For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL Mark for Canada symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES, REBUILT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RMGZ7)

USE

This category covers rebuilt portable signal receivers, portable signal and voice receivers and portable voice transceivers. These products are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt products are subject to the same requirements as new products.

PRODUCT MARKINGS

These products are marked with the following:

The month and year that the product was repaired or rebuilt.

The standard number and edition to which the product was rebuilt, as referenced under **REQUIREMENTS**.

RELATED PRODUCTS

See Radio Devices for Use in Hazardous Locations Certified for Canada (RMGR7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 157 (1992), "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations," or CSA-C22.2 No. 213 (1987), "Non-Incendive Electrical Equipment for Use in Class I, Division 2 Hazardous Locations."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Radio Device for Use in Hazardous Locations" (or "Rebuilt RAD DEV for Use in Hazardous Locations" or "Rebuilt RAD DEV for HAZ LOC") or "Repaired Radio Device for Use in Hazardous Locations" (or "Repaired RAD DEV for Use in Hazardous Locations" or "Repaired RAD DEV for HAZ LOC").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RMJA7)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with

the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RRAT7)

RECEPTACLE-ENCLOSURE COMBINATIONS WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RREG7)

GENERAL

This category covers receptacle-enclosure combinations with plugs intended for use in one or more of the following hazardous locations, as indicated on the product, in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC): Class I, Groups A, B, C and D; Class II, Groups F and G.

These receptacle-enclosure combinations with plugs are (1) completely assembled at the factory or (2) intended for final assembly in the field using components specified in the product classification. Assembly of the receptacle-enclosure combinations with plugs in the field is intended to be in accordance with the instructions provided with the product by the manufacturer.

Enclosures covered under this category are for threaded rigid conduit connection, and the conductors between the receptacle and the enclosure are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord connecting to the plugs should be frequently inspected and replaced when necessary. Terminal connection to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at the current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacle-enclosure combinations with plugs certified for Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined in the CEC.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 159, "Attachment Plugs and Receptacles for Use in Hazardous Locations."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RECEPTACLE-ENCLOSURE COMBINATION WITH PLUG
FOR USE IN HAZARDOUS LOCATIONS
AS TO EXPLOSION AND FIRE HAZARD ONLY
CLASS ____, GROUP ____
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RROR7)

GENERAL

This category covers receptacles with plugs certified under Class I and Class II groups for Division 1 locations provided with receptacle conduit boxes for threaded rigid conduit connection. The conductors between receptacles and conduit boxes are factory sealed. The plugs are for use with certified extra-hard-usage flexible cord having a grounding conductor.

Receptacles certified for Class I, Division 2 locations only are intended for use with general-purpose enclosures for supply connections. The supply conductors are factory sealed in the receptacles. The plugs for use with such receptacles are suitable for Class I, Division 1 locations.

Receptacles with plugs certified for groups under Class I hazardous locations have been subjected to endurance tests and overload operation tests in the presence of the specific flammable vapor-air atmospheres.

Receptacles with plugs certified for use in Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Receptacles with plugs certified for Class II, Groups F and G hazardous locations have dust-tight terminal boxes and have been subjected to endurance tests and overload operation tests while heavily blanketed with combustible dust.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 159 (1987), "Attachment Plugs, Receptacles and Similar Wiring Devices for Use in Hazardous Locations: Class I, Groups A, B, C and D; Class II, Group G, in Coal or Coke Dust, and in Gaseous Mines."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plug for Hazardous Locations" or "Receptacle Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RSPX7)

GENERAL

This category covers receptacles that are (1) completely assembled at the factory or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is to be done in accordance with instructions provided with the product by the manufacturer.

Receptacles with plugs interlocked with switches certified under Class I and Class II groups are constructed with interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit to the switch compartments. The plugs are intended for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with plugs interlocked with switches certified for Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Receptacles with Plugs Interlocked with Switches for Use in Hazardous Locations Certified for Canada (RSPX7)−*Continued*

Devices provided with a factory seal of conductors between switch and the conduit box are so identified on the individual product.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 159 (1987), "Attachment Plugs, Receptacles and Similar Wiring Devices for Use in Hazardous Locations: Class I, Groups A, B, C and D; Class II, Group G, in Coal or Coke Dust, and in Gaseous Mines."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Receptacle Interlocked with Switch for Hazardous Locations," "Plug for Hazardous Locations," "Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations," "Body Assembly for Hazardous Locations," or other appropriate product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RSUN7)

RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RSZD7)

USE

This category covers receptacles that are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer. Care should be taken to ensure that minimum IP ratings are maintained for field-assembled increased safety enclosures.

Receptacles with plugs interlocked with switches are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit or other suitable wiring method to the switch compartments. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices are permitted for use. Portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Receptacle Interlocked with Switch for Hazardous Locations," "Plug for Hazardous Locations," "Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations," "Body Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES CERTIFIED FOR CANADA (RTDV7)

GENERAL:

These listings cover the following types of products:

Appliance, Equipment or Fixture Outlet - A female contact device for mounting on utilization equipment.

Receptacle - A female contact device intended to be installed on a wiring system to supply current to utilization equipment.

RATINGS:

These devices are rated in volts 600 volts or less, ac or dc; and in amps 200 amps or less. They may also be rated in horsepower.

Devices rated 250 volts are tested on circuits involving a nominal potential to ground of 125 volts. Devices having other voltage ratings are tested on circuits involving full rated potential to ground except for multiphase rated devices which are tested on circuits consistent with their voltage ratings, i.e. a 120/208 volt, 3-phase, device is tested on a circuit involving 120 volts to ground.

BONDING:

Devices having a terminal identified by a green colored finish or by the word "green" are bonding types. The blade, pin or contact member connected to this terminal is for equipment bonding purposes only.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES FOR PLUGS AND ATTACHMENT PLUGS CERTIFIED FOR CANADA (RTRT7)

GENERAL

This category covers receptacles consisting of one or more female contact devices on the same yoke, installed at an outlet for the connection of one or more attachment plugs, and including duplex, single, flush mounted, surface mounted, split, isolated ground, hospital type and appliance receptacles, used mainly in household, office and industrial applications and in electrical and electronic equipment.

This category does not cover general-use attachment plugs and cord connectors, switched receptacles or current taps.

TERMINALS

Terminals of 15 A and 20 A receptacles are for use with copper conductors only. Screwless terminal connectors of the conductor push-in type are for use only with solid copper conductors.

Terminals of receptacles greater than 20 A not marked "AL-CU" are for use with copper conductors only.

Terminals of the wire-binding screw, setscrew, or screw-actuated backwired clamping types are suitable for use with both solid and stranded

Receptacles for Plugs and Attachment Plugs Certified for Canada (RTRT7)−*Continued*

building wires. Screwless terminal connectors of the conductor push-in type are limited to use on 14 AWG solid building wire only.

Single and duplex receptacles rated 15 A and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors may be used to feed a single set of branch-circuit conductors connected to other receptacles on a multioutlet branch circuit. These devices have not been tested for tapping off more than one circuit from the receptacle by utilizing both the side-wiring and back-wiring terminals on an outlet.

Duplex receptacles rated 15 A and 20 A that are provided with break-off tabs may have those tabs removed so that the two outlets may be wired in a multiwire branch circuit.

PRODUCT MARKINGS

These devices are marked with:

1. Listee's name or identification on device
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification
5. Date code or equivalent (except on isolated ground types)
6. Additional markings as required

Isolated Ground — Receptacles in which the bonding terminal is purposely insulated from the receptacle mounting means are so identified by an orange triangle marked on the face of the receptacle and the marking "ISOLATED GROUND."

Hospital Type — Receptacles for hospital use in patient care areas are identified by the marking "Hospital Grade" and a green dot on the face of the receptacle. The identification is visible during installation on the wiring system.

ADDITIONAL INFORMATION

For additional information, see Receptacles Certified for Canada (RTDV7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 42 (1999), "General Use Receptacles, Attachment Plugs, and Similar Wiring Devices."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Attachment Plug with Overload Protection," "Attachment Plug Fuseless," or other appropriate name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, STAGE TYPE CERTIFIED FOR CANADA (RUFR7)

GENERAL

This category covers special-use attachment plugs, cord connectors, receptacles and equipment power inlets intended for use in theater and motion-picture applications in accordance with Sections 44 and 48 respectively, of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

This category does not cover general-use attachment plugs and connector bodies, CO/ALR receptacles, switched receptacles or current taps.

PRODUCT MARKINGS

These devices are marked as follows:

1. Listee's name or identification on device and carton
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification by color or otherwise
5. Date code or equivalent
6. "CU-AL" where applicable
7. Additional markings as required

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 182.3, "Special Use Attachment Plugs, Receptacles and Connectors."

Receptacles, Stage Type Certified for Canada (RUFR7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following product names as appropriate: "Plug," "Connector," "Stage Type Plug," "Stage Type Connector," or other appropriate product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMBINATION RECEPTACLES WITH SWITCHES CERTIFIED FOR CANADA (RUSZ7)

GENERAL

This category covers combination receptacle and switch devices on the same mounting yoke, intended for household, office and industrial applications.

These devices are marked as follows:

a. Listee's name or identification on device
b. Catalog number or equivalent on device or carton
c. Complete electrical rating
d. Terminal identification
e. Date code
f. Additional markings as required in the Reports

RELATED PRODUCTS

See Snap Switches Certified for Canada (WJQR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 42, "General Use Receptacles, Attachment Plugs and Similar Wiring Devices," and CSA-C22.2 No. 111, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Receptacle/Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SINGLE-POLE, LOCKING-TYPE SEPARABLE ATTACHMENT PLUGS, PANEL INLETS, PANEL OUTLETS, ADAPTERS AND ACCESSORIES CERTIFIED FOR CANADA (RUUS7)

GENERAL

This category covers single-pole, locking-type separable attachment plugs, cord connectors, panel inlets, panel outlets, adapters and accessories, rated up to a maximum of 800 A and up to 600 V ac or dc. These devices are intended to provide power from feeders or branch circuits, or are for direct connection to feeders or branch circuits in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These devices are not intended for use in hazardous (classified) locations.

Attachment plugs and cord connectors are intended for use with single-conductor cable, having copper conductors only.

Single-pole, Locking-type Separable Attachment Plugs, Panel Inlets, Panel Outlets, Adapters and Accessories Certified for Canada (RUUS7)−*Continued*

Inlets and outlets are intended for use with single-conductor cable, having copper conductors only, or to copper busbars.

CURRENT INTERRUPTION

These devices are not intended for connection or disconnection under load conditions.

INTERMATEABILITY

Devices identified as Series 15, 16 or 18 are capable of being mated together between different Listees' lines of products. Devices that are not identified as Series 15, 16 or 18 are only intended to mate with the Listee's same line of products covered under this category.

Refer to Annex B of CSA-C22.2 No. 1691, "Single Pole Locking-Type Separable Connectors," for Series 15, 16 and 18 configurations.

ENVIRONMENTAL RATING

Devices identified as Series 15, 16 or 18 have a minimum environmental enclosure rating of Type 3R when mated, and are marked accordingly. Devices identified other than Series 15, 16 or 18 have a minimum rating of Type 1 and are marked accordingly.

ELECTRICAL RATING

Devices identified as Series 15 are rated 150 A maximum, 600 V maximum.

Devices identified as Series 16 or 18 are rated 400 A maximum, 600 V maximum.

Devices identified other than Series 15, 16 or 18 are rated in ampere, voltage and frequency ac or ac/dc, or in maximum ampere, maximum voltage and frequency ac or ac/dc, and are so marked.

GROUNDED DEVICES

Devices designated for connection to the grounded circuit conductor are identified by a white-colored housing. The pin or contact member connected to this terminal is for the grounded conductor only.

Panel inlets and panel outlets designated for connection to the grounded circuit conductor are identified by either a white-colored housing or by housing surfaces colored white adjacent to both the grounded terminal and grounded pin or contact.

GROUNDING

Devices designated for connection to the grounding circuit conductor are identified by a green- or green/yellow-colored housing. The pin or contact member connected to this terminal is for the grounding conductor only.

Panel inlets and panel outlets designated for connection to the grounding circuit conductor are identified by either a green-colored housing or by housing surfaces colored green adjacent to both the grounding terminal and grounding pin or contact.

PRODUCT MARKINGS

These devices are marked with:

1. The Listee's name or identification
2. The electrical rating
3. The statement, "CAUTION – Risk of Electric Shock. Do Not Disconnect Under Load," or equivalent following the word "CAUTION"
4. Series 15, 16 or 18 configurations, if applicable
5. The environmental type rating(s)

ADDITIONAL INFORMATION

For additional information, see Receptacles Certified for Canada (RTDV7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1691 (2012), "Single Pole Locking-Type Separable Connectors."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Attachment Plug," "Fuseless Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Connector," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECORD-PROTECTION DEVICES CERTIFIED FOR CANADA (RWIT7)

This category covers record protection equipment intended to provide protection to paper records (Class 177) against loss by fire of controlled extent and severity for periods designated by the hourly ratings indicated in the individual Classifications.

Record protection equipment (Classes 66 and 52) is also intended to provide protection to records other than paper against loss by fire of controlled extent and severity for periods designated by the hourly ratings indicated in the individual Classifications. Class 66-rated devices afford protection to magnetic tapes and other types of magnetic data processing media, photographic film and records other than paper. Class 52-rated devices afford protection to certain types of flexible disks.

Record protection equipment investigated for impact resistance (as indicated in the individual Classifications) is intended to provide protection to records in buildings when collapse may or may not be expected to occur as a result of fire since the rating includes investigation of impact stability.

Record protection equipment not investigated for impact resistance is not intended to provide protection in buildings when collapse may be expected to occur as a result of fire since the rating does not include an investigation of impact stability. Record protection equipment not investigated for impact resistance which is rated Class 177 provides less protection to records than does record protection equipment investigated for impact resistance rated Class 177 as evidenced by the location at which interior temperatures are measured during the fire tests.

The fire-resistance rating indicated in the individual Classifications may be seriously impaired by disturbance or injury of the insulation material due to fire, burglary or improper application of accessories. Repairs to insulation or steel components should be made at the manufacturer's factory.

Authorities Having Jurisdiction should be consulted as to which fire-resistance rating of a record protection device will be suitable for the situation where it is to be used.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECORD-PROTECTION EQUIPMENT CERTIFIED FOR CANADA (RYPH7)

GENERAL

This category covers record protection equipment consisting of self-contained devices that incorporate insulated bodies, doors, drawers or lids, or nonrated multidrawer devices housing individually-rated containers that contain one or more inner compartments for storage of records. These devices are intended to provide protection to one or more types of records as evidenced by the assigned Class rating or ratings: Class 177 for paper, Class 66 for magnetic computer tapes and photographic film, and Class 52 for flexible disks. Inner compartments of record protection equipment may bear labels indicating the Class ratings, if different from the Class rating of the basic outer unit.

Record protection equipment is effective in withstanding:

1. A standardized fire of controlled extent and severity for one of the following periods: 4 hr reaching 1090°C, 2 hr reaching 1010°C, 1 hr reaching 927°C, or 1/2 hr reaching 843°C depending upon its hourly rating; before the interior temperature of the compartment exceeds the rated Class temperature (177°C, 66°C or 52°C) during the period of fire exposure and the cooling period inside the furnace after the fire exposure.
2. A sudden heating at 1090°C for 30 min (20 min for units rated 1/2 hr) without producing an explosion sufficient to cause an opening into the interior and without destroying the usability of paper contents.
3. At the option of the manufacturer, and as indicated in the individual Classifications, an impact due to falling 9.1 m in the clear after being heated for 60 min, 45 min, 30 min or 20 min for devices rated 4, 2, 1 and 1/2 hr, respectively; and reheating in the inverted position for the same length of time (60 min, 45 min, 30 min or 20 min) after the impact without destroying the usability of the papers stored inside.

UNEVALUATED FACTORS

The ability of nonpaper records to withstand the exposure, or store or retain data has not been investigated.

These devices have not been investigated for their acceptability of use after exposure to fire and being impacted.

These devices have not been investigated for security protection.

ADDITIONAL INFORMATION

Record-protection Equipment Certified for Canada (RYPH7)−*Continued*

For additional information, see Record Protection Devices Certified for Canada (RWIT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C72-1992, "Tests for Fire Resistance of Record Protection Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RECORD PROTECTION EQUIPMENT
AS TO FIRE RESISTANCE
RATING: CLASS +-++ HR
No.
or

RECORD PROTECTION EQUIPMENT
AS TO FIRE AND IMPACT RESISTANCE
RATING: CLASS +-++ HR
No.

When individual compartments are investigated, the Classification Mark will also include the following statement:

SEE MARKINGS INSIDE UNIT FOR CLASS RATING
APPLICABLE TO INDIVIDUAL COMPARTMENTS

\+ **177**, **66** or **52**
++ **1/2**, **1**, **2**, **3** or **4**

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (SAOD7)

USE AND INSTALLATION

This category covers cord reels intended for use with extra-hard-usage cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems. Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (SAOX7)

GENERAL

This category covers cord reels for use with extra-hard-usage flexible cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Cord Reel for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD AND CABLE CERTIFIED FOR CANADA (SBCV7)

USE

This category covers reels, usually spring-powered, to pay out and retract flexible cord and cable, employed for supply of portable or mobile equipment.

Electrical ratings of reels are marked on the reels where readily visible. The reels are supplied with a length of cord or cable and intended for use with the reel. The electrical ratings cover the complete assemblies.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 21, ''Cord Sets and Power Supply Cords.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Cord Reel,'' ''Cable Reel'' or ''Reel.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA (SCER7)

This category covers mechanical compression refrigeration systems and absorption-type refrigeration systems, including refrigerant-containing components and associated controls intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Some of this equipment may employ water to directly or indirectly cool the refrigerant condenser. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERANT-LEAK-DETECTION EQUIPMENT CERTIFIED FOR CANADA (SCFE7)

USE

This category covers electronic refrigerant-leak-detection equipment used to detect leaks in refrigeration systems.

Some equipment has been investigated for performance characteristics contained in SAE J1627, ''Performance Criteria for Electronic Refrigerant Leak Detectors.''

This equipment has not been investigated for operation in hazardous (classified) locations.

PRODUCT MARKINGS

This equipment is marked with the manufacturer's name and model number.

Equipment investigated for performance in accordance with SAE J1627 is marked ''Design Certified by Underwriters Laboratories Inc. to meet SAE J1627 [date] for [type of refrigerant].''

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120 (1991), ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigerant Leak Detection Equipment.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERANT RECOVERY/RECYCLING EQUIPMENT CERTIFIED FOR CANADA (SCFQ7)

This category covers equipment intended to remove and/or recycle refrigerant from commercial and/or automotive refrigerant systems.

Automotive Refrigerant-extraction Equipment Certified for Canada (SCHL7)

USE

This category covers automotive refrigerant-extraction equipment intended to remove refrigerant from automotive refrigerant systems.

This equipment is rated 600 V or less and may be either cord or permanently connected to the source of supply in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II.''

This equipment has been investigated to determine that it meets the extraction specifications for refrigerant recovery to ensure that venting of refrigerant will not occur, and may be marked ''Design Certified by Underwriters Laboratories Inc. to Meet [applicable standard and issue date, e.g., SAE J2209 (issue date) for CFC-12] for use with [refrigerant type]. The refrigerant from this equipment must be processed to ARI Standard 700-88 before reuse in a mobile air conditioning system.'' This marking indicates that the equipment has been investigated for compliance with the applicable SAE requirements. The refrigerant removed by this equipment is intended to be returned to a refrigerant reclamation facility for processing.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, the type and amount of refrigerant and the design pressures.

Automotive Refrigerant-extraction Equipment Certified for Canada (SCHL7)−*Continued*

Equipment intended for outdoor use is so marked.

RELATED PRODUCTS

Equipment intended for recovery / recycling of refrigerants used air conditioning systems of mobile vehicles is covered under Refrigerant Recovery / Recycling Equipment, Automotive Certified for Canada (SCMA7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN / CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Automotive Refrigerant Extraction Equipment.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial Refrigerant Recovery Equipment Certified for Canada (SCIJ7)

GENERAL

These category covers refrigerant recovery equipment, including passive systems, intended to remove refrigerant from commercial refrigerant systems.

This equipment has been investigated for safety when removing refrigerant in any condition from a system and storing it in an external container without testing or processing the refrigerant. The use of this equipment to reduce contaminants, such as moisture, oil, noncondensable gas, acidity, particulate matter and the like, has not been investigated.

RELATED PRODUCTS

Refrigerant recovery hose assemblies are covered under Tubing, Refrigerant Certified for Canada (SFCS8).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN / CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigerant Recovery Equipment.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Commercial Refrigerant Recovery/recycling Equipment Certified for Canada (SCKG7)

USE

This category covers refrigerant recovery / recycling equipment intended to remove and recycle refrigerant from commercial refrigerant systems.

This equipment has been investigated for safety when removing and recycling refrigerant in any condition from a system or storing it in an external container without necessarily testing or processing the refrigerant. The use of this equipment to reduce contaminants, such as moisture, oil, noncondensable gas, acidity, particulate matter and the like, has not been investigated.

ADDITIONAL INFORMATION

Commercial Refrigerant Recovery / recycling Equipment Certified for Canada (SCKG7)−*Continued*

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN / CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Commercial Refrigerant Recovery / Recycling Equipment.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Refrigerant Recovery/recycling Equipment, Automotive Certified for Canada (SCMA7)

USE

This category covers refrigerant recovery / recycling equipment used to service automobiles, light trucks, and other vehicles with air conditioning systems that employ a refrigerant. This equipment is intended to be used mainly in automotive service stations and repair facilities.

Equipment may be investigated to determine the minimum purity specifications for recycled refrigerant for use in mobile automotive air conditioning systems. Such equipment is marked ''Design Certified by Underwriters Laboratories Inc. for Compliance with *,'' to indicate that the equipment has been investigated for compliance with the applicable SAE requirements.

Split-system equipment consisting of separate sections may be investigated to determine the minimum purity specifications for recycled refrigerant for use in mobile automotive air conditioning systems. Such equipment is marked ''Design Certified by Underwriters Laboratories Inc. for compliance with [applicable standard and issue date, such as SAE J2210 (issue date) for HFC-134a] when used with [equipment manufacturer's name, model designation and section identification],'' to indicate that the equipment has been investigated for compliance with the applicable SAE requirements.

* ''SAE J1991 (date)'' for CFC-12 or ''SAE J2210 (date)'' for HFC-134a

** Equipment manufacturer's name, model designation and section identification

The use of this equipment to service mobile vehicles for refrigerated cargo that have hermetically sealed, rigid-pipe air conditioning systems has not been investigated.

RELATED PRODUCTS

Refrigerant recovery hose assemblies are covered under Tubing, Refrigerant Certified for Canada (SFCS8).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN / CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''CFC-12 Recycling Equipment,'' ''HFC-134a Recycling Equipment'' or ''CFC-12 and HFC-134a Recycling Equipment,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION ACCESSORIES CERTIFIED FOR CANADA (SCSQ7)

Controllers, Refrigeration Certified for Canada (SDFY7)

GENERAL

This category covers electrical controls designed for refrigeration and air-conditioning equipment and for room temperature or humidity regulation. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

These devices respond directly or indirectly to changes in temperature, humidity, refrigerant level, or pressure to affect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Refrigeration controllers are certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a direct-current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.
- **M2** – Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

PRODUCT MARKINGS

Refrigeration controllers are marked with the company name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit Certified for Canada (MBPR7), Controls, Primary Safety Certified for Canada (MCCZ7) or Switches Certified for Canada (MFHX7).

Refrigerant valves are covered under Valves, Electrically Operated Certified for Canada (YIOZ7).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and -Regulating Equipment Certified for Canada (XAPX7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 24, "Temperature-Indicating and -Regulating Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigeration Controller," or other appropriate name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Refrigeration, Fittings Certified for Canada (SDTW7)

USE

This category covers fittings intended for connecting refrigerant lines of refrigerating systems.

These fittings are also suitable for use in lines handling hazardous liquids and automotive applications.

Refrigeration, Fittings Certified for Canada (SDTW7)−*Continued*

PRODUCT MARKINGS

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the fitting or on the carton or container in which the fitting is shipped, or on a separate sheet or a specification tag included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Fitting."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fusible Plugs, Refrigerant Certified for Canada (SEHU7)

USE

This category covers devices that have a predetermined-temperature fusible member for the relief of pressure.

PRODUCT MARKINGS

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the fusible plug or on the carton or container in which the fusible plug is shipped, or on a separate sheet or a specification tag included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Fusible Plug."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Liquid Indicators, Refrigerant Certified for Canada (SEYW7)

USE

This category covers liquid indicators located in the liquid line of a refrigerating system, and that have a sight port by which liquid flow may be observed.

PRODUCT MARKINGS

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the fitting or on the carton or container in which the fitting is shipped, or on a separate sheet or a specification tag included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Cer-

Liquid Indicators, Refrigerant Certified for Canada (SEYW7)−*Continued*

tified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Liquid Indicator."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Valves, Refrigerant Certified for Canada (SFJQ7)

USE

This category covers charging valves and stop valves. Charging valves are used to charge or add refrigerant to the system, or add oil to the compressor crankcase. Stop valves are intended to shut off the flow of refrigerant.

PRODUCT MARKINGS

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the valve or on the carton or container in which the valve is shipped, or on a separate sheet or a specification tag included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Valve."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BEVERAGE COOLERS AND BEVERAGE COOLER-DISPENSERS CERTIFIED FOR CANADA (SFWY7)

GENERAL

This category covers beverage coolers and beverage cooler-dispensers. Beverage coolers are intended to be connected to a field-installed dispensing means. Beverage cooler-dispensers include a factory-installed dispensing means. These products may be self-contained, sectional or remote. Accessories intended for use with beverage coolers and beverage cooler-dispensers are also covered under this category.

INSTALLATION

This equipment is rated 750 V ac or less and is intended to be installed in accordance with the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA-B52, "Mechanical Refrigeration Code."

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in CAN/CSA-B52, but are included in ASHRAE 34-1992 (amendment), "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants

Beverage Coolers and Beverage Cooler-Dispensers Certified for Canada (SFWY7)−*Continued*

in CAN/CSA-B52, UL's Listing Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in CAN/CSA-B52 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by CAN/CSA-B52 and have been determined to be nonflammable or practically nonflammable.

A beverage cooler or beverage cooler-dispenser of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained beverage cooler or beverage cooler-dispenser consists of a completely factory assembled and factory tested refrigeration system in which all the refrigerant-containing parts are connected at the factory.

A remote beverage cooler or beverage cooler-dispenser is intended to be connected to a field-installed condenser or condensing unit located remote from the beverage cooler or beverage cooler-dispenser.

Accessories for beverage coolers and beverage cooler-dispensers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Beverage coolers and beverage cooler-dispensers may be designed to accept accessories installed in the field. In such cases both the beverage cooler or beverage cooler-dispenser and the accessory are marked to relate the two for proper installation.

A section of a beverage cooler or beverage cooler-dispenser suitable for outdoor use is so marked. Sections not so marked are for indoor use only.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

REBUILT PRODUCTS

This category also covers beverage coolers and beverage cooler-dispensers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt beverage coolers and beverage cooler-dispensers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt beverage coolers and beverage cooler-dispensers are subject to the same requirements as new beverage coolers and beverage cooler-dispensers.

RELATED PRODUCTS

Coin-operated equipment is covered under Vending Machines, Refrigerated Certified for Canada (SQMX7).

Nonrefrigerated dispensing equipment is covered under Food-preparing Machines, Commercial Certified for Canada (IPST7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, "Refrigeration Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Beverage Cooler," "Beverage Cooler-Dispenser" (for a self-contained unit), "Beverage Cooler Less Condenser," "Beverage Cooler-Dispenser Less Condenser," "Beverage Cooler Less Condensing Unit," "Beverage Cooler-Dispenser Less Condensing Unit" (for a remote beverage cooler or beverage cooler-dispenser), "Section of Beverage Cooler," "Section of Beverage Cooler-Dispenser" (for each section of a beverage cooler or beverage cooler-dispenser shipped separately from the factory, the function of which is essential to the basic operation of the beverage cooler or beverage cooler-dispenser), or "Accessory for Beverage Cooler or Beverage Cooler-Dispenser" (for a part or device, the function of which supplements or modifies the basic operation of the beverage cooler or beverage cooler-dispenser).

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufac-

Beverage Coolers and Beverage Cooler-Dispensers Certified for Canada (SFWY7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND FREEZERS CERTIFIED FOR CANADA (SGKW7)

GENERAL

This category covers commercial refrigerators and freezers such as display cases, reach-in cabinets, meat cases, frozen food and merchandising cabinets, food service carts and soda fountain units. These products may be self-contained, sectional or remote. Accessories intended for use with commercial refrigerators and freezers are also covered under this category.

INSTALLATION

This equipment is rated 750 V ac or less and is intended to be installed in accordance with the requirements of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and CAN/CSA-B52, ''Mechanical Refrigeration Code.''

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in CAN/CSA-B52, but are included in ASHRAE 34-1992 (amendment), ''Designation and Safety Classification of Refrigerants.'' The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in CAN/CSA-B52, UL's Certification Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in CAN/CSA-B52 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by CAN/CSA-B52 and have been determined to be nonflammable or practically nonflammable.

Unitary refrigerators consist of a complete factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self contained refrigerator is a unitary refrigerator consisting of a completely factory assembled and factory tested refrigerating system in which all the refrigerant containing parts are permanently connected at the factory.

A remote refrigerator is a refrigerator intended to be connected to a field-installed condensing unit located remote from the refrigerator.

Accessories for commercial refrigerators and freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial refrigerator or freezer and the accessory are marked to relate the two for proper installation.

Equipment or section(s) of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only.

Commercial refrigerators and freezers may employ a wireway to permit end-to-end installation. The wireway of such units is marked accordingly.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

REBUILT PRODUCTS

This category also covers commercial refrigerators and freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial refrigerators and freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial refrigerators and freezers are subject to the same requirements as new commercial refrigerators and freezers.

RELATED PRODUCTS

Refrigerators and freezers for household use are covered under Household Refrigerators and Freezers Certified for Canada (SHZZ7) and Household Freezers Certified for Canada (SHMR7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: ''Commercial Refrigerator and/or Freezer'' (for a self-contained unit), ''Commercial Refrigerator and/or Freezer Less Condensing Unit'' (for a remote unit), ''Section of Commercial Refrigerator and/or Freezer'' (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator or freezer), or ''Accessory for Commercial Refrigerator and/or Freezer'' (for each part of a commercial refrigerator which is shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator or freezer).

For rebuilt products the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONDENSING AND COMPRESSOR UNITS CERTIFIED FOR CANADA (SGYU7)

These units are intended to be installed in air conditioning and refrigeration systems in accordance with the requirements of the Canadian Electrical Code and The Mechanical Refrigeration Code, CSA Standard B52. Optional accessories for use with these units are also covered in this section. Presently listed equipment is rated 600 v or less.

Units in this category intended for refrigeration service may be of any Btu per hour capacity. For listings of units rated more than 135,000 Btu per hour and intended primarily for air conditioning application, see Air Conditioning Systems Equipment, in this Directory.

Condensing units include one or more compressors and air or water-cooled condensers with interconnecting refrigerant piping and with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit.

Compressor units include one or more compressors with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit and to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate.

Some units are intended for field connection to multiple refrigeration systems and include multiple condensing units, compressor units, or compressors, with single or multiple condensers, with associated piping, controls, and wiring, mounted on a common frame or in a common housing.

The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

These units are to be used only in systems with the specified refrigerant and operating at pressures not in excess of those indicated by the marked test pressures.

Units that have been investigated and found suitable for use with Listed field installed accessories are marked to identify the specific accessories that may be used.

Units which are suitable for outdoor installation are so marked. Units not marked as suitable for outdoor installation are for indoor use only.

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

The basic standard used to investigate products in this category is CAN/CSA C22.2 No. 236-M90 ''Heating and Cooling Equipment'' .

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following product names as appropriate: "Condensing Unit", "Compressor Unit", "Accessory for Condensing Unit", "Accessory for Compressor Unit" or "Accessory for Condensing or Compressor Unit" .

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD FREEZERS CERTIFIED FOR CANADA (SHMR7)

GENERAL

This category covers self-contained freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption type or thermoelectric type. Accessories intended for use with household freezers are also covered under this category.

This category will be obsoleted August 21, 2016. On or before this date, all household freezer certifications will be transferred to Household Refrigerators and Freezers Certified for Canada (SHZZ7).

INSTALLATION

This equipment is intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household freezers are certified in three classes as follows:

Freestanding — A freezer intended for open-type installation only, not including stacking, locating in closets, alcoves, or other confined spaces.

Recessed Installation — A freezer intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

Built-in Installation — A recessed-type freezer intended for slide-in installation into a confined space and trimmed to blend with room decor.

Accessories for household freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

REBUILT PRODUCTS

This category also covers household freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household freezers are subject to the same requirements as new household freezers.

PRODUCT MARKINGS

Household freezers may be designed to accept accessories in the field. In such cases both the freezer and the accessory are marked to relate the two for proper installation.

A freezer intended for freestanding use is so marked on the unit. Each freezer intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

HOUSEHOLD REFRIGERATORS AND FREEZERS CERTIFIED FOR CANADA (SHZZ7)

GENERAL

This category covers self-contained refrigerators, freezers, and combination refrigerator-freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption type or thermoelectric type. Accessories intended for use with household refrigerators and freezers are also covered under this category.

INSTALLATION

This equipment is intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household refrigerators, freezers, and combinations thereof are certified in three classes as follows:

Freestanding — Intended for open-type installation only, not including stacking, locating in closets, alcoves or other confined spaces.

Recessed Installation — Intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

Built-in Installation — Recessed-type appliances intended for slide-in installation, into a confined space and trimmed to blend with room decor.

Accessories are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted for requirements relating to connection to water supply lines.

REBUILT PRODUCTS

This category also covers household refrigerators and freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household refrigerators and freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household refrigerators and freezers are subject to the same requirements as new household refrigerators and freezers.

PRODUCT MARKINGS

Household refrigerators, freezers, and combinations thereof may be designed to accept accessories in the field. In such cases both the appliance and the accessory are marked to relate the two for proper installation.

A refrigerator, freezer, or combination thereof intended for freestanding use is so marked on the unit. Each appliance intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Household Refrigerator,'' ''Accessory for Household Refrigerator,'' ''Household Freezer'' or ''Accessory for Household Freezer.''

For rebuilt products, the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE CREAM MAKERS CERTIFIED FOR CANADA (SINX7)

GENERAL

This category covers equipment intended for preparing products such as hard ice cream, soft-serve ice cream, milk shakes and sherbets, and may include means for dispensing the product directly into containers. These products may be self-contained or sectional. Accessories intended for use with ice cream makers are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and CAN/CSA-B52, ''Mechanical Refrigeration Code.''

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in CAN/CSA-B52, but are included in ASHRAE 34-1992 (amendment), ''Designation and Safety Classification of Refrigerants.'' The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in CAN/CSA-B52, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in CAN/CSA-B52 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by CAN/CSA-B52 and have been determined to be nonflammable or practically nonflammable.

Unitary ice cream makers consist of a complete factory-assembled and factory-tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice cream maker is a unitary ice cream maker consisting of a completely factory-assembled and factory-tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water-supply and waste-disposal lines.

PRODUCT MARKINGS

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

Equipment or sections of the equipment suitable for outdoor use are so marked. Units not so marked are for indoor use only.

Ice Cream Makers Certified for Canada (SINX7)−*Continued*

Some equipment may be designed to accept accessories installed in the field. In such cases, both the ice cream maker and the accessory are marked to relate the two for proper installation.

RELATED PRODUCTS

Ice cream makers (without a compressor) for household use are covered under Food Preparing Machines, Household Certified for Canada (IPWZ7).

Coin-operated equipment is covered under Vending Machines, Refrigerated Certified for Canada (SQMX7).

Nonrefrigerated dispensing equipment is covered under Food Preparing Machines, Commercial Certified for Canada (IPST7).

Beverage coolers and beverage cooler-dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers Certified for Canada (SFWY7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Ice Cream Maker,'' ''Section of Ice Cream Maker'' or ''Accessory for Ice Cream Maker.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE MAKERS CERTIFIED FOR CANADA (SJBV7)

GENERAL

This category covers devices that automatically manufacture and harvest ice in cube, flake, or other readily usable form, with or without provision for storage or means of dispensing ice. These products may be self-contained or sectional. Accessories intended for use with ice makers are also covered under this category.

This category does not cover tray type ice makers, ice vending machines, or ice makers and ice maker kits used in household refrigerators and freezers. See **RELATED PRODUCTS** below.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and CAN/CSA B52, ''Mechanical Refrigeration Code.''

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in CAN/CSA B52, but are included in ASHRAE 34 (1992) (amendment), ''Designation and Safety Classification of Refrigerants.'' The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in CAN/CSA B52, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in CAN/CSA B52 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by CAN/CSA B52 and have been determined to be nonflammable or practically nonflammable.

An ice maker of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice maker consists of a completely factory-assembled and factory-tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

A remote ice maker is an ice maker intended to be connected to a field-installed condenser or condensing unit located remote from the ice maker.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Ice Makers Certified for Canada (SJBV7)−*Continued*

Ice makers may be designed to accept accessories installed in the field. In such cases both the ice maker and the accessory are marked to relate the two for proper installation.

KITCHEN UNITS, REFRIGERATED CERTIFIED FOR CANADA (SJPT7)

GENERAL

This category covers refrigerators rated 250 V or less in combination with ranges, microwave ovens and/or sink units. Accessories intended for use with refrigerated kitchen units are also covered under this category.

INSTALLATION

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' The equipment is investigated and tested to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines, if applicable. Equipment connected to plumbing is intended for permanent connection to the source of supply.

PRODUCT MARKINGS

Kitchen units intended for recessed installation are marked to indicate the installation clearances.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the refrigerated kitchen unit and the accessory are marked to relate the two for proper installation.

RECREATIONAL VEHICLE REFRIGERATORS AND FREEZERS CERTIFIED FOR CANADA (SKKQ7)

GENERAL

This category covers refrigerators, freezers, and combination refrigerator-freezers, rated 250 V or less ac and/or 30 V or less dc, intended for use in recreational vehicles. These products are electrically operated, self-contained devices consisting of a complete refrigeration system that may be of the mechanical compression type, absorption type or thermoelectric type. These products are not gas-fired.

INSTALLATION

These products are certified in two classes as follows:

Freestanding — A unit designed for installation in other than a confined space. Each unit intended for freestanding installation is so marked.

Recessed — A unit designed for installation in a confined space. Each unit intended for recessed installation has specified installation clearances, if clearances are required, marked on the unit. These units are also suitable for freestanding installation.

These products are intended for installation in accordance with the manufacturer's instructions and as marked on the product. They are intended to be secured to the recreational vehicle structure. Authorities Having Jurisdiction and applicable codes should be consulted as to the requirements for this equipment with respect to installation and use. Such codes include: CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' CSA-Z240 RV Series, ''Recreational Vehicles Code,'' and CSA/CSA B52, ''Mechanical Refrigeration Code.''

RELATED PRODUCTS

Electric household refrigerators and freezers are covered under Household Refrigerators and Freezers Certified for Canada (SHZZ7) and Household Freezers Certified for Canada (SHMR7), respectively.

Gas-fired or combination gas/electric recreational vehicle refrigerators are covered under Refrigerators Using Gas Fuel Certified for Canada (LPHR7).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 63, ''Household Refrigerators and Freezers.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Recreational Vehicle Refrigerators and Freezers Certified for Canada (SKKQ7)−*Continued*

Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Recreational Vehicle Refrigerator'' or ''Recreational Vehicle Freezer,'' or other appropriate product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERANT-CONTAINING COMPONENTS CERTIFIED FOR CANADA (SKQZ7)

Accumulators, Refrigerant Certified for Canada (SKXY7)

USE

This category covers accumulators, which are storage chambers intended for low-side liquid refrigerant, and may be referred to as surge drums or surge headers. Refrigerant accumulators may also be pressure vessels whose volume is used in a refrigerant circuit to reduce pulsation.

PRODUCT MARKINGS

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the accumulator or on the carton or container in which the accumulator is shipped, or on a separate sheet or a specification tag included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, ''Refrigerant-Containing Components for Use in Electrical Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigerant Accumulator.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Compressors, Refrigerant, Open Type, Remanufactured Certified for Canada (SLRG7)

GENERAL

This category covers open-type remanufactured refrigerant compressors with a shaft or other moving port extending through its casing to be driven by an outside source of power thus requiring a shaft seal or equivalent rubbing contact between a fixed and moving part.

The performance of these devices when incorporated in an air conditioning or refrigeration system has not been investigated.

PRODUCT MARKINGS

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the refrigerant compressor or on the carton or container in which the refrigerant compressor is shipped, or on a separate sheet or a specification tag included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, ''Refrigerant-Containing Components for Use in Electrical Equipment.''

Compressors, Refrigerant, Open Type, Remanufactured Certified for Canada (SLRG7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Remanufactured Open Type Refrigerant Compressor.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Condensers, Refrigerant Certified for Canada (SLSV7)

GENERAL

This category covers refrigerant condensers intended to liquefy refrigerant vapor by removal of heat. They are air-cooled, evaporative or water-cooled types. Water-cooled types have not been investigated for use as water heaters. Water-cooled assemblies are shell-and-tube or tube-in-tube type.

PRODUCT MARKINGS

All condensers are marked with the manufacturer's name, model number and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Refrigerant condensers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and attached to the unit cooler that reads ''The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in CAN/CSA B52 for the charged refrigerant. After charging, mark the installed equipment with the refrigerant type and oil used,'' or equivalent.

Finned tube assemblies incorporating a motor-driven fan (forced-air-cooled units) are also marked with the electrical rating. Forced-air-cooled condensers suitable for outdoor installation are so marked.

RELATED PRODUCTS

Water-cooled condensers intended for use as water heaters are covered under Refrigerant Heat Recovery Equipment Certified for Canada (SOMU7) or Heat Reclaimers, Refrigerant Certified for Canada (SNLT7).

Condenser receivers are covered under Receivers, Refrigerant Certified for Canada (SOJV7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate forced-air-cooled condensers in this category is CAN/CSA-C22.2 No. 236, ''Heating and Cooling Equipment.''

The basic standard used to investigate all other condensers in this category is CSA-C22.2 No. 140.3, ''Refrigerant-Containing Components for Use in Electrical Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigerant Condenser.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Driers, Filters and Strainers, Refrigerant Certified for Canada (SMGT7)

USE

This category covers driers, filters and strainers.

A drier is a device containing a desiccant, the primary purpose of which is to collect and hold within the desiccant all water in the refrigerant system in excess of the amount that can be tolerated in the circulating refrigerant.

Driers, Filters and Strainers, Refrigerant Certified for Canada (SMGT7)−*Continued*

A filter is a device intended to remove solid material from the refrigerant.

A strainer is a device intended to withhold foreign matter from flowing liquid or gas refrigerant.

PRODUCT MARKINGS

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Driers, filters and strainers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, ''Refrigerant-Containing Components for Use in Electrical Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Refrigerant Filter,'' ''Refrigerant Filter-Drier,'' ''Refrigerant Strainer,'' ''Refrigerant Drier,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Evaporators, Refrigerant Certified for Canada (SMUR7)

USE

This category covers refrigerant evaporators intended to vaporize liquid refrigerant to produce refrigeration.

PRODUCT MARKINGS

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressure.

Evaporators not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped or on a separate sheet or tag of specification included in each carton or container.

RELATED PRODUCTS

Evaporators provided with a fan for air circulation and intended for refrigeration purposes are covered under Unit Coolers Certified for Canada (SPLR7). Similar assemblies intended for air conditioning purposes are referenced as fan-coil units and covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, ''Refrigerant-Containing Components for Use in Electrical Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigerant Evaporator.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Evaporators, Refrigerant Certified for Canada (SMUR7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Heat Exchangers, Refrigerant Certified for Canada (SNHZ7)

USE

This category covers refrigerant heat exchangers designed to transfer heat between refrigerant in the high side and low side of the system. These devices may also be referred to as heat interchangers.

PRODUCT MARKINGS

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressure.

Heat exchangers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped or on a separate sheet or tag of specification included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, ''Refrigerant-Containing Components for Use in Electrical Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigerant Heat Exchanger.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Heat Reclaimers, Refrigerant Certified for Canada (SNLT7)

USE AND INSTALLATION

This category covers refrigerant heat reclaimers intended for installation in conjunction with air conditioning or refrigeration systems to extract heat from the refrigerant for heating water. The heat reclaimers consist of a refrigerant-to-water heat exchanger without any water-temperature control components.

Refrigerant heat reclaimers are intended to be installed in accordance with the manufacturer's installation instructions provided with the heat reclaimer.

The efficiency of the heat reclaimer, the feasibility of interconnection with air conditioning or refrigeration systems, and the effect of the heat reclaimers on the operation of the air conditioning and refrigeration systems have not been investigated.

PRODUCT MARKINGS

These products are marked with the manufacturer's name and model number. Unless provided with a separate marking as indicated below, the products are marked with the type(s) of refrigerant to be used and the refrigerant design pressures.

Heat reclaimers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped or on a separate sheet or tag of specification included in each carton or container.

Heat reclaimers intended for heating potable water are so identified in the individual certifications and by a marking on the heat reclaimer.

RELATED PRODUCTS

Similar equipment designed for use with specific makes and models of air conditioning or refrigeration systems is covered under Accessories, Air Conditioning Equipment Certified for Canada (ABFY7).

ADDITIONAL INFORMATION

Mufflers, Refrigerant Certified for Canada (SNOY7)

USE

This category covers refrigerant mufflers located in the compressor discharge line to dampen or remove hot gas pulsations set up by the compressor.

PRODUCT MARKINGS

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Refrigerant mufflers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Oil Separators, Refrigerant Certified for Canada (SNVX7)

USE

This category covers refrigerant oil separators intended to separate oil and oil vapor from the refrigerant and usually installed in the compressor discharge line.

PRODUCT MARKINGS

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Refrigerant oil separators not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

ADDITIONAL INFORMATION

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Receivers, Refrigerant Certified for Canada (SOJV7)

USE

This category covers shell-type receivers and condenser receivers permanently connected to an air conditioning or refrigeration system and intended for the storage of liquid refrigerant. These devices may additionally serve as condensers.

PRODUCT MARKINGS

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Refrigerant receivers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

ADDITIONAL INFORMATION

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATED MEDICAL EQUIPMENT CERTIFIED FOR CANADA (SOPT7)

GENERAL

This category covers self-contained, refrigerated medical equipment such as oxygen therapy and thermia devices designated for professional use by personnel in hospitals, nursing homes, medical care centers, medical offices and similar health care facilities.

This equipment has been investigated for electric shock, fire and mechanical hazards. Other risks, including those that may result from use of this equipment in the presence of flammable anesthetics, have not been investigated.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Refrigerated Medical Equipment Certified for Canada (SOPT7)−*Continued*

This equipment has been investigated to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

Oxygen therapy equipment has been investigated with respect to the increased risks resulting from the presence of oxygen and electrical parts within the equipment. In view of the practical design features it is essential for safety that all possible sources of ignition be kept away from these devices. Possible sources of ignition, against which precautions should be taken, include open flames, matches, cigarettes, accumulations of static electricity and reducing valves on oxygen tanks which occasionally project flame or sparks due to ignition or explosion of rubber valve seats. The canopy (tent), reducing valve, oxygen cylinders, etc., used with oxygen therapy equipment have not been investigated nor covered as part of the certified equipment.

FACTORS NOT INVESTIGATED

The effects on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

RELATED PRODUCTS

Equipment investigated to determine its suitability or safety for use where a flammable anesthetic is likely to be present is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

Nonrefrigerated medical equipment is covered under Medical Equipment Certified for Canada (PIDF7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment,'' and CAN/CSA-C22.2 No. 601.1, ''Medical Electrical Equipment, Part 1: General Requirements for Safety.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

REFRIGERATED MEDICAL EQUIPMENT or REFRIGERATED OXYGEN THERAPY EQUIPMENT*
AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT ACCESSORIES CERTIFIED FOR CANADA (SOSR7)

USE AND INSTALLATION

This category covers devices investigated for installation on certified refrigeration equipment only as optional accessories, in accordance with the designation on the nameplate of the accessory and in the individual certification of the accessory. These accessories are rated 600 V ac or less, and are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment,'' and CSA-C22.2 No. 128, ''Vending Machines.''

UL MARK

Refrigeration Equipment Accessories Certified for Canada (SOSR7)−*Continued*

REFRIGERATORS AND FREEZERS, SPECIAL PURPOSE CERTIFIED FOR CANADA (SOVQ7)

GENERAL

This category covers equipment designed for special purposes, such as environmental chambers, flammable-materials-storage refrigerators, plant-growth chambers, and self-contained refrigerators and freezers intended for use in laboratories in commercial occupancies.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and CAN/CSA B52, ''Mechanical Refrigeration Code.''

For permanently connected equipment, the proper method of electrical installation (number of branch circuits, disconnects, etc.) is shown on the wiring diagram and/or marking required to be attached to the unit.

Flammable-materials-storage refrigerators are marked to indicate that they are acceptable for storage of flammable liquids.

PRODUCT MARKINGS

Laboratory refrigerators and freezers may use an ASHRAE 34 refrigerant, classified A3, as an additive. In accordance with System Application Rule (j) of Table 2 in CAN/CSA B52, use of A3 refrigerants is prohibited except in laboratories in commercial occupancies. Laboratory refrigerators are marked ''This unit is intended for use in laboratories in commercial occupancies as defined in CAN/CSA B52.''

RELATED PRODUCTS

Refrigerators and freezers investigated to determine suitability for use in hazardous (classified) locations are covered under Commercial Refrigerators and Freezers for Use in Hazardous Locations Certified for Canada (STRV7).

Products investigated for storage of flammable or combustible liquids in excess of 10 gal are covered under Flammable-liquid Storage Cabinets Certified for Canada (EDJZ7).

Commercial refrigerators and freezers are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product

name ''Special Purpose Refrigerator and/or Freezer,'' ''Laboratory Refrigerator'' or ''Environmental Chamber,'' or other appropriate product name shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT COOLERS CERTIFIED FOR CANADA (SPLR7)

USE

This category covers unit coolers, which are direct-cooling, factory-made encased assemblies, consisting of a cooling element, fan(s) and motor(s), intended for the free circulation of air for refrigeration purposes. They may also incorporate means for defrosting of the cooling element.

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

This equipment is intended for use in refrigeration systems charged with the refrigerant indicated on the device, but has not been investigated from the standpoint of operation when associated with other equipment used to form the complete refrigeration system.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and the type(s) of refrigerant to be used.

RELATED PRODUCTS

Equipment intended for air-conditioning purposes is referenced as fan-coil units and covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Unit Cooler.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNITS, REFRIGERATING CERTIFIED FOR CANADA (SPYZ7)

GENERAL

This category covers complete refrigeration systems consisting of a hermetic motor compressor, condenser, evaporator, refrigerant control, electrical controls, wiring and associated refrigerant-containing components including tubing and may include a defrost system. These systems are primarily used to refrigerate cooling rooms and warehouses intended for the storage of food and other perishable products. These products may be self-contained or sectional. Accessories intended for use with refrigerating units are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Refrigerating units consist of one or more factory-made sections. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

Accessories for refrigerating units are provided with instructions for installation into the product.

PRODUCT MARKINGS

Units, Refrigerating Certified for Canada (SPYZ7)−*Continued*

The condensing sections of refrigerating units suitable for outdoor installation are so marked. Sections not marked as suitable for outdoor installation are for indoor use only.

Refrigerating units may be designed to accept accessories in the field. In such cases both the refrigerating unit and the accessory are marked to relate the two for proper installation.

REBUILT PRODUCTS

This category also covers refrigerating units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerating units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt refrigerating units are subject to the same requirements as new refrigerating units.

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Nonelectrical insulated wall panels are covered under Building Units Certified for Canada (BLBT7).

Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies Certified for Canada (FDIT7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, ''Refrigeration Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigerating Unit'' (for a self contained unit), ''Section of Refrigerating Unit'' (for a part or device, the function of which is essential to the basic operation of the refrigerating unit) or ''Accessory for Refrigerating Unit'' (for each part of a refrigerating unit shipped separately from the factory, the function of which supplements or modifies the basic operation of the refrigerating unit).

For rebuilt products the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES, REFRIGERATED CERTIFIED FOR CANADA (SQMX7)

GENERAL

This category covers refrigerated vending machines designed for connection to alternating-current circuits rated not more than 600 V, and which incorporate refrigeration systems of the air-cooled or water-cooled type employing hermetic refrigerant motor-compressors.

This equipment consists of a complete refrigeration system and associated electrical controls for the system and for delivery of the product.

Accessories, such as a coin/currency mechanism and debit/credit card readers, may be field installed if the vending machine is marked to specify the types of accessories that are acceptable.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Where the equipment employs connection to a compressed carbon dioxide source, this category does not cover compressed carbon dioxide cylinders.

Some of this equipment employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

The burglary and theft features of these machines have not been investigated unless specifically indicated in the individual certifications.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

The venders are marked on or adjacent to the electrical rating plate with one of the following: ''For Indoor Use Only,'' ''Suitable for Protected Locations – See Installation Instructions'' or ''Suitable for Outdoor Use.'' Complete instructions appear on a vender intended for use in a protected loca-

Vending Machines, Refrigerated Certified for Canada (SQMX7)−*Continued*

tion, indicating the manufacturer's recommendations concerning the use and/or installation of any canopies, marquees, shelters, etc., which may be necessary for the protection of the vender. The instructions may be located inside the vender if they are accessible through the front door.

RELATED PRODUCTS

For certifications of machines that vend nonrefrigerated products, see Vending Machines Certified for Canada (YWXV7) or the specific category covering the equipment involved.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 128, "Vending Machines."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerated Vending Machine."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS CERTIFIED FOR CANADA (SRAV7)

Drinking-water Coolers Certified for Canada (SRJX7)

GENERAL

This category covers bottle- and pressure-type drinking-water coolers rated up to 250 V. These coolers are provided with a complete refrigeration system and associated electrical controls, and may also include means for heating water.

These products may contain water purification parts or system(s). However, the parts or system(s) used to purify the water have not been investigated to determine their effectiveness in purifying water unless specifically stated in the individual certifications.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

RELATED PRODUCTS

See Drinking Water System Components Certified for Canada (FDNP7).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

Water coolers intended for use in hazardous (classified) locations are covered under Water Coolers for Use in Hazardous Locations Certified for Canada (SUFT7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, "Refrigeration Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drinking Water Cooler."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Drinking-water Coolers Certified for Canada (SRJX7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL PROCESSING LIQUID COOLERS CERTIFIED FOR CANADA (SRFR7)

GENERAL

This category covers coolers intended to condition water or other fluids used for developing photographic film, cooling or thawing bulk product, cooling medical equipment, such as magnetic resonance imagers (MRI) or computer axial topography (CAT) scanners, and similar processes. The fluids intended for use in these coolers are limited to glycol, water, and water with additives. These coolers are not intended for the cooling of potable water. These units are provided with a complete refrigeration system and associated electrical controls and may also incorporate means for heating and circulating the water or other fluid.

If intended to be connected to the water supply, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

PRODUCT MARKINGS

These water coolers are marked with the manufacturer's name, model number, electrical rating, the refrigerant type, and the high- and low-side design pressures.

RELATED PRODUCTS

Bottle- and pressure-type potable water coolers are covered under Drinking Water Coolers Certified for Canada (SRJX7).

Other types of specialized refrigerators are covered under Specialty Refrigeration Equipment Certified for Canada (SROT7).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, "Refrigeration Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Processing Liquid Cooler."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIALTY REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA (SROT7)

GENERAL

This category covers specialty refrigeration equipment.

Compressor-evaporator units covered under this category are rated 135,000 Btu/h or less and include one or more compressors and evaporators with interconnecting refrigerant piping and with associated controls and wiring. These units are intended for field connection to a remote condenser having a marked working pressure not less than designated by the marking on the unit nameplate. The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA C22.2 No. 63 (1993), "Household Refrigerators and Freezers," CAN/CSA C22.2 No. 120 (1991), "Refrigeration Equipment," CAN/CSA C22.2 No. 128 (1990), "Vending Machines" and CAN/CSA C22.2 No. 140.3 (1987), "Refrigerant-Containing Components for Use in Electrical Equipment."

Specialty Refrigeration Equipment Certified for Canada (SROT7)–*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Food Service Cart,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (SSCR7)

COMMERCIAL REFRIGERATORS AND FREEZERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (STRV7)

GENERAL

This category covers commercial refrigerators and freezers of the self-contained reach-in type, having provision for connection to threaded rigid conduit.

In the storage of any chemicals in the refrigerators and freezers, consideration should be given to the inherent decomposition and reaction hazards of the chemicals.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Commercial Refrigerator and/or Freezer for Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (SUFT7)

GENERAL

This category covers bottled water and line water-supplied types of water coolers.

These appliances are self-contained units with a complete refrigeration system and associated electrical controls. The refrigeration system has provision for connection to threaded rigid conduit.

Safety may be affected if the manufacturer's installation instructions are not followed.

Appliances intended to be connected to external water sources have not been investigated with respect to pollution of water supply through reverse action due to low water pressure or other reasons.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

Water Coolers for Use in Hazardous Locations Certified for Canada (SUFT7)–*Continued*

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Water Cooler for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (STFO7)

ACCESSORIES, REFRIGERATION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (STFZ7)

Controllers, Refrigeration for Use in Zone Classified Hazardous Locations Certified for Canada (STGN7)

GENERAL

This category covers temperature- and pressure-operated controllers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 24-93, ''Temperature-Indicating and -Regulating Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Refrigeration Controller for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES CERTIFIED FOR CANADA (SYKJ7)

This category covers products that include equipment for initiating, controlling and indicating signals pertaining to the protection of life and property against fire and are intended to be installed, maintained and operated as system arrangements in accordance with CAN/ULC-S524, ''Installation of Fire Alarm Systems.''

Users of this equipment should consult Authorities Having Jurisdiction concerning the particular types to be used, number and location of sta-

tions, character and installation of wiring, methods to be followed in the receipt and disposition of signals, keeping of records, rendering of reports, and all other details having a bearing on adequate installation, maintenance and use of the system to be employed.

Listed protective fire alarm equipment is subjected to investigation to determine its suitability for its intended service and for installation, maintenance and use in conformity with the applicable standard with particular regard to design and construction, practicability of application and reliability of performance, in addition to the possible electrical hazards involved in its use.

This equipment may be used in different combinations as system assemblies. All parts of such an assembly may be either of one manufacture or of different manufactures. Special equipment designed for use with other particular equipment is indicated in the individual Listings.

A complete system is considered to be a combination of interrelated signal-initiating devices, signal-transmitting devices, signal-indicating devices and control unit installed in a protected premise in accordance with regulations enforced by the Authority Having Jurisdiction who determines the suitability of the installation for its particular application. This category applies only to the equipment intended to be installed to form these systems and not to the systems as installed.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELEASING DEVICE EQUIPMENT CERTIFIED FOR CANADA (SYLX7)

Releasing devices with accessory equipment are designed to release operating weights or air or water under pressure in the functioning of fire protection and fire alarm equipment.

They are available in both heat responsive (automatic) and manual types. The heat responsive types may be had in either fixed temperature or rate-of-rise types or a combination of these two.

The heat responsive portions of releasing devices are integral parts of some patterns. In other patterns they are separate parts, such as air chambers which are mounted in the fire area and connected by small-bore tubing to the releasing device; or thermostatically-operated electric switches (heat detectors) mounted in the fire area and connected by an electric wiring circuit to the releasing device. Devices which have normally open contacts are listed as Heat - Automatic Fire Detectors and those which have normally closed contacts are listed as Heat Detectors for Releasing Device Service.

Proper location and spacing of the auxiliary heat responsive devices (heat detectors, air chambers, tubing, etc.) involve consideration of service conditions throughout the area to be protected - such as ceiling construction, subdivisions of areas (including closets, small rooms, etc.) normal temperatures, high temperatures (if existent), resulting from manufacturing processes or other causes and draft conditions. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations. Individual listings should be consulted for details of spacing and location of the heat responsive devices.

The inspection authority having jurisdiction should be consulted in all cases before installation of systems or devices.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Accessories, Releasing Device Certified for Canada (SYSW7)

GENERAL

This category covers accessory equipment intended to be used in conjunction with other suitable releasing-device equipment as indicated in the individual certifications to form part of a releasing-device system.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term ''Releasing Device'' and the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment Certified for Canada (SYLX7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

Accessories, Releasing Device Certified for Canada (SYSW7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, ''Control Units for Fire Alarm Systems.''

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Fire Alarm Equipment'' or ''Fire Alarm Subassembly.''

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word ''SECURITY'' above the UL symbol. The product name is ''Fire Alarm and Security Equipment'' or ''Fire Alarm and Security Subassembly.''

