Continued*

Also see **INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and **ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

Installation Codes

Equipment with a gas-, oil-, or gas-oil-fired burner(s) is intended to be installed in accordance with the appropriate standards as required by the province in which the appliance is being installed, such as CSA B149.1, ''Natural Gas and Propane Installation Code,'' CSA B139, ''Installation Code for Oil-Burning Equipment,'' CAN/CSA A405, ''Design and Construction of Masonry Chimneys and Fireplaces,'' and the ''National Building Code of Canada.''

Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in CSA B52, ''Mechanical Refrigeration Code,'' but are included in ANSI/ASHRAE 34, ''Designation and Safety Classification of Refrigerants.'' The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants, in CSA B52 UL's Certification Reports, available from the manufacturer, identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15, ''Safety Standard for Refrigeration Systems,'' for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable.

Wiring Diagrams

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 236 (2005), ''Heating and Cooling Equipment.''

This category also covers products that have been investigated in accordance with CAN/CSA-E60335-2-40 (2001), ''Safety of Household and Similar Electrical Appliances – Part 2: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.''

Alternatively, single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Electrical Appliances, Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60335-2-40 (2012), ''Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.''

The basic standard used to investigate duct heaters is CSA-C22.2 No. 155 (1986), ''Electric Duct Heaters.''

The basic standard used to investigate commercial/industrial gas burners is the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA/CGA 3.4 (1973), ''Industrial and Commercial Gas-Fired Conversion Burners.''

The basic standard used to investigate oil burners is the current edition and effective addenda, Amendments, Bulletins, Notices, Technical Information Letters thereto of CSA B140.2.1 (1990), ''Atomizing-Type Oil Burners.''

The basic standards used to investigate gas-oil burners with gas-fired inputs up to and including 400,000 Btu/h (117.23 kW) are the current edition and effective addenda thereto of ANSI Z21.17/CSA 2.7 (1998), ''Domestic Gas Conversion Burners, '' and the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA B140.2.1 (1990).

The basic standards used to investigate commercial/industrial gas-oil burners with gas-fired inputs over 400,000 Btu/h (117.23 kW) are the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA/CGA 3.4 (1973), and the current edition and effective addenda, Amendments, Bulletins, Notices and Technical Information Letters thereto of CSA B140.2.1 (1990).

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Ductless, Large, Open Building Heating and Cooling Equipment.''

A separate Listing Mark is provided on Listed commercial/industrial gas burners (see Commercial/Industrial Gas Burners Certified for Canada [KXWT7]), oil burners (see Oil Burners Certified for Canada [KYKZ7]) or gas-oil burners (see Gas-Oil Burners Certified for Canada [KYKR7]) when employed in the heating module of the ductless, large, open building heating and cooling equipment. Refer to the individual product categories for the appropriate Listing Marks.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND COOLING EQUIPMENT RETROFIT ASSEMBLIES CERTIFIED FOR USE WITH OTHER MANUFACTURERS' EQUIPMENT CERTIFIED FOR CANADA (LZPK7)

USE AND INSTALLATION

This category covers retrofit assemblies consisting of parts and/or subassemblies intended for field installation by qualified service personnel in UL-certified heating and cooling equipment (see Heating and Cooling Equipment Certified for Canada [LZFE7]) that involves modifying, revising, or replacing of parts and/or subassemblies internal to the certified equipment. These products have been investigated to determine that, when installed in accordance with the manufacturer's installation instructions, they do not adversely affect the operation of the specified equipment.

Installation instructions are provided with each assembly and include information identifying the equipment into which the assembly may be installed. A generic list of equipment, when the specific parameters of the installation are understood by the installer, may be provided. The installation instructions provide these detailed parameters and indicate the suitable type of construction. All parts and materials necessary to accomplish the installation are included with the retrofit assembly.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 236 (2005), ''Heating and Cooling Equipment.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT ASSEMBLY FOR INSTALLATION IN EQUIPMENT IDENTIFIED IN THE MANUFACTURER'S INSTALLATION INSTRUCTIONS

Control No.

The Classification Mark appears on the largest part of the retrofit assembly that can be readily assembled by an installer on site. Each major part of the assembly is identified by appropriate markings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND COOLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (LZHA7)

GENERAL

This category covers devices that include a motor-operated fan or blower together with a cooling coil, a heating coil, or both, and may also include an electric heater. The fan or blower is designed to recirculate air or to draw in outside air, or both. The coil may be designed for refrigerant cooling, for refrigerant heating, for chilled water cooling, for hot water heating, for steam heating, or for combinations of these functions.

HEATING AND COOLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (LZHA7)

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 236, ''Heating and Cooling Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Heating and Cooling Equipment for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING, COOLING AND VENTILATING EQUIPMENT CERTIFIED FOR CANADA (LZLZ7)

GENERAL

This category covers fan-coil units, plenum air-terminal units, room air-terminal units, room fan heater units, and other equipment intended for comfort heating, cooling and ventilation. This equipment is rated 600 V or less.

This equipment is intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately Listed. This equipment has not been investigated from the standpoint of operation when combined with other equipment in a complete system assembled in the field, unless indicated in individual Listings for the other equipment.

Where a clearance is required to be maintained between the unit or attached duct work and combustible constructions, the clearance is designated in the individual Listings, and is also marked on the unit. Unless otherwise indicated, the designated clearances (other than ''zero'') are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

Unless specified otherwise in the individual Listings and product markings, the unit may be installed on combustible flooring.

Attic-type units are so indicated in the individual Listings. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the product marking or instructions provided with the unit.

Separately shipped steam, hot water, or refrigerant coils suitable for field installation in conjunction with heating, cooling and ventilating equipment are identified by (1) the type or model designation of the coil, and (2) the type or model designation of the heating, cooling and ventilating equipment with which it is suitable.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies which are specifically Listed for use with electric space heaters provided as part of this equipment, see **GENERAL PURPOSE CONTROL PANELS FOR ELECTRIC SPACE HEATING EQUIPMENT** under Heating and Cooling Equipment Certified for Canada (LZFE7). Other Listed separate assemblies, as referenced on the equipment marking, may also be used.

PRODUCT MARKINGS

Equipment suitable for outdoor installation is so marked. Equipment not marked as suitable for outdoor installation is intended for indoor use only.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC HEATER ASSEMBLIES CERTIFIED FOR USE ON SPECIFIED EQUIPMENT CERTIFIED FOR CANADA (LZPU7)

USE AND INSTALLATION

This category covers electric heater assemblies intended for field installation on specific certified heating and cooling equipment (see Heating and Cooling Equipment Certified for Canada [LZFE7]) as identified by a marking on the electric heater assembly. The accessories are intended to be installed in accordance with the installation instructions packaged with the electric heater assembly. All parts and materials necessary to accomplish the installation are included with the electric heater assembly.

The Certification Mark indicates that the heater assembly has been investigated and found suitable for use in combination with the specified certified equipment and that this Mark supplements or supersedes any markings related to add-on heater assemblies marked on the certified equipment.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling and Ventilating Equipment Certified for Canada (LZLZ7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 236 (2005), ''Heating and Cooling Equipment,'' in addition to the standards applicable to the heating and cooling equipment on which the heater assemblies are intended to be installed.

Alternatively, single-phase appliances rated not more than 250 V, and all other appliances rated not more than 600 V are investigated to CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Electrical Appliances, Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60335-2-40 (2012), ''Household and Similar Electrical Appliances, Part 2-40: Particular Requirements for Electrical Heat Pumps, Air-Conditioners and Dehumidifiers.''

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELECTRIC HEATER ASSEMBLY

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-RECOVERY VENTILATORS, DUCTED CERTIFIED FOR CANADA (LZTW7)

USE AND INSTALLATION

This category covers fixed equipment intended to remove air from buildings, replace it with fresh outside air and, in the process, transfer heat from the warmer to the colder air. The equipment is intended to be connected to duct systems that interconnect rooms or spaces within buildings for exhausting the indoor air and/or distributing the outdoor air. These ventilators are intended to be installed in accordance with the installation instructions packaged with the equipment and CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

RELATED PRODUCTS

Nonducted heat-recovery ventilators are covered under Heat-recovery Ventilators, Nonducted Certified for Canada (LZUU7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling and Ventilating Equipment Certified for Canada (LZLZ7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, ''Fans and Ventilators.''

Heat-recovery Ventilators, Ducted Certified for Canada (LZTW7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Ducted Heat Recovery Ventilator'' or ''Accessory for Ducted Heat Recovery Ventilator.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-RECOVERY VENTILATORS, NONDUCTED CERTIFIED FOR CANADA (LZUU7)

USE AND INSTALLATION

This category covers stationary or fixed equipment intended to remove air from buildings, replace it with fresh outside air and, in the process, transfer heat from the warmer to the colder air. The equipment is not intended to be connected to a duct system, other than the short-duct runs necessary to bring air to and from the equipment.

RELATED PRODUCTS

Equipment designed to be connected to ducts that interconnect rooms or spaces within buildings for exhausting the indoor air and/or distributing the outdoor air is covered under Heat-recovery Ventilators, Ducted Certified for Canada (LZTW7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling and Ventilating Equipment Certified for Canada (LZLZ7), Electrical Equipment for Use in Ordinary Locations Certified for Canada AALZ7 and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, ''Fans and Ventilators.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Non-Ducted Heat Recovery Ventilator.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (LZZA7)

This category covers accessories for use in the assembly or installation of air conditioning, heating, cooling or refrigeration equipment, and similar applications.

HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES CERTIFIED FOR CANADA (LZZX7)

This category covers accessories for use in the assembly or installation of air conditioning heating, cooling or refrigeration equipment, and similar applications.

CONTROLS, LIMIT CERTIFIED FOR CANADA (MBPR7)

GENERAL

Controls, Limit Certified for Canada (MBPR7)−*Continued*

This category covers controls that are essentially switches operated by a change in liquid level, pressure or temperature. They are intended primarily for use with air conditioning and heating equipment, although not limited to such specific applications. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

The limit controls may be provided as complete assemblies or they may consist of separate control and sensor sections as indicated in the individual certifications.

Controls for heating equipment — Controls intended for heating equipment are suitable for use with systems equipped with coal stokers, electric heaters, gas burners, or oil burners.

Limit controls and low-water shutoffs — Limit controls and low-water shutoffs should be of the type that opens the circuit when an unsafe condition is approached.

Control testing and specifications — The suitability and durability of the design and construction, the practicability of installation and use, and the accuracy and reliability of operation of the equipment are determined by appropriate examinations and tests.

When selecting controls, the temperature or pressure range desired and whether automatic or manual reset is required should be specified. The identification of this equipment and its primary function serves as a guide for specifying or ordering. The manufacturer's catalog should be consulted for detailed specifications.

Groups — Limit controls are grouped according to their primary functions as follows:

- **Group A** – Controls operated by a change in pressure intended primarily to limit the pressure in steam heating systems.
- **Group B** – Controls operated by a change in temperature intended primarily to limit the temperature in hot water heating systems and water heaters.
- **Group C** – Controls operated by a change in temperature intended primarily to limit the temperature in supply ducts of air conditioning and warm-air heating systems. May also be used to regulate air temperature in ovens and similar applications.
- **Group D** – Controls operated by a change in temperature intended to regulate the operation of air circulating fans in air conditioning and warm-air heating systems.
- **Group E** – Controls operated by a change in temperature for installation in the return air duct of air conditioning and ventilating systems to automatically shut off the fans when the temperature of the air in the system becomes excessive.
- **Group F** – Controls operated by a change in temperature for installation in the smoke pipe of stoker-fired heating plants to prevent feeding of green coal when the fire is out.
- **Group G** – Controls operated by a change in liquid level for boilers to prevent operation of the heating appliance in the event of low water in the boiler.
- **Group H** – Controls operated by a change in liquid level to regulate the delivery of feed water to boilers.

If a single control combines the functions of two groups its designation is a combination of the two groups. For example, a combination warm-air limit control and fan switch of the automatic reset type is classified under ''Group C, D.''

Manual reset controls — An ''M1'' or ''M2'' marking as a suffix to the group designation indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the ''closed'' position after normal operating conditions have been restored if the reset means is held in the ''reset'' position.
- **M2** – Controls that do not automatically reset to the ''closed'' position if the reset means is held in the ''reset'' position.

PRODUCT MARKINGS

Limit controls are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration Certified for Canada (SDFY7).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and Regulating Equipment Certified for Canada (XAPX7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

Controls, Limit Certified for Canada (MBPR7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 24, "Temperature-Indicating and -Regulating Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Limit Control" or "Section of Limit Control," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROLS, PRIMARY SAFETY CERTIFIED FOR CANADA (MCCZ7)

GENERAL

This category covers primary safety controls intended for use on gas-, gas-oil- or oil-burning appliances to program and monitor the operation of the burner. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The primary safety control may consist of several sections that when assembled together form a complete primary safety control. These sections may include a wiring subbase, a chassis, programming module, flame amplifier and combustion detector as indicated in the individual certifications. When a safety control consists of more than one section, the combination of sections specifically certified is intended to be employed unless otherwise specified on the appliance marking.

PRODUCT MARKINGS

Primary safety controls are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

These products are marked with the following (or equivalent) statement: "Important: For Proper Operation Refer To Manufacturer's Installation Instructions To Determine The Primary Safety Control Sections That Comprise A Listed Primary Safety Control System."

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 199, "Combustion Safety Controls and Solid-State Igniters for Gas- and Oil- Burning Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Primary Safety Control" or "Section of Primary Safety Control," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRAFT EQUIPMENT CERTIFIED FOR CANADA (MCQX7)

USE AND INSTALLATION

This category covers draft regulators (automatic dampers), automatic damper controls, draft fans, and similar equipment, intended to assist in maintaining the desired combustion chamber draft in heating equipment.

Draft regulators are intended for installation in the breeching or flue pipe of heating plants to regulate the draft while the appliance is being fired. They are used where a constant draft is desired, but function only when the draft in the chimney is greater than the draft for which the draft regulator is adjusted.

Automatic damper controls are designed to automatically regulate the position of dampers installed in the stack or air intake of heating plants.

Draft fans are for installation in the flue pipe adjacent to the heating appliance or to the chimney to induce a draft to supplement the natural draft created by the chimney. When automatically operated burners are used in installations equipped with induced draft fans, means should be provided to immediately shut off the fuel supply upon fan failure.

Draft Equipment Certified for Canada (MCQX7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C378 (1975), "Guide for the Investigation of Draft Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Draft Equipment."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRAFT EQUIPMENT CERTIFIED FOR USE WITH SPECIFIED APPLIANCES CERTIFIED FOR CANADA (MCQZ7)

USE AND INSTALLATION

This category covers draft equipment intended for field installation with specific oil-fired or automatic-feed solid-fuel-fired heating appliances as identified in the individual certifications.

Draft equipment includes draft regulators (automatic dampers), draft fans, and similar equipment, as indicated in the individual certifications, intended to assist in maintaining the desired combustion chamber draft in heating equipment.

Draft regulators are intended for installation in the breeching or flue pipe of heating plants to regulate the draft while the appliance is being fired. They are used where a constant draft is desired, but function only when the draft in the chimney is greater than the draft for which the draft regulator is adjusted.

Draft fans are intended for installation in the flue pipe adjacent to the heating appliance or to the chimney or at the chimney terminus to provide a draft or to supplement the natural draft created by the chimney. When automatically operated burners are used in installations equipped with draft fans, means should be provided to immediately shut off the fuel supply upon fan failure.

Draft equipment is intended to be installed in accordance with the instructions furnished with the draft equipment and with the heating appliance, in addition to CAN/CSA-B365, "Installation Code for Solid-Fuel-Burning Appliances and Equipment."

Draft equipment is intended to be installed only on specific properly operating heating appliances certified in accordance with nationally recognized safety standards, and equipped with required controls and other safety features. The installation is intended to be made by a qualified agency (one who is engaged in, is responsible for, and is thoroughly familiar with the installation and operation of the appropriate fuel-burning appliances and draft equipment involved, who is experienced in such work, familiar with all precautions required, and has complied with all requirements of the Authority Having Jurisdiction).

These products have been investigated to determine that, when installed in accordance with the manufacturer's instructions, they do not adversely affect the operation of the heating appliance with which they are installed.

RELATED PRODUCTS

See Solid-fuel-fired Boiler Assemblies Certified for Canada (KXBW7), Solid-fuel-fired Supplementary Central Furnaces Certified for Canada (LBHZ7) and Solid-fuel-fired Water Heaters Certified for Canada (LVHO7).

ADDITIONAL INFORMATION

For additional information, see Heating and Heating-Cooling Appliance Accessories Certified for Canada (LZZX7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C378, "Guide for the Investigation of Draft Equipment," CSA-C22.2 No. 113, "Fans and Ventilators," CAN/ULC-S609, "Low Temperature Vents Type L," ULC/ORD-C441, "Pellet Vents," CAN/CSA-B366.1, "Solid-Fuel-Fired Central Heating Appliances," and ULC-S627, "Space Heaters for Use with Solid Fuels."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification

Draft Equipment Certified for Use with Specified Appliances Certified for Canada (MCQZ7)−*Continued*

and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

DRAFT EQUIPMENT
FOR USE WITH SPECIFIC UL LISTED APPLIANCES
AS SPECIFIED IN THE INDIVIDUAL CLASSIFICATIONS AND
APPLIANCE MANUFACTURERS' INSTRUCTIONS
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OIL HEATERS, ELECTRIC CERTIFIED FOR CANADA (MDST7)

USE

This category covers electric oil heaters intended for heating combustible liquids, such as fuel oil. They may be immersion elements for insertion into piping or tanks, reservoir units consisting of a heating element and liquid reservoir, or systems as described in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 0.4, ''Bonding of Electrical Equipment,'' CSA-C22.2 No. 72, ''Heater Elements,'' and CSA-C22.2 No. 88, ''Industrial Heating Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Oil Heater, Reservoir Unit,'' ''Electric Oil Heater, Immersion Element'' or ''Electric Oil Heater, Immersion Element with Oil Reservoir.'' The statement ''___ psi max'' is also included with the product name if not marked elsewhere on the heater.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-OPERATED PUMPS CERTIFIED FOR CANADA (MEGR7)

USE

This category covers power-operated pumps, including oil pumps and air pumps (compressors). These pumps are intended for use in the assembly of power-operated, oil-burning appliances in accordance with ANSI/NFPA 31, ''Installation of Oil-Burning Equipment,'' or CAN/CSA-B139 (1991), ''Installation Code for Oil-Burning Equipment,'' as appropriate.

This category includes pumps intended for use with waste crankcase oils. Waste crankcase oils may vary considerably in their chemical and physical properties and normally consist of a mixture of different grades of used automotive (crankcase) oil, transmission oil, brake fluid, and gasoline. For the safe handling, storage, and burning of waste crankcase oils, reference should be made to ANSI/NFPA 31 or CAN/CSA-B139 (1991), as appropriate.

This category covers only the pumping unit, integral valves, strainer, and piping included in the assembly and, unless indicated otherwise in the individual Listings, does not attest to the acceptability of the electric motor or any part of the system to which the pump may be connected.

RELATED PRODUCTS

See Pumps, Power Operated, Flammable Liquid Certified for Canada (RCRX7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C343, ''Guide for the Investigation of Pumps for Oil-Burning Appliances.''

Power-operated Pumps Certified for Canada (MEGR7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Pump'' or ''Fuel Unit,'' and the statement ''For Air * psi max,'' ''For No. ** Fuel Oil * psi max,'' or ''For Waste Oil * max,'' or, for other oils as specified in the individual Listings, ''* psi max.'' The statement ''___ gph at ___ psi'' is also included on an oil pump and strainer combination unless included in installation instructions or marked elsewhere on the pump.

* Pressure rating not required if marked elsewhere on the pump

** Grade of fuel oil not required if pump is Listed for all grades (No. 6 or lighter)

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRAINERS, OIL BURNER CERTIFIED FOR CANADA (METZ7)

USE

This category covers strainers intended for use in the assembly of oil-burning equipment and at the pressures indicated in the individual certifications. The type of fuel oil for which a strainer is certified is indicated in the individual certifications. These devices are designated as ''strainers,'' however, they may also be designated as ''filters'' according to the common terminology of the industry

RELATED PRODUCTS

Strainers intended for use in the assembly of appliances, or in piping, handling gases or liquids, are covered under Strainers Certified for Canada (VXYV7).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C331, ''Guide for the Investigation of Strainers for Flammable Fluids and Anhydrous Ammonia,'' and CSA B140.0, ''Oil-Burning Equipment: General Requirements.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Strainer,'' and the statement ''For No. ___ Oil or Lighter, * kPa max.''

* Pressure rating not required if marked elsewhere on the strainer

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES CERTIFIED FOR CANADA (MFHX7)

GENERAL

This category covers switches designed specifically for use in conjunction with heating and cooling appliances. These switches include air-operated, float-operated, pressure-operated, thermostatically operated, etc., electric switching devices, as indicated in the individual certifications. They are intended for household, commercial and industrial use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Unless otherwise indicated in the individual certifications, these switches are intended for use at temperatures not exceeding 25°C (77°F).

PRODUCT MARKINGS

Switches are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Switches Certified for Canada (MFHX7)−*Continued*

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration Certified for Canada (SDFY7).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and -Regulating Equipment Certified for Canada (XAPX7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 24, ''Temperature-Indicating and -Regulating Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Switch for Heating and Cooling Appliances,'' ''Heating/Cooling Appliance Switch'' or ''Air- (or Float-, Pressure-, etc., as appropriate) operated Switch,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES CERTIFIED FOR CANADA (MFVV7)

This category covers valves designed specifically for use in conjunction with heating and cooling appliances.

The type of fluid for which a valve has been investigated is indicated in the individual Listings by the following symbols:

A – Air or nontoxic, nonflammable gases
Ac – Acetylene
F – Common refrigerants, except ammonia
FA – Common refrigerants, including ammonia
G – City gas supplied by public utilities
Ga – Gasoline
LP – Liquefied petroleum gases
02 – Nos. 1 and 2 fuel oils, oils having viscosities not more than 40, SU at 100°F
04 – No. 4 fuel oil, oils having viscosities from 40 to 125, SU at 100°F
05 – No. 5 fuel oil, oils having viscosities of 125, SU at 100°F, to 40, SF at 122°F
06 – No. 6 fuel oil, oils having viscosities from 40 to 300, SF at 122°F
Ox – Oxygen
S – Steam
W – Water or other aqueous nonflammable liquids

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas-appliance Pressure Regulators Certified for Canada (MGXY7)

USE AND INSTALLATION

This category covers gas-appliance pressure regulators, which are not part of a combination control, intended for application on gas appliances. They are for use with natural, manufactured and mixed gases, liquefied petroleum (LP) gases and LP-gas/air mixtures as indicated in the individual certifidations.

These valves are intended to be installed and used in accordance with the manufacturer's instructions, which include the mounting classifications.

These valves are not intended for use in building piping systems.

ADDITIONAL INFORMATION

For additional information, see Valves Certified for Canada (MFVV7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.18/CSA 6.3 (2007), ''Gas Appliance Pressure Regulators.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Gas Appliance Pressure Regulator.''

Gas-appliance Pressure Regulators Certified for Canada (MGXY7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Manual Valves Certified for Canada (MHKZ7)

USE

This category covers manually operated valves intended specifically for use with gas- or oil-burning equipment:

Metering valves are intended primarily for use in the burner fuel supply line to manually regulate the flow of fuel to the burner.

Shutoff valves are intended for use in the burner supply line to manually shut off the flow of fuel to the burner.

Three-way valves are intended for use in burner installations with two interconnected sources of fuel supply to allow fuel to be admitted to the burner from only one source at a time.

The type of fluid for which a valve has been investigated is designated in accordance with the symbols referenced under Valves Certified for Canada (MFVV7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C842, ''Guide for the Investigation of Valves for Flammable and Combustible Fluids.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Manual Valve,'' or other appropriate product name as shown in the individual Listings. The statement ''___ kPa max'' is also included if not marked elsewhere on the valve.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Manually-operated Gas Valves for Appliances, Appliance Connector Valves and Hose-end Valves Certified for Canada (MHLS7)

USE AND INSTALLATION

This category covers manually operated gas valves, not exceeding 4 in. (102 mm) pipe size, pilot shutoff valves for installation in heating appliances, such as boilers, furnaces, heaters, ovens, water heaters, incinerators, etc., and latching-type valves.

Manually operated gas valves include appliance main gas valves, gas burner valves, appliance connector valves, ''delta c'' valves, hose-end valves, and pilot adjustment valves.

The valves are intended to be installed and used in accordance with the manufacturer's instructions.

These valves are not intended for use in building piping systems.

ADDITIONAL INFORMATION

For additional information, see Valves Certified for Canada (MFVV7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.15/CGA 9.1, ''Manually Operated Gas Valves for Appliances, Appliance Connector Valves and Hose End Valves.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products

Manually-operated Gas Valves for Appliances, Appliance Connector Valves and Hose-end Valves Certified for Canada (MHLS7)−*Continued*

manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Appliance Main Gas Valve," "Gas Burner Valve," "Appliance Connector Valve," "Delta C Valve," "Hose-end Valve," "Latching-type Valve," "Pilot Adjustment Valve."

The statement "1/2 psi max" is also included if not marked elsewhere on the valve.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIALTY HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES CERTIFIED FOR CANADA (MJAT7)

GENERAL

This category covers heat reclaimers, analyzers, controls, venting systems, and heat exchangers intended primarily for accessory use in gas-, oil,- and solid-fuel-fired heating and cooling appliances.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate heat reclaimers and heat exchangers in this category is CAN/CSA-C22.2 No. 236, "Heating and Cooling Equipment," CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment," and/or CSA B55.2 (2012), "Drain Water Heat Recovery Units."

The basic standards used to investigate appliance-accessory controls in this category are CAN/CSA-E60730-1, "Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements," CSA-C22.2 No. 24, "Temperature-Indicating and -Regulating Equipment," and CSA-C22.2 No. 199, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Automatic Burner Ignition Systems and Components."

The basic standard used to investigate oil-appliance accessories in this category is ULC/ORD-C331, "Guide for the Investigation of Strainers for Flammable Fluids and Anhydrous Ammonia," and/or CSA B140.0, "Oil-Burning Equipment: General Requirements."

The basic standard used to investigate direct-venting-system products in this category is CSA 2.33, "Vented Gas Fireplace Heaters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

The statement "For No. ___ Oil or Lighter, ___ °C (and/or °F), ___ kPa (and/or psig) max" is also included on swivel connectors.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT AND SYSTEMS CERTIFIED FOR CANADA (MDAA7)

GENERAL

This category covers medical equipment and systems investigated to CAN/CSA-C22.2 No. 60601-1 (2008), "Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance."

The products are divided into separate categories and based on common aspects, including function, energy characteristics and test parameters. These product categories are associated with one or more Particular Standards.

If a device falls within the scope of a Particular Standard, the individual certification is covered under the product category containing that standard. In instances where a device falls within the scope of more than one Particular Standard, the individual certification is covered under the product category most closely associated with the device.

This equipment has been Classified with respect to the requirements in the General Standard (CAN/CSA-C22.2 No. 60601-1 [2008]) and the Particular and/or Collateral Standards to which the equipment has been investigated, unless specifically exempted in the individual application.

IECEE Operational and Ruling Document OD-2044, "Guidance for the Evaluation of Risk Management in Medical Electrical Equipment," is used in the assessment of the manufacturer's risk management system.

The wiring methods for installation of these products are covered by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in the CEC.

The nature of some products, such as X-ray, nuclear imaging, and magnetic resonance equipment, is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

X-radiation safety and performance requirements are regulated by Health Canada. Compliance with the applicable regulations under the conditions of normal and abnormal operation has not been investigated.

Some of the individual Classifications are predicated on the provision of one of two alternate attachment plugs, specifically referred to in Attachment Plugs, Fuseless Certified for Canada (AXUT7). One is a locking type identified by the marking "Hospital Only," and the other is a nonlocking type ANSI Standard-configuration grounding type identified by the marking "Hospital Grade" and a green dot on the body. The identification is visible after installation on the flexible cord. Medical devices intended for use with oxygen are labeled as such (which may be included in the documents accompanying the devices). It is not possible to make devices such as these inherently safe from external sources of ignition. This hazard is greatly increased by the presence of oxygen, which makes materials easier to ignite and greatly increases the burning rate. Accordingly, for safety, it is essential that all possible sources of ignition be kept away from these devices. Possible sources of ignition against which precautions should be taken include open flames, matches, cigarettes, accumulations of static electricity, and reducing valves on oxygen tanks which occasionally project flame and sparks due to ignition or explosion of rubber valve seats.

SYSTEMS

UL offers a service that investigates the combination of a medical device with other medical devices and/or nonmedically-investigated products (e.g., information technology equipment, such as a printer). While UL also certifies individual medical devices it does not contend that any combination of UL-certified devices results in a compliant system. A UL-certified system is identified as such as part of its published Classification. The system identification, as well as the parts comprising the system, is identified, including optional parts. UL-certified systems have been found compliant with the systems requirements specified in the General Standard.

CEC COMPLIANCE

All devices and systems have been found to be compatible for connection to CEC wiring systems. Part of this involves an evaluation of the documentation that accompanies the device or system, such as the installation instructions. Additionally, for systems with multiple component parts, the interconnecting wiring has been investigated for compliance with the stated standards and includes an evaluation of abuse levels, as well as circuit separation under both normal and single fault conditions.

REFERENCE MATERIAL

In many areas of the world, including Canada, the placement of medical devices in the marketplace is subject to legal market-entry requirements that are set and enforced by central governments. In Canada, this is Health Canada. Compliance with standards is often used to help substantiate a manufacturer's claim of compliance with legal market-entry requirements, especially with respect to safety and essential performance. Note that compliance with safety and essential performance requirements alone is not sufficient to satisfy these legal market-entry requirements. Even within the safety and essential performance requirements there are many separate areas of concern. These include, but are not limited to, electromagnetic compatibility, ionizing radiation, human factors, biocompatibility and environmental concerns. Many of these requirements are covered in the Collateral Standards. The General Standard and Particular Standards, together with the Collateral Standards, comprise the IEC 60601 series of standards. Also included in this series are joint IEC/ISO-developed standards having the designation(s) IEC/ISO 80601-2-xx. In addition, there may be CAN/CSA-C22.2 No. 60601-1-xx, 60601-2-xx and 80601-2-xx standards that contain Canadian National Differences, which are included as part of the investigation.

In the development cycle of a medical device the various evaluations needed are conducted at different times and, quite often, by different organizations. It is unrealistic to expect that one organization will demand that all the applicable evaluations be satisfied at one point in time. Therefore, the minimum set of safety and essential performance requirements needed to enable a medical device to be eligible for UL Classification is contained in the General Standard and applicable Particular Standards. Each device is marked identifying the standard(s) to which the product was investigated, and may include all or part of the totally applicable IEC 60601 series requirements, not just the minimum stated above. The manufacturer decides what, beyond the minimums, UL investigates.

The total of these evaluations form the basis of the device's legal and field acceptance. The determination must be made that all the requirements of concern have been satisfied. The requirements that have been evaluated by UL have been identified. UL does not assume responsibility for those requirements remaining unaddressed or evaluated by other organizations. As noted in the **UL MARK** section in the Guide Information for the individual product categories, the standards to which UL has found the device compliant are identified on the device, which may also include the accompanying documents.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

APPLIED CURRENT/ENERGY EQUIPMENT CERTIFIED FOR CANADA (MDAB7)

GENERAL

This category covers equipment intended to diagnose, treat and/or monitor a patient under medical supervision, and may also be used to compensate or alleviate disease, injury or disability. This equipment makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer. This also includes medical equipment intended for home health care applications.

REBUILT EQUIPMENT

This category also covers equipment that is rebuilt or remanufactured by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt equipment is rebuilt or remanufactured to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or remanufactured equipment is subject to the same requirements as new equipment.

FIELD-INSTALLED EQUIPMENT

Some of the equipment covered under this category is intended for field installation, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

The effects of the combination of therapies arising from the use of this equipment with other medical equipment have not been investigated.

RELATED EQUIPMENT

Equipment investigated for use in hazardous (classified) locations, as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I," is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

ADDITIONAL INFORMATION

For additional information, see Medical Equipment and Systems Certified for Canada (MDAA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60601-1 (2008), "Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance," in addition to one or more of the Particular and/or Collateral Standards noted below.

IECEE Operational and Ruling Document OD-2044, "Guidance for the Evaluation of Risk Management in Medical Electrical Equipment," is used in the assessment of the manufacturer's risk management system.

Note: Canadian National Standards are used where they exist.

Particular Standards:

CAN/CSA-C22.2 No. 60601-2-2 (2009), "Medical Electrical Equipment – Part 2-2: Particular Requirements for the Basic Safety and Essential Performance of High Frequency Surgical Equipment and High Frequency Surgical Accessories"

CAN/CSA-C22.2 No. 60601-2-4 (2012), "Medical Electrical Equipment – Part 2-4: Particular Requirements for the Basic Safety and Essential Performance of Cardiac Defibrillators"

CAN/CSA-C22.2 No. 601.2.10 (1992), "Medical Electrical Equipment – Part 2: Particular Requirements for the Safety of Nerve and Muscle Stimulators"

CAN/CSA-C22.2 No. 60601-2-31 (2009), "Medical Electrical Equipment – Part 2-31: Particular Requirements for the Basic Safety and Essential Performance of External Cardiac Pacemakers with Internal Power Source"

CAN/CSA-C22.2 No. 60601-2-40 (2001), "Medical Electrical Equipment – Part 2-40: Particular Requirements for the Safety of Electromyographs and Evoked Response Equipment"

CAN/CSA-C22.2 No. 60601-2-50 (2010), "Medical Electrical Equipment – Part 2-50: Particular Requirements for the Basic Safety and Essential Performance of Infant Phototherapy Equipment"

CAN/CSA-C22.2 No. 60601-2-57 (2011), "Medical Electrical Equipment – Part 2-57: Particular Requirements for the Basic Safety and Essential Performance of Non-Laser Light Source Equipment Intended for Therapeutic, Diagnostic, Monitoring and Cosmetic/Aesthetic Use"

Collateral Standards (optional):

CAN/CSA-C22.2 No. 60601-1-2 (2008), "Medical Electrical Equipment – Part 1-2: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Electromagnetic Compatibility – Requirements and Tests"

CAN/CSA-C22.2 No. 60601-1-3 (2009), "Medical Electrical Equipment – Part 1-3: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Radiation Protection in Diagnostic X-Ray Equipment"

CAN/CSA-C22.2 No. 60601-1-6 (2011), "Medical Electrical Equipment – Part 1-6: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Usability"

CAN/CSA-C22.2 No. 60601-1-8 (2008), "Medical Electrical Equipment – Part 1-8: General Requirements for Basic Safety and Essential Performance – Collateral Standard: General Requirements, Tests and Guidance for Alarm Systems in Medical Electrical Equipment and Medical Electrical Systems"

IEC 60601-1-9, "Medical Electrical Equipment – Part 1-9: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Environmentally Conscious Design"

CAN/CSA-C22.2 No. 60601-1-10 (2009), "Medical Electrical Equipment – Part 1-10: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for the Development of Physiologic Closed-Loop Controllers"

CAN/CSA-C22.2 No. 60601-1-11 (2011), "Medical Electrical Equipment – Part 1-11: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Medical Electrical Equipment and Medical Electrical Systems Used in the Home Healthcare Environment"

Particular Standards — The General Standard (CAN/CSA-C22.2 No. 60601-1 [2008]) contains requirements for safety and essential performance that are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (CAN/CSA-C22.2 No. 60601-2-xx). However, unless otherwise indicated in the National Differences in the General Standard, the requirements of a Particular Standard do not modify the National Differences in the General Standard. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (CAN/CSA-C22.2 No. 60601-1-xx or IEC 60601-1-xx), such standard(s) may, optionally, also be used. Unless otherwise indicated in the National Differences in the General Standard, the requirements of a Collateral Standard do not modify the National Differences in the General Standard.

Note: The list of standards referenced above is revised periodically but, at any point in time, may not reflect a current listing of the applicable standards.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Applied Current/Energy Equipment Certified for Canada (MDAB7)–*Continued*

Applied Current/Energy Equipment Certified for Canada (MDAB7)–*Continued*

MEDICAL — APPLIED CURRENT/ENERGY EQUIPMENT AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY
IN ACCORDANCE WITH [standard(s)*]
Control No.

For rebuilt or remanufactured equipment, the word **REBUILT**, **REMANUFACTURED**, **REFURBISHED** or **RECONDITIONED** precedes the word **APPLIED**.

For field-installed equipment, the words **FIELD-INSTALLED** precede the word **APPLIED**.

Alternate Marking Options

1. The Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS" or "ISO 7000, Symbol 1641 " or "Safety Sign ISO 7010-M002 ," the standard number*, and a control number. At a minimum, the standard number* always includes CAN/CSA-C22.2 No. 60601-1 (2008). In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

2. For products with limited space for markings, the Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the ISO 7000 Symbol 1641 or the Safety Sign ISO 7010-M002 , and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

3. For products (such as implantable devices) where use of the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or on the smallest unit container in which the product is packaged. The product's accompanying documents will contain the complete Classification Mark as described above.

* Based on the certification coverage of the product, the standard number is CAN/CSA-C22.2 No. 60601-1 (2008) and applicable Particular and/or related Collateral Standards for which the product has been found to comply by UL.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

APPLIED ELECTROMAGNETIC RADIATION EQUIPMENT CERTIFIED FOR CANADA (MDAC7)

GENERAL

This category covers equipment intended to diagnose, treat and/or monitor a patient under medical supervision, and may also be used to compensate or alleviate disease, injury or disability. This equipment makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer. This also includes medical equipment intended for home health care applications.

REBUILT EQUIPMENT

This category also covers equipment that is rebuilt or remanufactured by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt equipment is rebuilt or remanufactured to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or remanufactured equipment is subject to the same requirements as new equipment.

FIELD-INSTALLED EQUIPMENT

Some of the equipment covered under this category is intended for field installation, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

The effects of the combination of therapies arising from the use of this equipment with other medical equipment have not been investigated.

Applied Electromagnetic Radiation Equipment Certified for Canada (MDAC7)–*Continued*

RELATED EQUIPMENT

Equipment investigated for use in hazardous (classified) locations, as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I," is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

ADDITIONAL INFORMATION

For additional information, see Medical Equipment and Systems Certified for Canada (MDAA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60601-1 (2008), "Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance," in addition to one or more of the Particular and/or Collateral Standards noted below.

IECEE Operational and Ruling Document OD-2044, "Guidance for the Evaluation of Risk Management in Medical Electrical Equipment," is used in the assessment of the manufacturer's risk management system.

Note: Canadian National Standards are used where they exist.

Particular Standards:

CAN/CSA-C22.2 No. 60601-2-1 (2011), "Medical Electrical Equipment – Part 2-1: Particular Requirements for the Basic Safety and Essential Performance of Electron Accelerators in the Range 1 MeV to 50 MeV"
IEC 60601-2-3, "Medical Electrical Equipment – Part 2-3: Particular Requirements for the Basic Safety and Essential Performance of Short-Wave Therapy Equipment"
CAN/CSA-C22.2 No. 601.2.6 (1992), "Medical Electrical Equipment – Part 2: Particular Requirements for the Safety of Microwave Therapy Equipment"
CAN/CSA-C22.2 No. 60601-2-7 (2001), "Medical Electrical Equipment – Part 2-7: Particular Requirements for the Safety of High-Voltage Generators of Diagnostic X-Ray Generators"
CAN/CSA-C22.2 No. 60601-2-8 (2012), "Medical Electrical Equipment – Part 2-8: Particular Requirements for the Basic Safety and Essential Performance of Therapeutic X-Ray Equipment Operating in the Range 10 kV to 1 MV"
CAN/CSA-C22.2 No. 60601-2-11 (2001), "Medical Electrical Equipment – Part 2-11: Particular Requirements for the Safety of Gamma Beam Therapy Equipment"
CAN/CSA-C22.2 No. 60601-2-17 (2004), "Medical Electrical Equipment – Part 2: Particular Requirements for the Safety of Automatically-Controlled Brachytherapy Afterloading Equipment"
CAN/CSA-C22.2 No. 60601-2-28 (2012), "Medical Electrical Equipment – Part 2-28: Particular Requirements for the Basic Safety and Essential Performance of X-Ray Tube Assemblies for Medical Diagnosis"
CAN/CSA-C22.2 No. 60601-2-29 (2010), "Medical Electrical Equipment – Part 2-29: Particular Requirements for the Basic Safety and Essential Performance of Radiotherapy Simulators"
CAN/CSA-C22.2 No. 60601-2-33 (2012), "Medical Electrical Equipment – Part 2-33: Particular Requirements for the Basic Safety and Essential Performance of Magnetic Resonance Equipment for Medical Diagnosis"
CAN/CSA-C22.2 No. 60601-2-43 (2011), "Medical Electrical Equipment – Part 2-43: Particular Requirements for the Basic Safety and Essential Performance of X-Ray Equipment for Interventional Procedures"
CAN/CSA-C22.2 No. 60601-2-44 (2010), "Medical Electrical Equipment – Part 2-44: Particular Requirements for the Basic Safety and Essential Performance of X-Ray Equipment for Computed Tomography"
CAN/CSA-C22.2 No. 60601-2-45 (2011), "Medical Electrical Equipment – Part 2-45: Particular Requirements for the Basic Safety and Essential Performance of Mammographic X-Ray Equipment and Mammographic Stereotactic Devices"
CAN/CSA-C22.2 No. 60601-2-54 (2011), "Medical Electrical Equipment – Part 2-54: Particular Requirements for the Basic Safety and Essential Performance of X-Ray Equipment for Radiography and Radioscopy"
IEC 60601-2-63, "Medical Electrical Equipment – Part 2-63: Particular Requirements for the Basic Safety and Essential Performance of Dental Extra-Oral X-Ray Equipment"
IEC 60601-2-65, "Medical Electrical Equipment – Part 2-65: Particular Requirements for the Basic Safety and Essential Performance of Dental Intra-Oral X-Ray Equipment"

Collateral Standards (optional):

CAN/CSA-C22.2 No. 60601-1-2 (2008), "Medical Electrical Equipment – Part 1-2: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Electromagnetic Compatibility – Requirements and Tests"

Applied Electromagnetic Radiation Equipment Certified for Canada (MDAC7)−*Continued*

CAN/CSA-C22.2 No. 60601-1-3 (2009), ''Medical Electrical Equipment – Part 1-3: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Radiation Protection in Diagnostic X-Ray Equipment''
CAN/CSA-C22.2 No. 60601-1-6 (2011), ''Medical Electrical Equipment – Part 1-6: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Usability''
CAN/CSA-C22.2 No. 60601-1-8 (2008), ''Medical Electrical Equipment – Part 1-8: General Requirements for Basic Safety and Essential Performance – Collateral Standard: General Requirements, Tests and Guidance for Alarm Systems in Medical Electrical Equipment and Medical Electrical Systems''
IEC 60601-1-9, ''Medical Electrical Equipment – Part 1-9: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Environmentally Conscious Design''

CARDIO, VASCULAR AND PULMONARY EQUIPMENT CERTIFIED FOR CANADA (MDAD7)

GENERAL

This category covers equipment intended to diagnose, treat and/or monitor a patient under medical supervision, and may also be used to compensate or alleviate disease, injury or disability. This equipment makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer. This also includes medical equipment intended for home health care applications.

REBUILT EQUIPMENT

This category also covers equipment that is rebuilt or remanufactured by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt equipment is rebuilt or remanufactured to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or remanufactured equipment is subject to the same requirements as new equipment.

FIELD-INSTALLED EQUIPMENT

Some of the equipment covered under this category is intended for field installation, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

The effects of the combination of therapies arising from the use of this equipment with other medical equipment have not been investigated.

RELATED EQUIPMENT

Equipment investigated for use in hazardous (classified) locations, as defined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

ADDITIONAL INFORMATION

For additional information, see Medical Equipment and Systems Certified for Canada (MDAA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60601-1 (2008), ''Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance,'' in addition to one or more of the Particular and/or Collateral Standards noted below.

IECEE Operational and Ruling Document OD-2044, ''Guidance for the Evaluation of Risk Management in Medical Electrical Equipment,'' is used in the assessment of the manufacturer's risk management system.

Note: Canadian National Standards are used where they exist.

Particular Standards:

CAN/CSA-C22.2 No. 60601-2-13 (2007), ''Medical Electrical Equipment – Part 2-13: Particular Requirements for the Safety and Essential Performance of Anaesthetic Systems''
CAN/CSA-C22.2 No. 60601-2-16 (2009), ''Medical Electrical Equipment – Part 2-16: Particular Requirements for Basic Safety and Essential Performance of Haemodialysis, Haemodiafiltration and Haemofiltration Equipment''
IEC 60601-2-24, ''Medical Electrical Equipment – Part 2-24: Particular

Cardio, Vascular and Pulmonary Equipment Certified for Canada (MDAD7)−*Continued*

Requirements for the Basic Safety and Essential Performance of Infusion Pumps and Controllers"
CAN/CSA-C22.2 No. 60601-2-39 (2009), "Medical Electrical Equipment – Part 2-39: Particular Requirements for Basic Safety and Essential Performance of Peritoneal Dialysis Equipment"
CAN/CSA-C22.2 No. 80601-2-12 (2012), "Medical Electrical Equipment – Part 2-12: Particular Requirements for Basic Safety and Essential Performance of Critical Care Ventilators"

Collateral Standards (optional):
CAN/CSA-C22.2 No. 60601-1-2 (2008), "Medical Electrical Equipment – Part 1-2: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Electromagnetic Compatibility – Requirements and Tests"
CAN/CSA-C22.2 No. 60601-1-3 (2009), "Medical Electrical Equipment – Part 1-3: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Radiation Protection in Diagnostic X-Ray Equipment"
CAN/CSA-C22.2 No. 60601-1-6 (2011), "Medical Electrical Equipment – Part 1-6: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Usability"
CAN/CSA-C22.2 No. 60601-1-8 (2008), "Medical Electrical Equipment – Part 1-8: General Requirements for Basic Safety and Essential Performance – Collateral Standard: General Requirements, Tests and Guidance for Alarm Systems in Medical Electrical Equipment and Medical Electrical Systems"
IEC 60601-1-9, "Medical Electrical Equipment – Part 1-9: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Environmentally Conscious Design"
CAN/CSA-C22.2 No. 60601-1-10 (2009), "Medical Electrical Equipment – Part 1-10: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for the Development of Physiologic Closed-Loop Controllers"
CAN/CSA-C22.2 No. 60601-1-11 (2011), "Medical Electrical Equipment – Part 1-11: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Medical Electrical Equipment and Medical Electrical Systems Used in the Home Healthcare Environment"

Particular Standards — The General Standard (CAN/CSA-C22.2 No. 60601-1 [2008]) contains requirements for safety and essential performance that are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (CAN/CSA-C22.2 No. 60601-2-xx). However, unless otherwise indicated in the National Differences in the General Standard, the requirements of a Particular Standard do not modify the National Differences in the General Standard. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (CAN/CSA-C22.2 No. 60601-1-xx or IEC 60601-1-xx), such standard(s) may, optionally, also be used. Unless otherwise indicated in the National Differences in the General Standard, the requirements of a Collateral Standard do not modify the National Differences in the General Standard.

Note: The list of standards referenced above is revised periodically but, at any point in time, may not reflect a current listing of the applicable standards.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEDICAL — CARDIO, VASCULAR AND PULMONARY EQUIPMENT AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY
IN ACCORDANCE WITH [standard(s)*]
Control No.

For rebuilt or remanufactured equipment, the word **REBUILT**, **REMANUFACTURED**, **REFURBISHED** or **RECONDITIONED** precedes the word **CARDIO**.

For field-installed equipment, the words **FIELD-INSTALLED** precede the word **CARDIO**.

Alternate Marking Options

1. The Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS" or "ISO 7000, Symbol 1641 " or "Safety Sign ISO 7010-M002 ," the standard number*, and a control number. At a minimum, the standard number* always includes CAN/CSA-C22.2 No. 60601-1 (2008). In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

2. For products with limited space for markings, the Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the ISO 7000 Symbol 1641 or the Safety Sign ISO 7010-M002 , and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

3. For products (such as implantable devices) where use of the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or on the smallest unit container in which the product is packaged. The product's accompanying documents will contain the complete Classification Mark as described above.

* Based on the certification coverage of the product, the standard number is CAN/CSA-C22.2 No. 60601-1 (2008) and applicable Particular and/or related Collateral Standards for which the product has been found to comply by UL.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GENERAL MEDICAL EQUIPMENT CERTIFIED FOR CANADA (MDAF7)

GENERAL

This category covers equipment intended to diagnose, treat and/or monitor a patient under medical supervision, and may also be used to compensate or alleviate disease, injury or disability. This equipment makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer. This also includes medical equipment intended for home health care applications.

REBUILT EQUIPMENT

This category also covers equipment that is rebuilt or remanufactured by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt equipment is rebuilt or remanufactured to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or remanufactured equipment is subject to the same requirements as new equipment.

FIELD-INSTALLED EQUIPMENT

Some of the equipment covered under this category is intended for field installation, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

The effects of the combination of therapies arising from the use of this equipment with other medical equipment have not been investigated.

RELATED EQUIPMENT

Equipment investigated for use in hazardous (classified) locations, as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I," is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

ADDITIONAL INFORMATION

For additional information, see Medical Equipment and Systems Certified for Canada (MDAA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60601-1 (2008), "Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance," in addition to one or more of the Particular and/or Collateral Standards noted below. This category also covers equipment for which no Particular Standard exists.

IECEE Operational and Ruling Document OD-2044, "Guidance for the Evaluation of Risk Management in Medical Electrical Equipment," is used in the assessment of the manufacturer's risk management system.

General Medical Equipment Certified for Canada (MDAF7)−*Continued*

Note: Canadian National Standards are used where they exist.

Particular Standards:

CAN/CSA-C22.2 No. 60601-2-18 (2011), "Medical Electrical Equipment – Part 2-18: Particular Requirements for the Basic Safety and Essential Performance of Endoscopic Equipment"

CAN/CSA-C22.2 No. 60601-2-19 (2009), "Medical Electrical Equipment – Part 2-19: Particular Requirements for the Basic Safety and Essential Performance of Infant Incubators"

CAN/CSA-C22.2 No. 60601-2-20 (2010), "Medical Electrical Equipment – Part 2-20: Particular Requirements for the Basic Safety and Essential Performance of Infant Transport Incubators"

CAN/CSA-C22.2 No. 60601-2-21 (2010), "Medical Electrical Equipment – Part 2-21: Particular Requirements for the Basic Safety and Essential Performance of Infant Radiant Warmers"

CAN/CSA-C22.2 No. 601.2.32 (1998), "Medical Electrical Equipment – Part 2: Particular Requirements for the Safety of Associated Equipment of X-Ray Equipment"

CAN/CSA-C22.2 No. 60601-2-41 (2011), "Medical Electrical Equipment – Part 2-41: Particular Requirements for the Basic Safety and Essential Performance of Surgical Luminaires and Luminaires for Diagnosis"

CAN/CSA-C22.2 No. 60601-2-46 (2012), "Medical Electrical Equipment – Part 2-46: Particular Requirements for the Basic Safety and Essential Performance of Operating Tables"

CAN/CSA-C22.2 No. 60601-2-52 (2011), "Medical Electrical Equipment – Part 2-52: Particular Requirements for the Basic Safety and Essential Performance of Medical Beds"

IEC 60601-2-66, "Medical Electrical Equipment – Part 2-66: Particular Requirements for the Basic Safety and Essential Performance of Hearing Instruments and Hearing Instrument Systems"

CAN/CSA-C22.2 No. 80601-2-35 (2012), "Medical Electrical Equipment – Part 2-35: Particular Requirements for the Basic Safety and Essential Performance of Heating Devices Using Blankets, Pads or Mattresses and Intended for Heating in Medical Use"

CAN/CSA-C22.2 No. 80601-2-58 (2010), "Medical Electrical Equipment – Part 2-58: Particular Requirements for the Basic Safety and Essential Performance of Lens Removal Devices and Vitrectomy Devices for Ophthalmic Surgery"

IEC 80601-2-60, "Medical Electrical Equipment – Part 2-60: Particular Requirements for the Basic Safety and Essential Performance of Dental Equipment"

Collateral Standards (optional):

CAN/CSA-C22.2 No. 60601-1-2 (2008), "Medical Electrical Equipment – Part 1-2: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Electromagnetic Compatibility – Requirements and Tests"

CAN/CSA-C22.2 No. 60601-1-3 (2009), "Medical Electrical Equipment – Part 1-3: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Radiation Protection in Diagnostic X-Ray Equipment"

CAN/CSA-C22.2 No. 60601-1-6 (2011), "Medical Electrical Equipment – Part 1-6: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Usability"

CAN/CSA-C22.2 No. 60601-1-8 (2008), "Medical Electrical Equipment – Part 1-8: General Requirements for Basic Safety and Essential Performance – Collateral Standard: General Requirements, Tests and Guidance for Alarm Systems in Medical Electrical Equipment and Medical Electrical Systems"

IEC 60601-1-9, "Medical Electrical Equipment – Part 1-9: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Environmentally Conscious Design"

CAN/CSA-C22.2 No. 60601-1-10 (2009), "Medical Electrical Equipment – Part 1-10: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for the Development of Physiologic Closed-Loop Controllers"

CAN/CSA-C22.2 No. 60601-1-11 (2011), "Medical Electrical Equipment – Part 1-11: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Medical Electrical Equipment and Medical Electrical Systems Used in the Home Healthcare Environment"

Particular Standards — The General Standard (CAN/CSA-C22.2 No. 60601-1 [2008]) contains requirements for safety and essential performance that are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (CAN/CSA-C22.2 No. 60601-2-xx, CAN/CSA-C22.2 No. 80601-2-xx, IEC 60601-2-xx or IEC 80601-2-xx). However, unless otherwise indicated in the National Differences in the General Standard, the requirements of a Particular Standard do not modify the National Differences in the General Standard. Where Particular Requirements exist, the General Standard is not used alone.

General Medical Equipment Certified for Canada (MDAF7)−*Continued*

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (CAN/CSA-C22.2 No. 60601-1-xx or IEC 60601-1-xx), such standard(s) may, optionally, also be used. Unless otherwise indicated in the National Differences in the General Standard, the requirements of a Collateral Standard do not modify the National Differences in the General Standard.

Note: The list of standards referenced above is revised periodically but, at any point in time, may not reflect a current listing of the applicable standards.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEDICAL — GENERAL MEDICAL EQUIPMENT
AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY
IN ACCORDANCE WITH [standard(s)*]
Control No.

For rebuilt or remanufactured equipment, the word **REBUILT**, **REMANUFACTURED**, **REFURBISHED** or **RECONDITIONED** precedes the word **GENERAL**.

For field-installed equipment, the words **FIELD-INSTALLED** precede the word **GENERAL**.

Alternate Marking Options

1. The Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS" or "ISO 7000, Symbol 1641 " or "Safety Sign ISO 7010-M002 ," the standard number*, and a control number. At a minimum, the standard number* always includes CAN/CSA-C22.2 No. 60601-1 (2008). In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

2. For products with limited space for markings, the Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the ISO 7000 Symbol 1641 or the Safety Sign ISO 7010-M002 , and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

3. For products (such as implantable devices) where use of the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or on the smallest unit container in which the product is packaged. The product's accompanying documents will contain the complete Classification Mark as described above.

* Based on the certification coverage of the product, the standard number is CAN/CSA-C22.2 No. 60601-1 (2008) and applicable Particular and/or related Collateral Standards for which the product has been found to comply by UL.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LASER EQUIPMENT CERTIFIED FOR CANADA (MDAH7)

GENERAL

This category covers equipment intended to diagnose, treat and/or monitor a patient under medical supervision, and may also be used to compensate or alleviate disease, injury or disability. This equipment makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer. This also includes medical equipment intended for home health care applications.

REBUILT EQUIPMENT

This category also covers equipment that is rebuilt or remanufactured by the original manufacturer or another party having the necessary facilities,

Laser Equipment Certified for Canada (MDAH7)−*Continued*

technical knowledge and manufacturing skills. Rebuilt equipment is rebuilt or remanufactured to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or remanufactured equipment is subject to the same requirements as new equipment.

FIELD-INSTALLED EQUIPMENT

Some of the equipment covered under this category is intended for field installation, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

The effects of the combination of therapies arising from the use of this equipment with other medical equipment have not been investigated.

RELATED EQUIPMENT

Equipment investigated for use in hazardous (classified) locations, as defined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

ADDITIONAL INFORMATION

For additional information, see Medical Equipment and Systems Certified for Canada (MDAA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60601-1 (2008), ''Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance,'' in addition to one or more of the Particular and/or Collateral Standards noted below.

IECEE Operational and Ruling Document OD-2044, ''Guidance for the Evaluation of Risk Management in Medical Electrical Equipment,'' is used in the assessment of the manufacturer's risk management system.

Note: Canadian National Standards are used where they exist.

Particular Standard:

CAN/CSA-C22.2 No. 60601-2-22 (2008), ''Medical Electrical Equipment – Part 2-22: Particular Requirements for Basic Safety and Essential Performance of Surgical, Cosmetic, Therapeutic and Diagnostic Laser Equipment''

Collateral Standards (optional):

CAN/CSA-C22.2 No. 60601-1-2 (2008), ''Medical Electrical Equipment – Part 1-2: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Electromagnetic Compatibility – Requirements and Tests''

CAN/CSA-C22.2 No. 60601-1-3 (2009), ''Medical Electrical Equipment – Part 1-3: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Radiation Protection in Diagnostic X-Ray Equipment''

CAN/CSA-C22.2 No. 60601-1-6 (2011), ''Medical Electrical Equipment – Part 1-6: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Usability''

CAN/CSA-C22.2 No. 60601-1-8 (2008), ''Medical Electrical Equipment – Part 1-8: General Requirements for Basic Safety and Essential Performance – Collateral Standard: General Requirements, Tests and Guidance for Alarm Systems in Medical Electrical Equipment and Medical Electrical Systems''

IEC 60601-1-9, ''Medical Electrical Equipment – Part 1-9: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Environmentally Conscious Design''

CAN/CSA-C22.2 No. 60601-1-10 (2009), ''Medical Electrical Equipment – Part 1-10: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for the Development of Physiologic Closed-Loop Controllers''

CAN/CSA-C22.2 No. 60601-1-11 (2011), ''Medical Electrical Equipment – Part 1-11: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Medical Electrical Equipment and Medical Electrical Systems Used in the Home Healthcare Environment''

Particular Standards — The General Standard (CAN/CSA-C22.2 No. 60601-1 [2008]) contains requirements for safety and essential performance that are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (CAN/CSA-C22.2 No. 60601-2-xx). However, unless otherwise indicated in the National Differences in the General Standard, the requirements of a Particular Standard do not modify the National Differences in the General Standard. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (CAN/CSA-C22.2 No. 60601-1-xx or IEC 60601-1-xx), such standard(s) may, optionally, also be used. Unless otherwise indicated in the National Differences in the General Standard, the requirements of a Collateral Standard do not modify the National Differences in the General Standard.

PATIENT-MONITORING EQUIPMENT CERTIFIED FOR CANADA (MDAJ7)

GENERAL

This category covers equipment intended to diagnose, treat and/or monitor a patient under medical supervision, and may also be used to compensate or alleviate disease, injury or disability. This equipment makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer. This also includes medical equipment intended for home health care applications.

REBUILT EQUIPMENT

This category also covers equipment that is rebuilt or remanufactured by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt equipment is rebuilt or remanufactured to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or remanufactured equipment is subject to the same requirements as new equipment.

Patient-monitoring Equipment Certified for Canada (MDAJ7)−*Continued*

FIELD-INSTALLED EQUIPMENT

Some of the equipment covered under this category is intended for field installation, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

The effects of the combination of therapies arising from the use of this equipment with other medical equipment have not been investigated.

RELATED EQUIPMENT

Equipment investigated for use in hazardous (classified) locations, as defined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

ADDITIONAL INFORMATION

For additional information, see Medical Equipment and Systems Certified for Canada (MDAA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60601-1 (2008), ''Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance,'' in addition to one or more of the Particular and/or Collateral Standards noted below.

IECEE Operational and Ruling Document OD-2044, ''Guidance for the Evaluation of Risk Management in Medical Electrical Equipment,'' is used in the assessment of the manufacturer's risk management system.

Note: Canadian National Standards are used where they exist.

Particular Standards:

CAN/CSA-C22.2 No. 60601-2-23 (2012), ''Medical Electrical Equipment – Part 2-23: Particular Requirements for the Basic Safety and Essential Performance of Transcutaneous Partial Pressure Monitoring Equipment''

IEC 60601-2-25, '' Medical Electrical Equipment – Part 2-25: Particular Requirements for the Basic Safety and Essential Performance of Electrocardiographs''

IEC 60601-2-26, ''Medical Electrical Equipment – Part 2-26: Particular Requirements for the Basic Safety and Essential Performance of Electroencephalographs''

CAN/CSA-C22.2 No. 60601-2-27 (2011), ''Medical Electrical Equipment – Part 2-27: Particular Requirements for the Basic Safety and Essential Performance of Electrocardiographic Monitoring Equipment''

CAN/CSA-C22.2 No. 60601-2-34 (2012), ''Medical Electrical Equipment – Part 2-34: Particular Requirements for the Basic Safety and Essential Performance of Invasive Blood Pressure Monitoring Equipment''

CAN/CSA-C22.2 No. 60601-2-47 (2007), ''Medical Electrical Equipment – Part 2-47: Particular Requirements for the Safety, Including Essential Performance, of Ambulatory Electrocardiographic Systems''

CAN/CSA-C22.2 No. 60601-2-49 (2011), ''Medical Electrical Equipment – Part 2-49: Particular Requirements for the Basic Safety and Essential Performance of Multifunction Patient Monitoring Equipment''

CAN/CSA-C22.2 No. 80601-2-30 (2010), ''Medical Electrical Equipment – Part 2-30: Particular Requirements for the Basic Safety and Essential Performance of Automated Non-Invasive Sphygmomanometers''

ISO 80601-2-55, ''Medical Electrical Equipment – Part 2-55: Particular Requirements for the Basic Safety and Essential Performance of Respiratory Gas Monitors''

CAN/CSA-C22.2 No. 80601-2-56 (2012), ''Medical Electrical Equipment — Part 2-56: Particular Requirements for Basic Safety and Essential Performance of Clinical Thermometers for Body Temperature Measurement''

ISO 80601-2-61, ''Medical Electrical Equipment – Part 2-61: Particular Requirements for Basic Safety and Essential Performance of Pulse Oximeter Equipment''

Collateral Standards (optional):

CAN/CSA-C22.2 No. 60601-1-2 (2008), ''Medical Electrical Equipment – Part 1-2: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Electromagnetic Compatibility – Requirements and Tests''

CAN/CSA-C22.2 No. 60601-1-3 (2009), ''Medical Electrical Equipment – Part 1-3: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Radiation Protection in Diagnostic X-Ray Equipment''

CAN/CSA-C22.2 No. 60601-1-6 (2011), ''Medical Electrical Equipment – Part 1-6: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Usability''

Patient-monitoring Equipment Certified for Canada (MDAJ7)−*Continued*

CAN/CSA-C22.2 No. 60601-1-8 (2008), ''Medical Electrical Equipment – Part 1-8: General Requirements for Basic Safety and Essential Performance – Collateral Standard: General Requirements, Tests and Guidance for Alarm Systems in Medical Electrical Equipment and Medical Electrical Systems''

IEC 60601-1-9, ''Medical Electrical Equipment – Part 1-9: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Environmentally Conscious Design''

CAN/CSA-C22.2 No. 60601-1-10 (2009), ''Medical Electrical Equipment – Part 1-10: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for the Development of Physiologic Closed-Loop Controllers''

CAN/CSA-C22.2 No. 60601-1-11 (2011), ''Medical Electrical Equipment – Part 1-11: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Medical Electrical Equipment and Medical Electrical Systems Used in the Home Healthcare Environment''

Particular Standards — The General Standard (CAN/CSA-C22.2 No. 60601-1 [2008]) contains requirements for safety and essential performance that are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (CAN/CSA-C22.2 No. 60601-2-xx or 80601-2-xx). However, unless otherwise indicated in the National Differences in the General Standard, the requirements of a Particular Standard do not modify the National Differences in the General Standard. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (CAN/CSA-C22.2 No. 60601-1-xx or IEC 60601-1-xx), such standard(s) may, optionally, also be used. Unless otherwise indicated in the National Differences in the General Standard, the requirements of a Collateral Standard do not modify the National Differences in the General Standard.

Note: The list of standards referenced above is revised periodically but, at any point in time, may not reflect a current listing of the applicable standards.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEDICAL — PATIENT-MONITORING EQUIPMENT AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY IN ACCORDANCE WITH [standard(s)*] Control No.

For rebuilt or remanufactured equipment, the word **REBUILT**, **REMANUFACTURED**, **REFURBISHED** or **RECONDITIONED** precedes the words **PATIENT-MONITORING**.

For field-installed equipment, the words **FIELD-INSTALLED** precede the words **PATIENT-MONITORING**.

Alternate Marking Options

1. The Classification Mark includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol, the product name as described above, the phrase ''SEE ACCOMPANYING DOCUMENTS'' or ''ISO 7000, Symbol 1641 '' or ''Safety Sign ISO 7010-M002 ,'' the standard number*, and a control number. At a minimum, the standard number* always includes CAN/CSA-C22.2 No. 60601-1 (2008). In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

2. For products with limited space for markings, the Classification Mark includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol, the ISO 7000 Symbol 1641 or the Safety Sign ISO 7010-M002 , and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

3. For products (such as implantable devices) where use of the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or on the smallest unit container in which the product is packaged. The product's accompanying documents will contain the complete Classification Mark as described above.

* Based on the certification coverage of the product, the standard number is CAN/CSA-C22.2 No. 60601-1 (2008) and applicable Particular and/or related Collateral Standards for which the product has been found to comply by UL.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ULTRASOUND EQUIPMENT CERTIFIED FOR CANADA (MDAL7)

GENERAL

This category covers equipment intended to diagnose, treat and/or monitor a patient under medical supervision, and may also be used to compensate or alleviate disease, injury or disability. This equipment makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer. This also includes medical equipment intended for home health care applications.

REBUILT EQUIPMENT

This category also covers equipment that is rebuilt or remanufactured by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt equipment is rebuilt or remanufactured to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or remanufactured equipment is subject to the same requirements as new equipment.

FIELD-INSTALLED EQUIPMENT

Some of the equipment covered under this category is intended for field installation, in accordance with the instructions provided, to certified equipment of the same manufacturer. Field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by this equipment have not been investigated.

The effects of the combination of therapies arising from the use of this equipment with other medical equipment have not been investigated.

RELATED EQUIPMENT

Equipment investigated for use in hazardous (classified) locations, as defined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

ADDITIONAL INFORMATION

For additional information, see Medical Equipment and Systems Certified for Canada (MDAA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60601-1 (2008), ''Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance,'' in addition to one or more of the Particular and/or Collateral Standards noted below.

IECEE Operational and Ruling Document OD-2044, ''Guidance for the Evaluation of Risk Management in Medical Electrical Equipment,'' is used in the assessment of the manufacturer's risk management system.

Note: Canadian National Standards are used where they exist.

Particular Standards:

CAN/CSA-C22.2 No. 60601-2-5 (2011), ''Medical Electrical Equipment – Part 2-5: Particular Requirements for the Basic Safety and Essential Performance of Ultrasonic Physiotherapy Equipment''

CAN/CSA-C22.2 No. 60601.2.36 (1998), ''Medical Electrical Equipment – Part 2: Particular Requirements for the Safety of Equipment for Extracorporeally Induced Lithotripsy''

CAN/CSA-C22.2 No. 60601-2-37 (2008), ''Medical Electrical Equipment – Part 2-37: Particular Requirements for the Basic Safety and Essential Performance of Ultrasonic Medical Diagnostic and Monitoring Equipment''

Collateral Standards (optional):

CAN/CSA-C22.2 No. 60601-1-2 (2008), ''Medical Electrical Equipment – Part 1-2: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Electromagnetic Compatibility – Requirements and Tests''

CAN/CSA-C22.2 No. 60601-1-3 (2009), ''Medical Electrical Equipment – Part 1-3: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Radiation Protection in Diagnostic X-Ray Equipment''

Ultrasound Equipment Certified for Canada (MDAL7)−*Continued*

CAN/CSA-C22.2 No. 60601-1-6 (2011), ''Medical Electrical Equipment – Part 1-6: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Usability''

CAN/CSA-C22.2 No. 60601-1-8 (2008), ''Medical Electrical Equipment – Part 1-8: General Requirements for Basic Safety and Essential Performance – Collateral Standard: General Requirements, Tests and Guidance for Alarm Systems in Medical Electrical Equipment and Medical Electrical Systems''

IEC 60601-1-9, ''Medical Electrical Equipment – Part 1-9: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Environmentally Conscious Design''

CAN/CSA-C22.2 No. 60601-1-10 (2009), ''Medical Electrical Equipment – Part 1-10: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for the Development of Physiologic Closed-Loop Controllers''

CAN/CSA-C22.2 No. 60601-1-11 (2011), ''Medical Electrical Equipment – Part 1-11: General Requirements for Basic Safety and Essential Performance – Collateral Standard: Requirements for Medical Electrical Equipment and Medical Electrical Systems Used in the Home Healthcare Environment''

Particular Standards — The General Standard (CAN/CSA-C22.2 No. 60601-1 [2008]) contains requirements for safety and essential performance that are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (CAN/CSA-C22.2 No. 60601-2-xx). However, unless otherwise indicated in the National Differences in the General Standard, the requirements of a Particular Standard do not modify the National Differences in the General Standard. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (CAN/CSA-C22.2 No. 60601-1-xx or IEC 60601-1-xx), such standard(s) may, optionally, also be used. Unless otherwise indicated in the National Differences in the General Standard, the requirements of a Collateral Standard do not modify the National Differences in the General Standard.

Note: The list of standards referenced above is revised periodically but, at any point in time, may not reflect a current listing of the applicable standards.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEDICAL — ULTRASOUND EQUIPMENT
AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY
IN ACCORDANCE WITH [standard(s)*]
Control No.

For rebuilt or remanufactured equipment, the word **REBUILT**, **REMANUFACTURED**, **REFURBISHED** or **RECONDITIONED** precedes the word **ULTRASOUND**.

For field-installed equipment, the words **FIELD-INSTALLED** precede the word **ULTRASOUND**.

Alternate Marking Options

1. The Classification Mark includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol, the product name as described above, the phrase ''SEE ACCOMPANYING DOCUMENTS'' or ''ISO 7000, Symbol 1641 '' or ''Safety Sign ISO 7010-M002  ,'' the standard number*, and a control number. At a minimum, the standard number* always includes CAN/CSA-C22.2 No. 60601-1 (2008). In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

2. For products with limited space for markings, the Classification Mark includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol, the ISO 7000 Symbol 1641 or the Safety Sign ISO 7010-M002 , and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark as described above.

3. For products (such as implantable devices) where use of the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or on the smallest unit container in which the product is packaged. The product's accompanying documents will contain the complete Classification Mark as described above.

Ultrasound Equipment Certified for Canada (MDAL7)−*Continued*

* Based on the certification coverage of the product, the standard number is CAN/CSA-C22.2 No. 60601-1 (2008) and applicable Particular and/or related Collateral Standards for which the product has been found to comply by UL.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATING PADS, ELECTRIC CERTIFIED FOR CANADA (MNUV7)

USE

This category covers electric heating pads and specialty heating pads intended for household use.

RELATED PRODUCTS

Products intended for hospital service or other similar supervised medicinal usage are covered under Medical Equipment Certified for Canada (AALZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 15 (1991), ''Electrically Heated Warming Pads.''

Hospital-use requirements of CAN/CSA-C22.2 No. 15 (1991) are intended to complement other medical directive requirements.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Heating Pad,'' or the name of the specific type of product as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOBBY AND SPORTS EQUIPMENT CERTIFIED FOR CANADA (MSVW7)

USE

This category covers electrically powered hobby and sports equipment rated 250 V or less, intended for home entertainment and amusement of adults.

RELATED PRODUCTS

Toys and games intended for children are covered under Toys Certified for Canada (XNIZ7).

Transformers for toys are covered under Transformers, Toy Certified for Canada (XRBV7).

Equipment intended for commercial operation is covered under Amusement and Gaming Machines Certified for Canada (ASMU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68 (1992), ''Motor-Operated Appliances (Household and Commercial).''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Hobby Equipment,'' ''Sport Equipment,'' ''Sports Equipment,'' ''Hobby and Sport Equipment'' or ''Hobby and Sports Equipment.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOISTS CERTIFIED FOR CANADA (MSXT7)

USE AND INSTALLATION

This category covers electrically powered/operated hoists of the overhead type, intended for material-lifting service using either chain or wire rope. They are intended to be suspended from a fixed member and may include trolleys for mobility.

All hoists are of the self-locking or braking type so that if the actuating force is removed, the load is retained in place. Load capacities are marked on the assemblies.

This category does not cover:

Manual or power-operated portable hoists intended for use with scaffolds suspended by wire ropes
Hoists for transporting people
Manually operated chain hoists
The fixed member or trolley that suspends the hoist

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 33, ''Construction and Test of Electric Cranes and Hoists.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Hoist'' or ''Hoist.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOISTWAY CABLE CERTIFIED FOR CANADA (MSZR7)

GENERAL

This category covers twisted and parallel hoistway cable intended for control and signal applications in elevator hoistways in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' The cable is rated 300 V or 600 V. The temperature rating, if so marked, is 90°C; otherwise it is 60°C. Insulated conductors are 18–12 AWG inclusive for 600 V twisted constructions, 20–12 AWG for 300 V twisted constructions, and 18 AWG only for parallel constructions. Twisted constructions consist of insulated conductors cabled together and may be covered with an overall jacket.

PRODUCT MARKINGS

Hoistway cable is identified by the words ''Hoistway Cable'' printed on at least one insulated conductor of nonjacketed constructions, or on the jacket of jacketed constructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 49, ''Flexible Cords and Cables.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Hoistway Cable.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSE CERTIFIED FOR CANADA (MURZ7)

FLAMMABLE LIQUID HOSE ASSEMBLIES CERTIFIED FOR CANADA (MVQJ7)

GENERAL

This category covers flammable liquid hose assemblies that consist of a length of flexible hose with a coupling or other connecting fitting attached to each end, intended for use on portable tanks, discharge devices and other equipment requiring use of a flexible hose for conveying gasoline, kerosene, fuel oil or diesel fuel. Single-line hose assemblies are manufactured in sizes up to 40 mm inside diameter. Coaxial vapor-recovery hose assemblies are manufactured with various connection configurations. All are intended for use where the working pressure for hose conveying liquid fuel does not exceed 350 kPa.

These assemblies are intended for use only in ventilated locations.

Hose assemblies suitable for use at temperatures down to -54°C may be marked "For use down to -54C."

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S612 (2007), "Hose and Hose Assemblies for Dispensing Flammable Liquids."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name "Flammable Liquid Hose Assembly" or "Vapor Recovery Flammable Liquid Hose Assembly."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE METAL HOSE CERTIFIED FOR CANADA (MVTV7)

USE

This category covers flexible metal hose intended for handling gases which are usually considered to be combustible, such as liquefied petroleum gas and manufactured and natural fuel gases, and ordinary flammable and combustible liquids, such as fuel oils, gasoline, kerosene, alcohol and the like. Flexible metal hose is intended for lines other than those employed in connection with safety devices, and where bending is not caused by automatic action. The maximum working pressure is specified in the individual certifications.

Flexible metal hose is not considered a substitute for standard pipe or tubing and its use should be confined to applications where flexible connections cannot be avoided. It should not be subjected to torsional, tensile or excessive bending stresses and should be protected against mechanical damage. It has not been investigated for seismic-motion stress reduction.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C536 (1998), "Flexible Metallic Hose."

UL MARK

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Metal Hose for Combustible Gases and Flammable Liquids."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GASOLINE HOSE CERTIFIED FOR CANADA (MWHT7)

GENERAL

This category covers synthetic rubber hose in sizes up to and including 31.8 mm inside diameter, intended for use on portable gasoline tanks, discharge devices, and other equipment requiring the use of a flexible hose for conveying gasoline. The month and year of manufacture are shown on the hose.

This category does not cover couplings or their method of attachment.

The hose is intended only for use in ventilated locations.

Hose suitable for use at temperatures down to -54°C may be marked "For use down to -54C."

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S612 (1999), "Hose for Flammable and Combustible Liquids."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name "Gasoline Hose."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROPANE AND NATURAL GAS HOSE ASSEMBLIES CERTIFIED FOR CANADA (MXCQ7)

USE

This category covers propane and natural gas hose assemblies consisting of a length of reinforced hose with a coupling or other connecting fitting attached to each end. They are intended for use in accordance with CAN/CGA-B149.1, "Natural Gas and Propane Installation Code," or the applicable local code requirements, at temperatures down to -40°C (-40°F) and at a maximum working pressure of 2400 kPa gauge (350 psig) unless otherwise noted in the individual certifications.

Unless otherwise indicated in the individual certifications, the hose assemblies have not been investigated for use as flexible connectors in piping systems associated with cargo tanks used for the transportation of propane and natural gas by trucks or trailers.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CGA-8.1 (1986), "Elastomeric Composite Hose and Hose Couplings for Conducting Propane and Natural Gas" and CSA/CAN1-8.3 (1977), "Thermoplastic Hose and Hose Couplings for Conducting Propane and Natural Gas."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "LP-Gas Hose Assembly," "LPG Hose Assembly," "LP-Gas and Natural Gas Hose Assembly," "Propane and Natural Gas Hose Assembly" or "LPG and Natural Gas Hose Assembly," and the appropriate CGA Type as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSE AND HOSE FITTINGS CERTIFIED FOR CANADA (MYYT7)

FIRE EXTINGUISHER AND BOOSTER HOSE CERTIFIED FOR CANADA (MZMR7)

GENERAL

This category covers uncoupled fire extinguisher and booster hose supplied in trade sizes 8 mm up to and including 32 mm for use on portable, wheeled, and stationary fire extinguishers, and as booster hose on fire apparatus. This hose is intended for use at a maximum working pressure from 1400 to 8750 kPa, as indicated in the individual certifications.

Hose suitable for use at temperatures down to -65°F (-54°C) is marked "-65 F (-54 C)."

Hose suitable for oil-resistant service is marked "Oil Resistant."

This category does not cover couplings or their method of attachment.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S522, "Fire Extinguisher and Booster Hose."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Extinguisher and Booster Hose" (or "Fire Ext. and Booster Hose").

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE HOSE, LINED, UNCOUPLED, FOR MUNICIPAL AND INDUSTRIAL USE CERTIFIED FOR CANADA (MZQE7)

USE

This category covers lined fire hose in the following nominal inside diameter trade sizes: 38, 45, 50, 65, 75, 89, 100, 125 and 150. The jackets are made from cotton and/or synthetic yarns. Single-jacketed hose is intended for use at fire hydrants and similar places where hard usage is not anticipated and where it will not be subjected to chafing on rough or sharp surfaces. Single-jacketed hose may also be made with a cover. Multiple-jacketed hose or single-jacketed hose judged equivalent to multiple-jacketed hose is for use on pumping engines and in places where service conditions require additional protection against wear.

These products have been investigated as uncoupled hose. Couplings may be provided but have not been investigated and are not covered under UL's Certification and Follow-Up Service.

PRODUCT MARKINGS

Hose suitable for use at temperatures down to -65°F (-54°C) may be marked "For use down to -65 F (-54 C)."

Hose resistant to ozone atmospheres may be marked "Ozone Resistant."

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S511, "Lined Fire Hose for Interior Standpipes and Municipal and Industrial Fire Protection Services."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Hose," "Rubber-lined Fire Hose" or "Lined Fire Hose."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD AND SIMILAR ELECTRICAL APPLIANCES CERTIFIED FOR CANADA (NBEA7)

This category covers appliances intended for household and similar use. Appliances not intended for normal household use, but which nevertheless may be a source of danger to the public, such as appliances intended for use by laymen in shops, in light industry and on farms, are also covered under this category.

These products are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC IRONS CERTIFIED FOR CANADA (NBEZ7)

GENERAL

This category covers household and similar purpose electric dry irons and steam irons, including those with a separate water reservoir or boiler having a capacity not exceeding 5 liters.

All electric irons are either of the automatic type or have an inherent protection means for safeguarding against fire hazard. Electric irons of the automatic type are provided with a form of automatic temperature control (usually a thermostatic control), which operates automatically, within predetermined temperature limits, to open and close the heating-element circuit.

Most products covered under this category are limited to use on alternating current; this limitation is marked on the nameplate.

RELATED PRODUCTS

Garment-finishing appliances are covered under Flatirons and Garment-finishing Appliances Certified for Canada (IKOZ7).

ADDITIONAL INFORMATION

For additional information, see Household and Similar Electrical Appliances Certified for Canada (NBEA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-E60335-1/4E (2003), "Safety of Household and Similar Electrical Appliances – Part 1: General Requirements," and CAN/CSA-E60335-2-3 (2006), "Household and Similar Electrical Appliances – Safety – Part 2-3: Particular Requirements for Electric Irons."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Iron."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHAVERS, HAIR CLIPPERS AND SIMILAR APPLIANCES CERTIFIED FOR CANADA (NBKG7)

USE

This category covers electric shavers, hair clippers and similar appliances intended for household and similar purposes with a maximum rated voltage of 250 V.

Appliances not intended for normal household use, but which still may be a source of danger to the public, are also covered under this category. Examples of such appliances are animal clippers, animal shearers and appliances for hairdressers.

This category does not cover:

- appliances intended to be used in locations where special conditions prevail, such as the presence of a corrosive or explosive atmosphere (dust, vapor or gas)
- massage appliances
- appliances intended for medical purposes

RELATED PRODUCTS

Shavers, Hair Clippers and Similar Appliances Certified for Canada (NBKG7)−*Continued*

Hair clippers and shavers investigated to CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)," are covered under Hair Clipping and Shaving Appliances Certified for Canada (KEFX7).

Personal grooming and manicure appliances are covered under Personal Grooming Appliances Certified for Canada (QGRW7).

Pedicure spas are covered under Plumbing Accessories Certified for Canada (QMTX7).

Massage appliances are covered under Massage and Exercise Machines Certified for Canada (PGXX7).

Appliances intended for medical purposes are covered under Medical Equipment Certified for Canada (PIDF7).

ADDITIONAL INFORMATION

For additional information, see Household and Similar Electrical Appliances Certified for Canada (NBEA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-E60335-1/4E (2003), "Safety of Household and Similar Electrical Appliances, Part 1: General Requirements," and CAN/CSA-E60335-2-8 (2006), "Household and Similar Electrical Appliances – Safety – Part 2-8: Particular Requirements for Shavers, Hair Clippers and Similar Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate::

"Animal Clippers"
"Barber Vacuum"
"Beard Trimmer"
"Commercial Clippers"
"Direct-plug-in Clippers"
"Direct-plug-in Shaver"
"Hair Remover"
"Hair Tweezers"
"Hot Lather Dispenser"
"Household Clippers"
"Lather Dispenser"
"Rechargeable Clippers with Charging Unit"
"Rechargeable Shaver with Charging Unit"
"Shaver"
"Wet/Dry Shaver"

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITAL SIGNALING AND NURSE CALL ACCESSORY EQUIPMENT CERTIFIED FOR CANADA (NBQW7)

USE AND INSTALLATION

This category covers equipment intended to be used separately or in combination to supplement a hospital nurse call signaling system. Its application is defined by the installation diagram covering the combination of the unit(s) with other units either employed for general hospital signaling use or used to form part of a hospital nurse call signaling system.

The equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Authorities Having Jurisdiction should be consulted before installation.

These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres, it is so indicated in the individual certifications and marked on the device.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 125 (1984), "Electromedical Equipment," or CSA-C22.2 No. 205 (1983), "Signal Equipment."

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Hospital Signaling and Nurse Call Equipment" or "Hospital Signaling and Nurse Call Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Hospital Signaling and Nurse Call and Security Equipment" or "Hospital Signaling and Nurse Call and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Hospital Signaling and Nurse Call and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSPITAL SIGNALING AND NURSE CALL EQUIPMENT CERTIFIED FOR CANADA (NBRZ7)

USE

This category covers units employed for general hospital signaling use, or to form part of a hospital nurse call signaling system.

Where system units are identified as supplementary, they are usually intended for connection to other manufacturer's noncertified equipment. These certified supplementary units have been investigated for their ability to provide isolation between the other noncertified equipment and the other certified system units.

Where system interconnection wiring is supervised for open, ground, and short faults, the supervised conductors/circuits are identified in the individual certifications.

Equipment suitable for use in shower stalls is identified in the individual certifications as "Shower Station."

Equipment suitable for use in oxygen-enriched atmospheres or by patients undergoing oxygen therapy is identified as such in the individual certifications. All other equipment should not be used in oxygen-enriched atmospheres or by patients undergoing oxygen therapy.

INSTALLATION

This equipment is intended to be installed in exact accordance with the instructions in the manufacturer's installation manual included with the equipment, and the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and ANSI/NFPA 99, "Health Care Facilities."

Authorities Having Jurisdiction should be consulted before installation.

To maintain leakage-current levels required by the applicable codes, it is intended that the interconnected wiring of the installed system be segregated (separate conduit) from that of systems which are not certified or certified to other categories not conforming to the leakage-current requirements of ANSI/NFPA 99.

INSTALLATION INSTRUCTIONS/MARKINGS

The individual system units covered under this category are separately certified. These units are tested as a typical system while wired in accordance with the manufacturer's installation instructions and wiring diagram. The individual certifications cover not only the system units but also the installation instructions and wiring diagrams that specify proper interconnection.

Modifications to the system in the field are limited to that described in the installation instructions for that system.

Only equipment certified under a specific system name should be considered as having been tested together and found to be compatible per the installation instructions and wiring diagram. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres it is so indicated in the individual certifications and marked on the device.

Other equipment connected to any system unit covered under this product category is not considered to be part of the system configuration unless the equipment in question is identified by the Listee name and model number in the installation instructions and covered under this category or Hospital Signaling and Nurse Call Accessory Equipment Certified for Canada (NBQW7).

OPERATIONS

System units identified as fundamental perform an essential/required operation whose primary function is to provide notification and/or reset/cancellation of a staff-initiated or patient-initiated call signal to alert the staff. The operations include all of the following:

(a) Call annunciation at a nurse's station (audible and visual),
(b) Call annunciation at the dome light,
(c) Call-placed indicator on the patient station (visual),
(d) Zone annunciation (audible and visual), and
(e) Call reset/cancellation.

Devices that perform fundamental operations are not investigated as being capable of performing supplementary operations.

A supplementary device is a device that is electrically isolated and not investigated as a fundamental device. A supplementary operation is an operation that is adjunct to the fundamental operation so that the failure of such will have no effect on the fundamental operation of the nurse call system.

Various system units may additionally annunciate fire alarm signals. These signals are supplementary only and these system units have not been investigated as fire-protective signaling system units.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 125 (1984), "Electromedical Equipment," or CSA-C22.2 No. 205, "Signal Equipment."

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL Mark for Canada symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Hospital Signaling and Nurse Call Equipment" or "Hospital Signaling and Nurse Call Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Hospital Signaling and Nurse Call and Security Equipment" or "Hospital Signaling and Nurse Call and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Hospital Signaling and Nurse Call and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD BURGLAR ALARM SYSTEM UNITS CERTIFIED FOR CANADA (NBSX7)

USE AND INSTALLATION

This category covers the individual units that may be interconnected to form an electrically operated household burglar alarm system. These units include a main control unit (with integral or separate power supply), intrusion detection devices (contacts, motion detectors, sound detectors, etc.), and alarm-indicating devices (bells, relays, etc.).

Combination Control Unit — A control unit may additionally include circuit facilities for connection to fire alarm devices to form a combination fire-burglary control unit. In such a combination unit the fire alarm signal takes precedence over the burglar alarm signal and a distinction between alarm signals is required. A common trouble signal may be employed for both.

Modular Control or Combination Unit — A control unit may be prewired at the factory or assembled from readily installed modules. A certified fire module can be added after the unit is installed to expand the system's capability. The installation diagram indicates the type and number of modules that can be employed in a control unit.

Control Unit Accessory — A special unit assembly intended to be separately connected within a system and which is suitable for use only with a specific control unit.

An installation drawing is employed as the controlling factor to ensure proper interconnection among units. The drawing may be attached to the control unit, provided detached, or included as part of an instruction or installation booklet.

An instruction booklet illustrating typical installation layouts, operation, maintenance, servicing, and test procedures is provided for each household burglar alarm system or unit.

Provision may be made for transmitting a signal to a remote location.

This category also covers self-contained units that incorporate detection, alarm and power supply components in a single enclosure.

Individual units are certified under UL's Follow-Up Service. A Certification Mark is required to identify certification of each control unit comprising a household burglar alarm system, except for those devices, such as alarm-sounding devices, contacts, motion detectors and other burglar alarm devices, which are covered separately under their own category.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Household" or "Residential" and the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1023, "Preliminary Standard for Household Burglar Alarm System Units."

UL MARK

The Security Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Equipment" or "Subassembly."

When applicable, the Signaling Mark is also included. The combined Signaling/Security Listing Mark consists of the Security Mark elements detailed above and the word "SIGNALING" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Information Technology or Telephone categories. When applicable, the product name may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., "Security Equipment and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufac-

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HYDROMASSAGE BATHTUBS CERTIFIED FOR CANADA (NCHX7)

GENERAL

This category covers indoor hydromassage bathtubs (also known as whirlpool baths) rated 250 V or less, intended for residential and commercial use, for permanent connection to the building plumbing.

A hydromassage bathtub consists of a drainable tub, a recirculating pump and optional equipment such as lights, a heater, a control and an air-blower.

A bathtub may also be provided with an air-blower and no recirculating pump.

Hydromassage bathtubs are intended for connection to circuits protected by ground-fault circuit interrupters.

INSTALLATION INSTRUCTIONS

Factory Configuration Information — Each hydromassage bathtub is provided with a configuration sheet to identify the main factory-installed components of the unit. These components include pumps, controls, heaters and lighting fixtures. The configuration sheet and the installation instructions are intended to be available during installation and inspection. This configuration sheet also includes a list of optional accessories suitable for field addition to the product.

RELATED EQUIPMENT

Portable hydromassage equipment is covered under Personal Hygiene and Health Care Appliances Certified for Canada (QGRZ7).

Prefabricated steam baths and showers are covered under Prefabricated Assemblies, Sections and Units Certified for Canada (QQXX7).

Sauna and steam bath heating equipment is covered under Heaters, Sauna and Steam Bath Certified for Canada (KPJV7).

Self-contained spas and hot tubs are covered under Self-contained Spas Certified for Canada (WCZW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-B45.10, ''Hydromassage Bathtubs,'' and CSA-C22.2 No. 218.2, ''Hydromassage Bathtub Appliances.''

The suction fittings used in these hydromassage bathtubs have been investigated with respect to body and hair entrapment to ANSI/ASME A112.19.7/CSA B45.10 (2012), ''Hydromassage Bathtub Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Hydromassage Bathtub.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ILLUMINATING APPLIANCES, GAS FIRED, INDOOR/OUTDOOR CERTIFIED FOR CANADA (NCOG7)

USE AND INSTALLATION

This category covers gas-fired illuminating appliances rated 5,000 Btu/h or less per burner, intended for indoor or outdoor use. These include lamps and fixtures and the like as identified in the individual certifications. These appliances are stationary and intended for attachment to a fixed gas piping system or a self-contained liquefied petroleum gas supply system. A means of support is provided by the manufacturer as part of the appliance.

Gas-fired illuminating appliances are intended to be installed in accordance with markings on the appliance pertaining to clearances and types of surfaces. Appliances suitable for built-in installation or side-by-side mounting are indicated in the installation instructions. Each appliance is marked to indicate whether it is suitable for indoor (I) installation, outdoor (O) installation, or both (I/O).

These heating gas appliances operate at an inlet gas pressure not to exceed 1/2 psig (3.5 kPa).

Applicable codes and Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to installation and connection to the fuel supply.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is the current edition and effective addendum thereto of CSA/CAN 1-2.15, ''Gas-Fired Domestic Lighting Appliances.''

UL MARK

The Gas-fired Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL Mark for Canada symbol with the words ''GAS-FIRED'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the standard designation ''CSA CAN 1-2.15(+)-(++) Gas-Fired Domestic Lighting Appliance.''

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INCUBATORS AND BROODERS CERTIFIED FOR CANADA (NHYZ7)

USE

This category covers portable and stationary electric incubators and brooders, rated 250 V or less, intended for use on farms and commercial hatcheries in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 102 (1958), ''Construction and Test of Brooders and Incubators.''

Additional standards may be applicable based on the features employed.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Incubator'' or ''Brooder.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT CERTIFIED FOR CANADA (NIMX7)

This category covers the following devices:

- Electro-sensitive protective equipment
- Industrial control panels
- Industrial control switches
- Motor control centers
- Motor controllers
- Motor controllers over 1500 V
- Motor controller accessories over 1500 V
- Power circuit and motor-mounted apparatus
- Power conversion equipment
- Programmable controllers
- Protective relays
- Proximity switches

Enclosure Type ratings — Enclosed industrial control equipment identified with an Enclosure Type designation and is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for

Canada (AALZ7). Only Enclosure Type designations associated with the UL Listing Mark have been certified by UL. Open-type components investigated for mounting through the wall of specific Enclosure Types are marked "Suitable for use on a flat surface of a Type ____ enclosure," or the equivalent, and are provided with instructions and mounting hardware.

Open-type equipment — Unless otherwise specified in the instructions or markings on the product, open-type industrial control equipment is intended for installation within enclosures supplied in the field.

Field-wiring connections — Industrial control equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Accessories — Industrial control equipment for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

Coil ratings — Unless otherwise marked, the sealed volt-ampere rating of the operating coil circuit of a magnetically-operated industrial control device is as tabulated below. For a magnetically-operated industrial control device with an ac coil, the device is investigated for operation over a range of +10% and -15% of the rated control circuit voltage. For a magnetically-operated industrial control device with a dc coil, the device is investigated for operation over a range of +10% and -20% of the maximum rated control circuit voltage.

Marked Contact Rating of Device, Amperes	Maximum Coil Volt-Amperes
30 A or less	30 VA
50 A or less	75 VA
150 A or less	100 VA
300 A or less	125 VA

Voltage ratings — Industrial control equipment is marked with the maximum voltage rating for the intended loads. When the marked voltage rating is included in one of the voltage ranges tabulated below, the equipment has been investigated for use at the corresponding maximum voltage of the range:

Marked Voltage Rating of Equipment	Maximum Use Voltage
110 – 120	120
220 – 240	240
254 – 277	277
380 – 415	415
440 – 480	480
550 – 600	600

Frequency — Unless otherwise marked on the equipment, industrial control equipment is intended for use on alternating-current supply with a rated frequency of 50/60 Hz.

Load type — Unless otherwise marked on the equipment, an ampere rating assigned to industrial control equipment is considered to be a general-purpose rating for use with a load that is continuous or with an inrush current that does not exceed the ampere rating of the device. For other specific load types, the rating is followed by one of the following terms:

Marked Rating on Device	Intended Load Type
Amperes	General use
Amperes, resistive (or res.)	Resistive
Amperes, resistance	Heater load
Amperes, ballast	Electric discharge lamp magnetic ballast load
Amperes, electronic ballast	Fluorescent lamp electronic ballast load
Amperes or watts, tungsten	Incandescent lamp load
Code designation, volt-amperes	Coil, standard or heavy duty (pilot duty)
Amperes, kVar	Capacitor switching load, full load amperes
Hp	Motor load
FLA/LRA	Hermetic refrigeration compressor motor

Number of poles — Unless otherwise marked, an industrial control device rated for a single-phase load has been investigated for controlling a single-phase load using one pole of the controller. A controller rated for a three-phase load has been investigated for controlling the three-phase load using two poles of the controller. For an industrial control device marked "break all lines" or the equivalent, such as by means of a wiring diagram, a switched pole is intended to be connected to each conductor supplying the load.

Number of phases — A marked rating for which the number of phases is not specified is considered to be for a single-phase circuit.

Ambient temperature rating — Unless otherwise specified on the product or on instructions provided with the product, enclosed industrial control equipment and open-type equipment, when installed in an enclosure, is intended for use in an ambient temperature of 0°C – 40°C (32°F – 104°F).

Surrounding air-temperature rating — Some open-type equipment is marked with a surrounding air-temperature rating. Such equipment is intended to be installed within an enclosure having sufficient volume and ventilation or is provided with additional cooling means such that while the equipment is in operation, the air immediately surrounding the equipment within the ultimate enclosure does not exceed the marked surrounding air-temperature rating.

Functional Safety and Electromagnetic Compatibility (EMC) — Unless specifically indicated in the Guide Information for each product category, the equipment listed above has not been subjected to investigation with respect to its use in applications involving functional safety or EMC.

Service equipment markings — Some industrial control equipment is suitable for use as service equipment and may be so marked. Such marking is part of the Listing Mark or is an integral part of other required markings.

Some industrial control equipment incorporates neutrals that are insulated from the frame or enclosure. Such units are marked "Suitable for Use as Service Equipment." Some industrial control equipment incorporates neutrals factory bonded to the frame or enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRO-SENSITIVE PROTECTIVE EQUIPMENT CERTIFIED FOR CANADA (NIOZ7)

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery. ESPE is applied to machinery that presents a risk of personal injury. It provides protection by causing the machine to revert to a safe condition before a person can be placed in a hazardous situation. In addition to fire and electric shock hazards, these devices have been investigated for their safety-related performance features.

ESPE is designated as a certain "Type" as shown in the individual Listings and as defined in IEC 61496-1, Safety Of Machinery-Electro-Sensitive Protective Equipment-Part 1: General Requirements And Tests. In addition, the individual Listings identify products that also have been investigated to UL 1998, the Standard for Safety Related Software.

This category does not specify the dimensions or configuration of the sensing zone and its disposition in relation to hazardous parts for any particular application, nor what constitutes a hazardous state of any machine. It is restricted to the functioning of the ESPE, the means by which it monitors the condition of the machine, and how it interfaces with the machine controls.

Products covered in this category may be relevant to applications other than those for the protection of persons, for example for the protection of machinery or products from mechanical damage. In those applications additional requirements may be necessary, for example when the materials that have to be recognized by the sensing function have different properties from those of persons.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Active Opto-electronic Protective Devices Certified for Canada (NIPF7)

GENERAL

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices (AOPD) for the sensing function.

The sensing function is performed by opto-electronic emitting and receiving elements detecting the interruption of optical radiations generated, within the device, by an opaque object present in the specified detection zone.

This category does not cover AOPDs employing radiation at wavelengths outside the range 400 nm to 1,500 nm.

RELATED PRODUCTS

to diffuse reflection (AOPDDR) for the sensing function is covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection Certified for Canada (NIPM7).

Electro-sensitive protective equipment (ESPE) employing vision-based protective devices (VBPDs) for the safeguarding of machinery is covered under Active Opto-electronic Protective Devices Employing Vision-based Protective Devices Certified for Canada (NIPJ7).

ADDITIONAL INFORMATION

For additional information, see Electro-sensitive Protective Equipment Certified for Canada (NIOZ7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, ''Industrial Control Equipment,'' CAN/CSA-C22.2 No. 0.8, ''Safety Functions Incorporating Electronic Technology,'' IEC 61496-1, ''Safety of Machinery – Electro-Sensitive Protective Equipment – Part 1: General Requirements and Tests,'' and IEC 61496-2, ''Safety of Machinery – Electro-sensitive Protective Equipment – Part 2: Particular Requirements for Equipment Using Active Opto-electronic Protective Devices (AOPDs).''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electro-sensitive Protective Equipment'' (or ''ESPE'') or ''Active Opto-electronic Protective Device'' (or ''AOPD''), or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Active Opto-electronic Protective Devices Employing Vision-based Protective Devices Certified for Canada (NIPJ7)

GENERAL

This category covers electro-sensitive protective equipment (ESPE), employing vision-based protective devices (VBPDs) for the safeguarding of machinery.

The sensing function is performed by single-image sensing devices viewing one two-dimensional image against a passive pattern as the background and where the detection principle is blocking the view of the pattern.

RELATED PRODUCTS

Electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices (AOPD) for the sensing function is covered under Active Opto-electronic Protective Devices Certified for Canada (NIPF7).

Electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) for the sensing function is covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection Certified for Canada (NIPM7).

INDUSTRIAL CONTROL PANELS CERTIFIED FOR CANADA (NITW7)

GENERAL

This category covers industrial control panels, which are factory-wired assemblies of industrial control equipment, such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit protective devices. An industrial control panel does not include the controlled loads, including motors, luminaires, heaters, or utilization equipment.

An enclosed industrial control panel is comprised of the enclosure, all components located within the enclosure, and all components mounted to the walls of the enclosure.

An open industrial control panel is comprised of a mounting sub-panel and all components mounted to the sub-panel, and is intended for installation into an enclosure in the field.

Industrial Control Panels Certified for Canada (NITW7)−*Continued*

This category also covers industrial control panel enclosures. The enclosures may contain ventilation openings, observation windows, conduit fittings, environmental control devices, or maintenance luminaires. Industrial control panel enclosures are intended to house open-type industrial control panels or individual items of industrial control equipment installed in the field.

Unless otherwise marked, industrial control panels covered under this category are intended for general-use industrial applications for control of heaters, lighting, motors or pump loads, or a combination of these loads, and are intended for installation in accordance with Sections 28, 30 and 62 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Industrial control panels marked "Industrial Control Panel for Industrial Machinery" on the unit nameplate have been investigated to determine that they meet the requirements of CSA-C22.2 No. 73, "Construction and Test of Electrically Equipped Machine Tools." Industrial control panels designated for control of industrial machinery may not be suitable for use with other equipment.

Industrial control panels marked "Flame Control Panel" on the unit nameplate contain controls for fossil fuel-burning equipment, such as incinerators, kilns, and drying ovens, intended for industrial applications. These control panels may additionally contain controls for other loads.

Industrial control panels marked "Crane Control Panel" or "Hoist Control Panel" on the unit nameplate contain controls for overhead cranes and hoists for industrial applications. These panels may not be suitable for use with equipment other than cranes and hoists.

Industrial control panels marked "Industrial Control Panel for Refrigeration Equipment" or "Industrial Control Panel for Air Conditioning Equipment" on the unit nameplate contain controls for hermetic refrigerant compressor motors for industrial applications. Industrial control panels designated for control of refrigeration equipment may not be suitable for use with equipment other than refrigeration equipment.

Industrial control panels marked "Fountain Control Panel" on the unit nameplate are intended for control of permanently installed fountains or floating fountains.

Industrial control panels are not intended for installation in motor control center sections or units.

RATINGS

Industrial control panels are rated 600 V or less. Each power circuit output from the control panel is rated in current or power, voltage, and the intended load type, such as a motor. Each supply input to the industrial control panel is rated in full load amperes, rating of largest motor load, voltage, number of phases, and frequency. Each supply input is additionally provided with a short-circuit current rating indicating the maximum rms symmetrical amperes and voltage available at the input terminals of the industrial control panel or, for an industrial control panel not supplied with branch-circuit protection, the maximum rms symmetrical amperes and voltage available on the line side of the overcurrent protection installed in the field.

ENVIRONMENTAL RATINGS

Industrial control panel enclosures are marked with the enclosure type ratings for which they were investigated.

Enclosed industrial control panels are marked with an enclosure type rating. The type rating of the industrial control panel may differ from the rating of the basic enclosure due to the presence of components or assemblies installed through the enclosure walls by the manufacturer.

PRODUCT MARKINGS

Industrial control panels are marked with the electrical ratings for each source of supply to the panel. The panel or wiring diagram provided with the panel is marked with the electrical ratings of the intended load equipment, such as motors, heaters, lighting, or appliance loads. Industrial control panels are provided with a complete schematic diagram of the panel as built by the manufacturer. When the schematic wiring diagram includes components that are not supplied with the industrial control panel, such as remote control devices, motors or similar devices, a notation or similar means is used to identify such components. When additional installation instructions are provided on a separate drawing, a reference to the drawing containing the information is marked on the nameplate of the industrial control panel.

The nameplate of industrial control panels is marked with the short-circuit current rating for each supply as follows: "Short circuit current: ___ kA rms symmetrical, ___ V maximum," or the equivalent.

SPECIAL CONSIDERATIONS

These control panels are investigated for electrical fire and shock hazards only. The investigation of industrial control panels does not include investigation of the adequacy of the control and protective devices to supervise the functioning of the controlled equipment.