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include ''and Hospital Signaling and Nurse Call,'' ''and General Signaling,'' ''and Emergency Signaling,'' ''and Enclosed Energy Management,'' ''and Information Technology'' or ''and Telephone,'' as appropriate (e.g., ''Fire Alarm and Telephone Equipment'').

The product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Control Units, Releasing Device Certified for Canada (SYZV7)

GENERAL

This category covers control units intended for use with separately certified automatic fire detectors and releasing devices to form electrically supervised releasing systems. Contacts may be provided for connection of automatic alarm transmitters for signals to central station and for supplementary local annunciator circuits.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term ''Releasing Device'' and the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment Certified for Canada (SYLX7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, ''Control Units for Fire Alarm Systems.''

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Fire Alarm Equipment'' or ''Fire Alarm Subassembly.''

The Listing Mark for fire alarm equipment may include the designation ''___ of ___.'' The first space is stamped with the number indicating the

Control Units, Releasing Device Certified for Canada (SYZV7)−*Continued*

position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Releasing Devices Certified for Canada (SZNT7)

GENERAL

This category covers releasing devices intended for use 1) in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual certifications, and 2) as a means of releasing air or water under pressure from a piping system and confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

A releasing device and its associated detection system may be adjusted to compensate for more or less severe ambient temperature changes by different settings of the release or by varying the size of the compensating vents in the system to increase or decrease the rate of pressure build-up caused by exposure to some given temperature rise. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Releasing Device" and the specific use description as indicated in the individual certifications.

RELATED PRODUCTS

See Control Units, System Certified for Canada (UOJZ7), Smoke-automatic Fire Detectors Certified for Canada (UROX7).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment Certified for Canada (SYLX7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, "Standard for Control Units for Fire Alarm Systems."

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIBLE-SIGNAL APPLIANCES CERTIFIED FOR CANADA (ULSZ7)

GENERAL

This category covers electrically operated bells, buzzers, horns and similar signal-sounding appliances for fire-protective signaling service.

These appliances are not to be confused with audible-signal appliances for general signaling (nonfire alarm) use, which are covered under Audible-signal Appliances, General Signal Certified for Canada (UCST7).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Audible Signal Appliance for Fire Alarm Service," "Audible Signaling Appliance for Fire Alarm Service – Private Mode Only," "Audible Signal Appliance Accessory" or "Audible Signaling Appliance for Fire Alarm Service Subassembly."

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S525, "Audible Signal Devices for Fire Alarm Systems, Including Accessories."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling" or "and Emergency Signaling," as appropriate (e.g., "Fire Alarm and Emergency Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F – Fire Alarm Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Audible-signal Appliances Certified for Canada (ULSZ7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BOXES, MANUALLY ACTUATED CERTIFIED FOR CANADA (UMGX7)

A manually actuated box is an enclosed unit assembly of a mechanism having electrical contacts designed to transmit a signal when an integral part is operated manually. The signaling contacts are intended to be connected to circuits of private fire protective signaling systems.

Boxes, Noncoded Certified for Canada (UNIU7)

GENERAL

This category covers non-coded fire alarm boxes, which are boxes having electrical contacts actuated to change their normal position when a part is operated manually so as to produce a non-coded signal. This category also covers protective covers for fire alarm boxes.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term ''Non-coded Alarm Box,'' ''Non-coded Watchman's Station,'' ''Non-coded Fire and Watch Station,'' ''Alarm Back Box,'' ''Alarm Box Trim'' or ''Alarm Box Protective Cover.''

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S528, ''Manual Stations for Fire Alarm Systems, Including Accessories.''

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Fire Alarm Equipment'' or ''Fire Alarm Subassembly.''

The product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:

F – Fire Alarm Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL UNITS, SYSTEM CERTIFIED FOR CANADA (UOJZ7)

GENERAL

This category covers electrical control units for fire-protective signaling systems to be employed in indoor locations.

Products investigated for outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

A control unit consists of a unit assembly of electrical parts having provision for connection of power-supply circuits routed through the control unit equipment by a prescribed scheme of circuiting. The circuits are extended to separate devices by which the operating parts of the control units are actuated for signals and to separate or incorporated appliances by which the signals are indicated, so as to form a coordinated system combination for definite signaling services.

The Listee of a control unit furnishes the related actuating devices and signal-indicating appliances for use with the control unit or indicates the particular devices and appliances required and supplies any instructions necessary to complete their interconnection at the installation.

The individual Listings indicate that wiring diagrams have been submitted with the control unit, along with information regarding its intended application, and the unit has been tested with representative actuating devices and signal-indicating devices to be used with it as an interrelated assembly. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

Identification of the information in the individual certifications is as follows:

Control Units, System Certified for Canada (UOJZ7)−*Continued*

Local System Type (L)

System Control Unit with Emergency Voice Communication — A system control unit with emergency voice communication consists of a control unit that employs a speaker system in lieu of conventional general alarm-indicating circuits. The control unit may also have additional provision for telephone communication by use of hand sets. A tape deck with a prerecorded message may also be employed as a supplementary feature.

System Control Unit with Emergency Telephone Communication — A system control unit with emergency telephone communication consists of a control unit with conventional general alarm-indicating circuits and additionally employs telephone communication circuits to remote telephone hand sets for emergency communication during a fire condition, usually for use by fire department personnel.

The types of devices that can be connected for the service indicated in the individual certifications for each type control unit are as follows:

A – Automatic fire alarm: Thermostats, smoke detectors, etc.
M – Manual fire alarm: Manually operated boxes
WF – Waterflow alarm: Waterflow switches
SS – Supervisory: Gate valves, water-level switches, temperature switches, etc.
WSS – Watchman's supervisory service

The type of signaling service applicable to each type control unit is as follows: C – Coded; NC – Non-Coded; M – March Time; MX – Multiplex; RF – Radio Frequency; DAC – Digital Alarm Communicator.

C – Coded
NC – Noncoded
M – March Time
MX – Multiplex

Where more than one type of control unit is indicated for a model number, such as Type Fire Alarm (L, LS, A, RS), that particular model is suitable for all the indicated applications. The change from one type to another may be made by deletion or addition of a panel or module inside the control unit cabinet or revisions to operating software to provide the additional function. In other cases a control unit may be suitable for a dual function without any panel changes, such as a Type Fire Alarm (P, RS).

Authorities Having Jurisdiction should be consulted before installation or revision.

PRODUCT MARKINGS

Each complete product is marked to indicate its intended use. This consists of the word ''Commercial,'' followed by ''Protected-Premises Control Unit,'' consistent with the description in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, ''Control Units for Fire Alarm Systems.''

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Fire Alarm Equipment'' or ''Fire Alarm Subassembly.''

The Listing Mark for fire alarm equipment may include the designation ''___ of ___.'' The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word ''SECURITY'' above the UL symbol. The product name is ''Fire Alarm and Security Equipment'' or ''Fire Alarm and Security Subassembly.''

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include ''and Hospital Signaling and Nurse Call,'' ''and General Signaling,'' ''and Emergency Signaling,'' ''and Enclosed Energy Management,'' ''and Information Technology'' or ''and Telephone,'' as appropriate (e.g., ''Fire Alarm and Telephone Equipment'').

The product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:

S – Security Equipment

Control Units, System Certified for Canada (UOJZ7)−*Continued*

F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

****

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL UNIT ACCESSORIES, SYSTEM CERTIFIED FOR CANADA (UOXX7)

GENERAL

This category covers electrical units intended for use with fire-protective signaling systems employed in indoor locations in accordance with Section 32 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Signal and Fire Alarm Equipment and Services Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, "Control Units for Fire Alarm Systems."

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

****

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES CERTIFIED FOR CANADA (SYKJ7)

Control Unit Accessories, System Certified for Canada (UOXX7)−*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DETECTORS, AUTOMATIC FIRE CERTIFIED FOR CANADA (UPLV7)

These products are either individual devices or prescribed combinations of devices designed to detect flame, heat, smoke or combustion gases resulting from a fire and to automatically operate electrical contacts. The signaling contacts may be integral parts of an individual device or parts of a separate device to which the detecting element is connected as an extended component.

The signaling contacts of the detector are intended to be connected to the circuit conductors of the fire protective signaling system, so that the fire alarm signal initiated by the detector will be indicated by the system.

The kind of system (central station, proprietary, auxiliary, remote station or local) with which the detector can be used, depends upon the design of the signaling circuit to which the detector contacts are intended to be connected. A detector may have non-coded signaling contacts connected directly to the actuating circuit of system control unit or to the actuating circuit of an electrically operated transmitter, which will transmit coded signals over the signaling line circuit of a local, auxiliary, proprietary, remote station, or central station system.

The wiring diagram of the transmitter or system control unit with which the detector is used will indicate the circuit application of the detector.

A combination type detector depends upon two or more related but separate pieces of equipment which are designed to be installed together so as to form a complete detector.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Heat-automatic Fire Detectors Certified for Canada (UQGS7)

GENERAL

This category covers thermostat-type automatic fire detectors (known as thermostats), which are integral assemblies of heat-responsive elements and noncoded electrical contacts that function automatically under conditions of increase in air temperature. These thermostats consist of detection heads intended for mounting to compatible component bases having electrical functions, or self-contained units for mounting to standard electrical utility boxes.

Thermostats are of the fixed temperature (F), combination fixed temperature and rate-of-rise (C), or rate compensation (R) type. There are basically two types: (1) A spot-pattern-type thermostat is one in which the thermally-sensitive element is a compact unit of small area; (2) a line-pattern-type thermostat (heat-sensitive cable [HSC]) is one in which the thermally-sensitive element is continuous along a line.

The possible contact configurations of these thermostats are as follows: One-pole, normally open-circuit type (1PNO); one-pole, normally closed-circuit type (1PNC); two-pole open-circuit type (2PNO); two-pole, normally closed-circuit type (2PNC); two-pole, normally open-circuit and closed-circuit type (2PNO/NC). Thermostats with normally open contacts are suitable for use as initiating devices of a fire-protective signaling system. Thermostats with normally closed contacts are suitable for use as the heat-responsive portion of a releasing device system.

These thermostats have been investigated for indoor use only unless otherwise indicated in the individual certifications. Ordinarily, thermostats are intended for locations where normal ceiling temperatures prevail (below 38°C). Locations where temperatures at ceiling are likely to be unduly high (from sources of heat other than fire conditions, such as boiler rooms, dry kilns, etc.) demand special consideration and selection of thermostats operating normally at higher temperatures, and which are capable of withstanding high temperatures for long periods of time. Care should be exercised to select thermostats having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 38°C, install 71°C or equivalent (ordinary) rating thermostats
For ceiling temperatures exceeding 38°C, but not 66°C, install 100°C or equivalent (intermediate) rating thermostats
For ceiling temperatures exceeding 66°C, but not 107°C, install 141°C

Heat-automatic Fire Detectors Certified for Canada (UQGS7)−*Continued*

or equivalent (high) rating thermostats

For ceiling temperatures exceeding 107°C, but not 149°C, install 182°C or equivalent (extra high) rating thermostats

The response sensitivity of thermostats to standard test fires is indicated by the ''spacing'' rating. The spacing rating is the maximum distance between adjacent thermostats installed on a symmetrical layout with the maximum right-angle distance to any wall or partition one-half the distance between thermostats. The fire tests conducted on thermostats are based on only one set of conditions, typically a 5-m high smooth ceiling, no air movement, and no physical obstructions between the fire source and the thermostat. Under other conditions and forms of ceiling construction, reduced spacing may be required to obtain equivalent performance.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room space area, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment, and to draft conditions likely to be encountered at the time of the fire.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of one of the following:

For **nonseparable heads and bases**: ''Heat Detector''

For **separable heat detector heads**: ''Heat Detector Head for Use with * UL Listed Base''

For **separable heat detector bases**: ''Automatic Detector Base for Use with * UL Listed Head''

For **separable optional bases**: ''Automatic Detector Subassembly''

For **modules**: ''Module for Use with * UL Listed Automatic Detector Base''

* Company name or File No. (Sxxxx)

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic Fire Certified for Canada (UPLV7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530 (1991), ''Heat Actuated Fire Detectors for Fire Alarm Systems.''

UL MARK

A two-Listing-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Listing Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Fire Alarm Equipment'' or ''Fire Alarm Subassembly.''

The product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:

F – Fire Alarm Equipment

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detectors Certified for Canada (UROX7)

GENERAL

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units (see **APPLICATIONS**).

A heat detector and/or an audible-signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

Smoke-automatic Fire Detectors Certified for Canada (UROX7)−*Continued*

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

DETECTOR TYPES

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Projected Beam (PB) — A light beam is projected across the space of area to be protected.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

APPLICATIONS

Open-area Protection (OAP) — Requires detector connection to a compatible system control unit for operation.

Releasing Service (RS) — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

Open-area Protection with Releasing Service (OAP/RS) — Incorporates supplementary switching contacts for additional connection to releasing devices.

Duct Detector [D (ST)] — Intended for installation on the side of a duct. Employs sampling tubes that extend into the duct.

Duct Detector [D (I)] — For installation inside a duct.

COMPATIBILITY WITH CONTROL UNITS

Smoke detectors for open-area protection are intended to be connected to the initiating-device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating device circuit of a system control unit, are compatible with the initiating device circuits of any certified system control unit if (1) failure of the power to the detector is supervised at the control unit, and (2) the smoke detector is powered from a ''Regulated'' power-supply output, or a ''Special Application'' power-supply output for which the voltage outputs have been investigated. Compatible models for ''Special Application'' outputs are indicated on the installation wiring diagram of the control unit and/or detectors.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating-device circuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Certification is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of control unit and/or detectors.

INSTALLATION

Environmental Considerations — Open-area detectors are intended for indoor use only where normal ceiling temperatures [max 37.8°C (100°F)] prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests as measured in the duct text apparatus.

Stability Test — In view of the innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted (false) alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector may be required.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Smoke-automatic Fire Detectors Certified for Canada (UROX7)−*Continued*

Each product is marked to indicate its intended use. This consists of one of the following:

For **nonseparable heads and bases**:

1. Smoke Detector (+) for Open Area Protection
2. Smoke Detector (+) for Open Area Protection. Also Suitable for Releasing Device Service.
3. Smoke Detector (+) for Releasing Device Service
4. Smoke Detector (+) for Duct Application

For **separable heads**:

1. Smoke Detector Head (+) for Use with a (*) UL Listed Base
2. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base
3. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Duct Application.
4. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Releasing Device Service.
5. Smoke Detector Head (+) for Releasing Device Service When Used with a (*) UL Listed Base
6. Smoke Detector Head (+) for Duct Application When Used with a (*) UL Listed Base
7. Smoke Detector Head When Used with a (*) UL Listed Smoke Duct Detector Housing

For **separable bases and duct housing**:

1. Detector Base (+) for Use with a (*) UL Listed Head
2. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head
3. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Duct Application.
4. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service.
5. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service and Duct Application.
6. Detector Base (+) for Releasing Device Service When Used with a (*) UL Listed Head
7. Smoke-Duct Detector Housing for Use with (*) UL Listed Head

For **separable system assemblies**:

1. Smoke Detector Projected Beam System Unit
2. Smoke Detector Air Sampling System Unit
3. Smoke Detector for Duct Application Subassembly

+ To be inserted when applicable: "with Integral Audible Signal," "with Integral Heat Detector" or "with Integral Audible Signal and Heat Detector"

* Company name or File No. (Sxxxx)

Detectors marked with the designation "with Integral Audible Signal" include an audible-signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors marked with the designation "with Integral Heat Detector" include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the head detector results in the same alarm signal as obtained from the smoke detector.

RELATED PRODUCTS

Combination door closers and holders incorporating automatic smoke detection components are covered under Combination Fire Door Closers and Holders Certified for Canada (GTIS7).

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic Fire Certified for Canada (UPLV7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

Smoke Detectors for Special Applications Certified for Canada (URXG7)

USE AND INSTALLATION

This category covers smoke-automatic fire detectors employing a special construction different from conventional detectors and designed to detect products of combustion in a specific location. These detectors are not intended as a substitute for open-area protection.

These detectors are intended to be installed in accordance with the manufacturer's installation instructions, such as for extinguishing system applications. The sensitivity rating of the detector should be taken into consideration with regard to installation in an area to be protected under operating conditions to guard against false alarms. The detectors may be connected to the initiating-device circuits of certified control units that provide audible-alarm signals, or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal

Smoke Detectors for Special Applications Certified for Canada (URXG7)−*Continued*

shift in sensitivity. Velocity limits for duct detectors are based on response to fire tests in CAN/ULC-S529, "Standard for Smoke Detectors for Fire Alarm Systems."

Detector Types

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air analyzed for fire products.

EXTINGUISHING SYSTEM ATTACHMENTS CERTIFIED FOR CANADA (USQT7)

USE AND INSTALLATION

This category covers devices having electrical signaling contacts and designed for attachment to extinguishing system equipment so as to provide one or more of the following: (1) alarm signals indicating discharge of extinguishing means, (2) supervisory signals indicating abnormal conditions of extinguishing system equipment, (3) supervisory signals indicating restoration to normal of extinguishing system equipment.

These devices may be used with wet-pipe or dry-pipe sprinkler systems as indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted prior to installation.

ATTACHMENT TYPES

Extinguishing system attachments are classified as follows:

Water-flow Alarm Signal Types

Alarm or Dry-pipe Valve Attachment — Mechanically operated on lifting of alarm valve clapper, or pressure operated, by suitable connection to alarm or dry-pipe valve piping trim.

Water-flow Indicator — Paddle operated.

The signaling contacts of these attachments may be of the non-coded or coded type:

Non-coded types have contacts that perform a switching function and are intended for connection to actuating circuits of a separate electrically-operated transmitter or to the signaling line circuit of a separate electrical control unit by which their action is indicated.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES CERTIFIED FOR CANADA (SYKJ7)

Extinguishing System Attachments Certified for Canada (USQT7)−*Continued*

Coded types have contacts that perform a coded signaling impulse function resulting from the operation of a transmitting mechanism, which is a part of the attachment, and are for connection to the signaling line circuit of a separate electrical control unit by which their action is indicated.

Head losses due to hydraulic friction in a paddle-operated water-flow indicator at a flow velocity of 15 ft/sec (4.6 m/sec) do not exceed 3 psig (20.7 kPa) for pipe sizes up to and including 4 in. or 1 psig (6.9 kPa) for pipe sizes exceeding 4 in.

Special Attachment — Type not included by the above classification.

Supervisory Signal Types

Valve Position Signal Attachment — Operated by mechanical linkage to movable parts of a valve.

Water Level Signal Attachment — Operated by a tank float.

Pressure Signal Attachment — Operated by pressure change of air, steam or water.

Temperature Signal Attachment — Operated by water or air temperature change.

RATINGS

These devices are intended for use over a working pressure range of 20–175 psig (137.9–1207 kPa), in indoor applications, except as otherwise noted in the individual certifications. They have not been investigated for use in potable water systems, systems where sand or other material is present or systems employing other than water as the extinguishing agent, except as otherwise noted in the individual certifications.

The individual certifications contain information with regard to types, sizes, pressure ratings, special intended usages and other details associated with these devices.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Extinguishing System Attachment."

RELATED PRODUCTS

Water flow in extinguishing systems may also be detected by alarm pressure switches or alarm valves, which are covered under Switches, Pressure Certified for Canada (VOXZ7) and Valves, Alarm Certified for Canada (VPLX7), respectively.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S548, "Devices and Accessories for Water Type Extinguishing Systems."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

FIRE ALARM DEVICES, SINGLE AND MULTIPLE STATION, AND ACCESSORIES CERTIFIED FOR CANADA (UTER7)

The following Listings cover heat actuated type single station fire alarm devices which are normally intended to be employed in ordinary indoor locations.

The levels of toxicity produced by combustibles at which single- and multiple-station fire alarm devices are actuated have not been investigated by UL.

The devices are self-contained units incorporating means for both fire detection and alarm sounding.

A heat sensitive element of eutectic alloy or bimetallic metal is generally employed in the detection mechanism. Energy for sounding the alarm may be obtained from a wound spring or compressed gas.

Fire Alarm Devices, Single and Multiple Station, and Accessories Certified for Canada (UTER7)−*Continued*

These heat actuated fire alarm devices are normally employed as separate units in which case they are known as single station devices. However, the units operated by compressed gas may also be connected by tubing with other and similar units. These units are known as multiple station devices. When connected in this manner, the detection of a fire by one unit results in the sounding of an alarm by all units. The spring wound units are not capable of being linked together in this way.

For description of the applicable Listing Mark, refer to the sub-category Single- and Multiple-Station Heat Detectors (UTFS7).

Single- and Multiple-station Heat Detectors Certified for Canada (UTFS7)

USE AND INSTALLATION

This category covers single- and multiple-station heat detectors intended for locations where normal ceiling temperatures prevail (below 38°C). For ceiling temperatures not exceeding 38°C, devices having a temperature rating of 58°C are recommended. For ceiling temperatures exceeding 38°C but not 66°C, devices having a temperature rating of 79°C are recommended.

In order to minimize false alarms from premature operation, the operating temperature rating of heat-actuated devices should be appropriate for the maximum ambient temperature expected. Locations where the temperatures at the ceiling level are likely to be unduly high from sources of heat other than fire conditions, such as boiler rooms, require special considerations.

Under these conditions, alarm devices operating normally at higher temperatures and capable of withstanding higher than normal ambient temperatures for long periods of time may be required. Care should be exercised to select alarm devices having the appropriate temperature rating to guard against false alarms from premature operation.

The response sensitivity of heat-actuated fire alarm devices to standard test fires is indicated in the spacing rating assigned to the device. The spacing rating is the maximum distance between adjacent devices installed in a symmetrical layout with the maximum right-angle distance to any wall or partition one-half the distance between the devices.

The spacings specified in the individual certifications are for flat, smooth ceiling construction of ordinary height, generally regarded as the most favorable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling construction, reduced spacing of alarm devices may be required.

The placement and spacing of alarm devices should be based on consideration of the normal ceiling temperatures, possible exposure of the devices to abnormal heat and to the draft conditions likely to be encountered at the time of a fire. Refer to Chapter 2 of ANSI/NFPA 72, ''National Fire Alarm Code,'' for typical locations.

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories Certified for Canada (UTER7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C539- (1973), ''Guide for the Investigation of Fire Alarm Devices, Single and Multiple Station, Mechanically-Operated Type.''

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate: ''Single Station Heat Detector,'' ''Multiple-Station Heat Detector,'' ''Single- and/or Multiple-Station Heat Detector'' or ''Single- and/or Multiple-Station Heat Detector Accessory.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Single- and Multiple-station Smoke Alarms Certified for Canada (UTGT7)

USE

This category covers single- and multiple-station smoke alarms intended to be employed in ordinary indoor locations. These units are intended only for locations where normal ceiling temperatures between 4.4°C (40°F) and 37.8°C (100°F) prevail.

Single- and Multiple-station Smoke Alarms Certified for Canada (UTGT7)−*Continued*

This category also covers single- and multiple-station smoke alarms that have been performance tested to a minimum 10-year extended battery life under normal ambient conditions.

Smoke alarms are not intended for use in fire alarm systems. In addition, the acceptability of smoke alarms equipped with ancillary features, such as relays, automatic dialers, radio transmitters or interconnections, is subject to approval by the Authority Having Jurisdiction.

ALARM TYPES

Single Station — Self-contained units that incorporate a smoke chamber, an optional heat detector, and related electrical components to initiate an audible alarm signal from the unit when abnormal smoke or heat (when a supplementary heat detector is provided) actuates the unit. These devices may be energized from a commercial power-supply source by means of permanent wiring, flexible power-supply cord, use of limited-energy cable or equivalent wiring connected to the output of a suitable Class 2 power supply, or by one or more batteries.

Where a battery is employed as the main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal which persists for at least seven days.

Multiple Station — Similar to single-station units but provided with leads or terminals (or integral RF transmitter/receiver units) to permit the interconnection of single-station so that actuation of any one unit results in actuation of the audible alarms of all units. The installation instructions (manual) indicate the maximum number of units that can be interconnected.

Travel Alarm — Consists of a battery-operated smoke alarm provided with a mounting bracket for top of door mounting only. May also consist of a battery-operated single-station smoke alarm with the addition of a mounting bracket. The difference is indicated on the UL Listing Mark.

Alarm for Recreational Vehicles — More stringent environmental tests are conducted.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S531, ''Smoke Alarms.''

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate:

''Single-station Smoke Alarm''
''Multiple-station Smoke Alarm''
''Single- and/or Multiple-station Smoke Alarm''
''Single- and/or Multiple-station Smoke Alarm Accessory''
''Travel Smoke Alarm''
''Single-station Smoke Alarm – Also Suitable as a Travel Smoke Alarm''
''Single-station Smoke Alarm – Also Suitable for Use in Recreational Vehicles''
''Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit''
''Single-station Smoke Alarm – Also Suitable as a Single-station Carbon Monoxide Alarm''
''Multiple-station Smoke Alarm – Also Suitable as a Multiple-station Carbon Monoxide Alarm''
''Single- and/or Multiple-station Smoke Alarm – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm''
''Single-station Smoke Alarm – Also Suitable as a Commercial Residential Smoke Alarm''
''Multiple-station Smoke Alarm – Also Suitable as a Commercial Residential Multiple-station Smoke Alarm''

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word ''SECURITY'' above the UL symbol. The product name is one of the following:

''Single-station Smoke Alarm and Household Burglar Alarm Unit''
''Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit''
''Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit, Home Health Care Control Unit, and Signal Appliance Control Unit''
''Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit

Single- and Multiple-station Smoke Alarms Certified for Canada (UTGT7)−*Continued*

Accessory, Personal Call Unit, and Signal Appliance Environment Transmitter''
"Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit"
"Single-station Smoke Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit"
"Single-station Smoke and/or Carbon Monoxide Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit"

Any of the preceding product names may include "for the Hearing Impaired" for products so identified in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION CERTIFIED FOR CANADA (UTHV7)

USE AND INSTALLATION

This category covers fixed-temperature, heat-actuated-type detectors employing a special construction different from conventional thermostats and designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with the Authority Having Jurisdiction and CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating device circuits of certified control units that provide audible alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Heat Actuated Device for Special Application," "Control Unit for Special Application" or "Control Unit Accessory for Special Application."

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S530 (1991), "Heat Actuated Fire Detectors for Fire Alarm Systems."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

F – Fire Alarm Equipment

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD FIRE-WARNING SYSTEM UNITS CERTIFIED FOR CANADA (UTLQ7)

This category covers the individual units that are interconnected to form an electrically-operated household fire-warning system. These units include a main control unit (with integral or separate power supply) and related accessories intended for connection to the control unit.

Additional equipment and materials, such as bells, horns, heat detectors, smoke detectors, and limited-energy fire detector circuit wiring, may be required in various applications to complete a system. Such products are covered under Audible-signal Appliances Certified for Canada (ULSZ7), Smoke-automatic Fire Detectors Certified for Canada (UROX7), Heat-automatic Fire Detectors Certified for Canada (UQGS7) and Fire Alarm Devices, Single and Multiple Station, and Accessories Certified for Canada (UTER7).

Household Fire-warning System Units Certified for Canada (UTLQ7)−*Continued*

At least one smoke detector is required to be provided in a household fire-warning system. The smoke detector can be either electrically wired to and operated from the control unit, or be a separately-operated device, such as an electrically-operated single-station fire alarm device.

An installation drawing and/or detailed instructions are employed as the controlling factor to assure proper installation and interconnection among units. This material may be attached to the control unit, provided detached, or included as part of an instruction booklet.

An instruction booklet illustrating typical installation layouts, operation, maintenance, servicing and test procedures is supplied with the main control unit. Printed information for a household emergency evacuation plan may be separate or included as part of the booklet.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Control Units and Accessories, Household System Type Certified for Canada (UTOU7)

USE AND INSTALLATION

This category covers control units and accessories intended to be used as part of a household fire-warning system.

Control Unit — Consists of a unit assembly of electrical parts having provision for connection of a power supply, signal-actuating devices (heat detectors, smoke detectors, switches, etc.), and signal-indicating devices (bells, horns, strobes, etc.).

Combination Control Unit — A control unit may additionally include circuit facilities for connection to burglar-alarm devices to form a combination fire-burglary control unit. In such a combination unit the fire-alarm signal takes precedence over the burglar-alarm signal and a distinction between alarm signals is required. A common trouble signal may be employed for both.

Modular Control or Combination Unit — A control unit may be prewired at the factory or assembled from readily installed modules. A certified burglary module can be added after the unit is installed to expand the system capability. The installation diagram indicates the type and number of modules that can be employed in a control unit.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Household" or "Residential" and the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Household Fire-warning System Units Certified for Canada (UTLQ7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S545, "Residential Fire Warning System Control Units."

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Information Technology or Telephone categories. When applicable, the product name may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment

Control Units and Accessories, Household System Type Certified for Canada (UTOU7)−*Continued*

F – Fire Alarm Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
IT – Information Technology Equipment
T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-SUPPLY UNITS CERTIFIED FOR CANADA (UTRZ7)

GENERAL

This category covers power-supply units intended for application as components of fire-protective signaling systems.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S527, ''Control Units for Fire Alarm Systems,'' and ULC-S318 (1996), ''Power Supplies for Burglar Alarm Systems.''

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Fire Alarm Equipment'' or ''Fire Alarm Subassembly.''

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word ''SECURITY'' above the UL symbol. The product name is ''Fire Alarm and Security Equipment'' or ''Fire Alarm and Security Subassembly.''

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include ''and Hospital Signaling and Nurse Call,'' ''and General Signaling,'' ''and Emergency Signaling,'' ''and Enclosed Energy Management,'' ''and Information Technology'' or ''and Telephone,'' as appropriate (e.g., ''Fire Alarm and Telephone Equipment'').

The product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:
S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SMOKE-CONTROL-SYSTEM EQUIPMENT CERTIFIED FOR CANADA (UUKL7)

GENERAL

This category covers products intended to be installed in conjunction with heating-ventilating-air conditioning (HVAC) equipment to form a system for controlling the flow of smoke in a building during a fire condition. They are intended to perform specific functions related to a smoke-control system. This function and the interconnection to other smoke-

Smoke-control-system Equipment Certified for Canada (UUKL7)−*Continued*

control equipment, as well as HVAC equipment, are described in an installation document attached to the product or referenced in the marking on the product.

As indicated in the individual certifications, smoke-control equipment is assigned one or more of the following attributes:

OPERATION

Manual — Activation of the smoke-control system occurs as a result of the intervention of an authorized person.

Automatic — Activation of the smoke-control system occurs as a result of an alarm condition from a fire-detection device, such as a smoke detector or heat detector, or from a fire-alarm control unit.

TYPE

Nondedicated — A system that provides the building HVAC function under normal conditions and provides a smoke-control objective during a fire-alarm condition.

Dedicated — A system which is normally inactive and is used exclusively for the purpose of smoke control.

USE

Stairtower — A configuration of equipment that provides pressurizing of stairtowers to maintain a tenable environment for building egress.

Zoned Smoke Control — A configuration of equipment that provides exhausting of the smoke area and pressurizing of all other contiguous areas within a building.

Equipment investigated for mounting in air-handling spaces is specifically identified by markings on the product and in the individual certifications. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

Smoke-control systems are engineered systems specifically designed to meet the needs of the individual building and its occupants. While the products covered under this category have been investigated for reliability of operation and functionality, they have not been investigated as being suitable for any specific building design, nor has the effectiveness of the overall system in controlling the flow of smoke been determined. Authorities Having Jurisdiction should be consulted prior to installation.

This category does not cover motors, fans, dampers, ducts, etc., that provide the HVAC function.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term ''Smoke Control System'' and the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C100 (1992), ''Smoke Control System Equipment.''

The basic standard used to investigate products suitable for use in air-handling spaces in this category is UL 2043, ''Fire Tests for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.''

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name ''Fire Alarm Equipment'' or ''Fire Alarm Subassembly.''

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word ''SECURITY'' above the UL symbol. The product name is ''Fire Alarm and Security Equipment'' or ''Fire Alarm and Security Subassembly.''

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include ''and Hospital Signaling and Nurse Call,'' ''and General Signaling,'' ''and Emergency Signaling,'' ''and Enclosed Energy Management,'' ''and Information Technology'' or ''and Telephone,'' as appropriate (e.g., ''Fire Alarm and Telephone Equipment'').

The product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:
S – Security Equipment

Smoke-control-system Equipment Certified for Canada (UUKL7)−*Continued*

F – Fire Alarm Equipment

G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPEAKERS FOR FIRE-PROTECTIVE SIGNALING SYSTEMS CERTIFIED FOR CANADA (UUMW7)

USE AND INSTALLATION

This category covers speakers and their accessories investigated for use in fire alarm and/or emergency communication systems.

Speakers have been investigated for audible output of 85dBA or greater measured at 3 m, when powered from a source of pink noise over a range of 600 – 4000 Hz. The units are marked with a minimum audibility rating.

Accessories, such as enclosures, have been investigated with respect to both mechanical and acoustical consideration when used with speakers specified in the individual certifications.

Where a certified product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual certifications and each part bears a separate Certification Mark. The marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual certifications.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Speaker" or "Speaker Enclosure."

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S541, "Speakers for Fire Alarm Systems, Including Accessories."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling," as appropriate (e.g., "Fire Alarm and General Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:
F – Fire Alarm Equipment
G – General Signaling Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISUAL-SIGNAL APPLIANCES FOR FIRE-PROTECTIVE SIGNALING SYSTEMS CERTIFIED FOR CANADA (UVAV7)

USE AND INSTALLATION

Visual-signal Appliances for Fire-protective Signaling Systems Certified for Canada (UVAV7)−*Continued*

This category covers visual-signal appliances and accessories investigated for use in fire-protective signaling applications, and are intended for use with Listed compatible fire alarm control units or control unit accessories.

Accessories, such as enclosures and back boxes, and the products with which they are compatible are identified in the individual Listings.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual Listings. The marking on each part references installation instructions which show assembly and installation of the parts to form a Listed product.

All products covered under this category are intended for indoor use only unless otherwise specifically marked.

Visual-signal appliances have been investigated for light output measured at a distance of 10 ft. on-axis. The units are marked with a range of light output and flash rate.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Visual Signaling Appliance" or "Visual Signaling Appliance Accessory."

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S526-M87, "Visual Signal Devices for Fire Alarm Systems, Including Accessories."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling," as appropriate (e.g., "Fire Alarm and General Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:
F – Fire Alarm Equipment
G – General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MISCELLANEOUS DEVICES FOR FIRE-PROTECTIVE SIGNALING SERVICE CERTIFIED FOR CANADA (UXKV7)

GENERAL

This category covers miscellaneous equipment for fire-protective signaling service.

Products are typically investigated for use in an ordinary indoor environment with a prevailing ambient no greater than 25°C. Products investigated for ordinary outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, "Control Units for Fire Alarm Systems."

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL

Miscellaneous Devices for Fire-protective Signaling Service Certified for Canada (UXKV7)−*Continued*

Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELEASING DEVICE EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (TBCX7)

Releasing Devices with accessory equipment are designed to release operating weights or air or water under pressure in the functioning of fire protection and fire alarm equipment.

They are available in both heat responsive (automatic) and manual types. The heat responsive types may be had in either fixed temperature or rate-of-rise types or a combination of these two.

The heat responsive portions of releasing devices are integral parts of some patterns. In other patterns they are separate parts, such as air chambers which are mounted in the fire area and connected by small-bore tubing to the releasing device; or thermostatically operated electric switches (thermostats) mounted in the fire area and connected by an electric wiring circuit to the releasing device. Devices which have normally open contacts are listed as "Heat-Automatic Fire Detectors" and those which have normally closed contacts are listed as "Heat Detectors for Releasing Device Service."

Proper location and spacing of the auxiliary heat responsive devices (heat detectors, air chambers, tubing, etc.) involve consideration of service conditions throughout the area to be protected - such as ceiling construction, subdivisions of areas (including closets, small rooms, etc.) normal temperatures, high temperatures (if existent), resulting from manufacturing processes or other causes and draft conditions. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations. Individual Listings should be consulted for details of spacing and locations of the heat responsive devices.

Authorities Having Jurisdiction should be consulted in all cases before installation of systems or devices.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELEASING DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (TBJW7)

GENERAL

This category covers releasing devices intended for use in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual certifications.

This category also covers releasing devices intended for use as a means of releasing air or water under pressure from a piping system confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

A releasing device and its associated detection system may be adjusted to compensate for more or less severe ambient temperature changes by different settings of the release, or by varying the size of the compensating vents in the system to increase or decrease the rate of built-up pressure caused by exposure to some given temperature rise. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations.

RELATED PRODUCTS

See Heat Detectors for Releasing Device Service for Use in Hazardous Locations Certified for Canada (TBGR7) and Heat-automatic Fire Detectors for Use in Hazardous Locations Certified for Canada (UIRV7).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment for Use in Hazardous Locations Certified for Canada (TBCX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ULC-S527, "Control Units for Fire-Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Releasing Devices for Hazardous Locations."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REPACKAGED ELECTRICAL APPLIANCE AND UTILIZATION EQUIPMENT CERTIFIED FOR CANADA (TEOY7)

GENERAL

This category covers repackaged Listed and Classified electrical appliance and utilization equipment.

Required user instructions and ratings are marked on or packed with the smallest unit container in which the product is packaged. The repackaged product type or category name appears on the packaging.

Products under UL's Listed by Report Service may require special descriptions and recommended methods of installation and are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are referenced in Repackaged Product Program Requirements at www.ul.com.

UL MARK

The Listing or Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing or Classification and Follow-Up Service.

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name.

The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a control number, the appropriate product name, and information pertaining to the scope of the Classification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL INJURY," "IN ACCORDANCE WITH IEEE C37.59").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REPACKAGED ELECTRICAL CONSTRUCTION EQUIPMENT CERTIFIED FOR CANADA (TEOZ7)

GENERAL

This category covers repackaged Listed and Classified electrical construction equipment.

Required user instructions and ratings are marked on or packed with the smallest unit container in which the product is packaged. The repackaged product type or category name appears on the packaging.

Listed wire or cable that has been subjected to processing or respooling subsequent to its manufacture is covered under Processed Wire Certified for Canada (ZKLU7).

Lightning conductors, air terminals and fittings (see OVTZ7) are intended for installation in Listed lightning protection systems and are not eligible for repackaging.

Products under UL's Listed by Report Service may require special descriptions and recommended methods of installation and are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are referenced in Repackaged Product Program Requirements at www.ul.com.

UL MARK

The Listing or Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing or Classification and Follow-Up Service.

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name.

The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a control number, the appropriate product name, and information pertaining to the scope of the Classification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL INJURY," "IN ACCORDANCE WITH IEEE C37.59").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROBOTS AND ROBOTIC EQUIPMENT CERTIFIED FOR CANADA (TETZ7)

GENERAL

This category covers robots, integrated work cells, programmable production equipment, remote sensing equipment, robotic servo power supplies, and similar equipment.

This equipment has been investigated with respect to risks of electric shock, fire and injury to persons.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-Z434 (2003), "Industrial Robots and Robot Systems – General Safety Requirement," and CSA-C22.2 No. 73, "Construction and Test of Electrically Equipped Machine Tools."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Robot," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOF-COVERING MATERIALS CERTIFIED FOR CANADA (TEVT7)

GENERAL

This category covers roof-covering materials, which consist of two basic types: (1) roofing systems, generally involving the assembly of several components and may require special equipment to apply the materials involved, and (2) prepared materials, which can be applied directly to a roof deck in accordance with the manufacturer's instructions provided with the product. These coverings are intended for the protection of roof decks from external fire exposure and have not been investigated for performance when exposed to a fire from an internal source, i.e., directed onto the underside of the roof deck assembly.

Roofing systems are composed of the materials shown under the various generic system types referenced under Roofing Systems Certified for Canada (TGFU7) and as described under Roofing Systems (TGFU), to provide Class A, B or C for resistant coverings.

Where indicated in the individual Listings, the wind resistance of prepared roof coverings has been investigated to CAN/CSA-A123.5-M90, "Asphalt Shingles Made From Organic Felt and Surfaced With Mineral Granules/Asphalt Shingles Made From Glass Felt and Surfaced With Mineral Granules."

The weatherability of these roof-covering materials has not been investigated.

Authorities Having Jurisdiction should be consulted as to which class of roof coverings will be acceptable in each location.

CLASSES

Class A includes roof coverings which are effective against severe fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not carry or communicate fire, afford a fairly high degree of fire protection to the roof deck, do not slip from position, possess no flying brand hazard, and do not require frequent repairs in order to maintain their fire resisting properties.

Class B includes roof coverings which are effective against moderate fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not readily carry or communicate fire, afford a moderate degree of fire protection to the roof deck, do not slip from position, and possess no flying brand hazard, but may require infrequent repairs in order to maintain their fire resisting properties.

Class C includes roof coverings which are effective against light fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not readily carry or communicate fire, afford some degree of fire protection to the roof deck, do not slip from position, possess no flying brand hazard, and may require occasional repairs or renewals in order to maintain their fire resisting properties.

Roofing systems provide Class A, B or C coverings over combustible and/or noncombustible (steel, concrete or poured gypsum) decks. Prepared roof-covering materials provide class A, B or C coverings over combustible decks. Combustible decks consist of the following types:

(A) Minimum 3/4 in. thick sheathing boards.
(B) Minimum 3/8 in. (for Prepared) or 15/32 in. for (Roofing Systems) thick plywood.
(C) Minimum 3/8 in. (for Prepared) or 7/16 in. (for Roofing Systems) thick nonveneer sheathing (oriented strand board panels or waferboard panels).

RELATED PRODUCTS

Prepared roof coverings shown in Prepared Roof-covering Materials Certified for Canada (TFWZ7) and applied in accordance with detailed instructions included in the packages of materials provide Class A, B or C fire resistant coverings and wind resistant coverings as indicated on the Listing Mark for Canada applied to each package.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREPARED ROOF-COVERING MATERIALS CERTIFIED FOR CANADA (TFWZ7)

GENERAL

This category covers materials intended to provide Classes A, B and C coverings on combustible (wood, 3/4-in. thick sheathing boards or 3/4-in. thick plywood unless otherwise indicated) decks when applied in accordance with detailed instructions included with the packages.

The use of 15/32-in. thick (minimum) plywood is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications.

The use of 3/8-in. thick (minimum) nonveneer sheathing panels (composite panels or waferboard panels) is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications when a UL-certified underlayment is utilized between the sheathing and the prepared roof covering.

Certifications are applicable either for new work or for recovering purposes.

Flashings and trimmings are intended to be the same as or not less than the equivalent of the roof coverings in each class, or of 16 oz or heavier copper, No. 26 USS gauge or heavier galvanized steel, or 0.019 in. thick or heavier aluminum.

This category also covers shingles with factory-applied adhesives or integral locking features. The certification markings for such shingles may, in addition to fire-resistance information, include wind-resistance information.

PREPARED ROOF COVERINGS

Asphalt Organic-Felt Shingle Coverings are composed of asphalt organic-felt (previously identified as rag-felt) grit-surfaced shingles, one or more thickness, laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage.

Asphalt Glass-Fiber Mat Shingle Coverings are composed of asphalt glass-fiber mat, grit-surfaced shingles, laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage.

Modified Asphalt Glass-Fiber Mat, Asphalt Organic-Felt or Glass-Fiber/Polyester Composite Shingle Coverings are composed of modified asphalt-coated glass-fiber mat or glass-fiber/polyester composite, grit-surfaced shingles, laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage.

Wind-resistant Asphalt Glass-Fiber Mat Shingles are provided with field-applied or factory-applied adhesive or integral locking tabs. Some shingles with factory-applied adhesive utilize bands or spots of a heat-sensitive adhesive located either on the surface of the shingles or on the back side of each tab. Adhesives of this type must be activated by solar heat of intensity generally attained on warm, sunny days. Other shingles with factory-applied adhesive utilize a combination pressure-sensitive and heat-sensitive adhesive. Due to the nature of adhesives of this type, sealing is induced by application of pressure and/or heat.

Wind-resistant Asphalt Organic-Felt Shingles are provided with factory-applied adhesive or integral locking tabs. Some shingles with factory-applied adhesive utilize bands or spots of a heat-sensitive adhesive located either on the surface of the shingles or on the back side of each tab. Adhesives of this type must be activated by solar heat of intensity generally attained on warm, sunny days. Other shingles with factory-applied adhesive utilize a combination pressure-sensitive and heat-sensitive adhesive. Due to the nature of adhesives of this type, sealing is induced by application of pressure and/or heat.

Wind-resistant Modified Asphalt Glass-Fiber Mat Shingles are provided with factory-applied adhesive. Some shingles with factory-applied adhesive utilize bands or spots of a heat-sensitive adhesive located either on the surface of the shingles or on the back of each tab. Adhesives of this type must be activated by solar heat of intensity generally attained on warm, sunny days. Other shingles with factory-applied adhesive utilize a combination pressure-sensitive and heat-sensitive adhesive. Due to the nature of adhesives of this type, sealing is induced by application of pressure and/or heat.

RELATED PRODUCTS

Accessory components utilized in the prepared roof-covering system are covered under Prepared Roofing Accessories Certified for Canada (TGDY7). Ridge vents utilized in the prepared roof-covering system are covered under Ridge Vents Certified for Canada (TGEW7). Type 15 and Type 30 asphalt felts, used as underlayments, are covered under Roofing Systems Certified for Canada (TGFU7). Underlayments, ridge vents and accessory components, when utilized, are intended to be certified materials.

Other types of prepared roof-covering materials are covered under Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire Retardant -treated Wood Certified for Canada (TFXX7).

ADDITIONAL INFORMATION

Prepared Roof-covering Materials Certified for Canada (TFWZ7)−*Continued*

For additional information, see Roof-covering Materials Certified for Canada (TEVT7) and Roofing Materials and Systems Certified for Canada (AARM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S107, "Method of Fire Tests for Roof Coverings."

Where indicated in the individual certifications, specific products have also been investigated to ASTM D3462, "Standard Specifications for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules," or CSA-A123.5 (1998), "Asphalt Shingles Made from Organic Felt and Surfaced with Mineral Granules/Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," and the following additional information:

PREPARED ROOF COVERING MATERIALS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREPARED ROOF-COVERING MATERIALS, FORMED OR MOLDED METAL, FIBER-CEMENT, PLASTIC OR FIRE-RETARDANT-TREATED WOOD CERTIFIED FOR CANADA (TFXX7)

GENERAL

This category covers materials intended to provide Classes A, B and C coverings on combustible (wood, 3/4-in. thick sheathing boards or 1/2-in. thick plywood unless otherwise indicated) decks when applied in accordance with detailed instructions included with the packages.

The use of 15/32-in. thick (minimum) plywood is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications.

The use of 3/8-in. thick (minimum) non-veneer APA Rated Series Sheathing (oriented strandboard panels, structural particleboard panels, composite panels or waferboard panels) is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications for when a UL-certified underlayment is utilized between the sheathing and the prepared roof covering.

Certifications are applicable either for new work or for recovering purposes.

Flashings and trimmings are intended to be the same as or not less than the equivalent of the roof coverings in each class, or of 16 oz. or heavier copper, No. 26 USS gauge or heavier galvanized steel, or 0.019-in. thick or heavier aluminum.

PREPARED ROOF-COVERING MATERIALS

Fiber-Cement Shingle Coverings are composed of non-asbestos fiber-cement shingles laid to provide two or more thicknesses in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines exceeding 3 in. to the horizontal foot.

Fire Retardant-treated Red Cedar Shakes and Shingles are composed of red cedar shakes and shingles pressure impregnated with a fire-retardant treating solution.

Formed Metal Shingle, Shake or Panel Coverings are composed of plain or painted aluminum sheet alloy, painted or coated steel or copper laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage. These coverings have been investigated only for fire resistance.

Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire-retardant-treated Wood Certified for Canada (TFXX7)−*Continued*

Formed or Molded Plastic Shingles are composed of various plastic materials formed into various shapes in various colors. These coverings are limited to inclines sufficient to permit drainage.

Photovoltaic (Solar) Modules/Shingles are composed of flat-plate photovoltaic module/panels fabricated in sheets that resemble three-tab composite shingles when installed in accordance with the manufacturer's installation instructions. These coverings are limited to nominal 15/32-in. thick (minimum) plywood decks and to inclines sufficient to permit drainage. These coverings have also been investigated in accordance with ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels" [see Photovoltaic Modules and Panels Certified for Canada (QIGU7)].

Reinforced Cast Stone Shingles are composed primarily of stone dust and a small amount of resin reinforced with glass fiber. These shingles are limited to 15/32-in. thick (minimum) plywood decks and to inclines sufficient to permit drainage.

PREPARED ROOFING ACCESSORIES CERTIFIED FOR CANADA (TGDY7)

GENERAL

This category covers materials intended for use as an accessory component of a prepared roof-covering system.

These accessories are intended to be installed in accordance with the application instructions included with the basic prepared roof-covering material.

ADDITIONAL INFORMATION

For additional information, see Roof-covering Materials (TEVT) and Roofing Materials and Systems (AARM).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S107, "Method of Fire Tests for Roof Coverings."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOFING SYSTEMS CERTIFIED FOR CANADA (TGFU7)

GENERAL

This category covers materials intended for roofing systems that provide Class A, B or C coverings on combustible (wood – 3/4-in.-thick sheathing boards or plywood, unless otherwise indicated) and noncombustible (steel, concrete or poured gypsum) decks, unless otherwise indicated in the individual certifications. Minimum 2-in.-thick unfaced structural cement-fiber units, formed into slabs or boards and covered under Structural Cement-Fiber Units Certified for Canada (CIYT7), are suitable alternates as roof decks for all certified roofing systems intended for use over noncombustible decks.

The use of 7/16-in. (minimum) thick nonveneer sheathing (oriented strand board panels, structural particleboard panel, composite panels or waferboard panels) is a suitable alternate to 15/32-in. (minimum) thick plywood specified in the Class A, B or C certifications for the individual manufacturers. Certifications are applicable to roofing systems used over insulated decks when so indicated in the individual certifications.

Certified gypsum wallboard, any thickness, may be included in any roofing system without adversely effecting the certification. Insulations may be attached to the deck with fasteners, hot mopping asphalt or certified adhesive.

Certifications are applicable either for new construction, recovering or replacement purposes. (Recovering is the process of covering an existing roofing system with a new roofing system. Replacement is the process of removing an existing roof system and replacing it with a new system.) For recovering situations, certified uninsulated new construction assemblies are not intended for installation over existing certified insulated assemblies unless specifically certified in **MAINTENANCE AND REPAIR SYSTEMS** under Roofing Systems (TGFU).

Certified insulated systems may be installed over existing certified insulated systems when:

1) the new system is certified for use with the existing roof insulation type (glass fiber, perlite, wood fiber, foamed plastic, etc.), and
2) the total thickness of insulation in both systems does not exceed the maximum specified for the new system being supplied.

For installation over noncombustible decks, any certified insulated system utilizing minimum 1-in.-thick insulation (glass fiber, polyisocyanurate or perlite) may be used over any existing insulated system regardless of the type if its insulation in both systems does not exceed the maximum specified for the new system being applied. Certification is determined by the new construction system.

The above classifications apply only to coverings composed of certified materials assembled as described in the individual manufacturer certifications; flashings and trimmings being the same as or not less than the equivalent of the roofing systems in each class, or of 16 oz or heavier copper, No. 26 gauge or heavier galvanized steel, or 0.019 in. thick or heavier aluminum.

This category covers the following roofing systems, which are composed of varying types of components:

1. Asphalt Felt Systems (Organic, Asbestos or Glass Fiber) with Hot Roofing Asphalt
2. Coal Tar Felt Systems (Organic, Asbestos or Glass Fiber) with Hot Roofing Coal Tar Pitch
3. Cold Application Systems (Asphalt Felts or Ply Sheets with Cold Cements and Coatings)
4. Combination Hot and Cold Systems
5. Fluid-applied Coating Systems
6. Maintenance and Repair Systems

Roofing Systems Certified for Canada (TGFU7)−*Continued*

7. Single-ply Membrane Systems (Includes Modified Bitumen Membranes)
8. Spray-applied Foam and Coating Systems
9. Other systems

The composition of each of these system types is described in the UL Online Certifications Directory.

ADDITIONAL INFORMATION

For additional information, see Roof-covering Materials Certified for Canada (TEVT7) and Roofing Materials and Systems Certified for Canada (AARM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings."

UL MARK

Two methods of labeling are provided for this material: (1) Each bundle, package or container will bear the Classification Mark, (2) a Certificate is issued to the interested parties. This Certificate is prepared for each construction site that the manufacturer supplies. The use of the Certificate is optional when each bundle, package or container bears the Classification Mark but, in all cases, is restricted to material shipped directly from the manufacturer to a construction site.

The Classification Mark of UL on the bundle, package or container is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

+ FOR ROOFING SYSTEMS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RIDGE VENTS CERTIFIED FOR CANADA (TGEW7)

USE AND INSTALLATION

This category covers ridge vents intended for use with Prepared Roof-covering Materials (TFWZ7).

These ridge vents have been investigated for resistance to external fire exposure only when installed in accordance with the manufacturer's installation instructions provided with the ridge vents.

Authorities Having Jurisdiction should be consulted as to which class of ridge vent will be acceptable in each location.

FACTORS NOT INVESTIGATED

The corrosion resistance of metal ridge vents has not been investigated.

The ability of these products to provide attic ventilation in accordance with requirements of nationally recognized codes and standards has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Roof-covering Materials Certified for Canada (TEVT7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S107, "Standard Method of Tests of Roof Coverings."

UL MARK

The Classification Mark of UL on the product or package is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RIDGE VENTS – CLASS +
AS TO AN EXTERNAL FIRE EXPOSURE ONLY
WHEN INSTALLED IN ACCORDANCE WITH INSTRUCTIONS PROVIDED WITH RIDGE VENTS
Control No.

+ **A**, **B** or **C**

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOF DECK CONSTRUCTIONS CERTIFIED FOR CANADA (TGKX7)

Roof deck constructions are illustrated and described in the Roofing Materials and Systems Directory and are identified by a construction number and evaluated as to the spread of fire on the underside.

UL's tunnel furnace normally used to develop Surface Burning Characteristics of individual building materials has been adapted to tests of these assemblies. The limits of flame spread applicable to constructions described in this category were established by analysis of results of tunnel furnace tests of other constructions, which by large scale fire tests and by experience in actual installations were known to have contributed extensively to flame spread or, conversely, were regarded as being eligible for Classification from this standpoint.

The primary construction considered for the purpose of establishing limits was a steel roof deck, without vapor retarder or adhesives, insulated with 1-in. thick plain vegetable fiberboard mechanically attached and covered with a 4-ply built-up roof covering with gravel surfacing. As one requisite of Classification under this category, roof deck constructions shall not develop flame spread on the underside in excess of the limits established in tests of the above assembly. Fire Classified assemblies may be evaluated by either large scale fire testing or using procedures described in CAN/ULC-S126, "Standard Method of Test for Fire Spread under Roof Deck Assemblies."

These Classifications should not be confused with those appearing under either the Surface Burning Characteristics or the Fire Resistance Classification. The Surface Burning Characteristics is a comparative evaluation of materials (occasionally with facings or backing) with respect to flame spread and smoke developed. The Fire Resistance Classification is the time rating of an assembly with respect to resistance to flame passage, heat transfer and maintenance of structural integrity.

Roof deck constructions which are Classified as to fire are various assemblies of materials as illustrated and described in the Roofing Materials and Systems Directory. The assemblies are Classified on the basis of specific requirements for maximum flame spread on the underside of the assembly within definite time limits. These constructions differ from materials Classified with respect to Surface Burning Characteristics in that in the latter, materials are assigned comparative numerical values. They also differ from assemblies Classified with respect to Fire Resistance since temperature transmission through roof deck constructions and structural performance under load are not measured nor are time ratings assigned.

A fire investigation of a roof deck construction primarily determines whether the contribution to an igniting fire by any or all of the materials in the assembly is at a sufficient rate to cause propagation of flame on the underside, in excess of the established limits.

Authorities Having Jurisdiction should be consulted as to which type of deck construction is acceptable for any given location before installation.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOF DECK CONSTRUCTION MATERIALS CERTIFIED FOR CANADA (TGYV7)

Building Units Certified for Canada (TIAR7)

GENERAL

This category covers building units for use in roof deck constructions. The applicable Construction Numbers for these materials are indicated in the individual certifications.

Building units, consisting of proprietary mixes of organic and/or inorganic materials formed into blocks, boards, planks, slabs, or sheets fabricated into various sizes, thicknesses, and shapes, are certified for use in constructions as shown in the individual certifications. The insulating, acoustical, structural, and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

Properties of the building units other than those relating to their capacity to contribute to the spread of flame on the underside of the construction have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Roof Deck Constructions Certified for Canada (TGKX7) and Roofing Materials and Systems Certified for Canada (AARM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S126, ''Standard Method of Test for Fire Spread Under Roof Deck Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Foamed Plastic Certified for Canada (TJBX7)

GENERAL

This category covers foamed plastic material intended for use in roof deck constructions. The applicable Construction Numbers for these materials are indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

Properties of the materials other than their capacity to contribute to the spread of flame on the underside of the construction have not been investigated.

RELATED PRODUCTS

For surface-burning characteristics of foamed plastics, see Foamed Plastic Certified for Canada (BRYX7).

ADDITIONAL INFORMATION

For additional information, see Roof Deck Constructions Certified for Canada (TGKX7) and Roofing Materials and Systems Certified for Canada (AARM7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S126, ''Standard Method of Test for Fire Spread Under Roof Deck Assemblies.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SAFES AND CHESTS CERTIFIED FOR CANADA (TOXV7)

AUTOMATED TELLER SYSTEMS CERTIFIED FOR CANADA (TPEU7)

GENERAL

This category covers automated teller systems, which are generally unattended units designed to dispense currency and may also perform other functions usually handled by a bank teller. They may be accessible 24 hours a day or only during business hours.

The system consists of a customer access panel and a security container combined to provide the intended services and designed to protect against theft of its contents.

A teller's cash dispenser is intended to dispense currency directly to the bank teller only.

ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 950 (1989), ''Safety of Information Technology Equipment Including Electrical Business Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED'', a control number, and the following product names: ''Automated Teller System'', ''Automated Teller Machine'', ''ATM'', or ''Teller's Cash Dispenser'' followed by ''Business Hour Service'' or ''24-Hour Service-Level 1'' or ''24-Hour Service-Level 2'' . Accessory units include the following product names: ''Automated Teller System Accessory'' or ''Automated Teller Machine Accessory'' or ''Teller's Cash Dispenser Accessory'' .

When components are assembled at the point of installation the following shall be used: ''Automated Teller System or Teller's Cash Dispenser When Used With (Company Name) Listed Automated Teller or Teller's Cash Dispenser Enclosure Parts (Part or Model Nos.) and Automated Teller or Teller's Cash Dispenser Modules (Part or Model Nos.)'' followed by: ''Business Hour Service'' or ''24-Hour Service-Level 1'' or ''24-Hour Service-Level 2'' . The enclosure parts and modules shall use: ''Automated Teller or Teller's Cash Dispenser Enclosure Part (Part or Model No.)'' and ''Automated Teller or Teller's Cash Dispenser Module (Part or Model No.)'' .

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SAW CHAIN CERTIFIED FOR CANADA (TSZQ7)

USE

This category covers saw chain intended for use on gasoline-powered chain saws. Two types of saw chain are covered:

Type A reduced-kickback saw chain — For kickback performance requirements of CSA-Z62.3, Clause 4.1.3.1.

Type C low-kickback saw chain — For kickback performance

requirements of CSA-Z62.3, Clause 4.1.3.2.

Replacement saw chain — For kickback performance requirements of CSA-Z62.3, Clause 4.1.2.

RELATED PRODUCTS

Gasoline-powered chain saws are covered under Chain Saws Certified for Canada (JOOW7).

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

These products are investigated to the applicable paragraphs of CSA-Z62.3, "Chain Saw Kickback."

UL MARK

The Classification Mark of UL on the chain reel or the smallest unit container is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

SCAFFOLDING CERTIFIED FOR CANADA (TTDZ7)

DEVICES, SCAFFOLDING CERTIFIED FOR CANADA (TTRX7)

USE AND INSTALLATION

This category covers fabricated assemblies, such as (a) decorators' planks usually employed with ladders, (b) scaffold planks for use with scaffolding, (c) stage platforms for suspended scaffolds and (d) modular stage platforms for suspended scaffolds. The devices have been investigated only for their load-carrying capacity.

These devices are intended to be used with other scaffolding components to form a scaffolding system. Other components used in the system, such as hoists, stirrups and end frames are covered under Scaffolding Equipment Certified for Canada (TUFV7).

The installation of these devices is intended to be in accordance with the requirements of Authorities Having Jurisdiction and the manufacturer's instructions.

The investigation of these devices consists of strength tests to determine the ability of the device to carry rated load with a factor of four. The load-capacity rating is as indicated in the individual certifications and is marked on each device.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-Z271-1998, "Safety Code for Suspended Elevating Platforms."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELEVATING WORK PLATFORMS CERTIFIED FOR CANADA (TTYW7)

USE

This category covers self-propelled integral chassis aerial platforms having a platform that either rises directly above the base (CAN/CSA-B354.4), or that can move beyond the perimeter of the base (CAN/CSA-B354.2). Aerial platforms are power operated with primary functions, including drive, controlled from the platforms and are used to position personnel, along with their necessary tools and materials, at work locations.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-B354.4 (2002), "Self-Propelled Boom-Supported Elevating Work Platforms," or CAN/CSA-B354.2 (2001), "Self-Propelled Elevating Work Platforms."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT, SCAFFOLDING CERTIFIED FOR CANADA (TUFV7)

USE AND INSTALLATION

This category covers hoists intended for use with suspended scaffolds, accessories for use with suspended scaffolds, such as stirrups, work planks, etc., and components, such as end frames, braces, brackets, screw jacks, work planks, etc., which are intended to be used in the erection of a self-supporting scaffold system.

The investigation of these devices consists of strength tests to determine the ability of the device to carry a rated load. The load-capacity rating is as indicated in the individual certifications and is marked on each device. Electric hoists have also been certified as to electrical fire and shock hazards.

These devices are intended to be used with other scaffolding components to form a scaffolding system. Hoists and stirrups are intended for use with modular stage platforms and stage platforms, which are covered under Scaffolding Devices Certified for Canada (TTRX7).

The assembly and erection of a scaffolding system is not inspected by UL, and is intended to be in accordance with the requirements of the Authority Having Jurisdiction and the manufacturer's instructions.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-Z271, "Safety Code for Suspended Elevating Platforms."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Equipment, Scaffolding Certified for Canada (TUFV7)−*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SCALES AND ACCESSORIES, ELECTRONIC CERTIFIED FOR CANADA (TUTT7)

GENERAL

This category covers equipment, appliances and systems rated 600 V or less normally found in computer/data processing rooms, offices, other business establishments, educational facilities, residences, and other similar environments.

Equipment may be electromechanical or electronic in design or any combination thereof.

This equipment includes counter- and computer-type scales, weighing machines in all capacities, with or without label printers, lighting or remote controls, devices for use with platform scales, and other types of weighing equipment and accessories. This equipment may be cord-and-plug connected or permanently connected. Accessories intended for use with one another or with individual scales are marked to indicate the appropriate combination of use.

The individual units comprising a system installation are designed to be interconnected and installed by one of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 950 (1989), "Safety of Information Technology Equipment, Including Electrical Business Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Scales" or "Scale Accessories," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEALING, WRAPPING AND MARKING EQUIPMENT CERTIFIED FOR CANADA (TVOR7)

USE AND INSTALLATION

This category covers sealing machines, wrapping machines, marking machines and accessories, as well as combinations of the preceding products, rated 600 V or less, intended for use in the packaging of foods and other articles in commercial or industrial establishments and in homes. This equipment may be portable, stationary, or permanently installed.

Suitable cautionary or warning markings are provided as indicated in the individual certifications and on the equipment itself to inform the user of a potential risk of fire, electric shock and injury to persons, including equipment that:

is intended to be used with flammable liquids,
is not intended for immersion (or only intended for partial immersion) for cleaning in water,
requires a stabilizing means to be engaged before operation,
requires disassembly by means of a tool for user servicing resulting in the exposure of live parts that are normally enclosed or protected,
attains high surface temperatures during normal use, and
has provisions for permanent connection to multiple power supplies.

The marking informs the user of the specific actions to take to mitigate the potential risk of fire, electrical shock or injury to persons involved.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA C22.2 No. 64 (1991), "Household Cooking and Liquid-Heating Appliances," CAN/CSA C22.2 No. 68 (1992), "Motor-Operated Appliances (Household and Commercial)," C22.2 No. 88 (1958), "Construction and Test of Industrial Heating Equipment," and C22.2 No. 122 (1989), "Hand-Held Electrically Heated Tools."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sealing Equipment," "Wrapping Equipment" or "Marking Equipment," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEWING AND CUTTING MACHINES CERTIFIED FOR CANADA (UBCZ7)

USE

This category covers electric sewing machines, sewing machine appliances, vibrator-powered scissors, and cloth-cutting machines for household and commercial use. This category also covers textile equipment for use in unclassified locations, but does not cover equipment intended for use in hazardous (classified) locations, such as certain textile-processing equipment and yarn-handling equipment.

These products may be provided with attachments, such as a foot controller, presser feet, bobbins, etc., not involving moving or cutting parts. Attachments that perform functions other than intended by the basic design have not been investigated unless specifically noted in the individual certifications and covered in the installation and use instructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sewing Machine" or "Cutting Machine," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE, MARINE CERTIFIED FOR CANADA (UBVZ7)

USE

This category covers distribution (power), control and signal cable for use aboard commercial ships and mobile offshore drilling units (MODUs), in single or multiconductor construction, with or without metal armor and with or without an overall jacket.

The cable covered under this category is distribution cable rated 600 V, 1 kV, 2 kV, 5 kV or 8 kV, control cable rated 600 V, and signal cable rated 300 V.

CABLE MARKINGS

The cable is marked "-35C" and "FT4."

Cable that is considered equivalent but has a continuous corrugated aluminum armor is identified by the marking "CWCMC" in addition to the manufacturer's catalog designation for the cable.

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 245, ''Marine Shipboard Cable.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Marine Shipboard Cable.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE FITTINGS, MARINE CERTIFIED FOR CANADA (UBWE7)

USE AND INSTALLATION

This category covers fittings intended for use with marine shipboard cable, with and without metal wire armor and with and without nonmetallic jacket over the metal wire armor. No splices of conductors are intended to be made in the fittings. Restrictions on application, position, and/or location of the fittings are indicated in the manufacturer's instructions.

All male threaded fittings have only been investigated for use with locknuts.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. Investigations of these fittings include an evaluation for conformity to the installation.

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Shipboard Cable, Marine Certified for Canada (UBVZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 18.3 (2004), ''Conduit, Tubing, and Cable Fittings.''

UL MARK

The UL symbol on the product and the Marine Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word ''MARINE'' above the UL symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Shipboard Cable Fitting,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHORE-POWER CABLE SETS, MARINE CERTIFIED FOR CANADA (UBWW7)

USE

This category covers shore-power cable sets rated less than 300 V used in supplying ac shore power to boats which are moored to a dock.

They are intended to be stored aboard the boat, where not exposed to sunlight and/or weather while not in use.

Shore-power cable sets comply with the applicable requirements for outdoor-use cord sets and additional requirements to determine their acceptability for supplying power to a boat moored to a dock.

The male and female end fittings of a shore-power cable set are intended to be connected to suitable shore-power outlet and shore-power inlet devices, respectively. The connections to the power inlet and outlet devices are to provide a seal against water.

Shore-power cable sets are commonly furnished in coiled form. If used in this condition, excessive heating may occur. Therefore, when placed into service, all wrappings should be removed and the cord extended for its entire length.

RELATED PRODUCTS

See Cord Sets and Power-supply Cords Certified for Canada (ELBZ7).

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 21 (1990), ''Cord Sets and Power Supply Cords.''

UL MARK

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word ''MARINE'' above the UL symbol (as illustrated in the Introduction of this Directory), the word ''LISTED,'' a control number, and the product name ''Shore Power Cable Set.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHORE-POWER INLETS, MARINE CERTIFIED FOR CANADA (UBXR7)

GENERAL

The category covers shore-power inlets rated less than 300 V ac. They are intended for installation on boats to provide connection for shore-power-cable sets. These sets are used by boats which are moored to the dock. They are of the grounding type with a terminal provided for the grounding (green or green with yellow strip) conductor. The inlets are supplied with a rain-tight cover.

RELATED PRODUCTS

Shore-power inlets are also covered under Attachment Plugs, Fuseless Certified for Canada (AXUT7).

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, ''Attachment Plugs and Receptacles.''

UL MARK

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word ''MARINE'' above the UL symbol (as illustrated in the Introduction of this Directory), the word ''LISTED,'' a control number, and the product name ''Shore Power Inlet.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL ALARM EQUIPMENT, MARINE CERTIFIED FOR CANADA (UBXW7)

USE AND INSTALLATION

This category covers signal alarm equipment, including combinations of equipment making up a system, intended for use aboard boats to visually and/or audibly indicate an operating condition or malfunction.

These devices are intended for installation and operation in accordance with the manufacturer's instructions and the applicable requirements of the Canadian Coast Guard's ''Ship Safety Electrical Standards'' (TP 127 E), and the applicable requirements of CSA-C22.2 No. 183.2 (1983), ''DC Electrical Installations on Boats,''or CSA-C22.2 No. 183.1 (1982), ''Alternating-Current (AC) Electrical Installations on Boats,'' as it applies to the product.

PRODUCT MARKINGS

Only those products and components which have been investigated for ignition protection and comply with the requirements are so marked.

ADDITIONAL INFORMATION

For additional information, see Marine Products Certified for Canada (AAMP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 302, "Fire Protection Standard for Pleasure and Commercial Motor Craft."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Signal Alarm Equipment."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES CERTIFIED FOR CANADA (UCEV7)

AUDIBLE-SIGNAL APPLIANCES, GENERAL SIGNAL CERTIFIED FOR CANADA (UCST7)

GENERAL

This category covers electrically operated bells, buzzers, horns and similar signal-sounding appliances intended for general signaling only. These devices may differ from audible-signal appliances intended for fire-protective signaling service in construction, and are not required to be marked with an audibility rating.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Audible Signal Appliance for General Signaling (Nonfire-Alarm) Use" or "Audible Signal Appliance Subassembly for General Signaling (Nonfire-Alarm) Use."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (1983), "Signal Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G – General Signaling Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL SYSTEM UNITS CERTIFIED FOR CANADA (UDTZ7)

USE

This category covers units intended to be used in combinations with related certified equipment to form installed systems for general-utility signaling purposes.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Signal System Units Certified for Canada (UDTZ7)–*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (1983), "Signal Equipment."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the Signaling Mark is also included. The Signaling Mark consists of the Listing Mark elements detailed above, with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and Emergency Signaling" or "and Fire Alarm," as appropriate (e.g., "General Signaling and Fire Alarm Equipment").

Some of these products are also Listed under Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Enclosed Energy Management," "and Temperature-indicating," "and Temperature-regulating," "and Information Technology" or "and Telephone," as appropriate (e.g., "General Signaling and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPEAKERS CERTIFIED FOR CANADA (UEAY7)

USE AND INSTALLATION

This category covers speakers investigated for use in general-utility signaling applications with respect to risk of fire and electric shock.

Where a certified product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual certifications, and each part bears a separate Certification Mark. Marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual certifications.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Signaling Speaker," "Signaling Speaker Enclosure" or "Signaling Speaker Accessory."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 205, "Signal Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G – General Signaling Equipment

Speakers Certified for Canada (UEAY7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. VISUAL-SIGNAL APPLIANCES CERTIFIED FOR CANADA (UEES7)

USE AND INSTALLATION

This category covers visual-signal appliances and accessories intended for use in general-signaling applications. These devices have been investigated with respect to risk of fire and shock.

Accessories, such as enclosures and back boxes, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. The marking on each part references installation instructions which show assembly and installation of the parts to form a certified product.

These products are intended for indoor use only unless otherwise specifically marked.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term ''Visual Signaling Appliance'' or ''Visual Signaling Appliance Accessory.''

RELATED PRODUCTS

Devices intended for use in fire alarm and/or emergency-protective signaling applications are covered under Visual-signal Appliances for Fire Protective Signaling Systems Certified for Canada (UVAV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S526 (1987), ''Visible Signal Devices for Fire Alarm Systems, Including Accessories.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''General Signaling Equipment'' or ''General Signaling Subassembly.''

The product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:

G – General Signaling Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES, MISCELLANEOUS CERTIFIED FOR CANADA (UEHX7)

GENERAL

This category covers miscellaneous signaling appliance units that have been investigated only for hazard of fire and electric shock and are not associated with property protection and/or life safety. The general-purpose signaling nature of each product is categorized as Type NM (Nonmonitored).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the phrase ''Type NM'' and a the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 205, ''Signal Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Signal Appliances, Miscellaneous Certified for Canada (UEHX7)−*Continued*

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''General Signaling Equipment'' or ''General Signaling Subassembly.''

Some of these products are also Listed under other Signaling categories. When applicable, the Signaling Mark is also included. The Signaling Mark consists of the Listing Mark elements detailed above, with the word ''SIGNALING'' above the UL symbol and the word ''LISTED'' below the UL symbol. When applicable, the product name may include ''and Hospital Signaling and Nurse Call,'' ''and Emergency Signaling'' or ''and Fire Alarm,'' as appropriate (e.g., ''General Signaling and Fire Alarm Equipment'').

Some of these products are also Listed under Security categories. When applicable, the Security Mark is also included. The Security Mark consists of the Listing Mark elements detailed above, with the word ''SECURITY'' above the UL symbol and the word ''LISTED'' below the UL symbol. When applicable, the product name may include ''and Security'' (e.g., ''General Signaling and Security Equipment'').

Some of these products are also Listed under Energy Management, Information Technology or Telephone categories. When applicable, the product name may include ''and Enclosed Energy Management,'' ''and Information Technology'' or ''and Telephone,'' as appropriate (e.g., ''General Signaling and Telephone Equipment'').

For products also bearing the Signaling Mark, the product name may be abbreviated as follows: The word ''Type:'' followed by the appropriate Type Code (as shown below), additionally followed by ''Subassembly,'' as applicable.

Type Codes:

S – Security Equipment
F – Fire Alarm Equipment
HN – Hospital Signaling and Nurse Call Equipment
G – General Signaling Equipment
E – Emergency Signaling Equipment
EM – Enclosed Energy Management Equipment
IT – Information Technology Equipment
T – Telephone Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UFXR7)

Equipment for use in hazardous locations investigated for fire-protective signaling service also appears under Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7).

AUDIBLE-SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UGKZ7)

GENERAL

This category covers audible-signal appliances, such as bells, sirens and horns.

Audible-signal appliances certified for use in any of the groups under Class I hazardous locations have been investigated with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. Those for use in any of the groups under Class II hazardous locations have been investigated for dust-tightness and have been subjected to operation tests to establish safety of operation in the presence of the specific combustible dusts, and also to establish that they will function as intended with dust accumulated on external parts.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

Audible-signal Appliances for Use in Hazardous Locations Certified for Canada (UGKZ7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Audible Signal Appliance for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXTINGUISHING SYSTEM ATTACHMENTS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UGYX7)

GENERAL

This category covers devices having electrical signaling contacts that are designed for attachment to extinguishing system equipment so as to provide (1) alarm signals indicating discharge of extinguishing means, and (2) supervisory signals indicating abnormal conditions of extinguishing system equipment and restoration to normal.

The signal contacts of these attachments may be of the noncoded or coded type.

Devices classed as noncoded types have contacts that perform a switching function and are intended for connection to actuating circuits of a separate electrically operated transmitter or to the signaling line circuit of a separate electrical control unit by which their action is indicated.

Devices classed as coded types have contacts that perform a coded signaling impulse function resulting from the operation of a transmitting mechanism, which is a part of the attachment, and are intended for connection to the signaling line circuit of a separate electrical control unit by which their action is indicated.

ATTACHMENT TYPES

Attachments for automatic sprinkler systems are classed as follows:

Waterflow Alarm Signal Types

Alarm Dry-pipe Valve Attachment — Mechanically operated on lifting of alarm valve clapper or pressure operated by suitable connection to alarm or dry-pipe valve piping trim.

Waterflow Indicator — Paddle operated.

Special Attachment — Type not included by above class.

Supervisory Signal Types

Valve Position Signal Attachment — Operated by mechanical linkage to movable parts of valve.

Water Level Signal Attachment — Operated by tank float.

Pressure Signal Attachment — Operated by pressure change of air, steam or water.

Temperature Signal Attachment — Operated by water or air temperature change.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Extinguishing System Attachment for Use in Hazardous Locations'' or ''Water Flow Indicator for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE ALARM DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UHMV7)

USE AND INSTALLATION

This category covers coded and noncoded fire alarm boxes and fire and watch boxes for use with private fire alarm systems.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fire Alarm Box for Use in Hazardous Locations'' or ''Fire and Watch Box for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAME-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIAZ7)

USE AND INSTALLATION

This category covers fire detectors designed to detect flames, either in infrared or ultraviolet regions.

Each detector provides signaling contacts for connection to a signal-indicating appliance, electrically actuated transmitters, or a system control unit to form a fire alarm system as indicated by the installation wiring diagram supplied with the unit.

Each unit is intended to be installed in accordance with the manufacturer's control drawing, the Authority Having Jurisdiction, ANSI/NFPA 72, ''National Fire Alarm Code,'' or other NFPA standards that may apply, and CAN/ULC-S524 (1991), ''Installation of Fire Alarm Systems.''

Detector Location

The location of flame detectors should be based on an engineering survey of the conditions to be anticipated in service and the principle of operation. Detectors should be installed only after a thorough study has been made of the area or premises to be protected (whether in planning or construction stage) and of the life and property values involved. Prior to engineering, a layout of an installation and a copy of the manufacturer's technical bulletin should be obtained and reviewed to determine recommended detector locations. Consideration should be given to all features which could have a bearing on the location and sensitivity of the detectors, including such pertinent factors as coverage in partitioned sections, ceiling heights, and overlapping of areas of cone coverage to provide maximum protection. Test flames should be employed to check proper detector location.

Environmental Considerations

Where indicated in the individual certifications, detectors are intended for indoor and/or outdoor use. For indoor use, detectors should be located in areas where normal ceiling temperatures prevail. For outdoor use, detectors should be located such that an accumulation of snow, dirt, or road film is not likely to occur on the lens. Accordingly, detectors should be located under a building overhang or positioned on a downward angle to minimize the occurrence of such conditions.

Detectors should not be installed where unwanted false alarms are likely to occur, such as other sources of ultraviolet or infrared radiation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are ULC/ORD-C386 (1990), ''Flame Detectors,'' and CAN/ULC-S529 (1987), ''Smoke Detectors for Fire Alarm Systems.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

Flame-automatic Fire Detectors for Use in Hazardous Locations Certified for Canada (UIAZ7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Flame-automatic Fire Detector for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND INDICATORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIOR7)

GENERAL

This category covers electronic-type ground indicators, the ratings of which are given on the individual product. These devices indicate by audible or visible signals whether an adequate connection to gasoline tank trucks, tank cars, or drums has been established for dissipation of static electricity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Ground Indicator for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIPV7)

USE AND INSTALLATION

This category covers fixed-temperature, heat-actuated-type detectors employing a special construction different from conventional thermostats and designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with the Authority Having Jurisdiction and CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating-device circuits of certified control units that provide audible-alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic ordinary locations standard used to investigate products in this category is CAN/ULC-S530 (1991), ''Heat Actuated Fire Detectors for Fire Alarm Systems.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

Heat-actuated Devices for Special Application for Use in Hazardous Locations Certified for Canada (UIPV7)−*Continued*

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Heat-actuated Device for Special Application for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIRV7)

USE AND INSTALLATION

This category covers thermostat-type automatic fire detectors (known as thermostats), which are integral assemblies of heat-responsive elements and noncoded electrical contacts that function automatically under conditions of increase in air temperature. These thermostats consist of detection heads intended for mounting to compatible component bases having electrical functions, or self-contained units for mounting to standard electrical utility boxes.

Thermostats are of the fixed temperature (F), combination fixed temperature and rate-of-rise (C), or rate compensation (R) type. There are basically two types: (1) A spot-pattern-type thermostat is one in which the thermally sensitive element is a compact unit of small area; (2) a line-pattern-type thermostat is one in which the thermally sensitive element is continuous along a line.

The possible contact configurations of these thermostats are as follows: One-pole, normally open-circuit type (1PNO); one-pole, normally closed-circuit type (1PNC); two-pole open-circuit type (2PNO); two-pole, normally closed-circuit type (2PNC); two-pole, normally open-circuit and closed-circuit type (2PNO/NC). Thermostats with normally open contacts are suitable for use as initiating devices of a fire-protective signaling system. Thermostats with normally closed contacts are suitable for use as the heat-responsive portion of a releasing device system.

These thermostats have been investigated for indoor use only unless otherwise indicated in the individual certifications. Ordinarily, thermostats are intended for locations where normal ceiling temperatures prevail (below 38°C). Locations where temperatures at ceiling are likely to be unduly high (from sources of heat other than fire conditions, such as boiler rooms, dry kilns, etc.) demand special consideration and selection of thermostats operating normally at higher temperatures, and which are capable of withstanding high temperatures for long periods of time. Care should be exercised to select thermostats having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 38°C, install 71°C or equivalent (ordinary) rating thermostats

For ceiling temperatures exceeding 38°C, but not 66°C, install 100°C or equivalent (intermediate) rating thermostats

For ceiling temperatures exceeding 66°C, but not 107°C, install 141°C or equivalent (high) rating thermostats

For ceiling temperatures exceeding 107°C, but not 149°C, install 182°C or equivalent (extra high) rating thermostats

The response sensitivity of thermostats to standard test fires is indicated by the ''spacing'' rating. The spacing rating is the maximum distance between adjacent thermostats installed on a symmetrical layout with the maximum right-angle distance to any wall or partition one-half the distance between thermostats. The fire tests conducted on thermostats are based on only one set of conditions, typically a 5-m high smooth ceiling, no air movement, and no physical obstructions between the fire source and the thermostat. Under other conditions and forms of ceiling construction, reduced spacing may be required to obtain equivalent performance.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room space area, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment, and to draft conditions likely to be encountered at the time of the fire.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

Heat-automatic Fire Detectors for Use in Hazardous Locations Certified for Canada (UIRV7)−*Continued*

SIGNALING APPLIANCES AND EQUIPMENT FOR THE HEARING IMPAIRED FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UXWC7)

GENERAL

This category covers visual-signaling appliances, vibrators or other sensory apparatus and associated equipment investigated for fire-protective-signaling services to alert hearing-impaired persons, and subassemblies of signaling appliances intended for final assembly into signaling appliances.

Subassemblies, such as mounting bodies, globes and guards, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. Marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

These signaling appliances are intended to be used in conjunction with certified compatible fire-alarm-control units, alarm-initiating devices and the like. The interconnection, use and installation requirements of the products are intended to be in accordance with CAN/ULC-S540 (1986), ''Installation of Residential Fire Warning Systems,'' or CAN/ULC-S524 (2001), ''Installation of Fire Alarm Systems.''

The signaling appliances in this category have been investigated as to their ability to alert most hearing-impaired persons. However, since the ability of signal recognition varies among individuals, the effectiveness of alerting a person can only be ensured by actual testing of that person with the installed signaling appliance.

This category does not cover signaling devices for the hearing impaired that are an integral part of other alarm-initiating or alarm-indicating devices. When such a combination exists, suitability as a signaling appliance for the hearing impaired will be noted in the individual certifications of the primary product.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/ULC-S526 (2002), ''Visible Signal Devices for Fire Alarm Systems.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

SIGNALING APPLIANCES AND EQUIPMENT FOR THE HEARING IMPAIRED FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UXWC7)

584

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Signaling Appliance for the Hearing Impaired for Use in Hazardous Locations,'' ''Signaling Appliance Accessory for the Hearing Impaired for Use in Hazardous Locations'' or ''Signaling Appliance Subassembly for the Hearing Impaired for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNS CERTIFIED FOR CANADA (UXYT7)

USE AND INSTALLATION

This category covers electric portable and stationary signs and displays employing incandescent lamps, LEDs (light emitting diodes), electroluminescent panels, neon tubing, fluorescent lamps, high intensity discharge lamps or combinations thereof for installation in accordance with the ''Canadian Electrical Code, Part I.''

Signs or sections of a sign forming a complete enclosure intended for permanent connection to a source of supply are provided with permanent means for attachment to a building, to a support or to a hanging rig. The mounting hardware, poles and other structural components of a sign have not been evaluated with respect to local variable conditions such as wind and snow loading or soil conditions.

Electric signs, of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each major subassembly bears an ''Electric Sign Section'' Certification Mark. Sign faces, trim and mounting hardware are not considered major subassemblies. Each sign will have suitable installation instructions describing or illustrating the proper assembly, mounting and connection of the numbered sign sections. The acceptability of the assembled sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

Signs intended for permanent installation and which have been investigated for indoor use only are so marked. Cord-connected signs investigated for outdoor use are marked ''Outdoor.'' Signs for outline lighting are marked ''Outdoor Sign for Outline Lighting.''

REBUILT PRODUCTS

This category also covers signs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt signs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt signs are subject to the same requirements as new signs.

RELATED PRODUCTS

Accessories intended for use in certified signs are covered under Sign Accessories Certified for Canada (UYMR7).

Retrofit conversions intended to be field installed in certified electric signs are covered under Sign Conversions, Retrofit Certified for Canada (UYWU7).

Changing message center signs may contain integral controllers or may be intended for use with externally connected controllers. Externally connected controllers are covered under Sign Controllers, Message Centers Certified for Canada (UYTQ7).

This category does not cover billboard illumination, exit lights, skeletal neon tubing for show windows, or illuminated clocks rated 600 V or less.

Field-assembled neon systems used in display windows, outline lighting, or skeletal neon signs are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled Certified for Canada (UZBL7).

Field-assembled cold cathode electric discharge lighting systems that provide general illumination are covered under Electric Discharge Lighting Systems, Cold Cathode Certified for Canada (IFAY7).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field-installed Neon Outline Lighting Systems Certified for Canada (UYAM7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), ''Portable and Stationary Electric Signs and Displays.''

Electric signs that comply with the requirements in CAN/CSA-C22.2 No. 12, ''Portable Luminaires,'' may also be certified as Portable Luminaires Certified for Canada (QOWZ7).

SIGNS CERTIFIED FOR CANADA (UXYT7)

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names, as appropriate: ''Indoor Electric Sign,'' ''Electric Sign'' or ''Electric Sign Section.''

For rebuilt signs the word ''Rebuilt'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIELD-INSTALLED NEON OUTLINE LIGHTING SYSTEMS CERTIFIED FOR CANADA (UYAM7)

GENERAL

This category covers neon outline lighting systems that incorporate neon tubing with ferrule-type end caps which are electrically connected to the output of a transformer, power supply or ballast by ferrule-type lampholders. Each transformer or power supply in the system has a maximum output current rating of 300 mA. These systems are for installation in accordance with Section 34 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These lighting systems outline or call attention to architectural details of a room or building.

Neon outline lighting systems are provided as a system of parts that are field installed. These systems are installed using tools and techniques available only to an electrician. The systems are provided with installation instructions that define the scope of the system and method for installation. It is intended that the system installation instructions be retained with the installation to which they apply.

The certification of an outline lighting system does not constitute approval of the design, which is the responsibility of the manufacturer and the Authority Having Jurisdiction, nor approval of the installation. The final acceptance of the field-installed neon outline lighting system is the responsibility of the Authority Having Jurisdiction.

These systems are intended for permanent installation indoors unless marked ''Suitable for Outdoor Locations.''

RELATED PRODUCTS

This category does not cover neon tubing for display windows or signs; see Signs Certified for Canada (UXYT7).

This category does not cover field-assembled neon systems in display windows, outline lighting, or skeletal neon signs; see Skeletal Neon Sign and Outline Lighting Systems, Field Assembled Certified for Canada (UZBL7)

This category does not cover cold cathode electric-discharge lighting systems for general illumination; see Electric-discharge Lighting Systems, Cold Cathode Certified for Canada (IFAY7).

Outline lighting of the incandescent, HID or fluorescent type fabricated in factory-built sections is covered under Signs Certified for Canada (UXYT7).

Lighting systems operating at 1000 V or less are covered under Fluorescent Surface-mounted Luminaires Certified for Canada (IEUZ7), High-intensity-discharge Surface-mounted Luminaires Certified for Canada (IEXT7) and Incandescent Surface-mounted Luminaires Certified for Canada (IEZR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), ''Portable and Stationary Signs and Displays.''

UL MARK

The Listing Mark of UL on each transformer and transformer enclosure, and the containers in which the remaining neon outline lighting system parts are packaged, or on the remaining neon outline lighting system parts themselves, referencing a specific field-installed neon outline system number is the only method provided by UL to identify neon outline lighting systems manufactured under its Listing and Follow-Up Service. The Listing Mark for these systems includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Field Installed Neon Outline Lighting System Part,'' and the statement ''The Listing of this neon outline lighting system is contingent upon installation according to the specifications of [Listee's Name], System No. ____ and the Canadian Electrical Code.''

Field-installed Neon Outline Lighting Systems Certified for Canada (UYAM7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNS, CHANGING MESSAGE CERTIFIED FOR CANADA (UYFS7)

GENERAL

This category covers illuminated and nonilluminated changing-message signs intended to be installed and connected to an electrical supply source in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Illuminated changing-message signs include incandescent, fluorescent, HID (high intensity discharge), electric discharge tubing (including neon) LED (light emitting diode), and other sources of illumination.

Nonilluminated changing-message signs include scrolling, flipper, LCD (liquid crystal display), and similar types that are generally motor operated or electronically controlled.

Sign Section — The changing-message signs may be divided into sections. Each section of the sign bears a ''Changing Message Sign Section'' Certification Mark that states in combination with the Certification Mark ''Section ____ of ____.'' The first blank space identifies the number of the section, and the second blank space identifies the total number of sections required to constitute a complete changing-message sign. Suitable installation instructions describing or illustrating the proper assembly, mounting, and connection of the numbered sign sections are provided.

SIGN INSTALLATION MARKINGS

Indoor/Outdoor Use — Permanently connected changing-message signs are investigated and intended for use outdoors unless marked ''For Indoor Use Only.'' Cord-connected changing-message signs are investigated and intended for use indoors unless marked ''Portable Outdoor Changing Message Sign.''

Trailer Mounted — Changing-message signs intended to be trailer mounted are marked ''Trailer On Which Sign May Be Mounted Has Not Been Investigated.''

Orientation Marking — A changing-message sign intended for outdoor use that is not provided with construction features to ensure proper orientation is marked to indicate the proper mounting position.

Wall Mounted — A changing-message sign for outdoor use, wall mounting and provided with drain holes along the bottom edge of the back of the sign, and marked ''Maintain 1/2 Inch Clearance Between All Drain Openings And The Mounting Surface'' is intended to be installed so that the drain holes are not covered by the building surface.

REBUILT PRODUCTS

This category also covers rebuilt changing-message signs which have been reconditioned or rebuilt. Such changing-message signs have been factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Reconditioned or rebuilt changing-message signs are subject to the same requirements as new changing-message signs.

RELATED PRODUCTS

Components and parts intended for use on or with changing-message signs are covered under Sign Accessories Certified for Canada (UYMR7).

Changing-message signs may also be covered under Signs Certified for Canada (UXYT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), ''Portable and Stationary Electric Signs and Displays.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products include the UL Mark for Canada Symbol (as illustrated in the introduction of this directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Indoor Changing Message Sign,'' ''Changing Message Sign'' or ''Changing Message Sign Section.''

For rebuilt products, the word ''Rebuilt'' precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN ACCESSORIES CERTIFIED FOR CANADA (UYMR7)

USE

This category covers sign components such as combinations of frame plastic panels with metal or plastic characters; sign-rotating equipment and sign-lift mechanisms for use in electric signs where weather protection and electrical enclosure are provided by the sign; ballast lead covers or enclosures intended to provide weather and mechanical protection to leads of outdoor ballasts; fluorescent U-tube and lampholder assemblies consisting of lampholders in sheet-metal brackets with spring and loaded rod and hook assemblies with or without ballast; insulating caps for use on electrode receptacles to provide electrical insulation; low-voltage power supplies consisting of assemblies of Class 2 transformers, an enclosure and a power-supply cord; and kickback bases intended for indoor use and provided with a receptacle for connection of a related display and provided with a power-supply cord.

RELATED PRODUCTS

Lampholders and electrode receptacles are covered under Lampholders, Electric Discharge, More Than 1000 Volts Certified for Canada (OJOV7).

ADDITIONAL INFORMATION

For additional information, see Signs Certified for Canada (UXYT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), ''Portable and Stationary Electric Signs and Displays.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Sign Accessory.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN CONTROLLERS, MESSAGE CENTERS CERTIFIED FOR CANADA (UYTQ7)

GENERAL

This category covers control panels or units for changing-message signs.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), ''Portable and Stationary Electric Signs and Displays.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Sign Controller,'' or other appropriate product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN CONVERSIONS, RETROFIT CERTIFIED FOR CANADA (UYWU7)

USE AND INSTALLATION

This category covers retrofit sign conversions consisting of subassemblies or kits intended for field installation in certified signs. There are several types of sign conversions as specified below.

Scrolling units (motor-operated message assemblies), devices to change the type of illumination (such as from incandescent to fluorescent), or combinations thereof consist of subassemblies intended for field installation in specific certified permanently connected electric signs. The conversion identifies the catalog number (or other description) and company name of the sign in which it is intended to be used.

Sign Conversions, Retrofit Certified for Canada (UYWU7)−*Continued*

Light-emitting-diode (LED) kits consist of the power source, the LEDs and the LED mounting means necessary to change the type of illumination originally contained in the sign to LED illumination. The kit installation instructions specify the type of sign in which the kit is intended to be installed.

These conversions have been investigated to determine that, when used in accordance with the manufacturer's instructions provided with the retrofit device, they do not adversely affect the operation of the complete electric sign.

ADDITIONAL INFORMATION

For additional information, see Signs Certified for Canada (UXYT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207, ''Portable and Stationary Electric Signs and Displays.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT SIGN CONVERSION
FOR USE ONLY WITH SIGN
MODEL ___ MANUFACTURED BY ___
Control No.
or

RETROFIT SIGN CONVERSION LED KIT
FOR USE ONLY IN ACCORDANCE WITH KIT INSTRUCTIONS
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN FLASHERS CERTIFIED FOR CANADA (UYZZ7)

USE AND INSTALLATION

This category covers flashing devices intended to control incandescent lamps or gas-tube-sign transformers.

The installation of open-type flashing devices in electric signs is intended to be in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' as follows: (a) within a standard cutout box or cabinet, or (b) within an enclosed compartment, accessible and weatherproof, of metal at least as thick as that of the sign itself and located in or on the body or structure of the sign.

Flashing devices of the thermostatic type are intended to control incandescent lamps and are for indoor use only.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207, ''Portable and Stationary Electric Signs and Displays.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED'', a control number and one of the following product names as appropriate: ''Sign Flasher,'' ''Blinker,'' ''Winker,'' ''Flasher,'' or other appropriate product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SKELETAL NEON SIGN AND OUTLINE LIGHTING SYSTEMS, FIELD ASSEMBLED CERTIFIED FOR CANADA (UZBL7)

GENERAL

The presence of the Listing Mark (''Field Assembled Skeletal Neon Sign System'' or ''Field Assembled Skeletal Neon Outline Lighting System'') is evidence that the installation of the skeletal neon sign or outline lighting system (1) has been assembled and installed by an installer who is authorized by UL to apply UL Listing Marks described below and who subscribes to UL Follow-Up Service; (2) employs materials and components certified for Canada and (3) is subject to a field inspection program covering proper installation of the system.

These systems are field assembled for permanent installation in accordance with Section 34 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These systems are intended for outdoor use unless marked for indoor use.

The Listing of a system does not constitute approval of the completed assembly and installation which is the responsibility of the installer and the Authority Having Jurisdiction.

RELATED PRODUCTS

Field-assembled cold cathode electric-discharge lighting systems that provide general illumination are covered under Electric-discharge Lighting Systems, Cold Cathode, Certified for Canada (IFAY7).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field-installed Neon Outline Lighting Systems Certified for Canada (UYAM7).

Factory-assembled neon signs and outline lighting or sectional signs that require some field assembly are covered under Signs Certified for Canada (UXYT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207, ''Portable and Stationary Electric Signs and Displays.''

UL MARK

The Listing Mark on the transformer or power-supply enclosure is the only method provided by UL to identify that a field-assembled skeletal neon sign or outline lighting system is covered under its Listing and Follow-Up Service. The Listing Mark for these systems includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product identity ''Field Assembled Skeletal Neon Sign System'' or ''Field Assembled Skeletal Neon Outline Lighting System,'' the installing company name or logo, date of installation, and location.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SNOW MOVERS CERTIFIED FOR CANADA (UZNX7)

USE

This category covers battery-powered snow movers and motor-operated portable snow movers intended for outdoor use on nominal system voltages of 250 V or less, designed to be used in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

SPECIAL CONSIDERATIONS

These products have been investigated from the standpoint of risk of personal injury, electric shock and fire.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for snow movers marked ''Double Insulated,'' all snow movers are provided with means for grounding. Double-insulated appliances require normal care in handling.

FACTORS NOT INVESTIGATED

Any potential health effects that may be associated with the use of snow movers, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 147 (1990), ''Motor-Operated Gardening Appliances.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Snow Mover.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLAR ENERGY SYSTEMS EQUIPMENT CERTIFIED FOR CANADA (UZST7)

The products covered in this category are intended for use in systems involving direct utilization of solar energy. The type of product and limitations of use, if any, are indicated in the individual Listings and/or by the marking on the product. Unless outdoor use is evident by the type of product, or unless marked ''outdoor use'' or ''rain tight,'' products Listed in this category are for indoor use only.

Conventional products which may be used in solar systems but which are not specifically designed for such applications are not covered under this category.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROLLERS, ELECTRICAL, SOLAR CERTIFIED FOR CANADA (UZVY7)

GENERAL

This category covers electrical controllers intended for use as components of solar energy systems. They are responsive to change in temperature or differential temperature and are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

RELATED PRODUCTS

Electrical temperature controllers covered under Temperature-indicating and Regulating Equipment, Electrical Certified for Canada (XATJ7) may also be suitable for use in solar systems but are not specifically investigated for such use.

ADDITIONAL INFORMATION

For additional information, see Solar Energy Systems Equipment Certified for Canada (UZST7) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-F378 (1987), ''Solar Collectors.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Solar Electrical Controller.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOIDS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VAMH7)

USE

This category covers solenoids for installation on valves. The solenoids are incomplete devices inasmuch as the plungers or pistons are intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 139, ''Electrically Operated Valves.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Solenoid for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOIDS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VAPT7)

USE

This category covers solenoids intended for connection to threaded rigid conduit. These solenoids may include the plungers or pistons intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 139, ''Electrically Operated Valves.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Solenoid for Use in Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-METERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VBYC7)

GENERAL

This category covers equipment that measures and stores the ambient noise levels in industrial areas.

RELATED PRODUCTS

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Noise Dosimeter'' or ''Sound Level Meter,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-METERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VBYX7)

USE AND INSTALLATION

This category covers sound-metering equipment that measures and stores the ambient noise levels in industrial areas.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuits as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are identified in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Noise Dosimeter for Use in Hazardous Locations,'' ''Sound Level Meter for Use in Hazardous Locations'' or ''Sound Level Meter (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-RECORDING AND -REPRODUCING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VCSV7)

USE

This category covers speakers and similar equipment intended for use in sound-recording and -reproducing systems.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Sound-recording Equipment for Use in Hazardous Locations'' or ''Sound-reproducing Equipment for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES CERTIFIED FOR CANADA (VDGT7)

The following Standards of the National Fire Protection Association relate to the devices and equipment covered under this category: NFPA 13, ''Standard for the Installation of Sprinkler Systems,'' NFPA 15, ''Standard for Water Spray Fixed Systems for Fire Protection'' and NFPA 16, ''Standard for the Installation of Foam-Water Sprinkler and Foam-Water Spray Systems.''

Authorities Having Jurisdiction should be consulted regarding use of these devices and equipment before installation.

AIR COMPRESSORS, SPECIAL TYPE CERTIFIED FOR CANADA (VDUR7)

USE

This category covers air compressors that are special units intended for use with sprinkler equipment of special designs.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial).''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Air Compressor, Special Type.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DRAIN FITTINGS, SPECIAL TYPE CERTIFIED FOR CANADA (VEHZ7)

USE AND INSTALLATION

This category covers special-type drain fittings that may consist of a (1) sight glass; (2) ball-, angle-, plug- or globe-type shutoff valve in combination with either a sight glass or simulated sprinklers orifice; or (3) combination of a sight glass, drain valve and simulated sprinkler orifice as indicated in the individual certifications. These fittings may also be equipped with a relief valve intended for use in gridded wet-pipe sprinkler systems as indicated in the individual certifications.

These special-type fittings are intended for use in the drain piping or as a system test connection in sprinkler systems in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," or ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes." These devices are rated for a maximum pressure of 1210 kPa unless otherwise indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Sprinkler Systems and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C258 (2003), "Shutoff Valves for Trim and Drain Purposes for Fire Protection Service".

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drain Fitting, Special Type."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE SPRINKLER HOSE WITH FITTINGS CERTIFIED FOR CANADA (VENF7)

USE AND INSTALLATION

This category covers devices flexible sprinkler hose with fittings intended for use in sprinkler systems between the branch line and sprinkler when installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," or ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes," and the manufacturer's installation instructions.

As indicated in the individual certifications, these products may have high flexibility or limited flexibility. Products having high flexibility are intended for use in applications where frequent movement between the two ends of the hose is expected after installation. Products having limited flexibility are intended for use in applications where little or no movement between the two ends is expected after installation.

A flexible sprinkler hose assembly consists of a flexible hose, inlet fitting for connection to the branch line, and an outlet fitting for connection to the sprinkler. These flexible hose with fittings are intended to be installed using the anchoring devices referenced in the manufacturer's installation instructions. Flexible sprinkler hose length is limited to a maximum of 1828.8 mm (6 ft) to minimize the potential for hose kinking and undesirable movement of a sprinkler after installation. The manufacturer's installation instructions include additional information relative to proper use, such as anchoring device installation, allowable number of bends, minimum bend radii, pressure loss, sprinklers to be attached to the hose, flexibility and maximum temperature rating. Bending of the flexible hose to a radius less than the minimum value referenced in the manufacturer's installation instructions may cause structural damage that could adversely impact the pressure retention and hydraulic performance.

These products are intended for use in hydraulically designed sprinkler systems. The hydraulic pressure loss associated with these devices needs to be included in the hydraulic design calculations. Pressure loss is published in equivalent length, in meters of 1-in. diameter Schedule 40 steel pipe (where the Hazen-Williams coefficient of friction is C equals 120).

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

Flexible Sprinkler Hose with Fittings Certified for Canada (VENF7)−*Continued*

Unless certified for such use, the impact of a flexible sprinkler hose assembly on a ceiling-grid system used to provide fire-resistance performance in a floor-ceiling or roof-ceiling assembly has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1474 (2003), "Adjustable Drop Nipples for Sprinkler Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Sprinkler Hose Fitting."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAUGES, PRESSURE CERTIFIED FOR CANADA (VEVX7)

USE AND INSTALLATION

This category covers nonrecording, indicating pressure gauges of the elastic-element type. These gauges are intended for installation and use in accordance with applicable NFPA standards, such as ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C393, "Indicating Pressure Gauges for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pressure Gauge for Fire Protection Service."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GUARDS FOR SPRINKLERS CERTIFIED FOR CANADA (VFJV7)

USE

This category covers guards intended for use with pendent, upright, sidewall, or intermediate-level sprinklers when installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," or ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes," and the manufacturer's installation instructions.

The guards are intended for installation on sprinklers that may be subject to mechanical damage. The use of the guards is intended to be limited to the specific sprinklers indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199D (2003), "Guards for Sprinklers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Guards for Sprinklers Certified for Canada (VFJV7)−*Continued*

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Guard for Sprinkler.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HANGERS, PIPE CERTIFIED FOR CANADA (VFXT7)

USE AND INSTALLATION

This category covers pipe-hanger equipment intended for supporting piping in sprinkler systems, water-spray systems and other piping systems used for fire-protection service.

A pipe hanger consists of a unit assembly used singly or in combination with other assemblies for supporting or hanging pipe. This may include equipment which (1) partially or totally encompasses the pipe, (2) attaches to an element of the building, and (3) is interconnected by threaded steel rod with, or without couplings.

Pipe-hanger equipment that partially or totally encompasses the pipe includes solid, split, or swivel rings, clevis hangers, band hangers or the like as described in the individual certifications.

Pipe-hanger equipment that attaches to the elements of the building includes beam, purlin and C-clamps, side-beam attachments, brackets and eyelets, concrete inserts, ceiling flanges, post-installed anchors, or the like as described in the individual certifications.

For pipe hangers that use threaded steel rod, the rod sizes are specified in the individual certifications.

Requirements for the installation and use of these hangers are included in ANSI/NFPA 13, ''Installation of Sprinkler Systems.''

RELATED PRODUCTS

See Fasteners for Pipe Hangers, Powder Driven Certified for Canada (VGLR7) and Sway Brace Devices, Rigid Type for Sprinkler Systems Certified for Canada (VGMY7).

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C203, ''Pipe Hanger Equipment for Fire Protection Service.''

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Pipe Hanger.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fasteners for Pipe Hangers, Powder Driven Certified for Canada (VGLR7)

USE AND INSTALLATION

This category covers fasteners driven into concrete or steel that are intended for the attachment of pipe hangers. This category also covers threaded couplings intended for use with these fasteners. The fasteners and corresponding threaded couplings are tested to determine their suitability for supporting the loads associated with the pipe sizes indicated in the individual certifications. Unless otherwise stated, these fasteners are intended for vertical installation to support the pipe sizes indicated.

Application of these fasteners requires use of the Listee's powder-operated tools, releasing an explosive charge to drive the shank of the fasteners into the receiving material.

Authorities Having Jurisdiction should be consulted regarding use. As a preliminary step to installation of this product in concrete, test of the acceptability of the concrete for the purpose should be made by driving a number of test pins into the concrete and then measuring the load to extract them as outlined in ANSI/NFPA 13, ''Installation of Sprinkler Systems.'' The minimum thickness of steel of building members into which

Fasteners for Pipe Hangers, Powder Driven Certified for Canada (VGLR7)−*Continued*

studs may be driven for support of sprinkler piping should be based on the ability of the steel to support the load without deformation. From corrosion and holding-power standpoints, a minimum steel thickness of 4.7 mm is recommended.

ADDITIONAL INFORMATION

For additional information, see Hangers, Pipe Certified for Canada (VFXT7), Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C203, ''Pipe Hanger Equipment for Fire Protection Service.''

UL MARK

The Listing Mark of UL on the product, or on the smallest unit container in which the product is packaged with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fastener for Pipe Hanger.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Sway-brace Devices, Rigid Type for Sprinkler Systems Certified for Canada (VGMY7)

USE AND INSTALLATION

This category covers rigid-type sway-brace devices intended to be installed as part of a sprinkler system to resist horizontal lateral or longitudinal movement of sprinkler piping. These devices are intended to resist forces in tension and compression. Requirements for the installation and use of sway-brace assemblies are described in ANSI/NFPA 13, ''Installation of Sprinkler Systems,'' and the manufacturer's installation and design manual.

These devices are intended to be used in addition to the required pipe hangers specified in ANSI/NFPA 13, and include the following:

1. Sway-brace fittings used to attach the sprinkler system piping to a sway brace.
2. Sway-brace attachment fittings used to attach the sway brace to a building structure.

This category does not cover the sway brace, which is a rigid structural member intended to be attached to the building structure with a structure attachment fitting at one end, and attached to the sprinkler system piping with a sway-brace fitting at the other end. The sway braces intended to be used with these devices are specified in the manufacturer's installation instructions.

The maximum rated load indicated in the individual certifications is referenced for those situations when the use of other horizontal loads is required or permitted by the Authority Having Jurisdiction. These maximum rated loads should be reduced as specified in ANSI/NFPA 13 for loads that are less than 90 degrees from the vertical. The maximum sway-brace spacing specified in ANSI/NFPA 13 should not be exceeded. A sway-brace assembly is not intended to be installed to sustain a load greater than the load rating for any individual element of the assembly.

Authorities Having Jurisdiction should be consulted before installation of these devices.

ADDITIONAL INFORMATION

For additional information, see Hangers, Pipe Certified for Canada (VFXT7), Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C203A (1998), ''Sway Brace Devices for Sprinkler System Piping.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Sway Brace Fitting'' (or ''SB Fitting'') or ''Structure Attachment Fitting'' (or ''SA Fitting'').

* *

Sway-brace Devices, Rigid Type for Sprinkler Systems Certified for Canada (VGMY7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NOZZLES, SPRAY TYPE, FIXED CERTIFIED FOR CANADA (VGYZ7)

USE AND INSTALLATION

This category covers spray nozzles that discharge water in a specific spray pattern as defined by the manufacturer. Spray nozzles consist of the automatic or nonautomatic (open) type, and are intended for installation in fixed piping systems as specified in ANSI/NFPA 13, ''Installation of Sprinkler Systems,'' and ANSI/NFPA 15, ''Water Spray Fixed Systems for Fire Protection.''

Automatic Type

Automatic-type spray nozzles are intended to operate when the temperature of the heat-responsive element exceeds its thermal-response temperature.

Standard temperature ratings of automatic spray nozzles, the maximum ambient temperatures, and frame and glass heat-responsive element (glass bulb) color coding are as follows:

Temperature Class	Temperature Rating, °C	Frame Color Code+	Glass Bulb Color	Max Temp at Point of Installation, °C
Ordinary	57 to 77	Uncolored++	Orange or Red	38
Intermediate	79 to 107	White	Yellow or Green	66
High	121 to 149	Blue	Black	107
Extra High	163 to 191	Red	Purple	149
Very Extra High	207 to 246	Green	Black	191
Ultra High	260 to 302	Orange	Black	246

+ Corrosion-resistant spray nozzles are marked with either a dot on top of the deflector, color of the coating, or colored frame arms

++ The 57°C spray nozzles may be color coded black

Nonautomatic (Open) Type

Nonautomatic (open) type nozzles do not incorporate heat-responsive elements or operating parts and are intended to be installed in water-spray systems when water flow is controlled by devices other than the spray nozzle.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C2351 (2003), ''Spray Nozzles for Fire-Protection Service.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Automatic Fixed Nozzle'' or ''Nonautomatic Fixed Nozzle.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NOZZLES, FIXED SPRAY, FOAM CERTIFIED FOR CANADA (VIHU7)

GENERAL

This category covers nozzles that produce and distribute foam when foam solution is discharged through them, and will distribute over the same area in the absence of foam concentrate. Foam solution-nozzle combinations will produce foam blankets which provide burnback resistance and protection from reflash under standard test conditions.

These nozzles are of the nonautomatic (open) type and do not incorporate heat-responsive elements or operating parts and are intended to be installed in water spray systems when water flow is controlled by devices other than the spray nozzle.

Fixed foam-spray nozzles are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 16, ''Installation of Foam-Water Sprinkler and Foam-Water Spray Systems.''

Nozzles, Fixed Spray, Foam Certified for Canada (VIHU7)−*Continued*

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC-S564 (2006), ''Standard for Categories 1 and 2 Foam Liquid Concentrates,'' and ULC/ORD-C199 (2003), ''Automatic Sprinklers for Fire-Protection Service.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Fixed Foam Nozzle.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR-PRESSURE-MAINTENANCE DEVICES, AUTOMATIC CERTIFIED FOR CANADA (VIOT7)

USE AND INSTALLATION

This category covers automatically controlled air- or nitrogen-supply valves intended to maintain desired pressure in dry-pipe sprinkler systems and in special sprinkler systems needing supervising air or nitrogen pressure, by feeding air or nitrogen as needed from a pressure source. These products are intended for installation in accordance with ANSI/NFPA 13, ''Installation of Sprinkler Systems.''

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, ''Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Air Pressure Maintenance Device.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIPING, SPRINKLER SYSTEM CERTIFIED FOR CANADA (VIVS7)

Chlorinated Polyvinyl Chloride Sprinkler Pipe and Fittings Certified for Canada (VIWT7)

USE AND INSTALLATION

This category covers chlorinated polyvinyl chloride (CPVC) pipe and fittings intended for use in sprinkler systems in the following types of occupancies:

1. Light Hazard occupancies as defined in ANSI/NFPA 13, ''Installation of Sprinkler Systems.''
2. Residential occupancies as defined in ANSI/NFPA 13R, ''Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height.''
3. Residential occupancies as defined in ANSI/NFPA 13D, ''Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes.''

CPVC pipe and fittings are intended to be installed in accordance with the requirements specified in the manufacturer's installation instructions,

Chlorinated Polyvinyl Chloride Sprinkler Pipe and Fittings Certified for Canada (VIWT7)−*Continued*

ANSI/NFPA 13, 13R or 13D, and the "National Building Code of Canada." Special installation and design criteria relative to pipe hanger spacings, piping and sprinkler restraint, sprinkler temperature rating, piping location, testing procedures and friction loss characteristics are specified in the manufacturer's installation instructions provided with the pipe.

As the performance of plastic pipe and fittings can be adversely affected by elevated temperatures, it is important that they not be installed where ambient temperatures normally exceed the maximum temperature ratings specified in the individual certifications. These pipe and fittings are not intended to be installed in outdoor applications.

The CPVC pipe and fittings are intended for use in wet-pipe systems only and have not been investigated for use in dry-pipe systems. Their use in ceiling spaces above nonsprinklered areas has not been investigated.

The manufacturer's installation instructions should be reviewed and authorities having jurisdiction consulted before installation.

PROTECTION

When used with standard response sprinklers, protection is intended to be provided for CPVC pipe and fittings by ceilings, walls or soffits consisting of, at a minimum, lath and plaster, 9.5 mm thick gypsum board, 13 mm thick plywood or a suspended membrane ceiling with lay-in panels or tiles, classified with respect to surface burning characteristics having a mass of not less than 1.7 kg/sq m and installed in steel suspension grids. The effectiveness of this protection can be impaired if penetrated by openings such as ventilation grills, exhaust fans connected to metal ducts serving washrooms excepted. Where such penetration is present, individual openings exceeding 0.03 sq m but not exceeding 0.71 sq m in area should be located so that the distance from the edge of the opening to the nearest sprinkler does not exceed 300 mm. This piping is not intended to be used where such openings exceed 0.71 sq m in area.

The effect of the presence of nonrated recessed lighting fixtures, public address speakers, and other interruptions of the protective membrane has not been investigated.

As an alternative to the protection requirements, CPVC pipe and fittings may be installed without protection (exposed) when subject to the following additional limitations:

1. Exposed piping is to be installed below a smooth, flat, horizontal, fixed ceiling construction.
2. Certified quick-response or certified residential sprinklers with a maximum temperature rating of 77°C.

During remodeling or ceiling repair, appropriate precautions should be implemented to properly shield the piping from the protected occupancy.

FACTORS NOT INVESTIGATED

Compatibility for this pipe material with other components in fire sprinkler systems has not been investigated. Information obtained from field installations of this piping indicates certain materials or chemicals that come into contact with either the internal or external sprinkler system piping may cause the piping to degrade. The pipe manufacturer should be consulted to obtain any information available relating to material or chemical compatibility. These products have not been investigated for their effect on the potability of the water supply.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199P (2002), "Combustible Piping for Sprinkler Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "CPVC Sprinkler Pipe" or "Sprinkler Pipe," "CPVC Sprinkler Fitting" or "Sprinkler Pipe Fitting."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Support Devices for Thermoplastic Sprinkler Piping Certified for Canada (VIXH7)

USE AND INSTALLATION

This category covers devices intended for use with certified thermoplastic piping installed in sprinkler systems in the types of occupancies specified in Chlorinated Polyvinyl Chloride Sprinkler Pipe and Fittings Certified for Canada (VIWT7).

Support Devices for Thermoplastic Sprinkler Piping Certified for Canada (VIXH7)−*Continued*

These support devices are intended to be installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes," or ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."

Unless otherwise indicated in the individual certifications, these support devices have not been investigated for use in air-handling spaces.

INSTALLATION INSTRUCTIONS

Special installation and design criteria relative to pipe-support spacings, piping restraint and piping location are specified in the manufacturer's installation instructions provided with the pipe.

The manufacturer's installation instructions should be reviewed and Authorities Having Jurisdiction consulted before installation.

PROTECTION

An optional decorative cover may be provided with the support devices as indicated in the individual certifications. The decorative cover is not an acceptable means of providing protection for CPVC piping when a protective membrane is required in accordance with the certification of the CPVC pipe and the installation instructions.

ADDITIONAL INFORMATION

For additional information, see Chlorinated Polyvinyl Chloride Sprinkler Pipe and Fittings Certified for Canada (VIWT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199P, "Combustible Piping for Sprinkler Systems."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Support System Part for CPVC Piping" or "Pipe Hanger for CPVC Piping," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cross-linked Polyethylene Sprinkler Pipe and Fittings Certified for Canada (VIXR7)

USE AND INSTALLATION

This category covers cross-linked polyethylene (PEX) pipe and fittings intended for use in multi-purpose piping systems of residential occupancies as defined in ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

PEX pipe and fittings are intended to be installed in accordance with the requirements specified in the manufacturer's installation instructions, ANSI/NFPA 13D, and the "National Building Code of Canada." Special installation and design criteria relative to pipe-hanger spacing, piping and sprinkler restraint, sprinkler temperature rating, piping location, testing procedures and friction loss characteristics are specified in the manufacturer's installation instructions provided with the pipe.

PEX pipe and fittings are not intended to be installed in combustible concealed spaces where sprinklers are required by ANSI/NFPA 13D.

PEX pipe and fittings are intended for use in areas where the maximum ambient temperature does not exceed 48°C. If the ambient temperature is expected to exceed this limitation, refer to the manufacturer's installation instructions for additional information on methods to reduce the pipe exposure temperatures. These pipe and fittings are not intended to be installed in outdoor applications.

PEX pipe and fittings are intended for use in wet-pipe systems only and have not been investigated for use in dry-pipe systems.

The manufacturer's installation instructions should be reviewed and Authorities Having Jurisdiction consulted before installation.

PROTECTION

Protection is intended to be provided for PEX pipe and fittings unless otherwise indicated in the individual certifications. The minimum protection should consist of either (1) one layer of 9.5-mm gypsum wallboard, (2) a suspended membrane ceiling with lay-in panels or tiles having a weight of not less than 1.7 kg/sq m when installed with metallic support grids, (3) 13-mm plywood soffits, or (4) one layer of 13-mm plywood.

During remodeling or ceiling repair, appropriate precautions should be implemented to properly shield the piping from the protected occupancy.

ADDITIONAL INFORMATION

Cross-linked Polyethylene Sprinkler Pipe and Fittings Certified for Canada (VIXR7)−*Continued*

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199P (2002), "Combustible Piping for Sprinkler Systems."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "PEX Sprinkler Pipe" or "PEX Sprinkler Fitting."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Sprinkler Pipe Fittings Certified for Canada (VIYW7)

Fittings, Accessory Certified for Canada (VIYY7)

USE AND INSTALLATION

This category covers flexible joint fittings, union arm fittings, steel flanges and other accessory fittings intended for aboveground water-supply piping systems and fire-suppression systems.

These fittings are intended to be installed in accordance with the manufacturer's installation instructions. Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C213, "Preliminary Standard for Rubber Gasketed Fittings for Fire Protection Service."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Union Arm Fitting," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fittings, Grooved and Plain End Certified for Canada (VIZA7)

USE AND INSTALLATION

This category covers fittings consisting of cast, ductile or malleable iron or steel material intended for use with certified rubber-gasketed fittings in fire-service systems.

Unless otherwise indicated in the individual certifications, grooved-end and plain-end fittings are for use with rubber-gasketed fittings covered under Fittings, Rubber Gasketed Certified for Canada (VIZM7), and are intended to be installed in accordance with the individual rubber-gasketed fitting manufacturer's installation instructions.

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ULC/ORD-C213, "Rubber Gasketed Fittings for Fire Protection Service."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Grooved Fitting" or "Plain End Fitting" or other appropriate product name as shown in the individual Listings.

Fittings, Grooved and Plain End Certified for Canada (VIZA7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fittings, Malleable Iron Certified for Canada (VIZI7)

USE AND INSTALLATION

This category covers malleable-iron threaded fittings intended for use in fire-service systems and connections to such systems where the working pressure does not exceed the maximum rated pressure indicated on the fitting. These fittings comply with the dimensional requirements specified in ANSI/ASME B16.3 (1998), "Malleable Iron Threaded Fittings Classes 150 and 300," unless otherwise indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/ASME B16.3 (1998), "Malleable Iron Threaded Fittings Classes 150 and 300."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Malleable-Iron Fitting" (or "MI").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fittings, Rubber Gasketed Certified for Canada (VIZM7)

USE AND INSTALLATION

This category covers fittings consisting of couplings and fittings having various configurations such as elbows, tees and outlets containing rubber gaskets, intended for joining sections of metallic pipe, including steel, ductile iron, and copper piping or other piping indicated in the individual certifications. Fittings have grooved or plain ends for use in fire-service systems located aboveground and underground, unless otherwise indicated in the individual certifications.