Special relationships and investigations may be necessary for the proper operation of certain equipment, as noted below:

1. Industrial control panels investigated with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment Certified for Canada (LZFE7) or Specialty Refrigeration Equipment Certified for Canada (SROT7).
2. Industrial control panels investigated with industrial machinery are covered under Factory Automation Equipment Certified for Canada (GPNY7).
3. Flame control panels investigated with specific burner assemblies are covered under Commercial/Industrial Gas Burners Certified for Canada (KXWT7), Gas-Oil Burners Certified for Canada (KYKR7) or Oil Burners Certified for Canada (KYXZ7).
4. Fluid-handling systems consisting of industrial control panels, pumps, valves, gauges, and piping mounted to a structural base are covered under Packaged Pumping Systems Certified for Canada (QCZJ7).
5. Control panels investigated for use with flammable-liquid dispensing devices are covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7). Liquids with a flash point below 37.8°C (100°F) are defined as flammable. Liquids with a flash point of 37.8°C (100°F) and above are defined as combustible.
6. Control panels intended for use in motor control center sections or units are covered under Motor Control Centers Certified for Canada (NJAV7).

RELATED PRODUCTS

Enclosures for general-use electrical equipment or wiring are covered under Boxes, Junction and Pull Certified for Canada (BGUZ7) or Cabinets and Cutout Boxes Certified for Canada (CYIV7).

Control panels intended for elevators, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment are covered under Elevator Control Panels Certified for Canada (FQPB7).

Control panels with connection to sensors or initiating devices to detect and activate emergency alarms are covered under Signal System Units Certified for Canada (UDTZ7).

Control equipment intended to supply automatic illumination, power, or both, to critical areas and equipment essential to safety of human life is covered under Emergency Lighting and Power Equipment Certified for Canada (FTBR7).

Freestanding motor control center sections, motor control center units and equipment intended for field installation into a motor control center are covered under Motor Control Centers Certified for Canada (NJAV7).

Control panels intended for installation in hazardous (classified) locations are covered under Control Panels and Assemblies for Use in Hazardous Locations Certified for Canada (NNNY7).

Control panels provided with intrinsically safe circuits for extension into hazardous (classified) locations are covered under Industrial Control Panels Relating to Hazardous Locations Certified for Canada (NRBX7).

Cabinets, enclosures and rack/frame systems that include components and assemblies intended to power, protect, heat, cool or otherwise support information technology (IT), telecommunications equipment, or audio/video equipment (A/V) are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

Equipment intended for the control of fuel cells, photovoltaic systems, or utility interactive systems are covered under Static Inverters and Converters for Use in Independent Power Systems Certified for Canada (QIKH7).

Portable control panels containing switches, overcurrent protection, and that are cord connected via attachment plugs and receptacles for use at carnivals, circuses, fairs, exhibition halls, motion picture and television studios, theaters, construction sites and similar locations are covered under Portable Power Distribution Units and Devices Certified for Canada (QPSH7).

Assemblies comprised of equipment such as circuit breakers, fuses, switches, and related accessory equipment and intended to distribute power to field installed communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Controllers intended for electric fire pumps are covered under Pump Controllers, Fire Certified for Canada (QYZS7).

Control panels containing electrical control units for use in fire-protective signaling systems are covered under Control Units, Releasing Device Certified for Canada (SYZV7), Control Units, System Certified for Canada (UOJZ7) or Smoke Control System Equipment Certified for Canada (UUKL7).

Control panels intended for use with equipment for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls Certified for Canada (WAWU7).

Freestanding assemblies of circuit breakers and busses for control of electric light and power circuits of equipment for installation into dead-front switchboards are covered under Switchboards, Dead-front Certified for Canada (WEVZ7).

Industrial Control Panels Certified for Canada (NITW7)−*Continued*

Industrial Control Panels Certified for Canada (NITW7)−*Continued*

Enclosed assemblies consisting only of lengths of busbars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors for power circuits are covered under Termination Boxes Certified for Canada (XCKT7).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Open Industrial Control Panel," "Enclosed Industrial Control Panel" or "Industrial Control Panel Enclosure."

The "Enclosed Industrial Control Panel" Listing Mark covers both the enclosure and the provided panel. Open panels employ the "Open Industrial Control Panel" Listing Mark. The "Industrial Control Panel Enclosure" Listing Mark covers only the enclosure; the compatibility of the enclosure and the installed equipment and associated wiring has not been investigated unless an "Enclosed Industrial Control Panel" Listing Mark is also present.

* *

MOTOR CONTROL CENTERS CERTIFIED FOR CANADA (NJAV7)

GENERAL

This category covers motor control centers, which are floor-mounted assemblies of one or more enclosed vertical sections having a common horizontal power bus and primarily containing combination motor control units. In addition, motor control centers may contain other types of units, such as relay units, circuit breaker units, disconnect switch units, or panelboard units. Units are mounted one above the other in the vertical sections. Power may be supplied to the individual units by vertical power bus or, if the bus is omitted, by suitable wiring to the horizontal bus.

A combination motor control unit includes an externally operable circuit disconnecting means, branch circuit overcurrent protection, and a motor controller. Motor control centers are intended for installation in accordance with Section 28 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Motor control center sections and units are rated 600 V maximum.

Motor control center sections are rated for the maximum current for horizontal and vertical bus. A motor control center section is marked "Short-circuit current rating amps – RMS symmetrical volts – maximum. Do not install on circuits with available short-circuit currents greater than the lowest short-circuit rating of any installed unit," or the equivalent.

Combination motor control center units are rated in horsepower. A motor control center unit is marked "Unit short-circuit current rating – RMS symmetrical amps – volts maximum, when equipped with fuse or circuit breaker," or the equivalent.

A motor control center section or enclosure investigated for outdoor use in marked "Rainproof." A motor control center enclosure is intended to enclose one or more motor control center sections.

USE AS SERVICE EQUIPMENT

The marking "Suitable For Use As Service Equipment" appears on each motor control center section optionally intended for use at a service.

Some motor control center sections incorporate neutrals factory bonded to the enclosure. Such sections are marked "Suitable Only For Use As Service Equipment."

A section marked for use at services may also be used to provide the main control and disconnecting means for a separately derived system.

RELATED PRODUCTS

For information concerning overcurrent protective devices for motor controllers, see Motor Controllers Certified for Canada (NJOT7).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 254 (2005), "Motor Control Centres."

UL MARK

Motor Control Centers Certified for Canada (NJAV7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor Control Center Unit," "Motor Control Center Section" or "Motor Control Center Rainproof Enclosure."

The Listing Mark for motor control center sections also includes the marking "___ of ___." The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the motor control center. The latter space is stamped with the total number of sections in the motor control center. The Listing Mark on the motor control center section does not cover the individual units that are installed in the section.

The splice bus for interconnecting horizontal bus of abutting vertical sections in the series is also covered by the section Listing Mark.

Each Listed motor control center unit is identified by its own Listing Mark. Only those sections and units that bear the Listing Mark are covered under UL's Follow-Up Service.

* *

MOTOR CONTROLLERS OVER 1500 VOLTS CERTIFIED FOR CANADA (NJHU7)

GENERAL

This category covers enclosed motor controllers having ac voltage ratings above 1500 V but not more than 7.2 kV, intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open circuit voltage, and a phase factor of 1.73×10^6.

Motor controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Some motor controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

These motor controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

These motor controllers may consist of a single vertical section housing one or more individual controllers or may consist of several abutting vertical sections intended for interconnection by means of a suitable horizontal bus. These vertical sections are normally freestanding; however, a single motor controller may be provided in a construction intended for wall mounting.

ARC-RESISTANT MOTOR CONTROLLERS

Motor controllers specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant motor controllers.

Arc-resistant motor controllers have been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant motor controllers are marked with an Accessibility Type designation of Type 1, 1C, 2 or 2C, based upon the construction.

Type 1 designates motor controllers with arc-resistant construction at the front only.

Type 1C designates motor controllers with arc-resistant construction at the front, and between compartments within the same section or adjacent sections.

Type 2 designates motor controllers with arc-resistant construction at the front, sides and rear.

Type 2C designates motor controllers with arc-resistant construction at the front, sides and rear, and between compartments within the same section or adjacent sections.

In Type 1C or 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent sections.

ADDITIONAL INFORMATION

Motor Controllers Over 1500 Volts Certified for Canada (NJHU7)−*Continued*

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, ''Industrial Control Equipment,'' in addition to the requirements contained in CSA Technical Information Letter No. D-21, ''Interim Certification Requirements for Control Devices Rated at More Than 1500 V But Not More Than 7200 V, for Electric Motors,'' and/or CSA-C22.2 No. 253 (2009), ''Medium-Voltage AC Contactors, Controllers, and Control Centres.''

In addition to the requirements noted above, the standard used to investigate motor controllers Classified as ''arc resistant'' is CSA-C22.2 No. 0.22 (2011), ''Evaluation Methods for Arc Resistance Ratings of Enclosed Electrical Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''High Voltage Industrial Control Equipment'' or ''High Voltage Motor Control Equipment Section.''

The Listing Mark for high-voltage motor control equipment sections also includes the designation ''____ of ____.'' The first blank is stamped with the number indicating the position that the section occupies in the series of sections constituting the high-voltage motor control equipment. The second blank is stamped with the total number of sections in the high-voltage motor control equipment (including sections not bearing a UL Listing Mark).

Each Listed high-voltage motor control equipment section consists of one or more high-voltage industrial control equipment units. Each Listed high-voltage industrial control equipment unit is individually identified as a Listed product.

Classification Mark for Arc-resistant Motor Controllers

The Classification Mark of UL on motor controllers investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

ARC-RESISTANT MOTOR CONTROLLER
ALSO CLASSIFIED IN ACCORDANCE WITH CSA-C22.2 NO. 0.22

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or removable units. Each vertical section of a line-up of abutting vertical sections is provided with a ''____ of ____'' marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Power Conversion Equipment, Medium Voltage Certified for Canada (NJIC7)

GENERAL

This category covers enclosed power conversion equipment with primary voltage ratings of 1501–7200 V, intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' This equipment supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for medium-voltage power conversion equipment.

PRODUCT MARKINGS

Medium-voltage power conversion equipment incorporating overload protection for motors is marked to indicate the level of protection provided in percent of full-load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection, such as overload relays, or a thermally protected motor must be otherwise provided.

Medium-voltage power conversion equipment is marked with the following electrical ratings:

Power Conversion Equipment, Medium Voltage Certified for Canada (NJIC7)−*Continued*

- **Input Ratings:** Voltage, maximum continuous input current, frequency, number of phases, maximum allowable system symmetrical short-circuit current, and impulse withstand.
- **Output Ratings:** Maximum output voltage, rated continuous current, frequency range, and number of phases.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Over 1500 V Certified for Canada (NJHU7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, ''Industrial Control Equipment,'' in addition to the requirements contained in CSA Technical Information Letter No. D-21, ''Interim Certification Requirements for Control Devices Rated at More Than 1500 V But Not More Than 7200 V, for Electric Motors.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Medium Voltage Power Conversion Equipment.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS CERTIFIED FOR CANADA (NJOT7)

This category covers the following devices rated 600 V or less, and those rated 601–1500 V:

Auxiliary devices
Combination motor controllers
Float- and pressure-operated motor controllers
Magnetic motor controllers
Manual motor controllers
Mechanically-operated and solid-state motor controllers
Overload relays
Power conversion equipment

Horsepower ratings — Unless otherwise marked, motor controllers with three-phase horsepower ratings are intended for use with induction-type squirrel cage Design B, C or D motors. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and locked-rotor current. The tested locked-rotor current is at six times the motor full-load running current for ac ratings, and at ten times the motor full-load running current for dc ratings. For motor ratings in excess of 500 hp, the full-load current and locked-rotor currents are also specified. Some motor controllers are marked with full-load current (FLA) and locked-rotor current (LRA) in lieu of horsepower when they are intended to control motors equivalent to 2 hp or smaller.

Overload relay tripping class — Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600% of the overload relay current-element trip rating. The designations ''Class 10,'' ''Class 20'' and ''Class 30'' are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked ''Class 10'' and ''Class 30,'' respectively. Overload relays with a maximum tripping time of 20 seconds may be marked ''Class 20.'' Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

Overload relay instructions — Open-type overload relays with replaceable heater elements, or adjustable or electronic settings, are provided with additional instructions on an adhesive-backed label that is intended to be adhered to the ultimate enclosure for the equipment. These instructions also contain short-circuit ratings and required size and type of branch-circuit protection.

Overload relays with ground-fault current-sensing feature — Some overload relays are provided with a ground-fault current-sensing feature that has been investigated as providing additional protection to the motor circuit. This ground-fault current-sensing feature is not intended to be used for ground-fault current protection required by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC); see Ground-fault Sensing and Relaying Equipment Certified for Canada (KDAX7). When this feature is

Motor Controllers Certified for Canada (NJOT7)−*Continued*

provided and activated/selected, the overload relay is caused to trip when a differential current occurs between phases that is in excess of the pick-up current or tripping curve specified in the manufacturer's instructions.

Branch-circuit-protection requirements — Overload relays, motor controllers and motor starters (e.g., motor controllers incorporating thermal cutouts, thermal overload relays or other devices for motor-running overcurrent protection) are considered to be suitably protected against overcurrent due to short circuits or grounds by motor branch-circuit, short-circuit and ground-fault protective devices selected in accordance with the CEC and any additional information marked on the product. Motor controllers may specify that protection is to be provided by fuses only or, additionally, by an inverse-time circuit breaker. If there is no marking regarding the protective device type, controllers are considered suitably protected by either type of device. Motor controllers may specify a maximum rating of protective device. If not marked with a rating, the controllers are considered suitably protected by a protective device of the maximum rating permitted by the CEC.

Short-circuit-current rating — Combination motor controllers, overload relays, motor controllers rated more than 1 hp at 300 V or more, motor controllers rated more than 2 hp at any voltage, and motor starters (e.g., motor controllers incorporating thermal cutouts or overload relays) have been investigated as tabulated below. These controllers are marked "Suitable for use on a circuit capable of delivering not more than ____ rms symmetrical amps, ____ volts maximum," or the equivalent. These markings are provided on the motor controller or, for open-type motor controllers, the markings may be located on a separate adhesive-backed label (such as a heater table) packaged with the motor controller.

Motor Controllers Rated 600 V or Less, Max Hp Rating	Motor Controllers Rated 601–1500 V Max Full Load Current, Amps	Min Short-circuit-current Ratings, RMS Symmetrical Amps
1 or less	—	1,000
Over 1 to 50	50 or less	5,000
Over 1 to 200	Over 50 to 200	10,000
Over 200 to 400	Over 200 to 400	18,000
Over 400 to 600	Over 400 to 600	30,000
Over 600 to 900	Over 600 to 850	42,000
Over 900 to 1600	Over 850 to 1500	85,000
Over 1600	Over 1500	100,000

Motor controllers that have additionally been investigated for use at higher available fault currents than the minimum short-circuit-current ratings tabulated are marked "Suitable for use on a circuit capable of delivering not more than ____ rms symmetrical amps, ____ volts maximum when protected by Class ____ fuses or when protected by a circuit breaker having an interrupting rating not less than ____ rms symmetrical amperes, ____ volts maximum," as applicable.

Motor controllers intended for group installations are marked "Suitable for motor group installation on a circuit capable of delivering not more than ____ rms symmetrical amperes, ____ volts maximum."

Controllers intended for electric-motor-driven fire pumps are covered under Pump Controllers, Fire Certified for Canada (QYZS7).

* *

Auxiliary Devices Certified for Canada (NKCR7)

GENERAL

This category covers:

Magnetically operated control switches (relays)
Manually operated switches (push buttons, key-operated switches)
Biometrically operated switches (fingerprint/optically operated switches)
Pilot lights
Push-button stations (including parts such as pilot lights and selector switches)
Electronic, thermal and magnetic overload relays
Time-delay relays
Foot-operated switches
Flow switches
Liquid-level controls
Printed wiring board assemblies incorporating switched outputs

Some pilot lights and push-button assemblies are of a modular construction where individual parts, such as lenses, lampholders, operators and contact blocks, are individually certified and identified for use with mating parts.

Auxiliary Devices Certified for Canada (NKCR7)−*Continued*

These devices are intended for use in control circuits of magnetic motor controllers and the like. The contacts and switched outputs are marked with the voltage rating and whether they are intended for Standard Duty or Heavy Duty, or with a code designation such as A600, B600, etc. These codes represent the control circuit load that may be controlled by the device. The significance of each code is shown in the tables below. Standard Duty indicates ratings under Codes B and P; Heavy Duty indicates ratings under Codes A and N for the marked voltage rating.

Rating Codes for AC Control-circuit Contacts at 50 and 60 Hz

Contact Rating Code Dsg[a]	Thermal Continuous Test Current Amps	Max Current Amps[b] 120 V		240 V		480 V		600 V		Max Volt-amps	
		Make	Break	Make	Break	Make	Break	Make	Break	Make	Break
A150	10	60	6.00	—	—	—	—	—	—	7200	720
A300	10	60	6.00	30	3.00	—	—	—	—	7200	720
A600	10	60	6.00	30	3.00	15	1.50	12	1.20	7200	720
B150	5	30	3.00	—	—	—	—	—	—	3600	360
B300	5	30	3.00	15	1.50	—	—	—	—	3600	360
B600	5	30	3.00	15	1.50	7.5	0.75	6	0.60	3600	360
C150	2.5	15	1.5	—	—	—	—	—	—	1800	180
C300	2.5	15	1.5	7.5	0.75	—	—	—	—	1800	180
C600	2.5	15	1.5	7.5	0.75	3.75	0.375	3.00	0.30	1800	180
D150	1.0	3.60	0.60	—	—	—	—	—	—	432	72
D300	1.0	3.60	0.60	1.80	0.30	—	—	—	—	432	72
E150	0.5	1.80	0.30	—	—	—	—	—	—	216	36

[a]The numerical suffix designates the maximum voltage design values, which are to be 600 V, 300 V and 150 V for suffixes 600, 300 and 150, respectively.

[b]For maximum ratings at voltages between the maximum design value and 120 V, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage. For voltages below 120 V, the maximum make current is to be the same as for 120 V, and the maximum break current is to be obtained by dividing the break volt-amperes by the application voltage, but are not to exceed thermal continuous test current.

Rating Codes for DC Control-circuit Contacts

Contact Rating Code Dsg[a]	Thermal Continuous Test Current Amps	Max Make or Break[b] Current Amps 125 V	250 V	301 to 600 V	Max Make or Break V Amps at 300 V or Less
N150	10	2.2	—	—	275
N300	10	2.2	1.1	—	275
N600	10	2.2	1.1	0.40	275
P150	5.0	1.1	—	—	138
P300	5.0	1.1	0.55	—	138
P600	5.0	1.1	0.55	0.20	138
Q150	2.5	0.55	—	—	69
Q300	2.5	0.55	0.27	—	69
Q600	2.5	0.55	0.27	0.10	69
R150	1.0	0.22	—	—	28
R300	1.0	0.22	0.11	—	28

[a]The numerical suffix designates the maximum voltage design values, which are to be 600 V, 300 V and 150 V for suffixes 600, 300 and 150, respectively.

[b]For maximum ratings at 300 V or less, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage, but are not to exceed the thermal continuous test current.

These devices have not been investigated for providing restricted-access control to machinery or specifically defined areas. Such equipment is investigated to CAN/ULC-S319, "Electronic Access Control Systems."

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Certified for Canada (NJOT7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

Electronic, thermal and magnetic overload relays are investigated to CSA-C22.2 No. 14, or CAN/CSA-C22.2 No. 60947-1 (2007), "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and CAN/CSA-C22.2 No. 60947-4-1 (2007), "Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the prod-

Auxiliary Devices Certified for Canada (NKCR7)−*Continued*

uct is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Industrial Control Equipment'' (or ''Ind. Cont. Eq.'') or ''Auxiliary Device'' (or ''Aux. Dev.'').

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Combination Motor Controllers Certified for Canada (NKJH7)

USE AND INSTALLATION

This category covers combination motor controllers, which provide the motor branch-circuit functions of motor controller, disconnect means, short-circuit and ground-fault protection and motor overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

These products are marked ''Combination Motor Controller'' to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

An open-type combination motor controller is intended for factory installation in a switchboard, motor control center, industrial control panel or the like, or for field installation in an enclosure for industrial control equipment, a cabinet or a cutout box.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Certified for Canada (NJOT7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, ''Industrial Control Equipment,'' or CAN/CSA-C22.2 No. 60947-1-2007, ''Low-Voltage Switchgear and Controlgear – Part 1: General Rules,'' and CAN/CSA-C22.2 No. 60947-4-1-2007, ''Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters.''

Motor Controllers, Float- and Pressure-operated Certified for Canada (NKPZ7)

USE

This category covers:

- Float-operated switches, including weight-operated switches
- Pressure-operated switches, including vacuum-operated switches

These devices are intended for direct control of motors; for use in control circuits of magnetic motor controllers and the like; and for control of other types of loads.

Unless otherwise marked, these devices are intended for use only with air, water, or other nonhazardous fluids.

RELATED PRODUCTS

Pressure-operated switches investigated for use in connection with automatic sprinkler or similar protective equipment are covered under Switches, Pressure Certified for Canada (VOXZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14 (1991), ''Industrial Control Equipment.''

Motor Controllers, Float- and Pressure-operated Certified for Canada (NKPZ7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment'' (or ''Ind. Cont. Eq.'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Magnetic Certified for Canada (NLDX7)

GENERAL

This category covers:

- Across-the-line starters
- Across-the-line starters with motor circuit switches
- Combined starters and speed regulators
- Reduced-voltage starters, such as autotransformer, part-winding wye-delta, reactance and resistant types
- Speed regulators

Magnetic motor controllers have been tested to determine their acceptability for continuous operation at their marked rated load.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Switches, Industrial Control Certified for Canada (NRNT7).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Certified for Canada (NJOT7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, ''Industrial Control Equipment,'' or CAN/CSA-C22.2 No. 60947-1-2007, ''Low-Voltage Switchgear and Controlgear – Part 1: General Rules,'' and CAN/CSA-C22.2 No. 60947-4-1-2007, ''Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment'' (or ''Ind. Cont. Eq.'') or ''Magnetic Motor Controller'' (or ''Mag. Mtr. Cntlr.'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Manual Certified for Canada (NLRV7)

GENERAL

This category covers the following manually-operated devices intended for across-the-line starting of motors:

- Across-the-line starters
- Autotransformer starters
- Combined starters and speed regulators
- Reactance-type starters
- Resistance-type starters
- Speed regulators

Motor disconnect switch — Manual motor controllers that have been additionally investigated for use as a motor disconnect switch are marked ''Suitable as Motor Disconnect.''

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Certified for Canada (NJOT7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

Motor Controllers, Manual Certified for Canada (NLRV7)−*Continued*

The basic standard used to investigate products in this category is CSA-C22.2 No. 14,"Industrial Control Equipment," or CAN/CSA-C22.2 No. 60947-1 (2007), "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and CAN/CSA-C22.2 No. 60947-4-1 (2007), "Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manual Motor Controller" (or "Man. Mtr. Cntlr.").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Mechanically Operated and Solid-state Certified for Canada (NMFT7)

GENERAL

This category covers the following devices intended for across-the-line starting of motors:

Flow-operated motor controllers
Machine-operated motor controllers
Soft starters
Solid-state starters
Solid-state reduced-voltage starters
Solid-state speed controls

These devices are intended for the direct control of motors.

Mechanically operated and solid-state motor controllers have been tested to determine their acceptability for continuous operation at their marked rated motor load.

RELATED PRODUCTS

Devices intended for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices Certified for Canada (NKCR7).

Devices intended for use in nonmotor circuits other than motor control circuits are covered under Switches, Industrial Control Certified for Canada (NRNT7).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Certified for Canada (NJOT7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq."), "Solid-state Motor Controller" or "Solid-state Reduced-voltage Starter."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Power Conversion Equipment Certified for Canada (NMMS7)

GENERAL

This category covers equipment that supplies power to and controls a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type.

Power conversion equipment incorporating overload protection for motors and not intended for use with remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Power conversion equipment is marked with input electrical ratings and output motor electrical ratings.

This category does not cover power conversion equipment intended for use in safety-related functions (i.e., functional safety applications).

REBUILT PRODUCTS

This category also covers power conversion equipment that is rebuilt by the original manufacturer or by the Applicant's authorized manufacturer as found in the original product Follow-Up Service Procedure Authorization Page or Addendum to the Follow-Up Service Procedure Authorization Page. Rebuilt power conversion equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power conversion equipment is subject to the same requirements as new power conversion equipment, including production-line tests as applicable.

RELATED PRODUCTS

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is covered under Static Inverters and Converters for Use in Independent Power Systems Certified for Canada (QIKH7). Examples of this equipment are utility interactive, stand-alone, and multimode inverters and converters.

Products in which industrial-use power conversion equipment is integrated with a motor may be covered under Electronically Protected Motors with Integral Controllers for Industrial Use Certified for Canada (XDNZ7).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Certified for Canada (NJOT7), Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Power Conversion Equipment."

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS CERTIFIED FOR CANADA (NMTR7)

GENERAL

This category covers autotransformers, including motor-starting and variable-voltage types; battery chargers for industrial use; magnetically operated brakes; magnetically operated clutches; busbars; enclosed slip rings; phase converters; power-factor-correction equipment; power supplies for industrial use; reactors, including line chokes; current transformers and current transducers; voltage transformers and voltage transducers; and resistors, including motor-starting, rheostats and potentiometers.

A brake or clutch may consist of several parts with the Certification Mark appearing on the main electrical part (e.g., field coil). Where other part(s) are essential to complete a certified assembly, the basic unit is marked to indicate the parts needed.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category, except for power supplies, is CSA-C22.2 No. 14, "Industrial Control Equipment."

Power Circuit and Motor-mounted Apparatus Certified for Canada (NMTR7)−*Continued*

The basic standard used to investigate power supplies in this category is CSA-C22.2 No. 107.1, ''General Use Power Supplies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment'' (or ''Ind. Cont. Eq.'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS CERTIFIED FOR CANADA (NRAQ7)

GENERAL

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, computer interfaces, and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

RELATED PRODUCTS

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances. Such controls are covered under Controls, Primary Safety Certified for Canada (MCCZ7).

This category does not cover equipment intended for use in applications involving instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instruments, such as sensors, transducers and valve operations. Such equipment is covered under Process Control Equipment, Electrical Certified for Canada (QUYX7).

This category does not cover programmable controllers intended for use in safety-related functions (i.e., functional safety applications).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 142, ''Process Control Equipment,'' or CAN/CSA-E61131-2 (2006), ''Programmable Controllers – Part 2: Equipment Requirements and Tests.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment'' (or ''Ind. Cont. Eq.'') or ''Programmable Controller'' (or ''Prog. Cntlr.'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTIVE RELAYS CERTIFIED FOR CANADA (NRGU7)

GENERAL

This category covers relays of types directly associated with power switchgear. Typical devices covered under this category are instantaneous-current relays, voltage-unbalance relays, high-speed differential relays, dc timing relays, time-overcurrent relays, reverse-power relays, and the like.

These devices are intended to make or transfer current only, and to operate only under abnormal conditions.

This category does not cover overload relays of types designed primarily for industrial control or types used with communication, traffic signaling,

Protective Relays Certified for Canada (NRGU7)−*Continued*

computer switching, or other equipment not intended for the direct control of power equipment. The ability of these relays to detect an internal arc or to provide additional protection for equipment or operating personnel has not been investigated. It has not been determined that these relays provide compliance with CSA Z462, ''Workplace Electrical Safety.''

Instrument transformers are not evaluated as part of the investigation, unless the manufacturer provides the instrument transformer as part of the protective relay.

These devices are intended for use in circuits rated 600 V maximum. They may be used to monitor circuits of higher voltage, when suitably rated instrument transformers are used in conjunction with these devices, such that the voltage input to the protective relay is 600 V or less.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14 (1991), ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment'' (or ''Ind. Cont. Eq.'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROXIMITY SWITCHES CERTIFIED FOR CANADA (NRKH7)

USE

This category covers electronic switching devices that are actuated by position of an object without mechanical contact with the object. These proximity switches respond to inductive, capacitive, LED or photoelectric effects.

PRODUCT MARKINGS

The devices are marked with electrical ratings. At least one rating is marked on the product and additional ratings may be marked on an instruction sheet shipped with the device.

RELATED PRODUCTS

This category does not cover equipment intended for use in safety-related functions, such as electro-sensitive protective equipment (ESPE) for the safeguarding of machinery that presents a risk of personal injury (e.g., light curtains). Such equipment is covered under Electro-sensitive Protective Equipment Certified for Canada (NIOZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Industrial Control Equipment'' (or ''Ind. Con. Eq.'') or ''Proximity Switch.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, INDUSTRIAL CONTROL CERTIFIED FOR CANADA (NRNT7)

GENERAL

This category covers:

Magnetically operated switches

Switches, Industrial Control Certified for Canada (NRNT7)−*Continued*

Manually operated switches
Photoelectric switches
Solid-state switches

These devices are intended for the direct control of nonmotor-rated loads.

Open-type switches are certified for use as parts of equipment where the acceptability of the combination has been determined by UL or where open-type switches may be employed.

Switches have been tested to determine their acceptability for continuous operation at their marked rated load.

RELATED PRODUCTS

Switches intended for the direct control of motors are rated in horsepower and are covered under Motor Controllers, Magnetic Certified for Canada (NLDX7), Motor Controllers, Manual Certified for Canada (NLRV7) and Motor Controllers, Mechanically Operated and Solid-state Certified for Canada (NMFT7).

Switches intended for use in motor-control circuits are rated in pilot-duty code or volt-amperes and are covered under Auxiliary Devices Certified for Canada (NKCR7).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment Certified for Canada (NIMX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment," or CAN/CSA-C22.2 No. 60947-1-2007, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and CAN/CSA-C22.2 No. 60947-4-1-2007, "Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Industrial Control Switch" (or "Ind. Cont. Switch").

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NNGZ7)

This category covers the following devices for use in hazardous (classified) locations:

Auxiliary devices
Combination motor controllers
Control panels and assemblies
Enclosed slip rings
Flame-control panels
Float- and pressure-operated motor controllers
Magnetic motor controllers
Manual motor controllers
Miscellaneous motor controllers
Power circuit and motor-mounted apparatus
Power conversion equipment
Programmable controllers

Open-type equipment — Open-type industrial control equipment is intended for installation within a suitable enclosure. Examples of installation issues to consider when determining the suitability of the equipment enclosure include the following, as applicable: 1) the involved area classification, 2) protection against any specific environmental conditions, 3) thread engagement, and 4) whether a tool is required for opening of the enclosure. Installation requirements relating to the suitability of the enclosure are specified in the instructions or markings for the open-type equipment.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS AND ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NNNY7)

GENERAL

This category covers control panels and assemblies consisting of enclosures and electrical components such as push-button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Lead wire seals are not required between the modular enclosures. However, conduit runs entering an assembly should be sealed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," unless factory-made seals are provided and the product is marked to so indicate.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on certified assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations and while heavily blanketed with combustible dust for Class II locations.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Assembly Body for Hazardous Locations," "Control Assembly Cover for Hazardous Locations" or "Control Panel for Hazardous Locations."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flame-control Panels for Use in Hazardous Locations Certified for Canada (NNTE7)

GENERAL

This category covers flame-control panels intended for application in the control of fossil-fuel-burning equipment, such as incinerators, kilns and drying ovens. Flame-control panels have been certified only as to electrical fire and shock hazards. The compatibility of the panel with the controlled equipment from the standpoint of programming the burner(s) and preventing hazardous conditions due to firing of fuel has not been determined.

ADDITIONAL INFORMATION

For additional information, see Control Panels and Assemblies for Use in Hazardous Locations Certified for Canada (NNNY7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FLAME-CONTROL PANEL FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSED SLIP RINGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NNTR7)

USE AND INSTALLATION

This category covers enclosed slip rings intended to transfer power to industrial equipment.

A terminal compartment is provided for connection to threaded rigid conduit systems.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Enclosed Slip Ring for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NNUX7)

Motor controllers are Listed under the following categories:
Auxiliary Devices
Combination Motor Controllers
Float- and Pressure-Operated Motor Controllers
Magnetic Motor Controllers
Manual Motor Controllers
Miscellaneous Motor Controllers

Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7)−*Continued*

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

Industrial control equipment is Listed with maximum ratings of 200 hp and/or 300 amp and 600 V.

Industrial control equipment marked ''Rain tight'' is subjected to a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

If the sealed rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Auxiliary Devices for Use in Hazardous Locations Certified for Canada (NOIV7)

GENERAL

This category covers auxiliary devices intended for use in control circuits of magnetic motor controllers and the like, and consist of the following devices: machine-operated switches, pushbutton stations (including pilot lights and selector switches), magnetically operated switches, and miscellaneous manually operated switches.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Pilot lights without guards should be used only where not subject to breakage.

Enclosures furnished without mechanisms are marked to identify the mechanisms that are to be used.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Industrial Control Equipment for Hazardous Locations,'' ''Industrial Control Equipment Enclosure for Hazardous Locations,'' ''Industrial Control Equipment for Use in Hazardous Locations'' or ''Industrial Control Equipment Enclosure for Use in Hazardous Locations.'' The words ''Industrial Control Equipment'' may be abbreviated ''Ind. Cont. Eq.''; the words ''Hazardous Locations'' may be abbreviated ''Haz. Loc.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Combination Motor Controllers for Use in Hazardous Locations Certified for Canada (NOTH7)

GENERAL

This category covers combination motor controllers, which provide the motor branch-circuit functions of the motor controller, disconnect means,

Combination Motor Controllers for Use in Hazardous Locations Certified for Canada (NOTH7)−*Continued*

short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked ''Combination Motor Controller'' to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Industrial Control Equipment for Hazardous Locations,'' ''Industrial Control Equipment Enclosure for Hazardous Locations,'' ''Industrial Control Equipment for Use in Hazardous Locations'' or ''Industrial Control Equipment Enclosure for Use in Hazardous Locations.'' The words ''Industrial Control Equipment'' may be abbreviated ''Ind. Cont. Eq.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Float- and Pressure-operated Motor Controllers for Use in Hazardous Locations Certified for Canada (NOWT7)

GENERAL

This category covers float- and pressure-operated switches, including vacuum-operated switches. These devices are intended for direct control of motors, use in control circuits of magnetic motor controllers and the like, and control of other types of loads.

Unless otherwise indicated on the product, these devices are intended for use only with air, water, or other nonhazardous fluids.

Unless otherwise indicated on the product, these devices are intended for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature.

These devices have not been investigated for use in connection with automatic sprinkler or similar protective equipment.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14 (1985), ''Industrial Control Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment for Hazardous Locations'' or ''Industrial Control Equipment for Use in Hazardous Locations.'' The words ''Industrial Control Equipment'' may be abbreviated ''Ind. Cont. Eq.''

Float- and Pressure-operated Motor Controllers for Use in Hazardous Locations Certified for Canada (NOWT7)−*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Magnetic Motor Controllers for Use in Hazardous Locations Certified for Canada (NPKR7)

GENERAL

This category covers magnetic across-the-line starters.

Enclosures furnished without mechanisms are marked to identify the mechanisms which should be used.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Auxiliary Devices for Use in Hazardous Locations Certified for Canada (NOIV7).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14 (1985), ''Industrial Control Equipment.''

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Manual Motor Controllers for Use in Hazardous Locations Certified for Canada (NPXZ7)

GENERAL

This category covers manual across-the-line starters.

Overload units are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

Miscellaneous Motor Controllers for Use in Hazardous Locations Certified for Canada (NQLX7)

GENERAL

This category covers devices intended for the direct control of motors.

These devices have not been investigated for use in locations having automatic fire sprinklers.

Unless otherwise indicated on the product, these devices are intended for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature.

RELATED PRODUCTS

Devices intended for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices for Use in Hazardous Locations Certified for Canada (NOIV7).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment for Hazardous Locations'' or ''Industrial Control Equipment for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings. The words ''Industrial Control Equipment'' may be abbreviated ''Ind. Cont. Eq.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Power Conversion Equipment for Use in Hazardous Locations Certified for Canada (NQMD7)

USE

This category covers equipment that supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also includes power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type.

PRODUCT MARKINGS

Power conversion equipment incorporating overload protection for motors and not intended for remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection, such as thermal overload relays, or a thermally protected motor must be provided.

Power conversion equipment is marked with input and output electrical ratings.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category isCSA-C22.2 No. 14 (1991), ''Industrial Control Equipment.''

Power Conversion Equipment for Use in Hazardous Locations Certified for Canada (NQMD7)−*Continued*

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment for Use in Hazardous Locations'' (or ''Ind. Cont. Eq. for Use in Haz. Loc.'') or ''Power Conversion Equipment for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NRAD7)

GENERAL

This category covers autotransformers, including motor-starting and variable-voltage types; battery chargers for industrial use; magnetically operated brakes; busbars; magnetically operated clutches; enclosed slip rings; lamp dimmers, including incandescent, fluorescent, mercury vapor, surgical light and theater use; phase converters; power factor correction equipment; power supplies for industrial use; reactors, including line chokes; and resistors, including motor-starting, rheostats, potentiometers, and high-impedance grounding types.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment for Use in Hazardous Locations'' (or ''Ind. Cont. Eq. for Use in Hazardous Locations'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NRAG7)

GENERAL

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

Programmable Controllers for Use in Hazardous Locations Certified for Canada (NRAG7)−*Continued*

This category does not cover programmable controllers intended for use in safety-related functions (i.e., functional-safety applications).

REBUILT PRODUCTS

This category also covers programmable controllers and their accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 142 (1987), ''Process Control Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Industrial Control Equipment for Hazardous Locations'' (or ''Ind. Cont. Eq. for Haz. Loc.''), ''Industrial Control Equipment for Use in Hazardous Locations'' (or ''Ind. Cont. Eq. for Use in Haz. Loc.'') or ''Programmable Controller for Use in Hazardous Locations'' (or ''Prog. Cntlr. for Use in Haz. Loc.''), or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured,'' ''Reconditioned'' or ''Refurbished'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT RELATING TO HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NRAW7)

INDUSTRIAL CONTROL PANELS RELATING TO HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NRBX7)

GENERAL

This category covers industrial control panels relating to hazardous locations, which are factory-wired assemblies of industrial control equipment such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit-protective devices.

Industrial control panels relating to hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of industrial control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

Industrial Control Panels Relating to Hazardous Locations Certified for Canada (NRBX7)−*Continued*

RELATED PRODUCTS

Industrial control panels for general use are covered under Industrial Control Panels Certified for Canada (NITW7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Open Industrial Control Panel Relating to Hazardous Locations'' or ''Enclosed Industrial Control Panel Relating to Hazardous Locations,'' and the statement ''With Intrinsically Safe Circuit Extensions.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWEX7)

The Listing covers the following products:

Control Panels and Assemblies
Motor Controllers
Programmable Controllers

Enclosed industrial control equipment is intended for use as indicated in the general guide information at the front of Part II of the Directory (AANZ7) Section.

Industrial Control Equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Industrial Control Equipment for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

If the rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600 per cent of the overload relay current element trip rating. The designations ''Class 10, Class 20 and Class 30'' are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked Class 10 or Class 30 respectively. Overload relays with a maximum tripping time of 20 seconds may be marked Class 20. Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS AND ASSEMBLIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWFA7)

USE

This category covers control panels and assemblies consisting of enclosures and electrical components such as push button stations, pilot lights, motor controllers, and receptacles with plugs.

Control Panels and Assemblies for Use in Zone Classified Hazardous Locations Certified for Canada (NWFA7)−*Continued*

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product. Modular assemblies must be installed in accordance with the installation instructions provided with each part.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other Listed ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on Listed assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations.

The plugs of the receptacle-plug combinations are for use with extra-hard-usage flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14, ''Industrial Control Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Control Panel for Use in Hazardous Locations,'' ''Control Assembly Cover for Use in Hazardous Locations'' or ''Control Assembly Body for Use in Hazardous Locations.''

****

MOTOR CONTROLLERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWFE7)

Motor controllers are Listed under the following categories:
Auxiliary Devices
Combination Motor Controllers
Float-and Pressure-Operated Motor Controllers
Magnetic Motor Controllers
Manual Motor Controllers

Motor Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWFE7)−*Continued*

Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

****

Auxiliary Devices for Use in Zone Classified Hazardous Locations Certified for Canada (NWFN7)

GENERAL

This category covers devices such as machine-operated switches, push-button stations (including parts, such as pilot lights, meters, terminal blocks and selector switches), magnetically operated switches, and miscellaneous manually operated switches intended for use in control circuits of magnetic motor controllers, and the like.

Pilot lights without guards should be used only where not subject to breakage.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Enclosures furnished without mechanisms are marked to identify the mechanisms intended to be used.

REBUILT PRODUCTS

This category also covers auxiliary devices that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt auxiliary devices are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt auxiliary devices are subject to the same requirements as new auxiliary devices.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations,'' ''Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations,'' ''Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations,'' ''Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

For rebuilt products the word ''Rebuilt'' or ''Reconditioned'' precedes the product name.

****

Combination Motor Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWFP7)

GENERAL

This category covers combination motor controllers.

Combination Motor Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWFP7)−*Continued*

Combination motor controllers provide the motor branch-circuit functions of motor controllers, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked ''Combination Motor Controller'' to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

PRODUCT MARKINGS

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ″Industrial Control Equipment for Use in Hazardous Locations″ (or ″Ind. Cont. Eq. for Use in Haz. Loc.″) or ″Industrial Control Equipment for Hazardous Locations″ (or ″Ind. Cont. Eq. for Haz. Loc.″), or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT CERTIFIED FOR CANADA (NWGQ7)

USE

This category covers equipment, appliances and systems rated 600 V or less normally found in offices, and other business establishments, residences (homes), educational facilities, and other similar environments classified as ordinary locations.

EQUIPMENT TYPES

Equipment may be electronic or electromechanical in design or a combination thereof.

Various groupings of equipment are covered under this category, such as:

Displays: Flat-panel displays, LCD displays, monitors, plasma displays.

Information processing equipment: Central processing units (CPUs), hand-held computers (personal assistants), laptop computers, notebook computers, pen-based computers, personal computers, point-of-sale terminals, scanners (including portable barcode scanners), servers, work stations. **Accessories:** Docking stations, flash memory cards, keyboards, mouse, PCMCIA-memory-modem cards, port replicators, trackballs.

Information storage equipment: Automated information storage equipment, CD-ROM/RW drives, disk drives, DVD drives, tape drives, optical drives.

Telecommunication equipment: Cellular site equipment, cordless telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems, powerline communication equipment, private automated branch exchanges (PABXs), telephone answering machines, telephone sets, voicemail systems, IP telephones, IP systems, wireless telephony systems.

Office appliances: Adding machines, bursters, calculators, collators, dictation and transcribing machines, electric typewriters, erasers, folding, embossing and sealing machines, label printers, microfilm readers, motor-operated file cabinets, overhead projectors, paper cutters, paper shredders, pencil sharpeners, sorters, stackers, staplers.

Printers/Reproduction equipment: Copiers, duplicating machines, microfilm printers, mimeograph machines, plotters, printers.

Mailing, banking and currency-handling equipment: Cash registers, coin counters, feeders and dispensers, accounting machines, check-writing, -assigning, -dating, -inserting, -mailing, -numbering and -stamping machines, point-of-sale terminals.

Multimedia equipment/accessories: Cable modems, digital cameras, DLP projectors, LCD projectors, microphones, set-top boxes, speakers, video conferencing systems.

Network equipment: Baluns, bridges, fiber optic transceivers, hubs, nodes, Power over Ethernet (PoE) equipment (e.g., power source equipment [PSE] and powered devices [PD]), repeaters, routers, switches, transceivers.

Wireless (RF, infrared) transceiving equipment: RF modems, hand-held computers with integral transceivers.

Static-neutralizing equipment: Power units with discharge bars used with or within copiers, collators, film-plate processors, digital printers, duplicating machines and similar equipment.

Interconnecting cable assemblies: Cable assemblies intended for use beneath raised floors of computer rooms.

Included within the above groupings is equipment which is battery powered, either by standard-size consumer-replaceable batteries (e.g., AA, C, D), or nonstandard sizes specified by manufacturer, type and ratings.

This category also covers power distribution units (PDUs) and computer power centers investigated as part of a computer system for use exclusively in computer rooms. This equipment is connected to branch circuits, and it distributes power to other units in the computer system by means of interconnecting cable assemblies complying with one or more of the wiring methods outlined in CAN/CSA-C22.1, ″Canadian Electrical Code, Part I″ (CEC). Many of these units require special installation, such as a separate transformer, special grounding methods, motor-generator equipment, air conditioning, etc. Such features are covered in the manufacturer's installation instructions.

INSTALLATION

Some equipment has been investigated for installation in a restricted access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions that state ″To be installed only in a Restricted Access Location,″ or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment will also be marked ″Suitable for mounting on concrete or other noncombustible surface only,″ or similar wording.

When certified equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit should be separately provided.

Equipment intended to be installed in closed and multiunit standard racks and cabinets has been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions.

Equipment identified with an Enclosure Type designation, or as ″Raintight″ or ″Rainproof,″ is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

This equipment is intended for installation and use in accordance with the CEC, and the instructions are on or with the equipment.

ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specified or generic certified equipment specified in the marking or instructions.

SPECIAL CONSIDERATIONS

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

Equipment investigated with respect to security or burglary resistance is covered under Antitheft Alarms and Devices Certified for Canada (ATJT7) and other associated categories. Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security.

The burglary and theft protection features of coin-operated equipment, banking and currency-handling equipment, cash registers, coin counters and the like have not been investigated.

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems Certified for Canada (TPEU7). ATMs that have not been investigated for security protection are covered under Bank Equipment Certified for Canada (BALT7).

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

RELATED EQUIPMENT

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Uninterruptible power-supply (UPS) equipment intended for indoor and outdoor use that may be stationary or fixed is covered under Uninterruptible Power-supply Equipment Certified for Canada (YEDU7).

Automatic transfer switches intended for use in optional standby systems in accordance with the CEC are covered under Automatic Transfer Switches for use in Optional Standby Systems Certified for Canada (WPXT7).

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

Static neutralizing equipment is covered under Static Neutralizing Equipment Certified for Canada (VWWZ7). High-voltage parts that may be accessible after installation have been investigated as limited-current circuits.

INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT CERTIFIED FOR CANADA (NWGQ7)

462

Filing cabinets covered under this category have not been investigated with respect to fire resistance or security. Fire-resistant filing cabinets are covered under Record Protection Equipment Certified for Canada (RYPH7).

Other equipment associated with information technology / processing but not intended for use in offices, residences or computer rooms is covered under Graphics Arts Equipment Certified for Canada (KCQT7), Inspection and Measuring Electrical Equipment Certified for Canada (NYOK7), Teaching and Instruction Equipment Certified for Canada (WYFW7), Laboratory Use Medical Equipment Certified for Canada (OGTK7), Medical Equipment Certified for Canada (PIDF7), Marking and Coding Equipment, Electronic Certified for Canada (PGBE7) and Photographic Equipment Certified for Canada (QINT7). Other multimedia equipment and accessories are covered under Audio / Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7). Other telecommunication appliances and equipment is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7).

Modular assemblies of telecommunication equipment (e.g., racks, circuit card assemblies) which are designed for field installation by trained service personnel are covered under Custom-Built Telecommunication Equipment Certified for Canada (WYKM7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies is covered under Communication Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack / frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunication equipment that will be installed at a later time are covered under Information Technology and Telecommunication Equipment Cabinets, Enclosures and Racks Certified for Canada (NWIN7).

Power distribution products intended for indoor use as relocatable multiple-outlet extensions of a single branch circuit not for exclusive use of ITE and consisting of an attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles are mounted are covered under Relocatable Power Taps Certified for Canada (XBYS7).

Power distribution products intended for installation in modular furniture are covered under Furniture Power Distribution Units Certified for Canada (IYNC7).

Equipment intended to protect against mains transients is covered under Surge-protective Devices Certified for Canada (VZCA7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN / CSA-C22.2 No. 60950-1 (2007), "Information Technology Equipment – Safety – Part 1: General Requirements," in conjunction with CAN / CSA-C22.2 No. 60950-21 (2003), "Information Technology Equipment – Safety – Part 21: Remote Power Feeding," CAN / CSA-C22.2 No. 60950-22 (2007), "Information Technology Equipment – Safety – Part 22: Equipment to be Installed Outdoors," and / or CAN / CSA-C22.2 No. 60950-23 (2007), "Information Technology Equipment – Safety – Part 23: Large Data Storage Equipment."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and the category identifier "Information Technology Equipment" (or "Info. Tech. Equip.," "I.T.E." or "ITE"), "NWGQ7," or the standard number with or without the "CAN / CSA-C22.2 No." prefix (e.g., "CAN / CSA-C22.2 No. 60950-1," "60950-1"). The Listing Mark may also include one of the following product names: "Copier," "Modem," "Paper Shredder," "Personal Computer," "Cordless Telephone," or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word "Accessory."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWHC7)

INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWHC7)

GENERAL

This category covers information technology equipment for use in hazardous (classified) locations such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and / or electronic.

SPECIAL CONSIDERATIONS

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security or burglary resistance.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters / receivers are additionally investigated for short-term characteristics to ANSI / IEEE C95.1 (1999), "Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

RELATED EQUIPMENT

Graphic display and touch panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWGD7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN / CSA-C22.2 No. 60950-1 (2003), "Information Technology Equipment – Safety – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Information Technology Equipment for Use in Hazardous Locations" (or "I.T.E. for Use in Hazardous Locations" or "Info. Tech. Equip. for Use in Hazardous Locations") or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWHP7)

GENERAL

This category covers information technology equipment such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and / or electronic.

REBUILT PRODUCTS

INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWHP7)

This category also covers information technology equipment that is rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt information technology equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt information technology equipment is subject to the same requirements as new information technology equipment, including production-line tests as applicable.

SPECIAL CONSIDERATIONS

Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters/receivers are additionally investigated for short-term characteristics to ANSI/IEEE C95.1 (1999), "Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

RELATED EQUIPMENT

Graphic display and touch-panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Hazardous Locations Certified for Canada (NRAG7).

Card readers and data-entry-terminal equipment for information technology and telecommunications equipment is covered under Office Appliances and Business Equipment for Use in Hazardous Locations Certified for Canada (QAVS7).

Scanner and barcode-reader equipment for information technology and telecommunications equipment is covered under Data Processing Equipment, Electronic for Use in Hazardous Locations Certified for Canada (ENWS7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name Information Technology Equipment for Hazardous Locations (or "Info. Tech. Equip. for Hazardous Locations," "Info. Tech. Equip. for Haz. Loc.," "I.T.E. for Hazardous Locations" or "I.T.E. for Haz. Loc.") or "Information Technology Equipment for Use in Hazardous Locations" (or "Info. Tech. Equip. for Use in Hazardous Locations," "Info. Tech. Equip. for Use in Haz. Loc.," "I.T.E. for Use in Hazardous Locations" or "I.T.E. for Use in Haz. Loc."), or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Reconditioned" or "Refurbished" precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY AND COMMUNICATIONS EQUIPMENT CABINET, ENCLOSURE AND RACK SYSTEMS CERTIFIED FOR CANADA (NWIN7)

GENERAL

This category covers cabinet, enclosure and rack/frame systems that are not complete but include components and assemblies that are intended to power, protect, heat, cool, or otherwise support information technology (IT) or telecommunications equipment, audio/video equipment (A/V), or the like that will be installed at a later time. They usually include mounting hardware, shelves or space for the installation of additional electronic equipment. These cabinet, enclosure and rack/frame systems are intended to be used by manufacturers in the construction of complete IT and communications equipment, or by service providers for the installation of network infrastructure equipment.

A marking includes a configuration list, or diagram of the components, and assemblies provided with the product covered under the system category. In addition, it is the responsibility of the Authority Having Jurisdiction over the final installation to determine if the final configuration meets the necessary criteria for installation and use.

As appropriate, this equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Equipment covered under this category includes, but is not limited to, indoor and outdoor cabinets and enclosures, racks, frames (nonenvironmentally-controlled cabinets, pedestals, enclosures, etc.), and the like. For the purpose of identification in this Guide Information, all of the equipment (cabinets, racks and enclosures) covered under this category is referred to as "ITC equipment cabinets."

Equipment intended for outdoor use is marked with an enclosure Type designation and provides a degree of protection. The absence of a Type rating will presume no environmental conditions have been assessed, and will automatically designate the equipment with a "Type 0" rating. Cabinets and enclosures may incorporate multiple Type designations for differing compartments if marked on the equipment. In addition, equipment may optionally be investigated and marked for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)." IP codes are not intended to replace Type ratings.

Except for equipment identified with a specific temperature range, outdoor equipment has been investigated over a temperature range of -33°C to +40°C. The effects of insolation (solar loading) have also been considered.

For equipment containing Listed primary protectors for telecommunications circuits (see QVGV7), the individual Listing information for the protectors should be consulted for information regarding the installation and use of the protectors.

INSTALLATION

Some ITC equipment cabinet, enclosure, and rack/frame systems have been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such ITC equipment is provided with a marking or installation instructions which state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment is also marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

Equipment installed in a restricted-access location generally receives power from a centralized dc power source. If field-wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the applicable provisions of the CEC.

All wiring is intended to conform to the wiring methods outlined in the CEC.

ACCESSORIES

Field-installed accessories to Listed equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with Listed equipment as specified in the markings or instructions.

PRODUCT MARKINGS

The product marking includes a configuration list or diagram of components and accessories when included with the product.

Equipment containing service equipment is marked with the service panel input and output ratings. Short-circuit capacity may additionally be investigated and marked.

Equipment containing air conditioning or heat exchangers is marked with the BTU rating for the heat it can eliminate from the equipment interior. This rating is based solely on the manufacturer's specifications and has not been investigated or verified by UL. In addition, the heat release data for any installed equipment that is part of the cabinet system is also included. The heat release from power supplies is specified for the power supply operating under full load (basically the inefficiency of the power conversion process) but the heat release from powered equipment not included as part of the cabinet system is not included.

Equipment containing ac or dc power supplies or distribution is marked with an appropriate electrical rating for the power it can provide to installed units.

UNEVALUATED FACTORS

Other features that may affect the operation or performance of the installed equipment have not been investigated.

RELATED PRODUCTS

INFORMATION TECHNOLOGY AND COMMUNICATIONS EQUIPMENT CABINET, ENCLOSURE AND RACK SYSTEMS CERTIFIED FOR CANADA (NWIN7)

Complete ITC equipment cabinets are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7), Telephone Appliances and Equipment Certified for Canada (WYQQ7), Communications Service Equipment Certified for Canada (DUZO7), Custom-built Telecommunications Equipment Certified for Canada (WYKM7), Communications-circuit Accessories Certified for Canada (DUXR7), Audio and Video Equipment Certified for Canada (AZUJ7), Audio and Radio Equipment, Commercial Certified for Canada (AZCY7), Commercial Audio and Radio Equipment, Systems and Accessories Certified for Canada (AZJX7), Commercial Phonographs, Tape-playing and Recording Appliances and Accessories Certified for Canada (AZQW7), Audio/Video Apparatus Certified for Canada (AZSQ7), Closed-circuit Television Equipment Certified for Canada (DRQH7), Television/Video Equipment for Use in Health Care Facilities Certified for Canada (KFCV7), Video and Audio Equipment, Professional Certified for Canada (ZCBY7), and similar categories that cover complete equipment.

Cabinets and enclosures that do not include any additional components or assemblies may also be covered under Industrial Control Panels Certified for Canada (NITW7) and investigated to CAN/CSA-C22.2 No. 94-1991, "Special Purpose Enclosures."

Protectors for paired-conductor communications circuits are covered under Primary Protectors for Communications Circuits Certified for Canada (QVGV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1-2007, "Information Technology Equipment – Safety – Part 1: General Requirements." Outdoor Type ratings are investigated to CAN/CSA-C22.2 No. 94-1991, "Special Purpose Enclosures." Components and assemblies provided/installed as part of a communications rack or cabinet are investigated to the applicable UL requirements as appropriate for the component or assembly.

Service equipment, such as meter-socket accessories (see PKAX7), are investigated to CSA-C22.2 No. 115-1989, "Meter Mounting Devices."

Special-purpose air conditioners (see ACVS7) are investigated to CAN/CSA-C22.2 No. 236-1990, "Heating and Cooling Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and one of the following product names: "Enclosure System," "Cabinet System," "Rack System," preceded by "Telecom," "Telecommunications," "Communications," "IT," "ITC," "A/V," "CATV," a specific application such as "Cell System," "Wireless" or "Remote Terminal," or other appropriate product name as shown in the individual Listings.

For field-installed accessories, the product name includes the word "Accessory."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSECT- AND RODENT-CONTROL EQUIPMENT CERTIFIED FOR CANADA (NYKX7)

GENERAL

This category covers insecticide sprayers, vaporizers, dispensers, dusters and traps for insect or rodent control, insect electrocution equipment, ultrasonic generators for insect and/or rodent control, and commercial room treatment heaters for insect eradication.

Insecticide vaporizers and dispensers are provided with instructions that call attention to possible danger of dispensing unrecognized materials in kitchens above uncovered food, or in occupied sleeping quarters.

If a flammable dust or liquid, particularly if more volatile or flammable than kerosene (38°C flash point, closed cup), or other flammable material is used in a vaporizer or sprayer, there may be danger of fire or explosion, especially in closed rooms or confined spaces.

Motors used in ultrasonic generators for rodent control are prevented from hazardous overheating by inherent overheating devices, overcurrent protective devices or the inherent impedance of the windings, since these products are intended to operate continuously and unattended.

This equipment is provided with instructions for proper use and installation.

INSECT- AND RODENT-CONTROL EQUIPMENT CERTIFIED FOR CANADA (NYKX7)

The effectiveness of the product in performing its intended function has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category, except commercial room treatment heaters for insect eradication, are:

CAN/CSA-C22.2 No. 0 (1991), "General Requirements – Canadian Electrical Code, Part II"
CAN/CSA-C22.2 No. 0.4 (2004), "Bonding of Electrical Equipment"
CAN/CSA-C22.2 No. 189 (1989), "High-Voltage Insect Killers"
CAN/CSA-C22.2 No. 68 (2009), "Motor-Operated Appliances (Household and Commercial)"
CAN/CSA-C22.2 No. 64 (2010), "Household Cooking and Liquid-Heating Appliances"

Additional standards may be applicable based on the features employed. In addition, CSA Technical Information Letter No. C-37, "Input Ratings for Cord-Connected Heating and Cooking Appliances, Hairdressing Equipment and Electric Irons for Household Use" (issued 2-28-05), may also be used as applicable.

The basic standards used to investigate commercial room treatment heaters for insect eradication are CSA-C22.2 No. 46 (1988), "Electric Air Heaters," and CAN/CSA-C22.2 No. 0 (1991).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Insect and Rodent Control Equipment," "Insect Trap," "Insecticide Dispenser," "Insect Controller," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT CERTIFIED FOR CANADA (NYOK7)

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and for making measurements and tests such as might be associated with manufacturing processes and quality control procedures.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Additional equipment that may be used for measuring purposes is covered under Laboratory Use Electrical Equipment Certified for Canada (OGTK7) and Measuring, Testing and Signal Generation Equipment Certified for Canada (PICQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements," or CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment" or "Measuring Equipment," or the name of the specific type of product as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NYPA7)

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality-control procedures.

The accuracy of the equipment has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment for Use in Hazardous Locations" or "Measuring Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT, SPECIAL INSPECTION EQUIPMENT CERTIFIED FOR CANADA (NYQD7)

GENERAL

This category covers portable, mobile, stationary, and fixed units or systems intended primarily for the purpose of identifying materials, examining and investigating materials, including x-ray scanning (luggage) units, and other equipment that uses special technologies to perform its function.

Equipment not covered under this category includes, but is not limited to, medical x-ray equipment (including x-ray equipment designed to operate on supply potentials of over 600 V), equipment incorporating unenclosed aerial conductors, separate devices, such as tables, timers, etc., that are not limited in design to x-ray applications, and equipment which is not necessary for successful operation of x-ray equipment. See Inspection and Measuring Electrical Equipment Certified for Canada (NYOK7) and Medical Equipment Certified for Canada (PIDF7).

This equipment has been Classified as to electrical fire, shock, and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and must, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

FACTORS NOT INVESTIGATED

These products generate radiation or contain radioactive materials or involve working with toxic materials or other potentially harmful technologies, where data regarding levels of exposure and physiological effects are not investigated. The accuracy of measured, analyzed or prepared quantities has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements," or CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]
WITH RESPECT TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY
Control No.

* **SPECIAL INSPECTION EQUIPMENT** or **SPECIAL MEASURING EQUIPMENT**, or the name of the specific type of product

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTERIOR BUILDING CONSTRUCTIONS CERTIFIED FOR CANADA (OEQX7)

BUILDING UNITS CERTIFIED FOR CANADA (OERQ7)

GENERAL

This category covers insulated building units consisting of proprietary mixes of organic and/or inorganic materials formed into panels, boards or sheets fabricated into sizes, thicknesses and shapes. These units are certified as to fire growth and damageability under specified room fire conditions.

Building units are intended for use in wall, ceiling, or wall-ceiling constructions as stated in the individual certifications.

Fire investigations of these constructions determine whether the degree of contribution to an igniting fire by any or all of the materials used to form the assembly is sufficient to cause significant fire growth and damage beyond the area of ignition fire exposure.

These insulated building units are investigated in a full-scale room fire test to ULC/ORD-C376, "Fire Growth of Foamed Plastic Insulated Building Panels in a Full-Scale Room Configuration." The room consists of four walls at right angles, a floor, and a ceiling. The room interior is 3.6 m long, 2.4 m wide and 2.4 m high. The floor and one of the 2.4 m x 2.4 m walls are constructed of noncombustible materials. The noncombustible wall has an open doorway measuring 2.0 m high and 0.8 m wide. The other three walls and the ceiling are constructed from the panels under investigation. Where the panels are not used for ceiling application, the test ceiling will be selected to represent the worst-case condition anticipated in the field and will be described in the individual certifications.

The panels are subjected to an ignition source as described in ULC/ORD-C376, located in one of the two corners opposite the doorway, for a period of not less than 15 minutes. These panels have demonstrated that their contribution to fire growth within the room is sufficiently low to an extent that flames do not exit the open doorway, the floor heat flux level does not exceed 20 kW/m2, and the room temperature does not exceed 600°C as measured 300 mm from the corner diagonally opposite to the ignition source and between 670 mm and 2100 mm from the floor.

Where sprinkler protection is specified, one sprinkler head is located 75 mm below the ceiling, 2.0 m from the 2.4 m wall, and 1.2 m from the 3.6 m wall adjacent to the ignition source. The type of sprinkler head and minimum water flow rate is specified in the individual certifications. A requirement of the sprinkler system is that it is consistent with ANSI/

Building Units Certified for Canada (OERQ7)−*Continued*

NFPA 13, "Installation of Sprinkler Systems," and with generally accepted practices for the intended installation.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

The suitability of field-applied interior-finish materials that may be attached or applied to walls, ceilings, or wall-ceiling surfaces with respect to flame spread and smoke developed should be investigated on the basis of the surface-burning characteristics applicable to these materials; refer to Surface-Burning Characteristics Certified for Canada (BIKT7).

Building units investigated with respect to surface-burning characteristics are covered under Building Units Certified for Canada (BLBT7).

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C376, "Fire Growth of Foamed Plastic Insulated Building Panels in a Full-Scale Room Configuration."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

BUILDING UNITS FOR * CONSTRUCTION AS TO FIRE GROWTH AND DAMAGEABILITY IN ACCORDANCE WITH ULC/ORD-C376

Control No.

* **WALL**, **CEILING** or **WALL-CEILING**

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT AND SYSTEMS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OERX7)

GENERAL

This category covers products and systems investigated for use in hazardous (classified) locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications, together with nonincendive types of protection.

This equipment has not been investigated for performance of its intended function.

RELATED PRODUCTS

Gas detectors investigated for their performance relative to their ability to detect gas are covered under Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations Certified for Canada (JTPX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are CAN/CSA-C22.2 No. 157 (1992), "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations," and CSA-C22.2 No. 213 (1987), "Non-Incendive Electrical Equipment for Use in Class I, Division 2 Hazardous Locations."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY

Control No.

or

[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Control No.

The words "HAZARDOUS LOCATIONS" may be abbreviated "HAZ. LOC."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ION GENERATORS CERTIFIED FOR CANADA (OETX7)

GENERAL

This category covers portable air ionizers of the household and commercial types intended for emitting charged ions into the atmosphere. These appliances may or may not employ mechanical filters.

REBUILT PRODUCTS

This category also covers ion generators that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt ion generators are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt ion generators are subject to the same requirements as new ion generators.

FACTORS NOT INVESTIGATED

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners Certified for Canada (AGGZ7).

Air-filtering appliances utilizing mechanical filtration only or ultraviolet/germicidal lamps are covered under Air-filtering Appliances Certified for Canada (AEDX7).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners Certified for Canada (EOGX7).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted Certified for Canada (ABQK7).

Power supplies intended for use in electrostatic air-cleaning equipment are covered under Power Supplies, Electrostatic Air-cleaning Equipment Certified for Canada (QQCH8).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 187, "Electrostatic Air Cleaners."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ion Generator," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OEVX7)

GENERAL

This category covers products and systems investigated as to intrinsic safety only, as it pertains to use in hazardous locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications.

This equipment has not been investigated for performance of its intended function.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are CAN/CSA-C22.2 No. 60079-0 (2011), ''Explosive Atmospheres – Part 0: Equipment - General Requirements,'' and CAN/CSA-C22.2 No. 60079-11 (2011), ''Explosive Atmospheres – Part 11: Equipment Protection by Intrinsic Safety 'i'.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY
Control No.
*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ISOLATION POWER TRANSFORMERS, MARINE CERTIFIED FOR CANADA (OFLZ7)

USE AND INSTALLATION

This category covers products designed and intended for installation in accordance with CSA-C22.2 No. 183.1 (1982), ''Alternating-Current (AC) Electrical Installations on Boats.'' These products typically have a 1:1 turns ratio and are primarily used to electrically isolate the boat from the shore power to mitigate the effects of galvanic currents.

These products have not been investigated for use in hazardous (classified) locations or areas requiring ignition protected equipment unless marked ''Ignition Protected.''

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No.47 (1990), ''Air-Cooled Transformers (Dry Type).''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Marine Isolation Power Transformer.''

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OGNA7)

GENERAL

This category covers laboratory equipment and accessories, such as blenders, stirrers, and other types of products as described in the individual certifications, designed for technological activities involving:

1. The measurement of physical or chemical properties of materials.
2. The measurement, control, and/or display of the functional performance of a piece of equipment.
3. Qualitative or quantitative constituent analysis of substances.
4. Preparation of materials for further analysis or measurements.

These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been investigated.

This category does not cover laboratory equipment intended for patient contact.

RELATED PRODUCTS

Other equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory for use in Hazardous Locations Certified for Canada (KGIZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 151 (1986), ''Laboratory Equipment,'' or CAN/CSA-C22.2 No. 61010-1 (2004), ''Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Motor-operated Laboratory Equipment for Use in Hazardous Locations'' or ''Laboratory Equipment for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY HOODS AND CABINETS CERTIFIED FOR CANADA (OGOY7)

USE AND INSTALLATION

This category covers laboratory hoods intended to provide an enclosed countertop work area with exhaust for capture and removal of vapors, mists and particulate matter from the work area.

Unless specifically marked on the equipment, suitability for use with perchloric acid, radiological materials, or the like has not been investigated.

Requirements for the installation of this equipment are included in CSA Z316.5 (1994), ''Fume Hoods and Associated Exhaust Systems.''

This category does not cover biological containment cabinets.

PRODUCT MARKINGS

Laboratory hoods and cabinets are marked with (1) the manufacturer's name, trade name or trademark or other descriptive marking by which the organization responsible for the product may be identified, (2) a distinctive catalog or model number or the equivalent, (3) the electrical rating, and (4) the date or other dating period of manufacture not exceeding any three consecutive months.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA Z316.5, ''Fume Hoods and Associated Exhaust Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Hood."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY-USE ELECTRICAL EQUIPMENT CERTIFIED FOR CANADA (OGTK7)

USE

This category covers laboratory equipment and accessories designed for technological activities involving:

(a) The measurement of physical or chemical properties of materials.

(b) The measurement of the functional performance of a piece of equipment.

(c) Qualitative or quantitative constituent analysis of substances.

(d) Preparation of materials for further analysis or measurements.

These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been evaluated.

REBUILT PRODUCTS

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

RELATED PRODUCTS

Additional equipment that may be used in laboratories is covered under Laboratory Equipment Certified for Canada (OGGS7), Heaters, Industrial and Laboratory Certified for Canada (KQLR7) and Electrical and Electronic Measuring and Testing Equipment Certified for Canada (FHCW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part I: General Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Equipment," or other appropriate product name as shown in the individual Listings.

The Listing Mark for rebuilt laboratory equipment includes the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" preceding the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY ELECTRICAL EQUIPMENT FOR USE IN HEALTH CARE APPLICATIONS CERTIFIED FOR CANADA (OGUI7)

USE

This category covers laboratory equipment for health care applications, used to measure, indicate, monitor or analyze substances, or to prepare materials. Examples include but are not limited to centrifuges, hot plates and stirrers, sterilizers, fiber-optic illuminators and laboratory mixers.

MODULAR SYSTEMS

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Laboratory Electrical Equipment for Use in Health Care Applications Certified for Canada (OGUI7)−*Continued*

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment Certified for Canada (PIDF7).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7), Measuring, Testing and Signal Generation Equipment Certified for Canada (PICQ7) and Laboratory Use Electrical Equipment Certified for Canada (OGTK7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements," or CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements," and one or more of the following Particular Standards as applicable:

CAN/CSA-C22.2 No. 61010-2-010 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-010: Particular Requirements for Laboratory Equipment for the Heating of Materials"

CAN/CSA-C22.2 No. 1010.2.020 (1994), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-020: Particular Requirements for Laboratory Centrifuges"

CAN/CSA-C22.2 No. 1010.2.041 (1996), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-041: Particular Requirements for Autoclaves Using Steam for the Treatment of Medical Materials, and for Laboratory Processes"

CAN/CSA-C22.2 No. 61010-2-042 (1998), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-042: Particular Requirements for Autoclaves and Sterilizers Using Toxic Gas for the Treatment of Medical Materials, and for Laboratory Processes"

CAN/CSA-C22.2 No. 61010-2-043 (1998), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-043: Particular Requirements for Dry Heat Sterilizers Using Either Hot Air or Hot Inert Gas for the Treatment of Medical Materials, and for Laboratory Processes"

CAN/CSA-C22.2 No. 61010-2-045 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-045: Particular Requirements for Washer Disinfectors Used in Medical, Pharmaceutical, Veterinary and Laboratory Fields"

CAN/CSA-C22.2 No. 61010-2-051 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-051: Particular Requirements for Laboratory Equipment for Mixing and Stirring"

CAN/CSA-C22.2 No. 61010-2-061 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-061: Particular Requirements for Laboratory Atomic Spectrometers with Thermal Atomization and Ionization"

CAN/CSA-C22.2 No. 61010-2-081 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-081: Particular Requirements for Automatic and Semi-Automatic Laboratory Equipment for Analysis and Other Purposes"

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Laboratory Electrical Equipment for Use in Health Care Applications Certified for Canada (OGUI7)−*Continued*

Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Laboratory Electrical Equipment for Use in Health Care Applications,'' or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, ''OGUI7'' and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

For field-installed modules, accessories and subassemblies, the product name includes the word ''Module,'' ''Accessory'' or ''Subassembly'' (e.g., ''Laboratory Equipment Accessory'').

For rebuilt equipment, the word ''Rebuilt,'' ''Remanufactured,'' ''Refurbished'' (or ''Refurb'') or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY IN VITRO DIAGNOSTIC ELECTRICAL EQUIPMENT CERTIFIED FOR CANADA (OGUR7)

USE

This category covers laboratory equipment used to measure, indicate, monitor or analyze specimens, including blood and tissue samples, solely or principally for the purpose of providing information concerning one or more of the following:

- a physiological or pathological state, or
- a congenital abnormality;
- the determination of safety and compatibility with potential recipients;
- the monitoring of therapeutic measures.

Self-test IVD medical equipment is intended by the manufacturer for use by laypersons in a home environment. Examples include but are not limited to blood analyzers, blood gas analyzers and tissue analyzers, blood glucose monitors, immunoassay analyzers, microtitre plate readers, differential analyzers, chemistry analyzers, and similar products.

MODULAR SYSTEMS

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment Certified for Canada (PIDF7).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7), Measuring, Testing and Signal Generation Equipment Certified for Canada (PICQ7) and Laboratory Use Electrical Equipment Certified for Canada (OGTK7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Laboratory In Vitro Diagnostic Electrical Equipment,'' or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, ''OGUR7'' and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

For field-installed modules, accessories and subassemblies, the product name includes the word ''Module,'' ''Accessory'' or ''Subassembly'' (e.g., ''Laboratory Equipment Accessory'').

For rebuilt equipment, the word ''Rebuilt,'' ''Remanufactured,'' ''Refurbished'' (or ''Refurb'') or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY-USE ELECTRICAL EQUIPMENT, SPECIAL LABORATORY EQUIPMENT CERTIFIED FOR CANADA (OGVH7)

GENERAL

This category covers laboratory equipment that uses special technologies to measure, indicate, monitor or analyze substances, or to prepare materials, or to sterilize materials or areas, and other laboratory equipment that uses special technologies to perform its function. Examples include but are not limited to room sterilizers, equipment sterilizers, disinfection equipment, laboratory air cleaners, and decontamination equipment.

This equipment has been Classified as to electrical fire, shock and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation should, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons, and should also be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

MODULAR SYSTEMS

Special laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to Classified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically Classified in the individual Classifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment Certified for Canada (PIDF7).

Additional equipment that may be used in laboratories is covered under:

Heaters, Industrial and Laboratory Certified for Canada (KQLR7)

Laboratory Electrical Equipment for Use in Health Care Applications Certified for Canada OGUI7)

Laboratory In Vitro Diagnostic Electrical Equipment Certified for Canada (OGUR7)

Laboratory-use Electrical Equipment Certified for Canada (OGTK7)

Measuring, Testing and Signal-generation Equipment Certified for Canada (PICQ7)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1-2004, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]
AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY
Control No.

* **LABORATORY DISINFECTING EQUIPMENT**, **ROOM DECONTAMINATION EQUIPMENT**, **ROOM SANITIZER**, or other appropriate product name as shown in the individual Classifications

For field-installed modules, accessories and subassemblies, the product name includes the word "MODULE," "ACCESSORY" or "SUBASSEMBLY" (e.g., "ROOM SANITIZER ACCESSORY").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LADDERS CERTIFIED FOR CANADA (OHZR7)

USE

This category covers portable ladders constructed of wood, metal or reinforced plastic which are intended for general use in households or in commercial establishments. These consist of combination ladders, extension ladders, extension trestle ladders, platform ladders, sectional ladders, single ladders, special-purpose ladders, step stools, step ladders and trestle ladders.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-Z11 (2012), "Portable Ladders."

All portable ladders covered by this standard are classified as follows:

GRADE	LOAD RATING
1AA	Special duty
1A	Extra heavy duty
1	Heavy
2	Medium
3	Light

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name "Metal Ladder," "Wood Ladder" or "Reinforced Plastic Ladder," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPHOLDERS CERTIFIED FOR CANADA (OIMZ7)

LAMPHOLDERS, ELECTRIC DISCHARGE CERTIFIED FOR CANADA (OJAX7)

Lampholders, Electric Discharge, Over 1000 Volts Certified for Canada (OJOV7)

USE

This category covers lampholders and electrode receptacles for use with electric discharge lamps and tubes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 34 (1987), "Electrode Receptacles, Fittings, and Connectors for Gas Tubes," and CAN/CSA-C22.2 No. 43 (2008), "Lampholders."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lam-

Lampholders, Electric Discharge, Over 1000 Volts Certified for Canada (OJOV7)−*Continued*

pholder'' or ''Electric Discharge Lampholder,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Electric Discharge, 1000 Volts or Less Certified for Canada (OKCT7)

USE

This category covers lampholders and combination lampholders with starter holders intended for use with electric discharge or fluorescent lamps.

This category also covers GU24 and GU24-1 holders for fluorescent and LED self-ballasted lamps and lamp adapters with mating pin bases.

Lampholders for High Temperature — Thermoplastic lampholders investigated for use at temperatures greater than 90°C (194°F) are indicated in the individual certifications. These products are marked with ''T#'' (where ''#'' is the temperature rating).

RELATED PRODUCTS

Separate starter holders are covered under Holders for Automatic Starters Certified for Canada (FLPZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, ''Lampholders.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lampholder'' or ''Electric Discharge Lampholder,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPHOLDERS, FITTINGS CERTIFIED FOR CANADA (OKQR7)

GENERAL

This category covers attachments and parts intended for use with screw-shell lampholders to modify the lampholders for certain conditions of usage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, ''Lampholders,'' in addition to the requirements contained in CSA Electrical Bulletin No. 1444A, ''Diode Lamp-Life Extenders.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lampholder Fitting'' or ''Shadeholder,'' or other appropriate name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPHOLDERS, INCANDESCENT CERTIFIED FOR CANADA (OLDZ7)

Lampholders, Adapters Certified for Canada (OLRX7)

GENERAL

This category covers screw-shell lamp adapters. Included are male-to-female screw-shell adapters and screw-shell adapters provided with attachment-plug blades or receptacles.

RELATED PRODUCTS

For plug-in devices with a lampholder intended to be used as a nightlight, see Nightlights Certified for Canada (QOYX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, ''Lampholders.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Adapter,'' ''Lampholder Adapter'' or ''Incandescent Lampholder Adapter,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Candelabra and Miniature Certified for Canada (OMFV7)

GENERAL

This category covers screw-shell lampholders of the candelabra (E12) and miniature (E10) base sizes.

Candelabra and candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 43, ''Lampholders.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lampholder,'' ''Miniature Lampholder'' or ''Candelabra Lampholder.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Intermediate Base Certified for Canada (OMTT7)

GENERAL

This category covers screw-shell lampholders of the intermediate (E17) base size.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Lampholders, Intermediate Base Certified for Canada (OMTT7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, ''Lampholders.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lampholder'' or ''Intermediate Lampholder.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Medium Base Certified for Canada (ONHR7)

GENERAL

This category covers screw-shell lampholders of the admedium (E29) and medium (E26) base sizes.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

An admedium (E29) base is not intended for use with ordinary incandescent lamps.

Switched lampholders are tested on circuits involving a potential to ground of 125 V.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, ''Lampholders.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lampholder,'' ''Medium Lampholder'' or ''Incandescent Lampholder.'' The French translation ''Douille'' may also be used in conjunction with the preceding product names, e.g., ''Medium Lampholder (Douille).''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Mogul Base Certified for Canada (ONUZ7)

GENERAL

This category covers screw-shell lampholders of the mogul (E39) base size.

Switched lampholders are tested on circuits involving a potential to ground of 125 V.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, ''Lampholders.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated

Lampholders, Mogul Base Certified for Canada (ONUZ7)−*Continued*

in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lampholder'' or ''Mogul Lampholder.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Miscellaneous Certified for Canada (OOIX7)

USE

This category covers lampholders for lamps that employ other than the usual screw-shell bases or designed for specialized uses.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, ''Lampholders,''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Lampholder'' or ''Miscellaneous Lampholder.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS CERTIFIED FOR CANADA (OOKH7)

LAMPS, INCANDESCENT, MEDIUM BASE CERTIFIED FOR CANADA (OOKZ7)

USE

This category covers incandescent, medium screw-base lamps up to 300 W intended for general lighting and for luminaires and portable luminaires.

This category does not cover lamps designated for specific uses, such as traffic signal, vibration, street-lighting lamps, etc.

PRODUCT MARKINGS

The following product markings are permanent, legible, and located where readily accessible for viewing after assembly of the lamp in the final product, except as permitted otherwise:

1. Applicant's identification
2. Voltage and wattage rating
3. Additional markings as may be required by the applicable standard(s) for specific modules or usages

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0 (1991), ''General Requirements – Canadian Electrical Code, Part II,'' and CSA-C22.2 No. 84 (2005), ''Incandescent Lamps,'' in addition to the applicable requirements of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Medium-base Incandescent Lamp,'' ''Lamp'' or ''Light Bulb.''

LAMPS, SELF-BALLASTED AND LAMP ADAPTERS CERTIFIED FOR CANADA (OOLR7)

USE AND INSTALLATION

This category covers self-ballasted lamps consisting of a ballast, transformer or power supply, and an integrated or replaceable lamp, for direct connection to a lampholder. Products in this category employ various lamp technologies including, but not limited to, fluorescent lamps and high-intensity-discharge (HID) lamps. Devices with an integral lamp are termed ''self-ballasted''; devices with a replaceable lamp are termed ''adapters.'' These products are intended for operation at the voltage marked on the product.

This category does not cover:

Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires

LED lamps

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA_ANSLG C81.61, ''Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.'' When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in CSA-C22.2 No. 250.0, ''Luminaires.''

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have been investigated for use in the smaller of a 152 mm (6 in.) or 203 mm (8 in.) diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

These products have not been investigated for use in emergency lighting equipment or exit signs.

RELATED PRODUCTS

Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires are covered under Lamps, Self-ballasted and Lamp Adapters Certified for Canada (OOLR8).

Self-ballasted light-emitting-diode (LED) lamps are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV7).

LED lamps intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV8).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1993 (2012), ''Self-Ballasted Lamps and Lamp Adapters.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Self-ballasted Lamp'' or ''Lamp Adapter,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, SELF-BALLASTED, LIGHT-EMITTING-DIODE TYPE CERTIFIED FOR CANADA (OOLV7)

USE AND INSTALLATION

This category covers self-ballasted light-emitting-diode (LED) lamps, rated up to 347 V ac nominal, provided with ANSI lamp bases.

Self-ballasted lamps have integral control and driver circuitry allowing direct connection to a voltage source (e.g., mains, transformer) without the use of an external constant-current source such as a driver or ballast. Such lamps are intended for operation at their marked voltage(s).

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA_ANSLG C81.61, ''Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.'' When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in CSA-C22.2 No. 250.0, ''Luminaires.''

Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV7)−*Continued*

LED lamps intended to replace or supplant traditional incandescent lamps are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have been investigated for use in the smaller of a 152 mm (6 in.) or 203 mm (8 in.) diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

LED lamps intended to replace or supplant traditional fluorescent lamps have been investigated for use in totally enclosed lamp compartments with 25.4 mm (1 in.) of clearance around the sides and underneath the lamp, unless marked not for use in a totally enclosed luminaire.

Products marked ''Suitable for Use in Open Luminaires'' are intended to replace tungsten-halogen lamps in applications where the luminaire is open and does not require an additional lamp containment barrier.

These products have not been investigated for use in emergency lighting equipment or exit signs.

RELATED PRODUCTS

LED lamps intended for connection to constant-current power sources (e.g., LED drivers), or those intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV8).

LED retrofit kits intended for field installation in UL-certified luminaires or office-furnishing lights are covered under Light-emitting-diode Retrofit Luminaire Conversion Kits Certified for Canada (IFAR7).

Self-ballasted fluorescent and high-intensity-discharge (HID) lamps and lamp adapters are covered under Lamps, Self-ballasted and Lamp Adapters Certified for Canada (OOLR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 1993 (2012), ''Self-Ballasted Lamps and Lamp Adapters,'' and CAN/CSA-C22.2 No. 250.13 (2012), ''Light Emitting Diode (LED) Equipment for Lighting Applications.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''LED Lamp,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, SPECIALTY CERTIFIED FOR CANADA (OONB7)

USE

This category covers specialty lamps, usually of the common bulb shapes, containing assemblies of light sources (such as miniature incandescent bulbs, light-emitting diodes) and associated electrical components, and provided with bases of various sizes, usually of the standard configurations covered in ANSI C81.61 (1990), ''Electric Lamp Bases.''

These lamps are intended for use in certified equipment, such as exit fixtures or exit lights, where the product marking specifies the use of a lamp covered under this category.

PRODUCT MARKINGS

The lamp or the smallest unit container is marked with the wattage, voltage, manufacturer's identification and catalog number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 43, ''Lampholders,'' CSA-C22.2 No. 84, ''Incandescent

Lamps, Specialty Certified for Canada (OONB7)−*Continued*

Lamps,'' and CSA Technical Information Letter No. B-36B, ''Self-Ballasted Fluorescent Lamps with Medium Screw-Base and Integral-Ballasted Adapters with Medium Screw-Base for Fluorescent Lamps Intended for Use in Dry or Damp Locations.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SPECIALTY LAMP

(++) Lamp catalog number

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAUNDRY EQUIPMENT ACCESSORIES CERTIFIED FOR USE IN SPECIFIED EQUIPMENT CERTIFIED FOR CANADA (OOWK7)

USE AND INSTALLATION

This category covers accessories that allow operation of washing machines and clothes dryers through card-reading controls. These accessories are rated 600 V ac or less and are investigated for installation on specific models of washing machines and clothes dryers as indicated in the installation instructions.

Laundry-control accessories are intended to be installed by trained service personnel in accordance with the accessory manufacturer's installation instructions and CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 169, ''Electric Clothes Washing Machines and Extractors,'' and/or CAN/CSA-C22.2 No. 112, ''Electric Clothes Dryers.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LAUNDRY EQUIPMENT ACCESSORY

LEAK-DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OPDH7)

GENERAL

This category covers leak-detection equipment, including control units, indicators, sensors, probes and auxiliary devices used as part of leak-detection systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Leak Detection Equipment for Use in Hazardous Locations'' or ''Leak Detection Equipment (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTNING PROTECTION CERTIFIED FOR CANADA (OVGR7)

LIGHTNING CONDUCTORS, AIR TERMINALS AND FITTINGS CERTIFIED FOR CANADA (OVTZ7)

GENERAL

This category covers lightning protection components intended to be installed to provide a lightning protection system complying with CAN/CSA B72 (1987), ''Installation Code for Lightning Protection Systems.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Lightning Conductor,'' ''Air Terminal'' or ''Fitting.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LINE ISOLATION MONITORS CERTIFIED FOR CANADA (OWLS7)

USE

This category covers line isolation monitors, with or without supplementary remote indicating units, intended for use in isolated (ungrounded) power distribution systems in hospitals and other health care facilities. These devices are used to monitor the impedances to ground of an isolated circuit and provide a visual and audible indication of an abnormal leakage condition of the circuit being monitored.

The monitor and supplementary indicating units are intended to be installed in any of the following locations:

(a) Nonhazardous ordinary locations
(b) In operating rooms, 5 ft or more above the floor level
(c) Included as part of an isolated power-supply center

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 204, ''Line Isolation Monitors,'' and CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Line Isolation Monitor'' or ''Line Isolation Monitor Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOCKS CERTIFIED FOR CANADA (OWVV7)

HIGH-SECURITY ELECTRONIC LOCKS CERTIFIED FOR CANADA (OZDC7)

This category covers high security electronic locks intended for attachment on doors of safes, chests, vaults, automated banking machines, depository units, and the like. The locks are intended to provide a means of locking the boltwork against unauthorized opening. Electronic combination locks are investigated primarily for resistance to unauthorized opening and security against mechanical attack in an attempt to release the locking mechanism.

Electronic locks provide resistance to unauthorized opening for a limited period of time. Electronic combination locks covered under this category may or may not have integral protection against entry by force.

Electronic locks are powered by electrical circuits, or they generate their own power as a function of their operation.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Electronic Locks, High Security Certified for Canada (OZDU7)

USE

This category covers burglary-resistant electronic combination locks designed for attachment to doors of safes, chests, vaults, automated banking machines, depository units, and the like. The locks are intended to provide a means of locking the boltwork against unauthorized opening.

These locks are highly resistant to expert or professional manipulation. The protection against expert manipulation includes an audit trail and a resistance to tampering after installation. Combination locks categorized as High are considered suitable for use on torch-resistant safes and chests, Class TRTL-15X6 and TRTL-30X6 vaults, automated banking machines, and night depositories.

ADDITIONAL INFORMATION

For additional information, see Electronic Locks Certified for Canada (OZDC7) and Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S334, ''Burglary Resistant Electronic Combination Locks.''

UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SECURITY'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Burglary Resistant Electronic Combination Lock.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOCKING CYLINDERS CERTIFIED FOR CANADA (OZMV7)

USE

This category covers key-operated cylinders used in door locks and shunt switches for local and police-station-connected burglar alarm systems. The locking cylinders are intended to protect against unauthorized opening by picking or drilling the cylinder.

Locking Cylinders Certified for Canada (OZMV7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328, ''Burglary Resistant Key Locks.''

UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SECURITY'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Locking Cylinder.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cabinet-locking Cylinders Certified for Canada (OZQI7)

USE

This category covers key-operated cabinet-locking cylinders intended for use in cabinets and drawers. The cabinet-locking cylinders are intended to protect against unauthorized opening by picking or drilling the cylinder.

ADDITIONAL INFORMATION

For additional information, see Locking Cylinders Certified for Canada (OZMV7) and Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328 (1998), ''Burglary Resistant Key Locks.''

UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SECURITY'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Cabinet Locking Cylinder.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Door Locks Certified for Canada (OZTU7)

USE

This category covers key-actuated locking assemblies for use on doors of stores, buildings, residences, and the like, to resist unauthorized opening by picking, impression techniques or drilling the lock cylinder or assembly, sawing or drilling the lock bolt, pulling the lock cylinder or other method involving the use of small hand tools.

ADDITIONAL INFORMATION

For additional information, see Locking Cylinders Certified for Canada (OZMV7) and Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328, ''Burglary Resistant Key Locks.''

UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SECURITY'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Door Lock.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Door-lock Accessories Certified for Canada (OZWZ7)

USE

This category covers door-lock accessories that are used in conjunction with door locks to increase their resistance to unauthorized opening.

ADDITIONAL INFORMATION

For additional information, see Locking Cylinders Certified for Canada (OZMV7) and Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328 (1998), "Burglary Resistant Key Locks."

UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Door Lock Accessory," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER-SWITCHING DEVICES CERTIFIED FOR CANADA (PAPU7)

GENERAL

This category covers devices such as low-voltage ac power circuit breakers, low-voltage dc power circuit breakers, low-voltage ac power circuit protectors, low-voltage ac integrally-fused power circuit breakers, and low-voltage power-switching device adapters.

Low-voltage power-switching devices have been investigated for continuous duty at 100% of their current ratings and are designed to provide service-entrance, feeder or branch-circuit protection. They may be manually and/or electrically operable.

These low-voltage power-switching devices, enclosures and adapters are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are on a wiring diagram or other readily-visible location.

Stationary equipment is normally bus connected. However, terminal pads are provided which can accommodate field-installed pressure-wire connectors.

PRODUCT MARKINGS AND RATINGS

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and on the use of 75°C wire for higher amp-rated circuits.

Low-voltage power-switching devices suitable for use with an accessory are marked to indicate the accessory(s), the electrical rating and proper connections (if not obvious).

Low-voltage power-switching devices without enclosures are intended for use only in Listed enclosures or as part of other Listed equipment which has been and are marked for use with a specific low-voltage power switching device.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ADAPTERS, LOW-VOLTAGE AC POWER-SWITCHING DEVICES CERTIFIED FOR CANADA (PAQQ7)

GENERAL

This category covers equipment designed to adapt low-voltage power-switching devices to receiving devices, such as individual enclosures, dead-front switchboards (switchgear), panelboards, etc. Field installation is intended only in those receiving devices which are specifically marked for their use.

Adapters, Low-voltage AC Power-switching Devices Certified for Canada (PAQQ7)−*Continued*

These adapters have been investigated in conjunction with power-switching devices and have been found suitable to carry 100% of the current rating of the power-switching device, and to withstand the maximum fault-current levels specified on the power-switching device.

PRODUCT MARKINGS

The adapters are marked to indicate the power-switching device with which they may be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), "Switchgear Assemblies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Switching Device Adapter."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER CIRCUIT BREAKERS CERTIFIED FOR CANADA (PAQX7)

GENERAL

This category covers low-voltage power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection or serve as a disconnecting means. They are covered by the classifications indicated by the label designation as follows:

Low-voltage ac power circuit breaker — Without enclosure, and with or without noninterchangeable trip devices.

Low-voltage ac power breaker frame — Frame only of power circuit breaker with provision for interchangeable trip devices. A certified low-voltage ac power circuit breaker frame is certified for use only with certified low-voltage ac power circuit breaker trip device.

Low-voltage ac power circuit breaker trip device — Trip device only of power circuit breaker having provisions for interchangeable trip devices.

The frame size determines the maximum continuous current rating for all parts of a low-voltage ac power circuit breaker except the coils of the direct acting trip device. The rating of the trip device determines the actual continuous current rating.

The trip devices may contain ground-fault current, longtime-delay overcurrent, short-time-delay overcurrent and instantaneous overcurrent trip elements that may be adjustable. The tolerance of the marked position of the longtime-delay overcurrent trip setting is plus or minus 10%.

A ground-fault current trip element is one that functions at all values of current at or above a predetermined value of fault current to ground.

An instantaneous overcurrent trip element is one that functions with no purposely delayed action at all values of current at or above a predetermined value of overcurrent.

A long-time overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time or instantaneous pick-up settings of the circuit breaker.

A short-time-delay overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time current rating of the circuit breaker.

Circuit breakers without enclosures are intended for use only as part of other certified equipment investigated and marked for use with specific circuit breakers.

PRODUCT MARKINGS

Low-voltage ac power circuit breakers are marked with maximum voltage, frequency, continuous current, short-time current, short-circuit current (interrupting rating) and control voltage ratings. The short-time current rating is the designated limit of fault current that the low-voltage ac power circuit breaker can successfully carry for a short interval. Other rating information, such as the nominal design voltage and time-delay overcurrent trip setting, may be provided.

Circuit breakers without trip devices cannot of themselves respond to overcurrent, short-circuit or ground faults and are marked "No Over-

Low-voltage AC Power Circuit Breakers Certified for Canada (PAQX7)−*Continued*

Current Protection Provided'' or ''If Over-Current Protection is Required, Use With Type ____ Protective Relays.'' Circuit breakers without trip devices can respond to overcurrent when properly connected to protective relays.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), ''Switchgear Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Low-Voltage AC Power Circuit Breaker,'' ''Low Voltage AC Power Breaker Frame'' or ''Low Voltage AC Circuit Breaker Trip Unit.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC INTEGRALLY-FUSED POWER CIRCUIT BREAKERS CERTIFIED FOR CANADA (PASQ7)

GENERAL

This category covers low-voltage ac integrally fused power circuit breakers rated 600 V maximum. Low-voltage ac integrally fused power circuit breakers include all the mechanical features of low-voltage ac power circuit breakers and, in addition, have current limiters or current-limiting fuses that function to increase the fault-current interrupting rating of the low-voltage ac integrally fused power circuit breakers.

These devices have been investigated for use on three-phase circuits having available fault currents of 200,000 rms symmetrical amps, maximum.

In addition to overcurrent trip elements of the low-voltage ac power circuit breakers, these are provided with an anti-single-phase tripping device that automatically opens the circuit breaker contacts in response to circuit interruption by the current limiter or the current-limiting fuse.

These devices are intended for use in certified switchgear or switchboards with certified adapters.

PRODUCT MARKINGS

Low-voltage ac integrally fused circuit breakers are marked with the maximum voltage, frequency, continuous current, short-circuit current (interrupting rating), intended fuse rating and type, and control voltage ratings. Other rating information, such as the nominal design voltage and time-delay overcurrent tripping setting, may be provided.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (2010), ''Switchgear Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Low Voltage AC Integrally Fused Power Circuit Breaker.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE DC POWER CIRCUIT BREAKERS CERTIFIED FOR CANADA (PAXW7)

USE

Low-voltage DC Power Circuit Breakers Certified for Canada (PAXW7)−*Continued*

This category covers stationary and draw-out low-voltage dc air and power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Air circuit breakers are rated at a nominal voltage of 750 V dc and less.

Power circuit breakers are rated at a nominal voltage greater than 750 V dc and up to 3000 V dc.

Low-voltage dc air and power circuit breakers are separated into four types: general purpose, rectifier, high speed and semi-high speed.

These products are intended for use in certified switchgear or switchboards with certified adapters.

PRODUCT MARKINGS

These products are marked with the type of circuit breaker, frame size, rated maximum voltage, rated continuous current, rated peak current (when applicable), rated short-time current (where applicable), rated short-circuit current and rated control voltage.

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 31, ''Switchgear Assemblies,'' and IEEE C37.14, ''Low-Voltage DC Power Circuit Breakers Used in Enclosures.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''DC Air Circuit Breaker'' or ''DC Power Circuit Breaker,'' preceded by the applicable product type: ''General-purpose,'' ''High-speed,'' ''Semi-high-speed'' or ''Rectifier.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRIP DEVICES CERTIFIED FOR USE IN LOW-VOLTAGE AC POWER CIRCUIT BREAKERS CERTIFIED FOR CANADA (PAYK7)

USE

This category covers trip devices suitable for use in place of the original trip device of a low-voltage ac power circuit breaker. Certification covers only the trip device in its ability to sense and respond to overcurrent and fault-current conditions.

This category does not cover the circuit breaker on which the trip device is mounted.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power Circuit Breakers Certified for Canada (PAQX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), ''Switchgear Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRIP DEVICE
IN ACCORDANCE WITH CSA-C22.2 No. 31-M89
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANAGEMENT EQUIPMENT, ENERGY CERTIFIED FOR CANADA (PAZX7)

USE

This category covers energy management equipment that energizes or de-energizes electrical loads to achieve the desired use of electrical power. This equipment normally controls electrical loads by responding to sensors or transducers monitoring power consumption, by sequencing, by cycling the loads through the use of preprogrammed data logic circuits, or any combination thereof. Devices responding to signals from a utility company may receive the signals over the power lines or as radio signals.

Typical loads controlled are space heating, air conditioning, lighting and other similar loads.

Devices are intended to be used only within the manufacturer's brand and product series as indicated in the manufacturer's instructions. Exceptions are specifically identified.

FACTORS NOT INVESTIGATED

The effects of the controls on the performance ratings of the connected loads have not been investigated.

PRODUCT MARKINGS

"Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" and "Energy Management Equipment Accessory" require modular labeling. The marking on the individual subassembly, or smallest container, will make reference to 1) a wiring diagram for interconnection of a system, and 2) the various combinations of subassemblies that may be employed to comprise the system unit.

RELATED PRODUCTS

Signal system units incorporating energy management systems are covered under Signal System Units Certified for Canada (UDTZ7).

Switching devices operated by a clock mechanism and other similar type products used to energize or de-energize loads are covered under Switches, Clock Operated Certified for Canada (WGZR7).

Energy-usage-monitoring equipment (not controlling loads directly) is covered under Energy Usage Monitoring Systems Certified for Canada (FTRZ7).

Measurement equipment is covered under Measuring, Testing and Signal-generation Equipment Certified for Canada (PICQ7).

Temperature-indicating and -regulating switches are covered under Temperature-indicating and -Regulating Equipment Certified for Canada (XAPX7) and Controllers, Refrigeration Certified for Canada (SDFY7).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric Certified for Canada (WJCT7).

Plug-in, locking-type photocontrols for use with area lighting intended for parking lot and roadway lighting are covered under Photocontrols, Plug-in, Locking Type Certified for Canada (WJFX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (1983), "Signal Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Energy Management Equipment," "Open Energy Management Equipment," "Enclosed Energy Management Equipment," "Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" or "Energy Management Equipment Accessory."

The word "Management" may be abbreviated "Mgmt" or "Mgt" (with or without a period); the word "Equipment" may be abbreviated "Equip" or "Eqpt" (with or without a period).

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANIFOLDS CERTIFIED FOR CANADA (PBBZ7)

USE

This category covers manifolds for high-pressure gas cylinders that are designed to eliminate pipe joints where valves, gauges, etc. are to be grouped at a central location. The individual Listings identify the fluids with which these devices are intended to be used.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPRESSED GAS MANIFOLDS CERTIFIED FOR CANADA (PCRT7)

USE

This category covers compressed gas manifolds intended for use with oxygen, nitrogen, nitrous oxide, carbon dioxide, air, inert gases, anhydrous ammonia, and fuel gases other than acetylene, and may be of the portable or stationary type. These manifolds are intended for connecting together two or more compressed gas cylinders. The manifolds are marked to indicate the gas or gases and pressures for which they are designed.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C407 (1974), "High-Pressure Gas Manifolds."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged or the Listing Mark on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manifold – Compressed Gas." The statement "___ psi max for use with [gas]" is also included if not marked elsewhere on the product.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-GAS CONTROL MANIFOLDS CERTIFIED FOR CANADA (PDFR7)

USE AND INSTALLATION

This category covers various types of manifolds intended to be used in LP-gas systems to interconnect two containers. They serve to allow gas flow from one container at a time and, in the case of line breakage from one of the containers, will prevent both containers from emptying. They may be of the block, disc check, manually operated, or automatic-changeover types. Certain automatic-changeover manifolds also serve as first-stage regulators since they reduce the pressure to the second-stage regulator. Manual- or automatic-changeover manifolds may be incorporated in the assembly of integral two-stage regulators.

These devices are intended to be installed and used in accordance with CSA B149.2, "Propane Storage and Handling Code."

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C407 (1974), "Guide for the Investigation of High-Pressure Gas Manifolds," ULC/ORD-C125 (1992), "Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief)," and/or ULC/ORD-C144 (1975), "Guide for the Investigation of Pressure-Regulating Valves."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Manifold for LP-Gas."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARKING AND CODING EQUIPMENT, ELECTRONIC CERTIFIED FOR CANADA (PGBE7)

USE AND INSTALLATION

This category covers electronic marking and coding equipment rated 600 V or less. Included in this category are ink jet printers or similar systems for production line labeling and/or coding. Units covered under this category normally are located in commercial or industrial environments. This equipment may be cord connected or have provision for field wiring. The units are marked with the type or types of ink for which they have been investigated.

RELATED PRODUCTS

Printing equipment intended for use in other applications is covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 950 (1993), "Safety of Information Technology Equipment, Including Electrical Business Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Marking and Coding Equipment," "Ink Jet Coding Machine," "Ink Jet Marking Machine," "Laser Coding Machine" or "Laser Marking Machine."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MASSAGE AND EXERCISE MACHINES CERTIFIED FOR CANADA (PGXX7)

GENERAL

This category covers motor-operated massage and exercise machines, such as vibrating and massaging chairs, hand-held massagers, exercise treadmills, and the like. Motor-operated massage machines include electric vibrators of the magnetic and motor-driven types.

FACTORS NOT INVESTIGATED

Any physiological effects produced from the use of these massage and exercise machines have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Massage Machine" or "Exercise Machine," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MATERIAL LIFTS CERTIFIED FOR CANADA (PGZH7)

USE

This category covers manually or electrically operated material lifts intended to lift or support material loads. They are not intended to lift or support people.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B44, "Safety Code for Elevators."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manually-Operated Material Lift" or "Electrically-Operated Material Lift."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MATTRESSES AND BEDDING EQUIPMENT CERTIFIED FOR CANADA (PHIA7)

MATTRESSES CERTIFIED FOR FLAMMABILITY CERTIFIED FOR CANADA (PHIX7)

USE

This category covers mattresses and mattress sets intended for use in residential and institutional environments. Specific institutional occupancies include but are not limited to hotels, motels, nursing homes, hospitals, educational, detention, and correctional institutions.

Authorities Having Jurisdiction should be consulted as to the specific requirements covering the acceptance and use of these products in the intended occupancies.

PRODUCT TESTING

These products exhibit resistance to rapid heat release when exposed to an open flame ignition source. The mattresses and mattress sets are constructed with elements that either (1) have been treated for the reduction of flammability, (2) are inherently resistant to ignition and flame growth, or (3) are manufactured with a fire barrier.

Mattresses and mattress sets are subjected to the open burning calorimeter test with rate of heat release (HRR) from the burning sample determined by an oxygen consumption technique.

FACTORS NOT INVESTIGATED

Mattresses and mattress sets have not been investigated for the effect of larger or different placements of the ignition source or with respect to the contribution of the mattresses or mattress sets to a developing fire condition with multiple mattress items or other surrounding materials or products.

The effects of aging and wear on the fire-retardant characteristics of the product have not been investigated.