The pipe joints formed with these fittings may or may not need to be restrained, depending on the design and construction of the fitting. Grooved-type rubber-gasketed fittings are intended for use only with pipe, fittings and valves that have been grooved to the specifications of the rubber-gasketed fitting.

Fittings intended for installation with cut grooved steel pipe should be used with pipe having a minimum wall thickness in accordance with Schedule 20 (in sizes greater than 16 in.), Schedule 30 (in sizes 8 in. to 16 in.) or Schedule 40 (in sizes less than 8 in.) pipe.

Fittings intended for installation with rolled grooved steel pipe should be used with pipe having a minimum wall thickness in accordance with Schedule 10, unless otherwise indicated in the individual certifications. When Schedule 5 or 10 pipe is referenced in the individual certifications, the wall thickness should be as specified in ASTM A53, "Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless," or ASTM A795, "Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use."

Fittings intended for installation with cut grooved iron pipe shall be used with certified ductile-iron pipe (AWWA C151/A21.51, "Ductile-Iron Pipe, Centrifugally Cast, for Water").

Fittings intended for installation with plain-end pipe should be used with the type of pipe material and minimum wall thickness specified in the manufacturer's instructions. All bolts should be tightened to torque values or the bolt-tightening specifications contained in the manufacturer's installation instructions.

The size and position of the cut or rolled grooves should be as specified by the manufacturer's installation instructions.

Fittings, Rubber Gasketed Certified for Canada (VIZM7)−*Continued*

The rolled grooves located at pipe ends should be formed by the grooving machine specified by the individual manufacturer's installation instructions.

The rated pressures for the fittings are indicated in the individual certifications. The fittings are not intended to be used for pressures exceeding the pressure rating of the adjoining pipe or the allowable pressure of the adjoining pipe as specified in the applicable installation standard, such as ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," and ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection."

These fittings are intended for use with a maximum ambient temperature of 49°C (120°F) unless otherwise indicated in the individual certifications.

Unless otherwise indicated in the individual certifications, rubber-gasketed fittings are unsuitable for use in dry-pipe systems.

FACTORS NOT INVESTIGATED

These products have not been investigated for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C213, "Rubber Gasketed Fittings for Fire Protection Service."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rubber-gasketed Pipe Fitting."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Fittings, Welded Outlet Certified for Canada (VIZU7)

USE AND INSTALLATION

This category covers fittings consisting of steel outlets intended to be welded to Schedule 5, 10, 30, 40 and certified steel sprinkler pipe having the same outside diameter as Schedule 40 pipe with the outlet pipe having wall thickness the same as or less than the run pipe. These fittings are also suitable for use with Schedule 10 as the run pipe and Schedules 40 as the branch pipe. Other combinations of run and outlet pipes are indicated in the individual certifications. Fitting outlets less than 1-in. diameter are intended for direct connection to sprinklers only. These welded outlets are intended for use with piping for fire-service systems when installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems."

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C213B, "Welded Outlet Fittings."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welded Fitting", "Welded Outlet" or "Welded Outlet Fitting."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Steel Sprinkler Pipe Certified for Canada (VIZY7)

USE AND INSTALLATION

This category covers steel sprinkler pipe intended for use in water-based fire-protection systems for water-distribution or trim applications. This pipe may be used in wet, preaction, deluge or dry-pipe-type sprinkler systems when installed in accordance with the following:

- ANSI/NFPA 13, "Installation of Sprinkler Systems"
- ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes"
- ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height"

In accordance with the referenced NFPA Standards, the size of steel pipe installed to distribute water to the sprinklers shall be not less than 2.54 cm (1 in.) nominal.

As indicated in the individual certifications, Schedule 10, Schedule 40 and other steel pipe having lesser wall thicknesses than unthreaded Schedule 40 pipe is covered under this category. Cut grooved, roll grooved and plain-end pipe is intended to be joined by certified rubber-gasketed fittings (see VIZM7) or welded outlet fittings (see VIZU7), which have been investigated for compatibility with the specific pipe. Plain-end pipe may also be joined by welding end-to-end or welding to flanges.

Schedule 10 and 40 pipe incorporates dimensions and materials specified in ASTM A53, "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless," ASTM A135, "Standard Specification for Electric-Resistance-Welded Steel Pipe," or ASTM A795, "Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use." Schedule 40 pipe ends are intended to be threaded, roll grooved, cut grooved, or plain. Schedule 10 pipe ends are intended to be roll grooved or plain.

Steel pipe having lesser wall thicknesses than unthreaded Schedule 40 pipe may be threaded, roll grooved, or plain end as indicated in the individual certifications. Threading requires the use of thread gauges conforming to the dimensions of ASME B1.20.1, "Pipe Threads, General Purpose." This pipe has been investigated for both mechanical strength and relative corrosion resistance expressed in terms of a corrosion resistance ratio (CRR). This ratio for each size pipe is defined as follows:

$$CRR = \left(\frac{X}{X_{40}} \right)^3$$

Where: X_{40} = Thickness of Schedule 40 pipe under the first exposed thread. The "first exposed thread" is the minimum pipe thickness exposed to both interior and exterior corrosion and occurs at the threaded joint assembly at a line defined by the thread width, just before the pipe engages the fitting.

X = Thickness of the certified pipe measured either under the first exposed thread for threaded pipe or at the thinnest wall section for unthreaded pipe.

The CRR will be greater than 1.00 when the wall thickness of the certified pipe is greater than the wall thickness of Schedule 40 pipe under the first exposed thread, and less than 1.00 when the certified pipe wall is thinner than the wall thickness of Schedule 40 pipe under the first exposed thread.

The corrosion performance of steel pipe can vary depending on the composition of the steel of which it is formed, the composition of the water(s) to which it is exposed and related service conditions.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

Pipe materials have not been investigated for potability unless indicated in the individual certifications.

Coatings, platings or other surface treatments on the interior or exterior of the pipe have not been investigated for the ability to protect the pipe from corrosion, potability, or the effects of the coatings, platings or other surface treatments on components of the water-distribution system.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199S, "Light Wall Steel Pipes for Sprinkler Systems for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Steel Sprinkler Pipe" or "Sprinkler Pipe for Fire Service."

****

Steel Sprinkler Pipe Certified for Canada (VIZY7)−*Continued*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

QUICK-OPENING DEVICES, ACCELERATORS AND EXHAUSTERS CERTIFIED FOR CANADA (VJPZ7)

USE AND INSTALLATION

This category covers auxiliary attachments and associated accessories intended for installation on dry-pipe valves designed to reduce time delay in operation of the valve after the opening of one or more sprinklers. These devices are intended for use on sprinkler systems having a capacity not greater than 750 gal unless indicated otherwise in the individual certifications.

These devices are intended for installation in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATON

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260 (1975), "Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Quick Opening Device," "Accelerator," "Accessory for Quick Opening Devices" or "Exhauster."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RESIDENTIAL AUTOMATIC SPRINKLERS CERTIFIED FOR CANADA (VKKW7)

GENERAL

This category covers residential automatic sprinklers that have been investigated for installation in fire protection systems in accordance with the manufacturer's installation instructions and ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Mobile Homes," ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," and ANSI/NFPA 13, "Installation of Sprinkler Systems" where residential sprinklers are permitted.

Residential sprinklers are intended for use at the minimum design densities specified in ANSI/NFPA 13D, 13R or 13, as applicable, but in no case are the minimum flow rates to be less than those indicated in the individual Listings. The temperature ratings of residential sprinklers and the maximum ceiling temperatures are as follows:

Temp Rating, °C	Max Ceiling Temp, °C
57-77	38
79-107	66

Sprinklers have been investigated for maximum system working pressures of 1200, 1725 or 2068 kPa. Sprinklers are limited to 1200 kPa maximum system working pressure unless otherwise indicated in the individual Listings.

Sprinkler orifice sizes are described below are in terms of "k" in metric units of l/min/kPa^{½} unless specifically noted.

A four- to six-character Sprinkler Identification Number (SIN) is marked on each sprinkler to assist in identifying the sprinkler manufacturer, k-factor, deflector characteristic, pressure rating and thermal sensitivity.

These sprinklers have been investigated for installation in occupancies having smooth, flat, horizontal ceilings unless otherwise indicated in the individual Listings. Sprinklers indicated for installation in sloped ceilings have been investigated for use in smooth, flat ceilings that do not extend into or serve as a ceiling for an upper level floor in the structure.

Recessed and concealed sprinklers having provisions for venting through the escutcheon have not been investigated for installation in ceilings below positive-pressure plenums. In addition, blocking of the escutcheon vents may adversely impact sprinkler sensitivity and performance.

Authorities Having Jurisdiction should be consulted regarding installation, temperature rating, and approval of plans.

The following abbreviations are used in the individual Listings:

Conc. – Concealed
HSW – Horizontal Sidewall
Rec. – Recessed

Residential Automatic Sprinklers Certified for Canada (VKKW7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1626-2003, "Residential Sprinklers for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Sprinkler" (or "Res Spkr").

For ceiling-type residential sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer, the Listing Mark of UL on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory), together with the word "LISTED," a control number, and the product name "Sprinkler Part." If the first three elements of the Listing Mark appear on a label that also clearly identifies the SIN of sprinklers for which the escutcheon is to be used, the product name can be omitted from the Listing Mark.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPECIAL SYSTEM WATER CONTROL VALVES AND SYSTEM ACCESSORIES CERTIFIED FOR CANADA (VKRV7)

The Special System Water Control Devices listed herein are intended for installation in accordance with the National Fire Protection Association Standards for the Installation of Sprinkler Systems, NFPA 13; Deluge Foam - Water Sprinkler and Spray Systems, NFPA 16; and Water Spray Fixed Systems, NFPA 15.

Residential Automatic Domestic Water Shutoff Valves Certified for Canada (VKVI7)

USE AND INSTALLATION

This category covers automatic domestic water shutoff valves, which provide a means to isolate the domestic water supply during sprinkler operation and devote all incoming water to the residential sprinkler system.

These valves are intended for installation in residential fire sprinkler systems in one- and two-family dwellings and mobile homes in accordance with ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes," or in residential occupancies up to four stories in height in accordance with ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," as indicated in the individual certifications, and intended for working pressures not exceeding 1206 kPa.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, "Dry Pipe and Deluge Valves for Fire-Protection Service."

Residential Automatic Domestic Water Shutoff Valves Certified for Canada (VKVI7)−*Continued*

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Domestic Shutoff Valve.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Special System Water Control Valves, Assembled Units Certified for Canada (VKYL7)

GENERAL

This category covers units comprised of electronic control and signaling equipment, fire main control valve, water-flow control valve (deluge type), electrically operated solenoid valves, check valve, trim and drain valves, gauges, supervisory devices and special system accessories as indicated in the individual certifications, which are provided from the factory as an assembled unit.

These units are rated for a maximum pressure of 1207 kPa unless otherwise indicated in the individual certifications.

In addition to other certified products indicated in the individual certifications, these units may incorporate products covered under:

Check Valves Certified for Canada (HMER7)
Extinguishing System Attachments Certified for Canada (USQT7)
Gauges, Pressure Certified for Canada (VEVX7)
Special System Water Control Valves, Deluge Type Certified for Canada (VLFT7)
Accessories for Special Systems Certified for Canada (VLTR7)
Switches, Pressure Certified for Canada (VOXZ7)
Valves, Trim and Drain Certified for Canada (VQGU7)

These units are intended to be installed with the cabinet in the upright position for connection to wet-pipe, dry-pipe, preaction or double-interlock automatic sprinkler systems as indicated in the individual certifications.

These units are intended to be installed in accordance with the manufacturer's installation instructions and the applicable requirements of ANSI/NFPA 13, ''Installation of Sprinkler Systems,'' and ANSI/NFPA 15, ''Water Spray Fixed Systems for Fire Protection.''

Authorities Having Jurisdiction should be consulted regarding installation, operational programming and approval of working plans before installation of the units.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQURIEMENTS

The basic standards used to investigate products in this category are ULC/ORD-C260, ''Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service,'' and ULC-S527 (1987), ''Control Units for Fire Alarm Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Special System Water Control Valves – Assembled Units.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Special System Water Control Valves, Deluge Type Certified for Canada (VLFT7)

USE AND INSTALLATION

This category covers valves intended for use in controlling water flow to deluge, pre-action, and foam-water sprinkler systems and water-spray systems.

Deluge valves are intended to be installed in the vertical position only, unless otherwise indicated in the individual certifications.

Special System Water Control Valves, Deluge Type Certified for Canada (VLFT7)−*Continued*

These valves are provided by the manufacturer with all the necessary trim accessories (e.g., shutoff valves, drains, fittings) and assembly drawings. The valves are required to be installed as specified by the individual manufacturer's installation instructions.

RELATED PRODUCTS

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, ''Dry Pipe, Deluge and Pre-Action Valves for Fire-Protection Service''.

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Deluge Valve,'' ''Water Control Valve'' or ''Flooding Valve.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Special System Water Control Valves, Double-interlock Type Certified for Canada (VLJH7)

USE AND INSTALLATION

This category covers special double-interlock, preaction-type sprinkler system water-control valves. These valves include special features to prevent unintentional valve operation that would fill system piping with water. They are intended for use in areas requiring special consideration relative to unintentional valve operation which may cause pipe damage due to freezing conditions or water damage. Valve operation requires the actuation of two separate devices: (1) a certified fire detection device which is interconnected to the valve, and (2) a minimum of one automatic sprinkler.

Authorities Having Jurisdiction should be consulted before installation. The installation of these valves will result in a delay in the discharge of water. Special consideration should be provided regarding the need to increase system design area similar to the guidance provided in ANSI/NFPA 13, ''Installation of Sprinkler Systems,'' or dry-pipe systems.

These valves are intended to be installed in the vertical position only, unless otherwise indicated in the individual certifications.

These valves are provided by the manufacturer with all the necessary trim accessories (e.g., shutoff valves, drains, fittings) and assembly drawings. The valves are required to be installed as specified by the individual manufacturer's installation instructions.

RELATED PRODUCTS

See Accessories for Special Systems Certified for Canada (VLTR7).

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ULC Subject C260, ''Dry Pipe, Deluge and Pre-Action Valves for Fire-Protection Service.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged or the Listing Mark on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Water Control Valve – Double Interlock Type.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. Special System Water Control Valves, Pressure-reducing and Pressure-control Type Certified for Canada (VLMT7)

USE AND INSTALLATION

This category covers valves intended for use as wet-pipe pressure reducing, pressure control, water-flow control, or combination pressure and water-flow control valves in water-based fire-suppression systems, including sprinkler and standpipe systems.

Valves suitable for use as indicating valves are noted in the individual certifications.

These valves are intended to be installed and maintained in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," ANSI/NFPA 25, "Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems," and the manufacturer's installation instructions.

The manufacturer's installation instructions include a description of the performance characteristics of these valves for both flowing and nonflowing (static) conditions.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Valves intended for standpipe hose connection use are covered under Pressure-reducing and -Restricting Devices Certified for Canada (VUTX7).

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C312, "Check Valves for Fire Protection Service."

UL MARK

UL MARK

Accessories for Special Systems Certified for Canada (VLTR7)

USE AND INSTALLATION

This category covers accessory units intended for use with special system water-control valves (VLFT7 or VLMT7), including electrically operated valves and thermostatic releases. Heat-responsive devices and their accessories used with these special systems are covered under Accessories, Releasing Device Certified for Canada (SYSW7), Control Units, Releasing Device Certified for Canada (SYZV7) and Releasing Devices Certified for Canada (SZNT7). These devices are intended to be installed in accordance with the manufacturer's installation instructions for special system water-control valves.

FACTORS NOT INVESTIGATED

These products have not been investigated for use in potable water systems.

ADDITIONAL INFORMATION

For additional information, see Special System Water-control Valves and System Accessories Certified for Canada (VKRV7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, "Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Actuating Valve," "Dry Pilot-Line Actuator" or "Remote Control Valve," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Accessories for Special Systems Certified for Canada (VLTR7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPRINKLERS, AUTOMATIC AND OPEN CERTIFIED FOR CANADA (VNIV7)

GENERAL

This category covers automatic and open sprinklers that have been investigated for their ability to control fires when installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," and ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."

Sprinklers investigated for special service conditions are indicated in the individual Listings. In addition, extended coverage, ceiling, sidewall, high temperature wax coated, flow control, specific application, and dry-type sprinklers have been investigated for installation in accordance with the manufacturer's installation and design parameter instructions.

Automatic sprinklers are intended to operate when the temperature of the heat-responsive element exceeds its thermal-response temperature. Sprinkler response characteristics, either Standard Response (SR) or Quick Response (QR), are specified in the individual Listings.

The standard temperature ratings of automatic sprinklers and the maximum ceiling temperatures and color-coding are as follows:

Temperature Class	Temperature Rating, °C	Frame Color Code +	Color Code for Glass Bulb Sprinklers	Max Ceiling Temp, °C
Ordinary	57 to 77	No Color ++	Orange or Red	38
Intermediate	79 to 107	White	Yellow or Green	66
High	121 to 149	Blue	Blue	107
Extra High	163 to 191	Red	Purple	149
Very Extra High	204 to 246	Green	Black	191
Ultra High	260 to 302	Orange	Black	246
Ultra High	343	Orange	Black	329

+ The color code for non-decorative sprinklers is on the frame arms except for corrosion-resistant sprinklers. Corrosion-resistant sprinklers are marked with either a dot on top of the deflector, color of coating, or colored frame arms.

++ The 57°C sprinklers may be color-coded black.

Open sprinklers are automatic sprinklers without heat-responsive operating parts.

Sprinklers have been investigated for system working pressures of 48 to 1200, 48 to 1725, or 48 to 2400 kPa. Sprinklers are limited to 48 to 1200 kPa system working pressure unless otherwise indicated in the individual Listings. Sprinklers intended for use with foam liquid concentrates are indicated in the individual Listings under Foam Liquid Concentrates Certified for Canada (GFGV7).

Sprinkler orifice sizes are described below are in terms of a discharge coefficient, "k," in metric units of $l/min./kPa^{1/2}$ unless specifically noted.

A four- to six-character Sprinkler Identification Number (SIN) is marked on each sprinkler to assist in identifying the sprinkler manufacturer, k-factor, deflector characteristic, pressure rating and thermal sensitivity.

Authorities Having Jurisdiction should be consulted regarding installation, temperature rating, and approval of working plans before sprinklers are installed.

The following abbreviations are used in the individual Listings:

Conc. – Concealed
HSW – Horizontal Sidewall
QR – Quick Response
Rec. – Recessed
SR – Standard Response
VSW – Vertical Sidewall

SPRINKLER TYPES

Automatic and open sprinklers consist of the following types:

Upright and Pendent Standard Spray Sprinklers

Nominal 8 k-factor

These sprinklers have a nominal 80 k-factor (nominal 12.7-mm size orifice) and their deflectors are designed to discharge water in a parabolic pattern 4.9 m in diameter, measured 1.22 m below the plane of the deflector at a flow rate of 57 lpm, with little or no water discharged upward to wet the ceiling. These sprinklers have 1/2-in. NPT inlet threads unless noted in the individual Listings.

Nominal 2 to 6 k-factors

These sprinklers have nominal k-factors of 2, 2.7, 4 or 6 (nominal orifice sizes 6.4, 7.9, 9.5 and 11.1 mm, respectively) and they discharge 75, 67, 50 and 25% less water, respectively, at the same inlet pressure than nominal 8 k-factor (nominal 12.7-mm orifice) sprinkler.

Sprinklers, Automatic and Open Certified for Canada (VNIV7)−*Continued*

These sprinklers have been investigated for installation in light hazard occupancies only. These sprinklers have 1/2-in. NPT inlet threads unless noted in the individual Listings.

Nominal 11.5 k-factor

These sprinklers discharge approximately 40% more water, at the same inlet pressure, than nominal 8 k-factor sprinklers. These sprinklers have 3/4-in. NPT inlet threads unless noted in the individual Listings.

Standard Sidewall Spray Sprinklers

Sidewall spray sprinklers have been investigated for installation near a wall and near the ceiling. They consist of the horizontal and vertical types and are intended to discharge water on the back wall and outward in a quarter-spherical pattern. Sidewall sprinklers have been investigated for installation in either the upright, pendent or horizontal positions as indicated in the individual Listings. Sidewall sprinklers have been investigated for installation in light hazard occupancies unless otherwise indicated in the individual Listings that they have also been investigated for use in ordinary hazard occupancies. Sidewall sprinklers with nominal k-factors of 2, 2.7, 4 or 6 (nominal orifice sizes 6.4, 7.9, 9.5 and 11.1 mm, respectively) have been investigated for installation in light hazard occupancies only.

Horizontal and vertical sidewall sprinklers are intended for installation at minimum distances between sprinklers of 1.8 m or as specified in the manufacturer's installation and design parameter instructions.

Flush, Recessed and Concealed Types

These decorative-type sprinklers are intended for use with a concealed piping system and have been investigated for installation in a pendent or horizontal sidewall orientation (HSW). Flush types are constructed with an operating element, which extends a short distance from the ceiling or wall. Upon actuation, the sprinkler deflector extends beyond the plane of the ceiling or wall.

Recessed types consist of a pendent or sidewall sprinkler installed in a decorative escutcheon, which minimizes protrusion of the sprinkler into the room without adversely affecting water distribution. Concealed types incorporate a cover plate, which is released prior to sprinkler operation. Recessed concealed sprinklers having provisions for venting through the escutcheon have not been investigated for installation in ceilings below positive-pressure plenums. In addition, blocking of escutcheon vents may adversely impact sprinkler sensitivity and performance.

Concealed-type sprinklers with cover plates are intended to be installed in accordance with the temperature rating of the sprinkler and not the rating of the cover plate. Concealed-type sprinklers are available with nominal k-factors ranging from 2 through 16.1. The SIN is located in a visible location when the cover plate is removed.

Dry Sprinklers

Dry sprinklers have been investigated for installation on dry-pipe systems or wet systems where the sprinkler may be subject to freezing temperatures. As noted in the individual Listings, these sprinklers are intended for installation in the pendent, upright, or horizontal sidewall orientation.

Dry-type sprinklers consist of a sprinkler permanently secured to an extension nipple, which has a seal at the inlet end to prevent water from entering the nipple, until the sprinkler operates. The inlet end of the nipple is intended to be installed into the fittings referenced in the manufacturer's installation instructions. Dry-type sprinklers may be of the flush, recessed and concealed type.

Listings are for dry pendent types only unless otherwise indicated in the individual Listings.

Conventional (Old Style) Sprinklers

Conventional sprinklers may be installed in either the upright or pendent positions. They are designed to direct 40% to 60% of the total water initially discharged in a downward direction.

These sprinklers have 1/2-in. NPT inlet threads unless noted in the individual Listings.

Flow Control (On-Off) Sprinklers

These sprinklers are designed to control water flow by automatically cycling on and off within a specified temperature range.

Standard Response (SR)-Extended-coverage Sprinklers – Light Hazard

Extended-coverage (EC) sprinklers are intended for installation in light hazard occupancies having ceiling constructions as specified in ANSI/NFPA 13, unless other ceiling constructions are indicated in the individual Listings.

EC sidewall sprinklers have been investigated for installation with their deflectors located from 10.1 to 15.2, 15.2 to 30.5, or 30.5 to 45.7 cm (or any combination) below the ceiling as indicated in the individual Listings. EC upright and pendent sprinklers have been investigated for installation with their deflectors located 2.5 to 30.5 cm below the ceiling unless otherwise indicated in the individual Listings. EC sprinklers have been investigated for installation in accordance with the information indicated in the individual Listings and the manufacturer's installation and design parameter instructions. The maximum installation width and length dimensions, minimum flow rate and nominal k-factor are specified in the individual Listings.

Sprinklers, Automatic and Open Certified for Canada (VNIV7)−*Continued*

Quick Response (QR)-Extended-coverage Sprinklers – Light Hazard

These are EC sprinklers that have demonstrated quick response characteristics at the specified coverage areas, QR-EC upright and pendent sprinklers have been investigated for installation with their deflectors located 2.5 to 30.5 cm below the ceiling unless otherwise indicated in the individual Listings. QR-EC sidewall sprinklers have been investigated for installation with their deflectors located from 10.1 to 15.2, 15.2 to 30.5, or 30.5 to 45.7 cm (or any combination) below the ceiling. QR-EC sprinklers have been investigated for installation in light hazard occupancies having smooth, flat, horizontal ceilings unless otherwise indicated in the individual Listings. The maximum installation width and length dimensions, minimum flow rate and nominal k-factor are specified in the individual Listings.

Standard Response (SR)-Extended-coverage Sprinklers – Ordinary Hazard

These extended-coverage ordinary hazard occupancy (ECO) sprinklers are intended for installation in Ordinary Hazard Groups 1 and 2 occupancies.

These sprinklers are intended for installation in occupancies having ceiling constructions referenced for extended-coverage sprinklers specified in ANSI/NFPA 13 unless additional ceiling constructions are indicated in the individual Listings. The maximum installation width and length dimensions, minimum flow rate for each occupancy and nominal k-factor are specified in the individual Listings.

Quick Response (QR)-Extended-coverage Sprinklers – Ordinary Hazard

These are ECO sprinklers that have demonstrated quick response characteristics at the specified coverage areas. These sprinklers are intended for installation in Ordinary Hazard Groups 1 and 2 occupancies.

These sprinklers are intended for installation in occupancies having ceiling constructions referenced for extended-coverage sprinklers specified in ANSI/NFPA 13 unless additional ceiling constructions are indicated in the individual Listings. The maximum installation width and length dimensions, minimum flow rate for each occupancy and nominal k-factor are specified in the individual Listings.

Corrosion-resistant Sprinklers

Corrosion-resistant sprinklers have been investigated for installation in corrosive atmospheres.

These sprinklers are protected from the corrosive atmosphere by coating the entire sprinkler or operating parts with protective coatings such as wax, lead, wax over lead, enamel, or by fabricating the sprinklers from corrosion-resistant parts.

High-temperature, Wax-coated Sprinklers

These sprinklers have been investigated for installation where corrosion-resistant, high-temperature-rated sprinklers are required and the maximum ambient temperature does not exceed 66°C. The maximum ambient temperature is based on the thermal exposure limitations of the wax coating.

Intermediate-level Sprinklers (Water Shielded)

These sprinklers are equipped with a disc or canopy mounted above the heat-responsive element to protect it from retarded operation due to water discharge from sprinklers at higher elevations. These sprinklers have been investigated for installation in the upright or pendent positions as indicated in the individual Listings.

Sprinklers for Storage Protection (Area/Density)

These upright and pendent sprinklers have nominal k-factors of 16.1 and larger. They are intended for protection of stored commodities using the design requirements for area and density as specified in ANSI/NFPA 13. In addition, upright and pendent spray sprinklers having nominal k-factor of 11.2 may be used for storage applications where the design density does not exceed 14 mm/min.

Extended-coverage Sprinklers for Storage Protection (Area/Density)

These upright and pendent extended-coverage sprinklers for storage applications have nominal k-factors of 16.1 and larger. They are intended for protection of stored commodities using design requirements for area and density as specified in ANSI/NFPA 13 for coverage areas having maximum width and length dimensions of 3.7 x 3.7 m or 4.3 x 4.3 m. Unless otherwise indicated in the manufacturer's installation and design parameter instructions, the clearance between the top of the stored commodity and the sprinkler deflector is intended to be at least 91 cm.

The sprinkler coverage area dimensions are specified in the individual Listings.

Sprinklers for Storage Protection (Control Mode Specific Application)

These upright and pendent sprinklers have nominal k-factors of 16.1 and larger. They are intended for protection of stored commodities using design discharge pressures and areas as specified in the manufacturer's installation and design parameter instructions and ANSI/NFPA 13 if refer-

Sprinklers, Automatic and Open Certified for Canada (VNIV7)−*Continued*

enced therein. Unless otherwise indicated in the manufacturer's installation and design parameter instructions, the clearance between the top of the stored commodity and the sprinkler deflector is intended to be at least 91 cm.

Specific Application Sprinklers

These sprinklers have been investigated for protection of specific fire risks, (except for storage applications) as described in the Listing information and the manufacturer's installation and design parameter instructions.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199 (2003), "Automatic Sprinklers for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Sprinkler" or "Open Sprinkler."

For ceiling-type sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer, the Listing Mark of UL on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sprinkler Part." If the first three elements of the Listing Mark appear on a label that also clearly identifies the SIN of sprinklers for which the escutcheon is to be used, the product name can be omitted from the Listing Mark.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPRINKLERS, EARLY SUPPRESSION FAST RESPONSE CERTIFIED FOR CANADA (VNWH7)

GENERAL

This category covers early suppression fast response (ESFR) sprinklers that have been investigated for installation in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems." ESFR sprinklers incorporate a fast-actuating heat-responsive element and are designed to deliver a water discharge intended to suppress fires.

Sprinkler orifice sizes are described in terms of "k" in metric units of $l/min/kPa^{½}$ unless specifically noted. ESFR sprinklers have an orifice with minimum nominal "k" factors as indicated in the individual certifications.

The standard temperature ratings, maximum ceiling temperatures, and color coding of ESFR sprinklers are as follows:

Temperature Class	Temperature Rating, °C	Frame Color Code +	Color Code for Glass Bulb Sprinklers	Maximum Ceiling Temp, °C
Ordinary	57-74	No Color++	Orange or Red	38
Intermediate	93-104	White	Yellow or Green	66
High	121-149	Blue	Blue	107

+ The color code for ESFR sprinklers is on the frame arms except for corrosion-resistant sprinklers. Corrosion-resistant sprinklers are marked with either a dot on top of the deflector, color of coating, or colored frame arms.

++ The 57°C sprinklers may be color-coded black.

High-temperature-rated sprinklers are intended for installation in close proximity to heat sources only, as referenced in ANSI/NFPA 13.

A four- to six-character Sprinkler Identification Number (SIN) is marked on each sprinkler to assist in identifying the sprinkler manufacturer, k-factor, deflector characteristic, pressure rating and thermal sensitivity.

Specific-application ESFR sprinklers have been investigated for specific service pressures, fire risks, building and commodity heights, and installation criteria which may differ from those referenced in ANSI/NFPA 13.

Sprinklers, Early Suppression Fast Response Certified for Canada (VNWH7)−*Continued*

Authorities Having Jurisdiction should be consulted regarding installation, spacing, temperature rating and approval of working plans before sprinklers are installed.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1767 (2003), "Early-Suppression Fast-Response Sprinklers."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Early Suppression Fast Response Sprinkler" (or "ESFR Spkr" or "SPEC APP ESFR").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, PRESSURE CERTIFIED FOR CANADA (VOXZ7)

USE

This category covers pressure-operated electric switches intended for use in connection with sprinkler equipment, water spray systems, and like protection systems, as a means of initiating electrical alarms upon flow of water in the equipment or for actuation of other auxiliary equipment.

Water flow may also be detected by alarm valves and water-flow indicators, which are covered under Valves, Alarm Certified for Canada (VPLX7) and Extinguishing System Attachments Certified for Canada (USQT7), respectively.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Alarm Pressure Switch for Sprinkler Systems" or "Supervisory Pressure Switch for Sprinkler Systems."

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S548, "Alarm Initiating and Supervisory Devices for Water Type Extinguishing Systems."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F – Fire Alarm Equipment

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, ALARM CERTIFIED FOR CANADA (VPLX7)

USE AND INSTALLATION

This category covers automatic alarm valves intended for use in automatic wet-pipe sprinkler systems. Valves may be installed without a retarding chamber when steady pressures exist and with a retarding chamber when variable supply pressures exist. Unless otherwise indicated

Valves, Alarm Certified for Canada (VPLX7)−*Continued*

in the individual Listings, these alarm valves may be installed either vertically or horizontally. These valves are provided with either a pressure switch (electric circuit closer) for initiating electrical alarms, or water motor and gong for mechanical alarms, or both.

These valves are provided by the manufacturer with all the necessary trim accessories (e.g., shutoff valves, drains, fittings) and assembly drawings. The valves are required to be installed as specified by the individual manufacturer's installation instructions.

Requirements for the installation and use of these valves are included in ANSI/NFPA 13, "Installation of Sprinkler Systems."

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C193, "Guide for the Investigation of Alarm Valves for Fire-Protection Service," and ULC/ORD-C753, "Guide for the Investigation of Alarm Accessories for Automatic Water-Supply Control Valves for Fire-Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Alarm Valve," "Retarding Chamber" or "Water Motor and Gong."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, DRY PIPE CERTIFIED FOR CANADA (VPZV7)

GENERAL

This category covers dry-pipe valves intended for use as an automatic means of controlling water flow to automatic dry-pipe sprinkler systems. These valves range in size from 1 in to 12 in.

This category also covers valves known as cold-weather valves and air-check valves, which are small-size dry-pipe valves for special uses.

The manufacturer provides the necessary trim accessories (e.g., shutoff valves, drains, fittings) and installation instructions. Accessories used in the trim, such as gate and check valves, are not specifically tested unless they have a specific effect on the operation of the valve. Accessories such as alarm devices, alarm-line strainers, etc., which are of importance to proper operation may be investigated as part of an alarm valve. See Valves, Alarm Certified for Canada (VPLX7).

The valves are required to be installed as specified by the manufacturer's installation instructions. Requirements for the installation and use of these valves are included in ANSI/NFPA 13, "Installation of Sprinkler Systems."

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C260, "Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dry Pipe Valve."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, TRIM AND DRAIN CERTIFIED FOR CANADA (VQGU7)

USE AND INSTALLATION

Valves, Trim and Drain Certified for Canada (VQGU7)−*Continued*

This category covers trim and drain valves, which consist of ball-, plug-, angle- or globe-type shutoff valves for use in air- or water-supply piping in conjunction with dry pipe, deluge or alarm valves on sprinkler systems. These valves are rated for a maximum pressure of 1200 kPa unless otherwise indicated in the individual certifications. These products are intended to be installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems."

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C258 (2003), "Shutoff Valves for Trim and Drain Purposes for Fire Protection Service."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drain Valve," "Trim Valve" or "Trim and Drain Valve."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOSE VALVES CERTIFIED FOR CANADA (VTSR7)

GENERAL

This category covers hose valves for working pressures not exceeding 1210 or 2075 kPa. They consist of angle-pattern and straightway-pattern valves intended for use on standpipes, fire pumps, and hydrants supplying water for fire-protection service.

Hose valves include the following patterns and sizes:

Angle (90 Degree) Patterns — For standpipes with inlet and outlet openings of the same size or with the inlet larger than the outlet. Openings have nominal diameters of 1 in. (25 mm), 1-1/2 in. (38 mm), 2-1/2 in. (63 mm) or 3 in. (76 mm).

Angle (90 and 120 Degree) Patterns — For wet-pipe sprinkler equipment with 1-in. inlets (25 mm) and 1-1/2-in. (38 mm) outlets.

Straightway Patterns — For fire pumps and hydrants with inlet and outlet openings of the same size, having nominal diameters of 2-1/2 in. (63 mm).

Straightway Patterns — For standpipes with inlet and outlet openings of the same size or with the inlet larger than the outlet. Openings have nominal diameters of 1 in. (25 mm), 1-1/2 in. (38 mm), 2-1/2 in. (63 mm) or 3 in. (76 mm).

Requirements for the installation and use of these valves are included in ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection," and ANSI/NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C668, "Guide for the Investigation of Hose Valves for Fire-Protection Service."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Hose Valve."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPRINKLER SYSTEM AND WATER SYSTEM DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VQNT7)

USE AND INSTALLATION

This category covers devices and equipment for use in sprinkler systems and water spray systems.

These devices and equipment are intended to be installed in compliance with NFPA 13, "Sprinkler Systems," NFPA 15, "Water Spray Systems for Fire Protection" and NFPA 16, "Foam-Water Sprinkler and Spray Systems." Authorities Having Jurisdiction should be consulted regarding use of these Listed devices and equipment before installation.

SWITCHES, PRESSURE FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VRBR7)

USE

This category covers pressure-operated switches intended for connection with sprinkler equipment, water-spray systems and like protection systems, as a means of initiating electrical alarms upon flow of water in the equipment or the actuation of other auxiliary equipment.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices for Use in Hazardous Locations Certified for Canada (VQNT7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pressure Switch for Use in Hazardous Locations."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STANDPIPE EQUIPMENT CERTIFIED FOR CANADA (VROZ7)

PRESSURE-REDUCING AND -RESTRICTING DEVICES CERTIFIED FOR CANADA (VUTX7)

USE AND INSTALLATION

This category covers devices intended for use in wet-pipe systems and intended to be installed in the supply piping of standpipe systems or at the hose outlets as a means of reducing existing high pressure in the piping system to a level that the fire hose nozzle can be managed by an operator.

Pressure-restricting devices are designed to reduce outlet pressures under flowing (residual) conditions only and are intended to be used in situations where the inlet pressure does not exceed 1200 kPa. Pressure-reducing devices are designed to reduce outlet pressures under both flowing (residual) and nonflowing (static) conditions. The type of device is indicated in the individual certifications.

These devices are intended to be installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," and ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," and maintained in accordance with ANSI/NFPA 25, "Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems," and the manufacturer's installation instructions. The manufacturer's instructions include a description of the performance characteristics of these devices under flowing (residual) and nonflowing (static) conditions.

Pressure-reducing or -restricting devices having a 1-1/2 NPS outlet are intended to be used in Class II standpipe systems, and devices having a 2-1/2 NPS outlet are intended for use in Class I or III standpipe systems.

Pressure-reducing and -Restricting Devices Certified for Canada (VUTX7)–*Continued*

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Valves intended for use in sprinkler systems are covered under Special System Water-control Valves, Pressure-reducing and Pressure-control Type Certified for Canada (VLMT7).

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standards used to investigate products in this category are ULC/ORD-C668, "Guide for the Investigation of Hose Valves for Fire Protection Service," and ANSI/UL 1468, "Direct Acting Pressure Reducing and Pressure Restricting Valves."

The following requirements from ANSI/UL 1468 supersede or are added to the applicable requirements in ULC/ORD-C668: ANSI/UL 1468 section or paragraph reference, 7.2, 8.1, 8.2, 9, 9A, 10.2, 17, 19, 20, 21, 22, 23, 27, 28, 30.1 e), f), 30.4, 30.5, 31.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Pressure Reducing Device," "Pressure Reducing Valve," "Pressure Restricting Device" or "Pressure Restricting Valve."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIC NEUTRALIZING EQUIPMENT CERTIFIED FOR CANADA (VWWZ7)

USE AND INSTALLATION

This category covers high-voltage power-supply units with or without static discharge bars, high-voltage ionizers and related products. This type of equipment is designed for individual installation on equipment where static charges are generated during operation, or as stand-alone units for direct installation in the field.

Due to the nature of these installations, high-voltage parts are necessarily exposed and cannot be completely shielded from contact.

Care should be taken to follow the instructions provided with the equipment regarding the installation of the static neutralizers, including proper grounding of the equipment, and operating personnel should be carefully constructed regarding its correct operation and maintenance.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate stand-alone products and products intended to be used with equipment other than Information Technology Equipment (ITE) are CAN/CSA-C22.2 No. 0.4, "Bonding and Grounding of Electrical Equipment," and CAN/CSA-C22.2 No. 187, "Electrostatic Air Cleaners." These products are identified for "general" use in the individual certifications.

The basic standard used to investigate products intended to be used with Information Technology Equipment (ITE) is CAN/CSA-C22.2 No. 950 / CAN/CSA-C22.2 No. 60950, "Safety of Information Technology Equipment." High-voltage parts that may be accessible after installation have been found to comply with requirements of LIMITED CURRENT CIRCUITS. High-voltage components are investigated using the applicable requirements in CAN/CSA-C22.2 No. 0.4, "Bonding and Grounding of Electrical Equipment," and CAN/CSA-C22.2 No. 187, "Electrostatic Air Cleaners." These products may be marked "ITE" and are identified for "ITE" use in the individual certifications. They are also suitable for general use.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Static Neutralizing Equipment," "Static Neutralizing Bar," "Static Eliminator" or "Static Eliminator Bar," or the name of the specific type of product as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIC NEUTRALIZING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VXDY7)

USE AND INSTALLATION

This category covers high-voltage power units and discharge bars designed for individual installation on equipment in hazardous locations where static charges are generated during operation.

Due to the nature of these installations, high-voltage parts are necessarily exposed and cannot be completely shielded from contact.

Certain products in this category are associated apparatus and intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous location.

Care should be taken to follow the instructions provided with the equipment regarding the installation of the static neutralizers, including proper grounding of the equipment. Operating personnel should be carefully instructed regarding its correct operation and maintenance.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ‘‘Static Neutralizing Equipment for Use in Hazardous Locations’’ or ‘‘Antistatic Bar for Use in Hazardous Locations,’’ or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATION OUTLETS CERTIFIED FOR CANADA (VXHT7)

USE AND INSTALLATION

This category covers station outlets intended for use in health care facilities for distribution of nonflammable medical gas in rigid piping systems or manufactured assemblies.

Each outlet is equipped with a female quick-coupler of the noninterchangeable type for the specified gas. Where the back body of a station outlet is shipped separately from the front body, the back body is marked with the statement ‘‘Assembly Consisting of Back Body [No.] Only For Use With [Listee’s Name] Front Body [No.].’’

RATINGS

The gas and working pressure of these station outlets are specified in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-Z305.5 (1986), ‘‘Medical Gas Terminal Units,’’ and/or CAN/CSA-Z9170-1 (2011), ‘‘Terminal Units for Medical Gas Pipeline Systems – Part 1: Terminal Units for Use with Compressed Medical Gases, Vacuum, and Anaesthetic Gas Scavenging Systems.’’

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ‘‘Station Outlet’’ or ‘‘Station Outlet for *.’’

* indicates the gas service

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPILL CONTAINMENT FOR STATIONARY LEAD-ACID BATTERY SYSTEMS CERTIFIED FOR CANADA (VXMB7)

GENERAL

This category covers spill containment for stationary lead-acid battery systems used in telecommunications battery rooms and similar locations. These systems are intended to provide a reliable means of containment for hazardous-material liquids in the event of electrolyte leakage from stationary lead-acid or similar battery systems.

INSTALLATION

These systems are field assembled and require complete written installation instructions to ensure proper assembly.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic requirements used to investigate products in this category are the containment requirements for electrolyte spill as outlined in 4.3.8 of CAN/CSA-C22.2 No. 60950-1 (2007), ‘‘Information Technology Equipment – Safety – Part 1: General Requirements.’’

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ‘‘Spill Containment for Stationary Lead-Acid Battery Systems,’’ or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRAINERS CERTIFIED FOR CANADA (VXYV7)

USE

This category covers strainers for use in the assembly of appliances or in piping handling the gases or liquids and at the pressures indicated in the individual certifications.

RELATED PRODUCTS

Strainers for use only by manufacturers in the assembly of oil burners are covered under Heating and Heating-Cooling Appliance Accessories Certified for Canada (LZZX7).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C331, ‘‘Strainers for Flammable Fluids and Anhydrous Ammonia.’’

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged or the Listing Mark on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ‘‘LISTED,’’ a control number, the product name ‘‘Strainer,’’ and the state-

ment "For Gasoline, * kPa max," "For Kerosene, * kPa max," "For Anhydrous Ammonia, * kPa max," "For LP-Gas, * kPa max," "For Anhydrous Ammonia and LP-Gas, * kPa max," or other flammable fluid and pressure designation as identified in the individual Listings. The statement "For Use only at Outlet of Flammable Liquid Dispensing Device Hose" is also included if the strainer is so restricted.

* Pressure rating not required if marked elsewhere on the strainer.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE-PROTECTIVE DEVICES CERTIFIED FOR CANADA (VZCA7)

GENERAL

This category covers surge-protective devices (SPDs) designed for repeated limiting of transient-voltage surges up to 60 Hz power circuits not exceeding 1000 V. SPDs are designated as follows:

Type 1 — Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including meter sockets and intended to be installed without an external overcurrent-protective device.

Type 2 — Permanently connected SPDs intended for installation on the load side of the service equipment overcurrent device, including SPDs located at the branch panel.

Type 3 — Point-of-utilization SPDs, installed at a minimum conductor length of 10 m (approximately 30 ft) from the electrical service panel to the point of utilization, e.g., cord-connected, direct-plug-in, receptacle-type and SPDs installed at the utilization equipment being protected. The distance (10 m) is exclusive of conductors provided with or used to attach SPDs.

PRODUCT MARKINGS

SPDs are marked with the following:

SPD Type designation, 1, 2 or 3.

Electrical ratings, including the operating voltage rating (volts), ac power frequency (Hz) and number of phases. For a two-port SPD, the ratings include the load current rating (amperes).

Voltage Protection Rating (VPR) in volts.

Nominal Discharge Current (I_n) Rating in amps or kA (for Type 1 and 2 SPDs).

Maximum Continuous Operating Voltage Rating (MCOV) in volts (for Type 1 and 2 SPDs).

Short-circuit Current Rating (SCCR) in amps or kA (for Type 1 and 2 SPDs).

PV SPDs are marked, "For Use in Photovoltaic Systems Only," or the equivalent.

SPDs investigated for general dc applications may also be marked, "Suitable for Use in Photovoltaic Systems."

FACTORS NOT INVESTIGATED

The effect of the surge protector on connected loads, the effect of the surge protector on harmonic distortion of the supply voltage, and the adequacy of the suppression level to protect connected equipment from damage due to transient-voltage surges has not been investigated.

RELATED PRODUCTS

Cord-connected SPDs employing ground-fault circuit interrupters are covered under Ground-fault Circuit Interrupters Certified for Canada (KCXS7).

Cord-connected and direct plug-in SPDs are not intended for use with medical, dental or health care facilities equipment.

Component SPDs, including discrete components as well as component assemblies, are covered under Surge-protective Devices Certified for Canada (VZCA8).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate Type 2 and 3 SPDs in this category is CSA-C22.2 No. 8 (1986), "Electromagnetic Interference (EMI) Filters," in addition to the requirements contained in CSA Electrical Notice No. 516, "Surge/Transient Voltage Suppressors" (dated 9-2-1986), and the applicable requirements for devices with varistors intended for surge suppression of connected loads in CSA-C22.2 No. 42 (2010), "General Use Receptacles, Attachment Plugs, and Similar Wiring Devices."

The basic standard used to investigate Type 1 SPDs intended for installation in accordance with Article 26-500 (Use and Location of Lightning Arresters) of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," is CAN/CSA-C233.1, "Gapless Metal Oxide Surge Arresters for Alternating

Current Systems," or IEEE C62.1 (1989), "IEEE Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protective Device" (or "SPD").

The Listing Mark for this category requires the use of a holographic label.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE PROTECTORS AND ISOLATORS FOR USE ON CATHODICALLY PROTECTED SYSTEMS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VZQO7)

GENERAL

This category covers surge protectors and isolators used to provide ac grounding and dc blocking for cathodic protection of underground pipelines and similar installations. They may also be used to minimize galvanic corrosion between structures of dissimilar metals.

These devices have been investigated for providing effective grounding-path characteristics and also for providing isolation of objectionable dc ground currents.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protector for Use in Hazardous Locations," "Overvoltage Protector for Use in Hazardous Locations" or "Polarization Cell Replacement Unit for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA EQUIPMENT CERTIFIED FOR CANADA (WABX7)

BLOWERS CERTIFIED FOR CANADA (WAGN7)

USE AND INSTALLATION

This category covers equipment intended to introduce pressurized air into spas and hot tubs to create a hydromassage effect. They are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These products are marked to indicate their suitability for use either indoors or outdoors (Type 3) or indoors only (Type 2). They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

Blowers Certified for Canada (WAGN7)−*Continued*

To avoid water contacting live electrical parts, these products are intended to be installed in accordance with the manufacturer's instructions and permanently mounted at least 304.8 mm (12 in.) above the overflow level of the spa or hot tub.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 113 (1984), "Fans and Ventilators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Blower," "Hot Tub Blower" or "Spa/Hot Tub Blower."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROLS CERTIFIED FOR CANADA (WAWU7)

USE

This category covers controllers incorporating timers, temperature-regulating equipment, etc., for control of equipment intended for use with swimming pools, hot tubs and spas. This category also covers control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools.

These products are marked to indicate their suitability for use either indoors or outdoors (type 3) or indoors only (type 2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1, "Spas, Hot Tubs and Associated Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Controller" or "Swimming Pool Controller," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES AND FORMING SHELLS CERTIFIED FOR CANADA (WBDT7)

USE

This category covers luminaires and forming shells for installation in accordance with Section 68 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

ACCESSORIES

This category also covers accessory devices and kits intended to be field installed for the purpose of modernizing a luminaire, such as to convert the luminaire from incandescent to LED technology. These accessories include instructions that identify the specific luminaire(s) for which the accessory is intended and that do not require special knowledge or skills beyond that normally required for user maintenance activities, such as lamp replacement. After installation of a certified accessory, the installed luminaire is expected to comply with the same requirements and perform in a comparable manner as a new luminaire, relative to safety risks.

REBUILT PRODUCTS

This category also covers dry-niche and wet-niche underwater luminaires for swimming pools that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt dry-niche and wet-niche underwater luminaires for swimming pools are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt dry-niche and wet-niche underwater luminaires for swimming pools are subject to the same requirements as new dry-niche and wet-niche underwater luminaires for swimming pools.

Luminaires and Forming Shells Certified for Canada (WBDT7)−*Continued*

PRODUCT MARKINGS

Luminaires investigated for operation only in contact with water are marked "SUBMERSE BEFORE LIGHTING" or the equivalent, and such marking is visible after installation. Additional markings for specific types of luminaires are described below.

PRODUCT TYPES AND INSTALLATION

Dry-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for permanent installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the center of the lens not more than 600 mm (23.6 in.) below the normal water level unless otherwise marked. These luminaires are designed for servicing from the rear in a passageway behind the pool or spa wall or, if mounted in the bottom of a pool or spa, in a tunnel underneath the pool or spa. The luminaire may include (1) a factory-installed length of flexible cord terminating in an attachment plug, and (2) an attachment-plug receptacle for connection of the branch-circuit conductors.

Wet-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the center of the lens not more than 600 mm (23.6 in.) below the normal water level unless otherwise marked. These luminaires have been investigated for installation in a permanently installed forming shell (luminaire housing) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper forming shells with which they have been investigated for use. These luminaires are provided with a factory installed, permanently attached flexible cord with an exposed length of not less than 2.4 m (8 ft). The flexible cord is confined in the forming shell by the luminaire and permits the luminaire to be removed from the forming shell and to be lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 2.4 m (8 ft) long cord will not permit luminaire removal from the forming shell and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the forming shell.

Forming Shells (Housing) for Wet-niche Underwater Luminaires for Swimming Pools and Spas — These are structures designed to support a mating wet-niche luminaire, for mounting in a pool structure. Forming shells are marked to indicate the luminaires with which the forming shells have been investigated for use.

Underwater Luminaires for Aboveground Storable Swimming Pools — These luminaires have been investigated for temporary installation only through or on the wall of an above ground storable pool (a pool constructed in such a manner that it may be readily disassembled for storage and reassembled to its original integrity). They include all three of the following factory-provided parts:

1. Lamp assembly for temporary installation on or through the wall of an above ground pool
2. An isolating-type power supply provided with a 0.9 m – 1.8 m (3-6 ft) power-supply cord for connection to a source of supply and for temporary mounting away from the pool (the remote assembly)
3. Jacketed flexible cord of not less than 7.6 m (25 ft) in length connecting the lamp assembly and the remote assembly

If not an integral part of the remote assembly, the power supply is intended to be connected to a receptacle protected by a Class A ground fault circuit interrupter.

These luminaires have been investigated for installation with the top of the lens not less than 200 mm (8 in.) below the top of the pool. A hole through the pool wall may be required for luminaire installation. Unless otherwise indicated in the luminaire's installation instructions, the luminaire design has been investigated for the lower edge of any hole that a luminaire installer must cut in the pool wall to be no more than 360 mm (14 in.) below the top of the pool wall. The pool wall manufacturer may provide, at a greater depth, a properly sized hole or a reinforced wall section designed for field-cutting a properly sized hole for a luminaire or plumbing fitting. Unless otherwise marked for a greater maximum installation depth, these luminaires have been investigated for installation in

Luminaires and Forming Shells Certified for Canada (WBDT7)−*Continued*

such a hole with the center of the lens not more than 600 mm (23.6 inches) below the normal water level and only where the pool installation instructions provide for the deeper hole placement and usage.

Underwater Luminaires for Aboveground Nonstorable Swimming Pools — These luminaires have been investigated for permanent installation through or on the wall of an aboveground nonstorable pool. The information provided above for underwater luminaires for aboveground storable swimming pools regarding installation depth and using an existing hole or cutting a new hole for installation also applies to underwater luminaires for aboveground nonstorable swimming pools.

Convertible Underwater Luminaires for Aboveground Swimming Pools — These luminaires are initially configured as an underwater luminaire for aboveground storable swimming pool for use as described above. They include provisions for the one-time field conversion of the luminaire to an underwater luminaire for aboveground nonstorable swimming pool for use as described above. Once converted, these luminaires are not suitable for being modified back to their original configuration.

Fiber Optic Luminaires for Swimming Pools and Spas — These luminaires consist of a lamp/electrical enclosure that has been investigated for permanent mounting not less than 1.5 m (5 ft) from the pool or spa wall and a fiber optic element and associated fittings to transmit the light to the pool or spa. The lamp/electrical enclosure has been investigated for installation above the level at which water splashed from the pool or spa or from another source may collect.

SUPPLY-CIRCUIT CURRENT RATING

An underwater luminaire for aboveground storable swimming pools has been investigated for connection to the branch circuit specified in the CEC for receptacles having a blade configuration corresponding to the blade configuration of the luminaire attachment plug. For all other luminaires, unless marked to identify a permitted greater or required lower maximum supply-circuit current rating, a luminaire with a voltage and current rating shown in the table below has been investigated for installation on a supply circuit rated not more than as specified in the table. A luminaire with a voltage or current rating not covered by the table is marked to identify the maximum supply-circuit current rating for its installation.

Maximum Current Rating for Supply Circuit (Except as Specified in Preceding Paragraph)

Luminaire Voltage Rating	Luminaire Current Rating	Max Current Rating for Luminaire Supply Circuit
15 V ac or less	25 A or less	25 A
110 V ac – 120 V ac	16 A or less	20 A
110 V ac – 120 V ac	More than 16 A, not more than 24 A	30 A

RELATED PRODUCTS

See Submersible Luminaires Certified for Canada (IFEV7) for underwater luminaires intended for use in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate wet-niche swimming pool luminaires, forming shells and dry-niche swimming pool luminaires in this category is CAN/CSA-C22.2 No. 89, "Swimming-Pool Luminaires, Submersible Luminaires and Accessories."

The basic standard used to investigate luminaires for aboveground swimming pools and spas is CSA-C22.2 No. 9.0, "General Requirements for Luminaires," including the requirements contained in CSA Technical Information Letter No. B-44, "Interim Certification Requirements for Permanently Connected, Cord-Connected and Direct Plug-In Lighting Systems Incorporating Nicheless Luminaire Assemblies that Employ Extra-Low Voltage Incandescent Lamps for Use in Pools."

The basic standards used to investigate fiber optic luminaires for swimming pools and spas are CSA-C22.2 No. 9.0 and CAN/CSA-C22.2 No. 218.1, "Spas, Hot Tubs and Associated Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate:

- "Dry-niche Underwater Luminaire for Swimming Pool"
- "Rebuilt Dry-niche Underwater Luminaire for Swimming Pool"
- "Wet-niche Underwater Luminaire for Swimming Pool"

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS CERTIFIED FOR CANADA (WBRR7)

USE

This category covers heaters intended for permanent installation in or adjacent to swimming pools or spas in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These products have not been investigated for outdoor use unless they are marked "For Outdoor Use," or equivalent, in which case they are acceptable for both outdoor and indoor use.

RELATED PRODUCTS

Heaters intended for use with hydromassage bathtubs are covered under Hydromassage Bathtubs Certified for Canada (NCHX7).

Heat-pump-type units are covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA B140.12 (1976), "Oil-Burning Equipment: Service Water Heaters for Domestic Hot Water, Space Heating, and Swimming Pools," and CSA-C22.2 No. 64 (1991), "Household Cooking and Liquid-Heating Appliances."

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Heater" or "Spa Heater."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOT TUB AND SPA EQUIPMENT ASSEMBLIES CERTIFIED FOR CANADA (WBYQ7)

USE AND INSTALLATION

This category covers equipment assemblies intended for use with non-self-contained spas and hot tubs, rated 250 V or less, for household or commercial use. These products are marked to indicate their suitability for use either indoors or outdoors (Type 3) or indoors only (Type 2).

This category also covers equipment assemblies that do not contain a water heater and do not contain a water temperature-regulating control or a water temperature-limiting control. A water heater, a temperature-regulating control and a temperature-limiting control should be provided in the final installation and their adequacy determined by the Authority Having Jurisdiction.

Equipment assemblies are prepackaged combinations of various components, such as pumps, filters, heaters, blowers, lights and controls, and are designed for use with field-supplied tubs. Equipment assemblies are designed for installation and use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Equipment assemblies should be installed at least 1.5 m from the inside walls of a spa or hot tub and be connected by nonmetallic pipe only.

Hot Tub and Spa Equipment Assemblies Certified for Canada (WBYQ7)−*Continued*

Equipment assemblies have not been investigated for below-grade installation.

Equipment assemblies have not been investigated for use within an outer enclosure or under the skirt of a spa or hot tub unless so marked.

Equipment assemblies that contain a gas-fired water heater have not been investigated for indoor use, for use within an outer enclosure, or for use under the skirt of a spa or hot tub unless so marked.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1 (1989), ''Spas, Hot Tubs, and Associated Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Equipment Assembly for Spa/Hot Tub,'' ''Hot Tub Equipment Assembly'' or ''Spa Equipment Assembly.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DECK BOXES CERTIFIED FOR CANADA (WCEZ7)

USE AND INSTALLATION

This category covers deck boxes (also known as swimming pool junction boxes) intended for direct conduit connection to the forming shells of wet-niche luminaires for pools as described in Section 68 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

Rule 68-000 of the CEC considers a pool to be the following:

1. Permanently installed and storable swimming pools
2. Hydromassage bathtubs
3. Spas and hot tubs
4. Wading pools
5. Baptismal pools
6. Decorative pools

Deck boxes have been investigated for indoor and outdoor installation.

Deck boxes are intended for installation above the normal water level of the pool, with the top of the deck box at or above the finished level of the pool deck, and located in such a manner that any water on the deck will drain away from the deck box.

RELATED PRODUCTS

See Luminaires and Forming Shells Certified for Canada (WBDT7) and Submersible Luminaires Certified for Canada (IFEV7) for wet-niche luminaires intended for use underwater in pools and fountains, respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 89 (1976), ''Swimming-Pool Luminaires, Submersible Luminaires and Accessories,'' and Section 68, ''Pools, Tubs, and Spas,'' of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Deck Box.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OZONE GENERATORS CERTIFIED FOR CANADA (WCKA7)

USE AND INSTALLATION

This category covers ozone generators rated 600 V or less, intended for use in the treatment of nonpotable water in swimming pools, and in spas and hot tubs of other than the self-contained type. They have been investigated with respect to risk of electric shock, fire and mechanical injury only.

These products are marked to indicate their suitability for use either indoors or outdoors (marked with ''CSA enclosure 3'') or indoors only (marked with ''CSA enclosure 2'').

Ozone generators involve features of installation and use not ordinarily present in electrical utilization equipment. Such features are covered in the manufacturer's installation instructions. The installation is intended to be in accordance with the manufacturer's instructions furnished with the equipment and the requirements of the Authority Having Jurisdiction.

FACTORS NOT INVESTIGATED

Compliance with any applicable Canadian regulations governing the control of ozone emission from ozone generators under conditions of normal and abnormal operation has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1 (1989), ''Spas, Hot Tubs, and Associated Equipment.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

OZONE GENERATOR
IN ACCORDANCE WITH CANADIAN STANDARDS ASSOCIATION'S STANDARD NO. CAN/CSA C22.2 NO. 218.1-M89 WITH RESPECT TO RISKS OF ELECTRIC SHOCK, FIRE AND MECHANICAL INJURY ONLY
Control No.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS CERTIFIED FOR CANADA (WCSX7)

GENERAL

This category covers pumps for circulating the water in swimming pools, hot tubs and spas. These products are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These products are marked for outdoor (weatherproof) or indoor (dripproof) use.

Pumps investigated for permanently installed pools are so identified and are additionally marked ''Insulated Wet End Pump.'' Permanently installed pool pumps are intended to be permanently connected to the water circulation system and are permanently wired. Permanently installed pool pumps are provided with an accessible pressure-wire connector for equipotential bonding.