The density of smoke and toxicity of the products of combustion have not been investigated. It should be recognized that the products of combustion from fires may be toxic to varying degrees, inasmuch as they may include smoke (particulate), carbon dioxide, carbon monoxide, and other vapors and gases, depending upon the conditions of burning and the materials involved. Occupancy tenability depends upon the conditions of heating or burning and the degree of confinement (ventilation) of the products of combustion or decomposition.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S137, "Standard Method of Test for Fire Growth of Mattresses (Open Flame Test)."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Mattresses Certified for Flammability Certified for Canada (PHIX7)−*Continued*

[PRODUCT NAME*]
AS TO FLAMMABILITY

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEASURING, TESTING AND SIGNAL-GENERATION EQUIPMENT CERTIFIED FOR CANADA (PICQ7)

GENERAL

This category covers equipment intended primarily for metering and testing of electrical and electronic circuits, such as ammeters, voltmeters, power meters, frequency counters, chart recorders, oscilloscopes, and related accessories, kits and probes. This category also covers equipment designed to provide electrical or electronic signals for test purposes, such as signal generators or injectors, and frequency synthesizers.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

This category does not cover medical and dental or process-control metering and testing equipment. Certifications of equipment that measure the functional performance (nonelectrical or nonelectronic) of other equipment, the physical or chemical properties of materials or qualitative or quantitative constituent analysis of materials and preparation of materials for further analysis or measurement are covered under Laboratory-use Electrical Equipment Certified for Canada (OGTK7).

Additional certifications are covered under Electrical and Electronic Measuring and Testing Equipment Certified for Canada (FHCW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), ''Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements.'' In addition, CSA-C22.2 No. 61010-2-032 (2004), ''Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-032: Particular Requirements for Hand-Held and Hand-Manipulated Current Sensors for Electrical Test and Measurement,'' and/or CAN/CSA-C22.2 No. 61010-031 (2007), ''Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 031: Safety Requirements for Hand-Held Probe Assemblies for Electrical Measurement and Test,'' may be used where applicable.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Measuring and Testing Equipment,'' ''Measuring Equipment,'' ''Testing Equipment,'' ''Signal Generation Equipment,'' or the name of the specific type of product as shown in the individual Listings, or combinations of the preceding identities.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT CERTIFIED FOR CANADA (PIDF7)

USE AND INSTALLATION

This category covers equipment intended to diagnose, treat, or monitor a patient under medical supervision, and which makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer.

This equipment has been certified with respect to electric shock, fire, mechanical and other specified hazards incident to its use in unclassified locations. The other specified hazards are included in CAN/CSA-C22.2 No. 601.1, the Particular and/or Collateral Standards and applicable supplements and amendments to which the equipment has been investigated.

The nature of some of this equipment, such as X-ray, nuclear imaging, and magnetic resonance equipment, is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

Baby incubators and similar equipment for use with oxygen-enriched atmospheres have been investigated with respect to the increased hazard resulting from the presence of oxygen and electrical parts within the equipment.

REBUILT PRODUCTS

This category also covers medical equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt medical equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt medical equipment is subject to the same requirements as new medical equipment.

FIELD-INSTALLED EQUIPMENT

Products covered under this category include equipment intended to be field installed, in accordance with the instructions provided, to certified equipment of the same manufacturer. The field-installed equipment is appropriately marked as noted below.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, which may be produced by this equipment have not been investigated.

RELATED PRODUCTS

Medical equipment that includes refrigerated components, such as refrigeration therapy equipment, is covered under Refrigerated Medical Equipment Certified for Canada (SOPT7).

Equipment investigated to determine its suitability for use in hazardous (classified) locations as defined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

For household health care equipment, see Personal Hygiene and Health Care Appliances Certified for Canada (QGRZ7).

For heating pads, see Heating Pads, Electric Certified for Canada (MNUV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 601.1, ''Medical Electrical Equipment – Part 1: General Requirements.''

Particular Standards — CAN/CSA-C22.2 No. 601.1 contains requirements for safety which are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX). However, unless otherwise indicated in the deviations, the requirements of a Particular Standard do not modify the deviations. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) such standard(s) may, optionally, also be used. Unless otherwise indicated in the deviations, the requirements of a Collateral Standard do not modify the deviations.

Product Marking (with respect to applicable standards) — As part of the Certification Mark, reference to CAN/CSA-C22.2 No. 601.1 is included. For products that have been investigated in accordance with the applicable Particular (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX)

and/or related Collateral (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) Standards, reference to these standards is made on the product or in the accompanying documents.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEDICAL EQUIPMENT+
WITH RESPECT TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY
IN ACCORDANCE WITH [standard*]
Control No.

+ or other appropriate product name as shown in the individual Classifications

For rebuilt or remanufactured products the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

For field-installed products the words "Field Installed" precedes the product name.

Alternate Marking Options

1. The Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS," or the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 – ⚠), the standard number* and a control number. As a minimum, the standard number* always includes CAN/CSA-C22.2 No. 601.1 for products investigated to Canadian requirements only, and UL 60601-1, UL 2601-1 or both, with or without CAN/CSA-C22.2 No. 601.1, for products investigated to both U.S. and Canadian requirements. In addition, the product's accompanying documents will contain the complete Classification Mark.
2. For products with limited space for markings, the Classification Mark includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol, the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 – ⚠), and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark.
3. For products (such as implantable devices) where the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or smallest unit container in which the product is packaged. The product's accompanying documents may also contain the complete Classification Mark.

* Based on the certification coverage of the product, the standard number may be CAN/CSA-C22.2 No. 601.1 for products investigated to Canadian requirements only, or UL 60601-1, UL 2601-1 or both, and CAN/CSA-C22.2 No. 601.1 for products investigated to both U.S. and Canadian requirements. Additionally, the standard number may include any applicable Particular (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX) and/or related Collateral (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) Standards for which the product has been found to comply by UL.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PINR7)

GENERAL

This category covers portable suction, pressure and anesthesia units, portable baby incubators, surgical devices and similar equipment designed for professional use by attendants in hospitals. This equipment has been investigated solely from the standpoint of electrical, fire, explosion, and accident hazards. Other hazards, such as physiological effects, have not been investigated.

Except for low-voltage battery-powered devices, connections to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDIUM-VOLTAGE POWER CABLE CERTIFIED FOR CANADA (PITY7)

GENERAL

This category covers shielded and concentric neutral power cable rated 5000 to 46,000 V intended for transmission and distribution of electrical energy for use either indoors or outdoors in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This cable is single or multiconductor, aluminum or copper, with solid extruded dielectric insulation and may have an extruded jacket, metallic covering or combination of both over the single conductors or over the assembled conductors in a multiconductor power cable.

Shielded cable is suitable for use in wet or dry locations at a maximum conductor temperature of 90°C.

PRODUCT MARKINGS

Cable marked "Sunlight Resistant" may be exposed to the direct rays of the sun.

Cable may be optionally marked "FT1," or cable intended for installation in cable trays in accordance with the CEC is marked "FT4."

Cable with aluminum conductors is marked with the word "Aluminum" (or "AL").

The cable is marked with the conductor size, type of insulation (VLPE or EP), voltage rating and insulation level (100% or 133%), conductor material, the legend "Semiconducting — Remove When Terminating or Splicing" (or equivalent) on the surface of the semiconducting layer of the insulation shield in English or in French, the flame rating (if applicable) on the outer covering or jacket, an optional "Sunlight Resistant" marking if applicable, a power cable symbol and the year of manufacture.

Cable employing compact conductors is marked "CPT."

Cable employing solid conductors is marked "SOL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C68.3 (1997), "Shielded and Concentric Neutral Power Cables Rated 5–46 kV."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shielded and Concentric Neutral Power Cable" or "Medium-voltage Power Cable."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CERTIFIED FOR CANADA (PJAZ7)

GENERAL

This category covers Types AC90, ACWU90, RA90 and TECK 90 cable intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

AC90 and ACWU90 cable is rated for use up to 600 V, and certified in sizes 14 AWG through 2000 kcmil for copper, and 12 AWG through 2000 kcmil for aluminum, and employs thermoset- or thermoplastic-insulated conductors. AC90 and ACWU90 cable consists of one or more insulated conductors with an overall interlocked metal armor. One or more grounding conductors may be employed. ACWU90 cable employs an overall jacket of thermoset or thermoplastic material. Single-conductor cable in sizes 4 AWG and smaller, and single-conductor cable without a concentric bonding conductor in sizes larger than 4 AWG is green or green with yellow stripes.

TECK 90 cable is rated for use up to 5000 V, and certified in sizes 14 AWG through 2000 kcmil for copper, and 12 AWG through 2000 kcmil for aluminum, and employs thermoset- or thermoplastic-insulated conductors. TECK 90 cable rated 5000 V employs conductors no smaller than 8 AWG. TECK 90 cable consists of one or more insulated conductors, with or without one or more grounding conductors, an inner jacket of thermoplastic or thermosetting material, and an overall interlocked steel, copper or aluminum armor. The armor on single-conductor cable is aluminum or copper.

RA90 cable is rated for use up to 5000 V, and certified in sizes 14 AWG through 2000 kcmil for copper, and 12 AWG through 2000 kcmil for aluminum, and employs thermoset-insulated conductors. RA90 cable consists of one or more insulated conductors with an overall smooth, seamed, seamless or corrugated aluminum armor. One or more grounding conductors may be employed. RA90 cable may employ an overall jacket of thermoplastic material.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

AC90, ACWU90 and RA90 cable that complies with Appendix C of CSA-C22.2 No. 0.3, "Test Methods for Electrical Wires and Cables," for "FT4 – ST1," may be marked with the suffix "ST1."

AC90, ACWU90 and RA90 cable that complies with the Acid Gas Evolution Test of CSA-C22.2 No. 0.3 may be marked with the suffix "AG14."

"FT1" indicates that the TECK 90 cable meets the requirements of the FT1 Flame Test.

"FT4" indicates that the AC90, ACWU90, RA90 or TECK 90 cable meets the requirements of the FT4 Flame Test.

"-25C" (or "MINUS 25 C") indicates that the cable complies with a cold bending test at -25°C.

"-40C" (or "MINUS 40 C") indicates that the cable complies with a cold bending test at -40°C.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 123, "Aluminum Sheathed Cables," CAN/CSA-C22.2 No. 131, "Type TECK 90 Cable," and CSA-C22.2 No. 51, "Armoured Cables."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper conductors has the product name "Metal-clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-MOUNTING EQUIPMENT CERTIFIED FOR CANADA (PJSR7)

This category covers meter-mounting equipment, which consists of an enclosure, wiring terminals and provision for fastening of the meter to the

equipment. Meter-mounting equipment does not include load-making or load-breaking devices. It may include provisions for current transformers but not the transformers.

Transformer-rated meter-mounting devices intended for field installation of current transformers, busbars, and connectors for supply conductors are marked to show:

- the ampere rating and type of current transformers that may be used;
- the method of assembly; and
- the secondary wiring method or the following marking: "This Device Is Supplied Without Secondary Wiring. The Meter Socket Must Be Wired In Accordance With The Local Utility's Requirements."

Meter-mounting equipment is marked with a current rating. Multiple-position meter socket assemblies are provided with current ratings for each individual meter socket and an overall rating for the assembly. The overall rating is the rating for which the assembly is approved, but not necessarily the sum of the current ratings of the individual meter sockets.

This equipment is intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is on a wiring diagram or other readily visible location and is independent of any marking on a terminal connector unless the terminal connector is an integral, nonremovable part of the meter socket jaw.

Wire connectors in Listed meter-mounting equipment are intended to accommodate one conductor only unless use with more than one conductor is clearly indicated on the wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 75°C ampacities for wire as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

Meter-mounting equipment is marked with the enclosure type described in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-SOCKET BASES CERTIFIED FOR CANADA (PJWT7)

GENERAL

This category covers meter-socket bases, which are bases intended to accommodate plug-in-type watt-hour and similar meters rated for use with current transformers. They are designed to be installed, with the meter, inside enclosures to allow for connection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Meter-socket bases are rated 600 V ac maximum. Meter-socket bases rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amps. For short-circuit-current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter-socket bases are marked with a continuous amp rating. They may, in addition, have a maximum use (intermittent) rating of not more than 125% of the continuous amp rating.

RELATED PRODUCTS

Meter sockets with meters protruding through the enclosure are covered under Meter Sockets Certified for Canada (PJYZ7)

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment Certified for Canada (PJSR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 115 (1989), "Meter Mounting Devices."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unenclosed Meter Socket."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Meter-socket Bases Certified for Canada (PJWT7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER SOCKETS CERTIFIED FOR CANADA (PJYZ7)

GENERAL

This category covers meter sockets, which are complete enclosures accommodating plug-in-type watt-hour and similar meters. They provide terminating means for conductors of wiring systems recognized by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

The tightening torque required for terminal screws is specified by a marking.

Terminal-wire connectors may be omitted and, if omitted, a marking specifies which connectors are intended to be used. Instructions for the field installation of connectors are provided with the connectors.

Ratings of certified single-position meter sockets are limited to 600 V ac maximum and to 200 A maximum. Ratings of certified multiple-position meter socket assemblies are limited to 600 V ac maximum with an overall current rating of 600 A maximum (200 A maximum per meter socket).

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment Certified for Canada (PJSR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 115 (1989), ''Meter-Mounting Devices.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Meter Socket.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-SOCKET ACCESSORIES CERTIFIED FOR CANADA (PKAX7)

GENERAL

This category covers accessories intended for use with meter sockets, such as jumper covers, meter-socket extenders or other equipment.

Ratings of certified meter-socket accessories are limited to 600 V ac and 200 A maximum.

RELATED PRODUCTS

See Meter Sockets Certified for Canada (PJYZ7).

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment Certified for Canada (PJSR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 115 (1989), ''Meter-Mounting Devices.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Meter Socket Accessory,'' ''Temporary Jumper Cover Accessory'' or ''Meter Socket Extender,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METERS CERTIFIED FOR CANADA (PKQT7)

FLAMMABLE-LIQUID METERS CERTIFIED FOR CANADA (PLRZ7)

USE

This category covers positive-displacement (quantity) meters intended to be used in dispensing devices at operating pressures of 345 kPa (50 psig) or less.

These meters are intended for use with the following fuels:

a) Gasoline
b) Gasoline/ethanol blends designated as ''gasohol'' (E10 maximum)
c) Diesel fuel
d) Fuel oil
e) Kerosene

These products are intended to be installed and used in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

FACTORS NOT INVESTIGATED

The suitability of registers, counters, or computers used or provided with these meters, or the accuracy of measurement resulting from or required in actual application, has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C25, ''Meters for Flammable and Combustible Liquids and Propane.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Meter for Flammable Liquid.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAMMABLE-LIQUID METERS, REBUILT CERTIFIED FOR CANADA (PLSF7)

USE

This category covers rebuilt positive-displacement (quantity) meters intended to be used in dispensing devices at operating pressures of 344.83 kPa or less.

These meters are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt meters are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt meters are subject to the same requirements as new meters.

These meters are intended for use with the following fuels:

a) Gasoline
b) Gasoline/ethanol blends designated as ''gasohol'' (E10 maximum)
c) Diesel fuel
d) Fuel oil
e) Kerosene

These meters are intended to be installed and used in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

FACTORS NOT INVESTIGATED

The suitability of registers, counters or computers used or provided with these meters, or the accuracy of measurement resulting from or required in actual application, has not been investigated.

RELATED PRODUCTS

Meters intended for use with flammable and combustible liquids are covered under Flammable-liquid Meters Certified for Canada (PLRZ7).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C25, ''Meters for Flammable and Combustible Liquids and Propane.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark

Flammable-liquid Meters, Rebuilt Certified for Canada (PLSF7)−*Continued*

for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Meter for Flammable Liquid."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-GAS METERS CERTIFIED FOR CANADA (PMFX7)

USE

This category covers LP-gas meters intended for the handling of LP-gas in the liquid state and designed for working pressures of 1724 kPa or more, as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C25, "Meters for Flammable and Combustible Liquids and Propane."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Meter for LP-Gas," and the statement "____ kPa max."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE AND CABLE COMMUNICATION EQUIPMENT CERTIFIED FOR CANADA (POFV7)

This category covers microwave communication equipment, cable communication equipment, communication antennas and antenna positioning equipment intended for household or commercial use.

This equipment has been investigated with respect to risk of fire, electric shock and personal injury. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury have included only the equipment specifically Listed in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMUNICATION ANTENNAS CERTIFIED FOR CANADA (POQQ7)

USE

This category covers satellite and microwave receiving and transmitting antennas and accessories intended for household or commercial use, such as satellite antenna dishes, microwave antenna horns or waveguides, receiving and transmitting antennas, antenna mounting/support hardware (e.g., tripods, masts, polar mounts) and similar products.

RELATED PRODUCTS

These products may also be covered under Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7).

ADDITIONAL INFORMATION

For additional information, see Microwave, and Cable Communication Equipment Certified for Canada (POFV7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Communication Antennas Certified for Canada (POQQ7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 1, "Audio, Video, and Similar Electronic Equipment".

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Microwave and Cable Communication Equipment," "Satellite Antenna Equipment," "Microwave Antenna Equipment," "Antenna Equipment" or "...Product," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MINERAL-INSULATED CABLE ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (POWD7)

GENERAL

This category covers lengths of mineral-insulated metal-sheathed cable with one or both ends factory terminated with a certified mineral-insulated cable fitting. The fittings provide threaded connection of the cable to hazardous locations equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 174, "Cables and Cable Glands for Use in Hazardous Locations."

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MINERAL-INSULATED METAL-SHEATHED CABLE CERTIFIED FOR CANADA (PPKV7)

GENERAL

This category covers mineral-insulated metal-sheathed cable consisting of one or more solid copper conductors insulated with highly compressed magnesium oxide or silicon dioxide and enclosed in a continuous copper or alloy steel sheath. It is intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Type MI cable is labeled in sizes 18 AWG to 1000 kcmil single conductor, 18 to 4 AWG, two and three conductor, 18 to 6 AWG four conductor, and 18 to 10 AWG seven conductor constructions. The cable is rated 600 V, and employs a copper sheath.

Type LWMI cable is labeled in sizes 18 to 10 AWG for on to seven conductor constructions and is rated 600 V. Type LWMI cable is also labeled in sizes 18 to 10 AWG for 2 and 3 conductor constructions rated 300 V. The cable employs a copper sheath.

Type SSMI cable is similar to MI except that it employs a stainless steel alloy sheath.

Type SSLWMI cable is similar to LWMI except that is employs a stainless steel alloy sheath.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 124, "Mineral-Insulated Cable."

UL MARK

The Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Metal-Sheathed Cable."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR-GENERATOR SETS CERTIFIED FOR CANADA (PQYW7)

USE

This category covers close-coupled combinations of electric motors and generators for indoor use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I.". This equipment is designed as frequency converters or to provide a voltage regulating function provided by the mechanical inertia, and may be intended for portable, permanent or mobile installations.

This category does not cover electric machines for use in aircraft, marine service installations, drives for land transportation equipment, machines used in underground mining, hazardous environments or environments having abnormal temperatures.

RELATED PRODUCTS

This category does not cover electrical generating equipment driven by gasoline, LP-gas, or diesel fueled internal combustion engines. These products are covered under Engine Generators Certified for Canada (FTSR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 100 (2004), "Motors and Generators," and CSA-C22.2 No. 14 (1995), "Industrial Control Equipment," as it applies to the product.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-Generator Set" or "Flywheel Energy Storage System," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS CERTIFIED FOR CANADA (PRGY7)

USE

This category covers three-phase motors:

1. intended to be field installed in accordance with Section 28 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC),
2. 5 hp and larger,
3. greater than 177.8 mm (7 in.) in diameter,
4. where the motor overload protection required by Section 28 of the CEC takes the form of a separate overload device or control.

PRODUCT MARKINGS AND INSTALLATION

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7). The motor may also be marked "Raintight" or "Rainproof."

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open-type motor is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the motor, provided in the installation instructions or as a stuffer sheet provided with the motor.

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

FIELD PROVISIONS

Motors are provided with a means to electrical connect the motor with the electrical system in the field.

Suitability of guards for the shaft or other moving parts must be determined in the end-use application.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations Certified for Canada (PTDR7), Motors, Specialty for Use in Hazardous Locations Certified for Canada (PUCJ7) and Motors, Division 2 for Use in Hazardous Locations Certified for Canada (PTHE7).

Motors incomplete in construction are covered under Motors Certified for Canada (PRGY8).

Products Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZYKH).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 100, "Motors and Generators."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to CSA-C22.2 No. 0.2, "Insulation Coordination."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, INVERTER DUTY CERTIFIED FOR CANADA (PRHJ7)

USE

This category cover squirrel cage, polyphase induction motors intended for use with variable voltage and variable frequency controls (commonly referred to as inverters) that are:

1. three-phase,
2. intended to be field installed in accordance with Section 28 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC),
3. 5 hp and larger,
4. greater than 177.8 mm (7 in.) in diameter, and
5. where the motor overload protection required by Section 28 of the CEC takes the form of a separate overload device or control.

The requirements for this category are intended to investigate the suitability of the motor for normal use when fed from an inverter supply through a manufacturer-declared range of operating conditions.

This category does not cover:

1. the efficacy of motor-overtemperature protection under abnormal conditions,
2. the operation of a motor in hazardous (classified) locations.

Though the motors covered under this category may be provided with Recognized overtemperature protection, the suitability of the overtemperature protection has not been investigated and must be determined in the end-use application.

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions, or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate that raintight or wet-location hubs complying with the requirements in CAN/CSA-C22.2 No. 18.3, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identify the parts for bonding and specify the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

These motors are marked with:

1. the manufacturer's name or identification,
2. the motor catalog or model number,
3. the rated voltage,
4. the full-load amperes, watts or kilowatts, or both,
5. the rated speed,
6. the rated horsepower or output wattage,
7. the rated temperature rise or the insulation system class,
8. the rated ambient temperature,
9. the rated frequency, expressed in one of the following terms: hertz (or Hz); ac-dc (frequency in Hz)/dc (e.g., 60/dc); ac only; direct current, and
10. the number of phases.
11. A continuous-duty motor is marked "Continuous" (or "CONT").
12. A direct-current motor is marked to indicate the winding type: straight shunt, stabilized shunt, compound or series.
13. A multi-speed motor is marked with the amperes and horsepower at each speed.

These motors are marked to indicate the temperature rating (e.g., 60°C only, 60/75, or 75°C only) of the field-installed conductors for which the equipment has been investigated.

Motors equipped with electrically-powered, condensation-prevention heaters are marked with the rated heater voltage, number of phases, and the rated power in watts.

Air-over motors are marked "Air Over" (or "AO") or "Air-Over Motor" (or "AOM").

An alternating-current motor is marked with a code letter to indicate the locked-rotor amperes in accordance with the CEC.

A wound-rotor induction motor is marked with the secondary volts and full-load amperes.

A motor rated for short-time or intermittent duty is marked on the nameplate with the words "intermittent duty" (or "int. duty") and with the time rating in minutes or hours, or a combination of minutes and hours. The rating may be for "On" time only or include specifications for both "On" and "Off" periods.

If the acceptability of a Type 2 or 3R enclosure is dependent upon a particular mounting orientation, the enclosure is marked to indicate the required orientation.

A cast-metal enclosure marked Type 3, 3R or 3S is marked to indicate that, after determining the mounting position of the enclosure, any holes drilled in the field are intended to be located in the lowest part of the bottom wall.

Exception: If a manufacturer intends that a cast-metal enclosure be acceptable for field drilling and tapping of holes for conduit connections, the enclosure is marked to indicate the location and trade sizes of conduit for which the enclosure has been found to be acceptable. If counter-boring is necessary to accommodate certain sizes of conduit, such information is also given.

Note: The instructions for drilling and tapping may be provided on an instruction sheet provided with the enclosure or marked on the packaging carton.

Any environmental-type enclosure intended for use with conduit hubs and/or other field-installed equipment, but shipped from the factory without them, is marked or provided with instructions that identify the type of equipment intended to be used to maintain the environmental integrity of the enclosure. This may be accomplished by identifying the necessary environmental type designation or by identifying the specific manufacturer and model number of the field-installed equipment.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations Certified for Canada (PTDR7), Motors, Specialty for Use in Hazardous Locations Certified for Canada (PUCJ7), and Motors, Division 2 for Use in Hazardous Locations Certified for Canada (PTHE7).

Motors incomplete in construction and intended for factory installation are covered under Motors Certified for Canada (PRGY8).

Motors Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZYKH).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 100, "Motors and Generators."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to CSA-C22.2 No. 0.2, "Insulation Coordination."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inverter-duty Motor."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS AND GENERATORS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PRSN7)

MOTORS, SPECIALTY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PRZM7)

USE AND INSTALLATION

This category covers specialty motors.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

The Certification Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 100 (2004), "Motors and Generators."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

MOTORS AND GENERATORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PSBV7)

GENERATORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PSPT7)

GENERAL

This category covers generators for use in Class I, Groups C and D; Class II, Groups E, F and G hazardous locations.

The Certification Mark on a generator applies to the generator, but not to any equipment driving or driven by the generator. In the case of a motor generator set provided with a common base, the motor and generator each bear its respective Certification Mark.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 145 (1986), ''Motors and Generators for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Generator for Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. MOTORS, DIVISION 2 FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PTHE7)

GENERAL

This category covers electric motors intended for use in Class I, Division 2, Groups A, B, C and D, and Class II, Division 2, Groups F and G hazardous (classified) locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the motor is acceptable for Groups A, B, C and D. The motor is also marked with the operating-temperature code designating the maximum internal or external surface temperature determined at rated full-load steady-state conditions, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current-interrupting contacts immersed in oil, located in a nonincendive circuit or located in a purged and pressurized enclosure. If the motor is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor is de-energized, and vice versa. The maximum surface temperature of the space heater is considered in determining the marked operating temperature of the motor.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The motor is marked with the operating temperature or operating-temperature code designating the maximum full-load external temperature determined at rated full-load steady-state conditions when operating in free air (not dust blanketed), if the external temperature is greater the 100°C.

RELATED PRODUCTS

For Division 1 motors, see Motors for Use in Hazardous Locations Certified for Canada (PTDR7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CSA Electrical Certification Notice No. 672, ''Motors Used in Division 2 Locations'' (January 23, 1990).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Motor for Division 2 Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS AND GENERATORS, REBUILT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PTKQ7)

USE

This category covers rebuilt motors and generators for use in Class I, Groups C and D, and Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, rebuilt motors and generators for use in Class I and Class II hazardous locations are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

Motors and Generators, Rebuilt for Use in Hazardous Locations Certified for Canada (PTKQ7)–*Continued*

The Certification Mark on a rebuilt motor or generator applies to the motor or generator, but not to any equipment driven by or driving the motor or generator. In the case of a rebuilt motor-generator set provided with a common base, the motor and generator will each bear its respective Certification Mark.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (1986), ''Motors and Generators for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Rebuilt Electric Motor for Use in Hazardous Locations'' or ''Rebuilt Electric Generator for Use in Hazardous Locations.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, SPECIALTY FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PUCJ7)

GENERAL

This category covers specialty motors intended for use in Class I, Groups C and D, and Class II, Groups E, F and G hazardous (classified) locations.

These motors are intended for installation and operation in accordance with instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

The Certification Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (1986), ''Motors and Generators for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Specialty Motor for Hazardous Locations.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLIES CERTIFIED FOR CANADA (PVGT7)

USE AND INSTALLATION

This category covers metal raceways and power-pole assemblies with factory-installed conductors and attachment-plug receptacles without provision for field installation of additional conductors, except where the product is marked to indicate the number, type and size of additional conductors that may be field installed.

This category also covers nonmetallic raceways with factory-installed conductors and attachment-plug receptacles either factory installed or separately certified as Multioutlet Assembly Fittings Certified for Canada (PVUR7) for field installation.

Separation of communication, signal and data circuits from branch-circuit wiring is provided in the assembly where the conductors are installed at the factory. Separate channels are provided in assemblies intended to be field wired with circuits requiring separation.

Power-pole multioutlet assemblies may be provided with hard-usage flexible cord not exceeding 3 m in length and terminated with an attachment plug when operating at 300 V or less. Authorities Having Jurisdiction should be consulted before installation.

Multioutlet assemblies are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 62 (1993), ''Surface Raceway Systems,'' and CAN/CSA-C22.2 No. 62.1, ''Nonmetallic Surface Raceways and Fittings.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Multi-Outlet Assembly.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLY FITTINGS CERTIFIED FOR CANADA (PVUR7)

USE AND INSTALLATION

This category covers multioutlet assembly fittings intended for use with multioutlet metal raceways and power-pole assemblies. Fittings may consist of flexible metal conduit or armored cable to be connected to multioutlet assemblies by means of nonstandard wired plug-in devices or prefabricated component parts, such as preformed corners and the like.

Multioutlet assembly fittings are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Multioutlet Assemblies Certified for Canada (PVGT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 62 (1993), ''Surface Raceway Systems,'' and CAN/CSA-C22.2 No. 62.1, ''Nonmetallic Surface Raceways and Fittings.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Multi-Outlet Assembly Fitting,'' ''Elbow'' or ''End Fitting,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MUSICAL INSTRUMENTS CERTIFIED FOR CANADA (PWHZ7)

USE

This category covers electrical devices that produce music under the direct control of the player. This category also covers accessories for use with musical instruments, such as rhythm generators, tone cabinets, music tuners, and the like.

RELATED PRODUCTS

For devices that reproduce music from records, magnetic tape or other recording media, see Audio and Radio Equipment, Commercial Certified for Canada (AZCY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, "Audio, Video, and Similar Electronic Equipment" or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Musical Instrument" or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NEON TRANSFORMERS AND POWER SUPPLIES CERTIFIED FOR CANADA (PWIK7)

USE

This category covers indoor and outdoor use neon transformers and power supplies intended for use with display signs, outline lighting and luminaires employing gas-filled glass tubing identified as neon or electric discharge tubing.

These transformers and power supplies have been investigated for secondary-circuit ground-fault protection.

Neon transformers and power supplies are intended for use in or with electric signs and outline lighting within the scope of CAN/CSA-C22.2 No. 207-M89, "Portable and Stationary Electric Signs and Displays," and for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category also covers neon transformer and power-supply accessories intended for use with specific neon transformers and power supplies.

PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," "Weatherproof" or "WP." Products marked "Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 8 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

- **Type 2** – Neon supply with input and output terminals or leads that should be enclosed in accordance with the CEC.
- **Type 3** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the CEC.
- **Type 4** – Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.
- **Type 5** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system and provided with integral receptacles for output connection.
- **Type 6** – Cord-connected neon supply provided with integral receptacles for output connection.
- **Type 7** – Cord-connected neon supply with output terminals or leads that should be enclosed in accordance with the CEC.
- **Type 8** – Cord-connected neon supply with enclosed output terminals or leads.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

Transformers and power supplies marked "For Moving Vehicle Use Only" are intended for use only in moving vehicles and not for use in a freestanding sign, or building mounted sign or outline lighting product.

Neon transformer and power-supply accessories are marked "For Use With XXX Neon Transformer" or "For Use With XXX Neon Power Supply," where "XXX" indicates the model number, catalog number, part number, or other specific identifier of the neon transformer or neon power supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 255 (2004), "Neon Transformers and Power Supplies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Neon Transformer," "Neon Power Supply," "Neon Transformer Accessory" or "Neon Power Supply Accessory."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE CERTIFIED FOR CANADA (PWVX7)

GENERAL

This category covers Types NMWU and NMD90 nonmetallic-sheathed cable, rated 300 V, intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and certified in copper sizes 14 to 2 AWG inclusive and aluminum sizes 12 to 2 AWG inclusive.

PRODUCT MARKINGS

Cable with aluminum alloy 1350 conductors is surface marked "ALUMINUM," "ALUM" or "AL."

Cable with ACM conductors is surface marked "ALUMINUM-ACM," "ALUM-ACM" or "AL-ACM."

Wire and cable employing compact-stranded copper conductors is so identified on the tag, coil or reel by "COMPACT STRAND."

When Type NMD90 cable is provided with nylon sheaths over the insulated conductors, "NMD90 NYLON" is marked on the surface of the jacket. Type NMD90 cable employing cross-linked polyethylene insulation is surface marked on the jacket "NMD90 XLPE."

The words "RED-BLACK" are marked on the surface of the jacket of two-conductor cable employing red and black insulation. Two-conductor cable may be marked "-25C," "MINUS 25C," "-40C" or "MINUS 40C" if it complies with the applicable requirement.

This cable is marked with the flame rating "FT1."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 48 (1990), "Nonmetallic Sheathed Cable."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic-sheathed Cable."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED-CABLE CONNECTORS CERTIFIED FOR CANADA (PXJV7)

USE

This category covers nonmetallic-sheathed cable connectors intended for use with nonmetallic-sheathed cable for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

All male threaded fittings have only been investigated for use with locknuts.

The individual certifications may have details about the size and number of the nonmetallic-sheathed cable each connector will secure.

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

MARKINGS

Connectors which are also suitable for use with service-entrance cable, flexible nonmetallic tubing or flexible cord are so indicated on the device or carton.

Except for duplex connectors or when otherwise marked on the carton to indicate connecting of more than one cable or cord, the connectors in this category have been investigated for connecting one cable only.

RELATED PRODUCTS

Connectors covered under Armored Cable Connectors Certified for Canada (AWSX7) and Conduit Fittings Certified for Canada (DWTT7) are also suitable for use with nonmetallic-sheathed cable when specifically indicated on the device or carton.

Connectors suitable for flexible cord only are covered under Outlet Bushings and Fittings Certified for Canada (QCRV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 18.3, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic-sheathed Cable Connector" (or "N.M. Cable Connector"), or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE INTERCONNECTORS CERTIFIED FOR CANADA (QAAV7)

GENERAL

This category covers self-contained interconnectors employing pressure cable connectors, insulation displacement or insulation piercing connectors for splicing or tapping nonmetallic (NM) sheathed cable. These interconnectors are intended for installation and use in accordance with Section 12 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These devices have been investigated for equivalency to Type NM cable in insulation and temperature rise, and for capability to withstand fault currents, vibration and mechanical shock that may occur during transport of the units in which they are used.

PRODUCT MARKINGS

The devices are marked with the Listee's name or identification, catalog number or equivalent, and complete electrical ratings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 18.3, "Conduit, Tubing, and Cable Fittings," and CSA-C22.2 No. 182.3, "Special Use Attachment Plugs, Receptacles, and Connectors."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to

identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Interconnector" (or "N.M. Cable Interconnector"), or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL SEATING SYSTEMS CERTIFIED FOR CANADA (QAHU7)

GENERAL

This category covers single- or multiple-seating systems that may be provided with an integral table and contain electrical accessories, such as an electrical distribution system, and may also be provided with channels for routing communication wiring. The seating is intended to be permanently mounted to the building structure.

This category covers only the electrical hazards associated with the product.

RELATED PRODUCTS

Electrical accessories designed for field installation, such as receptacles, electrical distribution systems, power distribution elements, etc., are covered under Office Furnishings Certified for Canada (QAWZ7) and are marked to identify the specific seating system with which they have been investigated for use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 203 (1991), "Modular Wiring Systems for Office Furniture."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

POWERED SEATING SYSTEM*
FOR ELECTRICAL HAZARD ONLY
Control No.

* or other appropriate product name as shown in the individual Classifications

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE APPLIANCES AND BUSINESS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QAVS7)

GENERAL

This category covers equipment and appliances normally used in business establishments classified as hazardous locations. The equipment and appliances may be electromechanical and/or electronic.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

OFFICE APPLIANCES AND BUSINESS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QAVS7)

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Office Appliance for Use in Hazardous Locations'' or ''Business Equipment for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHINGS CERTIFIED FOR CANADA (QAWZ7)

USE AND INSTALLATION

This category covers office furnishings that consist of electrical distribution systems, components and accessories to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC). They may form part of a panel or office furnishing assembly and include the necessary wiring, raceways, outlets, switches, and interconnections between office furnishings.

Products specifically designed and arranged for field installation in office furnishings such as lighting units and clocks are covered as accessories under Office Furnishing Accessories Certified for Use with Specified Equipment Certified for Canada (QAXE7) and are marked to identify the specific office furnishing with which they have been investigated.

Office furnishing electrical systems may be suitable for connection to optional standby power systems in accordance with the CEC.

Office furnishing electrical systems are available in single-phase and three-phase wiring systems and may provide multi-circuit branch circuits to an office furnishing. Some office furnishings are connected to more than one source of supply, such as an uninterruptible power supply, in addition to the building service-entrance power.

When the office furnishing electrical system is supplied with hospital-grade receptacles, the office furnishing electrical system is not suitable for use in general patient care areas or critical patient care areas. The electrical system has not been investigated for use in patient care areas as stated in Section 24 of the CEC.

INSTRUCTIONS AND PRODUCT MARKINGS

Each office furnishing electrical component that is shipped separately from the major office furnishing unit to which it is to be connected is marked ''For Use with Office Furnishing System Series ____,'' in which the appropriate series or catalog number is designated.

Each top- and base-feed wiring assembly is marked with a diagram or the equivalent, indicating the methods of connection to the branch circuit and the electrical rating.

Each top- and base-feed wiring assembly is marked with ''WARNING'' and the following or equivalent statement: ''Connect to branch circuit at one point only.''

Each convenience receptacle is marked by a letter, number, color, or similar designation to indicate the circuit in the system to which the receptacle is connected. The identification is consistent throughout any one office furnishing electrical system and with any markings on the diagram for the branch-circuit connections.

The instructions indicate that not more than 12 outlets should be connected to one circuit.

RELATED PRODUCTS

Certified partitions that extend to the ceiling or used to support the building structure are covered under Sections and Units Certified for Canada (QQXX7).

Composite panels certified with respect to the CEC and/or one or more model building codes, plumbing codes or provincial building codes are covered under Composite Panels Certified for Canada (QRSY7).

Lighting units intended for use with office furnishings are covered under Office Furnishing Lights Certified for Canada (QAXB7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 203 (1991), ''Modular Wiring Systems for Office Furniture.''

Some office furnishing systems covered under this category have also been investigated to CAN/ULC-S102, ''Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies,'' and CAN/ULC-S102.2, ''Method of Test for Surface Burning Characteristics of Flooring, Floor Coverings, and Miscellaneous Materials and Assemblies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Office Furnishing'' or ''Office Furnishing Accessory.''

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to CAN/ULC-S102 and CAN/ULC-S102.2. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following:

ALSO CLASSIFIED IN ACCORDANCE WITH CAN/ULC-S102 and CAN/ULC-S102.2 SURFACE-BURNING CHARACTERISTICS

+

+ Flame-spread and smoke-developed values applicable to the product

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING LIGHTS CERTIFIED FOR CANADA (QAXB7)

GENERAL

This category covers lights intended for use with office furnishings when installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' This category covers both freestanding and mounted lights that may be electrically or mechanically connected to an office furnishing. Products specifically designed and arranged for use with an individual design of office furnishing are marked to identify the specific office furnishing with which they have been investigated.

Products that require electrical assembly in the field are covered as kits or light accessories in the individual certifications. Kits and light accessories are completely wired to the extent permitted by the intended field installation, with all splices and connections completed and with all electrical components mounted.

A kit forms a complete office furnishing light when assembled in accordance with the instructions provided.

A light accessory and the required office furnishing or a combination of light accessories form a complete office furnishing light when assembled in accordance with the instructions provided.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

REBUILT PRODUCTS

This category also covers office furnishing lights that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishing lights are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishing lights are subject to the same requirements as new office furnishing lights.

RELATED PRODUCTS

Office furnishing lights investigated to CSA-C22.2 No. 12, ''Portable Luminaires,'' or CSA-C22.2 No. 9.0, ''General Requirements for Luminaires,'' may also be covered under Luminaires, Portable Certified for Canada (QOWZ7).

Office furnishing light accessories investigated to CSA-C22.2 No. 12 may also be covered under Portable Luminaire Kits and Subassemblies Certified for Canada (QPAU7).

Office furnishing light accessories investigated to CSA-C22.2 No. 250.0, ''Luminaires,'' may also be covered under Luminaire Fittings Certified for Canada (IFFX7).

ADDITIONAL INFORMATION

For additional information, see Office Furnishings Certified for Canada (QAWZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 250.0, ''Luminaires,'' CSA-C22.2 No. 9.0, ''General Requirements for Luminaires,'' CSA-C22.2 No. 12, ''Portable Luminaires,'' and CAN/CSA-C22.2 No. 203, ''Modular Wiring Systems for Office Furniture,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Office Furnishing Lights Certified for Canada (QAXB7)−*Continued*

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Office Furnishing Light,'' ''Office Furnishing Light Kit,'' ''Office Furnishing Light Accessory'' or ''Rebuilt Office Furnishing Light.'' The word ''Luminaire'' may be used in lieu of ''Light.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING ACCESSORIES CERTIFIED FOR USE WITH SPECIFIED EQUIPMENT CERTIFIED FOR CANADA (QAXE7)

USE AND INSTALLATION

This category covers office furnishing accessories, such as lighting units, receptacles, clocks, power distribution systems and system components, intended for field installation in specific combinations that have been investigated for use with the specific office furnishing systems.

These accessories have been investigated for use with other manufacturers' certified office furnishings, as indicated in the Certification Mark or the referenced compatibility list.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 203 (1991), ''Modular Wiring Systems for Office Furniture.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE CERTIFIED FOR CANADA (QAYK7)

USE

This category covers optical fiber cable, which is a jacketed cable for use within buildings in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' in telecommunications systems.

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket consisting of the manufacturer's identification (name, trademark or color threads), cable type designation as noted below, flame classification as specified for the applicable cable type, and the temperature rating if above 60°C. Optical fiber cable may optionally be marked ''sunlight resistant'' (or ''sun res'' or ''SR'').

Type Designations and Associated Flame Ratings

OFNG, OFCG, OFNR or OFCR — The char length of this cable does not exceed 1.5 m (4 ft 11 in.) when tested in accordance with the Vertical-Tray Flame Test, Method 2 – FT4 in CSA-C22.2 No. 2556, ''Wire and Cable Test Methods.'' Smoke measurements are optional; the total smoke released does not exceed 150m^2 and the peak smoke release rate does not exceed 0.40 m^2/s when tested in accordance with the ST1 Limited Smoke Test in CSA-C22.2 No. 2556. The flame rating ''FT4'' or ''FT4-ST1,'' as applicable, follows the Type designation.

OFNP or OFCP — This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 1.50 m (5 ft), when tested per ANSI/NFPA 262, ''Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces,'' (CSA FT6 flame test). The flame rating ''FT6'' follows the Type designation.

OFNH, OFCH, OFN or OFC — This cable complies with the FT1 Flame Test requirements when tested in accordance with the FT1 flame test in CSA-C22.2 No. 2556. The flame rating ''FT1'' follows the Type designation.

A ''C'' in the third position of the Type designation indicates that the cable contains noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers.

An ''N'' in the third position of the Type designation indicates that the cable contains no metallic members and no other electrically conductive materials.

Cable marked ''sunlight resistant'' (or ''sun res'' or ''SR'') may be exposed to the direct rays of the sun.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 232, ''Optical Fiber Cables.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Optical Fiber Cable.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE, FIELD ASSEMBLED CERTIFIED FOR CANADA (QAZD7)

USE AND INSTALLATION

This category covers field-assembled optical fiber cable, which is an on-site assembly of one or more optical fiber members and an optical fiber jacket. Field-assembled optical fiber cable is intended for installation in buildings in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' The optical fiber jacket is installed in a manner similar to conduit or raceway. Once the jacket is installed, the optical fiber members are inserted into the jacket, completing the assembly.

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket . This marking includes the flame rating ''FT1'' or the suffix ''H,'' ''FT4'' or the suffix ''G'' or ''R,'' or ''FT6'' or the suffix ''P,'' in addition to the Listee's name and catalog designation and one of the following Type designations:

OFC — Indicates cable that contains noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers.

OFN — Indicates cable that contains no metallic members and no other electrically conductive materials.

Cable marked ''Sunlight Resistant'' (or ''Sun Res'' or ''SR'') may be exposed to the direct rays of the sun.

Optical Fiber Cable, Field Assembled Certified for Canada (QAZD7)−*Continued*

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged includes the following: "For Use Only with Optical Fiber Members, Cat. No.____, manufactured by [company name]."

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber members are packaged contains the following: "[Company name] Optical Fiber Members, For Use Only With Optical Fiber Jacket Cat. No. ____, manufactured by [company name]."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 232, "Optical Fiber Cables."

UL MARK

The UL symbol on the optical fiber jacket and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Field Assembled Optical Fiber Cable."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER/COMMUNICATIONS/ SIGNALING/COAXIAL CABLE RACEWAY CERTIFIED FOR CANADA (QAZM7)

USE AND INSTALLATION

This category covers raceway and fittings intended for the installation of conductive and nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The raceway is only suitable for the installation of the optical fiber cable, communications cable, signaling cable, and coaxial cable noted in the following information. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceway or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

A raceway marked "Plenum – OFCR FT-6" is suitable for use in ducts, plenums or other spaces used for environmental air when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-6." This raceway exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-spread distance of 1.50 m when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ULC/ORD-C2024, "Standard Method of Fire Tests for Optical Fibre Cable Raceway." This raceway is identified by a marking on the surface of the raceway or on a marker tape. This raceway is also suitable for installation in risers when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-4" or "FT-6," and general-purpose use when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-1," "FT-4" or "FT-6."

A raceway marked "Riser – OFCR FT-4" is suitable for installation in risers when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-4" or "FT-6." This raceway has fire-resistant characteristics capable of preventing the carrying of fire from floor to floor. This raceway meets the test requirements of the Test for Flame Propagation (Riser) in ULC/ORD-C2024. This raceway is identified by a marking on the surface of the raceway or on a marker tape. The raceway is also suitable for general-purpose use when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-1," "FT-4" or "FT-6."

A raceway marked "General – OFCR FT-1" is suitable for general-purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-1," "FT-4" or "FT-6." This raceway is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ULC/ORD-C2024.

Pliable raceway is a raceway that can be bent by hand without the use of tools. The smallest radius of the curve of the inner edge of any bend to which the raceway may be bent without cracking either on the outer surface or internally is not less than 2-1/2 times the outside diameter of the raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C2024, "Standard Method of Fire Tests for Optical Fibre Cable Raceway."

UL MARK

The UL symbol and the product name "Optical Fiber Raceway," "Communications Cable Raceway," "Signaling Cable Raceway," "Coaxial Cable Raceway" or "Optical Fiber/Communications/Signaling/Coaxial Cable Raceway" on the raceway, and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the appropriate product names as indicated above.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER/COMMUNICATIONS/ SIGNALING/COAXIAL CABLE OUTLET BOXES CERTIFIED FOR CANADA (QAZR7)

USE AND INSTALLATION

This category covers outlet boxes and other device-mounting products intended to support outlets for use with or without raceways and fittings that contain nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable. These products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The products and raceways are only suitable for the installation of the optical fiber, communications cable, signaling cable, and coaxial cable. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceways or fittings of other systems.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 18.1, "Metallic Outlet Boxes," and CSA-C22.2 No. 18.2, "Nonmetallic Outlet Boxes."

UL MARK

The Listing Mark on the product, or the UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Outlet Box," "Communications Cable Outlet Box" or "Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOX ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QAZV7)

GENERAL

This category covers conduit box bodies, flat and domed covers, fixture hanger covers, threaded extensions, sealing hub covers, and similar subassemblies of outlet boxes, fixture fittings and conduit fittings. They are intended to be assembled at the factory or in the field by the user to form a complete explosion-proof or dust-ignition-proof enclosure. Information on restrictions in the use and assembly of these devices are marked on each part.

RELATED PRODUCTS

See Outlet Boxes for Use in Hazardous Locations Certified for Canada (QBCR7), Conduit Fittings for Use in Hazardous Locations Certified for Canada (EBNV7) and Luminaire Fittings for Use in Hazardous Locations Certified for Canada (IGIV7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Outlet Box Accessory for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

****

CABLE ROUTING ASSEMBLIES CERTIFIED FOR CANADA (QBAA7)

USE AND INSTALLATION

This category covers routing assemblies for the installation of conductive and nonconductive optical fiber cable and communications cable. The routing assemblies are only suitable for the installation of optical fiber and communications cable noted in the following information. Individual routing assembly systems differ in their construction and, therefore, their components are not interchangeable with other routing assemblies or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends, and fittings such as expansion joints, female and male adapters, and couplings.

These products may or may not incorporate end fixtures or covers.

A routing assembly marked ''Plenum – OFCR FT-6'' is suitable for use in ducts, plenums or other spaces used for environmental air when used to enclose optical fiber or communications cable marked ''FT-6.'' This exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 1.50 m when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ULC/ORD-C2024, ''Standard Method of Fire Tests for Optical Fibre Cable Raceway.'' This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape. This routing assembly is also suitable for installation in risers when used to enclose optical fiber or communications cable marked ''FT-4'' or ''FT-6'' and general use when used to enclose optical fiber or communications cable marked ''FT-1,'' ''FT-4'' or ''FT-6.''

A routing assembly marked ''Riser – OFCR FT-4'' is suitable for installation in risers when used to enclose optical fiber or communications cable marked ''FT-4'' or ''FT-6.'' This routing assembly has fire-resistant characteristics capable of preventing the spread of fire from floor to floor. This routing assembly meets the test requirements of the Test for Flame Propagation (Riser) in ULC/ORD-C2024. This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape. The routing assembly is also suitable for general use when used to enclose optical fiber or communications cable marked ''FT-1,'' ''FT-4'' or ''FT-6.''

A routing assembly marked ''General – OFCR FT-1'' is suitable for general use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber or communications cable marked ''FT-1,'' ''FT-4'' or ''FT-6.''

This routing assembly is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ULC/ORD-C2024.

RELATED PRODUCTS

Optical fiber and communications cable raceways are covered under Optical Fiber/Communications/Signaling/Coaxial Cable Raceway Certified for Canada (QAZM7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C2024, ''Standard Method of Fire Tests for Optical Fibre Cable Raceway.''

UL MARK

The UL symbol on the product and the complete Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''General-use Cable Routing Assembly,'' ''Riser Cable Routing Assembly,'' ''Plenum Cable Routing Assembly,'' ''Optical Fiber Routing Assembly,'' ''Communications Cable Routing Assembly'' or ''Optical Fiber/Communications Cable Routing Assembly.''

****

OUTLET BOXES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QBCR7)

GENERAL

This category covers conduit boxes for use in threaded rigid conduit or steel intermediate metal conduit systems. They provide for splicing of conductors, but conductors should not be sealed in conduit boxes. The boxes are marked to indicate when accessories such as unions and sealing fittings are furnished with the box.

Boxes marked ''rain tight'' have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in entrance of water.

Cast-aluminum alloy outlet boxes are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt base paint or the equivalent.

RELATED PRODUCTS

See Conduit Fittings for Use in Hazardous Locations Certified for Canada (AAIZ7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. ****

ACTIVE OPTICAL CABLE ASSEMBLIES CERTIFIED FOR CANADA (QBDV7)

GENERAL

This category covers factory-assembled active optical cable (AOC) assemblies. AOC is a cabling technology that accepts the same electrical interfaces as a traditional copper cable, but uses optical fiber between the connectors. AOC uses electrical-to-optical transceivers on the cable ends to access the performance capabilities of optical fiber while retaining compatibility with standard electrical interfaces.

AOC assemblies consist of optical fiber or hybrid (optical fiber/copper) cable and electrically active connectors incorporating optical transceivers. This AOC utilizes Class 1 lasers with the light source wholly contained within the cable assembly. The electrical circuits are powered by a Class 2 power source or an information technology (computer) equipment limited-power circuit as defined in Section 16 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). Hybrid cable may be used to carry electrical power to the far end of the cable and is suitably rated for the voltage and current involved.

USE AND INSTALLATION

This category covers AOC assemblies intended for installation between units of electronic equipment where the interconnecting cable is outside of the equipment enclosures. AOC assemblies are not a permanent wiring method except as described in the CEC articles below.

When constructed with a certified cable identified by a marking on the surface of the jacket as a type permitted in Sections 16, 56 or 60 of the CEC, AOC assemblies may be installed in accordance with those sections.

RELATED PRODUCTS

Active connectors such as those that incorporate active optical transceivers are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ8) or Audio/Video, Information and Communication Technology Equipment Certified for Canada (AZOA8).

Optical fiber cable (without connectors) for use within buildings in accordance with Section 56 of the CEC is covered under Optical Fiber Cable Certified for Canada (QAYK7).

Factory-assembled optical fiber cable assemblies and factory-/field-installed connector products intended for residential and/or commercial applications as part of an optical fiber wiring system without active optical transceivers are covered under Optical Fiber Cable Assemblies and Connectors Certified for Canada (QBFA7).

Communications interconnecting cable, patch cords, extension cords and the like without active optical transceivers and not intended for use in residential and/or commercial applications as connected premises in accordance with the CEC are covered under Communications-circuit Accessories Certified for Canada (DUXR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

All assemblies: TIA-455-6-B (2003), "FOTP-6 - Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

Optical fiber cable identified as a type permitted for permanent installation in public or private premises by Section 56 of the CEC: CSA-C22.2 No. 232 (2009), "Optical Fiber Cables."

Hybrid cable identified as a type permitted for permanent installation in public or private premises by Sections 16 or 60 of the CEC: CSA-C22.2 No. 214 (2008), "Communications Cables."

Optical fiber cable for use in patch cords and not intended for permanent installation in public or private premises as described in the CEC: CSA-C22.2 No. 2556 (2007), "Wire and Cable Test Methods" (FT-1 rating).

Hybrid cable for use in patch cords and not intended for permanent installation in public or private premises as described in the CEC: CSA-C22.2 No. 210 (2011), "Appliance Wiring Material Products" (FT-1 rating).

UL MARK

The Listing Mark of UL on the product, on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Active Optical Cable" or "[Technology] Active Optical Cable," where "Technology" refers to the copper technology of the interface, such as "HDMI," "Thunderbolt" or "Ethernet."

The words "Active Optical Cable" may be abbreviated "AOC."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS CERTIFIED FOR CANADA (QBFA7)

GENERAL

This category covers factory-assembled optical fiber cable assemblies and factory/field-installed connector products intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber cable assemblies consist of optical fiber cable and optical fiber cable connectors. When constructed with a certified cable identified by a marking on the surface of the jacket as a type permitted in Section 56 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), optical fiber cable assemblies may be installed in accordance with that Section.

Optical fiber cable connectors are intended for factory assembly or for field assembly by trained service personnel.

RELATED PRODUCTS

Optical fiber cable (without connectors) for use within buildings in accordance with the CEC is covered under Optical Fiber Cable Certified for Canada (QAYK7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate optical fiber connectors is CAN/CSA-C22.2 No. 0.17 (2000), "Evaluation of Properties of Polymeric Materials."

The basic standards used to investigate optical fiber cable assemblies are CSA-C22.2 No. 232 (2009), "Optical Fiber Cables" (where certified cable is employed) or CSA-C22.2 No. 2556 (2007), "Wire and Cable Test Methods" (for noncertified cable FT-1 rating) and, for connectors, CAN/CSA-C22.2 No. 0.17 (2000) and TIA-455-6-B (2012), "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

UL MARK

The Listing Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable Assembly" or "Optical Fiber Connector."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS CERTIFIED FOR CANADA (QBPZ7)

METALLIC OUTLET BOXES CERTIFIED FOR CANADA (QCIT7)

GENERAL

This category covers metallic flush device boxes, conduit boxes, floor boxes, outlet boxes, outlet box hoods, special-purpose boxes (e.g., concrete and boxes for ceiling fans), extension rings, metallic covers, and cover plates for flush-mounted wiring devices intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Units of measure for markings are SI (metric) units unless otherwise specified. Markings expressed in equivalent units are optional.

COVER POSITION FOR 4-BY-4 BOX

This box accommodates two standard cover configurations.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

BOX EXTENDER

Adjustable-depth box extenders intended for adjustment during installation are marked with the maximum allowable amount of extension. The smallest unit shipping carton is also marked with the following or equivalent: "MAXIMUM EXTENSION __ mm (__in)" or "EXTENSION MAXIMUM __mm (__ in)."

Metallic Outlet Boxes Certified for Canada (QCIT7)−*Continued*

CLAMPS

Each cable opening, except a round knockout, is provided with a clamp. The carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with armored cable, TECK cable or aluminum-sheathed cable (“A”): flexible metal conduit – F, nonmetallic-sheathed cable – ‘‘N,’’ or flexible tubing (loom) – “T.” If suitable for all types, the clamp is marked ‘‘ALL.’’ Clamps suitable for nonmetallic-sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations. Clamps have been tested for securing only one cable per clamp, except multiple-section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout. If clamps have been tested only for 14/2 or for a cable size larger than 14/2, the cable size or size range is marked on the clamp or its smallest unit shipping carton. If clamps have been tested with 14/2 and the largest size cable the cable entry can physically accommodate, no marking is required.

KNOCKOUT ENTRY

Knockouts for the entrance of conduit or cable are not located in the sides of a gangable (sectional) box, including boxes intended to accommodate a switch rated at 347 V ac.

FIXTURE/LUMINAIRE SUPPORT

A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire is suitable for fixtures/luminaires weighing up to 23 kg. A bar hanger or a box designed to be supported from a ceiling grid is marked ‘‘Not for Fixture/Luminaire or Fan Support.’’ An instruction sheet is provided. The box is marked with the maximum weight it can support, but not exceeding 23 kg.

CEILING PADDLE FAN SUPPORT

An outlet box intended to support a ceiling-suspended fan weighing a maximum 15.9 kg or 23 kg is visibly and clearly marked ‘‘ACCEPTABLE FOR FAN SUPPORT OF ___ kg (___ lb) OR LESS’’ and ‘‘CONVIENT AU SUPPORT D’UN VENTILATEUR DE ___ kg (___ lb) OU MOINDRE,’’ with blanks filled in with maximum values. Each ceiling fan support box is provided with size No. 10-32 retaining screws and external tooth lock washers for securing the fan or the outlet box cover to the box.

INTEGRAL CONNECTORS

Boxes with integral connectors for electrical metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

GROUNDING MEANS

A minimum of one installed grounding screw per gang or device, or other means, is provided to connect the branch-circuit grounding conductors to the box and to connect a bonding jumper from the box to the grounding terminal of a wiring device. An identified hole, threaded or not, is not acceptable for grounding.

CONCRETE TIGHT

Boxes suitable for installation in concrete are identified as ‘‘concrete tight’’ on the carton. They may have no means of support other than the concrete and often accommodate covers at top and bottom. Outlet boxes intended for use in concrete slab ceilings have knockouts located to allow the conduit to be installed above crossed reinforcing bars without being offset or bent.

FLOOR BOXES

Floor boxes designed for floor installation are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type such as ‘‘Floor Box’’ or ‘‘Floor Box, Concrete Tight,’’ as appropriate. Floor boxes may be provided with wiring devices.

WET AND DAMP LOCATIONS

Boxes and covers intended for use in wet locations are marked ‘‘Wet Location.’’ Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed are marked ‘‘Wet Location Only When Cover Closed.’’ Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked ‘‘Extra-Duty.’’

RELATED PRODUCTS

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies Certified for Canada (QQYZ7).

ADDITIONAL INFORMATION

Metallic Outlet Boxes Certified for Canada (QCIT7)−*Continued*

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 18.1 (2004), ‘‘Metallic Outlet Boxes,’’ and CAN/CSA-C22.2 No. 42.1 (2000), ‘‘Cover Plates for Flush-Mounted Wiring Devices.’’

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: ‘‘Outlet Box,’’ ‘‘Outlet Box and Cover,’’ ‘‘Extension Ring,’’ ‘‘Flush Device Box,’’ or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC OUTLET BOXES CERTIFIED FOR CANADA (QCMZ7)

GENERAL

This category covers nonmetallic flush device boxes, conduit boxes, floor boxes, outlet boxes, outlet box and bar hanger assemblies, outlet box hoods, special-purpose boxes (e.g., concrete and boxes for ceiling fans), extension rings, metallic and nonmetallic box extenders, covers, and cover plates for flush-mounted wiring devices intended for installation in accordance with CAN/CSA-C22.1, ‘‘Canadian Electrical Code, Part I.’’ Units of measure for markings will include SI (metric) units, unless otherwise specified. Markings expressed in equivalent units are optional.

COVER MOUNTING SCREW HOLES FOR 4-BY-4 BOX

This box accommodates two standard cover configurations.

BOX EXTENDER

Adjustable-depth box extenders intended for adjustment during installation are marked with the maximum allowable amount of extension. The smallest unit shipping carton is also marked with the following or equivalent: ‘‘MAXIMUM EXTENSION ___ mm (___ in)’’ or ‘‘EXTENSION MAXIMUM ___ mm (___ in).’’

CABLE AND CLAMPS

Each cable opening, except a round knockout, is provided with a clamp. The carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with nonmetallic-sheathed cable ‘‘N’’ or flexible tubing (loom) “T.” Clamps have been tested for securing only one cable per clamp, except multiple-section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout. If clamps have been tested only for 14/2 or for a cable size larger than 14/2, the cable size or size range is marked on the clamp or its smallest unit shipping carton. If clamps have been tested with 14/2 and the largest size cable the cable entry can physically accommodate, no marking is required.

Boxes intended for use with nonmetallic-sheathed cable or open wiring are suitable for use with cable or wire rated 90°C.

FOR USE WITH RIGID PVC CONDUIT

Nonmetallic boxes for use with rigid PVC conduit are intended for use at a maximum working temperature of 75°C.

FIXTURE/LUMINAIRE SUPPORT

A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire is suitable for fixtures/luminaires weighing up to 13 kg or less or up to 23 kg. The box is marked either 13 kg or 23 kg.

A bar hanger or a box not intended to be used with a box for fixture/luminaire or ceiling fan support, but designed only to be supported from a ceiling grid is marked ‘‘Not for Fixture/Luminaire or Fan Support.’’

CEILING FAN SUPPORT

An outlet box intended to support a ceiling-suspended fan weighing a maximum 15.9 kg or 23 kg is visibly and clearly marked ‘‘ACCEPTABLE FOR FAN SUPPORT OF ___ kg (___ lb) OR LESS’’ and ‘‘CONVIENT AU SUPPORT D’UN VENTILATEUR DE ___ kg (___ lb) OU MOINDRE,’’ with blanks filled in with maximum values. Each ceiling fan support box is provided with size No. 10-32 retaining screws and external tooth lock washers for securing the fan or the outlet box cover to the box.

GROUNDING MEANS

Nonmetallic Outlet Boxes Certified for Canada (QCMZ7)−*Continued*

A metal strap or plate with a minimum of one installed grounding screw is provided for bonding connection in a box of nonmetallic material, and is securely mounted to the box. A means is provided for continuous bonding of multiple wiring devices.

CONCRETE TIGHT

Boxes suitable for installation in concrete are designated as ''concrete tight'' on the carton. They may have no means of support other than the concrete and often accommodate covers at top and bottom. Outlet boxes intended for use in concrete slab ceilings have knockouts located to allow the conduit to be installed above crossed reinforcing bars without being offset or bent.

FLOOR BOXES

Floor boxes designed for floor installation are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor-cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type, such as ''Floor Box'' or ''Floor Box, Concrete Tight,'' as appropriate. Floor boxes may be provided with wiring devices.

WET LOCATIONS

Boxes and covers are intended for use in wet locations are marked ''Wet Location'' or ''Rain tight.'' Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked ''Wet Location Only When Cover Closed.'' Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked ''Extra-Duty.''

RELATED PRODUCTS

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies Certified for Canada (QQYZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 18.2, ''Nonmetallic Outlet Boxes,'' CAN/CSA-C22.2 No. 42.1, ''Cover Plates for Flush-Mounted Wiring Devices,'' and CAN/CSA-C22.2 No. 85, ''Rigid PVC Boxes and Fittings.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Outlet Box,'' ''Outlet Box and Cover,'' ''Extension Ring'' or ''Flush Device Box,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BUSHINGS AND FITTINGS CERTIFIED FOR CANADA (QCRV7)

GENERAL

This category covers supports for outlet and flush-device boxes; bushings for use in metal studs; fittings for use in or on outlet and flush-device boxes, such as knockout reducers, seals and insulating inserts, and cord-grip attachments; insulating gaskets used behind a cover plate for flush-mounted wiring devices to stop drafts; pulling, strain-relief and support grips; locknuts for conduit; sealing rings, service-entrance heads for rigid conduit or electrical metallic tubing; cable riser supports; and bushings for use on the ends of rigid or flexible conduit, electrical metallic tubing, or armored cable, where a change to open wiring is made. These bushings are suitable for temperatures of 150°C if they are black or brown in color, 90°C if they are any other color unless specifically marked for a higher temperature. These products are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

All male threaded fittings have only been investigated for use with locknuts.

Outlet Bushings and Fittings Certified for Canada (QCRV7)−*Continued*

Reusability — Bushings and fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

Service-entrance heads or hoods are intended to be used on rigid conduit or electrical metallic tubing that is mounted with the conductor openings facing toward the ground. Service-entrance heads or hoods are suitable for outdoor use and in wet locations.

ENVIRONMENTAL ENCLOSURE TYPE RATINGS

Each fitting may be marked with one or more of the following Environmental Enclosure Type ratings for which it was investigated: Type 1, 2, 3, 3R, 3S, 4, 4X, 5, 6, 6P, 12, 12K, 13. The intended uses for each Environmental Enclosure Type are indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/CSA-C22.2 No. 18.1 (2004), ''Metallic Outlet Boxes''
CSA-C22.2 No. 18.3 (2004), ''Conduit, Tubing, and Cable Fittings''
CAN/CSA-C22.2 No. 42.1, ''Cover Plates for Flush-Mounted Wiring Devices''
CAN/CSA-C22.2 No. 85 (1989), ''Rigid PVC Boxes and Fittings''
CSA-C22.2 No. 211.0, ''General Requirements and Methods of Testing for Nonmetallic Conduit''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Outlet Bushing,'' ''Outlet Fitting,'' ''Offset Adapter,'' ''Bar Hanger,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET CIRCUIT TESTERS CERTIFIED FOR CANADA (QCYU7)

GENERAL

This category covers portable devices with fixed attachment-plug blades, or probes attached to flexible leads, used to indicate various wiring conditions in branch circuits by a pattern of lights or other similar means along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI), connected to the branch circuit.

These devices are not comprehensive diagnostic instruments.

RELATED PRODUCTS

Ground-continuity-indicating devices constructed integral with cord-connector bodies for use on construction sites are covered under Attachment Plugs, Fuseless Certified for Canada (AXUT7) as ''cord-connector bodies.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 160 (1985), ''Voltage and Polarity Testers.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Circuit Tester.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PACKAGED PUMPING SYSTEMS CERTIFIED FOR CANADA (QCZJ7)

GENERAL

This category covers fluid handling systems consisting of pumps, electric motors, frequency drives, control valves, gauges and piping mounted on a structural steel base. They are used for plumbing boosters, heat transfer, hot water heating, HVAC chilled and hot water packages, irrigation, boiler feed and condensate packages, and similar applications.

This category also covers fountain pumping systems intended for connection to permanently-installed architectural and floating fountains. They are intended for installation in accordance with Section 68 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). If provided with a control panel, its nameplate includes "Industrial Control Panel for Floating Fountain," "Industrial Control Panel for Permanently Installed Fountain" or "Fountain Control Panel."

RATINGS

Packaged pumping systems are rated 600 V or less. The supply input is rated in full load amperes, voltage, number of phases, frequency, and the rating of the largest motor load.

The system and components of the system are intended to be used within the rated working pressure and with the appropriate liquids in accordance with system markings.

SPECIAL CONSIDERATIONS

These pumping systems have not been investigated for the handling of hazardous materials or for use in hazardous (classified) locations as defined in the CEC.

RELATED PRODUCTS

Systems covered under this category may also be covered under Drinking Water System Components Certified for Canada (FDNP7). The investigation of drinking water system components is conducted with respect to contaminants that can be introduced into the drinking water supply from their base metal alloy, plastic resin, or other nonmetallic parts such as gaskets, seals, coatings, adhesives, filter media, cement linings or the like.

Systems investigated together with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment Certified for Canada (LZFE7) or Specialty Refrigeration Equipment Certified for Canada (SROT7).

Pumps intended for use with flammable liquids are covered under Pumps, Power Operated, Flammable Liquid Certified for Canada (RCRX7).

Prepackaged combinations of components, such as pumps, filters, heaters, blowers, lights and controls, intended for use with field-supplied hot tubs or spas are covered under Hot Tub and Spa Equipment Assemblies Certified for Canada (WBYQ7).

Pumps investigated for use with or in proximity to swimming pools or spas are covered under Pumps Certified for Canada (WCSX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and CAN/CSA-C22.2 No. 108, "Liquid Pumps."

The basic standard used to investigate packaged pumping systems for heating and cooling equipment in this category is CSA-C22.2 No. 236, "Heating and Cooling Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Packaged Pumping System" or "Packaged Fountain Pumping System."

The Listing Mark covers only the equipment mounted to the common structural frame.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS CERTIFIED FOR CANADA (QDFT7)

This category covers painting equipment, air compressors and vacuum pumps intended for use on nominal system voltages of 600 V and less, except that where the appliances are driven by universal type motors or electromagnetic mechanisms, the scope is limited to appliances rated for use on nominal system voltages of 240 V or less. These appliances are cord-connected or provided with means for field wiring connections.

This equipment is intended for household, commercial or industrial use as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). This includes sprayers intended for extensive open spraying of paints having a flash point higher than 60°C, but excludes electrostatic sprayers and types for use in spray booths or other areas when hazardous concentrations of flammable vapors are likely to occur.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding to comply with the provisions of the CEC. Such appliances are distinctively marked "Double-Insulated" or with the symbol  .

The instructions and warnings supplied with and applicable to each piece of equipment should be carefully observed. In cases where the nature or construction of the equipment is such that precautions beyond the requirements in the CEC must be observed in installation or use, suitable warnings are marked on the equipment.

The burglary and theft protection features of coin-operated machines have not been investigated.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPRESSORS, VACUUM PUMPS AND PNEUMATIC PAINT SPRAYERS CERTIFIED FOR CANADA (QDGS7)

USE AND INSTALLATION

This category covers air compressors and vacuum pumps, including pneumatic-type paint sprayers.

Pressure vessels, included with products under this category, are subject to the applicable requirements in CSA-B51, "Boiler, Pressure Vessel, and Pressure Piping Code."

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

REBUILT PRODUCTS

This category also covers compressors, vacuum pumps and pneumatic paint sprayers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are subject to the same requirements as new compressors, vacuum pumps and pneumatic paint sprayers.

FACTORS NOT INVESTIGATED

This equipment has not been investigated for use as medical and dental equipment, or heating, air conditioning or refrigeration equipment.

RELATED PRODUCTS

High-pressure paint sprayers, paint mixers and paint pigment dispensers are covered under Painting Equipment Certified for Canada (QDIQ7).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps Certified for Canada (QDFT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

Compressors, Vacuum Pumps and Pneumatic Paint Sprayers Certified for Canada (QDGS7)−*Continued*

together with the word ″LISTED,″ a control number, and the product name ''Painting Equipment'' or other appropriate product name as shown in the individual Listings.

For rebuilt products the word ''Rebuilt'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTROSTATIC PAINT-SPRAYING EQUIPMENT CERTIFIED FOR CANADA (QDHR7)

USE

This category covers electrostatic paint-spraying equipment, including control panels and power packs, intended to be installed and operated in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and ''National Fire Code of Canada'' requirements applicable to spray application using flammable and combustible materials.

With respect to the possibility of igniting solvent vapors and paint deposits in a spray booth by a spark from this equipment, Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps Certified for Canada (QDFT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 187, ''Electrostatic Air Cleaners.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electrostatic Paint-spraying Equipment.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT CERTIFIED FOR CANADA (QDIQ7)

USE

This category covers motor-operated equipment used for the preparation or application of paint, such as paint mixers, paint pigment dispensers, paint rollers and high-pressure airless paint sprayers.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with CAN/CSA C22.1, ''Canadian Electrical Code, Part I.''

REBUILT PRODUCTS

This category also covers painting equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt painting equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt painting equipment is subject to the same requirements as new painting equipment.

RELATED PRODUCTS

Paint heaters and paint dryers are covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7).

Pneumatic paint sprayers are covered under Compressors, Vacuum Pumps and Pneumatic Paint Sprayers Certified for Canada (QDGS7).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps Certified for Canada (QDFT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial).''

UL MARK

Painting Equipment Certified for Canada (QDIQ7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Painting Equipment'' or other appropriate product name as shown in the individual Listings.

For rebuilt products the word ''Rebuilt'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS CERTIFIED FOR CANADA (QEUY7)

USE, INSTALLATION AND MARKINGS

This category covers panelboards and enclosed panelboards rated 600 V or less.

Panelboards are intended for mounting in cabinets, cutout boxes, or enclosures designed for the purpose. The enclosure may be provided with the panel or provided separately. Only panelboards marked to indicate that they are for use in a specific enclosures (identified by either catalog number or specific dimensional information) and panelboards labeled as ''Enclosed Panelboards'' have been investigated to determine that wiring space is adequate, or have been investigated for short-circuit-current ratings greater than 10,000 A rms symmetrical.

Enclosed panelboards identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Some enclosed panelboards have one or more openings for plug-in watt-hour or similar meters. Such panelboards, when marked for outdoor use have, except for the joint between the plug-in meter and opening, been investigated for rain tightness.

Some panelboards are suitable for use as service equipment and may be so marked. Such marking is part of the Listing Mark as noted below or is an integral part of other required markings. Panelboards marked to indicate that they are suitable for use as service equipment and which can be removed from the enclosure are marked to identify the specific box or boxes in which they are intended to be installed. If the acceptability of such a panelboard for use as service equipment depends upon the condition of installation or use, the panelboard is marked to indicate those conditions.

Some panelboards incorporate neutrals factory bonded to the frame or enclosure. Such units are marked ''Suitable Only for Use as Service Equipment.''

Panelboards marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Panelboards are marked with their short-circuit current rating in rms symmetrical amps. The marking states that short-circuit-current ratings are limited to the lowest interrupting rating of (1) any device installed or intended to be installed therein, and/or (2) any combination series-connected device. However, for combination series-connected devices, the short-circuit-current rating marked on the panelboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the panelboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the panelboard in accordance with the marked instructions.

Panelboards to which units (circuit breakers, switches, etc.) may be added in the field are marked with the name or trademark of the manufacturer and the catalog number or equivalent of those units that are intended to be installed in the field.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches, other than fused power circuit devices, should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU7) and fused power circuit devices (see IYSR7) used in panelboards are suitable for continuous use at 100% of their rating.

Some panelboards may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location. If all

terminals are suitable for use with aluminum conductors as well as copper conductors, the panelboard is marked "Use Copper or Aluminum Wire." A panelboard employing terminals or main or branch circuits units, individually marked "CU-AL," will be marked as noted above or "Use Copper Wire Only." The latter statement indicates that wiring space or other factors make the panelboard unsuitable for aluminum conductors.

Unless the panelboard is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Notes to Table 2 and Table 4 of the CEC. Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

RELATED PRODUCTS

Large single panels, frames, or assemblies of panels on which are mounted on the face, back, or both, switches, overcurrent and other protective devices, buses, and usually instruments; accessible from the rear as well as from the front and not intended to be installed in cabinets are covered under Switchboards, Dead-front Certified for Canada (WEVZ7).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches Certified for Canada (WPTZ7).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels Certified for Canada (NITW7).

Distribution equipment containing only one circuit subdivision, unless also provided with a meter socket, is covered under Circuit Breakers, Molded Case and Circuit-breaker Enclosures Certified for Canada (DIVQ7).

Distribution equipment intended to serve as a means for distributing power required to operate mobile or temporarily installed equipment is covered under Power Outlets and Power Outlet Fittings Certified for Canada (QPYV7).

Factory-wired assemblies of controllers, timers, temperature-regulating equipment and the like, intended for control of equipment for use with swimming pools, hot tubs and/or spas are covered under Controls Certified for Canada (WAWU7).

Factory-wired assemblies intended for the control of architectural and floating fountains are covered under Architectural and Floating Fountains Certified for Canada (AWEG7).

Portable power distribution equipment is covered under Power Distribution Equipment, Portable Certified for Canada (QPRW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 29, "Panelboards and Enclosed Panelboards."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Panelboard" or "Enclosed Panelboard." The product name may include the wording "Suitable for Use as Service Equipment," where appropriate. The product name "Enclosed Panelboard" covers both the panel and the enclosure with which it is provided.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS, LIGHT AND POWER FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QFKR7)

USE

This category covers manually operable, air-break-type enclosed panelboards employing circuit breakers having automatic overload protection.

These enclosed panelboards are intended for lighting and low-capacity power distribution.

These panelboards are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors.

Each marking is independent of any marking on the terminal connectors and is on a wiring diagram or other readily visible location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Panelboard for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PARTS CLEANERS CERTIFIED FOR CANADA (QGDS7)

USE

This category covers parts cleaners, which are units intended for use with solvents and water-based cleaning solutions, as indicated in the individual certifications. Water-based cleaning solutions are considered to be noncombustible, alkaline (pH of more than 7) liquids in their unused state.

Parts cleaners with electric components are intended only for use with fluids having a flash point not less than 60°C (140°F) as indicated in the individual certifications. Parts cleaners for use with fluids having a flash point less than 60°C (140°F), which results in the generation of a hazardous (classified) location in and around the equipment, have been investigated accordingly.

REBUILT PRODUCTS

This category also covers parts cleaners that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt parts cleaners are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt parts cleaners are subject to the same requirements as new parts cleaners.

FACTORS NOT INVESTIGATED

The physiological effects of the cleaning solution in any form have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Parts Cleaner" or "Parts Washer." The product name may be preceded by "Section of" and is followed by the statement, as appropriate, "Consisting of sink (or as appropriate) assembly Part No. (Cat. No., etc.) and a control (or as appropriate) assembly Part No. (Cat. No., etc.)."

For rebuilt products, the word "Rebuilt," "Renovated" or "Reconditioned" precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PASSENGER BOARDING BRIDGES CERTIFIED FOR CANADA (QGLA7)

USE AND INSTALLATION

This category covers passenger boarding bridges intended to be installed at airport terminals. This equipment is for loading and unloading of aircraft passengers.

Passenger boarding bridges are assemblies of two or more component sections. These sections may include, but are not limited to, a rotunda, rotunda support, tunnel, rotating cab and driver or prime mover. The rotunda provides for the connection of the bridge to the airport terminal building. The cab provides for the connection of the bridge to the aircraft. The tunnel may consist of one or more sections having a telescoping construction to facilitate outward movement of the bridge to meet the aircraft. The driver or prime mover consists of one or more motors and drive train, which provide for proper positioning of the bridge to accommodate different types of aircraft and aircraft parking configurations. Bridges are provided with one or more services for connection to utility power. Power is supplied throughout the bridge by S- or SJ-type cable suitable for outdoor use and wire protected by rigid conduit with appropriate fittings or appropriate raceway. Electrical equipment within the bridge may include industrial control panels, disconnect switches, limit switches, proximity switches, luminaires, light switches, GFCI receptacles, alarms and smoke detectors. Bridges may be provided with optional equipment such as an air conditioner and power supply for the aircraft when the aircraft is parked. This equipment is normally attached to the underside of the bridge.

Bridges are completely assembled at the factory for inspection and functionality testing prior to shipping. Bridges are disassembled, shipped in sections, reassembled at the installation site and retested for functionality. As part of disassembly the air handler, aircraft power unit, and rotunda support may be removed. Bridges are provided with various control, monitoring, signaling and alarm devices to prevent movement of the bridge that would result in damage to the bridge, aircraft or airport structures and alert personnel in the vicinity of the bridge that bridge movement is imminent.

This category also covers accessories for passenger boarding bridges intended to be installed at gate areas of airport terminals. These accessories may be installed on or remote from the passenger boarding bridge. In either case they are associated with the operation of the passenger boarding bridge. The accessories include, but are not limited to, management systems for air-handling hoses, air-handling units, aircraft power units, and control, monitoring, signaling and alarm devices to regulate movement of the bridge.

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14 (2010), ''Industrial Control Equipment,'' and CAN/CSA-C22.2 No. 247 (1992), ''Operators and Systems of Doors, Gates, Draperies and Louvres.''

The basic standard used to investigate passenger boarding bridge accessories in this category is CSA-C22.2 No. 14 (2010).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Passenger Boarding Bridge'' or ''Passenger Boarding Bridge Accessory.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONNEL ELECTROSTATIC CONTROL DEVICES CERTIFIED FOR CANADA (QGOE7)

USE

This category covers wrist straps, ground heel straps, etc., designed to be worn by personnel to bleed off electrostatic-charge buildup on the wearer's body. These devices are not intended to evaluate the electrostatic-discharge performance.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2329, ''Outline of Investigation for Personnel Electrostatic Control Devices.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Electrostatic Control Device'' or ''Static Control Device.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES CERTIFIED FOR CANADA (QGRQ7)

This category covers cosmetic and grooming appliances and related equipment for use in beauty salons, barber shops, and residences. Appliances include barber chairs, curling irons, hair conditioning machines, hair dryers, manicure sets, permanent wave machines, shampoo machines, styling dryers, and untanglers (detanglers). These units are identified as to household or commercial use in the individual Listings.

The physiological effects of the medicaments or cosmetic materials that may be employed in association with these appliances have not been investigated.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES, COMMERCIAL CERTIFIED FOR CANADA (QGRT7)

GENERAL

This category covers cosmetic and grooming appliances intended for commercial use in beauty salons, barber shops, nail care centers, and cosmetic studios. Appliances include hair dryers, barber chairs, wig and brush dryers, facial therapy units, hair spray systems, permanent wave machines, manicure sets, curling irons, cosmetology equipment, and hair conditioning machines.

FACTORS NOT INVESTIGATED

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

PRODUCT MARKINGS

Grooming appliances with air discharge, curling irons, hair crimping and hair straightening personal grooming products intended for commercial applications are permanently marked with the following marking (or equivalent) as detailed in the individual certification reports: ''WARNING: NOT FOR HOUSEHOLD USE – MAY CAUSE BURNS.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 36, ''Hairdressing Equipment.''

Additional standards that may be used to investigate products in this category in conjunction with CSA-C22.2 No. 36 are:

CSA-C22.2 No. 64, ''Household Cooking and Liquid-Heating Appliances''

CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial)''

Personal Grooming Appliances, Commercial Certified for Canada (QGRT7)−*Continued*

CAN/CSA-C22.2 No. 224, ''Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications''

Additional standards may be applicable based on the features employed.

Alternatively, these products may be investigated to CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Electrical Appliances – Part 1: General Requirements,'' and CAN/CSA-E60335-2-23 (2005), ''Household and Similar Electrical Appliances – Safety – Part 2-23: Particular Requirements for Appliances for Skin or Hair Care.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES, HOUSEHOLD CERTIFIED FOR CANADA (QGRW7)

GENERAL

This category covers cosmetic and grooming appliances and related equipment for use household use. Appliances include curling irons, hair dryers, manicure sets, hair setters, tweezers, facial saunas, styling dryers, and untanglers (detanglers).

FACTORS NOT INVESTIGATED

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 36, ''Hairdressing Equipment.''

Additional standards that may be used to investigate products in this category in conjunction with CSA-C22.2 No. 36 are:

CSA-C22.2 No. 64, ''Household Cooking and Liquid-Heating Appliances''

CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial)''

CAN/CSA-C22.2 No. 224, ''Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications''

Additional standards may be applicable based on the features employed.

Alternatively, these products may be investigated to CAN/CSA-C22.2 No. 60335-1 (2011), ''Safety of Household and Similar Electrical Appliances – Part 1: General Requirements,'' and CAN/CSA-E60335-2-23 (2005), ''Household and Similar Electrical Appliances – Safety – Part 2-23: Particular Requirements for Appliances for Skin or Hair Care.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL SUN AND HEAT EQUIPMENT CERTIFIED FOR CANADA (QGRX7)

GENERAL

This category covers personal sun and heat equipment of the household and commercial variety, including tanning beds and booths for use in commercial tanning salons, intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

Personal Sun and Heat Equipment Certified for Canada (QGRX7)−*Continued*

This category also covers sun equipment provided with UV-A and UV-B fluorescent and/or high-intensity discharge (HID) lamps.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by these lamps have not been investigated.

RELATED PRODUCTS

For sun and heat equipment intended to therapeutic use, see Medical Equipment Certified for Canada (PIDF7).

For sun and heat equipment of the household variety intended for portable use, see Sun and Heat Lamps Certified for Canada (QPDY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' and CAN/CSA-C22.2 No. 224, ''Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Sun Bed,'' ''Tanning Booth'' or ''Heat Unit,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL HYGIENE AND HEALTH CARE APPLIANCES CERTIFIED FOR CANADA (QGRZ7)

GENERAL

This category covers appliances, primarily cord connected, intended for use in households or similar locations, not necessarily under professional supervision, such as toothbrushes, oral irrigation appliances, denture cleaners, hydromassage units, etc.

This category also covers toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, which are intended to connect to the already-provided plumbing accessories (toilet bowl).

FACTORS NOT INVESTIGATED

The physiological effect of the use of these appliances, beneficial or otherwise, has not been investigated.

RELATED PRODUCTS

Medical and dental equipment intended for professional use is covered under Medical Equipment Certified for Canada (PIDF7).

Other household-related equipment is covered under Personal Grooming Appliances, Commercial Certified for Canada (QGRT7), Personal Grooming Appliances, Household Certified for Canada (QGRW7), Heating Pads, Electric Certified for Canada (MNUV7), Massage and Exercise Machines Certified for Canada (PGXX7) and Personal Sun and Heat Equipment Certified for Canada (QGRX7).

Toilets are covered under Plumbing Accessories Certified for Canada (QMTX7).

Facial saunas are covered under Personal Grooming Appliances, Household Certified for Canada (QGRW7) and Personal Grooming Appliances, Commercial Certified for Canada (QGRT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68 (2009), ''Motor-Operated Appliances (Household and Commercial),'' with relevant requirements from CAN/CSA-C22.2 No. 64 (2010), ''Household Cooking and Liquid-Heating Appliances,'' and/or CAN/CSA-C22.2 No. 224 (1989), ''Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications.''

Additional standards may be applicable based on the features employed. In addition, CSA Technical Information Letter No. C-37, ''Input Ratings for

Cord-Connected Heating and Cooking Appliances, Hairdressing Equipment and Electric Irons for Household Use" (issue date 2-28-05), may also be used as applicable.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Personal Hygiene Appliance" or "Health Care Appliance," or the name of the specific product as shown in the individual Listings.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL PROTECTIVE EQUIPMENT CERTIFIED FOR CANADA (QGSY7)

OCCUPATIONAL FALL RESTRAINTS AND SUSPENSION DEVICES CERTIFIED FOR CANADA (QGTW7)

USE

This category covers the following devices intended for individual worker protection against falls when working in elevated or suspended positions:

- Body belts
- Full-body harnesses
- Connecting components, which include
  - Carabiners
  - D-rings
  - O-rings
  - Self-locking connectors
  - Snap hooks

These products are not intended for recreational use or for fire-fighting operations.

This category does not cover anchorages or anchorage connectors.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is one of the following:

- CAN/CSA-Z259.1 (issue date), "Body Belts and Saddles for Work Positioning and Travel Restraint"
- CAN/CSA-Z259.10 (issue date), "Full Body Harnesses Occupational Products – General Instruction No. 1"
- CAN/CSA-Z259.12 (issue date), "Connecting Components for Personal Fall Arrest Systems"

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EYE AND FACE PROTECTION CERTIFIED FOR CANADA (QGUU7)

USE

This category covers products intended for eye and face protection for occupational and educational operations or processes involving hazards to the eyes or face. Typical hazards include flying objects and particles, splashing liquids, molten metal, and ultraviolet, visible and infrared radiation, but do not include X-rays, gamma rays, high-energy particulate radiation, radioactive materials, lasers or masers. Products include spectacles, goggles, face shields, and welding helmets, hand shields and hoods.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA Z94.3 (2007), "Eye and Face Protectors."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Spectacles," "Goggles," "Face Shield," "Welding Helmet," "Welding Hand Shield," "Welding Hood."

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL WORKERS' PROTECTIVE APPAREL CERTIFIED FOR CANADA (QGVW7)

Workwear for Protection Against Hydrocarbon Flash Fire Certified for Canada (QGWB7)

USE

This category covers workwear for protection against hydrocarbon flash fire which is intended to provide a minimum degree of protection to the wearer and reduce the severity of injury against unplanned exposure to hydrocarbon flash fire.

This protective clothing is not intended to be used as specialized protective clothing, such as proximity suits, firefighters' protective clothing, and fire-entry clothing; nor is it intended to protect against chemical, radiological, electrical or biological hazards.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CGSB-155.20-(issue date), "Workwear for Protection Against Hydrocarbon Flash Fire."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LEG PROTECTION FOR CHAIN SAW USERS CERTIFIED FOR CANADA (QGWF7)

USE

This category covers protective garments and devices, including aprons, leggings, pants, trousers and chaps. They are intended to be worn by chain-saw users to reduce leg injuries during work with running chain saws. These products incorporate materials and construction methods designed to provide cut-resistance protection to the legs during accidental contact with a running power-saw chain.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/BNQ 1923-45 (1991), ''Leg Protective Device for Chain Saw Users.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

OCCUPATIONAL HEAD PROTECTION CERTIFIED FOR CANADA (QGWR7)

USE

This category covers protective headwear for use by industrial, construction, mining, utility, and forestry workers. This headwear is intended to reduce the forces of impact and penetration and may provide protection from an applied voltage. The headwear is described by impact and penetration types and dielectric class as follows:

TYPE 1 — Headwear intended to provide impact and penetration protection for the crown area of the head only.

TYPE 2 — Headwear intended to provide impact and penetration protection for the crown and lateral areas of the head.

CLASS C — Headwear that does not provide dielectric protection.

CLASS E — Headwear intended to provide protection against an applied voltage up to a maximum of 20,000 V.

CLASS G — Headwear intended to provide protection against an applied voltage up to a maximum of 2,200 V.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-Z94.1, ''Industrial Protective Headwear – Performance, Selection, Care, and Use.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTIVE FOOTWEAR CERTIFIED FOR CANADA (QGWT7)

GENERAL

This category covers products intended for individual occupational protection of the feet.

These products offer the following protection:

- Toe protection (mandatory), Grade 1, 2 or 3, with Grade 1 offering the most protection and Grade 3 the least
- Sole penetration protection (optional)
- Electric shock resistance (optional)
- Static dissipation (optional)

PRODUCT MARKINGS

The grade of toe protection and type of any additional protection provided by these products is permanently marked in a conspicuous location on at least one boot of each pair of footwear.

Footwear with **toe protection only** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection

Footwear with **sole penetration protection** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection
- An equilateral triangle incorporating the ''UL CLASSIFIED'' Mark for Canada symbol
- Label size: Equilateral triangle, 1-in. sides
- Color:
  - Black UL Mark for Canada symbol on Green Triangle (Grade 1)
  - Black UL Mark for Canada symbol on Yellow Triangle (Grade 2)
  - Black UL Mark for Canada symbol on Red Triangle (Grade 3)

Footwear with **electric shock resistance (dielectric protection)** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection
- A rectangular patch on the outside of the right boot with the Omega symbol (Ω) and the ''UL CLASSIFIED'' Mark for Canada symbol
- Label size: 1 in. x 5/8 in.
- Color: Orange UL Mark for Canada symbol and the Omega symbol (Ω) on White Rectangle

Footwear with **static dissipation protection** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection
- A rectangular patch with the letters ''SD,'' the electrical grounding symbol, and the ''UL CLASSIFIED'' Mark for Canada symbol
- Label size: 1 in. x 5/8 in.
- Color: Green UL Mark for Canada symbol, ''SD'' and the electrical grounding symbol on Fluorescent Yellow Rectangle

In addition to the above markings, one boot from each pair is marked with:

- The name of the certified company
- The size
- The month and year of manufacture

The grade of toe protection and type of any additional protection provided by these products is noted in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-Z195-(issue date), ''Protective Footwear.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products

Protective Footwear Certified for Canada (QGWT7)−*Continued*

includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

EMERGENCY SERVICES PROTECTIVE CLOTHING AND EQUIPMENT CERTIFIED FOR CANADA (QGUY7)

PROTECTIVE CLOTHING AND EQUIPMENT FOR WILDLAND FIRE FIGHTING CERTIFIED FOR CANADA (QGVD7)

USE

This category covers fireline workwear intended to provide a degree of protection against the adverse effects of fire to a fire fighter's body during forest fire fighting. Protective does not mean that a wearer will suffer no burns if exposed to fire while wearing workwear meeting this standard.

Fireline workwear is single-layer protective workwear that covers the body from the neck to the wrists and feet; it may or may not cover the neck. It is intended to be worn as the outermost garment. It does not refer to add-on accessories, such as, but not limited to, a belt, backpack and external harness.

Fireline workwear is not intended to be used as specialized protective clothing such as proximity suits, structural fire fighters' protective clothing, or workwear for protection against hydrocarbon flash fire and fire-entry clothing. It is not intended to provide for protection from chemical, radiological, electrical or biological hazards.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CGSB 155.22-(issue date), "Fireline Workwear for Forest Firefighters."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FIRE FIGHTERS' PROTECTIVE CLOTHING CERTIFIED FOR CANADA (QGVG7)

USE

This category covers protective clothing intended to protect fire fighters against heat and flame encountered during fires and related life-saving activities.

Fire Fighters' Protective Clothing Certified for Canada (QGVG7)−*Continued*

This protective clothing is not intended for use in aircraft rescue and fire fighting, hazardous material emergencies, or wildland fire fighting, and is not intended for approach, proximity or entry fire exposures.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CGSB-155.1-(issue date), "Firefighters' Protective Clothing for Protection Against Heat and Flame."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FIREFIGHTERS' PROTECTIVE CLOTHING

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHONOGRAPHS AND CD PLAYERS, COIN OPERATED CERTIFIED FOR CANADA (QGXW7)

USE

This category covers coin-operated phonographs, compact disc (CD) players and accessories for use on supply circuits in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." This equipment is designed for use in commercial establishments.

Coin-operated phonographs and CD players are intended for the reproduction of music, speech, or other sound utilizing records or compact discs. Each unit has complete reproduction facilities including record selection and playing mechanisms, amplifiers and speakers. Remote record selection and coin-acceptance mechanisms may also be included. These units are intended for indoor use only unless specified otherwise in the individual certifications.

RELATED PRODUCTS

Commercial phonographs that are not coin operated are covered under Commercial Phonographs, Tape-playing and Recording Appliances and Accessories Certified for Canada (AZQW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, "Audio, Video and Similar Electronic Equipment," or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Coin-operated Phonograph," "Coin-operated CD Player" or "Wall Box," or the name of the specific type of product as shown in the individual Listings.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT CERTIFIED FOR CANADA (QHWJ7)

BUILDING-INTEGRATED PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR CANADA (QHZK7)

USE AND INSTALLATION

This category covers flat-plate building-integrated photovoltaic (BIPV) modules and panels intended for mounting integrally to the structural or protective surfaces of a building. BIPV modules and panels are investigated for one of three primary installation methods: (1) intended to serve as the roof, or as a majority component of the roofing system of a building, (2) intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., or (3) intended to serve as part of a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure.

When intended to serve as the roof, or as a majority component of the roofing system of a building, the BIPV module serves as a primary component of the building's fire resistance and waterproofing membrane. These functions have been investigated as appropriate to the extent of those functions served. Standards used in roofing system investigations have been employed as appropriate to the nature of construction and use of the system. Roofing-type BIPV products have been investigated to those roofing standards, as appropriate to their construction and use.

When intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module is assumed to serve as a primary component of the building's exterior surface and is accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), either applied to the interior of the system or integral to the support structure. BIPV modules intended to be mounted or retained within a metallic support structure have been investigated to CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," for fire-resistance classification appropriate to the installation requirements (typically Class A). The combination of BIPV modules and the intended support structure should act as structurally reliable building components in terms of both loading and fire resistance.

When intended to serve as part of a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module is assumed not to serve as a primary component of the building's exterior surface and is not accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required for structural BIPV systems, and the intended support structure should act as structurally reliable control of the module system alone, as required in ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels."

In either the structural or nonstructural curtain wall, facade, atrium, skylight, etc. installation mode, the BIPV panel may be identified to be suitable for use with specific UL-certified BIPV mounting systems covered under Building-integrated Photovoltaic Mounting Systems Certified for Canada (QHZQ7).

The modules and panels are marked with manufacturer and model identification. The wiring system indicates the proper terminal polarity. The installation instructions supplied provides all required electrical data, such as voltages, currents, power ratings, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed) and appropriate means of connection between the modules and between the module array and the load, in accordance with the CEC.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the fire-resistance classification required.

FLAME CLASSES

When applicable, BIPV modules and panels intended for installation as a roofing system are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that are not installed as roofing systems are identified with respect to their fundamental resistance to external fire exposure, or are marked "Not Fire Rated."

RELATED PRODUCTS

Framed PV modules or panels that include a mounting means as part of the product and are not intended to be installed into or as part of the building surface or structure are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

Building-integrated Photovoltaic Modules and Panels Certified for Canada (QHZK7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Building Materials Certified for Canada (AABM7) and Roofing Materials and Systems Certified for Canada (AARM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels."

In addition, CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

Some products covered under this category have also been investigated to one or more of the following design qualification standards:

IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
EN 61215, "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
IEC 61646, "Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
EN 61646, "Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
IEC 61730-1, "Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction," and IEC 61730-2, "Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing"
EN 61730-1, "Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction," and EN 61730-2, "Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "BIPV Module," "BIPV Photovoltaic Panel," "BIPV Roofing Product," "BIPV Module for Use with Classified Structural Support Systems," or other appropriate product name as shown in the individual Listings.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to IEC and/or EN design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one or more of the following:

IEC 61215-(issue date)
EN 61215-(issue date)
IEC 61646-(issue date)
EN 61646-(issue date)
IEC 61730-1-(issue date) and IEC 61730-2-(issue date)
EN 61730-1-(issue date) and EN 61730-2-(issue date)

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEMS CERTIFIED FOR CANADA (QHZQ7)

USE AND INSTALLATION

This category covers building-integrated photovoltaic (BIPV) mounting systems intended for use with specific certified BIPV modules and panels (see Building-integrated Photovoltaic Modules and Panels Certified for Canada [QHZK7]) that have been investigated for mounting integral to the structure of a building. The systems have been investigated for electric shock and fire hazards only.

Installation of BIPV modules and mounting systems integral to or in addition to a building's roof system may adversely affect the roof-covering materials' resistance to external fire exposure if the module and mounting system combination has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules and mounting system have an equal or greater fire-resistance rating than the roof-covering material.

The installation of these BIPV mounting systems and related modules or panels is intended to be in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

Building-integrated Photovoltaic Mounting Systems Certified for Canada (QHZQ7)−*Continued*

FLAME CLASSES

When applicable, BIPV modules and mounting systems intended for installation as part of a roof are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules, panels and mounting systems that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire-retardant-treated Wood Certified for Canada (TFXX7) and Roofing Systems Certified for Canada (TGFU7).

RELATED PRODUCTS

Rack-mounted PV modules and panels that include an integral mounting means not intended to be installed into or as part of the building structure or facade are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Building Materials Certified for Canada (AABM7) and Roofing Materials Certified for Canada (AARM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels."

BIPV modules and mounting systems integral to or in addition to a building's roof system are additionally investigated to CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," and may be certified for degree of wind resistance to CSA-A123.5 (2005), "Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules," as appropriate to the nature of construction and installation.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]
AS TO RISK OF ELECTRIC SHOCK AND FIRE HAZARDS ONLY
+
Control No.

* **BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEM** (or **BIPV MOUNTING SYSTEM**)

\+ For products additionally investigated for resistance to external fire exposure, the Classification Mark includes the words **CLASS A**, **CLASS B** or **CLASS C**, as appropriate.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC CHARGE CONTROLLERS CERTIFIED FOR CANADA (QIBP7)

USE AND INSTALLATION

This category covers permanently connected photovoltaic charge controllers that control the state of charge of storage batteries used in photovoltaic power systems.

These photovoltaic charge controllers are rated 600 V dc or less and are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These products include photovoltaic charge controller subassemblies for field installation in the terminal compartment of a photovoltaic module, in accordance with the instructions supplied with the subassembly. The markings identify the modules in which the subassemblies may be installed. The modules and subassemblies are products of the same manufacturer.

Controllers identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product

name "Photovoltaic Charge Controller" or "Photovoltaic Charge Controller Subassembly," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR CANADA (QIGU7)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels.

These modules and panels are intended for mounting on buildings or on ground-supported frames. Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to power conditioning units which convert the dc power, the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current, and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, power conditioning unit or controller is intended to be in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels." In addition, CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Module" or "Photovoltaic Panel."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS, REMANUFACTURED CERTIFIED FOR CANADA (QIGZ7)

USE AND INSTALLATION

This category covers remanufactured flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Remanufactured flat-plate photovoltaic modules and panels are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Remanufactured flat-plate photovoltaic modules and panels are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Remanufactured flat-plate photovoltaic modules and panels are subject to the same requirements as new remanufactured flat-plate photovoltaic modules and panels.

Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Photovoltaic Modules and Panels, Remanufactured Certified for Canada (QIGZ7)−*Continued*

Installation of modules on or integral to a building's roof system may adversely affect the roof covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Remanufactured photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked ''Class A,'' ''Class B'' or ''Class C'' to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked ''Not Fire Rated.'' For significance of external fire exposure classes, see Roofing Systems Certified for Canada (TGFU7).

RELATED PRODUCTS

Additional certifications of flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, ''Flat-Plate Photovoltaic Modules and Panels.'' In addition, CAN/ULC-S107, ''Methods of Fire Tests of Roof Coverings,'' is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Remanufactured Photovoltaic Module'' or ''Remanufactured Photovoltaic Panel.''

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS WITH SYSTEM VOLTAGE RATINGS OVER 600 VOLTS CERTIFIED FOR CANADA (QIIA7)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels with system voltage ratings above 600 V up to and including 1000 V.

These modules and panels are intended for mounting on ground-supported frames, and may be mounted on a building roof when the maximum system voltage of the photovoltaic installation is limited to 600 V. Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may or may not adversely affect the roof-covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the

Photovoltaic Modules and Panels with System Voltage Ratings Over 600 Volts Certified for Canada (QIIA7)−*Continued*

intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked ''Class A,'' ''Class B'' or ''Class C'' to denote their classification for resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked ''Not Fire Rated.'' For significance of external fire exposure classes, see Roof-covering Materials Certified for Canada (TEVT7) and Roofing Systems Certified for Canada (TGFU7).

RELATED PRODUCTS

Modules and panels with maximum system voltage ratings of 600 V or less are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, ''Flat-Plate Photovoltaic Modules and Panels.''

In addition, CAN/ULC-S107, ''Methods of Fire Tests of Roof Coverings,'' is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. DISTRIBUTED GENERATION POWER SYSTEMS ACCESSORY EQUIPMENT CERTIFIED FOR CANADA (QIIO7)

GENERAL

This category covers actuators, blocking diodes, conduit boxes, photovoltaic combiner boxes, controllers (control boxes), communication modules, disconnects, distribution panels and transition boxes.

This equipment is intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

RELATED PRODUCTS

See Static Inverters and Converters for Use in Independent Power Systems Certified for Canada (QIKH7) and Photovoltaic Modules and Panels Certified for Canada (QIGU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), ''General Use Power Supplies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Distributed Generation Utility Interconnection Controller,'' ''Photovoltaic System Ground Fault Detector Interrupter,'' ''Photovoltaic System Transition Box,'' ''Photovoltaic Disconnect,'' ''Photovoltaic System Control Box,'' ''Distributed Generation Sys-

Distributed Generation Power Systems Accessory Equipment Certified for Canada (QIIO7)−*Continued*

tem Distribution Panel," "Distributed Generation Interface Module," "Distributed Generation Communications Module," "Photovoltaic Combiner Box," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIC INVERTERS, CONVERTERS AND ACCESSORIES FOR USE IN INDEPENDENT POWER SYSTEMS CERTIFIED FOR CANADA (QIKH7)

USE AND INSTALLATION

This category covers permanently connected inverters and converters for use in electric power systems. Inverters are devices that change DC power to AC power. Converters are devices that accept AC or DC power input and convert it to another form of AC or DC power for direct utilization by a load or accumulation in an energy storage system (batteries, capacitors, etc.). Electric power systems are defined as facilities that deliver electric power to a load. Devices covered in this category are classed as Utility Interactive, Stand-alone or Multimode. Utility Interactive devices operate in parallel with the utility grid. Stand-alone devices are intended to operate independent of the utility grid. Multimode devices can operate as both or either Stand-alone (utility independent) or Utility Interactive devices. Optional accessories intended for use with these units are also covered under this category.