Cord-and-plug connected poolside pumps (storable pool pumps) are intended to be connected to a water circulation system constructed so that the pump may be readily disassembled from the system for storage and future reassembly to its original integrity. Cord-and-plug-connected poolside pumps (storable pool pumps) are provided with a minimum 25 ft (7.62 m) nondetachable power-supply cord terminating in a grounding-type attachment plug, are double insulated, have no accessible grounded metal parts, have inaccessible noncurrent-carrying metal parts connected to the grounding conductor of the power-supply cord, and do not have an equipotential bonding connector.

These pumps may be provided with integral filters. The suitability of the filters to clean water has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 108, ''Liquid Pumps.''

UL MARK

Pumps Certified for Canada (WCSX7)−*Continued*

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Swimming Pool Pump,'' ''Spa Pump'' or ''Swimming Pool or Spa Pump,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SELF-CONTAINED SPAS CERTIFIED FOR CANADA (WCZW7)

USE AND INSTALLATION

This category covers self-contained spas for aboveground use and for household or commercial use. These spas are not designed or intended to have the water drained after each use. They are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

A self-contained spa is a continuous-duty appliance in which all control, water-heating and water-circulating equipment is an integral part of the product, located entirely under the spa skirt.

Self-contained spas may be provided with electric or gas heaters. Spas with gas heaters are intended for permanent wiring and permanent installation, and are intended for outdoor use only.

These products are marked to indicate their suitability for use with either indoors or outdoors (type 3) or indoors only (type 2).

Each spa is provided with a marking on the wiring diagram in the field-wiring compartment or in the installation instructions or on a separate configuration sheet, to identify the major components of the spa when manufactured. The configuration sheet and the installation instructions are intended to be available during installation and inspection.

Self-contained spas may be shipped completely assembled or in knockdown form.

Knockdown spas are packaged by major component in multiple cartons to aid in shipping. They consist of a completely assembled and plumbed tub and an equipment package. The skirt may be attached to the tub or it may be provided in prefabricated sections for assembly in the field. The equipment package is completely assembled, pre-wired and plumbed. Connections are made by union fittings or similar quick-disconnect plumbing that does not require tools or special materials. All cartons used to ship a knockdown spa are marked to indicate the contents, the spa model, and the total number of required cartons.

RELATED PRODUCTS

Hydromassage bathtubs are covered under Hydromassage Bathtubs Certified for Canada (NCHX7).

Factory-made assemblies of pumps, heaters, blowers, lights and controls intended for use with field-supplied hot tubs and spas are covered under Hot Tub and Spa Equipment Assemblies Certified for Canada (WBYQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1 (1989), ''Spas, Hot Tubs, and Associated Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Self Contained Spa.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA COVER OPERATORS, ELECTRIC CERTIFIED FOR CANADA (WDDJ7)

USE AND INSTALLATION

Swimming Pool and Spa Cover Operators, Electric Certified for Canada (WDDJ7)−*Continued*

This category covers electrically driven cover operators intended for use with swimming pools and spas, together with controls for use with such operators. The cover operators generally consist of a motor-driven apparatus used to move the covering material. These operators are intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' These products are marked to indicate their suitability for both indoor and outdoor (type 3) use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1 (1989), ''Spas, Hot Tubs, and Associated Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Swimming Pool Cover Operator,'' ''Spa Cover Operator'' or ''Pool Cover Operator.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA TRANSFORMERS CERTIFIED FOR CANADA (WDGV7)

USE

This category covers enclosed transformers intended for use in residential or commercial spas, hydromassage bathtubs, swimming pools, or other products that involve immersed persons. Spas and hydromassage bathtubs are intended for use in unclassified locations. They are intended to be permanently connected to a plumbing system and building structure, and permanently installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' specifically:

- Permanent connection to a single- or three-phase branch circuit rated 150 V or less to ground; or
- Connection by means of a factory-installed power-supply cord having a 15 A 125 V attachment-plug cap.

These transformers provide either one level or two levels of protection (electrical isolation) in accordance with CSA-C22.2 No. 218.1, ''Spas, Hot Tubs, and Associated Equipment,'' and CAN/CSA-C22.2 No. 218.2, ''Hydromassage Bathtub Appliances.''

These products are provided with a power-supply cord or have provisions for conduit connection to the branch-circuit supply. Transformers not provided with a power-supply cord are provided with leads with a length of 150 mm or more and are not smaller than 18 AWG. Wire connectors for wire terminations comply with the requirements in CAN/CSA-C22.2 No. 65, ''Wire Connectors.''

These products have not been investigated for outdoor use, unless marked ''For Outdoor Use'' or equivalent, in which case they are acceptable for both outdoor and indoor use.

PRODUCT MARKINGS

These transformers are marked with:

1. The primary voltage(s), and frequency (if other than 60 Hz)
2. The number of phases, if other than single-phase
3. All secondary voltages
4. The secondary capacity in amperes or volt-amperes

Special-purpose enclosures, such as drip-tight, weatherproof, water-tight or dust-tight, or enclosures suitable for outdoors are marked as required by CAN/CSA-C22.2 No. 94.2, ''Enclosures for Electrical Equipment, Environmental Considerations.''

RELATED PRODUCTS

See General-purpose Transformers Certified for Canada (XPTQ7) and Transformers, Class 2 Certified for Canada (XOKV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

Swimming Pool and Spa Transformers Certified for Canada (WDGV7)−*Continued*

The basic standards used to investigate products in this category are CSA-C22.2 No. 218.1 (1989), ''Spas, Hot Tubs, and Associated Equipment,'' and CAN/CSA-C22.2 No. 218.2 (1993), ''Hydromassage Bathtub Appliances.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Fountain Transformer,'' ''Swimming Pool Transformer,'' ''Spa Transformer'' or ''Fountain, Swimming Pool or Spa Transformer.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER TREATMENT EQUIPMENT CERTIFIED FOR CANADA (WDLC7)

USE AND INSTALLATION

This category covers chlorinators, brominators, ozone generators, ion generators, and similar equipment intended to sanitize water in pools, spas and hot tubs. This category also covers equipment designed to monitor water chemistry in pools, spas and hot tubs, with or without the capability of adding chemicals to the water to adjust water chemistry. These products are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These products are marked to indicate their suitability for use either indoors or outdoors (type 3) or indoors only (type 2). They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

FACTORS NOT INVESTIGATED

The ability of this equipment to sanitize pool and spa water has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 108 (1989), ''Liquid Pumps.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Swimming Pool Chlorinator,'' ''Spa Chlorinator'' or ''Swimming Pool and Spa Chlorinator,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA EQUIPMENT, MISCELLANEOUS CERTIFIED FOR CANADA (WDUT7)

GENERAL

This category covers accessory equipment for swimming pools, hot tubs and spas, such as valves, pool cover operators, and pool cover drain pumps. These products are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These products are marked to indicate their suitability for use either indoors or outdoors (weatherproof, Type 3) or indoors only (drip-proof, Type 2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

Swimming Pool and Spa Equipment, Miscellaneous Certified for Canada (WDUT7)−*Continued*

The basic standards used to investigate products in this category are CSA-C22.2 No. 218.1, ''Spas, Hot Tubs, and Associated Equipment,'' and C22.2 (Series) standards applicable to the type of accessory.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Pool Cover Operator,'' ''Pool Valve Actuator'' or ''Pool Freeze Protector,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SUCTION FITTINGS FOR SWIMMING POOLS, WADING POOLS, SPAS AND HOT TUBS CERTIFIED FOR CANADA (WEBS7)

USE AND INSTALLATION

This category covers suction fittings intended for use in swimming pool, wading pool, spa, hot tub, and hydromassage (whirlpool) bathtub installations.

These fittings have been investigated for resistance to hair, body, finger and limb entrapment.

Suction fittings have been investigated for both indoor and outdoor use unless marked for indoor use only. They are intended to be installed following the instructions that are packaged with each fitting.

Self-contained spa fittings are intended only for installation in self-contained, factory-produced spas. They are intended for plumbing with at least two fittings per pump.

RATINGS

Each suction fitting is marked with a waterflow rate in gallons per minute. This rate should equal or exceed the maximum flow rate of the pump(s) used in the water circulating system.

PRODUCT MARKINGS

These fittings are marked with the intended installation position: ''Wall Only,'' ''Floor Only'' or ''Wall or Floor.'' They may additionally be marked with the statement, ''For Single or Multiple Drain Use,'' ''For Single Drain Use'' or ''For Multiple Drain Use Only.''

Self-contained spa fittings are marked ''For Use in Self-Contained Factory Manufactured Spas Only'' and ''For Multiple Outlet Use Only.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/APSP-16 (2011), ''Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs,'' CSA B125 (1993), ''Plumbing Fittings,'' and CSA-C22.2 No. 218.2 (1993), ''Hydromassage Bathtub Appliances.''

Note: Fittings complying with ANSI/APSP-16 are also considered to comply with ANSI/ASME A112.19.8b (2009), ''Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Swimming Pool Suction Fitting'' (or ''Sw Pool Sctn Ftn'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHBOARDS CERTIFIED FOR CANADA (WEIR7)

SWITCHBOARDS, DEAD-FRONT CERTIFIED FOR CANADA (WEVZ7)

GENERAL

This category covers dead-front switchboards rated 600 V or less. Switchboards are large single panels, structural frames or assemblies of panels or structural frames on which may be mounted, on the face or back or both: switches, overcurrent, and other protective devices, buses, and instruments. Switchboards may be accessible from the rear as well as from the front and are not intended to be installed in cabinets.

A **switchboard section** is that portion of a switchboard which is prevented by the structural framework from being physically separated into smaller units. Framework that is welded or joined with steel rivets over 6.4 mm in diameter is considered to constitute a single section.

A **switchboard enclosure** is intended to enclose one or more switchboard sections or switchboard interiors, or is intended to provide auxiliary wiring space for an adjacent switchboard section.

A **switchboard interior** is intended to be field installed in a switchboard enclosure to become the equivalent of a dead-front switchboard section.

USE, INSTALLATION AND RATINGS

Electrical Ratings

Each switchboard section is marked with the current rating of the supply bus. Within a group of sections, a through or splice bus is not required to be marked with its rating. The ampacity of the through bus and supply bus supplying the next section may be reduced but should not be less than the supply rating of the next section. The current rating of the through and splice bus in the last section of a group (which might be used in the future to supply an additional section) is shown in the switchboard section marking if the through or splice bus rating is less than the supply rating of that section. The current rating of the section bus is also included in the marking. The adequacy of the supply, through, splice, or section bus current rating with respect to the calculated load current using the appropriate diversity factors noted in Section 8 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), can only be determined by the Authority Having Jurisdiction (AHJ) at the final installation.

Short-circuit Ratings

Dead-front switchboard sections or interiors are marked with their short-circuit-current rating in rms symmetrical short-circuit current rating in amps. The marking states that short-circuit ratings are limited to the lowest short-circuit rating of (1) any switchboard section connected in series, or (2) the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

Service Equipment

The marking "Suitable for Use as Service Equipment" appears on each switchboard section or switchboard interior containing one or more service disconnects optionally intended for use at a service.

A switchboard section or interior marked for use at services as indicated above may also be used to provide the main control and means of cutoff for a separately derived system or a separate building.

Some switchboard sections or interiors incorporate neutrals factory bonded to the enclosure. Such units are marked "Suitable only for Use as Service Equipment."

Ground-fault Protection

Some switchboard sections may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking such as on a wiring diagram or on the relaying equipment. Instructions are provided for on-site testing of the ground-fault protection at the time of installation.

Overcurrent Protection

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches other than fused power circuit devices should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU7) and fused power circuit devices (see IYSR7) used in switchboards are suitable for continuous use at 100% of their rating.

Field-installed Equipment

A switchboard section or interior may have provision for field installation of additional suitable equipment such as branch, splice or through buses, meter socket bases, circuit breakers, switches, panelboards, and terminal connectors. The switchboard section or interior is marked with the name or trademark of the manufacturer and the catalog number or

Switchboards, Dead-front Certified for Canada (WEVZ7)−*Continued*

equivalent of such equipment that is intended to be installed in the field. A switchboard section or interior may also have provision for utility-installed current transformers and metering equipment.

Installation

A switchboard section or enclosure investigated to determine that it is rainproof is marked "Type 3R" and may also be marked "Rainproof."

A section or enclosure suitable for connection to a busway is marked to indicate the manufacturer and type of busway.

The acceptability of conduit stubs serving unit sections, with respect to wiring space and spacing from live parts, can be determined only by the AHJ at the final installation.

In some cases, field drilling of holes in the ground bus may be needed to add additional grounding terminals.

Field Terminations

Dead-front switchboard sections covered under this category are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Aluminum conductors may be used if such marking is independent of any marking on terminal connectors and if it appears on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Tables 2 and 4 of the CEC. Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

RELATED PRODUCTS

Single panels or groups of panel units designed for assembly in the form of a single panel, including buses and automatic overcurrent devices, and equipped with or without switches for the control of light, heat, or power circuits; designed to be placed in a cabinet or cutout box placed in or against a wall, partition, or other support; and accessible only from the front are covered under Panelboards Certified for Canada (QEUY7).

Theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards are covered under Switchboards, Special Purpose Certified for Canada (WFJX7).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches Certified for Canada (WPTZ7).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels Certified for Canada (NITW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 244, "Switchboards."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dead Front Switchboard Section," "Switchboard Interior" or "Switchboard Enclosure." The Listing Mark for dead-front switchboard sections includes the statement "____ of ____." The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchboard. The second space is stamped with the total number of sections in the switchboard (including sections not bearing a UL Listing Mark).

The Listing Mark covers only the section so marked; it does not cover other sections included in the complete switchboard.

****

SWITCHBOARDS, SPECIAL PURPOSE CERTIFIED FOR CANADA (WFJX7)

USE, INSTALLATION AND MARKINGS

This category covers theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards rated 600 V or less.

These switchboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum

Switchboards, Special Purpose Certified for Canada (WFJX7)−*Continued*

conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

Short-circuit Rating

Special purpose switchboards are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In the case of rack-type theater-dimming switchboards with removable modules, the rating may depend on the use of specific dimming modules. These dimming modules are marked on the switchboard. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

Duty Rating

Theater-dimming switchboards have been investigated to operate continuously at 100% of their marked input rating.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and CSA-C22.2 No. 29, "Panelboards and Enclosed Panelboards."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Switchboard," "Theater Switchboard" or "Incandescent Lighting Switchboard," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES CERTIFIED FOR CANADA (WFXV7)

PULLOUT SWITCHES, DETACHABLE TYPE CERTIFIED FOR CANADA (WGEU7)

USE AND INSTALLATION

This category covers enclosed switches having detachable pullout heads, with or without fuseholders, for cartridge fuses. These switches may be enclosed or nonenclosed.

Nonenclosed switches are intended for use in other assemblies, such as panelboards or the like.

Enclosed pullout switches that are rain-tight or rainproof are marked accordingly.

These pullout switches are intended for use with copper conductors unless marked to indicate that certain terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on the terminal connectors and appear on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

RATINGS

Ratings of enclosed or nonenclosed pullout switches are limited to 600 V or less, 400 A or less.

Pullout Switches, Detachable Type Certified for Canada (WGEU7)−*Continued*

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused pullout switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits."

Pullout switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Pullout switches with amp ratings only are suitable for general use only.

Pullout switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not intended for use as motor controllers.

Motor-circuit pullout switches are intended for use only in motor circuits and are marked "Enclosed Motor-Circuit Pullout Switch."

Horsepower ratings are associated with particular voltages and number of phases. A horsepower-rated switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some pullout switches have dual horsepower ratings, the larger of which is based on the use of fuses with time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches marked "Suitable For Use On A Circuit Capable of Delivering Not More Than ___ Amps, RMS, Symmetrical, ___ Volts Maximum: Use Class ___ Fuses" have been investigated for the additional rating indicated.

RELATED PRODUCTS

Products with similar uses are covered under Switches, Enclosed Certified for Canada (WIAX7), Motor Controllers, Manual Certified for Canada (NLRV7), Switches, Dead-front Certified for Canada (WHXS7) and Switches, Open Type Certified for Canada (WHTY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 29, "Panelboards and Enclosed Panelboards."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Pullout Switch," "Enclosed Pullout Switch," "Motor Circuit Pullout Switch" or "Enclosed Motor Circuit Pullout Switch."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, AUTOMATIC CERTIFIED FOR CANADA (WGLT7)

Switches, Clock Operated Certified for Canada (WGZR7)

GENERAL

This category covers clock-operated switches. They may be marked with the following:

- Manufacturer's name, trademark or identifier (visible after installation)
- Model number (visible after installation)
- Factory code (if the device is produced at more than one location)
- Electrical ratings, including: volts, hertz, amps, load type (visible after installation)
  - Lamp load maximum ratings are indicated or is one-tenth of the full amp rating
- Electrical loads, when applicable, are indicated as follows:
  - "Tungsten " (or "T") for tungsten-filament-lamp loads
  - "Resistance only" (or "R") for noninductive resistance loads
  - "Inductive" (or "H") for inductive loads, such as IT equipment and appliances
  - "Pilot duty" (or "PD") for magnet-coil loads
- Clock-operated switches marked "Replace with Type HPN cord only" are suitably rated for SP-2 replacement cord

Permanently connected devices may be marked as follows:

Switches, Clock Operated Certified for Canada (WGZR7)−*Continued*

Terminals are identified so that it is obvious how to connect the conductors or correspond to the wiring diagram (provided with the device).

"For supply connections, use ____ AWG or larger wires suitable for at least ____°C (____°F)," or equivalent. If no wire size is provided, 14 AWG was used; if no temperature is provided, 60°C wire was used.

"AL" or "Use aluminum wire only" identifies terminals for aluminum supply wire only.

"CU" or "Use copper wire only" identifies terminals for copper supply wire only.

"CU-AL" or "AL-CU" or "Use copper or aluminum wire" identifies terminals for copper or aluminum supply wire.

"Use copper wire only except at terminals ____" identifies a specific terminal wired to a conductor other than copper. Identification of specific terminals is required.

RATINGS

Clock-operated switches are rated for ac, dc, or both, and may be rated up to 600 V.

RELATED PRODUCTS

Appliance switches investigated to CAN/CSA-C22.2 No. 61058-1, "Switches for Appliances – Part 1: General Requirements," and special-use switches investigated to CSA-C22.2 No. 55, "Special Use Switches," are covered under Switches, Appliance and Special Use Certified for Canada (WOYR8).

General-use snap switches or flush-mounted switches installed in a wiring system per CAN/CSA-C22.1, "Canadian Electrical Code, Part I," are covered under Switches, Flush Certified for Canada (WMUZ7).

Manual motor controllers are covered under Motor Controllers, Manual Certified for Canada (NLRV7).

Switches for industrial applications are covered under Power Circuit and Motor-mounted Apparatus Certified for Canada (NMTR7).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric Certified for Canada (WJCT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and CAN/CSA-C22.2 No. 177, "Clock-Operated Switches."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clock Operated Switch" or "Timer Switch."

The Listing Mark for this category requires the use of a holographic label.

****

SWITCHES, OPEN TYPE CERTIFIED FOR CANADA (WHTY7)

USE AND INSTALLATION

This category covers open-type switches without an enclosure that are provided with a handle operator. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are intended for installation in a panelboard, switchboard, motor control center, industrial control panel or the like, or for installation in a certified cabinet or a cutout box in accordance with the switch installation instructions or without an enclosure where acceptable.

These switches are intended to be mounted in enclosures such that they are manually operable by means of an external handle without opening the enclosure. Externally operated handles mounted to the sidewall of an enclosure or through the cover of an enclosure are intended to be installed in accordance with the switch installation instructions.

These switches are intended or use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in

Switches, Open Type Certified for Canada (WHTY7)−*Continued*

Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

RATINGS

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits."

Ratings of certified open-type switches are limited to 4000 A, 500 hp, 600 V. Open-type switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked "For Isolating Use Only – Do Not Open Under Load."

Open-type switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Open-type switches with ampere ratings only are intended for general use only. Open-type motor circuit switches are intended for use only in motor circuits and are marked "Motor-Circuit Switch."

Open-type switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Ratings of certified open-type motor circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some open-type switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

RELATED PRODUCTS

Products with similar uses are covered under Switches, Enclosed Certified for Canada (WIAX7), Switches, Molded Case Certified for Canada (WJAZ7), Motor Controllers, Manual Certified for Canada (NLRV7), Pull-out Switches, Detachable Type Certified for Canada (WGEU7) and Switches, Dead-front Certified for Canada (WHXS7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 4 (2004), "Enclosed and Dead-Front Switches."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Open Type Switch" or "Open Type Motor-Circuit Switch."

****

SWITCHES, DEAD-FRONT CERTIFIED FOR CANADA (WHXS7)

USE AND INSTALLATION

This category covers dead-front switches having all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are manually operable by means of external handles without opening the enclosure or are hinged pullout switches.

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits."

These dead-front switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG,

Switches, Dead-front Certified for Canada (WHXS7)−*Continued*

and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

RATINGS

Ratings of certified dead-front switches are limited to 4000 A, 500 hp, 600 V. Dead-front switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked "For Isolating Use Only – Do Not Open Under Load."

Dead-front switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Dead-front switches with ampere ratings only are intended for general use only.

Some hinged pullout switches achieve an "off" position only by leaving the door open. These switches are restricted to use only as a single main in a panelboard or the like and are rated not higher than 200 A and 250 V.

Dead-front switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Enclosed motor-circuit switches are intended for use only in motor circuits and are marked "Motor-circuit Switch."

Ratings of certified dead-front motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some dead-front switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

SWITCHES, ENCLOSED CERTIFIED FOR CANADA (WIAX7)

USE AND INSTALLATION

This category covers enclosed switches and enclosed motor-circuit switches that are externally operable without opening the enclosure. These switches may be provided with fuseholders for plug- or cartridge-type fuses and may be electrically tripped.

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

RATINGS

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Switches, Enclosed Certified for Canada (WIAX7)−*Continued*

Enclosed switches identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Fused enclosed switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits."

Ratings of certified enclosed switches are limited to 4000 A, 500 hp, 600 V. Enclosed switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 V at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked "For Isolating Use Only – Do Not Open Under Load."

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use. Enclosed motor-circuit switches are intended for use only in motor circuits and are marked "Motor-Circuit Switch."

Enclosed switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Ratings of certified enclosed motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some enclosed switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

Enclosed switches may also be suitable for use as service switches. Such switches are marked "Suitable for Use as Service Equipment."

RELATED PRODUCTS

Products with similar uses are covered under Switches, Dead-Front Certified for Canada (WHXS7), Motor Controllers, Manual Certified for Canada (NLRV7), Pullout Switches, Detachable Type Certified for Canada (WGEU7) and Switches, Open Type Certified for Canada (WHTY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 4 (2004), "Enclosed and Dead-Front Switches."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Switch" or "Enclosed Motor-Circuit Switch."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, LOAD INTERRUPTER AND ISOLATING, OVER 600 VOLTS CERTIFIED FOR CANADA (WIQG7)

GENERAL

This category covers enclosed medium-voltage load-interrupter and isolating (disconnect) switches and switchgear having nominal ac voltage ratings above 600 V through 46 kV. These switches and switchgear are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Load-interrupter switches are rated up to 3000 A and may be provided with or without fuses. Switches with no load-current-interrupting rating are isolating only. These switches are available in either stationary or draw-out versions.

These switches are generally three-pole devices; however, some switches may be one- or two-pole.

Enclosures may be either ventilated or nonventilated.

An enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R."

Unless specifically marked otherwise, this equipment is intended for use on three-phase circuits where the nominal voltage to ground is 0.58 times the line-to-line voltage.

Switches, Load Interrupter and Isolating, Over 600 Volts Certified for Canada (WIQG7)−*Continued*

Each switch or section containing a switch is marked with the rated maximum voltage, rated impulse withstand voltage, rated low-frequency withstand voltage, rated frequency, rated continuous current, momentary current rating and short-time current rating. A load-interrupter switch is also marked with a load-current-interrupting rating.

Load-interrupter switches are marked with a fault close rating. They should not be used on circuits having available fault currents in excess of the fault close rating. When provided with some fuses it may be necessary for the supply circuit to have an available fault current that is less than the fault close rating of the switch due to the limited interrupting ability of the fuses.

Switches provided with fuseholders are marked to indicate the maximum fuse ratings, and may also be marked to indicate the specific type fuse to be used.

This equipment may consist of a single freestanding vertical section or it may consist of several abutting vertical sections intended for interconnection by a horizontal bus. When provided with a horizontal bus, each vertical section is marked with the ampacity of the horizontal bus in amps. Switches intended to be part of such a line-up are provided with a "___ of ___" marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing a UL Listing Mark) and the first blank indicates the position (reading from left to right) of the vertical section bearing the marking. An enclosure which is part of a line-up may be provided as an enclosure only, without switches or bus. These enclosures are intended for the addition of control equipment in the field and are marked as a metal-enclosed switchgear enclosure.

This equipment is investigated for use with bus or 90°C insulated wire at 90°C ampacity.

ARC-RESISTANT LOAD-INTERRUPTER SWITCHGEAR

Switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear may be designed to vent overpressure gases either into the surrounding area or through an exhaust duct outside of the building.

Where overpressure gases are vented in the surrounding areas, the arc-resistant switchgear has been investigated for installation in buildings that have sufficient overhead space and minimum distance from adjacent walls to permit venting without reflecting arc products, as specified in the installation instructions provided by the manufacturer.

When provided with an exhaust duct, overhead space and minimum distance from adjacent walls are not specified. Exhaust ducts provided in the installation are intended to be as specified in the installation instructions provided by the manufacturer.

Arc-resistant switchgear is marked with one of the Accessibility Type designations noted below based upon the construction of the switchgear investigated.

Type 1 designates switchgear with arc-resistant construction at the front only.

Type 1B designates switchgear with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

Type 2 designates switchgear with arc-resistant construction at the front, sides and rear.

Type 2B designates switchgear with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 193 (1983), "High Voltage Full-Load Interrupter Switches," CSA-C22.2 No. 58 (1989), "High-Voltage Isolating Switches," and CSA-C22.2 No. 31 (2010), "Switchgear Assemblies."

Metal-enclosed switchgear Classified as "arc resistant" has additionally been investigated to CSA-C22.2 No. 0.22 (2011), "Evaluation Methods for Arc Resistance Ratings of Enclosed Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Isolating Switch," "Metal-Enclosed Interrupter Switchgear," "Metal Enclosed Switchgear," "Load Interrupter Switch," "Load Interrupter Switchgear," "Metal Enclosed Interrupter Switchgear Enclosure" or "Metal Enclosed Switchgear Enclosure."

Switches, Load Interrupter and Isolating, Over 600 Volts Certified for Canada (WIQG7)−*Continued*

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark covers only the section so marked; it does not cover other sections included in the complete assembly.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on metal-enclosed switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH CSA-C22.2 NO. 0.22

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or removable units. Each vertical section of a line-up of abutting vertical sections is provided with a "_____ of _____" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, MOLDED CASE CERTIFIED FOR CANADA (WJAZ7)

GENERAL

This category covers fused and unfused molded-case switches, with a maximum voltage rating of 750 V.

The unfused switches are tested to determine their acceptability for continuous operation at their marked rated load.

Unfused switches are tested under overload conditions at six times amp rating to cover motor circuit applications and are suitable for use as motor circuit disconnects per Section 28-602 of CAN/CSA -C22.1, "Canadian Electrical Code, Part I."

Fused switches are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

USE AND INSTALLATION

Unfused two-pole molded-case switches marked to indicate suitability for use on 3-phase circuits have been investigated and found suitable for controlling 3-phase, corner-grounded delta circuits.

These switches are for use with copper conductors, unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any markings on terminal connectors and are readily visible.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire where wire sizes 14-1 AWG are used, and 75°C wire where wire sizes 1/0 AWG and larger are used.

Molded-case switches without enclosures are intended for use in certified circuit breaker enclosures, or as a part of other certified equipment or where open type molded-case switches are acceptable.

Some unfused switches have a release mechanism that causes the switch to open automatically to protect itself in the event of a short-circuit current fault. Such switches are marked to indicate that they may open.

Some enclosed molded-case switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected will be identified by a marking, such as on a wiring diagram.

Molded-case switches may be mounted in any position.

Line-and-load markings on a molded-case switch are intended to limit the connections to those as marked.

Molded-case switches may be equipped with factory-installed accessories, such as alarm and auxiliary switches, remotely energized electrically operated trip mechanisms and electrical operators.

PRODUCT MARKINGS

No overcurrent protection is provided by the unfused switches and they are marked with a short-circuit current withstand rating.

The fused switches have one or more replaceable fuses to provide overcurrent protection and they are marked with a short-circuit current interrupting rating.

Fused switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed."

Switches, Molded Case Certified for Canada (WJAZ7)−*Continued*

Some enclosed molded-case switches are marked as suitable for use as service equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 5 (2002), ''Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Molded-case Switch'' (or ''M.C.S.'') or ''Fused Molded-case Switch'' (or ''Fused M.C.S.'').

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, PHOTOELECTRIC CERTIFIED FOR CANADA (WJCT7)

GENERAL

This category covers photoelectric switches and motion detectors (light-sensitive or presence-sensitive types) intended for use in nonindustrial locations, rated maximum 347 V ac, and protected by branch-circuit protection not to exceed 20 A.

Switches investigated for the control of tungsten-filament-lamp loads are marked ''Tungsten.'' Switches investigated for the control of the applicable ballast loads (such as fluorescent) are marked ''Magnetic Ballast'' or ''Electronic Ballast.''

The investigation of devices identified as ''Raintight'' or ''Rainproof'' includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water. Devices marked ''Raintight'' or ''Rainproof'' are also suitable for wet locations. Devices marked ''Indoor Use Only'' are suitable for indoor dry locations only.

These switches have been tested to determine their acceptability for continuous operation at their marked load rating.

RELATED PRODUCTS

Photoelectric switches and motion detectors designed to provide protection for mercantile premises, stock rooms, safes, vaults, etc., are covered under Intrusion-detection Units Certified for Canada (ANSR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (1983), ''Signal Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Photoelectric Switch'' or ''Motion Detector Switch.''

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Photocontrols, Plug-in, Locking Type Certified for Canada (WJFX7)

USE

This category covers plug-in, locking-type photocontrols for use on outdoor-type electric lighting fixtures used for both street lighting and area lighting (lighting of parking lots and similar applications).

Unless marked specifically ''Tungsten'' or ''Ballast,'' these products are suitable for use with either type of fixture, at 480 V ac maximum.

Photocontrols, Plug-in, Locking Type Certified for Canada (WJFX7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are:

CAN/CSA-C22.2 No. 4 (1989), ''Enclosed and Dead-Front Switches''
CSA-C22.2 No. 21 (1995), ''Cord Sets and Power Supply Cords''
CSA-C22.2 No. 55 (1986), ''Special Use Switches''
CAN/CSA-C22.2 No. 94 (1991), ''Special Purpose Enclosures''
CSA-C22.2 No. 182.2 (1987), ''Industrial Locking Type, Special Use Attachment Plugs, Receptacles and Connectors''
CAN/CSA-C239 (1994), ''Performance Standard for Dusk-to-Dawn Luminaires''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Photocontroller,'' ''Photocontroller Shorting Plug'' or ''Photocontroller Open Circuit Plug.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SNAP SWITCHES CERTIFIED FOR CANADA (WJQR7)

GENERAL

This category covers general-use snap switches, which are so constructed that they can be installed in flush device boxes or on outlet box covers or otherwise used in connection with wiring systems recognized by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

Door switches are investigated for use only in combination with a specific switch, special switch box and cover.

Flush snap switches investigated for use without separate outlet boxes with nonmetallic-sheathed cable, Types NM, NMC, NM-B and NMC-B cable in accordance with the CEC, are so identified by a specific marking on the carton in which they are packed.

Snap switches have not been investigated for switching a load between two alternate sources of supply. Double-throw enclosed switches (see Switches, Enclosed Certified for Canada [WIAX7]) or switches Listed as transfer switches (see Switches, Transfer Certified for Canada [WPTZ7] and Emergency Lighting and Power Equipment Certified for Canada [FTBR7]) should be used for this purpose.

Multi-pole, general-use snap switches have not been investigated for more than single-circuit operation unless marked ''2-circuit'' or ''3-circuit.''

Snap switches without a grounding connection are intended for replacement use only in accordance with the CEC.

General-use snap switches are classified into two categories: AC-DC general use and AC general use. AC general-use switches are marked ''AC,'' ~, or equivalent to limit their use to alternating current circuits. AC-DC general-use switches are not so limited; no such marking is required or generally provided.

AC-DC GENERAL-USE SNAP SWITCHES

The standard amp and voltage ratings for an AC-DC general-use snap switch for controlling direct- or alternating-current circuits are given in Table I. While many of these snap switches will operate successfully on circuits that have some reactance, in general, for inductive loads, the switch should have an amp rating of twice the amp rating of the load except for a snap switch that has been tested for the control of an electric discharge lamp load and marked with the letter ''F'' as part of the electric lamp load rating of 10 A, 125 V. Such a switch may be used without derating where the inductive load is AC and the power factor is between 75% and unity. However, some of these snap switches are marked with additional horsepower ratings at one or more voltages, which indicate that the switch has been tested for the control of a motor of the horsepower and voltage rating indicated. An AC-DC general-use snap switch tested for the control of tungsten-filament lamp loads is marked with the letter ''T'' as part of the suitable tungsten-filament lamp load rating at 125 V.

Table I
Snap Switch Ratings in Amperes Corresponding to Direct-Current Potentials

Snap Switches Certified for Canada (WJQR7)−*Continued*

125 V	250 V	600 V	125 V	250 V	600 V
—	—	1	—	10	—
3*	1*	—	20	10	—
—	—	2	—	20	10
5*	2*	—	—	—	20
—	—	3	—	20	—
5 or 6	3	—	30	20	—
—	5	3	40	20	—
—	—	5	—	30	20
—	5	—	—	—	30
10	5	—	—	30	—
—	10	5	60	30	—
—	—	10	—	60	—

The above ratings apply equally when these switches are used on alternating-current circuits. For two-circuit and three-circuit switches the amp rating applies to the maximum current carried under any combination of circuits.

* These dual ratings may be assigned only to three-way, four-way, two-circuit, or three-circuit switches.

AC GENERAL USE SNAP SWITCHES

An AC general-use snap switch has a marked current and voltage rating only for alternating current, which is one of the ratings given in Table II, and is intended for installation in a flush device box (flush snap switch), mounting on an outlet box cover, or surface mounting (surface snap switch).

AC general-use snap switches are tested for the control of resistive, inductive (including electric discharge lamp) and tungsten-filament lamp loads at 120 V up to the full current rating of the switch.

Table II
AC Snap Switch Ratings in Amperes Corresponding to Alternating-Current Potentials

120 V AC	120 – 277 V AC*	277 V AC	347 V AC
15	—	—	—
20	—	—	—
30	—	—	—
—	15	—	—
—	20	—	—
—	30	—	—
20	—	15	—
30	—	15	—
30	—	20	—
—	—	—	15
—	—	—	20
—	—	—	30

* Switches rated 120 – 277 V AC are acceptable for use on motor circuits up to the amp ratings shown, at any voltage between 120 and 277 V AC.

Snap switches rated 240 or 250 V that are intended for use on circuits involving a nominal potential to ground of 120 or 125 V, respectively, are tested on such circuits and are marked with the voltage rating 240 or 250 (no underlining). Snap switches rated 240 or 250 V that are suitable for use at full potential to ground are marked with the voltage rating $\underline{\underline{240}}$ or $\underline{\underline{250}}$ (double underlining). Snap switches having voltage ratings other than 240 or 250 V are tested on circuits involving full rated potential to ground.

Terminals of 15 A and 20 A switches not marked "CO/ALR" are intended for use with copper conductors only. Terminals marked "CO/ALR" are for use with aluminum and copper conductors.

Terminals of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with solid building wires unless otherwise indicated either on the device or in the installation instructions.

Screwless terminal connectors of the conductor push-in type (also known as "push-in terminals") are restricted to 15 A branch circuits and are intended for connection with 14 AWG solid copper wire only. They are not intended for use with aluminum wire, 14 AWG stranded copper wire, or 12 AWG solid or stranded copper wire.

Terminals of switches rated 30 A and above not marked "AL-CU" are intended for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL-CU" are for use with aluminum and copper conductors.

****

Switches, Fixture, Socket and Special Mechanism Types Certified for Canada (WMHR7)

USE

This category covers fixture, socket and special-mechanism-type switches intended for use in appliances, electric fixtures and portable lamps.

PRODUCT MARKINGS

The devices are marked as follows:

a. Listee's name or identification on device.
b. Catalog number or equivalent on device or carton.
c. Complete electrical rating on device.
d. Switches intended for control of tungsten filament lamps on both direct and alternating current are marked with the letter "T," located to indicate that it applies only to the rating at 125 V. AC/DC switches intended for the control of electric discharge lamps are marked with the letter "F." A switch may be marked with both letters to indicate both uses.
e. Switches intended for appliance use are marked "FOR APPLIANCE USE."

ADDITIONAL INFORMATION

For additional information, see Snap Switches Certified for Canada (WJQR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 111, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch," "Fixture Snap Switch" or "Fixture Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

****

Switches, Flush Certified for Canada (WMUZ7)

USE

This category covers switches designed for mounting in outlet boxes or on an outlet box cover and intended for connection to branch-circuit wiring, including combinations of switches on a single yoke.

This category does not cover dimmer switches.

PRODUCT MARKINGS

The devices are marked as follows:

a. Listee's name or identification on device
b. Catalog number or equivalent on device or carton
c. Complete electrical ratings on device
d. Date code or equivalent on general-purpose ac switches on device or carton

ADDITIONAL INFORMATION

For additional information, see Snap Switches Certified for Canada (WJQR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 111, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

****

Switches, Flush Certified for Canada (WMUZ7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Pendant Certified for Canada (WNIX7)

GENERAL

This category covers pendant switches, through-cord switches, and combination pendant switches with outlet.

PRODUCT MARKINGS

The devices are marked as follows:

a. Listee's name or identification on device
b. Catalog number or equivalent on device or carton
c. Complete electrical ratings on device

ADDITIONAL INFORMATION

For additional information, see Snap Switches Certified for Canada (WJQR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 55, "Special Use Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFER SWITCHES CERTIFIED FOR CANADA (WPTZ7)

This category covers automatic and nonautomatic transfer switches, including associated control devices, with maximum ratings of 600 V ac.

Transfer switches and bypass switches which have been investigated without regard to the enclosure in which they are mounted have the Listing Mark applied to the switch panel. When the Listing Mark is applied to the enclosure of an enclosed transfer switch or bypass switch it indicates the Listing of the complete enclosed assembly.

Transfer switches which have been investigated for their suitability for use as service equipment are marked, "SUITABLE FOR USE AS SERVICE EQUIPMENT."

Transfer switches are required to be designed so that the load cannot remain simultaneously disconnected from both the normal and alternative sources when either or both sources are available, except that transfer switches marked, "SUITABLE FOR USE AS SERVICE EQUIPMENT" are provided with accessible means to independently disconnect both the normal and alternate sources.

Automatic transfer switches transfer a common load from a normal supply to an on site generated supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished.

Additional sensing devices which may initiate or delay transfer have been evaluated in accordance with the manufacturer's marked operating values.

Automatic transfer switches may have a switching contact to initiate the starting of an engine generator set.

Transfer Switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which in the case of an automatic transfer switch is expected to include scheduled test operations switching full load.

Listed transfer switches without enclosures are for use as part of other equipment or where open type devices are acceptable.

Transfer switches without integral overcurrent protective devices are suitable for continuous use at 100% of rated current. Transfer switches incorporating integral overcurrent protective devices are suitable for continuous use at 100% of rated current unless restricted to use at 80% of rated current as indicated by the marking, "CONTINUOUS LOAD CURRENT NOT TO EXCEED 80 PERCENT OF SWITCH RATING," on the switch.

Transfer Switches Certified for Canada (WPTZ7)−*Continued*

Transfer switches are rated in amps and are generally considered to be suitable for total system transfer, which includes control of motors, electric discharge lamps, electric heating loads, and tungsten-filament lamps within the amp rating marked on the nameplate.

Unless marked otherwise, transfer switches rated 100 A or less are suitable for use on circuits having available fault currents not greater than 5000 A rms symmetrical. Transfer switches rated more than 100 A are suitable for use on circuits having an available fault current of 10,000 A rms symmetrical or 20 times the transfer switch rating, whichever is greater.

Transfer switches having manual operators accessible only by opening the enclosure, are not intended to be manually operated under load.

Some transfer switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking such as on a wiring diagram.

Transfer switches without integral overcurrent protection, are marked to indicate the maximum rating of overcurrent protection to be provided ahead of the transfer switch.

Transfer switches as Listed herein are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is indicated on a wiring diagram or other readily visible location.

Unless the device is marked otherwise, the wiring space and current carrying capacity are based on 60°C wire for switches rated 100 A or less and 75°C for switches rated more than 100 A.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Accessories, Transfer Switch Certified for Canada (WPVQ7)

USE

This category covers accessories intended for use with transfer switches rated 600 V or less, including bypass/isolation switches and other accessories intended solely for use with certified transfer switches. These accessories are intended for use in conjunction with transfer switches, but are not intended to modify the function or construction of the transfer switch itself.

This category covers bypass switches, which permit testing and maintenance of emergency system components that could not be otherwise maintained without disruption of important functions. The bypass switching sequence is manually initiated.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 178, "Automatic Transfer Switches."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Transfer Switch Accessory," "Transfer and By-Pass/Isolation Switch," "By-Pass/Isolation Switch" or "By-Pass/Transfer Switch."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches for Use in Emergency Systems Certified for Canada (WPWR7)

USE

This category covers automatic transfer switches, rated 600 V or less, intended for use in emergency systems in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These switches are also suitable for use in standby systems.

ADDITIONAL INFORMATION

Automatic Transfer Switches for Use in Emergency Systems Certified for Canada (WPWR7)−*Continued*

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 178.1 (2007), ''Requirements for Transfer Switches.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Automatic Transfer Switch for Emergency Systems.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches for Use in Optional Standby Systems Certified for Canada (WPXT7)

USE

This category covers automatic transfer switches with a maximum rating of 600 V ac, intended for use in optional standby systems in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Transfer switches suitable for service equipment use are so marked.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 178.1 (2007), ''Requirements for Transfer Switches.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Automatic Transfer Switch for Use in Optional Standby Systems.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Nonautomatic Transfer Switches Certified for Canada (WPYV7)

USE

This category covers nonautomatic transfer switches rated 600 V or less, intended to transfer a common load from a normal supply to an alternate supply of an equipment system in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

ADDITIONAL INFORMATION

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 178, ''Automatic Transfer Switches.''

The basic standard used to investigate manually operated generator transfer panels having maximum ratings of 250 V, 60 A in this category is CSA-C22.2 No. 178.2, ''Requirements for Manually Operated Generator Transfer Panels.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Non-Automatic Transfer Switch.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Nonautomatic Transfer Switches Certified for Canada (WPYV7)−*Continued*

SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WQNV7)

Switches rated in horsepower have been tested with respect to interruption of the maximum operating overload current of motors of the same horsepower and voltage ratings. When rated in amps and volts only the switches have not been investigated with respect to use in motor circuits.

ENCLOSED SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WRPR7)

GENERAL

This category covers enclosed switches, with or without fuseholders, intended for plug or cartridge fuses. Enclosed switch ratings are limited to 3600 A, 500 hp, 600 V.

Enclosed switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher-amp-rated circuits.

Enclosed motor-circuit switches and enclosed switches with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 4 (1989), ''Enclosed and Dead-Front Switches.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Enclosed Switch for Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SNAP SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WSQX7)

GENERAL

This category covers snap switches that are limited to 30 A, 600 V, ac; 60 A, 250 V, ac or dc; and not more than 2 hp at 600 V or less, ac, 250 V or less, dc.

Snap switches with horsepower ratings have been tested with respect to interruption of maximum overload currents of motors of the same horsepower and voltage ratings.

Snap switches having a ''T'' rating are capable of controlling tungsten-filament-lamp loads corresponding to the 125 V rating of the switches.

Snap switches provided with a factory seal of conductors entering the switch enclosure are so identified by a marking on the product.

ADDITIONAL INFORMATION

Snap Switches for Use in Hazardous Locations Certified for Canada (WSQX7)−*Continued*

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 55-1986, "Special Use Switches."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Snap Switch for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, MISCELLANEOUS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WTEV7)

GENERAL

This category covers switches that are not fused. The suitability of miscellaneous switches for use on high-capacity circuits has not been investigated.

Miscellaneous switches with amp ratings are intended for general use. Switches with horsepower ratings are suitable for use in motor circuits.

Miscellaneous switches certified with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for ac ratings, and at four times motor full-load running current for dc ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flow Switch for Use in Hazardous Locations" or "Limit Switch for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WTSN7)

Switches rated in horsepower have been tested with respect to interruption of the maximum operating overload current of motors of the same horsepower and voltage ratings. When rated in amps and volts only, the switches have not been investigated with respect to use in motor circuits.

ENCLOSED SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WUGF7)

GENERAL

This category covers enclosed switches either with or without fuseholders for plug or cartridge fuses. Enclosed switch ratings are limited to 3600 A, 500 hp, 600 V.

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use.

Enclosed switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher-amp-rated circuits.

Enclosed motor-circuit switches and enclosed switches with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Switch for Hazardous Locations."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE-POWER CIRCUIT-BREAKER TYPE CERTIFIED FOR CANADA (WUTZ7)

GENERAL

This category covers metal-enclosed, low-voltage-power circuit-breaker switchgear rated up to 750 V ac, nominal.

These switchgear assemblies are completely enclosed on all sides and top with sheet metal (except for ventilation openings and inspection windows) and may contain the following: (1) low-voltage-power circuit breakers, either fused or unfused, (2) bare and/or insulated busbars and connections, (3) instrument and control power transformers, (4) instruments, meters and relays, and (5) control wiring and accessory devices.

The low-voltage-power circuit breakers are contained in individual grounded metal compartments and are controlled either remotely or from the front of the enclosure. The circuit breakers may be stationary or of the draw-out type.

These switchgear assemblies may consist of a single vertical section housing one or more individual low-voltage-power circuit-breaker compartments or auxiliary compartments, along with the associated busbar structure, or may consist of several abutting sections interconnected by horizontal buses.

The auxiliary compartments may house such auxiliary equipment as potential transformers, control power transformers, or other miscellaneous devices.

These switchgear assemblies are marked with the following ratings or with a reference to a drawing which is included with the product and marked with the following ratings: (1) rated maximum voltage, (2) rated frequency, (3) rated insulation level, (4) rated continuous current, (5) rated short-time current, and (6) rated short-circuit current. This information also includes (1) whether the assembly is for indoor or outdoor use, (2) whether accessibility from the rear, side, top or ends is required for installation, and (3) the suitability of the equipment for mounting over combustible surfaces.

Low-voltage-power switching devices used in these switchgear assemblies are suitable for continuous use at 100% of their continuous-current rating.

The marking "Suitable for Use as Service Equipment" appears on each switchgear section or assembly optionally intended for use at a service.

A switchgear section marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Generally this switchgear is shipped without wire connectors and the busbar terminations are provided with standard bolt-hole patterns. The suitability of the wire connectors installed must be determined by Authorities Having Jurisdiction at the time of final inspection.

A switchgear section investigated to determine if it is rainproof is marked "Rainproof."

The individual power circuit-breaker compartments or adapters are intended to accommodate a low-voltage-power circuit breaker and are marked to indicate the type(s) of circuit breaker that may be installed.

Individual auxiliary compartments are intended to house control components such as meters, instrument and/or control power transformers, and the like.

Low-voltage-power circuit-breaker switchgear assemblies are generally provided with shop drawings or the like that include circuit and connection diagrams of the assembly, continuous-current ratings of the main and section buses, details of control and ground-fault protection (if provided) circuits, etc.

ARC-RESISTANT SWITCHGEAR

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended, may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear has been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant switchgear is marked with an Accessibility Type designation of Type 1 or 2, 1B or 2B, 1C or 2C, or 1D based upon the construction and the standard used for the investigation.

Type 1 denotes that arcing does not cause holes in the freely accessible front of the enclosure.

Type 2 denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure.

Type 1B denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

Type 2B denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

Type 1C denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments.

Type 2C denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments, except that a fault in the main busbar compartment is allowed to propagate into the main busbar compartment of adjacent vertical sections.

Type 1D denotes that arcing does not cause holes in the freely accessible front and any other surface of the enclosure under investigation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 31, "Switchgear Assemblies."

The basic standard used to investigate switchgear Classified as "arc resistant" is IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low-Voltage Power Circuit Breaker Switchgear Section," "Low-Voltage Power Circuit Breaker Compartment" or "Low-Voltage Power Circuit Breaker Auxiliary Compartment."

The Listing Mark for low-voltage-power circuit-breaker switchgear sections also includes the marking "____ of ____." The first blank is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchgear assembly. The second blank

is stamped with the total number of sections in the switchgear assembly. Only those sections and compartments that bear the Listing Mark are covered under UL's Follow-Up Service.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a "____ of _____" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR OVER 600 VOLTS CERTIFIED FOR CANADA (WVDA7)

ARC-RESISTANT SWITCHGEAR

Switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear may be designed to vent overpressure gases either into the surrounding area or through an exhaust duct outside of the building.

Where overpressure gases are vented in the surrounding areas, the arc-resistant switchgear has been investigated for installation in buildings that have sufficient overhead space and minimum distance from adjacent walls to permit venting without reflecting arc products, as specified in the installation instructions provided by the manufacturer.

When provided with an exhaust duct, overhead space and minimum distance from adjacent walls are not specified. Exhaust ducts provided in the installation are intended to be as specified in the installation instructions provided by the manufacturer.

Arc-resistant switchgear is marked with an Accessibility Type designation based upon the construction and the standard to which the switchgear is investigated.

When investigated in accordance with EEMAC G14-1, "EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault," the Accessibility Types may be A, B or C.

Type A designates switchgear with arc-resistant construction at the front only.

Type B designates switchgear with arc-resistant construction at the front, sides and rear. None of these Type designations imply that the equipment maintains its intended degree of protection when operated with any door or cover, including low-voltage control or instrument compartment doors or covers open.

Type C designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells. In Type C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

When investigated in accordance with IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults," the Accessibility Types may be 1, 1B, 1C, 1D-SR, 1D-SL, 1D-R, 2, 2B or 2C.

Type 1 designates switchgear with arc-resistant construction at the front only.

Type 1B designates switchgear with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

Types 1D-SR, 1D-SL, 1D-R designate switchgear with arc-resistant construction in the front; and at the right side (SR), left side (SL) or the rear (R), respectively.

Type 1C designates switchgear with arc-resistant construction at the front, and between compartments within the same cell or adjacent cells. In Type 1C equipment, a fault in a main busbar compartment

may propagate into the main busbar compartments of adjacent feeder cells.

Type 2 designates switchgear with arc-resistant construction at the front, sides and rear.

Type 2B designates switchgear with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

Type 2C designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells. In Type 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR, GAS-INSULATED TYPE, OVER 600 VOLTS CERTIFIED FOR CANADA (WVEK7)

GENERAL

This category covers indoor medium-voltage switchgear where gas, typically sulfur hexafluoride (SF-6), is used as the insulating medium. The term ''indoor'' does not preclude the use of this equipment in outdoor enclosures, but rather defines the class of equipment. This equipment includes circuit breakers specifically intended to provide feeder or branch-circuit overcurrent protection, in nominal voltages of 600 V through 46kV ac. This equipment is not intended for use as service entrance equipment. These devices are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' in unclassified locations, for controlling and protecting the power from generators and other sources of electrical energy.

CIRCUIT BREAKERS

The circuit breakers are three-pole devices, fixed, trip-free. Interruption may take place in a gas-filled chamber or in a vacuum interrupter that is in a gas-filled chamber. Each circuit breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

Circuit Breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a ''close-and-latch'' rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating ''I'' in rms symmetrical amperes that is applicable at the maximum rated voltage. These circuit breakers are also provided with a ''K'' factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. The circuit breaker may interrupt a current greater than ''I'' by a factor up to the value of ''K,'' at a voltage reduced from the maximum rated voltage, ''V max'' by the same factor, or at a lower voltage, as depicted in Illustration 1 of Circuit Breakers and Metal-clad Switchgear Over 600 Volts Certified for Canada (DLAH7).

Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

GAS-INSULATED SWITCHGEAR

This switchgear may consist of several gas-filled compartments connected together. Gas-filled compartments are isolated from each other by gas seals. The compartments are electrically connected together and grounded. A compartment may house a circuit breaker, a length of bus, or a switch. A dual bus system, with isolating switches, may be provided.

A vertical section may consist of a circuit breaker, a switch, a bus compartment and a control compartment. A vertical section may be a single freestanding section or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a ''____ of ____'' marking where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Listing Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Listing Mark.

Auxiliary equipment such as potential transformers and current transformers are factory installed. Other auxiliary equipment such as protective relays and the like are separately enclosed within the switchgear. They are not typically in gas-insulated compartments.

Switchgear, Gas-insulated Type, Over 600 Volts Certified for Canada (WVEK7)−*Continued*

The output of these current sensors is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

Gas-insulated Switchgear Ratings

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Listing Mark.

ARC-RESISTANT SWITCHGEAR

Metal-clad switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

ENCLOSURES

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the gas-insulating medium. The enclosures are intended for indoor applications.

An additional enclosure investigated to determine that it is rainproof is marked ''Rainproof,'' ''Outdoor'' or ''3R.'' These enclosures may be either nonventilated or ventilated. Enclosures intended for outdoor use are marked to indicate the exposure Category (A, B or C) for which they are intended. Enclosures marked ''Category A'' are intended to be installed in areas accessible to the unsupervised general public; enclosures marked ''Category B'' are intended to be installed in areas accessible to authorized personnel only; enclosures marked ''Category C'' are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ADDITIONAL INFORMATION

For additional information, see Switchgear Over 600 Volts Certified for Canada (WVDA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31-1989, ''Switchgear Assemblies.''

The requirements of T.I.L. No. D-25, ''Interim Requirements for Pressurized Gas Insulated Switchgear,'' also apply to products in this category.

Switchgear Classified as ''arc resistant'' has additionally been investigated to EEMAC G14-1, ''EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault,'' or IEEE C37.20.7, ''IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults,'' as indicated in the Classification Mark.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Gas-insulated Switchgear.''

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed circuit breakers; it does not cover other vertical sections included in the assembly or removable circuit breakers.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH
[standard designation and date]

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a ''_____ of _____'' marking, where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Switchgear, Gas-insulated Type, Over 600 Volts Certified for Canada (WVEK7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR, METAL ENCLOSED, OVER 600 VOLTS CERTIFIED FOR CANADA (WVGN7)

GENERAL

This category covers medium-voltage, metal-enclosed switchgear where air is used as the primary insulating medium. This does not preclude the use of gas within the switching chamber of a switch or circuit breaker used in the switchgear. This equipment may include load-break switches, or circuit breakers that are specifically intended to provide feeder or branch-circuit overcurrent protection. This equipment may also include isolating-type switches that are interlocked with circuit breakers or load-break switches. These devices are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

CIRCUIT BREAKERS

Circuit breakers are three-pole, fixed-type devices. Interruption may take place in a vacuum interrupter, in a gas-filled chamber, or in a vacuum interrupter that is in a gas-filled chamber. Each circuit-breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

Circuit-breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amperes that is applicable at the maximum rated voltage. Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

SWITCHES

Switches are three-pole, gang-operated-type devices. Interruption may take place in air, or in a gas-filled chamber. The switches provide either a load break or isolating function, and may also provide a means to ground the load conductors. Switches intended for isolation only are interlocked with a device that has been investigated for switching of loads.

Switch Ratings

Each switch is provided with a marking that indicates the switch ratings. This marking includes the rated maximum voltage and continuous current rating of the switch. Switches have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 200, 600, 1200, 2000 or 3000 A. Switches are also marked with a momentary withstand rating, expressed in rms asymmetrical amperes (kA).

Load-break-type switches are marked with a fault-making rating, expressed in rms asymmetrical amperes, which is applicable at the maximum rated voltage. Unless specifically marked otherwise, these switches are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

METAL-ENCLOSED SWITCHGEAR

Vertical sections may consist of a circuit breaker, a switch, a bus compartment and a control compartment. Vertical sections may be single free-standing sections or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

Auxiliary equipment, such as potential transformers and current transformers, are factory installed. Other auxiliary equipment, such as protective relays and the like, are separately enclosed within the switchgear. They are not typically in gas-insulated chambers.

The output of each potential and current transformer is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

Metal-enclosed Switchgear Ratings

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Mark.

Switchgear, Metal Enclosed, Over 600 Volts Certified for Canada (WVGN7)−*Continued*

ARC-RESISTANT SWITCHGEAR

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

ENCLOSURES

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the switches, circuit breakers, and auxiliary equipment. The enclosures are intended for indoor applications unless marked otherwise.

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only.

When intended for outdoor use, an enclosure is investigated to determine that it is rainproof and is marked "Rainproof" or "Outdoor." These enclosures may be either nonventilated or ventilated.

The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ADDITIONAL INFORMATION

For additional information, see Switchgear Over 600 Volts Certified for Canada (WVDA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), "Switchgear Assemblies."

Switchgear Classified as "arc resistant" has additionally been investigated to EEMAC G14-1, "EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault," or IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults," as indicated in the Classification Mark.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-enclosed Switchgear, Over 600 V."

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed-mount switches or fixed-mount circuit breakers; it does not cover other vertical sections included in the assembly, or removable switches or circuit breakers.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH
[standard designation and date]

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a "_____ of _____" marking, where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

* *

SWITCHGEAR, PAD MOUNTED, SUBSURFACE AND VAULT OVER 600 VOLTS CERTIFIED FOR CANADA (WVHN7)

GENERAL

This category covers medium-voltage, pad-mounted, subsurface and vault switchgear having ac voltage ratings up to 38 kV ac maximum. For purposes of this category, pad-mounted, subsurface and vault switchgear may be designated as distribution switchgear (DSG).

Pad-mounted switchgear is an enclosed switchgear assembly in which all energized parts are insulated and completely enclosed within a grounded shield system when separable connectors are in place.

Pad-mounted switchgear is intended for installation in outdoor, aboveground areas accessible to the unsupervised general public in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Although intended for outdoor use, this equipment is not precluded from being used indoors.

Subsurface switchgear is a submersible switching assembly suitable for application in a below-grade enclosure and is normally surface operable. Subsurface switchgear may be provided as open equipment.

Vault switchgear is open type (unenclosed), partially enclosed, or enclosed-type switchgear intended to be installed in an electrical vault, in which the switch and accessories are operable from inside a vault.

Each assembly of DSG includes one or more "ways." A "way" is a three-phase or single-phase circuit connection to the bus, which may contain combinations of switches and protective devices or may be solid bus.

DSG may use oil, air, or another gas (such as SF6) as the insulating medium for the entire assembly, or for portions of the assembly, such as individual switches.

DSG is intended to be cable connected using separable insulated connector systems complying with IEEE 386, "Separable Insulated Connector Systems for Power Distribution Systems Above 600 V."

ENCLOSURES

The enclosures of pad-mounted switchgear are provided with security features such as pentahead securing bolts and padlocking provisions on all access doors.

Pad-mounted switchgear has not been investigated for installation in coastal environments unless so marked. Coastal environments are those land areas within 762 m of the mean high-water line.

Tanks and cabinets of submersible equipment are made of corrosion-resistant materials or provided with impact- and corrosion-resistant finishes. No additional investigation of enclosures for subsurface or vault-type switchgear is included under this category.

SWITCHES

Switches may be single- or three-phase, dead-front or live-front, pad-mounted, subsurface or vault. Switches may be provided with or without protective devices, such as fuses or fault interrupters.

Switch Ratings

Each switch within DSG has the following ratings: continuous current, load-switching current, loop-switching current, cable-charging switching current, and transformer-magnetizing switching current.

The preferred continuous-current ratings of load-interrupter switches within DSG are 200, 400 and 600 A, but switches may be investigated for ratings other than the preferred ratings.

PRODUCT MARKINGS

All DSG is marked with:

a) Name of the manufacturer and type designation
b) Model, style number and catalog number (if any)
c) Unique serial number
d) Date of manufacture (month and year)
e) Rated maximum voltage
f) Rated power frequency
g) Rated lighting-impulse withstand voltage (BIL)
h) Rated power-frequency withstand voltage
i) Rated short-circuit current
j) Total weight, including insulating medium
k) Type and quantity of insulating medium
l) Three-line schematic diagram

The marked rated maximum voltage is no greater than the voltage rating of the lowest rated "way." The equipment is also marked with a description of the type of equipment, for example, "Pad-mounted Fused Switch" or "Fused Load-break Way." The nameplate may be located on the exterior of the equipment or within an interior compartment.