These products may contain energy storage devices and associated charge controllers.

These devices are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The devices may be connected to different types and combinations of distributed generation (DG) sources: generator sets, photovoltaic cells, fuel cells, wind and microturbines or other sources as specified in the manufacturer's installation instructions.

Some devices in this category must be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer required.

These products may require external output overcurrent protection, which will be specified in product markings and installation instructions. The products require external overcurrent protection to be sized at 125% of the product output current rating unless otherwise specified.

These products may require that overcurrent protection be provided in the source circuits. These protection ratings will be specified in the product installation instructions.

Devices containing charge controllers are provided with instructions to indicate the type of battery for which they are intended.

Units suitable for use with certified field-installed accessories are marked to identify the specific accessories that may be used.

For units that are shipped in multiple sections where the end product requires that all of the sections be included and assembled to make a complete certified product, the sections include the same end-product Certification Mark and are differentiated by section number as specified under **UL MARK** below.

For units that are shipped in multiple sections consisting of a complete end product and associated optional accessories investigated for use with the complete certified end product, the complete end product has a single Certification Mark and the accessory(ies) are labeled as specified under **UL MARK** below with one of the applicable accessory markings.

SURGE TESTING

These products are investigated to surge categories for the Ring Wave and Combination Wave Surge Tests in IEEE C62.41.2 (2002), "Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits." These particular surge waveforms that are applied to the DG equipment are based upon distance between the DG equipment and the service entrance equipment. These location categories have associated peak values of voltage and current for the standard surge-testing waveforms as noted below. A manufacturer may also choose to test at a custom value for the Ring Wave and Combination Wave. These values are stated in the individual certifications for the product tested.

STANDARD WAVEFORM PEAK VALUES

Surge Category	Ring Wave	Combination Wave
A	6 kV/0.20 kA	N/A

Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)−*Continued*

STANDARD WAVEFORM PEAK VALUES

Surge Category	Ring Wave	Combination Wave
B	6 kV/0.50 kA	6 kV/3 kA
C	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

- "Standard 1.2/50 us - 8/20 us Combination Wave"
- "Standard 0.5 us - 100 kHz Ring Wave"

Refer to IEEE C62.41.2 (2002) for additional details on standard wave parameters and tolerances.

CODES

The following summarizes and defines the codes shown in the individual certifications.

Source Type	ST
Fuel Cell	FC
Photovoltaic	PV
Microturbine	MT

Ambient rating in degrees Celsius (example: 60C)	60

FIRMWARE VERSION AND CHECKSUM

Version Number – Identification number of the software elements that specifies the investigated software version and current release.

Checksum or Unique Identifier – A unique identifier stored in nonvolatile memory computed as a function of the critical and supervisory sections of the software.

RELATED PRODUCTS

Power converters and inverters intended for use in recreational or land vehicles and the like are covered under Power Converters/Inverters and Power Converter/Inverter Systems Certified for Canada (QPPY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), "General Use Power Supplies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product designation. The product designation is the combination of the specific DG source and the type of inverter or converter product. Acceptable product designations include:

"Fuel Cell Multimode Inverter"
"Fuel Cell Stand-alone Inverter"
"Fuel Cell Utility Interactive Inverter"
"Microturbine Multimode Inverter"
"Microturbine Stand-alone Inverter"
"Microturbine Utility Interactive Inverter"
"Photovoltaic Multimode Inverter"
"Photovoltaic Stand-alone Inverter"
"Photovoltaic Utility Interactive Inverter"
"Wind Turbine Multimode Inverter"
"Wind Turbine Stand-alone Inverter"
"Wind Turbine Utility Interactive Inverter"
(or equivalent)

The product designation for accessories is one of the product designations noted above, preceded by the words "Accessory for."

For multi-piece units, the Listing Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for Listing. The Listing Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each enclosure section of a Listed inverter assembly is provided with a "Section _____ of _____" marking, where the second blank indicates the total number of enclosure sections contained in the Listed inverter assembly and the first blank indicates the respective enclosure section number bearing the UL Mark.

If the source type does not appear in the product designation it must be indicated on the product as a separate marking.

****

MOUNTING SYSTEMS, MOUNTING DEVICES, CLAMPING DEVICES AND GROUND LUGS FOR USE WITH PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR CANADA (QIMS7)

USE AND INSTALLATION

This category covers photovoltaic (PV) mounting systems, mounting devices, clamping devices (which may be for bonding and/or mechanical loading) and ground lugs intended for use with specific PV modules and panels and specified module frames and mounting structures as identified in the individual Listings. These systems and devices are investigated for one of two installation types: (1) ground mounted, or (2) intended to serve as part of a nonstructural component of a building, such as a stand-alone system on a building, curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure. Both mounting systems and clamping devices may be investigated for mechanical mounting alone, or mechanical mounting and ground bonding as identified in the individual Listings. Ground lugs may be investigated for use with specific PV modules, specific PV module frames, or specific mounting-system rails.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

Mounting Systems, Mounting Devices, Clamping Devices and Ground Lugs for Use with Photovoltaic Modules and Panels Certified for Canada (QIMS7)−*Continued*

RELATED PRODUCTS

PV modules and panels are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels."

Ground lugs are additionally investigated to CSA-C22.2 No. 41 (2007), "Grounding and Bonding Equipment."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Photovoltaic Mounting System," "Photovoltaic Module Clamping Device," "Photovoltaic Mounting Device," "Photovoltaic Bonding Device," "Photovoltaic Mounting and Bonding Device" or "Photovoltaic Ground Lug." The word "Photovoltaic" may be abbreviated "PV."

****

PHOTOGRAPHIC EQUIPMENT CERTIFIED FOR CANADA (QINT7)

GENERAL

This category covers photographic equipment and accessories investigated in accordance with requirements applicable in Canada, and includes various equipment, such as photographic flash units, chargers for photographic flash units, motorized projection screens, photographic equipment controllers and interconnect devices, film editors, photographic enlargers, power supplies for photographic accessories, vacuum pumps for use with printing frames, and photographic print processors, all cord-and-plug connected.

This category also covers photographic developing and reproduction equipment, generally of a commercial nature, including photocopying equipment, enlargers, photo printing equipment, and printers; equipment may be cord connected or permanently connected.

This category also covers accessories for field installation on photographic equipment as identified on the products or the installation instructions.

REBUILT PRODUCTS

This category also covers photographic equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt photographic equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt photographic equipment is subject to the same requirements as new photographic equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 118, "Construction and Test of Picture Machines and Appliances," or CAN/CSA-C22.2 No. 60950 or 60950-1, "Safety of Information Technology Equipment," or CAN/CSA-E60335-2-56, "Safety of Household and Similar Electrical Appliances – Part 2: Particular Requirements for Projectors and Similar Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Photographic Equipment,'' or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word ''Rebuilt,'' ''Refurbished'' or ''Remanufactured'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIN-AND-SLEEVE-TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS CERTIFIED FOR CANADA (QLGD7)

RATINGS

Pin-and-sleeve-type plugs, receptacles and cable connectors are rated 600 V or less, ac or dc, and in amperes. Devices intended for use with motor loads are identified by a horsepower rating. Devices not intended for current interruption are marked ''NOT FOR INTERRUPTING CURRENT,'' or with an equivalent statement.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, e.g., a 120/208 V, 3-phase device is tested on a circuit involving a potential to ground of 120 V.

GROUNDING

Devices having a terminal identified by a green-colored finish or by the word ''green'' are grounding types. The pin or contact member connected to this terminal is for equipment grounding only.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS, PIN-AND-SLEEVE TYPE CERTIFIED FOR CANADA (QLHN7)

GENERAL

This category covers pin-and-sleeve-type attachment-plug bodies, attachment plugs with and without fuses, and cable connectors.

The terminations of these devices are intended for use with flexible cord or cable having copper conductors. The ampacity of the flexible cord or cable is based on Table 12 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Unless the product is marked with both the size and temperature rating of the flexible cord or cable to be used, the termination provisions are based on the use of 60°C flexible cord or cable.

This category does not cover devices to be molded on flexible cord or cable, unassembled devices to be factory assembled to flexible cord or cable, general use, special use, or locking type attachment plugs and/or cord connectors.

PRODUCT MARKINGS

These devices are marked as follows:

1. Listee's name or identification on device and carton
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification by color or otherwise
5. Date code or equivalent
6. Additional markings as required

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors Certified or Canada (QLGD7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 182.1, ''Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type.''

UL MARK

Attachment Plugs, Pin-and-Sleeve Type Certified for Canada (QLHN7)−*Continued*

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Pin-and-Sleeve Attachment Plug,'' ''Plug'' or ''Connector,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, PIN-AND-SLEEVE TYPE CERTIFIED FOR CANADA (QLIW7)

GENERAL

This category covers pin-and-sleeve-type receptacles and other devices intended for direct connection to wiring systems recognized by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC). This category also covers other pin-and-sleeve-type receptacles, outlet devices and power inlets intended for use in appliances and other equipment.

The terminations of these devices are intended for use with the copper conductors and are marked to indicate the conductor size and temperature rating of all field-installed conductors. Such markings are located where readily visible on the device or in a wiring diagram provided with the device. If no marking is provided, conductor sizes are based on the use of 60°C insulated conductor column for circuits rated 100 A or less, and the use of 75°C insulated conductor column for circuits rated more than 100 A, as specified in Table 2 of the CEC.

Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (devices rated 100 A or less) or 75°C ampacity (devices rated over 100 A).

This category does not cover general use, special use, or locking-type receptacles, switched receptacles or current taps.

PRODUCT MARKINGS

These devices are marked as follows:

1. Listee's name or identification on device and carton
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification by color or otherwise
5. Date code or equivalent
6. Additional markings as required

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors Certified for Canada (QLGD7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 182.1, ''Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Pin-and-Sleeve Receptacle,'' ''Receptacle'' or ''Power Inlet,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIPE JOINT SEALING COMPOUNDS CERTIFIED FOR CANADA (QLSR7)

USE

This category covers compounds intended for use in joining threaded metal pipe connections in piping systems intended for the containment of alcohol, alcohol fuel blends, natural gas and methane, oxygen, petroleum

distillates (gasoline, kerosene, etc.), propane and butane, steam and water (potable and nonpotable), as indicated in the individual certifications. The maximum pressure for each application is indicated in the individual certifications. Unless indicated otherwise, these products are free from any tendency to heat spontaneously.

These products have also been certified as to their fire hazard. Using the method for classification of the fire hazard of liquids specified in UL 340, "Tests for Comparative Flammability of Liquids," they have been rated on a numerical scale of hazard from 0 to 100 as indicated in the table below.

General Classification	Numerical Classification
Diethyl ether	100
Gasoline	90 to 100
Ethyl alcohol	60 to 70
Kerosene	30 to 40[a]
Paraffin oil	10 to 20[b]
Water or nonflammable	0 or nonflammable

[a] A standard kerosene of 37.8°C (100°F) flash point (closed cup) is rated 30 to 40.
[b] A paraffin oil of 226.7°C (440°F) flash point (closed cup) is rated 10 to 20.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S642, "Compounds and Tapes for Threaded Pipe Joints."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

AS TO FIRE HAZARD. [PRODUCT NAME]
CLASSED @
FOR USE IN DEVICES HANDLING
GASOLINE AND PETROLEUM OILS (MAX PRESS * kPa),
NATURAL GAS (MAX PRESS * kPa),
PROPANE OR BUTANE (MAX PRESS * kPa). (as appropriate)
[HAS SOME TENDENCY TO HEAT SPONTANEOUSLY. (as appropriate)]
Control No.

@ Statement of flammability rating per UL 340
* The pressure specified for the product in the individual Classifications

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES CERTIFIED FOR CANADA (QMTX7)

USE

This category covers plumbing accessories connected to or used with plumbing in commercial locations or residential occupancies, including lawn sprinklers, electric faucets, shower controls, urinal controls and toilet-flushing systems.

This category also covers toilets, bidets, and combination toilet/bidets.

Products suitable for outdoor use and those for use with heated liquids are so marked.

FACTORS NOT INVESTIGATED

These products have not been investigated with respect to the effect of their use with corrosive liquids or aqueous solutions containing corrosive materials.

RELATED PRODUCTS

Toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, that connect to separate plumbing features are covered under Personal Hygiene and Health Care Appliances Certified for Canada (QGRZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14 (1991), "Industrial Control Equipment," and CAN/CSA-C22.2 No. 68 (1992), "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lawn Sprinkler Control" or "Electric Faucet," or other appropriate product name shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES FOR RECREATIONAL VEHICLES CERTIFIED FOR CANADA (QNAW7)

USE

This category covers products connected to or used with plumbing in recreational vehicles, including water controls, mechanical valves, electric faucets, toilet-flushing systems, sewage pumps, grinder pumps, chemical-feed pumps, transfer pumps and liquid-circulating pumps.

Products suitable for outdoor use, exposure to road splashing, and for use with hot liquids are so marked.

FACTORS NOT INVESTIGATED

This equipment has not been investigated with respect to the effect of its use with corrosive liquids or aqueous solutions containing corrosive materials, nor for use with drinking water.

RELATED PRODUCTS

Products investigated for use with drinking water are covered under Drinking Water System Components Certified for Canada (FDNP7).

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-Z240 RV Series (1986), "Recreational Vehicles," CSA B125 (1993), "Plumbing Fittings," CSA B45 Series (1994), "Plumbing Fixtures," and CAN/CSA-C22.2 No. 68 (1992), "Motor-Operated Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "RV Sewage Pump" or "RV Electric Faucet," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QNHV7)

USE AND INSTALLATION

This category covers pump assemblies and controls for use in pumping sewage. Assemblies exposed to sewage have constructions intended to reduce corrosion of enclosure parts and explosion-proof joints. They have not been investigated for use where severe corrosive conditions are likely to be present.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 145 (1986), "Motors and Generators for Use in Hazardous Locations," in addition to the standards referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Control Unit for Use in Hazardous Locations'' or ''Submersible Sump Pump for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING PRODUCTS CERTIFIED FOR CANADA (QNJA7)

These products include plastic plumbing fixtures, plumbing fixture fittings and plumbing pipe and pipe fittings.

The individual product categories include reference to the applicable standards used as the basic standard for the investigation.

PLUMBING FIXTURES CERTIFIED FOR CANADA (QNNA7)

Ceramic Plumbing Fixtures Certified for Canada (QNNK7)

USE AND INSTALLATION

This category covers vitreous and nonvitreous ceramic plumbing fixtures, such as water closets, lavatories, urinals, bidets, bathtubs, shower bases, sinks and drinking fountains, intended for residential or commercial installation in accordance with the ''National Plumbing Code of Canada.''

Unless otherwise indicated in the individual certifications, these fixtures do not include supply fittings.

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA B45.1 (2008), ''Ceramic Plumbing Fixtures.''

Fixtures with integral supply fittings have additionally been investigated to CSA B125.1 (2005), ''Plumbing Supply Fittings.''

Fixtures with integral supply fittings intended for use with potable water have additionally been investigated to NSF/ANSI 61 (2008), ''Drinking Water System Components – Health Effects.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Ceramic Plumbing Fixture,'' ''Ceramic Water Closet,'' ''Ceramic Lavatory,'' ''Ceramic Urinal,'' ''Ceramic Bidet,'' ''Ceramic Bathtub,'' ''Ceramic Shower Base,'' ''Ceramic Sink'' or ''Ceramic Drinking Fountain.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Plastic Plumbing Fixtures Certified for Canada (QNNP7)

GENERAL

This category covers plumbing fixtures such as, but not limited to, bathtubs, shower receptors and shower stalls, lavatories, water closets, sinks, bidets and urinals made primarily of plastic. These products are intended for commercial or residential installations in accordance with the applicable model plumbing codes.

PRODUCT MARKINGS

Products investigated to the standards noted below are marked with the certified company's name, trade name, trademark, or other mark known to identify the manufacturer, in a location readily visible after installation. These products are also marked with the date of manufacture. Water closets and each component of a water closet, if the fixture is made up of two

Plastic Plumbing Fixtures Certified for Canada (QNNP7)−*Continued*

or more components, are marked to identify whether they are a low-consumption (6 LPF) or watersaver (13.25 LPF) type. Urinals are marked to indicate whether they are a low-consumption (3.8 LPF) or watersaver (5.7 LPF) type. The marking on the packaging of water closets and urinals includes the manufacturer's recommended working pressure. Special-purpose fixtures that do not comply with the dimensional requirements in the standards are marked with an ''N'' to indicate that they are ''nonstandard'' type fixtures. Plumbing fixtures intended for use only in recreational vehicles are marked with ''RV.''

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-B45.0, ''Plumbing Fixtures,'' and CSA-B45.5, ''Plastic Plumbing Fixtures.''

Products with integral waste fittings have additionally been investigated to ANSI/ASME A112.18.2/CSA B125.2 (2011), ''Plumbing Waste Fittings.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Plastic Plumbing Fixture,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Enameled Cast Iron and Enameled Steel Plumbing Fixtures Certified for Canada (QNNV7)

GENERAL

This category covers enameled cast iron and enameled steel plumbing fixtures, including bathtubs, drinking fountains and water coolers, sinks and lavatories, and shower receptors (also called shower pans or shower bases), intended for residential or commercial installation in accordance with the ''National Plumbing Code of Canada.''

PRODUCT MARKINGS

Special-purpose fixtures that do not comply with certain dimensional requirements specified in ASME A112.19.1/CSA B45.2, ''Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures,'' are marked with the letter ''N'' to indicate the nonstandard nature of the fixture.

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ASME A112.19.1/CSA B45.2 (2008), ''Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Enameled Cast Iron Fixture,'' ''Enameled Steel Fixture,'' ''Enameled Cast Iron Bathtub,'' ''Enameled Steel Bathtub,'' ''Enameled Cast Iron Shower Receptor,'' ''Enameled Steel Shower Receptor,'' ''Enameled Cast Iron Sink,'' ''Enameled Steel Sink,'' ''Enameled Cast Iron Lavatory'' or ''Enameled Steel Lavatory,'' and the statement ''LISTED IN ACCORDANCE WITH ASME A112.19.1/CSA B45.2.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Stainless Steel Plumbing Fixtures Certified for Canada (QNOA7)

USE

This category covers stainless steel plumbing fixtures, such as sinks, bathtubs, shower bases, water closets, lavatories, bidets, urinals, water coolers and drinking fountains intended for installation in accordance with the ''National Plumbing Code of Canada.''

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ASME A112.19.3/CSA B45.4 (2008), ''Stainless Steel Plumbing Fixtures.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Stainless Steel Plumbing Fixture'' or ''Stainless Steel Sink.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELATED PLUMBING PRODUCTS CERTIFIED FOR CANADA (QNOK7)

Ballcocks, Flush Valves, Flushometer Valves and Flushometer Tanks Certified for Canada (QNOP7)

GENERAL

This category covers ballcocks (fill valves), flush valves, flushometer valves and flushometer tanks intended for installation in water closets (toilets) and urinals in accordance with the ''National Plumbing Code of Canada.''

PRODUCT TYPES

Ballcocks (Fill Valves) — Ballcocks (also called anti-siphon-type flush tank fill valves) are water-supply valves installed within water-closet tanks that refill the tank after flushing the water closet.

Flush Valves — Flush valves are valves located in a gravity-flush tank and used to flush a water closet, urinal or tank by discharging water into the fixture.

Flushometer Valves and Tanks — Flushometer valves are devices that are installed on a pressurized water-supply pipe for the purpose of discharging a predetermined quantity of water to a toilet or urinal for flushing purposes. These valves are designed to gradually close in order to minimize water hammer. Flushometer tanks are devices that accomplish the same purpose as flushometer valves; however, they consist of a valve integrated with an accumulator vessel. They are actuated by direct water pressure, which is generated by the accumulator.

PRODUCT MARKINGS

These products are marked with the certified company's name, trade name, trademark, or other mark known to identify the manufacturer. The packaging for all products covered under this category is also marked with the certified company's name, trade name, trademark, or other mark known to identify the manufacturer and the product's model number.

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA B125.3 (2011), ''Plumbing Fittings,'' and ANSI/ASME A112.19.5/CSA B45.15 (2011), ''Flush Valves and Spuds for Water Closets, Urinals, and Tanks.''

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Ballcock,'' ''Fill Valve,'' ''Flush Valve,'' ''Flushometer Tank'' or ''Flushometer Valve.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Ballcocks, Flush Valves, Flushometer Valves and Flushometer Tanks Certified for Canada (QNOP7)−*Continued*

General Plumbing and Associated Products Certified for Canada (QNPJ7)

GENERAL

This category covers various plumbing products and fittings intended for commercial or residential installations.

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

CSA B45.0 (2002), ''General Requirements for Plumbing Fixtures''
CSA B45.5 (2002), ''Plastic Plumbing Fixtures''
CSA B64.0 (2001), ''Backflow Preventers and Vacuum Breakers''
CSA B64.1.1 (2001), ''Vacuum Breakers, Atmospheric Type (AVB)''
CSA B64.1.2 (2001), ''Vacuum Breakers, Pressure Type (PVB)''
CSA B64.8 (2001), ''Backflow Preventers, Dual Check Valve Type with Intermediate Vent (DuCV)''
CSA B651 (2004), ''Accessible Design for the Built Environment''

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Plumbing-waste Fittings Certified for Canada (QNSW7)

GENERAL

This category covers plumbing-waste fittings of sizes NPS-2 and smaller such as, but not limited to, sink, shower and bath drains, traps, strainers, grey-water diverters, and subdrains for built-up shower pans. These devices are intended to be used and installed in accordance with the ''National Plumbing Code of Canada.''

This category does not cover pipe, tubes, or pipe and tube fittings, such as couplings, elbows, unions or reducers.

PRODUCT AND PACKAGE MARKINGS

These products are marked with the certified company's name, trademark, or other mark to identify the manufacturer in a location visible after installation. Additional markings for specific product types are described in the individual Reports.

The packaging of these products includes the certified company's name and model designation.

RELATED PRODUCTS

Plumbing supply fittings are covered under Plumbing Fixture Fittings Certified for Canada (QNSQ7).

Products certified to a plumbing standard for which no specific category has been established are covered under General Plumbing and Associated Products Certified for Canada (QNPJ7).

Plumbing products certified to an international standard are covered under Plumbing Products Certified in Accordance with International Publications (QNVJ).

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/ASME A112.18.2/CSA B125.2 (2011), ''Plumbing Waste Fittings.''

UL MARK

PLUMBING FIXTURE FITTINGS CERTIFIED FOR CANADA (QNSQ7)

USE AND INSTALLATION

This category covers plumbing fixture fittings such as, but not limited to, anti-scald shower control valves, hose-connected kitchen spray nozzles, hand-held showers, showerheads, and faucets for sinks, lavatories, bathtubs and showers.

This category does not cover pipe fittings, such as couplings, elbows, unions or reducers.

These devices are intended for installation and use in accordance with the manufacturer's instructions and the "National Plumbing Code of Canada."

Fittings having a primary or secondary outlet that can terminate in non-potable water have been investigated for backflow prevention. This includes faucets with pull-out spouts or hose-connected spray nozzles and hand-held showers.

PRODUCT MARKINGS

These products are marked with the certified company's name, trade name, trademark, or other mark known to identify the manufacturer, in a location readily visible after installation. Fittings for use only in recreational vehicles are marked with "RV." Each showerhead, sink faucet and lavatory faucet and its packaging are marked with the flow rate in L/min. The packaging for all products covered under this category is also marked with the certified company's name and the product's model number.

PACKAGE MARKINGS

The packaging of these products includes the certified company's name and model designation.

RELATED PRODUCTS

Devices and fittings (e.g., lavatory faucets, bar faucets, kitchen sink faucets, supply stops, endpoint control valves) that come into contact with drinking (potable) water and drinking water treatment chemicals have been investigated to NSF/ANSI 61, "Drinking Water System Components – Health Effects."

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

ADDITIONAL INFORMATION

For additional information, see Plumbing Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA B125.1 (2005), "Plumbing Supply Fittings," and CSA B125.3 (2005), "Plumbing Fittings."

Other standards that may be used are noted in the individual Reports.

UL MARK

The Plumbing Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Plumbing Listing Mark for these products includes the UL Mark for Canada symbol with the word "PLUMBING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Plumbing Fixture Fitting," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LEAD CONTENT VERIFICATION OF PRODUCTS IN CONTACT WITH POTABLE WATER CERTIFIED FOR CANADA (QNVB7)

GENERAL

This category covers drinking water system products, including, but not limited to, components, materials and process media (activated carbon, sand, etc.) that come in contact with, convey or dispense water intended for human consumption by drinking or cooking. The investigation includes determination of compliance with design requirements with respect to lead (Pb), including a weighted average Pb content of not more than 0.25%, and testing of the required materials to verify the Pb content. Products, components and materials covered under this category have been investigated for compliance with NSF/ANSI 372, "Drinking Water System Components – Lead Content."

NSF/ANSI 372 does not cover structural integrity, performance or other health risk aspects such as contaminants that may leach into the water from materials of which the product, component, or material is manufactured. The final acceptance of a product, component, or material is dependent upon its compliance with the requirements and standards that a local, state, federal, or other jurisdictional body has defined for the product or component.

INSTALLATION

These products and components are intended to be installed and used in accordance with applicable codes and regulations. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water-supply lines.

RELATED PRODUCTS

Products in contact with potable water are also covered under Drinking Water System Components Certified for Canada (FDNP7).

Water coolers, drinking water fountains and remote chillers are also covered under Drinking-water Coolers Certified for Canada (SRJX7).

Faucets and related plumbing fixture fittings are also covered under Plumbing Fixture Fittings Certified for Canada (QNSQ7).

Submersible well pumps are also covered under Pumps, Electrically Operated, Liquid Certified for Canada (REUZ7).

Household freezers are also covered under Household Freezers Certified for Canada (SHMR7).

Refrigerators intended for use in recreational vehicles are also covered under Recreational Vehicle Refrigerators and Freezers Certified for Canada (SKKQ7).

Refrigerators intended for commercial use are also covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Refrigerators in combination with ranges, microwave ovens and/or sinks are also covered under Kitchen Units, Refrigerated Certified for Canada (SJPT7).

Commercial electric cooking and warming equipment is also covered under Commercial Cooking Appliances Certified for Canada (KNGT7) and Custom-built Food Service Equipment Certified for Canada (KNNS7).

Gas-fired food service equipment is also covered under Gas-fired Food Service Equipment Certified for Canada (LGQX7).

Refrigerators and freezers intended for commercial use are also covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

ADDITIONAL INFORMATION

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 372 (2011), "Drinking Water System Components – Lead Content."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. For process media shipped in bulk quantities, the Classification Mark may appear on a Bill of Lading or a Bulk Shipment Certificate. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]
IN ACCORDANCE WITH NSF/ANSI 372
Control No.

* **VALVE**, **FAUCET**, or other appropriate product identity as shown in the individual Classifications

The Classification Mark may be abbreviated as follows:

UND. LAB. CLASSIFIED
IN ACCORDANCE WITH NSF/ANSI 372
Control No.
or
UND. LAB. CLFD
IN ACCORDANCE WITH NSF/ANSI 372
Control No.

The words "AS TO ≤ 0.25% Pb ONLY" may be used in lieu of "IN ACCORDANCE WITH NSF/ANSI 372" described above until July 1, 2013. After July 1, 2013, the words "IN ACCORDANCE WITH NSF/ANSI 372" shall be used.

For products that are also Listed or Classified by UL under another category, as an alternative to the complete Classification Mark described above, the words "ALSO CLASSIFIED" (or "ALSO CLFD") and the text "IN ACCORDANCE WITH NSF/ANSI 372" may be used adjacent to the applicable UL Mark.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE ELECTRIC HAND LAMPS CERTIFIED FOR CANADA (QORX7)

GENERAL

This category covers portable electric hand lamps of the incandescent and fluorescent lamp types, rated 125 V, 300 W or less.

Incandescent-type lamps have a length of flexible cord and an attachment plug for connection to a source of supply, an insulating handle, a lamp guard, and provisions for temporary support. Fluorescent-type lamps have a lamp reflector assembly, a length of flexible cord with either an in-line ballast and attachment plug or a direct plug-in type ballast. Both fluorescent and incandescent types are not intended for outdoor use or for use in hazardous locations or above hazardous locations as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, "Portable Luminaires," and CSA Technical Information Letter No. B-67, "Interim Certification Requirements for Extension Handlamps."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Hand Lamp" or "Portable Luminaire."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LIGHTING PRODUCTS CERTIFIED FOR CANADA (QOTU7)

GENERAL

This category covers lampshades, nightlights, light-emitting-diode (LED) nightlights, office furnishing lights, portable cabinet luminaires, portable cabinet LED luminaires, portable luminaire kits and subassemblies, portable luminaires, portable LED luminaires, portable work lights, and sun and heat lamps.

RELATED PRODUCTS

Portable lighting products and associated furnishings investigated for use together are covered under Furnishings, Household and Commercial Certified for Canada (IYQX7).

Portable lighting products used as hand lamps are covered under Portable Electric Hand Lamps Certified for Canada (QORX7).

Portable lighting products intended for seasonal use are covered under Seasonal and Holiday Decorative Product Accessories Certified for Canada (DGWU7), Outfits, Decorative Certified for Canada (DGXW7) or Strings, Decorative Lighting Certified for Canada (DGZZ7).

Portable lighting products intended for use in hazardous (classified) locations are covered under Portable Lighting Units for Use in Hazardous Locations Certified for Canada (QPKX7).

Portable lighting products intended for temporary use (such as at construction sites or car sales lots) are covered under Temporary-lighting Strings Certified for Canada (XBRT7).

Portable lighting products intended for theatrical use are covered under Stage and Studio Luminaires and Connector Strips Certified for Canada (IFDZ7).

PORTABLE CABINET LIGHT-EMITTING-DIODE LUMINAIRES CERTIFIED FOR CANADA (QOVA7)

USE AND INSTALLATION

This category covers surface- and recess-mounted portable cabinet light-emitting-diode (LED) luminaires intended for installation into open or enclosed portable cabinets, such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage portable LED luminaires intended for installation in cabinets provided or marked for use with a power supply of the direct-plug-in or attachment-plug-equipped, cord-connected type.

This category also covers portable cabinet LED luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies, intended for use with portable cabinet LED luminaires.

These products are not intended for installation in recessed walls or ceilings where the wiring is concealed or passed through openings in the structure.

Portable cabinet LED luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet LED luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

Portable cabinet LED luminaires of all types should not be located less than 30.5 cm (12 in.) apart and should be provided a 13 mm (1/2 in.) minimum clearance between the top and any horizontal surface, unless the instructions indicate a lesser spacing.

Portable cabinet LED luminaires investigated only for surface mounting inside a cabinet and not intended for recessed mounting are marked "SUITABLE FOR SURFACE MOUNTING ONLY."

RELATED PRODUCTS

Portable luminaires intended for installation other than in cabinets are covered under Luminaires, Portable Certified for Canada (QOWZ7).

Portable cabinet luminaires that do not employ LEDs as their primary light source are covered under Portable Cabinet Luminaires Certified for Canada (QOVJ7).

LED luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Light-emitting-diode Surface-mounted Luminaires Certified for Canada (IFAM7) for surface mounting, or Light-emitting-diode Recessed Luminaires Certified for Canada (IFAO7) for recessed mounting.

Low-voltage LED lighting systems intended for installation in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7).

Portable cabinet LED luminaires investigated for use with specific cabinet or display designs are certified together with the cabinet or display as Furnishings, Household and Commercial Certified for Canada (IYQX7).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 9.0, "General Requirements for Luminaires," in addition to the requirements contained in CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Cabinet Light-emitting-diode Luminaire" (or "Portable Cabinet LED Luminaire") or "Portable Cabinet Light-emitting-diode Luminaire Accessory" (or "Portable Cabinet LED Luminaire Accessory").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Portable Cabinet Light-emitting-diode Luminaires Certified for Canada (QOVA7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE CABINET LUMINAIRES CERTIFIED FOR CANADA (QOVJ7)

USE AND INSTALLATION

This category covers surface- and recess-mounted portable cabinet luminaires intended for installation into open or enclosed cabinets such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage portable luminaires intended for installation in cabinets provided or marked for use with a power supply of the direct-plug-in or attachment-plug equipped, cord-connected type.

These products are not intended for installation in recessed walls or ceilings where the wiring is concealed or passes through openings in the structure.

Portable cabinet luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket, or spacer.

Portable cabinet luminaires of all types should not be located less than 30.5 cm (12 in.) apart and should be provided a 13 mm (1/2 in.) minimum clearance between the top and any horizontal surface, unless the instructions indicate a lesser spacing.

Portable cabinet luminaires investigated only for surface mounting inside a cabinet and not intended for recessed mounting are marked "SUITABLE FOR SURFACE MOUNTING ONLY."

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

RELATED PRODUCTS

Portable LED cabinet luminaires are covered under Portable Cabinet Light-emitting-diode Luminaires Certified for Canada (QOVA7).

Portable luminaires intended for installation other than in cabinets are covered under Luminaires, Portable Certified for Canada (QOWZ7) and Light-emitting-diode Luminaires, Portable Certified for Canada (QOVZ7).

Incandescent and fluorescent luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passes through openings in the structure, are covered under Incandescent Surface-mounted Luminaires Certified for Canada (IEZR7) and Fluorescent Surface-mounted Luminaires Certified for Canada (IEUZ7), respectively.

Low-voltage lighting systems intended for installation in permanently-installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Incandescent Luminaires and Fittings Certified for Canada (IFDR7).

Portable cabinet luminaires investigated for use with specific cabinet or display designs, along with the cabinet or display, are covered under Furnishings, Household and Commercial Certified for Canada (IYQX7).

LIGHT-EMITTING-DIODE LUMINAIRES, PORTABLE CERTIFIED FOR CANADA (QOVZ7)

GENERAL

This category covers portable light-emitting-diode (LED) luminaires whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

This category also covers low-voltage portable LED luminaires provided or marked for use with a power supply of the direct-plug-in or attachment-plug-equipped, cord-connected type.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

PRODUCT MARKINGS

Products investigated as Convertible Units are marked to indicate acceptability as a LED luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Certification Mark, "SUITABLE FOR WET LOCATIONS."

Undercabinet portable LED luminaires are marked "SUITABLE FOR UNDERCABINET MOUNTING."

RELATED PRODUCTS

Portable luminaires that do not employ LEDs as their primary light source are covered under Luminaires, Portable Certified for Canada (QOWZ7).

Portable cabinet LED luminaires are covered under Portable Cabinet Light-emitting-diode Luminaires Certified for Canada (QOVA7).

Portable electric hand lamps are covered under Portable Electric Hand Lamps Certified for Canada (QORX7).

Nightlights are covered under Nightlights Certified for Canada (QOYX7).

Portable luminaires that comply with CAN/CSA-C22.2 No. 207, "Portable and Stationary Electric Signs and Displays," may also be certified as Signs Certified for Canada (UXYT7).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies Certified for Canada (QPAU7).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate undercabinet-type luminaires in this category is CSA-C22.2 No. 9.0, "General Requirements for Luminaires."

The basic standard used to investigate luminaires other than undercabinet type in this category is CSA-C22.2 No. 12, "Portable Luminaires."

CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993), is also used in addition to the above standards.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Light-emitting-diode Luminaire" (or "Portable LED Luminaire").

The Listing Mark for this category requires the use of a holographic label.

LIGHT-EMITTING-DIODE NIGHTLIGHTS CERTIFIED FOR CANADA (QOWC7)

USE

This category covers light-emitting-diode (LED) nightlights for direct-plug-in use in parallel-slot, general-purpose receptacles rated 15 or 20 A, 125 V.

RELATED PRODUCTS

Nightlights employing light sources other than LED are covered under Nightlights Certified for Canada (QOYX7).

LED lighting products intended for use as nightlights, but provided with a power-supply cord, are covered under Light-emitting-diode Luminaires, Portable Certified for Canada (QOVZ7).

Light-emitting-diode Nightlights Certified for Canada (QOWC7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 256, ''Direct Plug-In Nightlights.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Light-emitting-diode Nightlight'' (or ''LED Nightlight'').

The Listing Mark for this category requires the use of a holographic label.

****

PORTABLE LUMINAIRE ACCESSORIES, KITS AND SUBASSEMBLIES CERTIFIED FOR CANADA (QPAU7)

USE AND INSTALLATION

This category covers portable luminaire accessories, kits and subassemblies of the following types.

Portable Luminaire Accessory — Portable luminaire accessories are intended to be used with portable luminaires and consist of components such as interconnecting cord sets, dimmer and switch assemblies, and conversion kits to enable the portable luminaire to be converted to a fixed unit (luminaire) in accordance with CSA-C22.2 No. 250.0, ''Luminaires.''

Portable Luminaire Kit — Portable luminaire kits are intended to be used for making complete portable luminaires using ordinary tools to assemble and/or attach the parts to a support base in accordance with the instructions provided with the kit. All parts needed to assemble the product in accordance with the instructions are provided.

Portable Luminaire Subassembly — Portable luminaire subassemblies are intended to be used for modernizing, or replacing parts on existing luminaires in accordance with the instructions provided with the subassembly. They may also be used for constructing new portable luminaires

Portable Luminaire Accessories, Kits and Subassemblies Certified for Canada (QPAU7)−*Continued*

in accordance with the instructions provided with the subassembly. All electrical components needed to assemble the product in accordance with the instructions are provided.

MARKINGS AND INSTRUCTIONS

Portable luminaire accessory conversion kits are provided with mounting and installation instructions and markings to indicate that they are capable of being used as fixed units (luminaires) when used with the appropriate portable luminaires. The portable luminaires are identified by catalog or model number.

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 12 (1982), ''Portable Luminaires,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

Portable luminaire accessory conversion kits and their associated portable luminaires are additionally investigated to CSA-C22.2 No. 250.0, ''Luminaires.''

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Portable Luminaire Accessory,'' ''Portable Luminaire Kit,'' ''Portable Lamp Subassembly'' or ''Portable Luminaire Subassembly.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE WORK LIGHTS CERTIFIED FOR CANADA (QPCJ7)

USE AND INSTALLATION

This category covers cord-and-plug-connected lights for illumination of work areas such as construction sites, loading docks, and machinery work stations. Work lights are not intended to be hand held during use. Work lights are not intended for use in hazardous (classified) locations as defined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

This category also covers work light accessories intended for use with specific work lights.

Work lights may be freestanding, clamp-on, or similar portable mounting means, or be provided with a means for mounting to a tool, machine or a similar movable object.

Work lights may be placed on combustible floors. Special care must be employed to avoid overturning and to keep away from draperies, furniture, etc.

PRODUCT MARKINGS

A work light marked ''Dry Location Use'' is intended to be used only in a dry location.

A work light marked ''Suitable for Wet Location Use'' is intended for use in a wet or dry location.

A work light marked ''Suitable for Outdoor Use Only'' is suitable for use in a wet location and is intended to be used only in an outdoor location.

RELATED PRODUCTS

Portable outdoor flood lights for illumination or landscape, outdoor decorations, patios and play areas are covered under Luminaires, Portable Certified for Canada (QOWZ7), suitable for wet locations.

For other portable lighting products, see Luminaires, Portable Certified for Canada (QOWZ7) and Portable Electric Hand Lamps Certified for Canada (QORX7).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 12 (1982), ''Portable Luminaires,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Work Light,'' ''Portable Work Light'' or ''Work Light Accessory.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SUN AND HEAT LAMPS CERTIFIED FOR CANADA (QPDY7)

USE

This category covers portable sun and heat lamps of the household variety intended for the production of ultraviolet (sun) radiation, infrared (heat), radiation, or both.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, which may be produced by these lamps have not been investigated.

RELATED PRODUCTS

Sun and heat lamps intended for professional use are covered under Medical Equipment Certified for Canada (PIDF7).

Sun and heat equipment for household and commercial use is covered under Personal Sun and Heat Equipment Certified for Canada (QGRX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' and CAN/CSA-C22.2 No. 224, ''Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Infrared Lamp,'' ''Ultra-Violet Lamp,'' ''Heat Lamp'' or ''Sun Lamp.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QPKX7)

GENERAL

This category covers portable luminaires (lighting units). Portable luminaires have provision for connection of a three-conductor, flexible, extra-hard-usage cord having grounding conductor, and are provided with a seal between the lamp compartment and the terminal enclosure.

Connections to the fixed portion of the supply require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12 (1982), ''Portable Luminaires,'' and CSA-C22.2 No. 137 (1981), ''Electric Luminaires for Use in Hazardous Locations,'' in addition to the requirements contained in CSA Technical Information Letter No. B-60, ''Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires'' (issued 5-17-1993).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Portable Lighting Unit for Hazardous Locations'' or ''Portable Luminaire for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER CABLE CERTIFIED FOR CANADA (QPMU7)

USE

This category covers portable power cable constructed as described in and certified for use in accordance with Section 4 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Portable power cable consists of either a single insulated conductor with no jacket, or two or more insulated conductors, with or without grounding conductors, with an overall jacket. The insulation and jacket are both thermoset, except for Type PPC/TPE, which employs thermoplastic elastomer insulation, and Types MP and MP-GC, which employ a thermoset insulation and a thermoplastic or thermoset jacket. Insulation may be applied in one or two layers.

Types G, G-GC, G-BGC, W and SHD-GC are intended for supplying power to mobile equipment and machinery and are rated 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil. This cable employs flexible stranded conductors in the AWG sizes indicated below. The voltage ratings are as indicated below.

Types PPC and PPC/TPE are intended for temporary installations, such as portable stage lighting and temporary outdoor functions, and are rated 600 V, 60, 75, 90 or 105°C dry. This cable employs flexible stranded copper conductors in a size range of 8 AWG to 300 kcmil using strands of 34 or 30 AWG, and is flame rated minimum FT5.

Types MP and MP-GC are intended for use in underground mines where subject to occasional removal and change of location, and in rugged environments. This cable is rated 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil, and is flame rated minimum FT5. The voltage ratings are as indicated below.

CABLE TYPES

Type G Cable — A round, portable power cable with three or four insulated conductors, uninsulated ground wires, an overall jacket in conductors sized 12 AWG to 500 kcmil, or a two- or three-conductor cable in flat configuration in conductors sized 6 AWG to 4/0, both rated 2 kV.

Type G-GC Cable — A round, portable cable with three insulated conductors, uninsulated ground wires, ground-check conductor(s), an overall jacket using conductors sized 12 AWG to 500 kcmil, or a three- or four-conductor cable in flat configuration in conductors sized 6 AWG to 4/0, both rated 2 kV.

Type G-BGC Cable — A round, portable cable with three insulated conductors, uninsulated ground wires, ground-check conductor(s), and an overall jacket. The ground-check conductor is located in the center interstice of the three-phase conductor. The conductors are sized 12 AWG to 500 kcmil, rated 2 kV.

Type W Cable — A single conductor cable, in conductors sized 8 AWG to 1000 kcmil, a round, portable power cable with two, three or four insulated conductors, an overall jacket in conductors sized 12 AWG to 500 kcmil, or a two-conductor cable in flat configuration in conductors sized 8 AWG to 4/0, rated 2 kV.

Type SHD-GC Cable — A round, portable power cable with three insulated conductors, two uninsulated grounding conductors, a ground-check conductor, and an overall jacket. The conductors are sized 14 AWG to 500 kcmil, and the cable is rated 2 to 25 kV.

Type PPC/TPE Cable — A single-conductor, nonjacketed power cable.

Type PPC — A single conductor, nonjacketed power cable.

Type MP — A round power cable with three insulated, shielded conductors and three bare bonding conductors with conductors sized 6 AWG to 500 kcmil, rated 5 to 25 kV.

Type MP-GC — A round power cable with three insulated, shielded conductors, two bare bonding conductors, one ground check conductor with conductors sized 6 AWG to 500 kcmil, rated 5 to 25 kV.

PRODUCT MARKINGS

The type and flame ratings are identified by tag markings and by printing on the surface of the insulation. This cable may be marked ''-40C.'' If so marked, the cable complies with a cold bend test (not a suppleness test) at -40°C. Cable marked ''-50C,'' ''-60C'' or ''-70C'' complies with a bend test (not a suppleness test) at the applicable low temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 96, ''Portable Power Cables,'' and CSA-C22.2 No. 96.1, ''Mine Power Feeder Cables.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Portable Power Cable.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE CERTIFIED FOR CANADA (QPOR7)

GENERAL

This category covers instrumentation and control cable consisting of two or more insulated conductors, with or without one or more grounding (bonding) conductors, with or without one or more optical fiber members, and covered with a nonmetallic jacket. One or more grounding (bonding) conductors may be insulated or bare. Any fully insulated grounding (bonding) conductor is colored green or green with a yellow stripe. The cable is rated 150, 300 or 600 V.

The cable is certified in conductor sizes 18 to 4/0 AWG copper and 12 to 4/0 AWG aluminum rated 600 V, and 26 to 14 AWG for cable rated 300 V and 150 V. The type of insulation is surface marked (PVC, XLPE, EP, PE or TPE) on the cable. Conductor sizes within a cable may be mixed. A mixture of copper and aluminum circuit conductors is not provided within the same cable.

PRODUCT MARKINGS

Cable employing aluminum conductors is marked ''ALUMINUM'' (or ''ALUM'' or ''AL''). When any wire or cable contains ACM (aluminum conductor material) conductor(s), it is marked ''ALUMINUM ACM'' (or ''ALUM ACM'' or ''AL ACM'').

The cable is marked -25°C or -40°C. Cable employing thermocouple conductors is marked with the type designation of the thermocouple alloy.

Cable employing a shield is surface-marked ''Shielded.''

The cable is surface-marked with the temperature rating, ''Wet'' or ''Dry'' where applicable, ''Control'' and/or ''Instrumentation Cable'' or ''Thermocouple Cable'' where applicable, ''CIC'' for control and instrumentation cable nonarmored, or ''ACIC'' for armored control and instrumentation cable, and the flame rating. Cable that has been investigated to the CSA FT4 Flame Test is surface-marked ''FT4.'' Otherwise, cable is marked ''FT1.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 239, ''Control and Instrumentation Cables.''

UL MARK

The Listing Mark of UL on the attached tag, the reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name as appropriate: Control and instrumentation cable that contains copper conductors has the product name ''Control and Instrumentation Cable''; control and instrumentation cable that contains aluminum conductors has the product name ''Aluminum Control and Instrumentation Cable.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CONVERTERS/INVERTERS AND POWER CONVERTER/INVERTER SYSTEMS CERTIFIED FOR CANADA (QPPY7)

USE AND INSTALLATION

This category covers (1) fixed and stationary power converters, power inverters, power converter systems and power inverter systems for use in recreational vehicles in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," (2) portable stationary and fixed power converters, power inverters, power converter systems and power inverter systems for use in land vehicles, and (3) accessories for power converters and power inverters.

Power converters are primarily rectifying units intended for connection to a 120 V or 120/240 V, 15 or 20 A branch circuit supplied from the recreational vehicle panelboard and designed to provide low direct voltage for equipment in the recreational vehicle. A power converter may also include a battery charging feature.

Power inverters are intended for connection to a battery source within a vehicle. They are designed to supply ac voltage for equipment in a land vehicle. A power inverter may be provided with an ac transfer option to supply the output from an ac distribution system when the inverter is connected to such a system. A power inverter may also include a battery charger feature.

Power converter systems consist of a power converter and not more than three integral line voltage branch circuit protective devices. Power inverter systems consist of a power inverter and not more than three integral line voltage branch circuit protective devices. A main disconnecting means is provided if more than two branch circuit protective devices are incorporated.

A power converter system or power inverter system may serve the function of a distribution panelboard in a land vehicle. They are intended to be connected directly to an ac distribution system by means of a power supply cord.

REBUILT PRODUCTS

This category also covers units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt units are subject to the same requirements as new products.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 107.1 (1991), "Commercial and Industrial Power Supplies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Power Converter," "Power Converter System," "Power Inverter," "Power Inverter System," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION CENTERS FOR COMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (QPQY7)

GENERAL

This category covers power distribution centers for communications equipment rated 600 V or less.

Power distribution centers contain equipment such as circuit breakers, supplementary protectors, contactors, fuses, switches, including pullout types and related accessory equipment.

Some centers incorporate constructions designed to provide safety for the operator. These centers are dead-front but may be open at the back, bottom, top or sides. Other centers may employ special alarm indicating fuses that have exposed live parts extending through the front. The distribution centers that incorporate special alarm fuses or that are not provided with a complete enclosure are intended for installation in places accessible only to qualified persons and are so marked.

INSTALLATION

Some equipment has been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions, stating "To be installed only in a Restricted Access Location," or similar wording.

A certified subassembly such as a fuse panel, circuit breaker panel or the like has been investigated for use in a power distribution center or cabinet and is suitable for field installation. The subassembly is installed in accordance with the manufacturer's installation instructions, and the catalog number or equivalent of the subassembly and power distribution center or cabinet is referenced in the instructions.

PRODUCT MARKINGS

Power distribution centers are marked with their short circuit current rating. This marking may be presented as a dc rating in amps, a description of the battery power supply, such as "Suitable For Use In Circuits Powered By Up To Five Banks Of 48 V, 200 A-Hr. Batteries," or a combination of both. A battery "bank" consists of a sufficient number of series-connected batteries to obtain the required system voltage. A number of "banks" are then wired in parallel to obtain the desired system A-Hr. capacity.

A distribution center having provision for the field installation of additional equipment such as circuit breakers, contactors, switches or the like is marked with the name or trademark of the manufacturer and the catalog number or equivalent of those devices that are intended to be installed in the field.

Power distribution centers are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

RELATED EQUIPMENT

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950, "Safety of Information Technology Equipment," or CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Center for Communications Equipment" or "Power Distribution Center for Communications Equipment Subassembly."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-DISTRIBUTION EQUIPMENT, PORTABLE CERTIFIED FOR CANADA (QPRW7)

USE

This category covers portable power-distribution units and devices for use in the following locations:

- Theatre installations in accordance with Section 44 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC)
- Amusement parks, midways, carnivals, film and TV sets, TV remote broadcasting locations, and traveling shows in accordance with Section 66 of the CEC
- Temporary wiring at construction sites in accordance with Section 76 of the CEC

RATINGS

This category covers units rated at 600 V or less, single- or multi-phase. Units are rated maximum 1600 A.

Short-circuit Rating — Units are intended for connection to supplies with a maximum available fault current of 10,000 A.

PRODUCT MARKINGS

Accessibility — Units intended for use in areas not accessible by the general public are marked "For Use in Areas Not Readily Accessible by the General Public."

Conductors in Parallel — Units intended for paralleled conductors on a single circuit are marked "WARNING – Risk of Fire – Not for Multiple Circuits. Single Circuit with Parallel Conductors Only."

Duty Rating — Outputs are not suitable for continuous use unless marked otherwise.

Ground-fault Protection — Only those receptacles so marked are provided with ground-fault circuit protection for personnel.

Neutral Connection — Equipment rated for use on 3-phase, 4-wire with ground supplies and intended for use with electronic dimmers are marked "130 Percent Neutral – Suitable for Use with Electronic Dimmers." Equipment for use on both 208Y-/120-volt, 3-phase, 4-wire and 120-/240-volt, single-phase supplies at the full current rating on both systems are marked "200 Percent Neutral."

Qualified Personnel — Units intended for use by qualified personnel are marked "FOR USE BY QUALIFIED PERSONNEL ONLY" and "The routing of portable supply conductors, the making and breaking of supply connectors, and the energization and de-energization of supply services shall be performed by qualified personnel only."

Enclosure Type — Enclosures are marked with a Type designation indicating the external conditions for which they are intended. Intended uses for the various Type designations are indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7). Enclosures may additionally be marked with descriptive terms such as "Raintight," "Watertight," "Corrosion Resistant" and the like.

Receptacle Ratings — Equipment with receptacles that are not suitable to be disconnected under load are marked "Do Not Disconnect Under Load," or other similar marking to indicate the limitation of the receptacle.

Single-pole Inlets and Outlets — Equipment with separate, single-pole devices for input or output and without sequential interlocking provisions are marked "WARNING — Risk of Electric Shock. Plug connection should be in the following order:

a) Equipment grounding conductor connectors,
b) Grounded circuit conductor connectors, and
c) Ungrounded conductor connectors.

Disconnection should be in reverse order."

RELATED PRODUCTS

Units intended for use in theater or studio rigging immediately adjacent to stage luminaires are covered under Stage and Studio Luminaires and Connector Strips Certified for Canada (IFDZ7).