Each "way" is marked with the manufacturer and type designation of switch and manufacturer and type designation of fuse mounting. In addition, a "way" may be marked with maximum voltage and short-circuit current. The maximum voltage and short-circuit current ratings are optional since they are part of the overall marking of the DSG.

Three-phase DSG containing one or more "ways" with components rated for phase-to-ground voltage (maximum voltage divided by 1.732), such as fuses, single-phase switches, or fused load-break devices, is marked with the designation "Grd-Y" (grounded-wye) added to the maximum voltage.

Switchgear, Pad Mounted, Subsurface and Vault Over 600 Volts Certified for Canada (WVHN7)−*Continued*

Each "switched way," "fused-switched way," or "fused load-break way" is marked with the following ratings: continuous current, load-switching current, loop-switching current, cable-charging switching current, and transformer-magnetizing switching current.

Each "fused way" or "tapped way" is marked with the continuous current rating of the "way."

Each enclosure is marked **DANGER – HIGH VOLTAGE – KEEP OUT**.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 31 (2010), "Switchgear Assemblies," and ANSI/IEEE C37.74 (2003), "Standard Requirements for Subsurface, Vault, and Pad-Mounted Load-Interrupter Switchgear and Fused Load-Interrupter Switchgear for Alternating Current Systems Up to 38 kV."

Pad-mounted switchgear is additionally investigated to ANSI/IEEE C57.12.28 (2005), "Pad-Mounted Equipment – Enclosure Integrity."

Enclosures for pad-mounted switchgear intended for installation in coastal areas are additionally investigated to IEEE C57.12.29 (2005), "Pad-Mounted Equipment – Enclosure Integrity for Coastal Environments."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name "Pad-mounted Switchgear," "Subsurface Switchgear" or "Vault Switchgear."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TABLES, UTILITY CERTIFIED FOR CANADA (WWJT7)

GENERAL

This category covers tea or coffee tables, lightweight kitchen and utility tables, portable ironing boards, projector tables, portable cabinets and desks, all with permanently attached receptacles, and with a separable cord set or permanently attached power-supply cord. Except for projector tables that may contain a small lamp for previewing slides, the units contain no electrical load other than optional pilot lights.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 21 (1990), "Cord Sets and Power Supply Cords."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and one of the following product names as appropriate: "Utility Table," "Projector Table," "Desk," "Drafting Table," "Portable Utility Cabinet," "Ironing Board With Supply Cord," or other appropriate product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TANK-MONITORING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WWQS7)

GENERAL

This category covers tank-monitoring equipment, including control units, indicators, sensors, transmitters, liquid-level probes and auxiliary devices used for tank monitoring or as part of tank-monitoring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuits as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ‘‘Tank Monitoring Equipment for Use in Hazardous Locations’’ or ‘‘Tank Monitoring Equipment (Associated Apparatus),’’ or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TANK-MONITORING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WWQZ7)

GENERAL

This category covers tank-monitoring equipment, including control units, indicators, sensors, transmitters, liquid-level probes and auxiliary devices used for tank monitoring or as part of tank-monitoring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ‘‘Tank-monitoring Equipment for Use in Hazardous Locations’’ or ‘‘Tank-monitoring Equipment (Associated Apparatus),’’ or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEACHING AND INSTRUCTION EQUIPMENT CERTIFIED FOR CANADA (WYFW7)

USE

This category covers equipment intended for use in schools and other establishments to aid in instruction.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1, ‘‘Information Technology Equipment – Safety – Part 1: General Requirements.’’

New submittals for equipment intended for use in schools and other establishments to aid in instruction are investigated to CAN/CSA-C22.2 No. 60950-1 and are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ‘‘Teaching Equipment’’ or ‘‘Instructing Equipment,’’ or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELECOMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (WYIE7)

Listing of the following products appear in this section:

Telephone Appliances and Equipment

Telephones, Cellular

Telecommunications equipment covered under this category has not been investigated for use in computer/information technology rooms. Computers and related equipment, including telecommunications equipment, that interface with electronic data processing systems and are intended for use in computer/information technology rooms are covered under Data Processing Equipment, Electronic Certified for Canada (EMRT7) or Information Technology Equipment Certified for Canada (NWGQ7).

Telecommunications equipment not marked as suitable for outdoor locations is for indoor use only and the acceptability of such equipment when installed in semi-protected or otherwise shielded locations is determined by the Authority Having Jurisdiction.

Unless marked to indicate special circuit characteristics or a specific function (such as ‘‘keyboard’’), telecommunications-type output connectors (such as RJ-series modular jacks, 50-pin commercial connectors, and insulation piercing terminals) of telecommunications equipment are limited to telecommunications-circuit levels and are suitable for connection to typical telecommunications networks and distribution wiring.

Certain types of telecommunications equipment are Listed as accessories for use only with other Listed equipment or systems and are identified by the word ‘‘Accessory.’’

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CUSTOM-BUILT TELECOMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (WYKM7)

GENERAL

This category covers custom-built, modular telecommunications equipment and accessories that include various combinations of cabinets, racks, circuit card assemblies, power supplies, and the like designed for field

Custom-built Telecommunications Equipment Certified for Canada (WYKM7)−*Continued*

installation by trained service personnel. They are intended for installation in accordance with Section 60 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This equipment is intended to be installed and maintained by local exchange carriers (LECs), inter-exchange carriers (IXCs), and similar operating telecommunications companies, which provide service to the subscriber's premise and access to the public network.

INSTALLATION

Custom-built telecommunications equipment is intended to be installed only in restricted access locations, such as equipment rooms or closets, where access is limited to trained service personnel, unless it is installed in a certified rack, cabinet, or similar enclosure identified with the installation code "E."

Some units may have accessible parts (such as the output terminals of a low-power, ring-generator power supply) that operate at Class 3 voltage levels. The location of these units either in the restricted access location or in the final system configuration is intended to be such that unintentional contact with these parts is unlikely.

Unless identified with the installation code "B" or "E," custom-built telecommunications equipment is intended to be installed only over a noncombustible surface or in a certified rack, cabinet, or similar enclosure that is identified with the installation code "B" or "E."

Custom-built telecommunications equipment is intended to be configured in a system and installed in accordance with the manufacturer's installation instructions and the network carrier's installation practices. In order to ensure proper coordination of the individual units in the final installation, letter codes are provided to identify significant input, output, and installation parameters. These are divided into three categories: Power Codes (PC), Telecommunications Codes (TC), and Installation Codes (IC).

Power Codes (PC)

Power codes provide information relating to the type of power required to be supplied to the unit (input) or the type of power supplied by the unit (output).

C — As an input code, this designation requires the power inputs to the unit to be limited to normal telecommunications levels. Acceptable sources of power are certified telecommunications power supplies identified as having "Level C" outputs, certified custom-built telecommunications equipment with an output code "C," or communications line powering from certified telephone equipment or the public network.

As an output code, this designation indicates that the outputs are limited to normal telecommunications levels (Level C) and are suitable for connection to typical telecommunications networks and distribution wiring that are installed in accordance with Section 60 of the CEC.

F — As an input code, this designation requires the power inputs to the unit to be provided with overcurrent protection or be otherwise power limited. Acceptable sources of power are certified telecommunications power supplies identified as having "Class 2" or "Level C" outputs, a certified Class 2 power source, or certified custom-built telecommunications equipment with an output code of "F" or "C."

As an output code, this designation indicates that the unit provides power-limited outputs that are intended to be used for custom-built telecommunications equipment in the same system. These outputs have not been investigated as Class 2 circuits or communications circuits unless identified as such.

L — As an input code, this designation requires that, with overcurrent protection bypassed, the power source supplying the unit be limited to 250 VA and the current source be limited to 1000 V max. Acceptable types of limited power sources are certified Class 2 power supplies, a certified telecommunications power supply with outputs identified as being source limited, or certified custom-built telecommunications equipment with a power output code "L."

As an output code, this designation indicates that, with overcurrent protection bypassed, the unit provides power outputs that are source limited to 250 VA with the current limited to 1000 V max.

The following table summarizes acceptable power sources for units with input power codes C, F and L.

Power Source	May Supply Unit With An Input Power Code:
Output power code "L"	L
Output power code "F"	F
Output power code "C"	L, F, C
Class 2 power source	L, F
Communications circuits (e.g., public network)	L, F, C
Certified telephone power supplies with identified "Level C" outputs	L, F, C

Custom-built Telecommunications Equipment Certified for Canada (WYKM7)−*Continued*

Power Source	May Supply Unit With An Input Power Code:
Certified telephone power supplies with identified "source-limited" outputs	L

Telecommunications Codes (TC)

Telecommunications codes provide information relating to the characteristics of the telecommunications circuits that may be connected to the unit.

T — Provided as an output code, this designation indicates that the equipment provides isolation from "exposed" circuits requiring protection in accordance with Section 60-200 of the CEC.

X — As an input code or as an output code, this designation indicates that the input or output telecommunications circuits are suitable for connection to "exposed" circuits requiring protection in accordance with Section 60-200 of the CEC. Absence of this code is an indication that the equipment is intended to be isolated from "exposed" circuits by equipment with an output code designation "T."

Installation Codes (IC)

Installation codes provide information relating to the location and/or installation of the unit.

A — Where provided, this designation indicates that additional information is provided regarding the installation of the unit. Such information may be provided in the form of a permanent tag or information sheet attached to the unit.

B — Where provided, this designation indicates that the equipment provides side and bottom enclosures that minimize the risk of spread of fire. Cabinets, racks and similar equipment identified with an installation code "B" are not intended to completely enclose or limit accessibility to certified subassemblies mounted within the enclosure and are, therefore, not intended for use outside of limited access locations.

E — Where provided, this designation indicates that the equipment provides a complete enclosure for parts that may present a risk of electric shock, electrical energy/high current levels, or fire and limits accessibility to these parts. Cabinets, racks, and similar equipment identified with an installation code "E" are intended to enclose and limit accessibility to certified subassemblies mounted within the enclosure and may be used outside of restricted access locations.

Marking on Units

The codes are marked in the following format:

	In	Out
Power Code (PC)	F	C
Telecommunications Code (TC)	X	T, X
Installation Code (IC)	A	—

In this example, the "F" Power Code (PC) for the input indicates that the power inputs require overcurrent protection from the equipment that provides power to this unit. The "C" Power Code (PC) for the output indicates that the outputs are limited to levels compatible with communications wiring systems. The "X" input Telecommunications Code (TC) means that the communications-circuit inputs are suitable for connection to exposed circuits. The "T" Telecommunications Code (TC) for the output indicates that the unit provides isolation between the exposed circuits connected at the input and the telecommunications output ports. The "X" Telecommunications Code (TC) for the output indicates that the output circuits are also suitable for connection to exposed circuits. The "A" Installation Code (IC) indicates that additional important installation information is provided on a tag or an attached information sheet. The lack of any other installation codes indicates that the equipment should be installed in limited access areas over a noncombustible surface or mounted in a suitable enclosure with an "E" or "B" installation code.

Power supplies and assemblies containing power supplies or power-distribution components are marked with electrical ratings. Assemblies that present a load on the power system are marked with a load or input rating. The total load ratings for any system should not exceed the power supply/distribution ratings.

Custom-built telecommunications equipment is intended to be installed or situated in a location or position that does not cause excessive heat build-up or interfere with its proper ventilation.

RELATED EQUIPMENT

Complete telephone equipment (e.g., PABXs, telephones, telephone answering machines) is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7) or Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Information technology equipment is covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone com-

Custom-built Telecommunications Equipment Certified for Canada (WYKM7)−*Continued*

panies, CATV companies, and similar network communications companies is covered under Communications Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunications equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

ADDITIONAL INFORMATION

For additional information, see Telecommunications Equipment Certified for Canada (WYIE7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 225 (1990), "Telecommunication Equipment," or CAN/CSA-C22.2 No. 60950-1 (2003), "Safety of Information Technology Equipment," and CAN/CSA-C22.2 No. 60950-21 (2003), "Safety of Information Technology Equipment – Remote Power Feeding," as appropriate.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Custom-built Telecommunication Equipment" (or "Custom Tel Eq." or "Custom Telecom").

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONES, CELLULAR CERTIFIED FOR CANADA (WYLR7)

USE

This category covers hand-held cellular telephones, transportable cellular telephones, and cellular telephone voice-dialers that may be used in households or commercial establishments, or on a vehicle, boat or the like, where the telephone interconnects with the telephone network through a radio transmitter and receiver.

FACTORS NOT INVESTIGATED

Possible physiological effects of these devices have not been investigated.

RELATED EQUIPMENT

Cell site equipment and similar equipment that forms the "base station" for a cellular communications network, and incorporates the interface to the wired telecommunications network, controllers, amplifiers, and transmitting/receiving equipment is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7).

ADDITIONAL INFORMATION

For additional information, see Telecommunications Equipment Certified for Canada (WYIE7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1 (1998), "Audio, Video, and Similar Electronic Equipment," CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Information Technology Equipment – Safety Requirements," or CAN/CSA-C22.2 No. 60950 or 60950-1, "Information Technology Equipment – Safety Requirements," as well as the product certification requirements to current Industry Canada Regulations.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Telephone" (or "Telephone, Cellular"), or the name of the specific type of product as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE APPLIANCES AND EQUIPMENT CERTIFIED FOR CANADA (WYQQ7)

GENERAL

This category covers appliances and equipment intended to be electrically connected to a telecommunications network that has an operating voltage to ground that does not exceed 200 V peak, 300 V peak-to-peak or 150 V rms.

EQUIPMENT TYPES

Examples of equipment covered under this category include:

- Telephones, telephone answering devices, and telephone dialers that do not deliver a recorded message.
- Key telephone systems, automatic telephone call sequencers, customer administration panels, four-wire channel terminating units, intelligent switching subsystems, message transmitters, mounting shelves, PABX (private automatic branch exchange) systems, phone line TV interface systems, remote telephone base stations, telecontrollers, terminals, terminal sets, WATS boxes and cordless telephones.

INSTALLATION

Certain types of telecommunications equipment have been investigated for installation only over a noncombustible surface and are marked as such.

Certain types of telecommunications equipment have been investigated for installation only in restricted access locations, such as equipment rooms or closets, where access is limited to trained service personnel, and are marked as such.

RELATED EQUIPMENT

Information technology equipment, including other telecommunications appliances and equipment, is covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Modular assemblies (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunications Equipment Certified for Canada (WYKM7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communications companies is covered under Communications Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool or otherwise support IT or telecommunications equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

Accessories and Subassemblies

Field-installed accessories and subassemblies (component assemblies) to Listed equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

ADDITIONAL INFORMATION

For additional information, see Telecommunications Equipment Certified for Canada (WYIE7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 225, "Telecommunication Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Appliance," "Telephone Equipment" or "Telecommunication Equipment," or other appropriate product name as shown in the individual Listings.

The product name for field-installed accessories or subassemblies is provided with the additional word "Accessory" or "Subassembly."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Telephone Appliances and Equipment Certified for Canada (WYQQ7)−*Continued*

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WYMG7)

GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid-flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

The investigation of telemetering equipment marked "Raintight" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

RELATED PRODUCTS

Equipment investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations," "Section of Telemetering Equipment Relating to Hazardous Locations," an appropriate abbreviation, or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WYMV7)

GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid-flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

RELATED PRODUCTS

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations" or "Section of Telemetering Equipment Relating to Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WYOS7)

GENERAL

This category covers retrofit devices and kits consisting of parts and or subassemblies intended for field installation in certified telemetering equipment. These products have been investigated to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]
FOR USE WITH [specified product]
Control No.

* The appropriate product name as shown in the individual Classifications

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WZAT7)

USE AND INSTALLATION

This category covers telephones, sound-powered telephones, and communication equipment and systems. Unless identified as intrinsically safe or for use in Division 2 locations only, the equipment is of the explosion-proof design.

The handset and cord assembly should be carefully inspected and should be replaced if there is any evidence of damage or deterioration.

The equipment should be installed in accordance with the installation instructions provided with the product and in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Station equipment, power-supply equipment, protectors, and other equipment as detailed in the installation instructions should be located outside the hazardous area.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ″Telephone for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND SIMILAR USE CERTIFIED FOR CANADA (XAAA7)

AUTOMATIC ELECTRICAL PRESSURE-SENSING CONTROLS CERTIFIED FOR CANADA (XAAK7)

GENERAL

This category covers automatic electrical pressure-sensing controls with a minimum gauge pressure rating of -8.7 psi and a maximum gauge pressure rating of 609.6 psi intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

This category does not cover pressure-sensing in-line cord controls and automatic electrical pressure-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical pressure-sensing controls incorporate electronic devices. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

Ratings — These automatic electrical controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Automatic electrical pressure-sensing controls are marked with the company's name or trademark, a distinctive catalog number, electrical ratings (e.g., volts, amps, hertz, kPa, load type), and the manufacture date code. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Automatic electrical pressure-sensing controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety Certified for Canada (MCCZ7), Switches Certified for Canada (MFHX7) and Controls, Limit Certified for Canada (MBPR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-E60730-1, ''Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements,'' and CAN/CSA-E730-2-6,

Automatic Electrical Pressure-sensing Controls Certified for Canada (XAAK7)−*Continued*

''Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Automatic Electrical Pressure-sensing Control.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC ACTUATORS CERTIFIED FOR CANADA (XABE7)

GENERAL

This category covers electric actuators intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

This category does not cover electric actuators intended exclusively for industrial applications.

The individual certifications of electric actuators do not include valves or other connected mechanical loads. Motors used in electric actuators are investigated to the appropriate motor standards.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The electric actuators incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Electric actuators intended for plenum use are investigated for the application and their fire-resistance and low-smoke-producing characteristics in accordance with ULC/ORD-C2043, ''Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.''

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

Ratings — These electric actuators have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Electric actuators are marked with the company's name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, torque, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

HUMIDITY-SENSING CONTROLS CERTIFIED FOR CANADA (XACI7)

GENERAL

This category covers automatic electric humidity-sensing controls intended for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category does not cover automatic electrical humidity-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The humidity-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

Ratings — These humidity-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Humidity-sensing controls are marked with the company's name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 24, "Temperature-Indicating and -Regulating Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Humidity-sensing Control" or "Room Humidistat," or other appropriate product name as shown in the individual Listings.

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MISCELLANEOUS CONTROLS CERTIFIED FOR CANADA (XACN7)

GENERAL

This category covers automatic electrical controls for use in, on, or in association with equipment for household and similar use, including controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category does not cover automatic electrical controls intended exclusively for industrial applications.

These controls are mechanically or electrically operated, and are responsive to or control such characteristics as temperature, pressure, passage of time, humidity, light, electrostatic effects, flow or liquid level, current, voltage, acceleration and the like. Automatic controls that do not specifically fall under the scope of other product categories are covered under this category.

Miscellaneous Controls Certified for Canada (XACN7)−*Continued*

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

Ratings — These automatic electrical controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Automatic electrical controls are marked with the company's name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Automatic controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety Certified for Canada (MCCZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-E60730-1, "Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements," in addition to one or more of the following:

CAN/CSA-E730-2-2, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Motor Protectors"

CAN/CSA-E730-2-3, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"

CAN/CSA-E730-2-4, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Motor Protectors for Motor-Compressors of Hermetic and Semi-Hermetic Type"

CAN/CSA-E730-2-6, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Automatic Electrical Pressure Sensng Controls, Including Mechanical Requirements"

CAN/CSA-E730-2-7, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Timers and Time Switches"

CAN/CSA-E60730-2-8, "Automatic Electrical Controls for Household and Similar Use – Part 2-8: Particular Requirements for Electrically Operated Water Valves, Including Mechanical Requirements"

CAN/CSA-E60730-2-9, "Automatic Electrical Controls for Household and Similar Use – Part 2-9: Particular Requirements for Temperature Sensing Controls"

CAN/CSA-E730-2-10, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Motor Starting Relays"

CAN/CSA-E730-2-11, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Energy Regulators"

CAN/CSA-E730-2-12, "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Electrically Operated Door Locks"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Foot-actuated Control" or "Electronic Protective Control," or other appropriate product name as shown in the individual Listings.

TEMPERATURE-SENSING CONTROLS CERTIFIED FOR CANADA (XACX7)

GENERAL

This category covers automatic electrical temperature-sensing controls for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category does not cover automatic electrical temperature-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical temperature-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

Equipment intended for agricultural use — Controls marked to indicate use in agricultural buildings have been investigated to the relevant requirements of the CEC and the "National Farm Building Code of Canada" (1995).

Ratings — These temperature-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Automatic temperature-sensing controls are marked with the company's name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Automatic controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety Certified for Canada (MCCZ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-E60730-1, "Automatic Electrical Controls for Household and Similar Use - Part 1: General Requirements," and CAN/CSA-E60730-2-9, "Automatic Electrical Controls for Household and Similar Use - Part 2-9: Particular Requirements for Temperature Sensing Controls."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat," "Temperature Limiter" or "Thermal Cut-out," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT CERTIFIED FOR CANADA (XAPX7)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

These devices respond directly or indirectly to changes in temperature, humidity, or pressure to affect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Temperature-indicating and -regulating equipment is certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a direct-current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.
- **M2** – Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Room thermostats — Room thermostats intended for the direct control of electric space-heating equipment that are to be permanently connected electrically and are provided with a marked or implied "off" position, disconnect all ungrounded poles of the supply circuit when adjusted to the "off" position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

Equipment intended for agricultural use — A control marked to indicate use in agricultural buildings has been tested in agricultural building environmental conditions.

Motor operators — The individual certifications of motor operators or actuators do not include valves or other connected mechanical loads.

PRODUCT MARKINGS

Temperature-indicating and -regulating equipment is marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit Certified for Canada (MBPR7), Controls, Primary Safety Certified for Canada (MCCZ7) or Switches Certified for Canada (MFHX7).

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration Certified for Canada (SDFY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 24, "Temperature-Indicating and -Regulating Equipment," or CAN/CSA-E60730-1 (2002), "Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements," in addition to one or more of the following:

CAN/CSA-E730-2-2 (1994), "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Motor Protectors"

CAN/CSA-E730-2-3 (1994), "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"

CAN/CSA-E730-2-4 (1994), "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Motor Protectors for Motor-Compressors of Hermetic and Semi-Hermetic Type"

CAN/CSA-E730-2-6 (1994), "Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls Including Mechanical Requirements"

CAN/CSA-E60730-2-9 (2001), "Automatic Electrical Controls for

Household and Similar Use – Part 2-9: Particular Requirements for Temperature Sensing Controls''
CAN/CSA-E730-2-10 (1994), ''Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Motor Starting Relays''
CAN/CSA-E730-2-11 (1994), ''Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Energy Regulators''
CAN/CSA-E730-2-12 (1994), ''Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Electrically Operated Door Locks''

Some thermostats for use with individual room electric space-heating devices covered under this category have also been investigated to Clause 4.3 (Thermal Regulation) of CAN/CSA-C828-(+), ''Performance Requirements for Thermostats Used with Individual Room Electric Space Heating Devices.'' This coverage includes wall-mounted line-voltage thermostats and built-in line-voltage thermostats (up to 1500 W) used as local zone thermostats, rated 120 to 240 V.

(+) Issue date of standard or latest addendum

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Temperature Indicating Equipment,'' ''Temperature Regulating Equipment'' or ''Temperature-indicating and -Regulating Equipment'' (or ''Temp. Ind. and Reg. Equip.''), or other appropriate product name as shown in the individual Listings.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to Clause 4.3 of CAN/CSA-C828. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: ''ALSO CLASSIFIED IN ACCORDANCE WITH THE THERMAL REGULATION REQUIREMENTS IN CLAUSE 4.3 OF CAN/CSA-C828-(+).''

(+) Issue date of standard or latest addendum

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT, ELECTRICAL CERTIFIED FOR CANADA (XATJ7)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

These devices respond directly or indirectly to changes in temperature, humidity or pressure to effect temperature control, or equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Temperature-indicating and regulating equipment is certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating current ratings unless a direct current (noninductive) rating is specified.

Manual reset controls — An ''M1'' or ''M2'' marking indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the ''closed'' position after normal operating conditions have been restored if the reset means is held in the ''reset'' position.
- **M2** – Controls that do not automatically reset to the ''closed'' position if the reset means is held in the ''reset'' position.

Room thermostats — Room thermostats intended for the direct control of electric space heating equipment that are to be permanently connected electrically and are provided with a marked or implied ''off'' position, disconnect all ungrounded poles of the supply circuit when adjusted to the ''off'' position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as ''Rain tight'' or ''Rainproof'' is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7)..

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

Equipment intended for agricultural use — A control marked to indicate use in agricultural buildings has been tested in agricultural building environmental conditions.

Motor operators — The certifications of motor operators or actuators do not include valves or other connected mechanical loads.

PRODUCT MARKINGS

Temperature-indicating and regulating equipment is marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Temperature Indicating Equipment'' or ''Temperature Regulating Equipment,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XBAI7)

USE

This category covers electrical controls for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control, or equipment or appliance operation, etc.

RATINGS

Temperature-indicating and -regulating equipment is certified with a maximum rating of 600 V.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for alternating-current motor ratings and at ten times motor full load running current for direct-current motor ratings.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XBAI7)

A switching device rated in ''pilot duty'' is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically operated valve, and is tested with an appropriate electromagnetic load.

A control rated in amps is tested with an inductive (75 – 80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

The certifications of motor operators do not include valves or other connected mechanical loads.

The thermostats in the individual certifications can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 24, ''Temperature-Indicating and Regulating Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Thermostat for Use in Hazardous Locations,'' ''Temperature-indicating Equipment for Use in Hazardous Locations'' or ''Temperature-indicating Equipment (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XBDV7)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control, or equipment or appliance operation, etc.

Temperature-indicating and -regulating equipment is Listed with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full-load running current for alternating-current motor ratings, and at ten times motor full-load running current for direct-current motor ratings.

A switching device rated in ''pilot duty'' is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically operated valve, and is tested with an appropriate electromagnetic load.

A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

The motor operators in this category do not include valves or other connected mechanical loads.

The thermostats in this category can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XBDV7) 631

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 24, ''Temperature-Indicating and -Regulating Equipment.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Thermostat for Use in Hazardous Locations,'' ''Temperature-indicating Equipment for Use in Hazardous Locations'' or ''Temperature-indicating Equipment (Associated Apparatus),'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPORARY-LIGHTING STRINGS CERTIFIED FOR CANADA (XBRT7)

GENERAL

This category covers temporary-lighting strings rated 1500 W maximum, 125 V, intended for use indoors and outdoors to provide temporary illumination in accordance with Sections 30 and 76 of CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Temporary-lighting strings consist of a factory assembly of flexible cord or cable incorporating a series of Edison-base lampholders provided with lamp guards. The flexible cord is terminated at one end with an attachment plug, for connection to the source of supply, and may be provided with a cord connector at the opposite end.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, ''Portable Luminaires,'' and CSA Technical Information Letter No. B-31B, ''Interim Certification Requirements for Portable Luminaire Lighting Strings.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Temporary Lighting String.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELOCATABLE POWER TAPS CERTIFIED FOR CANADA (XBYS7)

USE AND INSTALLATION

This category covers cord-connected multiple-receptacle extension boxes and relocatable power taps intended for indoor use as relocatable multiple-outlet extensions of a branch circuit to supply laboratory equipment, home workshops, home movie lighting controls, musical instrumentation, and to provide outlet receptacles for computers, audio and video equipment, and other equipment. They consist of one attachment plug and a single length of flexible cord terminated in a single enclosure in which are mounted two or more receptacles. They may, in addition, be provided with fuses or other supplementary overcurrent protection, switches, suppression components and/or indicator lights in any combination, or connections for cable, communications, telephone and/or antenna.

Relocatable power taps are intended to be directly connected to a permanently-installed branch circuit receptacle. Relocatable power taps are not intended to be series connected (daisy chained) to other relocatable power taps or to extension cords.

Relocatable power taps are not intended for use at construction sites and similar locations.

Relocatable power taps are not intended to be permanently secured to building structures, tables, work benches or similar structures, nor are they intended to be used as a substitute for fixed wiring. The cords of relocatable power taps are not intended to be routed through walls, windows, ceilings, floors or similar openings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 21 (1995), "Cord Sets and Power Supply Cords."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Cord-connected, Multiple Receptacle Extension Box," "Relocatable Power Tap," "Power Tap" or "Outlet Strip."

The Listing Mark for this category requires the use of a holographic label.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TERMINATION BOXES CERTIFIED FOR CANADA (XCKT7)

GENERAL

This category covers termination boxes (also known as splitters) that (1) consist of lengths of busbars, terminal strips, terminal plates, or terminal blocks provided with or having provision for wire connectors to accommodate incoming (main) or outgoing (branch) conductors, or both, and (2) are intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

A "splitter box" has a length-to-width ratio not greater than 3 to 1. A "splitter trough" has a length-to-width ratio greater than 3 to 1. The length of the enclosure does not exceed 4900 mm. A splitter with a length greater than 4900 mm is considered a busway (see **RELATED PRODUCTS**).

RATINGS

Termination boxes have a current rating of 5000 A and less, and a voltage rating of 600 V or less.

PRODUCT MARKINGS

Termination boxes are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Termination boxes intended for use with field-installed wire connectors or wire connector kits are marked stating which pressure terminal connectors or component terminal assemblies are to be used.

RELATED PRODUCTS

Equipment connected only by busbars to both input and output circuits and splitters greater than 4900 mm in length are covered under Busways and Associated Fittings Certified for Canada (CWFT7).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards Certified for Canada (WEIR7), Industrial Control Equipment Certified for Canada (NIMX7) and Panelboards Certified for Canada (QEUY7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 76, "Splitters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Termination Box," or the name of the specific type of product as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

JOINT SYSTEMS CERTIFIED FOR CANADA (XHBN7)

USE AND INSTALLATION

This category covers joint systems, which are specific constructions consisting of a wall or floor assembly and the materials designed to prevent the spread of fire through a linear opening within the wall or floor assembly. The specifications for materials in a joint system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems.

The Classification of joint systems contemplate installation in heated and air-conditioned environments unless stated otherwise in the description of the system.

Materials used in the joint systems are intended to be installed in accordance with the manufacturer's instructions provided with the material. The structural integrity of the floor or wall assembly has not been investigated as a result of the openings.

Unless otherwise indicated in the systems, the ratings for joint systems installed in walls apply when either face of the wall is exposed to fire. The ratings for joint systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire-resistance ratings of the floor and wall assemblies in which, or between which, the joint system is intended to be installed are covered under Fire Resistance Ratings Certified for Canada (BXUV7). Where the individual joint system references back to fire-resistance designs, all construction details of the individual design are intended to be followed. In addition, all details relative to the construction of the wall or floor assembly contained in the individual joint system are intended to be followed. Where the construction details shown in the fire-resistance design and the joint system differ, such as in stud size and spacing, fastener spacing etc., the most restrictive construction details prevail.

The installation contractor and Authority Having Jurisdiction should ensure the specified properties of the packing and/or forming material are satisfied as noted in the individual Classifications. Such properties may include material type (mineral wool, backer rod, fiberglass, etc.), physical properties (size, density, etc.) and installation (depth, orientation, compression, etc.). Attention should also be given to ensure the installed material matches the manufacturer (where applicable) in the individual Classifications. The material and attributes are critical to the performance of the system and the ability of such system to satisfy the conditions of acceptance in CAN/ULC-S115 and the local building code. The fire-resistance rating of the system is dependent upon the use and installation of the materials specified within the respective system.

The joint sealant material thickness published in the fire-resistance designs is measured wet (unless otherwise specified in the individual systems) and may be susceptible to a percentage of shrinkage during the curing process. Joint systems are investigated after the sealant materials are fully cured. Refer to the individual Classifications for the investigated percentage of shrinkage.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

NUMBERING SYSTEM

The systems are identified by an alphanumeric identification system. The alpha components identify the type of joint system and whether the joint system has movement capabilities. The numeric components identify the nominal joint width. In the case of head-of-wall joint systems, the width of the joint does not include the voids created under the crests of metal deck floor or roof systems.

The first two alpha characters identify the type of joint system as follows:

Alpha Characters	Description of Joint System
FF	Floor-to-floor
WW	Wall-to-wall
FW	Floor-to-wall
HW	Head-of-wall
CG	Wall-to-wall joints intended for use as corner guards

The third alpha character is either S or D. The S signifies joints systems that do not have movement capabilities. This D signifies joint systems that do have movement capabilities.

The numeric component uses sequential numbers to identify the nominal width of the joint systems. The significance of the number used is:

No. Range	Nom Joint Width
0000 – 9999	Less than or equal to 2 in.
1000 – 1999	Greater than 2 in. and less than or equal to 6 in.
2000 – 2999	Greater than 6 in. and less than or equal to 12 in.
3000 – 3999	Greater than 12 in. and less than or equal to 24 in.
4000 – 4999	Greater than 24 in.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, ''Standard Method of Fire Tests of Firestop Systems.''

All joint systems described herein have been investigated with a minimum positive furnace pressure differential of 2.5 Pa (0.01 in. of water) maintained at a distance of 20 mm (0.78 in.) below horizontal test assemblies and at the mid-height of vertical test assemblies.

CAN/ULC-S115 defines the criteria for hourly F, FT, FH and FTH ratings, and an optional L rating for the joint systems. The F rating criteria prohibits flame passage through the system. The FT rating criteria prohibits flame passage through the system and requires the maximum temperature rise of the unexposed surface of the wall or floor assembly and on the fill material not to exceed 181°C (325°F) above ambient. The FH rating criteria prohibits flame passage through the system and requires acceptable hose stream performance. The FTH rating criteria combines all the requirements for the F, FT and FH ratings. The optional L rating criteria determines the amount of air leakage, in cu feet per linear foot of joint opening (CFM/Lin Ft), through the joint system at ambient and/or 204°C (400°F) air temperature at an air pressure differential of 75 Pa (0.30 in. of water). The L ratings are intended to assist Authorities Having Jurisdiction, and others, in determining the suitability of joint systems for the protection of openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101 (2006), ''Life Safety Code.''

The surface flammability and smoke development characteristics of Classified materials used in joint systems are measured by the test method in CAN/ULC-S102.2, ''Method of Test for Surface Burning Characteristics of Floor Coverings, and Miscellaneous Materials and Assemblies.'' The flame spread index of these materials is less than 200 and the smoke developed index is less than 450. Surface burning characteristics Classifications are covered under Surface Burning Characteristics Certified for Canada (BIKT7).

Where indicated in the individual Classifications, joint sealant materials have also been investigated to ASTM C1241 (2000), ''Standard Test Method for Volume Shrinkage of Latex Sealants During Cure.''

UL MARK

Those materials identified by an (*) in the system description text are eligible to be produced under the Follow-Up Service Program of UL. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

****

THROUGH-PENETRATION FIRESTOP SYSTEMS CERTIFIED FOR CANADA (XHEZ7)

GENERAL

This category covers firestop systems, which are specific constructions consisting of a wall or floor assembly, a penetrating item passing through an opening in the wall or floor assembly, and the materials designed to prevent the spread of fire through the opening. The specifications for materials in a firestop system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems. Additionally, the substitution or elimination of components required in a system should not be made unless specifically permitted in the individual system or in these general guidelines.

The firestop systems covered under this category have been investigated with a minimum positive furnace pressure differential of 2.5 Pa (0.01 in. of water) maintained at a distance of 305 mm (12 in.) below horizontal test assemblies and 20 mm (0.78 in.) below the fill materials surrounding the penetrating items passing through vertical test assemblies.

CAN/ULC-S115, ''Standard Method of Fire Tests of Firestop Systems,'' defines the criteria for hourly F, FT, FH and FTH ratings, and an optional L rating for the firestop systems. The F rating criteria prohibits flame passage through the system. The FT rating criteria prohibits flame passage through the system and requires the maximum temperature rise on the unexposed surface of the wall or floor assembly, on the penetrating item and on the fill material not to exceed 181°C (325°F) above ambient. The FH rating criteria prohibits flame passage through the system and requires acceptable hose-stream performance. The FTH rating criteria combines all the requirements for the F, FT and FH ratings. The optional L rating criteria determines the amount of air leakage, in cu feet per minute per square foot of opening (CFM/sq ft), through the firestop system at ambient and/or 204°C (400°F) air temperature at an air-pressure differential of 75 Pa (0.30 in. of water). The L ratings are intended to assist Authorities Having Jurisdiction and others in determining the suitability of firestop systems for the protection of penetrations and miscellaneous openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101, ''Life Safety Code.''

These firestop systems are intended for installation in heated and air-conditioned environments unless stated otherwise in the description of the system.

Materials used in the firestop systems are intended to be installed in accordance with the manufacturer's instructions provided with the materials. The fill, void or cavity material thickness published in the fire-resistance designs is measured wet and may be susceptible to a percentage of shrinkage during the curing process. Firestop systems are investigated after the fill, void or cavity materials are fully cured. Refer to the individual Classifications under Fill, Void or Cavity Materials Certified for Canada (XHHW7) for the investigated percentage of shrinkage.

The minimum and/or maximum annular space referenced in the firestop system must be maintained in order to achieve the hourly rating of the system. The annular space of a penetrating item through a rectangular opening is determined by measuring the distance from the closest point of the penetrating item to a point perpendicular to each of the four sides of the opening. The diagonal dimension is not intended to represent the annular space of a rectangular opening. The annular space between multiple penetrating items within a rectangular opening is determined by measuring the closest point of one penetrating item to the closest point of the adjacent penetrating item.

The structural integrity of the floor or wall assembly should be investigated when providing openings for the penetrating items.

These systems are Classified with respect to (1) installation in a wall only, (2) installation in a floor only, or (3) installation in either a wall or a floor. Unless otherwise indicated in the systems, the rating for firestop systems installed in walls apply when either face of the wall is exposed to fire. The ratings for firestop systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire-endurance rating of the walls and floors incorporating these systems are not indicated. The hourly fire-endurance ratings of wall and floor assemblies are covered under Fire Resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7). Firestop systems that specify installation in concrete floors may include installation in floors consisting of fluted or corrugated steel deck topped with structural concrete, provided that (1) the concrete topping thickness measured above the top plane of the steel deck is equal to our greater than the minimum concrete thickness specified in the system, and (2) the firestop system does not require any portion of the forming material or fill material to extend below the bottom plane of the floor.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

PENETRATING ITEMS

When the penetrating item is indicated as being pipe, the pipe is intended for the transport of gases, liquids and the like. The maximum diameter, the minimum wall thickness and the specific material for conduit and pipe are specified in each system. All nonmetallic pipe is intended to be of the solid-wall type unless indicated otherwise in the system. For electrical conductors, the maximum conductor size and the maximum number of conductors in the individual cables are specified in each system. All electrical conductors are intended to be copper unless indicated otherwise in the system.

Where the individual system specifies the penetrating item is to be rigidly supported on both sides of the wall or floor, the support system should be designed based upon the premise the firestop system provides no support.

Some systems do not include penetrating items. These firestop systems are intended to be used to seal openings where the penetrating items have been removed or where the penetrating items have not yet been installed.

FORMING MATERIALS

Forming materials specified for a firestop system should not be removed after cure of the fill material, unless removal is specified in the description of the system.

The installation contractor and Authority Having Jurisdiction should ensure the specified properties of the packing and/or forming material are satisfied as noted in the individual Classifications. Such properties may include material type (mineral wool, backer rod, fiberglass, etc.), physical properties (size, density, etc.) and installation (depth, orientation, compression, etc.). Attention should also be given to ensure the installed material matches the manufacturer (where applicable) in the individual Classifications. The material and attributes are critical to the performance of the system and the ability of such system to satisfy the conditions of acceptance in CAN/ULC-S115 and the local building code. The fire-resistance rating of the system is dependent upon the use and installation of the materials specified within the respective system.

NUMBERING SYSTEM

A complete description of each firestop system tested specifically to Canadian requirements can be found under this category. Systems tested concurrently to U.S. and Canadian requirements are covered under Through-penetration Firestop Systems (XHEZ). In either case, the systems are identified by an alpha-alphanumeric identification system. The alpha components identify the type of assembly being penetrated and the numeric component identifies the type of penetrating item.

The first alpha component is F, W or C. The F signifies a floor is being penetrated, the W signifies a wall is being penetrated, and C signifies either a floor or a wall is being penetrated.

The second alpha component may be any letter. The significance of the letter used is:

Letter	Description
A	Concrete floors with a minimum thickness less than or equal to 127 mm (5 in.)
B	Concrete floors with a minimum thickness greater than 127 mm (5 in.)
C	Framed floors
D	Steel decks in marine vessels
E through I	Not used at present time
J	Concrete or masonry walls with a minimum thickness less than or equal to 203.2 mm (8 in.)
K	Concrete or masonry walls with a minimum thickness greater than 203.2 mm (8 in.)
L	Framed walls
M	Bulkheads in marine vessels
N through Z	Not used at present time

The numeric component uses sequential numbers to identify the penetrating item. The significance of the number used is:

No. Range	Description
0000–0999	No penetrating items
1000–1999	Metallic pipe, conduit or tubing
2000–2999	Nonmetallic pipe, conduit or tubing
3000–3999	Electrical cable
4000–4999	Cable trays with electrical cable
5000–5999	Insulated pipe
6000–6999	Miscellaneous electrical penetrants, such as busducts
7000–7999	Miscellaneous mechanical penetrants, such as air ducts
8000–8999	Groupings of penetrations, including any combination of items listed above
9000–9999	Not used at present time

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, ''Standard Method of Fire Tests of Firestop Systems.''

Where indicated in the individual Classifications under Joint Systems Certified for Canada (XHBN7) and Fill, Void or Cavity Materials Certified for Canada (XHHW7), fill, void or cavity materials have also been investigated to ASTM C1241 (2000), ''Standard Test Method for Volume Shrinkage of Latex Sealants During Cure.''

UL MARK

Those materials identified by an (*) in the system description text are eligible to be produced under the Follow-Up Service Program of UL. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. CABINETS CERTIFIED FOR CANADA (XHGK7)

USE AND INSTALLATION

This category covers factory-built cabinets that penetrate one surface of a fire-resistive wall or floor assembly.

These cabinets are intended to be installed in accordance with the instructions provided with the product and the instructions specified in the individual through-penetration firestop system. Certification of these products contemplates installation within a controlled environment, unless stated otherwise in the individual certifications.

Properties of the cabinets other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – CAN/ULC-S101 (BXUV7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is CAN/ULC-S115 (1995), ''Standard Method of Fire Tests of Firestop Systems.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

DUCT-WRAP MATERIALS CERTIFIED FOR CANADA (XHHD7)

USE AND INSTALLATION

This category covers duct-wrap materials manufactured from proprietary materials and processed into faced or unfaced batts or blankets.

Duct-wrap materials are intended to be installed in accordance with the instructions provided with the product and the instructions specified in the individual through-penetration firestop system. Certification of these products contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual certifications.

Properties of the duct-wrap materials other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

FILL, VOID OR CAVITY MATERIALS CERTIFIED FOR CANADA (XHHW7)

USE AND INSTALLATION

This category covers fill, void or cavity materials, which are proprietary materials investigated for use in joint systems and firestop systems. Except as specified below, properties of the fill, void or cavity materials other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are intended for installation at a job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system or through-penetration firestop system.

The fill, void or cavity material thickness published in the fire-resistance designs is measured wet and may be susceptible to a percentage of shrinkage during the curing process. Firestop systems are investigated after the fill, void or cavity materials are fully cured. Refer to the individual certifications for the investigated percentage of shrinkage.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

See Joint Systems Certified for Canada (XHBN7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

Where indicated in the individual certifications, fill, void or cavity materials have additionally been investigated to ASTM C1241 (2000), "Standard Test Method for Volume Shrinkage of Latex Sealants During Cure."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FIRESTOP DEVICES CERTIFIED FOR CANADA (XHJI7)

USE AND INSTALLATION

This category covers firestop devices, which are factory-built products intended to provide a degree of fire resistance to openings in fire-resistive walls or floors to accommodate penetrating items, such as electrical cable, cable trays, conduit and pipe.

Firestop devices are intended to be installed in accordance with the instructions provided with the device and the instructions specified in the individual through-penetration firestop system. Certification of these firestop devices contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual certifications.

Properties of the firestop devices other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

FORMING MATERIALS CERTIFIED FOR CANADA (XHKU7)

USE AND INSTALLATION

This category covers forming materials investigated for use in firestop systems and joint systems. The forming materials are manufactured from proprietary materials, processed into the form of boards or sheets and formed into various sizes and shapes.

Properties of the forming materials other than their capacity to provide a degree of the fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are used as a form and seal to prevent leakage during the installation and curing of some fill, void or cavity materials and should be installed in accordance with the instructions specified in the individual joint system or through-penetration firestop system. After installation, forming materials are left in place and, together with the fill material, provide a degree of fire resistance for the opening.

Authorities Having Jurisdiction should be consulted before installation.

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LIGHT GAUGE FRAMING
FOR USE IN JOINT SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY
Control No.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MECHANICAL JOINT ASSEMBLIES CERTIFIED FOR CANADA (XHLP7)

USE AND INSTALLATION

This category covers mechanical joint assemblies, which are proprietary products installed at the job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system.

Properties of the mechanical joint assemblies other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate the joint systems in which these products are installed is CAN/ULC-S115 (2005), ''Standard Method of Fire Tests of Firestop Systems.''

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEMBRANES CERTIFIED FOR CANADA (XHLR7)

USE AND INSTALLATION

This category covers membrane materials that are proprietary products intended to be installed at the job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system.

Properties of the membrane materials other than the capacity to provide a degree of fire resistance to openings in fire-rated walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate the joint systems in which these products are installed is CAN/ULC-S115 (2005), ''Standard Method of Fire Tests of Firestop Systems.''

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. PIPE-COVERING MATERIALS CERTIFIED FOR CANADA (XHLU7)

USE AND INSTALLATION

This category covers pipe-covering materials, which are intended to be installed in accordance with the instructions specified in the individual through-penetration firestop systems. Certification of these products contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual certifications.

Properties of the pipe-covering materials other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is CAN/ULC-S115 (2005), "Standard Method of Fire Tests of Firestop Systems."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

THROUGH-PENETRATING PRODUCTS CERTIFIED FOR CANADA (XHLY7)

USE AND INSTALLATION

This category covers through-penetrating products that are proprietary products (cable, conduit, pipe and tubing) whose fire-resistive properties have been investigated for specific applications in which they pass through openings in fire-rated walls or floors, or both, within a building.

Properties of the through-penetrating products other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

REQUIREMENTS

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is CAN/ULC-S115 (2005), "Standard Method of Fire Tests of Firestop Systems."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TIME-INDICATING AND -RECORDING APPLIANCES CERTIFIED FOR CANADA (XHNR7)

USE AND INSTALLATION

This category covers electrically operated clocks that form parts of a master clock system and similar time-indicating and -recording appliances intended primarily for industrial and commercial installations on circuits of 300 V or less.

RELATED PRODUCTS

Clocks intended primarily for household use and installations are covered under Clocks, Household Certified for Canada (DROX7).

Clock-operated switches and timers designed to close and open circuits to a load at predetermined intervals are covered under Switches, Clock Operated Certified for Canada (WGZR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Time Indicating Appliance" or "Time Recording Equipment," or other appropriate product name as shown in the individual Listings.

*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TIME-INDICATING AND -RECORDING APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XIAZ7)

GENERAL

This category covers intrinsically safe chart drives.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Chart Drive for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TOOLS CERTIFIED FOR CANADA (XJXX7)

MANUAL AND SEMIAUTOMATIC METAL-SAWING MACHINES CERTIFIED FOR CANADA (XJYQ7)

USE AND INSTALLATION

This category covers manual and semiautomatic metal-sawing machines that use a saw blade (tool) to cut off or change the shape of the work piece and are intended for use in industrial or commercial applications. These machines are manually operated or capable of performing one cutting cycle of operation, which is manually actuated.

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These machines are not intended for the handling of hazardous material.

The use of some equipment involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree.

RELATED EQUIPMENT

Automated equipment designed to perform repetitive manufacturing-related cutting or sawing tasks is covered under Factory Automation Equipment Certified for Canada (GPNY7).

Robotics and associated control equipment are covered under Robots and Robotic Equipment Certified for Canada (TETZ7).

Industrial control panels are covered under Industrial Control Panels Certified for Canada (NITW7).

Saws used in residential applications are covered under Tools, Stationary Certified for Canada (XKJU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II,'' CSA-C22.2 No. 14, ''Industrial Control Equipment,'' and CSA-C22.2 No. 73, ''Construction and Test of Electrically Equipped Machine Tools.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Metal-sawing Machine.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE ELECTRIC TOOLS CERTIFIED FOR CANADA (XJYW7)

USE

This category covers tools intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'':

- hand-held motor-operated or magnetically driven electric tools, such as drills, grinders, polishers, sanders, circular saws, shears, reciprocating saws, routers, etc., the rated voltage of the tools being not more than 250 V for single-phase ac or dc tools, and 440 V for three-phase ac tools.
- rechargeable-battery-powered motor-operated or magnetically driven tools and the battery packs for such tools. It covers the tools incorporating detachable, integral and separable battery packs. The maximum rated voltage for tools and battery packs is 75 V dc.

Portable Electric Tools Certified for Canada (XJYW7)−*Continued*

- rechargeable-battery-powered motor-operated or magnetically driven tools and the battery packs for such tools that are also operated and/or charged directly from the mains or a nonisolated source, including tools provided with integral battery chargers. It covers the tools incorporating detachable, integral or separable battery packs. The maximum rated voltages for tools are 250 V single-phase ac or dc mains source and 75 V dc battery source. The maximum rated voltage for battery packs is 75 V dc.

This category also covers:

- tools with an electric heating element
- hand-held electric tools that can be mounted on a support for use as fixed tools without any alteration of the tool itself, and only where the requirements for such support are given in a relevant Part 2 standard
- motors not isolated from the supply, and having basic insulation not designed for the rated voltage of the tools
- rechargeable-battery-powered motor-operated or magnetically driven tools and the battery packs for such tools
- tools that are also operated and/or charged directly from the mains or a nonisolated source

This category does not cover:

- hand-held tools intended to be used in the presence of explosive atmosphere (dust, vapor or gas)
- hand-held tools used for preparing and processing food
- hand-held tools for medical purposes
- heating tools
- tools using general-purpose batteries installed by the user

REBUILT PRODUCTS

This category also covers portable electric tools that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable electric tools are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable electric tools are subject to the same requirements as new portable electric tools.

SPECIAL CONSIDERATIONS

These products are investigated from the standpoint of risk of personal injury, electric shock and fire.

These devices are not intended for the handling of hazardous material.

Precautions should be taken during the use of sanding machines to prevent formation of combustible dust-air mixtures with surrounding atmospheres.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for tools that are Class II construction, all tools are provided with means for earthing. Class II tools require normal care in handling. They should not be used under conditions which would be considered hazardous with tools of conventional construction, e.g., with either the tool or user in contact with water.

A ''square within a square'' symbol ⧈ designates a double-insulated Class II tool. Protection against electric shock has been achieved by basic insulation, and additional precautions, such as double or reinforced insulation, are provided. Tools identified as Class II are not provided with a means for earthing (grounding).

FACTORS NOT INVESTIGATED

Any potential health hazards that may be associated with the use of portable tools, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60745-1, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 1: General Requirements,'' in addition to one or more of the following:

CAN/CSA-C22.2 No. 60745-2-1, ''Hand-Held Motor-Operated Electric

Portable Electric Tools Certified for Canada (XJYW7)−*Continued*

Tools – Safety – Part 2-1: Particular Requirements for Drills and Impact Drills''

CAN/CSA-C22.2 No. 60745-2-3, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-3: Particular Requirements for Grinders, Polishers and Disk-Type Sanders''
CAN/CSA-C22.2 No. 60745-2-4, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-4: Particular Requirements for Sanders and Polishers Other Than Disk Type''
CAN/CSA-C22.2 No. 60745-2-5, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-5: Particular Requirements for Circular Saws''
CAN/CSA-C22.2 No. 60745-2-6, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-6: Particular Requirements for Hammers''
CAN/CSA-C22.2 No. 60745-2-8, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-8: Particular Requirements for Shears and Nibblers''
CAN/CSA-C22.2 No. 60745-2-9, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-9: Particular Requirements for Tappers''
CAN/CSA-C22.2 No. 60745-2-11, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-11: Particular Requirements for Reciprocating Saws''
CAN/CSA-C22.2 No. 60745-2-12, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-12: Particular Requirements for Concrete Vibrators''
CAN/CSA-C22.2 No. 60745-2-14, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-14: Particular Requirements for Planers''
CAN/CSA-C22.2 No. 60745-2-16 (2009), ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-16: Particular Requirements for Tackers''
CAN/CSA-C22.2 No. 60745-2-17, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-17: Particular Requirements for Routers and Trimmers''
CAN/CSA-C22.2 No. 60745-2-18, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-18: Particular Requirements for Strapping Tools''
CAN/CSA-C22.2 No. 60745-2-19, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-19: Particular Requirements for Jointers''
CAN/CSA-C22.2 No. 60745-2-20, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-20: Particular Requirements for Band Saws''
CAN/CSA-C22.2 No. 60745-2-21, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-21: Particular Requirements for Drain Cleaners''
CAN/CSA-C22.2 No. 60745-2-22 (2012), ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-22: Particular Requirements for Cut-Off Machines''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Tool,'' ''Portable Tool,'' ''Portable Electric Tool,'' ''Drill,'' ''Circular Saw,'' or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word ''Rebuilt,'' ''Refurbished'' or ''Remanufactured'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CHAIN SAWS, ELECTRIC CERTIFIED FOR CANADA (XJZV7)

USE

This category covers cord-connected electric chain saws intended for use on nominal system voltages of 250 V or less, in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Chain saws are divided into two classes:

Class 2A — A professional chain saw, intended for use by trained workers, where the operator is expected to use the chain saw for extended periods of time on a daily basis.

Class 2C — A consumer chain saw, intended for general use by homeowners, cottagers, campers, etc., and for general applications, such as cleaning, pruning and cutting firewood.

Chain Saws, Electric Certified for Canada (XJZV7)−*Continued*

SPECIAL CONSIDERATIONS

These products are investigated from the standpoint of risk of personal injury, electric shock and fire.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for chain saws marked ''double insulated,'' all saws are provided with means for grounding. Double-insulated chain saws require normal care in handling. They should not be used under conditions which would be considered hazardous with tools of conventional construction, e.g., with either the tool or user in contact with water.

FACTORS NOT INVESTIGATED

Any potential health hazards that may be associated with the use of portable tools, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 147 (1990), ''Motor-Operated Gardening Appliances,'' and CAN/CSA-Z62.1, ''Chain Saws.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Chain Saw'' or ''Electric Chain Saw,'' or other appropriate name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TOOLS, PORTABLE CERTIFIED FOR CANADA (XKFR7)

GENERAL

This category covers cord-connected portable tools, such as drills, hand grinders, polishers, sanders, hand circular saws, drain cleaners, pipe benders, etc.

The tools in this category are divided into two broad groups:

Portable Electric Tools — Hand tools usually employing motors subject to wide and minor fluctuations of load, such as drills, orbital sanders, saws, hand grinders, nibblers, shears, disc sanders, etc.

Transportable Tools — Tools that are not hand held and intended for the tool to be taken to the work piece to perform its function. Such tools include diamond-core drills, drain cleaners and pipe benders.

The load on a portable electric tool varies to the extent that the amp rating marked on such a tool may not be the maximum current that can be drawn by the tool under normal use conditions, but is rather an indication of the thermal capacity of the motor employed. It is indicative of the loading to which the tool may be continuously subjected without causing overheating.

REBUILT PRODUCTS

This category also covers rebuilt portable tools that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable tools are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable tools are subject to the same requirements as new portable tools.

SPECIAL CONSIDERATIONS

The suitability of the grinding wheels for the peripheral speeds involved has not been investigated.

Precautions should be taken during the use of sanding machines to prevent formation of combustible dust-air mixtures with surrounding atmospheres.

The use of some tools involves certain inherent accident hazards that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the certified tools.

Tools, Portable Certified for Canada (XKFR7)−*Continued*

Unless specifically mentioned in literature supplied with the tool, the certification of an individual tool is not intended to cover attachments that may be offered by the manufacturer to perform operations other than intended by the design of the basic tool.

Except for tools marked with ''double-insulated,'' all tools are provided with means for grounding. Double-insulated tools require normal care in handling. They are not intended to be used under conditions that would be considered hazardous with tools of conventional construction, i.e., with either the tool or user in contact with water, unless it's obvious that the certification intends the tool to be operated under such conditions.

RELATED PRODUCTS

Tools intended for servicing and repairing automobiles are covered under Garage Equipment Certified for Canada (JGWV7).

Tools intended for use in finishing floors in household and commercial environments are covered under Floor-finishing Machines Certified for Canada (IMSR7).

Tools intended for use in gardening and lawn care are covered under Gardening Appliances Certified for Canada (JHKT7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 71.1 (1989), ''Portable Electric Tools.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Tool,'' ''Portable Tool,'' ''Portable Electric Tool,'' ''Drill,'' ''Circular Saw,'' or other appropriate product name, as shown in the individual Listings.

For rebuilt products, the word ''Rebuilt'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEMIAUTOMATIC WOODWORKING EQUIPMENT CERTIFIED FOR CANADA (XKHS7)

USE AND INSTALLATION

This category covers production and accessory equipment for attended or unattended fabrication or modification of material used in manufacturing products or subassemblies in industrialized or commercial applications. The equipment has a total connected power of 3.7 kw (5 hp) or greater or is rated three-phase. Equipment in this category is designed to be set up for specific manufacturing applications, such as cutting, drilling, planing, or other modification of materials of wood or plastic laminate. The equipment is intended to be installed in accordance with the Canadian Electrical Code Part 1, Safety for Electrical Installations, C22.1-98.

SPECIAL CONSIDERATIONS

Devices included in this category are not intended for the handling of hazardous material. The use of some equipment involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the Listed equipment.

RELATED EQUIPMENT

Self-sustaining production equipment designed to be programmed for the assembly of products or subassemblies in a specific manufacturing application, such as assembly of components, packaging, sorting, or counting of parts, and which only incorporates manufacturing processes involving heating or cooling, drying, or gluing of parts are covered by Factory Automation Equipment Certified for Canada (GPNY7).

Robotics and associated control equipment are covered under Robots and Robotic Equipment Certified for Canada (TETZ7). Industrial Control Panels Certified for Canada are covered under their own category (NITW7).

Equipment that may be used in residential applications is covered under Tools, Stationary Certified for Canada (XKJU7).

REBUILT EQUIPMENT

This category also covers rebuilt semi-automatic woodworking equipment that may or may not be rebuilt by the original manufacturer. Rebuilt semi-automatic woodworking equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned

Semiautomatic Woodworking Equipment Certified for Canada (XKHS7)−*Continued*

component parts. Rebuilt semi-automatic woodworking equipment is subject to the same requirements as new semi-automatic woodworking equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirements used to investigate products in this category are C22.2 No. 0, General Requirements, C22.2 No. 14, Industrial Control Equipment, and C22.2 No. 105, Electrical Equipment for Woodworking Machinery.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Semi-automatic Woodworking Equipment'' or other appropriate product name as shown in the individual Listing. For rebuilt semi-automatic woodworking equipment the product name is preceded by the word ''Rebuilt,'' ''Refurbished'' or ''Remanufactured.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TOOLS, STATIONARY CERTIFIED FOR CANADA (XKJU7)

USE

This category covers single-phase electric tools of the bench type intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' when connected to a nominal system voltage of 240 V or less.

This category does not cover:

a) tools intended for industrial use,
b) tools covered by CSA-C22.2 No. 73, ''Construction and Test of Electrically Equipped Machine Tools,'' and CSA-C22.2 No. 105, ''Construction and Test of Electrical Equipment for Woodworking Machinery,'' or
c) magnetic drill presses or diamond core drills, which are covered by CAN/CSA-C22.2 No. 71.1, ''Portable Electric Tools.''

SPECIAL CONSIDERATIONS

These devices are not intended for the handling of hazardous material.

These products are investigated from the standpoint of risk of personal injury, electric shock and fire.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Precaution should be taken during the use of sanding machines to prevent formation of combustible dust-air mixtures with surrounding atmospheres.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for tools marked ''double insulated,'' all tools are provided with means for grounding. Double-insulated tools are investigated for residential use only and require normal care in handling. They should not be used under conditions which would be considered hazardous with tools of conventional construction, e.g., with either the tool or user in contact with water.

PRODUCT MARKINGS

In some instances, attachments may be certified. In these cases, the attachments are marked ''Use only with [specific Listed stationary and fixed tools].'' For example, a certified hand attachment may be marked ''Use only with Listed power supply Model XX,'' or a certified feed control device may be marked ''Use only with Listed radial arm saw Model XX.''

FACTORS NOT INVESTIGATED

Any potential health hazards that may be associated with the use of portable tools, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

RELATED PRODUCTS

Tools, Stationary Certified for Canada (XKJU7)−*Continued*

Tools intended primarily for use in garages and service stations are covered under Garage Equipment Certified for Canada (JGWV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 71.2, ''Electric Bench Tools.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names as appropriate: ''Tool,'' ''Stationary Tool,'' ''Table Saw,'' ''Wood Working Machine,'' ''Drill Press,'' ''Miter Saw,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TOOLS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XKVL7)

PORTABLE ELECTRIC TOOLS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XKWH7)

USE

This category covers cord-connected and battery-operated power tools intended for securing fasteners. This category does not cover tools such as drills, grinders, circular saws or other equipment that, under normal operation, may produce arcs, sparks or hot surfaces.

The load on certain tools varies within a wide range. Accordingly, the amp rating marked on such a tool may not be the maximum current that can be drawn by the tool under normal use conditions, but is rather an indication of the thermal capacity of the motor employed. It is indicative of the loading to which the tool may be continuously subjected without causing overheating.

This category does not cover attachments such as grinding wheels, sanders, polishers or other attachments that may be offered by the manufacturer to perform operations other than intended by the design of the basic tool.

The use of some tools involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the certified tools.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are CAN/CSA-C22.2 No. 60745-1, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 1: General Requirements,'' and CAN/CSA-C22.2 No. 60745-2-2, ''Hand-Held Motor-Operated Electric Tools – Safety – Part 2-2: Particular Requirements for Screwdrivers and Impact Wrenches.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Tool for Use in Hazardous Locations,'' ''Portable Tool for Use in Hazardous Locations'' or ''Portable Electric Tool for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TORCHES CERTIFIED FOR CANADA (XLFX7)

FUEL GAS TORCHES CERTIFIED FOR CANADA (XMHT7)

GENERAL

This category covers fuel-gas torches of the air-aspirating type, designed to operate with commercial-grade fuel gases other than acetylene as indicated in the individual certifications. The torches are designated as hand torches or portable torches.

Hand torches are units consisting of a shutoff valve and burner assembly. The fuel for the torches is stored in a separate fuel-gas-container assembly connected to the torch, or in an integral container assembly that may be refillable. Integral containers do not exceed 4.0 fluid oz. capacity.

Portable torches include a handle with a shutoff valve, hose, regulator and a burner assembly, and may also include a fuel container of the Canadian Transportation Commission cylinder type.

Torches for use with LP-gas are intended for use in accordance with ANSI/NFPA 58, ''Storage and Handling of Liquefied Petroleum Gases.''

RELATED PRODUCTS

Oxy-fuel torches are covered under Blowpipes and Torches Certified for Canada (BDCT7).

MPS-fuel-gas torches are covered under Methylacetylene-Propadiene Stabilized Fuel Gas Torches Certified for Canada (XMOS7).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA/CGA 2.29 (1997), ''Hand-Held Torches for Fuel Gases.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Butane Torch,'' ''LP-gas Torch'' or ''Propane Torch.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METHYLACETYLENE-PROPADIENE STABILIZED FUEL GAS TORCHES CERTIFIED FOR CANADA (XMOS7)

USE

This category covers air-aspirating-type torches designed to operate on methylacetylene-propadiene stabilized (MPS) fuel gas. The torches are designated as hand torches or portable torches.

Hand torches are completely self-contained assemblies consisting of a burner and fuel container. The fuel container is a Canadian Transportation Commission (CTC) cylinder having a water capacity not exceeding 2-1/2 lbs. Unless otherwise indicated in the individual certifications, such containers are of the disposable type and are not refillable.

Portable torches include a burner and a fuel container of the CTC cylinder type. The burner may be integral with the fuel container or may be a separate unit. A separate burner is connected to the fuel container by a length of hose included as part of the torch assembly.

Some of these torches may be qualified for use with LP-gas (liquefied petroleum). Such torches can be identified by a reference to LP-gas appearing in the Certification Mark.

TOYS CERTIFIED FOR CANADA (XNIZ7)

USE

This category covers electrically operated toys and simulated miniatures of full-sized appliances in forms that may not necessarily perform the expected function of the copied appliance, including toy phonographs with motor-driven turntables and mechanical sound reproduction. They are intended to be used on nominal 120-volt branch circuits and are for indoor use.

PRODUCT MARKINGS

Markings on the product indicate the age level for which the toy or play article is intended. As with all electric products, adult guidance or supervision may be necessary.

FACTORS NOT INVESTIGATED

All food products supplied with toys are manufactured in accordance with Canadian requirements. Compliance with these regulations has not been investigated by UL.

RELATED PRODUCTS

Transformers for toys are covered under Transformers, Toy Certified for Canada (XRBV7).

Electric hobby and sports equipment is covered under Hobby and Sports Equipment Certified for Canada (MSVW7).

Products intended for use primarily by adults are covered under Hobby and Sports Equipment Certified for Canada (MSVW7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 149 (1972), ''Electrically Operated Toys.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and one of the following product names: ''Toy,'' ''Electric Toy,'' ''Toy Oven,'' ''Toy Popcorn Maker,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFER SWITCHES FOR USE IN FIRE PUMP MOTOR CIRCUITS CERTIFIED FOR CANADA (XNVE7)

GENERAL

This category covers separately mounted, open and enclosed automatic transfer switches intended for use in fire pump motor circuits, including associated control devices, with a maximum rating of 600 V ac and 4000 A.

These transfer switches are intended for use in fire pump motor circuits covered by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I'' (CEC).

Fire pump power transfer switches are automatic transfer switches that transfer a fire pump motor load from a normal supply to an alternate (on-site generated or second utility) supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished. No other loads, other than the fire pump motor, are intended to be connected to the fire pump power transfer switch.

If not marked to indicate that the alternate source is a second utility, the alternate source is considered to be an on-site generated supply. Such transfer switches include frequency sensing and sensing of at least one phase of the alternate (generator-set) source to enable transfer to the alternate source. Such transfer switches have a switching contact(s) to initiate the starting of an engine generator set. Such transfer switches may include a disconnect switch or an isolating switch for the alternate source (generator set). If it does, this transfer switch is equipped with pilot contacts for supervision and pilot contacts to override the engine start signal.

Additional sensing devices that may initiate or delay transfer have been investigated in accordance with the manufacturer's marked operating values.

The enclosure of an enclosed transfer switch has been investigated for its ability to protect against water dripping on the enclosure from the downward vertical.

Transfer switches for use in fire pump circuits are not suitable for use as service equipment.

Transfer switches are required to be designed so that the load cannot remain simultaneously disconnected for both the normal and alternative sources when either or both sources are available.

These transfer switches are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

These transfer switches may be marked to indicate that protection is intended to be provided by fuses or by an inverse time circuit breaker. If there is no marking of a protective device type, transfer switches are considered suitably protected by either type of device. Transfer switches may be marked with a maximum rating of protective device. If not marked with a rating, the transfer switches are considered suitably protected by a protective device of the maximum rating required by the CEC.

Transfer switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which includes scheduled test operations switching full load.

RELATED PRODUCTS

Fire pump controller assemblies with a transfer switch are covered under Pump Controllers, Fire Certified for Canada (QYZS7).

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 178, ''Automatic Transfer Switches.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Fire Pump Power Transfer Switch.''

The Listing Mark is applied to the switch panel on transfer switches investigated without regard to the enclosure in which they are mounted. When the Listing Mark is applied to the enclosure of an enclosed transfer switch, it indicates the Listing of the complete enclosed assembly.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS CERTIFIED FOR CANADA (XNWX7)

TRANSFORMERS, CLASS 2 CERTIFIED FOR CANADA (XOKV7)

GENERAL

This category covers transformers suitable for use with Class 2 remote-control, low-energy power and signal circuits not exceeding 30 V rms, including bell or buzzer circuits, and rated 100 VA or less, and intended for use in Class 2 remote control and signal circuits in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

A Class 2 transformer that is energy-limiting has such winding impedance as to limit the output current.

A Class 2 transformer that is non-energy-limiting is equipped with a fuse or other overcurrent protective device that limits the output current.

PRODUCT MARKINGS

Class 2 transformers are marked, where readily visible after installation, with the catalog number or other identification and the electrical rating as follows:

- The primary voltage
- Frequency (if other than 60 Hz)
- Secondary rating in amperes or volt amperes
- "Class 2," except where the terminals are marked "BELL" or "CHIME"
- The primary terminals or leads are marked "LINE" or "PRIMARY" or equivalent
- The secondary terminals or leads are marked "LOAD" or "SECONDARY" or equivalent, unless marked "BELL" or "CHIME"

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," or intended for use in Canada, are marked "ISC-x-CAN," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

"CAN" represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0 and ANSI/UL 1446, "Systems of Insulating Materials – General," or intended for use in Canada and the United States, are marked "ISC-x," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

For a required overcurrent protector, the following statement is used: "CLASS 2 WHEN USED WITH PROTECTOR, MFG _____, CAT. NO. _____."

The month and year of manufacture, at a minimum, is marked on the transformer in a location accessible without the use of tools. Date coding, serial numbers or the equivalent may be used.

Unless marked "BELL" or "CHIME," transformers intended for intermittent duty are marked with the "ON" and "OFF" time.

A transformer with multiple secondary windings having an output exceeding 30 V rms is marked, where readily visible after installation, with the word "WARNING," and the following or equivalent: "Risk of electric shock or fire. Do not interconnect secondary windings."

Transformers intended for mounting in a conduit knockout and that have no means for maintaining a bonding path between the transformer and the equipment grounding conductor when the transformer is installed in a nonmetallic box are marked "Install in Metal Box Only."

RELATED PRODUCTS

For direct-plug-in or cord-connected Class 2 transformers, see Direct-plug-in and Cord-connected Class 2 Power Units Certified for Canada (EPBU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 66.1 (2006), "Low Voltage Transformers – Part 1: General Requirements," and CSA-C22.2 No. 66.3 (2006), "Low Voltage Transformers – Part 3: Class 2 Transformers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Class 2 Transformer."

Transformers, Class 2 Certified for Canada (XOKV7)–*Continued*

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, DRY TYPE, OVER 750 VOLTS CERTIFIED FOR CANADA (XPFS7)

USE AND INSTALLATION

This category covers dry-type distribution transformers, including solid-cast and resin-encapsulated transformers, rated 69 kV class or less, single- and three-phase.

Both the primary and secondary voltage ratings may be greater than 750 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Transformers having exposed live parts, such as at high-voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the CEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 47 (1990), "Air-Cooled Transformers (Dry Type)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distribution Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

The "Distribution Transformer" Listing Mark covers both the transformer and the enclosure.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, LIQUID-FILLED TYPE, OVER 750 VOLTS CERTIFIED FOR CANADA (XPLH7)

USE AND INSTALLATION

This category covers liquid-filled, distribution-type, pad-mounted and substation-type transformers, rated 69 kV class or less, single- and three-phase.

Both the primary and secondary voltage ratings may be greater than 750 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Transformers having exposed live parts, such as at high-voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the CEC.

The type of liquid used is identified on the transformer nameplate. Additional information on the fluid used is provided in Material Safety Data Sheets (MSDS Sheets) available from the transformer manufacturer.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA C2.1 (2006), "Single-Phase and Three-Phase Liquid-Filled Distribution Transformers."

Transformers, Distribution, Liquid-filled Type, Over 750 Volts Certified for Canada (XPLH7)−*Continued*

Additional standards used, as applicable, are CSA C227.3 (2006), "Low-Profile, Single-Phase, Pad-Mounted Distribution Transformers with Separable Insulated High-Voltage Connectors," and CSA C227.4 (2006), "Three-Phase, Pad-Mounted Distribution Transformers with Separable Insulated High-Voltage Connectors."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-Immersed Distribution Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

The Listing Mark covers both the transformer and the enclosure.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, GENERAL PURPOSE CERTIFIED FOR CANADA (XPTQ7)

USE

This category covers transformers of the compound filled, exposed core or open core, coil construction, general purpose and industrial control types, rated 750 V or less. Step-up, step-down, insulated and autotransformer types are also included.

Open core and coil power transformers for use in industrial control equipment are identified as "Industrial Control Transformers."

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present, such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor speed controllers.

General purpose transformers are suitable for use in a maximum 25°C ambient unless otherwise marked. Industrial control transformers are suitable for use in a 40°C ambient.

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

Some transformers are marked to specify a minimum distance to a wall.

General purpose transformers are provided with leads, or with studs or terminal pads to which certified pressure wire connectors can be factory or field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG, and 75°C wire for sizes 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installations or use, suitable for special instructions are marked on the transformer.

PRODUCT MARKINGS

All transformers are marked with the following:

1. The primary voltage, or voltages, and frequency (if other than 60 Hz)
2. Number of phases, if other than single-phase
3. All secondary voltages
4. The secondary capacity in amperes or volt-amperes

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0, "General Requirements - Canadian Electrical Code, Part II," or intended for use in Canada, are marked "ISC-x-CAN," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

"CAN" represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0 and ANSI/UL 1446, "Systems of Insulating Materials – General," or intended for use in Canada and the United States, are marked "ISC-x," where:

"ISC" stands for "Insulation System Class"

Transformers, General Purpose Certified for Canada (XPTQ7)−*Continued*

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

Terminals and leads are identified as such.

Autotransformers are marked "AUTOTRANSFORMER."

Secondary terminals or leads on autotransformers intended for operation on circuits having a voltage to ground of 150 V or less are marked as required by CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II."

If taps in windings are other than full capacity taps, they are so indicated.

Special-purpose enclosures, such as drip-tight, weatherproof, water-tight or dust-tight, or enclosures suitable for outdoors are marked as required by CAN/CSA-C22.2 No. 94, "Special Purpose Enclosures."

RELATED PRODUCTS

Transformers of the air-cooled, dry, ventilated and nonventilated types are covered under Power and General Purpose Transformers, Dry Type Certified for Canada (XQNX7).

Reactors used for dimming, and variable voltage autotransformers are covered under Power Circuit and Motor-mounted Apparatus Certified for Canada (NMTR7).

Voltage regulators are covered under Power Supplies, General Purpose Certified for Canada (QQFU7).

Ballasts for mercury lamps and fluorescent lamps are covered under High-intensity-discharge Lamp Ballasts Certified for Canada (FLCR7) and Fluorescent Lamp Ballasts Certified for Canada (FKVS7), respectively.

Liquid-filled transformers are covered under Transformers, Distribution, Liquid-filled Type, Over 600 V Certified for Canada (XPLH7).

Class 2 transformers are covered under Transformers, Class 2 Certified for Canada (XOKV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 66.1-2006, "Low Voltage Transformers – Part 1: General Requirements," and CSA-C22.2 No. 66.2-2006, "Low Voltage Transformers – Part 2: General Purpose Transformers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Purpose Transformer," "Industrial Control Transformer" or "Auto-Transformer," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, IGNITION CERTIFIED FOR CANADA (XPZZ7)

USE

This category covers ignition transformers designed for use on gas- or oil-burning equipment where the acceptability of the combination has been determined by UL. The transformers are designed for connection to supply circuits operating at not over 600 V. The output does not exceed 15,000 V open-circuit and, unless otherwise indicated in the individual certifications, the transformers are of the air-cooled, step-up type.

Interchangeable transformers certified as Class 6, 10, 12 or 14, have secondary voltage ratings of 6,000, 10,000, 12,000 and 14,000 V, respectively. These transformers have been investigated to determine that their ignition characteristics are such that they may be interchanged with other certified transformers of like class and secondary grounding. These transformers are intended for use, without further ignition performance tests, on certified oil or gas burners employing single spark gaps.

Noninterchangeable transformers are intended for specific applications or include ignition characteristics that preclude their interchangeability. Noninterchangeable transformers are acceptable only on specific gas- or oil-burning equipment with which they have been tested.

PRODUCT MARKINGS

All transformers are marked with the following:

1. Name, trademark, or other recognized symbol of identification of the manufacturer
2. Catalog number or equivalent

Transformers, Ignition Certified for Canada (XPZZ7)−*Continued*

3. Electrical rating, consisting of:
   a. low-potential voltage
   b. frequency
   c. volt-amperes or amperes based on input
   d. all open-circuit high-potential rms voltages
   e. high-potential short-circuit current in mA

Transformers having the mid-point or one end of the high-potential winding grounded to the core and the enclosure are marked "MID-POINT (OR ONE END) OF HIGH VOLTAGE WINDING GROUNDED TO CORE AND CASE," or the equivalent.

Transformers intended for use with a twin-gap or a multiple-gap ignition system are marked accordingly. In the case of a multiple-gap transformer, the marking indicates the number of secondary circuits for which the transformer is intended, and which pair of terminals is associated with each secondary winding, unless such identification is obvious.

Ignition transformers suitable for use under the interchangeability program are identified as such.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 13 (1962), "Transformers for Luminous-Tube Signs, Oil- or Gas-Burner Ignition Equipment, Cold-Cathode Interior Lighting."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Interchangeable Ignition Transformer" or "Noninterchangeable Ignition Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

A green background identifies the Listing Mark for interchangeable transformers; a red background identifies the Listing Mark for noninterchangeable transformers.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND GENERAL-PURPOSE TRANSFORMERS, DRY TYPE CERTIFIED FOR CANADA (XQNX7)

USE AND INSTALLATION

This category covers single-phase and polyphase transformers of the air-cooled, dry, ventilated and nonventilated types rated 750 V or less. Step-up, step-down, insulated, and autotransformer types are also included.

The transformers are provided with leads, or with the studs or terminal pads to which certified pressure-wire connectors can be factory or field installed to accommodate field wiring. The adequacy of the wire-bending space in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), has not been determined and should be investigated at the time of the installation.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG and 75°C wire for sizes 1/0 AWG and larger.

Unless otherwise marked, these transformers have not been investigated for use where a significant nonsinusoidal current is present. Examples of equipment that may draw nonsinusoidal currents are uninterruptible power supplies, electronic ballasts, data processing equipment and solid-state motor speed controllers.

K factor-rated transformers have not been investigated for use with harmonic loads where the rms current of any single harmonic higher than the tenth is greater than 1/h of the fundamental rms current.

The transformer ratings are based on installation in a maximum 40°C ambient unless otherwise marked.

Transformers with ventilating openings should be installed so that the ventilating openings are not blocked. Some transformers are marked to specify a minimum distance to a wall.

The suitability of the transformer circuit grounding, grounding electrode connections, and equipment grounding connections in accordance with the CEC should be determined by the Authority Having Jurisdiction at the time of installation.

Power and General-purpose Transformers, Dry Type Certified for Canada (XQNX7)−*Continued*

In cases where the nature or construction of the transformer is such that special precautions beyond the requirements of the CEC must be observed in installations or use, suitable special instructions are marked on the transformer.

PRODUCT MARKINGS

All transformers are marked with the following:

1. Catalog, style, model or other identifying designation
2. High and low voltages
3. Frequency
4. Number of phases, unless clearly indicated on the connection diagram
5. Output amperes or kVA
6. Rated temperature rise, in degrees Celsius
7. Percent impedance

Transformers investigated for use where significant nonsinusoidal current is present are marked "Suitable for nonsinusoidal current load with K factor not to exceed ___," where the blank is filled in with one of the standard K factor ratings of 4, 9, 13, 20, 30, 40 or 50. (The K factor specified is the summation of the per unit rms current at harmonic "h" squared times the harmonic order squared.)

If taps are provided, transformers are marked with the tap voltages, either as actual voltages or as a percentage of the rated voltage.

Autotransformers are marked "AUTOTRANSFORMER."

Transformers provided with an enclosure are marked with the environmental type number(s).

Transformers having terminations, other than leads, suitable for aluminum are marked "CU-AL."

RELATED PRODUCTS

Voltage regulators are covered under Power Supplies, General Purpose Certified for Canada (QQFU7).

Ballasts for mercury lamps and fluorescent lamps are covered under High-intensity-discharge Lamp Ballasts Certified for Canada (FLCR7) and Fluorescent Lamp Ballasts Certified for Canada (FKVS7), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 47, "Air-Cooler Transformers (Dry Type)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Transformer," "Air-Cooled Power Transformer" or "Dry Type General Purpose and Power Transformer," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, TOY CERTIFIED FOR CANADA (XRBV7)

GENERAL

This category covers direct-plug-in or cord-connected portable, step-down transformers of the low-secondary-voltage type suitable for supplying current to electrically operated toys or hobby sets.

ACCESSORIES

An accessory to a certified toy or hobby transformer is provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified toy or hobby transformer specified in the markings or instructions. Such accessories serve to provide conditioning or control of the transformer output voltage, current or power.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 173 (1983), "Transformers for Toy and Hobby Use."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Transformers, Toy Certified for Canada (XRBV7)−*Continued*

Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Toy Transformer," "Hobby Transformer," "Toy Transformer Accessory" or "Hobby Transformer Accessory."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XPAF7)

TRANSFORMERS, GENERAL PURPOSE FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XPJF7)

GENERAL

This category covers transformers of the compound filled, exposed core or open core and coil construction (industrial control type) type, rated 600 V or less. Step-up, step-down, insulated, and autotransformer types are also included. Autotransformers are so marked.

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor-speed controllers.

The transformer rating is based on installation in a maximum 25°C ambient unless otherwise marked.

PRODUCT MARKINGS

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

Some transformers are marked to specify a minimum distance to a wall. General-purpose transformers are provided with leads, or with studs or terminal pads to which certified pressure-wire connectors can be factory or field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for size 14–1 AWG, and 75°C wire for size 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," must be observed in installations or use, suitable for special instructions are marked on the transformer.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Purpose Transformer for Use in Hazardous Locations," "Industrial Control Transformer for Use in Hazardous Locations" or "Auto-Transformer for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Transformers, General Purpose for Use in Hazardous Locations Certified for Canada (XPJF7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRASH COMPACTORS CERTIFIED FOR CANADA (XUTS7)

This category covers equipment intended to reduce the volume of trash by means of mechanical compaction.

COMMERCIAL TRASH COMPACTORS CERTIFIED FOR CANADA (XUUC7)

USE AND INSTALLATION

This category covers commercial-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. They may be provided with a facility to tie the compacted trash into bales. They are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These compactors are motor operated and are provided with overcurrent or overheating protective devices.

Commercial-use compactors are intended to be installed, maintained and operated by competent personnel who are fully instructed concerning the hazards involved.

RELATED PRODUCTS

Trash compactors for household use are covered under Household Trash Compactors Certified for Canada (XUUM7).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Waste disposers are covered under Waste Disposers Certified for Canada (ZDHR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Compactor," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD TRASH COMPACTORS CERTIFIED FOR CANADA (XUUM7)

USE

This category covers household-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. These compactors are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These motor-operated compactors are rated 250 V or less and are provided with overcurrent or overheating protective devices.

RELATED PRODUCTS

Trash compactors for commercial use are covered under Commercial Trash Compactors Certified for Canada (XUUC7).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Waste disposers are covered under Waste Disposers Certified for Canada (ZDHR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances."

TRUCKS, INDUSTRIAL CERTIFIED FOR CANADA (XVHZ7)

This category covers industrial-type material handling equipment of the power-operated or walking type, such as lift trucks, platform trucks, towing tractors, etc.

These devices may be electric battery-powered or internal combustion engine-powered.

TRUCKS, ELECTRIC BATTERY-POWERED CERTIFIED FOR CANADA (XVVX7)

Trucks, Industrial, Type E Certified for Canada (XWJV7)

USE

This category covers electric-battery-powered trucks having minimum acceptable safeguards against inherent fire and electric shock hazards.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C583, ''Guide for the Investigation of Electric Battery Powered Industrial Trucks.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TYPE E INDUSTRIAL TRUCK

Trucks, Industrial, Type ES Certified for Canada (XXES7)

USE

This category covers electric-battery powered trucks provided with safeguards against fire and electric shock hazards in addition to those required for Type E trucks. Barriers are provided to restrict the entrance of combustibles flying into electrical enclosures and to guard against the emission of flame and molten metal.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C583, ''Guide for the Investigation of Electric Battery Powered Industrial Trucks.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRUCKS, INTERNAL COMBUSTION ENGINE-POWERED CERTIFIED FOR CANADA (XXLR7)

Trucks, Industrial, Type D Certified for Canada (XXYZ7)

USE

This category covers diesel-engine-powered trucks having minimum acceptable safeguards against inherent fire hazards.

These trucks are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these trucks should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558, ''Guide for the Investigation of Internal Combustion Engine-Powered Industrial Trucks.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TYPE D INDUSTRIAL TRUCK
AS TO FIRE HAZARD ONLY
Control No.
*** ***

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. Trucks, Industrial, Type DS Certified for Canada (XYMX7)

USE

This category covers diesel-engine-powered trucks which are investigated under requirements similar to those applying to Type D trucks. Special features are provided as additional safeguards to further reduce the inherent fire hazards of the electric, fuel and exhaust systems.

These trucks are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these trucks should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558, ''Guide for the Investigation of Internal Combustion Engine-Powered Industrial Trucks.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TYPE DS INDUSTRIAL TRUCK
AS TO FIRE HAZARD ONLY
No.

Trucks, Industrial, Type G/LP Certified for Canada (XZVS7)

USE

This category covers engine-powered trucks (dual-fuel) which may operate on either gasoline or liquefied petroleum gas and have minimum acceptable safeguards against inherent fire hazards.

These trucks are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these trucks should conform to the requirements of Authorities Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C558, ''Guide for the Investigation of Internal Combustion Engine-Powered Industrial Trucks.''

UNINTERRUPTIBLE POWER-SUPPLY EQUIPMENT CERTIFIED FOR CANADA (YEDU7)

USE AND INSTALLATION

This category covers indoor- and outdoor-use uninterruptible power-supply (UPS) equipment that may be stationary or fixed. This equipment is rated 600 V or less.

This category also covers large UPS equipment requiring field assembly of modules or subassemblies, which are appropriately marked as indicated below.

A UPS is used to provide alternating-current power to a load for some period of time in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

These products include the following equipment intended for use with a UPS: (1) battery supply modules with or without batteries, (2) remote status panels, (3) bypass switches, (4) maintenance bypass switches, (5) battery circuit disconnect switches, (6) rectifier and power conversion units, and (7) power distribution panels.

The investigation of UPS equipment does not include the effects on the load that may be caused by momentary disruption of alternating-current power.

A UPS identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Products suitable for use in computer rooms are marked "Suitable for Computer Room Applications," or the equivalent.

This category does not cover a UPS intended as a component of a fire-protective or burglary-protective signaling system.

REBUILT PRODUCTS

This category also covers UPS equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt UPS equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt UPS equipment is subject to the same requirements as new UPS equipment.

RELATED PRODUCTS

UPS systems for use with professional medical and dental equipment are covered under Uninterruptible Power Supplies for Use in Health Care Facilities Certified for Canada (KFFG7).

Battery-powered emergency equipment for controlling lighting and/or power is covered under Emergency Lighting and Power Equipment Certified for Canada (FTBR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1, "General Use Power Supplies," or CSA-C22.2 No. 107.3, "Uninterruptible Power Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Uninterruptible Power Supply" (or "UPS"), "UPS Battery Supply," "UPS Status Panel," "UPS Transfer Switch," "UPS Inverter," "UPS Rectifier/Charger," "UPS Equipment Enclosure," "UPS Equipment Part," "UPS Equipment Subassembly," "UPS Equipment Accessory," "UPS Power Distribution Panel," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNINTERRUPTIBLE POWER-SUPPLY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (YEEU7)

USE AND INSTALLATION

This category covers indoor- and outdoor-use uninterruptible power-supply (UPS) equipment that may be stationary or fixed. This equipment is rated 600 V or less.

RELATED PRODUCTS

UPS equipment intended for use in unclassified locations is covered under Uninterruptible Power-supply Equipment Certified for Canada (YEDU7).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), "General Use Power Supplies," or CSA-C22.2 No. 107.3 (2005), "Uninterruptible Power Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Uninterruptible Power Supply for Use in Hazardous Locations," "UPS Battery Supply for Use in Hazardous Locations," "UPS Status Panel for Use in Hazardous Locations," "UPS Transfer Switch for Use in Hazardous Locations," "UPS Inverter for Use in Hazardous Locations," "UPS Rectifier/Charger for Use in Hazardous Locations," "UPS Equipment Enclosure for Use in Hazardous Locations," "UPS Equipment Part for Use in Hazardous Locations," "UPS Equipment Subassembly for Use in Hazardous Locations," "UPS Equipment Accessory for Use in Hazardous Locations" or "UPS Power Distribution Panel for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT SUBSTATIONS CERTIFIED FOR CANADA (YEFR7)

GENERAL

This category covers unit substations rated 600 V or less intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and in accordance with the installation instructions provided on the unit substation.

A unit substation consists of a transformer in combination with primary and/or secondary overcurrent protective devices or switching devices housed in a single enclosure.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Some unit substations are suitable for use as service equipment and are so marked. Such marking is part of the Certification Mark as noted below, or is an integral part of other required markings.

Certified unit substations are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking shall be independent of any marking on terminal connectors and shall be on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors, the marking will indicate "Use copper or aluminum wire." A unit substation employing terminals for main or branch circuit units individually

marked "Cu-A1" will be marked "Use copper-A1 wire" or "Use copper wire only." The latter statement indicates that wiring space or other factors make the unit substation unsuitable for aluminum conductors.

Unless the unit substation is marked with both the size and temperature rating of wire to be used, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG and 75°C ampacities for wire 1/0 AWG and larger.

Unit substations have the secondary neutral bonded to the enclosure and have provision on the neutral for connection of a grounding conductor. A terminal is also provided on the enclosure near the line terminals for use with an equipment grounding conductor between the unit substation and the enclosure of equipment on the line side of the unit substation for use when a metallic conduit system is not provided.

The suitability of unit substations for use on high capacity circuits has not been investigated.

Unit substations are marked with enclosure type number 1, 2 or 3R as described in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Unit substations marked with enclosure type 3RX provide the same level of protection as type 3R enclosures, and are provided with an additional level of corrosion protection for the enclosure.

A unit substation marked "Type 3R" may also be marked "Rainproof."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 31, "Switchgear Assemblies," and CAN/CSA-C22.2 No. 47, "Air-Cooled Transformers (Dry Type)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unit Substation."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT SUBSTATIONS OVER 600 VOLTS CERTIFIED FOR CANADA (YEFV7)

USE AND INSTALLATION

This category covers three-phase articulated and integral unit substations for step-down operation. Articulated substations are rated through 10,000 kVA, at primary voltages above 600 V through 38 kV (nominal 35 kV). Integral substations are rated through 2500 kVA at primary voltages above 600 V through 38 kV.

Articulated unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as multiple self-enclosed pieces of equipment intended for connection in the field.

Integral unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as a single self-enclosed piece of equipment. Sections may be shipped separately.

An articulated unit substation may consist of several separately certified pieces of equipment. Only those sections provided with unit substation Certification Marks have been investigated as part of an articulated unit substation. The suitability of other assemblies will need to be determined by the Authority Having Jurisdiction.

The transformer section(s) house the three-phase power transformer(s) for step-down operation. These unit substation transformers are dry-type distribution transformers including solid cast and resin encapsulated types.

The input sections may consist of a terminal chamber, metal-clad switchgear, or metal-enclosed interrupter switchgear.

The output sections may consist of metal-clad switchgear, metal-enclosed interrupter switchgear, a motor control center, molded-case circuit breaker equipment, fused switch equipment, a dead-front switchboard, a panelboard or similar types of distribution or control equipment.

A transition section may be located between a transformer section and an input section, between a transformer section and an output section,

between different types of input sections, or between different types of output sections. Transition sections may be integral parts of two adjacent sections, an integral part of one of the sections, or a separate section.

The transformer ratings determine the kVA and voltage capabilities of the overall integral unit substation.

These unit substations are intended for installation in accordance with the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and in accordance with the installation instructions provided on the equipment.

PRODUCT MARKINGS

A master nameplate is mounted on an external surface of the enclosure and visible after normal installation of the equipment. This master nameplate includes the following information as a minimum: manufacturer's name and equipment identification number, kVA rating or ratings if force cooled, primary and secondary lightning impulse withstand voltage (BIL) ratings, primary and secondary voltage ratings, primary and secondary continuous current ratings, transformer design impedance, and total weight. If metal-clad switchgear or metal-enclosed interrupter switchgear is connected to the transformer primary, the nameplate also includes a short-time current carrying rating and momentary current rating.

Each section of the unit substation also has its own rating based on the requirements in standards applicable for that section of the equipment. These individual section ratings are coordinated to be equal to or greater than the rating of the unit substation.

The enclosure of the integral unit substation or the several enclosures of an articulated unit substation are marked to indicate the exposure category (A, B or C) for which it is intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; and enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only.

An enclosure that has been investigated to determine it is rainproof is marked "Rainproof," "Outdoor" or "3R." The enclosure may be either nonventilated or ventilated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 31 (1989), "Switchgear Assemblies," and CAN/CSA-C22.2 No. 47 (1990), "Air Cooled Transformers (Dry Type)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory), together with the word "LISTED," a control number, the product name "Unit Substation Section," and "_____ of _____," where the first space is stamped with a number indicating the position (reading from left to right) that the section occupies in the series of sections constituting the unit substation, and the second space indicates the total number of sections which are provided as part of the unit substation.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VAPORIZERS CERTIFIED FOR CANADA (YEIV7)

GENERAL

This category covers devices intended for vaporization of water, certain medicaments in water solution, and glycol.

If a flammable liquid or other flammable material, particularly if more volatile or flammable than kerosene (38°C flash, closed cup) is used in these devices, there may be danger of fire or explosion, especially in closed rooms or confined spaces.

Portable electric vaporizers of the resistance-wire type present certain inherent hazards. Care should be exercised to prevent their contact with readily combustible materials, such as blankets, bedding, curtains and draperies.

FACTORS NOT INVESTIGATED

The physiological effects of the liquids, including the medicaments which may be employed, have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances."

Additional standards may be applicable based on the features employed. In addition, CSA Technical Information Letter No. C-37, "Input Ratings for Cord-Connected Heating and Cooking Appliances, Hairdressing Equipment and Electric Irons for Household Use" (issued 2-28-05), may also be used as applicable.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vaporizer."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES CERTIFIED FOR CANADA (YEWT7)

These valves are for use in the assembly of appliances or equipment or in piping handling gases or liquids. The various categories identify the specific or general kind of service for which the valve is intended.

CHECK VALVES CERTIFIED FOR CANADA (YFKR7)

Check valves are for various specific uses including prevention of return-flow, hydraulic back pressure, excess flow and for equalizing or controlling fluid flow.

Anhydrous-ammonia Check Valves Certified for Canada (YFXZ7)

USE AND INSTALLATION

This category covers filler valves, vapor-return valves, back-pressure check valves, and excess-flow check valves. Filler valves and vapor-return valves, where so indicated in the individual certifications, are intended to be installed in conjunction with a separate back-pressure check or a separate excess-flow check valve.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C125, "Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief)."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, one of the following product names as appropriate: "Excess Flow Valve," "Filler Valve," "Vapor-Return Valve" or "Back Pressure Valve," and the statement "for Anhydrous Ammonia * kPa max."

* Pressure rating required only if valve is rated in excess of 1720 kPa gauge.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-gas Check Valves Certified for Canada (YHNT7)

USE AND INSTALLATION

This category covers filler, vapor-return, back-pressure check, excess-flow check, and similar valves as indicated in the individual certifications. Filler valves and vapor-return valves, where so indicated, are intended to be installed in conjunction with a separate back-pressure or a separate excess-flow check valve.

LP-gas Check Valves Certified for Canada (YHNT7)−*Continued*

Back-pressure and excess-flow check valves may be installed in either liquid or vapor lines unless otherwise indicated. They are for use in systems using Transport Canada cylinders or containers constructed in accordance with the "Canadian Pressure Vessel Code." They are suitable for use with LP-gas in either the liquid or gaseous phase at working pressures of at least 1720 kPa gauge pressure. Those suitable for use at pressures in excess of 1720 kPa are marked with the maximum pressure.

These devices are intended for installation and use in accordance with CSA-B149.2, "Propane Storage and Handling Code."

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C125, "Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief)."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, one of the following product names: "Back Pressure Valve," "Excess Flow Valve," "Filler Valve," "Vapor Return Valve," or other appropriate product name as shown in the individual Listings, and the statement "For LP-Gas * kPa max."

* Pressure rating required only if valve is rated in excess of 1720 kPa.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, AUTOMATIC, FOR GAS APPLIANCES CERTIFIED FOR CANADA (YINV7)

USE AND INSTALLATION

This category covers automatic valves rated 600 V or less that are constructed entirely of new, unused parts and materials, and intended for use with one or more of the following fuels in the gaseous state: natural gas, manufactured gas, LP-gas, or LP-gas-air mixtures as indicated in the individual certifications. These valves may be individual automatic valves, or valves utilized as parts of automatic gas ignition systems.

These valves have a maximum operating gas pressure rating of 1/2, 2, 5 psi (3.5, 13.8, 34.5 kPa), or when higher than 5 psi (34.5 kPa), in 5 psi (34.5 kPa) increments up to and including a maximum operating pressure of 60 psi (413.7 kPa). They are capable of operation at ambient temperatures of 32 to 125°F (0 to 51.5°C), unless a higher and/or a lower temperature are specified in the individual certifications. Valves marked "Commercial/Industrial (C/I) Safety Shutoff Valve" have an operating pressure rating greater than 1/2 psi (3.5 kPa), a capacity rating greater than 400,000 Btu/hr, and close in less than 2 seconds after being de-energized.

These valves are intended for stationary installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA-B149.1 (2000), "Natural Gas and Propane Installation Code."

RELATED PRODUCTS

Electrically operated valves intended for other applications are covered under Valves, Electrically Operated Certified for Canada (YIOZ7).

Electrically operated valves intended for other applications in hazardous (classified) locations are covered under Valves, Electrically Operated for Use in Hazardous Locations Certified for Canada (YTSX7).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI Z21.21a/CSA 6.5a (2001), "Automatic Valves for Gas Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Automatic Valve for Gas Appliances," and the statement "IN ACCORDANCE WITH ANSI Z21.21a-2001/CSA 6.5a-2001."

Valves, Automatic, for Gas Appliances Certified for Canada (YINV7)−*Continued*

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, ELECTRICALLY OPERATED CERTIFIED FOR CANADA (YIOZ7)

USE AND INSTALLATION

This category covers electrically operated valves, which are designated general purpose valves or safety valves as indicated in the individual Listings. These valves may be equipped with complementary or optional mechanical actuators.

A general purpose valve is intended to control the flow of a fluid, but is not intended for use as a safety valve. It may be a normally closed or normally open valve.

A safety valve is a normally closed valve of the ''On'' and ''Off'' type intended to be actuated by a safety control or an emergency device to prevent the delivery of a fluid. It may also be used as a general purpose valve. A multiple port valve may be designated as a safety valve only with respect to its normally closed port.

These valves are intended for stationary installation in an ambient temperature normally prevailing in habitable spaces and for handling fluids at a temperature not exceeding 25°C (77°F) as defined by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' unless otherwise indicated.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 139-1982, ''Electrically Operated Valves.''

Products intended for automotive use with CNG are additionally investigated to ANSI/AGA NGV3.1/CGA NGV 12.3-1995, ''Fuel System Components for Natural Gas Powered Vehicles.''

Products intended for automotive use with LP-gas are additionally investigated to CSA 12.2-2002, ''Propane Fuel System Components for Use on Highway Vehicles.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with word ''LISTED,'' a control number, and one of the following product names as appropriate: ''General Purpose Valve,'' ''Safety Shut off Valve,'' ''Safety Valve,'' ''Shut off Valve'' or ''Positive Shut off Valve.'' The product name may be preceded by ''Section of'' and is followed by one of the following statements as appropriate: ''Assembly Consisting of Coil (or Actuator) (No.) and Body (No.),'' ''For Automotive Use Only'' or ''For Use with (No.) Pilot Safety Control Switch.''

The specific fluid(s) for which the valve is Listed together with the fluid temperature and ambient temperature ratings are also included on the Listing Mark or marked elsewhere on the valve.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REGULATORS CERTIFIED FOR CANADA (YJQV7)

For Listing purposes, gas regulators are divided into two groups: Compressed Gas Regulators and LP-Gas Regulators. Regulators designated as Compressed Gas Regulators are not investigated for their ability to maintain the delivery pressure within predetermined limits. Regulators designated as LP-Gas Regulators are investigated to determine that they are capable of controlling and maintaining a uniform gas delivery pressure.

Compressed Gas Regulators Certified for Canada (YKFT7)

USE

This category covers regulators designed for use with the compressed gases specified in the individual certifications, to reduce the storage cylinder pressure or line pressure of not more than 37.91 mPa (5500 psig) to the use pressure.

Compressed Gas Regulators Certified for Canada (YKFT7)−*Continued*

FACTORS NOT INVESTIGATED

The regulating performance, the effects of overpressure on connected equipment, and the physiological effects of the use of medical equipment regulators have not been investigated.

RELATED PRODUCTS

LP-gas pressure regulators for equipment intended for installation and use in accordance with CAN/CSA-B149.1, ''Natural Gas and Propane Installation Code,'' and CAN/CSA-B149.2, ''Propane Storage and Handling Code,'' are covered under LP-Gas Regulators Certified for Canada (YKSR7 and YKSR8).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C252 (1975), ''Guide for the Investigation of Gas Pressure Regulators.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Compressed Gas Regulator.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-gas Regulators Certified for Canada (YKSR7)

USE

This category covers regulators intended to be used in accordance with CSA B149.2, ''Propane Storage and Handling Code,'' in LP-gas systems other than automotive, utilizing Department of Transportation, Transport Canada or CSA containers.

First-stage regulators are designed for vapor service to reduce pressure from the container to a nominal pressure of 68.7 kPa or less. Second-stage regulators are designed to reduce the first-stage outlet operating pressure to a pressure equal to or less than 356 mm water column. Integral two-stage regulators combine a first-stage and a second-stage regulator into a single unit.

Second-stage regulators are equipped with a threaded vent opening or other means for connection of vent piping required of regulators to be located inside a building or to be included in the assembly of underground systems.

If so indicated in the individual certifications, these regulators may incorporate a manual- or automatic-changeover control manifold.

High-pressure regulators are designed for handling LP-gas in either the gaseous or liquid phase to reduce prevailing container pressure to a lower pressure in excess of 6.9 kPa. High-pressure regulators are not required to be equipped with integral relief valves but may be so equipped if indicated in the individual certifications.

Single-stage regulators are designed for vapor pressure to reduce pressure from the container to a nominal pressure of 6.9 kPa or less. They are for use with small portable appliances and outdoor cooking appliances.

Special-purpose regulators are designed to reduce the prevailing cylinder, tank or other pressure in excess of 6.9 kPa to a lower pressure. These regulators are not intended for installation in two-stage piping systems that serve 3.5 kPa appliance systems.

RELATED PRODUCTS

For automotive-type LP-gas regulators, see LP-Gas Accessories, Automotive Type Certified for Canada (ITPV7).

ADDITIONAL INFORMATION

For additional information, see Regulators Certified for Canada (YJQV7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC-C144 (1975), ''Guide for the Investigation of Pressure Regulating Valves.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''LP-Gas Regulator.''

RELIEF VALVES CERTIFIED FOR CANADA (YLFZ7)

LP-gas Relief Valves Certified for Canada (YNWZ7)

Relief Valves, Hydrostatic, LP-gas Certified for Canada (YOKX7)

USE AND INSTALLATION

This category covers valves intended for the relief of hydrostatic pressures only. Hydrostatic-relief valves are intended for installation in pipelines, charging manifolds, and other equipment handling LP-gas in the liquid phase. The are intended for installation and use in accordance with CSA B149.2, ''Propane Storage and Handling Code.''

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C132, ''Safety Relief Valves for Anhydrous Ammonia and Propane.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Hydrostatic Relief Valve,'' and the statement ''For LP-Gas * kPa max.''

* Pressure rating not required if marked elsewhere on the valve

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Relief Valves, Safety, LP-gas Certified for Canada (YOYV7)

USE AND INSTALLATION

This category covers safety-relief valves intended for installation on LP-gas containers, other than those constructed according to Transport Canada specifications, in accordance with CSA B149.2, ''Propane Storage and Handling Code.'' They are used to safeguard such containers against excessive pressures caused by exposure to external heat, by overfilling, or by filling with LP-gas having a vapor pressure in excess of that for which the container is designed.

The maximum allowable working pressure (MAWP) of the tank determines the start-to-discharge pressure setting of the relief valve to be used. This setting is made by the valve manufacturer, and the adjustment is sealed to discourage tampering.

Safety-relief valves are rated according to their discharge capacities in dm3/s of air at 16°C and 101.3 kPa. This rate of discharge, the set pressure in kilopascals, and the manufacturer's name and valve number designation are marked on each relief valve or multiple-head unit or manifold.

The rate of discharge of the valve or valves used on the container is intended to be in accordance with the provisions of the requirements of the provincial or territorial authority where the tank is to be installed.

Safety-relief valves may be furnished by the manufacturer either separately or threaded into and incorporated in the assembly of a certified multiple-head unit.

The rate of discharge indicated on the relief valve applies only when the valve is mounted in a straight coupling in the top of a tank, and no restriction to flow is introduced on either the inlet or outlet side of the valve. Relief valves installed otherwise may have restrictions set up which will materially reduce the indicated rate of discharge.

When relief valves displaying a Certification Mark are installed in a head unit or manifold other than that with which valves have been flow

Relief Valves, Safety, LP-gas Certified for Canada (YOYV7)−*Continued*

tested and rated, used with vapor tubes, or mounted in any fittings in such manner as to introduce restrictions to flow ahead of the valve inlet, and/or the flow is restricted on the outlet side of the valve by the use of undersize pipe and fitting for venting the discharge, it is necessary to determine the resulting loss. Flow tests must be conducted to ascertain the reduction in flow, and the relief valve manufacturer should be consulted for such information.

When the relief valves are incorporated in the assembly of a multiple-head unit or a manifold by the valve manufacturer, the rate of discharge is indicated on the body of the head unit or manifold. The rating indicated on the body of the head unit or manifold is the total rated discharge of the valves in the unit, as determined by conducting flow tests with the relief valve or valves installed in the unit.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C132 (1992), ''Safety Relief Valves for Anhydrous Ammonia and Propane.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''LP-Gas Safety Relief Valve.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHUTOFF VALVES CERTIFIED FOR CANADA (YPMT7)

Shut-off valves following are exclusive of the electrically operated types and are manually, float, or pressure actuated.

Anhydrous-ammonia Shutoff Valves Certified for Canada (YQAR7)

USE

This category covers anhydrous-ammonia shutoff valves, including gas-line service and other types as indicated in the individual certifications. They are suitable for handling either liquid or gaseous anhydrous ammonia at a maximum working pressure of 1720 kPa. Those suitable for use at pressures in excess of 1720 kPa are marked with the maximum working pressure.

These valves are suitable for installation where a positive shutoff is required unless otherwise specified in the individual certifications. Metal-to-metal seat-type valves are suitable for installation only in branch or bypass lines where a positive shutoff is not essential.

PRODUCT MARKINGS

Valves are marked with the designation ''Metal-to-Metal Seat'' and ''____ kPa max,'' if applicable.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C125, ''Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief).''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Shut-off Valve for Anhydrous-Ammonia (NH_3).''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Compressed Gas Shutoff Valves Certified for Canada (YQNZ7)

USE

This category covers compressed gas shutoff valves intended for use in pipelines and with compressed gas containers in systems storing and handling various compressed gases other than those for LP-gas and anhydrous ammonia.

The valve types and the maximum working pressures for gas-line service valves are indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C842, ''Guide for the Investigation of Valves for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Shut-Off Valve,'' and the statement ''for *, ** kPa max.''

* Name of gas

** Pressure rating not required if marked elsewhere on the valve

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flammable Liquid Shutoff Valves Certified for Canada (YRBX7)

USE

This category covers valves of the gate, globe, angle, needle, and other types designed for use in pipe lines or equipment assemblies for gasoline, kerosene, fuel oil, petroleum, dry-cleaning solvent, etc. Valves may be of the manual, self-closing remote control, or other types as designated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C842, ''Guide for the Investigation of Valves for Flammable and Combustible Fluids.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Shut-off Valve,'' and the statement ''for Flammable Liquid * psi max.''

* Pressure rating not required if marked elsewhere on the valve

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Gas Shutoff Valves Certified for Canada (YRPV7)

USE

This category covers manual gas shutoff valves intended for use in lines conveying fuel gases. The type of valve, use, and maximum working pressure is noted in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products with a pressure of 125 psig or less in this category is CGA 3.16-M88, ''Lever Operated Non-Lubricated Gas Shut-Off Valves.''

Gas Shutoff Valves Certified for Canada (YRPV7)−*Continued*

The basic standard used to investigate products with a pressure greater than 125 psig in this category is ULC/ORD-C842, ''Guide for the Investigation of Valves for Flammable and Combustible Liquids.''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Shut-Off Valve,'' and the statement ''For LP-Gas * psi max,'' ''For Natural Gas * psi max'' or ''For Natural and Manufactured Gas * psi max.''

* Pressure rating not required if located elsewhere on the valve

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LP-gas Shutoff Valves Certified for Canada (YSDT7)

USE AND INSTALLATION

This category covers LP-gas shutoff valves, including gas-line service valves and other valves as identified in the individual certifications. These valves are intended for use and installation in accordance with CSA B149.2, ''Propane Storage and Handling Code.'' They are suitable for use with LP-gas in either the liquid or gaseous phase at working pressures of at least 1720 kPa. Those suitable for use at pressures in excess of 1720 kPa are marked with the maximum working pressure.

These valves are suitable for installation where a positive shutoff is required unless otherwise specified in the individual certifications. Metal-to-metal seat-type valves are suitable for installation only in branch or bypass lines where a positive shutoff is not essential.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C125, ''Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief).''

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, the product name ''Shut-Off Valve,'' the designation ''Metal-to-Metal Seat'' if applicable, and the statement ''for LP-Gas * kPa max.''

* Pressure rating required only if valve is rated in excess of 1720 kPa and not marked elsewhere on the valve.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (YTSX7)

GENERAL

This category covers electrically operated valves which, for the purpose of certification, are designated as follows:

General-purpose valve — A valve intended to control the flow of a fluid, but not to be depended upon to act as a safety valve. It may be a normally closed or normally open valve.

Safety valve — A normally closed valve of the ''On'' and ''Off'' type intended to be actuated by a safety control or an emergency device to prevent the unsafe delivery of a fluid. It may also be used as a general-purpose valve.

A multiple port valve may be designated as a safety valve only with respect to its normally closed port.

Unless otherwise indicated, these valves are intended for connection to rigid conduit in an ambient temperature normally prevailing in habitable spaces and for handling fluids at a temperature not exceeding 25°C (77°F) rated 600 V and less.

Identification of the specific fluid(s) for which the valves is certified, together with the fluid temperature and ambient temperature ratings, is included in installation instructions or marked on the valve or on a tag attached to the valve.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 139 (1982), ''Electrically Operated Valves.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''General Purpose Valve for Hazardous Locations'' or ''Safety Valve for Hazardous Locations.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VAPOR RECOVERY SYSTEMS CERTIFIED FOR CANADA (YUJZ7)

VAPOR RECOVERY SYSTEM ACCESSORIES, FLAMMABLE LIQUID CERTIFIED FOR CANADA (YUNT7)

USE AND INSTALLATION

This category covers accessories such as vapor-processing equipment intended for use by manufacturers and installers of vapor-recovery systems, installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

These products are intended for use with the following fuels:

a) Gasoline

b) Gasoline/ethanol blends designated as ''gasohol'' (E10 maximum)

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following as applicable:

- CSA-C22.2 No. 0.4, ''Bonding of Electrical Equipment (Protective Grounding)''
- CSA-C22.2 No. 0.5, ''Threaded Conduit Entries''
- CSA-C22.2 No. 22, ''Electrical Equipment for Flammable and Combustible Fuel Dispensers''
- CSA B346, ''Power-Operated Dispensing Devices for Flammable Liquids''
- CAN/CSA-C22.2 No. 157 (1992), ''Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations''
- CSA-C22.2 No. 30 (1986), ''Explosion-Proof Enclosures for Use in Class I Hazardous Locations''
- CAN/ULC-S634 (1999), ''Hose Swivel Connectors for Flammable and Combustible Liquids''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Vapor Processing Equipment'' or ''Vapor Recovery Equipment,'' or other appropriate product name as shown in the individual Listings.

Vapor Recovery System Accessories, Flammable Liquid Certified for Canada (YUNT7)−*Continued*

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES CERTIFIED FOR CANADA (YWXV7)

GENERAL

This category covers commercial vending machines, which include payment-accepting machines for vending nonrefrigerated food and beverages, general merchandise, etc.

This equipment is rated 250 V or less, single-phase, and may be either cord or permanently connected to the source of supply in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I,'' and CAN/CSA-C22.2 No. 0, ''General Requirements – Canadian Electrical Code, Part II.''

Accessories, such as a coin/currency mechanism and debit/credit card readers, may be field installed if the vending machine is marked to specify the types of accessories that are acceptable.

Vending machines of certain types are designated for permanent connection to water supplies and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

The burglary and theft protection features of these machines have not been investigated unless specifically indicated in the individual certifications.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number and electrical rating.

These appliances are marked on or adjacent to the electrical rating plate with one of the following: ''Suitable for Indoor Use Only,'' ''Suitable for Protected Locations — See Installation Instructions'' or ''Suitable for Outdoor Use.'' Complete instructions appear on an appliance intended for use in a protected location, indicating the manufacturer's recommendations concerning the use or installation, or both, of any canopy, marquee, shelter, etc., that may be necessary for the protection of the appliance. The instructions may be located inside the appliance if they are accessible through the front door.

REBUILT PRODUCTS

This category also covers vending machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt vending machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt vending machines are subject to the same requirements as new vending machines.

RELATED PRODUCTS

Machines for vending refrigerated food and beverages are covered under Vending Machines, Refrigerated Certified for Canada (SQMX7).

Games, rides and similar payment-accepting amusement products are covered under Amusement and Gaming Machines Certified for Canada (ASMU7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 128, ''Vending Machines.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Vending Machine,'' or other appropriate product name as shown in the individual Listings.

For rebuilt products the word ''Rebuilt,'' ''Remanufactured'' or ''Reconditioned'' precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTILATING EQUIPMENT FOR COMMERCIAL COOKING APPLIANCES CERTIFIED FOR CANADA (YXLT7)

Ventilating equipment includes fire dampers and hoods, grease extractors, exhaust hoods, power ventilators and grease ducts intended for installation in ventilating systems serving commercial cooking equipment. This equipment is intended for installation in accordance with the National Fire Protection Association Standard for the Installation of Equipment for the removal of Smoke and Grease Laden Vapors from Commercial Cooking Equipment, NFPA 96, or other recognized codes or standards as indicated for the individual product categories.

EXHAUST HOODS WITH EXHAUST DAMPERS CERTIFIED FOR CANADA (YXZR7)

GENERAL

This category covers exhaust hoods with exhaust dampers intended to be installed over commercial cooking equipment. These hoods are provided with fire-actuated automatic dampers. The hoods with dampers are intended to be used in accordance with ANSI/NFPA 96, ''Ventilation Control and Fire Protection of Commercial Cooking Operations.'' These products may be provided with manually or automatically operated cleaning or washing systems. These systems are not investigated for grease-extraction efficiency. These systems are not investigated for their suitability as fire-extinguishing-system units for the protection of grease-removal devices and hoods, unless specifically indicated in the individual Listings.

All exhaust hood dampers are marked relative to minimum exhaust air flow and maximum supply air flow directed into the hood and/or out the bottom (if provided).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C710 (1980), ''Preliminary Standard for Grease Extractors for Exhaust Duct.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Damper and Hood for Kitchen Exhaust Ducts,'' ''Damper Assembly for Kitchen Exhaust Ducts'' or ''Exhaust Hood with Exhaust Damper.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXHAUST HOODS WITHOUT EXHAUST DAMPERS CERTIFIED FOR CANADA (YYCW7)

GENERAL

This category covers exhaust hoods without exhaust dampers intended for placement over restaurant-type cooking equipment in accordance with ANSI/NFPA 96, ''Ventilation Control and Fire Protection of Commercial Cooking Operations.''

These products are intended for use with certified fire-extinguishing-system units. They may be provided with manually or automatically operated cleaning or washing systems. These systems are not investigated for grease-extraction efficiency. These systems are not investigated for their suitability as fire-extinguishing-system units for the protection of grease-removal devices and hoods, unless specifically indicated in the individual certifications. Electrical components, if provided, are investigated for compliance with established requirements.

All hoods are marked relative to minimum exhaust air flow and maximum supply air flow, directed into the hood and/or out the bottom (if provided).

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

Exhaust Hoods Without Exhaust Dampers Certified for Canada (YYCW7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C710 (1980), ''Preliminary Standard for Grease Extractors for Exhaust Ducts.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Hood for Kitchen Exhaust Ducts'' or ''Exhaust Hood Without Exhaust Damper.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GREASE DUCTS FOR RESTAURANT COOKING APPLIANCES CERTIFIED FOR CANADA (YYGQ7)

USE AND INSTALLATION

This category covers grease ducts intended for restaurant cooking appliances. Grease ducts are designed to be used with restaurant kitchen hoods and associated ventilating equipment, and are intended to be installed in accordance with the manufacturer's recommended installation instructions and ANSI/NFPA 96, ''Ventilation Control and Fire Protection of Commercial Cooking Operations.''

This category covers grease ducts and grease duct systems intended to be installed at the minimum clearances specified in the individual certifications, where 457 mm clearance is specified in ANSI/NFPA 96. These grease ducts are not intended to be wrapped with certified enclosure systems unless specified in the individual certifications of the grease duct and the enclosure system certification.

Each grease duct system consists of one or more parts, such as straight sections, elbows, tees, wyes and transitions. Tees and wyes are intended for use in common ducts or to provide cleanout and access openings when installed as indicated in the installation instructions. Grease duct parts may be provided with fittings to accept sensors, or wash, sprinkler and spray nozzles. Maximum lengths and heights are limited by certified support and re-support assemblies as indicated in the installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Restaurant exhaust hoods are covered under Exhaust Hoods with Exhaust Dampers Certified for Canada (YXZR7) and Exhaust Hoods Without Exhaust Dampers Certified for Canada (YYCW7).

Accessories intended for use with hoods and/or ducts are covered under Hood and Duct Accessories Certified for Canada (YYXS7).

Exhaust ventilators are covered under Power Ventilators for Restaurant Exhaust Appliances Certified for Canada (YZHW7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S662, ''Factory-Built Grease Ducts.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Grease Duct Component for Restaurant Cooking Appliance.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOOD AND DUCT ACCESSORIES CERTIFIED FOR CANADA (YYXS7)

USE AND INSTALLATION

This category covers accessories intended for use with hoods and/or ducts installed over commercial cooking equipment.

Hood and Duct Accessories Certified for Canada (YYXS7)−*Continued*

Authorities Having Jurisdiction should be consulted to determine that these accessories are acceptable for use in any given location.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1978, ''Grease Ducts,'' and ANSI/NFPA 96, ''Installation of Equipment for the Removal of Smoke and Grease Laden Vapors from Commercial Cooking Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Hood and Duct Accessory,'' or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOODS/RECIRCULATING SYSTEMS FOR USE WITH SPECIFIED COMMERCIAL COOKING APPLIANCES CERTIFIED FOR CANADA (YZCT7)

USE AND INSTALLATION

This category covers products intended for installation with specific certified commercial cooking appliances, such as fryers, griddles, broilers and other appliances, that are installed in commercial establishments where food is prepared.

Recirculating systems consist of a fan, collection hood, and an air-filtering system consisting of a grease filter, and may incorporate other air-filtering devices. These systems incorporate a fire-extinguishing system that has been investigated with the specified cooking equipment.

These recirculating systems are intended for venting filtered cooking effluent into the room in which the equipment is located. These products are not intended for connection to a ducted exhaust system.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products intended for connection to a ducted exhaust system are covered under Exhaust Hoods with Exhaust Dampers Certified for Canada (YXZR7) and Exhaust Hoods Without Exhaust Dampers Certified for Canada (YYCW7).

Commercial cooking appliances with integral recirculating ventilation systems are covered under Commercial Cooking Appliances with Integral Recirculating Ventilation Systems Certified for Canada (KNKG7).

Commercial cooking appliances with integral systems for limiting the emission of grease-laden air are covered under Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air Certified for Canada (KNLZ7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 109, ''Commercial Cooking Appliances,'' and ANSI/UL 710B, ''Recirculating Systems'' (formerly ANSI/UL 197 Supplement SB, ''Commercial Electric Cooking Appliances with Recirculating Systems'').

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]
FOR USE WITH UL LISTED [Company name] MODEL(S)
COMMERCIAL COOKING APPLIANCE(S)
Control No.