Portable cord-connected units rated 250 V ac or less, 20 A or less, intended for indoor use as multiple-outlet extensions of a branch circuit to a central location to supply laboratory equipment, a home workshop, home movie lighting control, etc., are covered under Relocatable Power Taps Certified for Canada (XBYS7).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables are covered under Cord Sets and Power-supply Cords Certified for Canada (ELBZ7).

****

PORTABLE POWER-DISTRIBUTION UNITS AND DEVICES CERTIFIED FOR CANADA (QPSH7)

GENERAL

This category covers portable power-distribution equipment of standardized type or configuration. Each unit has a marked model, type or catalog number.

Portable power-distribution units are assemblies of certified products or components, or both, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, control components, receptacles for attachment plugs, stage and studio type inlets and connectors, and the like.

This category also covers cable-mounted busbar clamps for use with portable power-distribution units as well as partially enclosed, plastic-framed cable-splicing blocks.

Busbar Clamps (Sister Lugs)

Busbar clamps are intended for use by qualified personnel only. Cable terminating to busbar clamps should be tied or otherwise supported so that flexing or strain on the conductors is not transmitted to the conductor termination at the busbar clamp. Solder lug-type units are not suitable to terminate an equipment grounding conductor. Busbar clamps are marked with their range of intended wire sizes and their maximum current rating.

Cable-splicing Blocks (Spiders)

Partially enclosed, plastic-framed cable-splicing blocks are suitable for outdoor use. They are suitable for exposure to rain or water spray when not energized. Following such an exposure they are intended to be dried and inspected prior to energization. They are intended for use by qualified personnel in areas not readily accessible by the general public. They are intended for installations covered by Section 44 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Construction Site Units

Units identified as "Construction-site Portable Power-distribution Units" or with similar identifiers that are marked as providing ground-fault protection for personnel protect the output circuits in the presence of one or more of the following conditions:

1. Any two power supply conductors are reversed.
2. There is an open circuit in either the grounded supply conductor or any of the ungrounded supply conductors.

Protection is provided by exhibiting the performance characteristics of a Class A ground-fault circuit-interrupter or by de-energizing the protected output circuits.

ADDITIONAL INFORMATION

For additional information, see Power-distribution Equipment, Portable Certified for Canada (QPRW7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify portable power-distribution units manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Distribution Unit" (or "Port Pwr Dist Unit") or "Construction Site Portable Power Distribution Unit" (or "Construction Site Port Pwr Dist Unit"). The word "Equipment" may be substituted for "Unit."

The Listing Mark of partially enclosed, plastic-framed cable-splicing blocks is the same as that specified above except the product name is "Open Frame Cable Splicing Block."

The Listing Mark on the smallest unit container in which busbar clamps are packaged and additionally provided with the UL Mark for Canada symbol on the busbar clamp is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for busbar clamps includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Busbar Clamp."

****

POWER OUTLETS AND POWER-OUTLET FITTINGS CERTIFIED FOR CANADA (QPYV7)

GENERAL

This category covers power outlets and power-outlet fittings.

Power outlets are enclosed assemblies that may include components such as receptacles, circuit breakers, fuseholders, fused switches, buses, and watt-hour meter-mounting means. Power outlets are permanently installed and, although not restricted to such use, are intended for use:

- At outdoor locations, such as on farms, at building sites, and the like, where power is required to operate portable, mobile, or temporarily installed equipment
- To supply power to a mobile home or a recreational vehicle
- To supply shore power to boats

Power-outlet fittings may be panels or combination units incorporating receptacles, disconnecting means, overcurrent protection or other such devices. A separable mounting post or pedestal to which power outlets are to be mounted is also considered a fitting. Power-outlet fittings are intended for factory or field assembly into or in conjunction with specific power outlets. Power outlets are marked to indicate those fittings with which they are intended to be used.

USE AND INSTALLATION

Power outlets are mounted using a post or pedestal, each detailed as follows:

Post type power outlets are intended to be mounted in concrete at or below grade level, or intended to be secured to some other mounting support. The mounting post contains markings indicating the proper grade level.

Pedestal type power outlets are intended for mounting on a concrete slab.

Unless marked otherwise, a mounting post, pedestal or fitting is not intended to serve as the sole support of a mast for overhead wiring.

Power outlets are not intended for use in recreational vehicle parks or in marinas unless so marked.

Power outlets are suitable as service equipment if marked ''Suitable For Use As Service Equipment'' or, where the neutral is factory bonded to the enclosure, ''Suitable For Use Only As Service Equipment.''

Power outlets containing overcurrent protection are marked with their short-circuit current ratings in rms symmetrical amps.

Where in normal operation the load will continue for three hours or more, circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Investigation of a power outlet includes a test designed to simulate exposure to beating rain to determine that such exposure will not interfere with successful operation of the apparatus within the enclosure nor result in wetting of the exposed faces of receptacles and associated attachment plugs.

Power outlets are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

RELATED PRODUCTS

Portable power distribution equipment is covered under Portable Power Distribution Units and Devices Certified for Canada (QPSH7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 29 (1989), ''Panelboards and Enclosed Panelboards.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Outlet'' or ''Power Outlet Fitting.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES CERTIFIED FOR CANADA (QQAQ7)

These categories cover the following types of power supplies intended for use in ordinary locations in accordance with the Canadian Electrical Code.

- General Purpose Power Supplies
- Specialty Power Supplies
- Information Technology Equipment Power Supplies
- Telephone Power Supplies

The investigation of a device covered in these categories does not include the effects it may have on the system or equipment connected thereto.

A power supply not covered under one of the above mentioned categories and for use with only a specific product may be covered under the category of the specific product.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, GENERAL PURPOSE CERTIFIED FOR CANADA (QQFU7)

GENERAL

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 750 V, direct and alternating current.

Power supplies marked ''Intended for Installation in a Protected Environment'' or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

ADDITIONAL INFORMATION

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1, ''Power Supplies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Supply.''

For rebuilt products the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT CERTIFIED FOR CANADA (QQGQ7)

GENERAL

This category covers power supplies rated 600 V or less, intended for use with information technology equipment (ITE) including electrical busi-

Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7)−*Continued*

ness equipment. End-use products that employ these types of power supplies are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

All power-supply types covered under this category are marked with input and output electrical ratings that include the voltage and intended maximum load ratings in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is to be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

ADDITIONAL INFORMATION

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 60950-1 (2007), ''Information Technology Equipment – Safety – Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60950-22 (2007), ''Information Technology Equipment – Safety – Part 22: Equipment to be Installed Outdoors.''

All low-voltage outputs (maximum 42.4 V peak or 60 V dc) are safety extra-low-voltage (SELV) as defined in CAN/CSA-C22.2 No. 60950-1, and, where noted in the test report, SELV for wet locations as defined in CAN/CSA-C22.2 No. 60950-22. An output marked ''LPS'' has been determined to have an output level at or below the limited power-source level specified in CAN/CSA-C22.2 No. 60950-1, as it relates to the requirements for equipment supplied by the output.

An output marked ''Class 2'' has additionally been investigated to CAN/CSA-C22.2 No. 223 (1991), ''Power Supplies with Extra Low Voltage Class 2 Outputs.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number or file number, and the category identifier ''Information Technology Equipment Power Supply'' (or ''I.T.E. Power Supply'' or ''ITE Power Supply''), ''QQGQ7 Power Supply,'' or the standard number with or without the ''CAN/CSA-C22.2 No.'' prefix (e.g., ''CAN/CSA-C22.2 No. 60950-1,'' ''60950-1'').

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word ''Accessory.''

For rebuilt products the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, SPECIALTY CERTIFIED FOR CANADA (QQIJ7)

USE

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 750 V, direct and alternating current.

These power supplies are intended for, but not necessarily limited to, specific uses such as to supply electroplating equipment, cathodic protection equipment, power supply/battery charger combinations, and industrial equipment, including inverters and converters.

This category also covers Class 2 power units that are permanently connected, or that are cord-connected with input rated greater than 250 V. Other types of Class 2 power units are covered under Transformers, Class 2 Certified for Canada (XOKV7) and Direct-plug-in and Cord-connected Class 2 Power Units Certified for Canada (EPBU7).

PRODUCT MARKINGS

Power Supplies, Specialty Certified for Canada (QQIJ7)−*Continued*

Power supplies marked ''Intended for installation in a protected environment'' or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

RELATED PRODUCTS

See Power Supplies, General Purpose Certified for Canada (QQFU7).

ADDITIONAL INFORMATION

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), ''General Use Power Supplies.''

Products with a marked Class 2 output are additionally investigated to CAN/CSA-C22.2 No. 223 (1991), ''Power Supplies with Extra-Low-Voltage Class 2 Outputs.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, TELEPHONE CERTIFIED FOR CANADA (QQJE7)

GENERAL

This category covers indoor- and outdoor-use telecommunication power supplies having input ratings of not more than 750 V, direct and alternating current, intended for use with telephone exchange equipment, telephone appliances, and telephone accessories.

REBUILT PRODUCTS

This category also covers telephone power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt telephone power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt telephone power supplies are subject to the same requirements as new telephone power supplies.

RELATED PRODUCTS

See Power Supplies, General Purpose Certified for Canada (QQFU7).

ADDITIONAL INFORMATION

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 225, ''Telecommunication Equipment,'' and CSA-C22.2 No. 107.1, ''General Use Power Supplies.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Telecommunication Power Supply'' or ''Telephone Power Supply.''

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES FOR USE WITH AUDIO/VIDEO, INFORMATION AND COMMUNICATION TECHNOLOGY EQUIPMENT CERTIFIED FOR CANADA (QQJQ7)

GENERAL

This category covers power supplies rated 600 V or less, intended for use with products covered under Audio/Video Equipment Certified for Canada (AZOE7), Communication Technology Equipment Certified for Canada (AZOJ7) and Information Technology Equipment Certified for Canada (AZOT7).

These power supplies are stand-alone units that deliver power to the above end-use products via external interconnecting means.

This category also covers modular accessory power supplies. Such power supplies are types that are intended for field installation within computing, telecommunication, or similar equipment. These modular power supplies are also provided with installation instructions relative to safe installation.

All power-supply types covered under this category are marked with input and output ratings that include the voltage and intended maximum load rating in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit will be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the specific system or equipment to which it is connected.

ADDITIONAL INFORMATION

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 62368-1 (2012), ''Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements.''

All low-voltage outputs are Class 1 electrical energy sources (ES1) as defined in CAN/CSA-C22.2 No. 62368-1. An output marked ''LPS,'' ''PS1'' or ''PS2'' has been determined to have an output level at or below the limited power-source level, Class 1 electrical power source (PS1) or Class 2 electrical power source (PS2), respectively, specified in CAN/CSA-C22.2 No. 62368-1, as it relates to the requirements for equipment supplied by the output.

An output marked ''Class 2'' has additionally been investigated to CAN/CSA-C22.2 No. 223 (1991), ''Power Supplies with Extra-Low-Voltage Class 2 Outputs.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Power Supply,'' or other appropriate product name as shown in the individual Listings.

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word ''Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED ASSEMBLIES CERTIFIED FOR CANADA (QQRX7)

This category covers prefabricated assemblies, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site. Materials, including the methods used for the installation of electrical, mechanical, heating and plumbing equipment incorporated in these assemblies by their manufacturer are based on the ''National Electric Code of Canada,'' ''National Building Code of Canada,'' ''National Fire Code of Canada,'' ''National Plumbing Code of Canada,'' and/or the ''National Farm Building Code of Canada.''

Authorities Having Jurisdiction should be consulted before installation.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED WIRING SYSTEMS CERTIFIED FOR CANADA (QQVX7)

USE AND INSTALLATION

This category covers prefabricated wiring systems that may incorporate modular multipole connectors, AC90 cable, ACWU90 cable, flexible metal conduit, hard usage cord, outlet boxes, splitter assemblies, remote control switching assemblies and devices. The wiring systems cannot be field inspected by the Authority Having Jurisdiction (AHJ) without damage to the assembly.

These prefabricated modules and assemblies are intended for installation rearrangement and inspection in accessible locations in accordance with the CEC. AHJs should be consulted before installation.

This equipment is intended to be connected to supply circuits of up to 600 V ac and maximum rating of 30 A per circuit.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, are based on the CEC, the ''National Building Code of Canada,'' ''National Fire Code of Canada,'' and/or the ''National Farm Building Code of Canada.''

PRODUCT MARKINGS

Devices of manufactured wiring systems that are not intended for interrupting current are marked ''NOT FOR INTERRUPTING CURRENT.''

Each bi-directional wiring assembly is marked ''WARNING: Risk of Fire or Electric Shock,'' and the following or equivalent: ''Do not electrically connect to more than one source of supply. Always determine that the wiring assembly is electrically connected to one and only one source of supply.''

Manufactured wiring systems suitable for installation in patient care areas are marked ''Suitable For Patient Care Areas of Health Care Facilities Other Than Anesthetizing Locations.''

Manufactured wiring systems suitable for installation in ducts or plenums are marked ''Acceptable for Use in Ducts or Plenums Used for Environmental Air.''

Manufactured wiring systems suitable for installation in air-handling spaces other than ducts or plenums are marked ''Acceptable for Use in Air-handling Spaces Other Than Ducts or Plenums.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 203.1 (1994), ''Manufactured Wiring Products.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Distribution Box'' or ''Tap Box,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECTIONS AND UNITS CERTIFIED FOR CANADA (QQXX7)

USE AND INSTALLATION

This category covers factory-built assemblies for use within, or as part of the building structure of buildings for commercial, industrial and residential use. These assemblies may incorporate pre-installed electrical power distribution systems comprised of certified electrical components, which are usually concealed and may not be accessible for inspection at the installation site. Some assemblies may incorporate additional certified equipment.

The structural requirements vary with the type of building construction, occupancy and location of installation and are not investigated under this category.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Some assemblies covered under this category have additionally been investigated to CAN/ULC-S102, ''Standard Method of Test for Surface

Sections and Units Certified for Canada (QQXX7)−*Continued*

Burning Characteristics of Building Materials and Assemblies," and may be marked with a designation "FHC X/Y" on the assembly that denotes these products have a flame-spread value of "X" or less and a smoke-developed value of "Y" or less.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," and CAN/CSA-C22.2 No. 0.4, "Bonding of Electrical Equipment."

The basic standard used to investigate products in this category for flame-spread and smoke-developed values is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies." Such products are noted in the individual certifications.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Prefabricated *."

* The appropriate product name as shown in the individual Listings

One Listing Mark is applied to each section or unit.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRING ASSEMBLIES CERTIFIED FOR CANADA (QQYZ7)

GENERAL

This category covers prefabricated wiring systems comprised of Listed electrical components that could be field assembled and inspected by an Authority Having Jurisdiction (AHJ), but are assembled in the factory prior to field installation.

Prefabricated wiring assemblies incorporate Listed conduit, tubing, or cable, conductors and fittings intended for field installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). They may be factory assembled to outlet or junction boxes, box mounting brackets, and wiring devices.

Prefabricated wiring assemblies are marked with the conduit, tubing or cable type, and the conductor size and type to permit determination of their suitability for a specific application and ampacity in accordance with the CEC. A parts list is provided with each assembly to identify the extent of the product.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, are based on the CEC, the "National Building Code of Canada," "National Fire Code of Canada," and/or the "National Farm Building Code of Canada."

Wiring Assembly Kits

Wiring assembly kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed conduit, tubing or cable, Listed fittings appropriate for the type of conduit, tubing, or cable, outlet or junction boxes, conductors, or other devices.

The packaging for wiring assembly kits is marked with the conduit, tubing, or cable size and type, and the conductor size and type, if provided, to permit determination of their suitability for a specific application and ampacity in accordance with the CEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Conduit Kits

Conduit kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed conduit or tubing, Listed fittings appropriate for the type of conduit or tubing, outlet or junction boxes, or other devices.

The packaging for conduit kits is marked with the conduit or tubing size and type to permit determination of their suitability for a specific application with the CEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Surface Raceway Kits

Surface raceway kits for final assembly in the field consist of a package that contains some or all: lengths of Listed surface metal or nonmetallic surface raceways, Listed fittings appropriate for the surface raceway, or other devices.

Wiring Assemblies Certified for Canada (QQYZ7)−*Continued*

The packaging for surface raceway kits is marked with the raceway size and the number, type and size of conductors that may be installed in the Listed raceway, to permit determination of its suitability for a specific application in accordance with the CEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

RELATED PRODUCTS

For factory-built modules and cable sets incorporating fixtures, switches, connectors and receptacles, see Manufactured Wiring Systems Certified for Canada (QQVX7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

UL MARK

The Listing Mark of UL on the factory-assembled wiring assembly or the packaging of a wiring assembly kit is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Wiring Assembly," "Wiring Assembly Kit," "Conduit Kit" or "Surface Raceway Kit."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED BUILDINGS CERTIFIED FOR CANADA (QRAR7)

These are factory-built buildings and building assemblies incorporating pre-installed materials and equipment which after installation, are usually concealed and may not be accessible for inspection at the installation site.

They are intended for installation subject to approval by the authority having jurisdiction.

The buildings and building assemblies have been investigated in accordance with one or more Canadian Building, Plumbing, Electrical Codes, etc. applicable to the requirements of the local regulatory authority.

As an alternate, the building and building assemblies have been investigated in accordance with one or more specific areas of a code such as electrical, plumbing, mechanical, structural, etc.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED UNITS CERTIFIED FOR CANADA (QRHQ7)

USE AND INSTALLATION

Prefabricated units are factory built assemblies for varying uses such as rooms within buildings or rooms within rooms of buildings for commercial, industrial or residential use, outdoor or exterior roofed structures, and canopies.

Information covering the electrical equipment and appliances factory furnished as part of the prefabricated unit, and items such as site-completed work subject to review by the Authority Having Jurisdiction, are contained on the manufacturer's data plate attached to each unit.

These prefabricated units are intended for installation subject to approval by the Authority Having Jurisdiction.

REQUIREMENTS

These units have been investigated in accordance with the applicable sections of one or more Canadian Codes (such as Building, Fire, Plumbing) to meet the needs of the local jurisdiction. As an alternate, the units may have been investigated in accordance with only one or more specific areas such as electrical, plumbing, mechanical, etc.

ADDITIONAL INFORMATION

For additional information, see Prefabricated Buildings Certified for Canada (QRAR7).

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Mark of UL on the product is the only method provided by UL to identify prefabricated units manufactured under its Classi-

Prefabricated Units Certified for Canada (QRHQ7)−*Continued*

fication and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), "PREFABRICATED UNIT IN ACCORDANCE WITH (Canadian Building Code, Canadian Electrical Code, etc.)."

The Classification Mark includes reference to the specific codes (including editions) to which the product was investigated. One Classification Mark is applied to each prefabricated unit at a location visible after the unit is erected. In addition, a manufacturer's data plate is applied adjacent to the UL Mark, where necessary, to convey applicable information such as the equipment and appliances factory furnished as part of the classified unit, the structural design loads, and any site-completed items subject to review by the Authority Having Jurisdiction. If the unit is shipped knocked down, the number and description of the sections required to complete the unit is included on the data plate.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL AND INDUSTRIAL BUILDINGS CERTIFIED FOR CANADA (QRNZ7)

This category includes automotive service station buildings, toll booths, electrical distribution buildings, and similar prefabricated buildings.

These factory built buildings have been classified in accordance with one or more Canadian codes (building, plumbing, electrical, etc.) to meet the needs of the local jurisdiction.

As an alternate, the building has been classified in accordance with one or more specified areas of a Building Code such as electrical, plumbing, mechanical, structural, etc. Information covering the electrical equipment and appliances factory furnished as part of the building, and the items such as site-completed work subject to review by the local regulatory authority, are contained on the manufacturer's data plate attached to each building.

Prefabricated commercial and industrial buildings are intended for installation subject to approval by the authority having jurisdiction.

The Classification Marking of UL on the product is the only method provided by UL to identify Commercial and Industrial Buildings produced under its Classification and Follow-Up Service.

The Classification Marking includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), the product identity "Industrial Buildings", "In accordance with Canadian Electrical Code, Canadian Building Code, etc." including the manufacturer's name and address, serial number of the building units/sections and a reference to a manufacturer's data plate posted at or near the electrical distribution panel.

One Classification Marking is applied to each building at a location visible after the building is erected. In addition, information covering the equipment and appliances factory furnished as part of the Classified, site-completed building and, if the building is shipped knock down, the number and description of the sections required to complete the building is included on a data plate.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPOSITE PANELS CERTIFIED FOR CANADA (QRSY7)

USE AND INSTALLATION

This category covers composite panels, which are factory-built panel assemblies intended for use within or as part of the structure of buildings for commercial, industrial and residential use. These assemblies incorporate pre-installed branch-circuit electrical power distribution systems that are usually concealed and may not be accessible for inspection at the installation site. Some panels incorporate audio, lighting, ventilation fans, and other certified utilization equipment.

The structural strength requirements vary with live loads, dead loads, and seismic conditions of each locality. Authorities Having Jurisdiction should be consulted with respect to their requirements for panel systems.

INSTALLATION INSTRUCTIONS

Composite Panels Certified for Canada (QRSY7)−*Continued*

A copy of the installation and operation instructions are provided with each panel if shipped separately or with each set of panels intended to be installed as a system.

The composite panel system is provided with an assembly diagram and with an electrical diagram specifying the specific locations of the field-installed wiring connections, the connections between composite panel sections, factory-installed utilization equipment, and the intended field-wiring branch-circuit-conductor connection points of the panel system.

The installation instructions indicate which circuits are factory installed.

PRODUCT MARKINGS

Each input power feed conduit whip, cord or building field-wiring-connection point to the panel system is marked with a schematic wiring diagram or the equivalent, indicating the circuits and conductors provided and the required rating of the branch circuit to which it is to be connected.

A panel system with other than a single-phase circuit has the convenience receptacles and utilization equipment marked by a letter, number, color, or a similar designation to indicate the circuit in the system to which the receptacle or utilization equipment is connected.

Each panel system electrical accessory that is shipped separately from the major panel system to which it is to be connected is marked with respect to its intended use and interrelationship with the panel system; for example, "For Use with Composite Panel Series ____," in which the appropriate series or catalog number is designated. When separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

COMPOSITE PANEL
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY
Control No.
or
COMPOSITE PANEL ACCESSORY
FOR USE WITH PANEL SERIES [panel designation]
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY
Control No.

PRESS AND OTHER POWER-OPERATED MACHINE CONTROLS AND SYSTEMS CERTIFIED FOR CANADA (QUEQ7)

This category covers controls and systems intended for industrial or commercial application on power-operated machines intended for such uses as pressing, punching, shearing or breaking operations. They may be designed for use on particular types of equipment such as pneumatic- or hydraulic-powered devices or mechanically operated part or full revolution types of machines. The control or system is intended to reduce the risk of bodily injury resulting from machine operation. The intended use of the control is noted in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESENCE-SENSING DEVICES CERTIFIED FOR CANADA (QUHP7)

USE

This category covers presence-sensing devices intended for use in machine control systems where they can be interconnected to the control system. Presence-sensing devices detect the presence of an object or body part and are used as a part of the machine safeguarding system to reduce the risk of bodily injury from moving machine parts. These products are limited to use on part revolution types of machines or machines where operation can be interrupted and motion stopped at any point in the machine operation cycle.

Presence-sensing devices investigated for press initiation are noted in the individual certifications.

RELATED PRODUCTS

Presence-sensing devices employing active opto-electronic protective devices (AOPD) consisting of one or more light beams for the sensing function are covered under Active Opto-electronic Protective Devices Certified for Canada (NIPF7).

Presence-sensing devices employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) consisting of one or more laser scanners for the sensing function are covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection Certified for Canada (NIPM7).

ADDITIONAL INFORMATION

For additional information, see Press and Other Power-operated Machine Controls and Systems Certified for Canada (QUEQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 0.8, ''Safety Functions Incorporating Electronic Technology,'' and CSA-C22.2 No. 14, ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Presence Sensing Device.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESS CONTROLS CERTIFIED FOR CANADA (QUKQ7)

USE

This category covers press controls intended for use in press control systems where they are interconnected with other components, such as push-button hand controls, valves, air cylinders, etc.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 0.8, ''Safety Functions Incorporating Electronic Technology,'' and CSA-C22.2 No. 14, ''Industrial Control Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Press Control.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT, ELECTRICAL CERTIFIED FOR CANADA (QUYX7)

GENERAL

This category covers process control equipment rated 600 V maximum and intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators).

Equipment intended to be installed only in process control panels is so identified.

Process control equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with provided installation instructions.

Open-type process control equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Process control equipment intended for mounting in hazardous (classified) locations or with circuits that extend into hazardous (classified) locations is covered under Process Control Equipment for Use in Hazardous Locations Certified for Canada (QUZW7) and Process Control Equipment for Use in Zone Classified Hazardous Locations Certified for Canada (QVAJ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), ''Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements.''

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Process Control Equipment,'' ''Open-type Process Control Equipment,'' ''Process Control Enclosure,'' ''Process Control Enclosure Part,'' ''Process Control Subassembly,'' ''Process Control Accessory,'' or other appropriate product name as shown in the individual Listings. The words ''Process Control Equipment'' may be abbreviated ''Proc. Cont. Eq.''

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL Mark for Canada symbol, ''QUYX7'' and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QUZW7)

USE AND INSTALLATION

This category covers process control equipment rated 600 V maximum and intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators), including associated apparatus providing intrinsically safe outputs (e.g., barriers providing intrinsically safe circuit extensions).

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is certified as part of the system unless otherwise indicated and is used as intended.

Equipment intended to be installed only in process control panels is so identified in the individual certifications. Such equipment is not intended for field installation.

Safety may be affected if the manufacturer's installation instructions are not followed.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QUZW7)

RELATED PRODUCTS

Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

Process control equipment intended for use in unclassified locations is covered under Process Control Equipment, Electrical Certified for Canada (QUYX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Process Control Equipment for Use in Hazardous Locations," "Process Control System for Use in Hazardous Locations," "Process Control Unit for Use in Hazardous Locations," "Process Control Equipment (Associated Apparatus)," "Process Control Unit (Associated Apparatus)," or other appropriate product name as shown in the individual Listings. The words "Hazardous Locations" may be abbreviated "Haz. Loc." The words "Process Control Equipment" may be abbreviated "Proc. Cont. Eq."

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL Mark for Canada symbol, "QUZW7" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QVAJ7)

USE AND INSTALLATION

This category covers process control equipment rated 600 V maximum and intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code." These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators).

Equipment intended to be installed only in process control panels is so identified in the individual Listings. Such equipment is not intended for field installation.

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is Listed as part of the system, unless otherwise indicated, and is used as intended.

Safety may be affected if the manufacturer's installation instructions are not followed.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Equipment investigated for use only in hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

Process control equipment intended for use in unclassified locations is covered under Process Control Equipment, Electrical Certified for Canada (QUYX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

PROCESS CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QVAJ7)

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Process Control Equipment for Use in Hazardous Locations," "Process Control System for Use in Hazardous Locations," "Process Control Unit for Use in Hazardous Locations," "Process Control Equipment (Associated Apparatus)," "Process Control Unit (Associated Apparatus)," or other appropriate product name as shown in the individual Listings. The words "Hazardous Locations" may be abbreviated "Haz. Loc." The words "Process Control Equipment" may be abbreviated "Proc. Cont. Eq."

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL Mark for Canada symbol, "QVAJ7" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS CERTIFIED FOR CANADA (QVGK7)

PRIMARY PROTECTORS FOR COMMUNICATIONS CIRCUITS CERTIFIED FOR CANADA (QVGV7)

GENERAL

This category covers protectors intended for use on communication circuits as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

These protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at or over 300 V to ground as defined in the CEC. These devices may also be used to protect against electrical transients from an electromagnetic disturbance or higher than normal voltages induced on the communication circuits due to close proximity of the protected circuit to electric light or power conductors.

This category includes both fuse and fuseless protectors. Requirements for the location and installation of primary protectors are contained in the CEC. The individual certifications provide the following information: Protector block number, catalog numbers of arresters that may be employed in a certified block, types of arresters, design features, maximum fusing wire that is used in series with the block, and indoor or outdoor use.

The maximum size fusing wire is indicated by the following alphabetical designations:

A – 24 AWG, copper wire with thermoplastic insulation
B – 22 AWG, copper wire with thermoplastic insulation
C – 20 AWG, 40% copper-clad wire
D – 26 AWG, copper wire with thermoplastic insulation

Protector blocks suitable for outdoor use are also suitable for use indoors. Blocks marked for indoor use are suitable for installation only indoors.

This category also covers network interface devices, which are two-compartment enclosures that serve to provide a demarcation between the equipment of the private residence and the outside plant. The first compartment, located on the incoming side of the telephone line, may employ a certified compatible telephone protector, where the compatibility is determined by UL. The second compartment employs terminals and standard telephone jacks for use by the resident. Indoor and outdoor certification is subject to the same requirements used in the investigation of telephone protectors.

RELATED PRODUCTS

Separate network interface devices intended for use without a protector are covered under Communication Circuit Accessories Certified for Canada (DUXR7).

Primary Protectors for Communications Circuits Certified for Canada (QVGV7)−*Continued*

Protectors intended for use with municipal fire alarm circuits are covered under Miscellaneous Devices Certified for Canada (UXKV7).

Secondary protectors intended for telephone, telegraph, fire alarm and similar signaling circuits are covered under Secondary Protectors for Communications Circuits Certified for Canada (QVRG7).

ADDITIONAL INFORMATION

For additional information, see Protectors Certified for Canada (QVGK7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 226, ''Protectors in Telecommunication Networks.''

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Signal Circuit Protector,'' ''Telephone Protector,'' ''Network Interface Device'' or ''Signal Circuit Protector Enclosure.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECONDARY PROTECTORS FOR COMMUNICATIONS CIRCUITS CERTIFIED FOR CANADA (QVRG7)

GENERAL

This category covers secondary protectors intended for use on communication circuits as defined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

These protectors are intended to suppress abnormal voltage and/or current conditions that bypass the primary protector. These devices limit currents to less than the current-carrying capacity of certified communication wire employed in the communication loop of the protected premise. Any overvoltage protection and/or grounding connection is intended to be electrically located on the equipment side of the protector's current-limiting means.

Secondary protectors covered under this category have been investigated for use only on the equipment side of a primary protector (QVGV7) and are intended to be installed only on the protected portion of a communication circuit. In those cases where a primary protector is not required, as defined in the CEC, the secondary protector may be installed or connected into the communication circuit without the use of a primary protector.

The current-limiting, fusing or extinguishing operation may be accomplished by a current-protection device located within the secondary protector, or the secondary protector may be used with a ''sneak-current protector.'' A sneak-current protector serves to limit abnormal fault current that is generated due to contact of the telephone lines with AC power lines. The sneak-current protector is a separate device or module that is intended for mounting on a certified compatible base assembly. This current-protection system may employ a fuse, current-limiting circuitry or other similar means to limit the abnormal fault current condition.

RELATED PRODUCTS

Other telephone equipment is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7).

Primary telephone protectors are covered under Primary Protectors for Communication Circuits Certified for Canada (QVGV7).

Wire and cable intended to be permanently installed in a building in accordance with the CEC is covered under the appropriate wire and cable categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA C22.2 No. 226 (1992), ''Protectors in Telecommunication Networks.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

Secondary Protectors for Communications Circuits Certified for Canada (QVRG7)−*Continued*

together with the word ″LISTED,″ a control number, and the product name ''Secondary Protector,'' ''Secondary Telephone Protector'' or ''Sneak Current Protector.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QVSC7)

ISOLATED LOOP CIRCUIT PROTECTORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QVSI7)

USE

This category covers protectors intended for use on Class 2 or Class 3 remote control, signaling and power-limited circuits or fire-protection-signaling circuits.

These protectors are intended as suppression devices for abnormal voltage conditions that may exist on the circuit due to electrical transients from an electromagnetic disturbance. These protectors are not intended for use on circuits exposed to accidental contact with electric light or power conductors operating at over 300 V to ground.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Isolated Loop Circuit Protector for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE CERTIFIED FOR CANADA (QVUT7)

The following information and listings relate to fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with the requirements of the Standard of the National Fire Protection Association for the Installation of Centrifugal Fire Pumps, NFPA 20.

Authorities having jurisdiction should be consulted before installation.

CENTRIFUGAL FIRE PUMPS CERTIFIED FOR CANADA (QWWQ7)

Centrifugal fire pumps intended for installation in accordance with NFPA 20 have the following rated capacities: 100, 190, 380, 570, 760, 950, 1140, 1510, 1700, 1890, 2850, 3800, 4750, 5700, 7600, 9500, 11400, 13200, 15100, 17000, 18900 L/M or larger. Residential fire pumps intended for installation in accordance with NFPA 13D have rated capacities as indicated in the individual Listings.

Centrifugal Fire Pumps Certified for Canada (QWWQ7)−*Continued*

Centrifugal fire pumps intended for installation in accordance with NFPA 20 are rated at net head pressures of 280 kPa or more. Residential fire pumps are rated at net head pressures as indicated in the individual Listings.

Where a range of rated net head pressure is shown, the manufacturer can furnish impellers to produce any rated pressure in that range.

The term ''Rated Net Pressure'' represents the capability of each pump at rated speed and rated capacity.

A Split Case, End Suction, or In-Line pump shall be supplied with water under positive pressure. The ''Rated Net Pressure'' will be the pressure at the discharge side of the pump minus the pressure at which water is supplied to the pump.

Vertical turbine pumps are capable of lifting water from a source such as a cistern, pond, creek, river, or from other sources. It should be noted that the lift distance is to be measured from the surface to the water source. Where a pump is located above the water surface, the pressure at the discharge side of the pump will be less than the ''Rated Net Head Pressure'' by an amount, expressed in psi, approximately equivalent to the vertical distance in feet between the center line of the pump discharge and surface of the water source plus loss due to friction in the suction pipe.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Centrifugal Fire Pumps, End Suction Certified for Canada (QWZU7)

USE AND INSTALLATION

This category covers end-suction centrifugal fire pumps intended to deliver the capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI / NFPA 20, ''Installation of Stationary Pumps for Fire Protection.''

These pumps are intended to be installed with the shaft in the horizontal position. The maximum working pressure (kPa) is the maximum pressure that can be developed at the discharge flange under any operating condition. The values indicated in the individual certifications are the maximum for a given model designation; accordingly, the ratings and limitations indicated in the individual certifications and marked on the pump are not intended to be modified.

The rated speed marked on the pump by the manufacturer may vary within + or - 4% of rated speed referenced in the individual certifications.

Where the pump flange pressure rating is less than the maximum allowable discharge head pressures shown in the individual certifications, the flange rating is to prevail.

ADDITIONAL INFORMATION

For additional information, see Centrifugal Fire Pumps Certified for Canada (QWWQ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC / ORD-C448, ''Guide for the Investigation of Pumps for Fire Protection Service.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Centrifugal Fire Pump – End Suction.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Centrifugal Fire Pumps, In-line Certified for Canada (QXCZ7)

USE AND INSTALLATION

This category covers in-line centrifugal fire pumps intended to deliver the capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI / NFPA 20, ''Installation of Stationary Pumps for Fire Protection.''

Centrifugal Fire Pumps, In-line Certified for Canada (QXCZ7)−*Continued*

These pumps are intended to be installed with the shaft in the vertical position, unless specifically indicated in the individual certifications.

The maximum working pressure (kPa) is the maximum pressure that can be developed at the discharge flange under any operating condition. The values indicated in the individual certifications are the maximum for a given model designation; accordingly, each pump is designed to accommodate specific installation needs and the ratings and limitations indicated in the individual certifications and marked on the pumps are not intended to be modified.

The rated speed marked on the pump by the manufacturer may vary within + or - 4% of rated speed referenced in the individual certifications.

Where the pump flange pressure rating is less than the maximum allowable discharge head pressure shown in the individual certifications, the flange rating is to prevail.

ADDITIONAL INFORMATION

For additional information, see Centrifugal Fire Pumps Certified for Canada (QWWQ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC / ORD-C448, ''Guide for the Investigation of Pumps for Fire Protection Service.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Centrifugal Fire Pump – In-Line.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Centrifugal Fire Pumps, Split Case Certified for Canada (QXJY7)

USE AND INSTALLATION

This category covers split-case pumps intended to deliver the rated capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI / NFPA 20, ''Installation of Stationary Pumps for Fire Protection.''

These pumps are intended to be installed with the shaft in the horizontal position, unless specifically indicated in the individual certifications that the pump is designed for installation in the vertical position.

The maximum working pressure (kPa) is the maximum pressure that can be developed at the discharge flange under any operating condition. The values indicated in the individual certifications are the maximum for a given model designation; accordingly, each pump is designed to accommodate specific installation needs and the ratings and limitations indicated in the individual certifications and marked on each pump are not intended to be modified.

Where the pump flange rating is less than the maximum allowable discharge head pressure shown in the individual certifications, the flange rating is to prevail.

ADDITIONAL INFORMATION

For additional information, see Centrifugal Fire Pumps Certified for Canada (QWWQ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC / ORD-C448, ''Guide for the Investigation of Pumps for Fire Protection Service.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Centrifugal Fire Pump – Split Case.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Centrifugal Fire Pumps, Vertical Turbine Certified for Canada (QXXW7)

USE AND INSTALLATION

This category covers vertical shaft turbine-type fire pumps intended for use in conditions where the source of water is below ground level.

These pumps are intended to deliver the rated capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection." Manufacturers may furnish pumps with oil-lubricated or water-lubricated line shafts except as noted.

ADDITIONAL INFORMATION

For additional information, see Centrifugal Fire Pumps Certified for Canada (QWWQ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C448, "Guide for the Investigation of Pumps for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Centrifugal Fire Pump – Vertical Turbine."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTERNAL-COMBUSTION ENGINES FOR DRIVING STATIONARY FIRE PUMPS CERTIFIED FOR CANADA (QYLU7)

USE AND INSTALLATION

This category covers diesel engines intended for driving stationary fire pumps.

The horsepower ratings presented in individual certifications represent the engine horsepower available at standard SAE conditions for 91 m above sea level (74 cm Hg) and 25°C air temperature, with allowance made for power consumption by accessories, normal engine wear and manufacturing tolerances. Engines are rated at a specific speed or for a speed range or ranges as indicated in the individual certifications. For engines rated for a speed range or ranges, the rated horsepower within the specified speed range or ranges is to be determined by the use of linear interpolation between the rated horsepower at the minimum and maximum speeds. Requirements for installation and use of these engines are contained in ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

Diesel engines are intended to be mounted horizontally unless otherwise indicated.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C448A, "Guide for the Investigation of Diesel Engines for Driving Centrifugal Fire Pumps."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Internal Combustion Engine for Driving Stationary Fire Pumps."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE CERTIFIED FOR CANADA (QYZS7)

GENERAL

This category covers fire pump controllers, circuit breakers for fire pump controllers, emergency manual operators and remote alarm panels.

Pump Controllers, Fire Certified for Canada (QYZS7)−*Continued*

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated in the individual certifications, these controllers are intended for use with spark-ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark-ignition internal combustion engines are intended for such engines installed prior to 1974.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

Fire pump controllers intended for starting and stopping additive pump motors are marked "Additive Pump Controller" or "Limited-service Additive Pump Controller."

Controllers intended for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers intended for squirrel-cage motors may be for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

"Limited-service controllers" are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required markings.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Fire Pump Controller," "Limited Service Controller," "Additive Pump Controller," "Limited Service Additive Pump Controller."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, OVER 750 VOLTS CERTIFIED FOR CANADA (QZGR7)

GENERAL

This category covers fire pump controllers having ac voltage ratings in the range of 2.2 kV to 2.5 kV, 4.0 kV to 5.0 kV or 6.2 kV to 7.2 kV, intended for starting and stopping centrifugal fire pumps, and including nonautomatic and automatic types for electric-driven pumps.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

These fire pump controllers are intended for use with squirrel-cage motors rated 7.2 kV or less.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73×10^6.

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled. Accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Some fire pump controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

Fire pump controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required markings.

Pump Controllers, Fire, Over 750 Volts Certified for Canada (QZGR7)−*Continued*

Fire pump controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Fire pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Fire Pump Controller" or "High Voltage Foam Pump Controller."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, RESIDENTIAL CERTIFIED FOR CANADA (QZKE7)

GENERAL

This category covers fire pump controllers intended for starting, stopping and protecting centrifugal fire pumps in one- and two-family dwellings and manufactured homes. These controllers are the automatic or nonautomatic type for electric-driven pumps.

The equipment and systems employing these controllers are intended for installation and use in accordance with ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

Residential fire pump controllers are intended for use with squirrel-cage motors rated 250 V or less.

This equipment has been investigated for use on single-phase alternating-current circuits having available fault-current levels not exceeding the short-circuit withstand rating appearing on the nameplate.

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly they are tested at six times the continuous current rating of the controller at rated voltage.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Residential pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection," as applicable to limited-service fire pump controllers.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Fire Pump Controller."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RAHW7)

This category covers fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

FIRE PUMP CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RCYW7)

USE

This category covers fire pump controllers, circuit breakers for fire pump controllers, and emergency manual operators.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic types and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated, these controllers are intended for use with spark ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark ignition internal combustion engines are intended for such engines installed prior to 1974.

Controllers for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers for squirrel-cage motors may be used for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

Limited-service controllers are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required marking.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fire Pump Controller for Use in Hazardous Locations," "Limited Service Controller for Use in Hazardous Locations," "Foam Pump Controller for Use in Hazardous Locations," "Limited Service Foam Pump Controller for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS CERTIFIED FOR CANADA (RAOV7)

These pumps, which may be of the positive displacement piston, rotary gear, centrifugal, or vane type, are intended for handling liquids which may be combustible, corrosive or flammable. The various listings and classifications identify such liquids.

FLAMMABLE LIQUID PUMPS CERTIFIED FOR CANADA (RBQR7)

Pumps, Power Operated, Flammable Liquid Certified for Canada (RCRX7)

USE AND INSTALLATION

This category covers power-operated pumps of the types indicated in the individual certifications. Each pump includes means to limit the discharge pressure to 345 kPa (50 psi) or less unless indicated in the individual certifications.

Booster pumps are intended for use with existing self-contained, power-operated dispensing devices if the vertical distance from the booster pump manifold outlet to the dispensing device inlet is not less than 152 cm.

Replacement pump-motor assemblies may be incomplete in their construction, and are only intended for use with equipment as specified in the installation instructions. Pumps intended for use in Class I, Group D hazardous (classified) locations are indicated in the individual certifications.

Pump-motor assemblies include electric motors and appropriate junction boxes that are suitable for use in Class I, Group D hazardous (classified) locations, unless indicated otherwise in the individual certifications.

A motor controller specified in conjunction with a pump-motor assembly is suitable for use with that assembly. Unless indicated otherwise, the controller is not suitable for use in hazardous (classified) locations.

These pumps are intended for use with the following fuels:

a) Gasoline
b) Gasoline/ethanol blends designated as ''gasohol'' (E10 maximum)
c) Diesel fuel
d) Fuel oil
e) Kerosene

These products are intended for installation and use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CSA B346 (1980), ''Power-Operated Dispensing Devices for Flammable Liquids''

CSA-C22.2 No. 22, ''Electrical Equipment for Flammable and Combustible Fuel Dispensers''

CSA-C22.2 No. 25, ''Enclosures for Use in Class II, Groups, E, F and G Hazardous Locations''

CSA-C22.2 No. 30, ''Explosion-Proof Enclosures for Use in Class I Hazardous Locations''

CAN/CSA-C22.2 No. 157, ''Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Operated Pump for Petroleum Products,'' ''Power Operated * Pump for Petroleum Products'' (where ''*'' is ''Transfer,'' ''Booster,'' or other appropriate product name as shown in the individual Listings) or ''Electric Pump Controller,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS, ELECTRICALLY OPERATED, LIQUID CERTIFIED FOR CANADA (REUZ7)

USE

This category covers submersible and nonsubmersible pumps for household, commercial or industrial use, including pumps for fountains, circulation, wells, sewage, effluent, irrigation, building sites (contractor type), sumps and general utility.

Pumps suitable for outdoor use and those for use with heated water are so marked.

These pumps have not been investigated for use with or in proximity to swimming pools or spas, for fire service, or for contact with drinking water.

RELATED PRODUCTS

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 108, ''Liquid Pumps.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Sump Pump,'' ''Water Circulating Pump'' or ''Sewage Pump,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS, NONFLAMMABLE LIQUID, MARINE CERTIFIED FOR CANADA (RFIX7)

USE AND INSTALLATION

This category covers electrically operated nonflammable liquid pumps rated less than 50 V dc for use on board boats, including potable water pumps.

These pumps are intended for installation and operation in accordance with the manufacturer's instructions and the applicable requirements of the Canadian Coast Guard, and the applicable requirements of CSA-C22.2 No. 183.2 (1983), ''DC Electrical Installations on Boats.''

All pumps are required to comply with the requirements for ignition protection and are so marked.

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1113, ''Electrically Operated Pumps for Nonflammable Liquids, Marine.''

UL MARK

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word ''MARINE'' above the UL symbol (as illustrated in the Introduction of this Directory), the word ''LISTED,'' a control number, and the product name ''Nonflammable Liquid Pump.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RFPW7)

GENERAL

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas in accordance with ANSI/NFPA 496, ''Purged and Pressurized Enclosures for Electrical Equipment.'' This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

TYPES

ANSI/NFPA 496 specifies the following purged pressurization types:

Type X — Reduces the classification within an enclosure from Division 1 to unclassified

Type Y — Reduces the classification within an enclosure from Division 1 to Division 2

Type Z — Reduces the classification within an enclosure from Division 2 to unclassified

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS IN ACCORDANCE WITH THE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD FOR PURGED AND PRESSURIZED ENCLOSURES FOR ELECTRICAL EQUIPMENT NFPA 496

* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RFPZ7)

GENERAL

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas.

There are three pressurization types:

px — Reduces the classification within an enclosure from Zone 1 to unclassified

py — Reduces the classification within an enclosure from Zone 1 to Zone 2

pz — Reduces the classification within an enclosure from Zone 2 to unclassified

This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 60079-2 (2012), ''Explosive Atmospheres – Part 2: Equipment Protection by Pressurized Enclosures 'p'.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS IN ACCORDANCE WITH CAN/CSA-C22.2 NO. 60079-2 EXPLOSIVE ATMOSPHERES – PART 2: EQUIPMENT PROTECTION BY PRESSURIZED ENCLOSURES ″p″ Control No.

* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL QUICK-CONNECT TERMINALS CERTIFIED FOR CANADA (RFWV7)

GENERAL

This category covers quick-connect tabs and quick-connect connectors constructed from plain or plated copper alloy or of nickel or nickel alloy, herein referred to as quick-connect terminals. They are additionally defined as follows:

Quick-connect Wiring Termination — An electrical connection consisting of a male tab and a female connector that can be readily engaged or disengaged without the use of a tool.

Terminal — An electrical connecting device consisting of either a connector or tab.

Tab — A terminal that is inserted in a connector, manufactured to specified tolerances, and intended to mate with a connector to establish a connection in an electrical circuit.

Connector — A terminal that is pushed onto a tab.

Quick-connect terminals are intended for use with one or two copper conductors, 22–10 AWG. Ampacity for a two-wire combination is limited to the current associated with the largest of the two conductors.

Quick-connect terminals are not intended for disconnecting under load.

PRODUCT MARKINGS

Cartons containing quick-connect terminals are marked to indicate whether the tab or connector is suitable for the internal wiring of appliances, for field termination of conductors to electrical equipment, or for both.

Cartons containing quick-connect terminals are marked to indicate their suitability for termination of copper wire only.

Cartons containing insulated quick-connect terminals are marked with a voltage rating and the maximum operating temperature for which they have been found acceptable. The marked voltage rating may be 300 V maximum; 600 V maximum; or 600 V maximum building wire, 1000 V maximum signs or fixtures.

Quick-connect terminals to be assembled to wire using a special tool are intended to be assembled using the tool specified by the manufacturer on or in the shipping carton. Such tools are identified by an appropriate marking.

RELATED PRODUCTS

Quick-connect tabs or connectors constructed from plated steel, or unplated steel of a corrosion-resistant alloy are covered under Electrical Quick-connect Terminals Certified for Canada (RFWV8).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 153, ''Electrical Quick-Connect Terminals.''

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduc-

tion of this Directory) together with the word "LISTED," a control number, and the product name "Quick-connect Tab" or "Quick-connect Connector," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RACEWAY CERTIFIED FOR CANADA (RGKT7)

CELLULAR METAL FLOOR RACEWAY CERTIFIED FOR CANADA (RHZX7)

GENERAL

This category covers cellular metal floor raceway intended to enclose electrical conductors. This raceway is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Each component is provided with installation instructions to identify its relation to other components of the raceway system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 79, "Cellular Metal and Cellular Concrete Floor Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway," "Cellular Metal Floor Raceway Bottom" or "Cellular Metal Floor Raceway Cover Plate for Use with Listed Raceway Bottom," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Metal Floor Raceway Fittings Certified for Canada (RINV7)

USE AND INSTALLATION

This category covers cellular metal floor raceway fittings intended to enclose electrical conductors. These fittings are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Each component is provided with installation instructions to identify its relation to other components of the raceway system.

ADDITIONAL INFORMATION

For additional information, see Cellular Metal Floor Raceway Certified for Canada (RHZX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 79, "Cellular Metal and Cellular Concrete Floor Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway Fitting," "End Closure" or "Grommet," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE METAL RACEWAY CERTIFIED FOR CANADA (RJBT7)

USE

This category covers surface metal raceway intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 62 (1993), "Surface Raceway Systems."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceways," "Surface Metal Raceway Base for Use with Labeled Raceway Cover" or "Surface Metal Raceway Cover for Use with Labeled Raceway Base."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Surface Metal Raceway Fittings Certified for Canada (RJPR7)

USE

This category covers surface metal raceway fittings intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

Fittings suitable for supporting a ceiling-suspended fan weighing a maximum 15.9 kg or 23 kg is visibly and clearly marked "ACCEPTABLE FOR FAN SUPPORT OF ___ kg (___ lb) OR LESS" and "CONVIENT AU SUPPORT D'UN VENTILATEUR DE ___ kg (___ lb) OU MOINDRE," with blanks filled in with maximum values. Each fitting is provided with size No. 10-32 retaining screws and external tooth-lock washers for securing the fan.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 62 (1993), "Surface Raceway Systems."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceway Fitting," "Hanger" or "Side Feed," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE NONMETALLIC RACEWAY CERTIFIED FOR CANADA (RJTX7)

USE

This category covers surface nonmetallic raceway for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on accompanying literature, or on the package in which it is shipped.

Surface Nonmetallic Raceway Certified for Canada (RJTX7)−*Continued*

Raceway provided with adhesive strips is marked "For Class 2 Circuits Only" or "For Power and Communication Circuits, Use Screws," or equivalent.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 62.1, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway," "Surface Nonmetallic Raceway Base for Use with Labeled Raceway Cover" or "Surface Nonmetallic Raceway Cover for Use with Labeled Raceway Base."

The Listing Mark is applied to each length or package of complete raceway, raceway cover or raceway base.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Surface Nonmetallic Raceway Fittings Certified for Canada (RJYT7)

USE

This category covers surface nonmetallic raceway fittings intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT MARKINGS

A fitting intended for supporting a luminaire is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified luminaire weight should not exceed 22.7 kg (50 lb). The marking is readily visible after the fitting has been mounted.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 62.1, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway Fitting," "Butt Joint Cover" or "End Cap," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERFLOOR RACEWAY CERTIFIED FOR CANADA (RKCZ7)

USE

This category covers metal underfloor duct systems designed for use as raceway for the installation of wire and cable in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and the manufacturer's installation instructions.

PRODUCT MARKINGS

The raceway may consist of factory-constructed raceway or field-installed components forming a raceway. Each component is provided with installation instructions to identify its relation to the other components of the raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

Underfloor Raceway Certified for Canada (RKCZ7)−*Continued*

The basic standard used to investigate products in this category is CSA C22.2 No. 80 (1978), "Underfloor Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Underfloor Raceway Fittings Certified for Canada (RKQX7)

USE AND INSTALLATION

This category covers underfloor raceway fittings intended for installation in underfloor raceway systems in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and the manufacturer's installation instructions.

Each component is provided with installation instructions to identify its relation to the other components of the raceway system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 80 (1978), "Underfloor Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway Fitting," "Raceway Adapter" or "Saddle Support," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RMGR7)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

ADDITIONAL INFORMATION