Hoods/Recirculating Systems for Use with Specified Commercial Cooking Appliances Certified for Canada (YZCT7)−*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER VENTILATORS FOR RESTAURANT EXHAUST APPLIANCES CERTIFIED FOR CANADA (YZHW7)

GENERAL

This category covers power roof- and wall-mounted ventilators and proximity-type ventilators consisting of an impeller and motor in a housing. Roof- and wall-mounted ventilators have a weather-resistant housing and are supported by a weather-resistant steel base designed to fit, by means of a steel curb, over a roof or wall exhaust duct opening for venting restaurant cooking appliances.

These ventilators are designed for the removal of smoke and grease-laden vapors at an exhaust air temperature not exceeding the maximum temperature shown in the individual certifications and on the certified device.

Power ventilators for restaurant exhaust appliances are intended for installation in accordance with ANSI/NFPA 96, ''Ventilation Control and Fire Protection of Commercial Cooking Operations.'' Authorities Having Jurisdiction should be consulted to determine that these appliances are acceptable for use in any given location.

Proximity-type ventilators have an enclosure and are positioned adjacent to the cooking appliance that they serve.

RELATED PRODUCTS

For other types of power ventilators, see Ventilators, Power Certified for Canada (ZACT7).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 113, ''Fans and Ventilators,'' and ULC-S645, ''Power Roof Ventilators for Commercial and Institutional Kitchen Exhaust Systems.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Ventilator for Restaurant Exhaust Appliances.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTILATORS, POWER CERTIFIED FOR CANADA (ZACT7)

GENERAL

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, by means of a curb, over a wall or roof opening.

These ventilators are intended primarily for commercial or industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust-type and makeup-air-type devices. Makeup-air-type ventilators equipped for evaporative cooling are covered under Humidifiers Certified for Canada (AHIV7).

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

RELATED PRODUCTS

Ventilators intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances are covered under Power Ventilators for Restaurant Exhaust Appliances Certified for Canada (YZHW7).

For other types of fans and blowers, see Fans, Electric Certified for Canada (GPWV7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, ''Fans and Ventilators.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Ventilator.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL MATERIAL HANDLERS CERTIFIED FOR CANADA (ZAJS7)

USE

This category covers products intended for continuous movement of material-laden air.

The instruction manual states these devices are intended for exhausting, material conveying, pollution control and air circulation. These devices are certified as to risk of electric shock and mechanical hazards only.

ADDITIONAL INFORMATION

For additional information, see Ventilators, Power Certified for Canada (ZACT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, ''Fans and Ventilators.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

INDUSTRIAL MATERIAL HANDLER
AS TO ELECTRIC SHOCK AND MECHANICAL HAZARD ONLY
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTILATORS, POWER FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ZANE7)

GENERAL

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, usually by means of a curb, over a wall or roof opening. Power ventilators consist of an assembly of UL-certified parts.

These ventilators are intended for industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust type and makeup air type devices. Makeup air-type ventilators are not equipped for evaporative cooling.

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

These ventilators are not intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances.

Metallic impellers are constructed of medium brass or aluminum, with a hardness not over Rockwell B66. Belt-driven power ventilators are investigated for the potential risk of ignition from temperature as a result of belt slippage.

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 113 (2010), ''Fans and Ventilators.''

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Ventilator for Use in Hazardous Locations,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTS, SMOKE AND HEAT CERTIFIED FOR CANADA (ZAQR7)

This category covers automatically-operated roof vents and power ventilators for smoke control systems intended for the purpose of localizing the heat released by a fire to the immediate fire area, lowering building temperatures, exhausting smoke, and improving accessibility for fire fighting personnel to permit close approach and direct action against the fire.

The advantages or disadvantages of venting and the conditions under which venting should be provided have not been investigated.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER VENTILATORS FOR SMOKE-CONTROL SYSTEMS CERTIFIED FOR CANADA (ZAXH7)

USE AND INSTALLATION

This category covers power ventilators for smoke-control systems intended for installation in buildings in accordance with ANSI/NFPA 92A, ''Smoke-Control Systems Utilizing Barriers and Pressure Differences,'' and ANSI/NFPA 92B, ''Smoke Management Systems in Malls, Atria, and Large Spaces.''

These ventilators have been investigated with respect to their operation during exposure to elevated temperatures. Information regarding the duration of the exposure and the temperature to which the ventilator has been subjected is marked on the product and indicated in the individual certifications.

Power ventilators for smoke-control systems have not been investigated as being suitable for any specific building design, nor has their effectiveness in controlling the flow of smoke been determined. The performance of these products is subject to the conditions of installation; therefore, the Authority Having Jurisdiction should be consulted prior to installation.

These power ventilators are intended to be connected to and controlled by smoke-control system equipment (see UUKL7).

ADDITIONAL INFORMATION

Power Ventilators for Smoke-control Systems Certified for Canada (ZAXH7)−*Continued*

For additional information, see Vents, Smoke and Heat Certified for Canada (ZAQR7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 113, ''Fans and Ventilators,'' and ULC/ORD-C793, ''Guide for the Investigation of Automatically Operated Smoke and Heat Roof Vents.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Power Ventilator for Smoke Control Systems.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROOF VENTS, AUTOMATICALLY OPERATED CERTIFIED FOR CANADA (ZBDZ7)

GENERAL

This category covers automatically operated smoke and heat roof vents consisting of (1) fusible-link-actuated type having a body frame, one or more damper panels and hatches, and automatic operating mechanism, or (2) plastic-dome type. The vents may be operated manually and/or automatically in the event of fire. Automatic operation does not depend on electrical power or other energy sources that may be interrupted during a fire.

These vents automatically operate by the use of a plastic dome shrinking and falling out of place due to fire exposure. The temperature of operation of the plastic dome-type vents is indicated in the individual certifications.

An optional automatically operated smoke and heat plenum vent can be used as an accessory to a certified door-type automatically operated roof vent for smoke and heat.

Smoke and heat roof vents provided with plastic domes or plastic damper panels are either designed in a manner that flying brands would not be likely to lodge on them, or are protected by a steel wire screen.

For information concerning the spacing of vents and venting ratios, refer to ANSI/NFPA 204M, ''Guide for Smoke and Heat Venting.''

ADDITIONAL INFORMATION

For additional information, see Vents, Smoke and Heat Certified for Canada (ZAQR7) and Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C793 (1973), ''Guide for the Investigation of Automatically Operated Smoke and Heat Roof Vents.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Automatically Operated Roof Vent'' or ''Automatically Operated Plenum Vent.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL INDUSTRIAL VIBRATORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ZBRX7)

GENERAL

This category covers devices designed to produce controlled vibration by electromagnetic means or motor rotor eccentrics, and that have provisions for mounting to impart the vibrating motion to industrial material-handling equipment, such as sieves and hoppers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (1986), ''Motors and Generators for Use in Hazardous Locations.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Electric Industrial Vibrator for Hazardous Locations,'' ''Industrial Vibrator for Hazardous Locations'' or ''Industrial Vibrator-Motor for Hazardous Locations.''

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VIDEO AND AUDIO EQUIPMENT, PROFESSIONAL CERTIFIED FOR CANADA (ZCBY7)

USE AND INSTALLATION

This category covers video and audio monitoring, processing, receiving, recording, and reproducing equipment and accessories intended for use and maintenance by technically trained professional personnel in broadcast and recording studios, remote field locations, head end facilities or similar controlled access locations.

Many of these units and systems require special installation such as a separate transformer, power supply, special grounding methods, special mounting, special cable construction, interconnection between units by means of one or more of the wiring methods outlined in CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.'' Such features are covered in the manufacturer's installation instructions.

Information concerning field-wiring connections, mounting location, mounting method, clearances, servicing, and the like are marked on the unit or specified in instructions accompanying the unit.

PRODUCT TYPES

Professional video and audio equipment includes video and audio tape recorders, editing, processing and amplification equipment, signal transmission equipment, television cameras, and video monitors, and the like.

Accessory equipment includes wall-mounting brackets, console enclosures, battery packs, and racks intended for use with professional video and audio equipment are also covered under this category.

RELATED PRODUCTS

For video tape recorders, video cameras and related accessories intended for household or commercial use, see Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7).

For television receivers, commercial and household video monitors and video products incorporating a cathode ray tube display, see Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7).

For household audio tape recorders and players, and related accessories, see Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7). For commercial audio and radio equipment, systems and accessories, see Commercial Audio and Radio Equipment, Systems and Accessories Certified for Canada (AZJX7) and also Audio/Video Apparatus Certified for Canada (AZSQ7). For commercial phonographs, tape playing and recording equipment, see Commercial Phonographs, Tape Playing and Recording Appliances and Accessories Certified for Canada (AZQW7) and Audio/Video Apparatus Certified for Canada (AZSQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, ''Audio, Video, and Similar Electronic Equipment,'' CAN/CSA-C22.2 No. 60950 or 60950-1, ''Safety of Information Technology Equipment,'' or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, ''Audio, Video and Similar Electronic Apparatus – Safety Requirements.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Professional Video Equipment," "Professional Audio Equipment" or "Professional Video Product," or the specific product name (prefixed by "Professional" or "Professional Use") as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASHING MACHINES CERTIFIED FOR CANADA (ZCTT7)

USE AND INSTALLATION

This category covers washing machines and combination washer-dryers tested with water as the cleaning liquid. Unless specifically marked, these products are intended for open type installations, which do not include stacking of units or locating in closets, alcoves, or other confined areas. These products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Motor-overcurrent protection is included in motor-operated combination washer-dryers if adequate protection would not be provided by the branch circuits to which they would properly be connected.

The normal use of a combination washer-dryer may create a large volume of humid air that may be vented to the room interior. Unless the appliance is properly oriented this moisture could affect electrical wiring or other electrical devices in the vicinity.

Provision should be made for the periodic removal of accumulation of lint that might result from normal operation of a combination washer-dryer.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the CEC must be observed in installation or use, the necessary special instructions are provided on or with the equipment. An individual branch circuit should be provided for each combination washer-dryer.

Electrically operated washing machines employing wringers are investigated from the standpoint of personal injury as well as electrical hazards. All such devices are required to comply with safety requirements designed to reduce the likelihood of accidents. All wringers are provided with a readily accessible release mechanism, clearly marked to indicate its function.

REBUILT PRODUCTS

This category also covers washing machines, other than combination washer-dryers, that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt washing machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt washing machines are subject to the same requirements as new washing machines.

RELATED PRODUCTS

For electric clothes dryers, see Clothes Dryers Certified for Canada (KMEX7).

For dryers other than electrically heated types, see Dryers Certified for Canada (LEFZ7), Gas-fired Clothes Dryers, Type 1 Certified for Canada (LETA7) and Gas-fired Clothes Dryers, Type 2 Certified for Canada (LETX7).

Products Verified for energy efficiency are covered under Clothes Washers, Household Verified for Energy Efficiency (ZZSR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 169, "Electric Clothes Washing Machines and Extractors."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Washing Machine" or "Washer," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS CERTIFIED FOR CANADA (ZDHR7)

USE AND INSTALLATION

This category covers waste disposers intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Commercial waste disposers, because of the volume of material handled and the manner in which they are utilized, do not necessarily incorporate the safeguards which are a part of the household type. Commercial units are intended to be utilized only by competent personnel who are fully instructed concerning the hazards involved.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waste Disposer," or other appropriate product name as shown in the individual Listings.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS, PULPER TYPE CERTIFIED FOR CANADA (ZDIB7)

GENERAL

This category covers commercial pulper-type waste disposers that are intended to grind food waste, food-service products such as paper, cardboard, plastic utensils and wrapping materials, and general office waste.

The waste materials are ground in a chamber supplied with running water to produce a slurry, which is then conveyed to a waterpress assembly by an auger-type drive. Excess water is pressed out of the pulpy waste, and the waste water is discharged into a sanitary drain or recycled back to the grinding chamber. The de-watered pulp is disposed of in a waste container.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pulper-Type Waste Disposer," or other appropriate product name as shown in the individual Listing.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS, SINK MOUNTED CERTIFIED FOR CANADA (ZDII7)

USE

This category includes waste disposers for household or commercial use, which are intended to convert primarily organic types of waste material to a form which can be accommodated by the soil pipe attached to plumbing systems.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial).''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Waste Disposer,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER SOFTENERS, DEMINERALIZERS AND WATER TREATMENT UNITS CERTIFIED FOR CANADA (ZDUZ7)

USE AND INSTALLATION

This category covers water softeners, demineralizers and other water treatment units and control assemblies rated 300 v maximum and intended for use in cold water systems. These products are intended for use in unheated water systems. It includes products employing the following or a combination of the following water treatment methods: cation exchange, ozone generation, filtering, reverse osmosis, ultraviolet radiation, and ionization. These products are intended for installation in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

This category does not cover the aesthetic or health effects of the water treatment technology.

Products intended for use outdoors are marked ''Suitable for Outdoor Use.''

Industrial equipment is intended for permanent connection to the power supply.

Control assemblies include all switches, valves, etc., necessary for regeneration, but do not include connecting pipes or tanks.

Care should be taken during installation to consider possible cross-contamination of the water supply due to low pressure or reverse action. Authorities Having Jurisdiction should be consulted for plumbing requirements for sanitation and plumbing connections.

RELATED PRODUCTS

Equipment used in spas or swimming pools is covered under Water Treatment Equipment Certified for Canada (WDLC7).

Aquarium equipment is covered under Aquarium Equipment Certified for Canada (AVRR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial).''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Water Softener,'' ''Water Demineralizer'' or ''Water Clarifier,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER TREATMENT UNITS EMPLOYING OZONE GENERATION CERTIFIED FOR CANADA (ZEIX7)

GENERAL

This category covers water treatment equipment employing ozone generation, investigated with respect to mechanical, electric shock, and fire hazards only.

The methods for controlling ozone release or the effectiveness of the water treatment have not been investigated.

RELATED PRODUCTS

Water treatment units employing ozone generators and intended for use only with swimming pools, spas and hot tubs are covered under Ozone Generators Certified for Canada (WCKA7) or Water Treatment Equipment Certified for Canada (WDLC7).

Aquarium equipment is covered under Aquarium Equipment Certified for Canada (AVRR7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, ''Motor-Operated Appliances (Household and Commercial).''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

OZONE GENERATOR
WITH RESPECT TO RISK OF ELECTRIC SHOCK,
FIRE AND MECHANICAL INJURY ONLY
Control No.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING MACHINES CERTIFIED FOR CANADA (ZGLZ7)

USE

This category covers portable and stationary transformer-type arc-welding equipment rated 600 V or less. This equipment is intended to be installed in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

The welding machines are designed to be operated at rated input and output. They are occasionally operated under heavy overloads. The nature of the service for which they are intended requires frequent loading and unloading so their duty under heavy overload is of an intermittent nature. This overload is somewhat analogous to the inherent overload capacity of motors and transformers, and it is not covered at present by any definite requirements and is not investigated by UL. However, the abuse of this excess current capacity — the overloading of a welding machine, except for relatively short periods of time may be hazardous and should receive careful consideration by all those concerned.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 60 (1990), ''Arc-Welding Equipment.''

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ″LISTED,″ a control number, and the product name ''Welding Machine,'' or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING MACHINE ACCESSORIES CERTIFIED FOR CANADA (ZGPU7)

USE

This category covers products designed to be used with certified arc-welding machines, such as wire feeders and vacuum units for welding-smoke removal. This category also covers arc-cutting equipment, such as arc-cutting power supplies, for industrial applications. These products are intended for installation and use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

ADDITIONAL INFORMATION

For additional information, see Welding Machines Certified for Canada (ZGLZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 60, "Arc-Welding Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Machine Accessory," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WHEELCHAIR LIFTS AND STAIRWAY CHAIRLIFTS CERTIFIED FOR CANADA (ZGUW7)

USE

This category covers permanently installed vertical and inclined wheelchair lifts and inclined stairway chairlifts for use by the physically disabled in both commercial and private residence locations.

ADDITIONAL INFORMATION

For additional information, see Building Materials Certified for Canada (AABM7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-B355 (1986), "Elevating Devices for the Handicapped," and CAN/CSA-B613 (1987), "Elevating Devices for the Handicapped in Private Residences."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wheelchair Lift" or "Stairway Chairlift," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CERTIFIED FOR CANADA (ZGZX7)

FLEXIBLE CORD CERTIFIED FOR CANADA (ZJCZ7)

GENERAL

Flexible Cord Certified for Canada (ZJCZ7)−*Continued*

This category covers flexible cord constructed and certified for use in accordance with Section 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). All conductors are stranded copper.

Voltage Rating

Types TX and PXT are rated 125 V.

Types E (12 – 2 AWG), ETT (12 – 2 AWG), ETP (12 – 2 AWG), EO (12 – 2 AWG), CXWT (14 – 12 AWG), S, SO, SOO, SOW, SOOW, ST, STO, STOO, STW, STOW and STOOW are rated 600 V.

Types E (20 – 12 AWG), ETT (20 – 12 AWG), ETP (20 – 12 AWG), EO (20 – 12 AWG), CXWT (18 – 16 AWG), SV, SVO, SVOO, SJ, SJO, SJOO, SJOW, SJOOW, SPT-1, SPT-1W, SPT-2, SPT-2W, SPT-3, NISPT-1, NISPT-2, SVT, SVTO, SVTOO, SJT, SJTO, SJTOO, SJTW, SJTOW, SJTOOW, TPT, TST, DRT, PXWT HPN, HSJ, HSJO, HSJOW, HSJOO and HSJOOW are rated 300 V.

Types E, EO, ETT and ETP in 12 AWG are rated 300 or 600 V, depending on insulation thickness.

Temperature Rating

Types S, SO, SOO, SOW, SOOW, SJ, SJO, SJOO, SJOW, SJOOW, SPT-1, SPT-1W, SPT-2, SPT-2W, SPT-3, NISPT-1, NISPT-2, SVT, SVTO, SVTOO, SJT, SJTO, SJTOO, SJTW, SJTOW, SJTOOW, ST, STO, STOO, STW, STOW and STOOW are rated 60, 75, 90 or 105°C.

Types SV, SVO and SVOO are rated 60, 75 or 90°C.

Type DRT is rated 60 or 90°C.

Types TX, PXT, TPT, TST, E, EO, ETT, CXWT, and PXWT are rated 60°C.

Types HPN, HSJ, HSJO, HSJOW, HSJOO and HSJOOW are rated 90 or 105°C.

Cord Types or Characteristics Not Covered by the CEC

Type TX is a twisted assembly of two conductors intended for use in decorative-lighting equipment.

Types HSJOW and HSJOOW are outdoor-use versions of types HSJO and HSJOO, respectively.

PRODUCT MARKINGS

"VW-1" indicates that the finished cord and the individual conductors comply with a vertical flame test.

"FT-1" indicates that only the finished cord complies with a vertical flame test.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 49, "Flexible Cords and Cables."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Cord."

The Listing Mark for this category requires the use of a holographic label.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS-TUBE-SIGN AND IGNITION CABLE CERTIFIED FOR CANADA (ZJQX7)

GENERAL

This category covers gas-tube-sign and ignition cable certified as single conductor Type GTO-5 (5,000 V), GTO-10 (10,000 V) or GTO-15 (15,000 V) intended for use with gas-tube systems for signs, outline lighting and interior lighting, and for use also in the ignition systems of oil- and gas-burning equipment at voltages up to 15,000 V.

Ignition cable is certified as single conductor Type ICS for use in the ignition systems of oil- and gas-burning equipment at voltages up to 10,000 V.

The letter "L" is used as a suffix in combination with any of the preceding Type GTO letter designations to indicate that an outer covering of lead has been applied.

ADDITIONAL INFORMATION

For conductor terminal information and additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 127, "Equipment and Lead Wires."

UL MARK

Gas-Tube-Sign and Ignition Cable Certified for Canada (ZJQX7)−*Continued*

The UL symbol on the product and the Listing Mark of UL on the attached tag, the coil, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," and the product name as appropriate: A cable containing a copper conductor has the product name "Gas Tube Sign and Ignition Cable"; a cable containing an aluminum conductor has the product name "Gas Tube Sign and Ignition Aluminum Cable."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESSED WIRE CERTIFIED FOR CANADA (ZKLU7)

GENERAL

This category covers Listed wire, flexible cord and cable, and Classified cable that has been subjected to processing subsequent to Labeling and identified as either processed wire or processed wire – respooled.

Listed wire, flexible cord and cable identified as "Listed Processed Wire" has been cut into certain lengths from which the insulation may be stripped from one or both ends. The stripped ends may be soldered or tinned and may have simple terminals of the eyelet, ring, open spade or quick-connect type attached by crimping, soldering or welding.

These lengths may be packaged for further processing. Single lengths of Listed processed wire and cable may be paralleled with other insulated wire and cable and may be held together by an open binder.

Products identified as "Listed Processed Wire – Respooled" are single, continuous lengths of wire, flexible cord or cable cut from a longer length and coiled or placed on a spool or reel.

Products identified as "Classified Processed Wire" has been cut into certain lengths from which the insulation may be stripped from one or both ends. These lengths may be packaged for further processing. Single lengths of Classified processed wire may be paralleled with other insulated cable and may be held together by an open binder.

Products identified as "Classified Processed Wire – Respooled" are single, continuous lengths of Classified cable cut from a long length and coiled or placed on a spool or reel.

The tag markings from the wire spooler reel (e.g., voltage, temperature, insulation thickness, usage) are provided on the processed wire tag attached to the product.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 49, "Flexible Cords and Cables," CSA-C22.2 No. 75, "Thermoplastic-Insulated Wires and Cables," or CSA-C22.2 No. 38, "Thermoset Insulated Wires and Cables," and CAN/CSA-C22.2 No. 65, "Wire Connectors," or CSA-C22.2 No. 188, "Splicing Wire and Cable Connectors."

UL MARK

The Listing or Classification Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing or Classification and Follow-Up Service. The Listing or Classification Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED" or "CLASSIFIED" respectively, a control number, and the product name "Processed Wire" or "Processed Wire – Respooled."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMOSET-INSULATED WIRE CERTIFIED FOR CANADA (ZKST7)

GENERAL

This category covers thermoset-insulated wire intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The wire

Thermoset-insulated Wire Certified for Canada (ZKST7)−*Continued*

tabulated below is rated 600 or 1000 V, except that Types RW75, R90 and RW90 in conductor sizes 8 AWG and larger may be rated up to 5000 V.

PRODUCT MARKINGS

The wire is designated as follows:

RW75, RWU75 — Indicates a single-conductor thermoset-insulated construction having ratings of 75°C wet or dry. Type RW75 may also be cabled together with one or more Type RW75 conductors and jacketed.

RW90, RWU90 — Indicates a single-conductor thermoset-insulated construction having ratings of 90°C wet or dry. Type RW90 may also be cabled together with one or more Type RW90 conductors and jacketed.

R90 — Indicates a single-conductor thermoset-insulated construction having a rating of 90°C dry. Type R90 may also be cabled together with one or more Type R90 conductors and jacketed.

The above types may have the following optional ratings marked on the surface of the wire, where applicable:

The voltage rating, if other than 600 V.

"MINUS 40 C" — indicates that it can be handled down to -40°C.

"ALUMINUM" (or "ALUM") — indicates aluminum conductor.

"FTI" — indicates the wire meets the requirements of the FT1 Flame Test.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 38, "Thermoset-Insulated Wires and Cables."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoset-insulated wire that contains copper conductors has the product name "Insulated Wire"; thermoset-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMOPLASTIC-INSULATED WIRE CERTIFIED FOR CANADA (ZLGR7)

USE

This category covers thermoplastic-insulated wire and cable rated 600 V and intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

PRODUCT TYPES

The wire and cable is designated as follows:

TW, TWU — Indicates a single-conductor, thermoplastic-insulated construction having ratings of 60°C wet or dry.

TW-75, TWU-75 — Indicates a single-conductor, thermoplastic-insulated construction having ratings of 75°C wet or dry.

T-90 NYLON — Indicates a single-conductor, thermoplastic-insulated, nylon-jacketed construction having a rating of 90°C dry.

TWN75 — Indicates a single-conductor, thermoplastic-insulated, nylon-jacketed construction having a rating of 75°C wet or dry.

SUBMERSIBLE PUMP CABLE — Indicates a 2, 3 or 4 conductor cable, with or without an overall jacket and bonding conductor, suitable for handling at -40°C.

PRODUCT MARKINGS

The above types may have the following ratings marked on the surface of the wire, where applicable:

"OIL RESISTANT" or "PR" (multinational marking) — Indicates 60°C oil resistance.

"MINUS 40C" — Indicates that it can be handled at temperatures down to -40°C.

"NYLON" — Indicates use of a nylon jacket (Types TW, TWU, TW-75, TWN75 and TWU-75 only).

"GASOLINE RESISTANT" or "GR" (multinational marking) — Indicates resistance to gasoline at ambient temperatures.

"ALUMINUM" or "ALUM" — Indicates aluminum conductor.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

Thermoplastic-insulated Wire Certified for Canada (ZLGR7)−*Continued*

The basic standard used to investigate products in this category is CSA-C22.2 No. 75, ''Thermoplastic-Insulated Wires and Cables.''

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Insulated Wire'' for products containing copper conductors, or ''Insulated Aluminum Wire'' for products containing aluminum conductors.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERGROUND LOW-ENERGY CIRCUIT CABLE CERTIFIED FOR CANADA (ZLIA7)

USE

This category covers wire and cable for use as extra-low-voltage control circuits (LVT) in wire sizes 22 to 16 AWG, as extra-low-voltage control cable (ELC) in wire sizes 26 to 16 AWG, in golf course sprinkler systems (GCS) or lawn sprinkler systems (LSS) in wire sizes 20 to 2 AWG, and low-voltage landscape lighting (LVLL) or underground low-energy circuits (ULEC) in wire sizes 18 to 8 AWG, intended for operation at no more than 30 V and 60°C, and as low-energy control cable (LECC) in wire size 18 AWG, intended for operation at no more than 30 V and 105°C.

PRODUCT MARKINGS

The wire is marked with the Listee's name, trade name or file number, type designation, conductor size, voltage rating and temperature rating (LECC only).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 35, ''Extra-low-voltage Control Circuit Cable, Low-energy Control Cable, and Extra-low-voltage Control Cable.''

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the specific name or type designation of the wire, such as ''Lawn Sprinkler System Wire'' (or ''LSS Wire'').

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING CABLE CERTIFIED FOR CANADA (ZMAY7)

USE AND INSTALLATION

This category covers welding cable, which is a single-conductor cable intended for use in accordance with CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

This cable is rated 60, 75, 90 or 105°C and is used in the secondary circuit of electric welders. The cable has no voltage rating. The cable is flame rated minimum FT2.

Welding cable employs flexible stranded copper conductors, 8 AWG – 300 kcmil, the individual strands of which are 34, 32 or 30 AWG.

PRODUCT MARKINGS

The temperature and flame ratings are identified by tag marking and by printing on the surface of the insulation. Cable is rated 60°C unless marked otherwise.

Cable marked ''Oil Resistant'' is suitable for exposure to oil at 60°C.

This cable may be marked ''-40C.'' If so marked, the cable complies with a cold bend test and a low-temperature impact test at -40°C. Cable marked ''-50C,'' ''-60C'' or ''-70C'' complies with a cold bend test and a low-temperature impact test at -50, -60 or -70°C, as applicable.

Welding Cable Certified for Canada (ZMAY7)−*Continued*

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 96, ''Portable Power Cables.''

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the coil, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the product name ''Welding Cable.''

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE, SPECIAL PURPOSE CERTIFIED FOR CANADA (ZMHX7)

GENERAL

This category covers constructions of wire and cable, each intended for the particular application marked on the product, tag, carton or reel. Included in this category are: Golf Course Sprinkler (GCS) Wire, Lawn Sprinkler System (LSS) Wire, Low Voltage Landscape Lighting (LVLL) Wire, and Underground Low Energy Circuit (ULEC) Cable, all rated 60°C, 30 V.

PRODUCT MARKINGS

Information regarding installation, ampacity, etc., where appropriate, is included in the marking found on the tag, reel or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic requirement used to investigate products in this category is CSA T.I.L. No. J-17C, ''Interim Certification Requirements for Golf Course Sprinkler (GCS) or Lawn Sprinkler System (LSS) Wire and Cable, for Low Voltage Landscape Lighting (LVLL) Wire and Cable, and for Underground Low Energy Circuits (ULEC).''

UL MARK

The Listing Mark of UL on the attached tag, the reel or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word ''LISTED,'' a control number, and the specific name or type designation of the wire, such as ''Lawn Sprinkler System Wire'' (or ''LSS Wire''). The name of the category ''Special Purpose Wire Certified for Canada'' is not used.

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CONNECTORS CERTIFIED FOR CANADA (ZMKQ7)

CRIMP TOOLS CERTIFIED FOR USE WITH SPECIFIED WIRE CONNECTORS CERTIFIED FOR CANADA (ZMLS7)

USE

This category covers crimp tools suitable for use with specific certified Grounding and Bonding Equipment Certified for Canada (KDER7), Electrical Quick-connect Terminals Certified for Canada (RFWV7) and Wire Connectors and Soldering Lugs Certified for Canada (ZMVV7) in accordance with the Certification Mark and a compatibility list provided with the tool.

The inside cover of the tool storage case or a permanently attached label to the tool itself contains a compatibility list which tabulates the company

Crimp Tools Certified for Use with Specified Wire Connectors Certified for Canada (ZMLS7)−*Continued*

name and catalog number of the crimp tool and the company name, catalog number, wire size and number of crimps of the applicable certified grounding and bonding connectors, quick-connect terminals, and wire connectors for which the crimp tool has been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 41 (2013), ''Grounding and Bonding Equipment,'' CSA-C22.2 No. 153 (2009), ''Electrical Quick-Connect Terminals,'' CSA-C22.2 No. 188 (2013), ''Splicing Wire Connectors,'' and/or CSA-C22.2 No. 65 (2013), ''Wire Connectors.''

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word ''CLASSIFIED'' above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CRIMP TOOL
FOR USE WITH UL LISTED *
IDENTIFIED IN THE INSTRUCTIONS PROVIDED
Control No.

* One or more of the following: **GROUNDING AND BONDING CONNECTORS**, **QUICK CONNECT TERMINALS**, **WIRE CONNECTORS**

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POLE SPLICING WIRE CONNECTORS CERTIFIED FOR CANADA (ZMNA7)

USE AND INSTALLATION

This category covers insulated multi-pole mating and nonmating splicing wire connectors intended for field wiring and factory wiring. Multi-pole splicing wire connectors are intended to facilitate the connection of hard-wired utilization equipment (e.g., prefabricated wiring assemblies, ceiling fans, smoke detectors, lighting products) to the branch-circuit conductors of buildings. They are multi-polarity devices used to connect to two or more branch-circuit conductors.

This category also covers luminaire disconnects, which are intended to be used:

1. internal to luminaires to facilitate replacement of the ballast, or
2. for LED retrofit applications.

Luminaire disconnects are not intended to be directly attached to the branch-circuit conductors for the purpose of interrupting (making and breaking) branch circuits other than those for the luminaire associated with the disconnect. Luminaire disconnects may have one or more conductors per contact.

Mating connectors consist of two separable mating members (usually consisting of a male/female connection) that can be readily engaged or disengaged without the use of tools. They are provided with a latching mechanism and are physically keyed to maintain correct polarity. Luminaire (ballast) disconnects need not be provided with a latch or locking mechanism, and have not been investigated as latching- or locking-type devices.

Nonmating connectors are single devices used to facilitate the direct connection to the branch-circuit conductors.

Multi-pole splicing wire connectors are not intended to be permanently mounted. They are floating in an outlet, junction box or within a piece of equipment, such as a luminaire.

These wire connectors are suitable for currents not exceeding the ampacity of insulated conductors or the rated ampacity of the connector.

These wire connectors are intended for use in installations covered by CAN/CSA-C22.1, ''Canadian Electrical Code, Part I.''

Reusability — These connectors have not been investigated for reusability, except for spring-action-type connectors without the one-time-use-only marking.

Make and break — These wire connectors have been subjected to 10 operations of making and breaking 150% of current.

Box fill — These wire connectors have not been investigated for volume (box fill) and their acceptance in this capacity should be determined by the Authority Having Jurisdiction.

Multi-pole Splicing Wire Connectors Certified for Canada (ZMNA7)−*Continued*

Use of specific tools — A specific tool and die used to assemble a multi-pole splicing wire connector to a conductor is identified on the connector, or on or within the unit container of the connector. The identification consists of a catalog or type designation, color coding, die index number, or equivalent means.

Multiple crimping operations — The number of crimps necessary to make a connection using the specific tool is identified on the connector, or on or within the unit container of the connector. Absence of information implies a single crimp.

Conductor strip length — Multi-pole splicing wire connectors requiring a specific strip length have this information identified on the connector, on or within the unit container of the connector, on an insulating cover, or on the tool or tool-carrying case.

PRODUCT MARKINGS AND RATINGS

Wire size — Multi-pole splicing wire connectors are rated for copper conductors only. The wire size or wire range is marked on the connector, or on or within the unit container.

Multi-pole splicing wire connectors have not been investigated for use with aluminum conductors.

Multiple conductors — Multi-pole splicing wire connectors generally accommodate a single conductor under each clamping mechanism unless otherwise identified (e.g., the number of conductors located parenthetically in front of the wire size or range). Some connectors may have a single-conductor wire range as well as a second multiple-conductor wire range.

Wire stranding — Unless clearly marked ''Solid,'' ''SOL,'' ''Stranded'' or ''STR'' for a given wire size, wire range or wire combination, conductors in the range 10–30 AWG are both solid and stranded, and 6–8 AWG are for stranded wire only.

Stranded conductor Class — Multi-pole splicing wire connectors are rated for use with stranded Class B concentric, Class B compressed, and Class C concentric copper conductors.

Strip length — Multi-pole splicing wire connectors are marked with an insulation strip length for the conductor before assembly to the wire connector.

Conductor material — Multi-pole splicing wire connectors are marked ''CU'' or ''Copper Wire Only.''

Ampacity level — Other than luminaire disconnects, multi-pole splicing wire connectors are suitable for currents not exceeding the ampacity of insulated conductors rated 90°C. Use of higher-temperature-rated conductors is permitted, provided the ampacity levels continue to be based on the 90°C ratings.

Assigned ampere rating — A luminaire (ballast) disconnect is marked with its assigned ampere rating on the device or the unit container.

Luminaire disconnect — Multi-pole splicing wire connectors are intended to hot disconnect a ballast within a luminaire and are marked ''Luminaire Disconnect.''

Insulation temperature rating (maximum operating temperature) — Insulated multi-pole splicing wire connectors are marked with an insulation temperature rating. Insulated connectors, insulating caps and insulating covers that have an insulation temperature greater than the connector ampacity level are marked ''Temperature Rating of Insulating Material ___°C.''

Voltage rating — Insulated multi-pole splicing wire connectors are marked with a voltage rating on the device or the unit container.

Flammability rating — Insulated multi-pole splicing wire connectors may be additionally marked with a flammability rating of V-2, V-1, V-0, VTM-2, VTM-1 or VTM-0.

Assigned torque rating — Multi-pole splicing wire connectors may be marked with an assigned torque value for which the connector was investigated.

Circuit identification — Unless provided with color-coded integral lead wires, multi-pole splicing wire connectors are marked to identify each terminal with the intended conductor polarity (e.g., G, B, W, L1, L2). Color-coded integral lead wires may also be used for circuit identification. The ground terminal, if provided, is marked with the international symbol for ground or with ''G,'' ''GR,'' ''GND,'' ''Ground,'' ''Grounding,'' or similar marking. An integral lead wire for grounding is color-coded green.

One-time use — Multi-pole splicing wire connectors employing spring-action-type terminations and intended for one-time use only are marked ''One-Time Use Only - Do Not Reuse,'' or the equivalent.

Limited current interruption — Mating-type multi-pole splicing wire connectors are marked ''Limited Number of Current Interrupting Operations,'' or the equivalent, to identify that the device has been investigated for a maximum of 10 make-and-break current operations.

Installation instructions — Multi-pole splicing wire connectors are marked ''To be sold only with installation instructions.''

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Multi-pole Splicing Wire Connectors Certified for Canada (ZMNA7)−*Continued*

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 2459 (2008), "Insulated Multi-Pole Splicing Wire Connectors."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-pole Splicing Wire Connector" or "Luminaire Disconnect," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CONNECTORS AND SOLDERING LUGS CERTIFIED FOR CANADA (ZMVV7)

USE

This category covers single-polarity wire connectors for use with all alloys of copper or aluminum conductors, or both, for the purpose of providing contact between current-carrying parts. Wire connectors may be uninsulated, supplied with integral insulation, or separable insulation in the form of insulating caps or covers.

Terminal connectors establish a connection between one or more conductors to a terminal plate or stud, or to any similar device by means of mechanical pressure. They are fixed in position.

Splicing wire connectors establish a connection between two or more conductors by means of mechanical pressure and are not intended to be permanently mounted. They are floating, such as a twist-on connector in an outlet box.

Insulating caps or covers are for general use when installed on specific connectors. Information covering use of the caps or cover on specific connectors appears on the unit containers in which the caps or covers are packaged.

Soldering lugs are terminal connectors designed for attachment to a conductor by means of solder (nonpressure).

Reusability — Wire connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

Direct burial — Wire connectors have not been investigated for direct burial. See **RELATED PRODUCTS**.

Use in service equipment — Where wire connectors are used as a part of service equipment, dead-front switchboards, panelboards, meter sockets, enclosed switches, circuit breakers, etc., reference should be made to the General Information for those categories concerning the use of the wire connectors. When wire connectors suitable for use with aluminum conductors are employed in such equipment, the suitability for wiring with aluminum conductors of such equipment will be indicated by a marking on the equipment and is independent of any marking on the wire connector.

INSTALLATION

Wire connectors are intended for use in installations covered by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), and should be installed using the prescribed manufacturer's installation instructions.

Stacking of connectors (multiple connectors assembled using a single bolt, nut and washers) may be permitted where mechanical interference is reduced or eliminated with the use of offset tangs, stacking adapters, and the like. The surface contact area of the mounting tang should make complete contact with the mounting surface or the previously stacked connector tang.

PRODUCT MARKINGS AND RATINGS

Wire size and wire combinations — Wire connectors are rated for 30 AWG or larger copper conductors and/or 12 AWG or larger aluminum conductors. The wire size, wire range or wire combinations are marked on the connector, or on or within the unit container. Wire connectors additionally investigated for metric-size conductors are marked with the metric wire sizes expressed in mm^2.

Multiple conductors — Connectors generally accommodate a single conductor under a clamping mechanism unless otherwise identified, such as with the number of conductors located parenthetically in front of the wire size or range. Some connectors may have a single-conductor wire range as well as a second multiple-conductor wire range. Some connectors, such as twist-on connectors, will have multiple conductors expressed in a list of wire combinations.

Wire Connectors and Soldering Lugs Certified for Canada (ZMVV7)−*Continued*

Parallel conductors — Connectors intended for paralleling of conductors are intended to be used in accordance with Section 12-108 of the CEC. Parallel connectors may have multiple-conductor clamping mechanisms, each accepting a single conductor or a singular clamping mechanism accepting multiple conductors.

Wire stranding — Unless clearly marked "Solid," "SOL," "Stranded" or "STR" for a given wire size, wire range or wire combination, conductors in the range 30–10 AWG are both solid and stranded, and 8 AWG and larger are for stranded wire only. Connectors additionally rated for metric conductor sizes may be marked with the letter "r" for rigid solid and rigid stranded conductors, or the letter "f" for flexible conductors.

Stranded conductor Class — Connectors rated for use with stranded conductors are for the following strand configurations:

- Aluminum – Class B concentric, compressed or compact, and SIW (single input wire)
- Copper – Class B concentric or compressed, Class B compact (sizes 8 AWG and larger) and Class C concentric

Wire connectors additionally rated for use with compact copper conductors are additionally marked "For compact-stranded copper conductors" or equivalent on the connector, or on or within the unit container.

Wire connectors additionally rated for use with other Class conductors, such as Class M, are marked with the additional class designation and number of strands.

Strip length — Some connectors or their unit containers are marked with a strip length for the conductor before assembly to the wire connector.

Conductor material — Wire connectors or the unit containers are marked with the type of conductor material(s) as follows:

Marking (or equivalent)	For Use With
"CU"	Copper wire only
"AL"	Aluminum wire only
"AL-CU" or "CU-AL"	Copper to copper, aluminum to aluminum, and copper to aluminum but not intermixed or in direct physical contact
"AL-CU (intermixed – dry locations)"	Copper to copper, aluminum to aluminum, and copper to aluminum intermixed

Except as otherwise noted on or in the shipping carton, copper and aluminum conductors are not intended to be used in direct physical contact in the same connector. A wire connector for securing an aluminum wire in combination with a copper conductor, where physical contact occurs between the wires of different metals, is limited to dry locations only and is marked "AL-CU (intermixed – dry locations)."

Ampacity level rating:

A. **Equipment use** — Equipment wiring requirements may restrict the sizing, ampacity and temperature ratings of connected conductors. Equipment requirements may limit 90°C or higher-rated conductors to 60 or 75°C ampacity in accordance with Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

B. **General use** — Connectors rated 75°C are intended for use at ampacities not greater than those for 75°C-rated conductors, and connectors rated 90°C are for use at ampacities not greater than those for 90°C-rated conductors. Connectors may be marked with "75C" or "90C" to represent these levels. Alternatively, these rating levels may be represented by a 7 or 9 associated with the marking "CU," "AL" or "AL-CU," e.g., "AL9," "AL9CU," "AL7CU," "CU7," "CU9." Connectors not marked with an ampacity number 7 or 9 have an assumed level per the following table. Use of higher-temperature-rated conductors is not prohibited, provided the ampacity levels continue to be based on the 75 or 90°C ratings.

Connectors are rated and marked as follows:

Type of Connector	Rated For	Wire Range	Temp Marking	Rating
Terminal (CU body)	CU only	All	Not marked	90
Terminal (AL body)	CU only	All	75 or 90	As marked@
Terminal	AL or AL-CU	All	75 or 90	As marked@
Splicing wire	CU only	30-6	Not marked	90
Splicing wire (CU body)	CU only	4 and larger	Not marked	90
Splicing wire (AL body)	CU only	4 and larger	75 or 90	As marked
Splicing wire	AL or AL-CU	30–6	Not marked	75
Splicing wire	AL or AL-CU	4 and larger	75 or 90	As marked

@ Terminal connectors rated for 6 AWG or smaller conductors may have the markings on the connector, the unit container, or on an information sheet packed in the unit container.

Wire Connectors and Soldering Lugs Certified for Canada (ZMVV7)−*Continued*

Insulation temperature rating (maximum operating temperature) — Insulated connectors, insulating caps and insulating covers have an insulation temperature rating marked on the device or the unit container. Insulated connectors, insulating caps and insulating covers that have an insulation temperature greater than the connector ampacity level rating are marked "Temperature Rating of Insulating Material ___°C."

Voltage rating — Uninsulated wire connectors are rated for general use in circuits up through 2000 V. Uninsulated wire connectors may be used in circuits over 2000 V up through 35,000 V where the effects of corona have been investigated in the end-use application. Uninsulated wire connectors are not marked with a voltage rating.

Insulated wire connectors, insulating caps and insulating covers have voltage ratings for which they have been found acceptable. The voltage rating is marked on the device or the unit container and may be stated as "300 volts maximum," "600 volts maximum," or "600 volts maximum building wire, 1000 volts maximum, in signs or luminaires," or equivalent wording.

Flammability rating — Insulated connectors and insulating caps and covers may be additionally marked with a flammability rating of V-2 or VTM-2 or better.

Assigned torque rating — A connector or its unit container may be marked with an assigned torque value for which the connector was investigated.

INSTALLATION INSTRUCTIONS

Use of specific tools — A specific tool and die used to assemble a wire connector to a conductor is identified on the connector, or on or within the unit container of the connector. The identification consists of a catalog or type designation, color-coding, die index number, or equivalent means. Color-coding of the crimp barrel is common.

Multiple crimping operations — The number of crimps necessary to make a connection using the specific tool is identified on the connector, or on or within the unit container of the connector. Location and number of crimping points is commonly located on the crimp barrel of the connector.

Conductor strip length — Wire connectors requiring a specific strip length have this information identified on the connector, on or within the unit container of the connector, on an insulating cover, or on the tool or tool-carrying case. Strip-length marking is optional for some constructions.

Preliminary preparation of conductor — Some wire connectors supply instructions for the preliminary preparation of conductors, such as use of conductor termination compound (antioxidant compound) or pre-twisting of conductors, on or within the unit container.

Pre-twisting — Some connectors may specify that conductors are to be pre-twisted before assembly onto the connector.

Conductor termination compound — Some connectors are shipped prefilled with conductor termination compound (antioxidant compound). For non-prefilled connectors, conductor termination compound may be used if recommended by the connector manufacturer as preliminary preparation of the conductor. Wire brushing of the conductor may also be performed if recommended.

RELATED PRODUCTS

Sealed wire-connector systems intended for direct burial, below-grade use, or similar damp or wet locations are covered under Sealed Wire-connector Systems Certified for Canada (ZMWQ7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 65, "Wire Connectors," and CSA-C22.2 No. 188, "Splicing Wire and Cable Connectors."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Wire Connector," "Soldering Lug," "Terminal Connector," "Splicing Wire Connector," or other appropriate product name as shown in the individual Listings.

* *

SEALED WIRE-CONNECTOR SYSTEMS CERTIFIED FOR CANADA (ZMWQ7)

USE AND INSTALLATION

This category covers sealed wire-connector systems intended for wet or damp locations and other installations, such as direct burial, below grade, or above grade where protected from direct exposure to sunlight. These systems may also be used indoors or in dry locations.

Sealed wire-connector systems are intended for use in installations covered by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Sealed wire-connector systems have not been investigated for direct exposure to sunlight. Additional performance considerations to show equivalency to the connected conductors should be considered for UV exposure.

This category covers a complete system or insulating caps, covers, resins, tubing and tapes that are part of the system for use with specific wire connectors where the seal is made at the conductor. Pressure wire connectors may or may not be provided with the system.

CONDUCTOR TYPES

Sealed wire-connector systems are intended for use with Types USE, RHW, XHHW, RW90 EP, RW90 XLPE or TWU, 30 AWG through 2000 kcmil copper or aluminum conductors with currents not exceeding the ampacity of insulated conductors rated either 75 or 90°C and intended for use at 600 V or less.

When so marked, sealed wire-connector systems may also be intended for use with conductors of single- or multiple-conductor underground feeder cable (Type UF), golf course sprinkler cable, underground low-energy cable, irrigation cable, or other cable with insulation acceptable for direct burial, below grade use, or wet locations.

PRODUCT MARKINGS AND RATINGS

Sealed wire-connector systems are marked with the following:

1. catalog number
2. wire range or wire combinations
3. voltage rating
4. operating temperature rating
5. the statement "For Use in Wet or Damp Locations"
6. special conductor types, if applicable

Sealed wire-connector systems are marked with the following:

1. all required wire-connector markings and assembly information (see ZMVV7)
2. complete assembly instructions for the sealed wire-connector system

Sealed wire-connector systems not provided with a wire connector in the same unit container include a statement that the sealed wire-connector system is intended to be used only with certified wire connectors and are marked with one or more of the following:

1. the catalog number of the specific wire connector intended to be used
2. the physical dimensions of a specific wire connector intended to be used, or
3. the minimum and maximum envelope dimensions of any wire connector intended to be used

Some sealed wire-connector systems may additionally be marked "Direct Burial," "Raintight," "Watertight" or "Submersible," as applicable.

All markings on located on:

1. all parts that comprise the system,
2. the packaging carton,
3. the unit container, or
4. the information sheet provided in each unit container.

RELATED PRODUCTS

See Wire Connectors and Soldering Lugs Certified for Canada (ZMVV7) for additional information on wire connectors used within a sealed wire-connector system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 198.2 (2005), "Sealed Wire Connector Systems."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sealed Wire Connector System."

* *

WIRED CABINETS CERTIFIED FOR CANADA (ZNXR7)

USE AND INSTALLATION

This category covers wired cabinets, such as illuminated and nonilluminated jewelry, display and showcases.

Wired cabinets may be permanently connected or cord-and-plug connected. Cord-and-plug-connected wired cabinets are limited to groups of not more than six sections coupled together by flexible cord and locking connectors, with one of the wired-cabinet sections connected by a flexible cord and plug cap rated 15 or 20 A to a permanently installed receptacle in the building structure.

Permanently wired cabinets may be provided with convenience outlets for connection of equipment, such as POS (point-of-sale) equipment. Cord-and-plug-connected wired cabinets may have receptacles installed for connection of factory-installed equipment, such as luminaires. These receptacles are not intended for powering additional equipment and are occupied by factory-installed equipment.

Wired cabinets may be divided into sections when of such size that shipment as one cabinet is impractical. Each major subassembly bears a "Wired Cabinet Section" Certification Mark. Each group of wired-cabinet sections are provided with installation instructions describing or illustrating the proper assembly and electrical connection of the sections when applicable.

These products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

RELATED PRODUCTS

Other commercial display cabinets are covered under Commercial Displays Certified for Canada (IYMX7).

Cabinets provided with or designed for use with refrigeration equipment are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated Certified for Canada (AAVU7).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, Internet communication stands and the like, are covered under Custom-built Kiosks Certified for Canada (EMHH7).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0 (2010), "General Requirements – Canadian Electrical Code, Part II," and CSA-C22.2 No. 0.4 (2004), "Bonding of Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wired Cabinet" or "Wired Cabinet Section ____ of ____" (the first blank identifies the number of the section, and the second blank identifies the total number of sections that constitute the complete wired cabinet).

****

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POSITIONING DEVICES CERTIFIED FOR CANADA (ZODZ7)

GENERAL

This category covers cable ties, cable-tie mounts, and similar types of related hardware for field installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

The investigation of cable ties to CAN/CSA-C22.2 No. 62275 (2010), "Cable Management Systems – Cable Ties for Electrical Installations," generally includes flammability, installation, minimum and maximum operating temperature, minimum installation temperature, and mechanical property considerations. In addition, cable ties may also be investigated for smoke and heat generation, corrosion resistance, and weatherability characteristics as appropriate for the product.

The investigation of fixing devices (cable-tie mounts) to CAN/CSA-C22.2 No. 62275 (2010) generally includes flammability, minimum and maximum operating temperature, and mechanical property considerations. In addition, fixing devices may also be investigated for smoke and heat generation, corrosion resistance, and weatherability characteristics as appropriate for the product.

The investigation of devices to CSA-C22.2 No. 18.5 (2002), "Positioning Devices," generally includes flammability, maximum operating temperature, and mechanical property considerations. In addition, such devices may also be investigated for smoke and heat generation, corrosion resistance, and weatherability characteristics as appropriate for the product.

RATINGS

Type Designations for Products Investigated to CAN/CSA-C22.2 No. 62275 (2010)

Type 2 — A Type 2 product retains 100% of its declared loop tensile strength (cable ties) or declared mechanical strength (fixing devices) after test conditions. The declared maximum operating temperature for products designated and marked as "Type 2" is based solely on performance criteria in CAN/CSA-C22.2 No. 62275 (2010). The polymeric material comprising the product has not been separately investigated for long-term thermal properties according to CAN/CSA-C22.2 No. 0.17 (2000), "Evaluation of Properties of Polymeric Materials."

Type 21 — A Type 21 product retains 100% of its declared loop tensile strength (cable ties) or declared mechanical strength (fixing devices) after test conditions. The declared maximum operating temperature for products designated and marked as "Type 21" is limited to the Relative Thermal Index – Strength (RTI – Strength) at 1.5 mm (0.06 in.) thickness for the polymeric material that comprises the product. The RTI – Strength for the material is determined by separate investigation for long-term thermal properties according to CSA-C22.2 No. 0.17 (2000), and the declared maximum operating temperature of the product is based on the performance criteria in CAN/CSA-C22.2 No. 62275 (2010).

Type 2S and Type 21S — Type 2S and Type 21S products meet the same requirements as Type 2 and Type 21 products, respectively, but have been additionally investigated for use as primary support for a flexible conduit, flexible tubing, or cable in accordance with the CEC. Such products may also be marked "Support" in lieu of the "S" designation.

Products Investigated to CSA-C22.2 No. 18.5 (2002)

Load Rating — When a load rating is declared, the device retains the declared mechanical strength following test conditions.

Temperature Rating — The temperature rating of the device is limited to the RTI – Strength at 1.5 mm (0.06 in.) thickness for the polymeric material that comprises the product. The RTI – Strength for the material is determined by separate investigation for long-term thermal properties according to CAN/CSA-C22.2 No. 0.17 (2000), and the declared maximum operating temperature of the product is based on the performance criteria in CSA-C22.2 No. 18.5 (2002).

Limited Support — Products marked "Limited Support" are able to provide support for nonflexible conduit or tubing up to the maximum load rating marked on the device. The devices are not intended to provide primary support for nonflexible conduit or tubing at the maximum spacing intervals specified in the CEC.

MARKINGS

For cable ties investigated to CAN/CSA-C22.2 No. 62275 (2010), the product, the smallest unit container in which the product is packaged, or the installation instructions provided with the product are marked with the manufacturer's identifier (company name or registered trademark), catalog or model number, the product's maximum and minimum operating temperature, minimum installation temperature if below 0°C, minimum and maximum bundle diameter, loop tensile strength, and type designation in accordance with CAN/CSA-C22.2 No. 62275 (2010).

For separately supplied fixing devices investigated to CAN/CSA-C22.2 No. 62275 (2010), the product, the smallest unit container in which the product is packaged, or the installation instructions provided with the product are marked with the manufacturer's identifier (company name or registered trademark), catalog or model number, the product's maximum and minimum operating temperature, declared mechanical strength, and type designation in accordance with CAN/CSA-C22.2 No. 62275 (2010).

Fixing devices or cable ties having integral fixing devices investigated to CAN/CSA-C22.2 No. 62275 (2010) that are dependent on specific maximum and minimum mounting-hole size, panel thickness, mounting orientation, or other variables critical to proper installation include this information in their marking on the product, smallest unit container in which the product is packaged, or installation instructions provided with the product.

For devices investigated to CSA-C22.2 No. 18.5 (2002), the product or the smallest unit container in which the product is packaged is marked with the product's maximum load and thermal ratings, together with the manufacturer's identifier (company name or registered trademark) and catalog or model number.

Products covered under this category have not been investigated for outdoor use unless marked "Resistant to Ultraviolet Light," "For Use Outdoors," "For Use Outdoors or Indoors," or similar wording, in which case they have been found acceptable for both indoor and outdoor use.

All metallic products are suitable for use in air-handling areas and may be marked "Suitable for use in air handling spaces in accordance with Rules 12-010 (3), (4), and (5), and 12-020 of the Canadian Electrical Code," "AH-1," or equivalent wording, as appropriate.

All nonmetallic and composite products that have been investigated to determine their suitability for use in air-handling areas may be marked "Suitable for use in air handling spaces in accordance with Rules 12-010 (3), (4), and (5), and 12-020 of the Canadian Electrical Code," "AH-2," or equivalent wording, as appropriate.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 18.5 (2002), "Positioning Devices," or CAN/CSA-C22.2 No. 62275 (2010), "Cable Management Systems – Cable Ties for Electrical Installations."

UL MARK

The Listing Mark of UL on the product, or on the smallest unit container in which the product is packaged with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Positioning Device" or "Cable Tie," or other appropriate product name as shown in the individual Listings.

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE-PULLING COMPOUNDS CERTIFIED FOR CANADA (ZOKZ7)

USE

This category covers wire-pulling compounds intended for use as lubricants in installing electrical conductors in raceways. These compounds have been investigated to determine their compatibility with specific types of wire and cable jacket or other exterior coverings.

Other compound properties including friction reduction, toxicity and combustibility have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 249, "Standard Tests for Determining Compatibility of Cable-Pulling Lubricants With Wire and Cable."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wire-pulling Compound."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIREWAY, AUXILIARY GUTTERS AND ASSOCIATED FITTINGS CERTIFIED FOR CANADA (ZOYX7)

USE

This category covers wireway, auxiliary gutters and fittings for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Products installed in accordance with product markings and manufacturer's instructions are suitable for use as equipment grounding conductors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 26, "Construction and Test of Wireways, Auxiliary Gutters and Associated Fittings."

WIREWAY, AUXILIARY GUTTERS AND ASSOCIATED FITTINGS CERTIFIED FOR CANADA (ZOYX7)

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wireway or Auxiliary Gutter" or "Wireway or Auxiliary Gutter Fitting."

* *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ULC DIRECTORIES AND STANDARDS

DIRECTORIES PUBLISHED BY UNDERWRITERS LABORATORIES OF CANADA

You can order or view on-line the following ULC directories.

Building Materials

Burglar and Fire Alarm Systems and Components

Fire Protection Equipment

Fire Resistance

Firestop Systems and Components

Heating and Ventilating Equipment and Flammable Liquids and Gases Equipment

The label or listing mark on a product is evidence that such a device or material has been produced under the Listing Program of Underwriters Laboratories of Canada. Such marking does not mean that products of the same classification are necessarily equivalent in quality or merit.

Listing Directories can be ordered in softcover (single and in sets) as well. These can be ordered by going to http://www.ulc.ca, click on "ULC Standards" then click on "Sales of ULC Standards Materials" then click on "ULC Online Store" and select "Listing Directories."' ULC standards and ORDs can also be ordered from the same site or by calling 1-866-937-3852 ext. 61744, fax to 613-231-5977 or by e-mail at publications@ulc.ca (in subject line enter: Standards Order Request). ULC also has a number of resellers of its standards and ORDS. Email the publication department or check on our website for a current list.

ADVISORY COUNCILS

Issues relating to ULC Standards and Other Recognized Documents having a bearing on listings covered in this directory are brought to the Advisory Council of Underwriters Laboratories of Canada for information, input and comment.In addition to the above, Underwriters Laboratories of Canada liases as appropriate with various federal, provincial, territorial and munIcipal regulatory authorities.

The foregoing advisory bodies are also consulted by the staff of Underwriters Laboratories of Canada in connection with the development or revision of ULC Standards and Other Recognized Documents and with respect to special problems that may arise in connection with the Laboratories' engineering and listing services.

STANDARDS AND OTHER RECOGNIZED DOCUMENTS OF UNDERWRITERS LABORATORIES OF CANADA

ULC Standards develops and publishes standards and specifications for products having a bearing on fire, safety and security, crime prevention, thermal insulation and systems, air barriers, live working and other areas. ULC Standards is accredited by the Standards Council of Canada as a Standards Development Organization under the National Standards System of Canada.

If you are interested in taking part in Standards Development please contact the Manager of Standards, ULC Standards. If you are interested in having a standard developed please contact the Director of Standards, ULC Standards. ULC Standards has 17 Standards development committees covering the following areas

Committee on Fire Tests –ULC- S100A

Committee on Security and Burglar Alarm Equipment and Systems – ULC-S300A

Committee on Physical Security Equipment – ULC-S300B

Committee on Automobile Theft Deterrent Equipment and Systems – ULC-S300V

Committee on Live Working – ULC – S400A

Committee on Solid State & LED Lighting – ULC – S400B

Committee on Portable Fire Extinguishers – ULC-S500A

Committee on Fire Fighting Apparatus and Equipment – ULC-S500B

Committee on Fire Alarm and Life Safety Equipment and Systems – ULC-S500F

Committee on Fire Fighting Foams – ULC-S500G

Committee on Stationary Steel Storage Containers for Flammable and Combustible Liquids – ULC-S600A

Committee on Stationary Non-Metallic Storage Containers for Flammable and Combustible Liquids – ULC-S600B

Committee on Factory-Built Fireplaces, Chimneys and Vents – ULC-S600E

Committee on Fittings for Flammable and Combustible Liquids – ULC-S600H

Committee on Kitchen Exhaust Equipment and Systems - ULC-S600K

Committee on Oil-Water Separators – ULC-S600L

Committee on Thermal Insulation Materials and Systems – ULC-S700A

Committee on Air Barrier Materials and Systems – ULC-S700B

Committee on Electric Utility Workplace Electrical Safety – ULC - S800A

The Engineering Department of Underwriters Laboratories of Canada also develops and publishes Other Recognized Documents (ORDs) to deal with certification of products where standards do not yet exist or do not deal with the product.

A list of Standards and ORDs currently available may be obtained through our web site at http:www.ul-c.ca. In addition, the current standards work program of ULC Standards Department can be found on the same web site by selecting ''ULC Standards'' as well as being linked through the web site of the Standards Council of Canada at http:/ /www.scc.ca. This work program is updated online on a regular basis

Where applicable, conformance of a product with pertinent requirements found in Canadian Codes and Standards and regulations published by other agencies is required before listing is established. For further details concerning the significance of the listing, reference should be made to the explanatory texts preceding each of the various classifications of products covered herein.

For judging acceptability of devices incorporating electrical features, reference is made to applicable requirements contained in the Canadian Electrical Code, Parts I and II, and compliance therewith is a prerequisite to listing.

Other UL Services

In addition to its Listing, Classification and Component Recognition Services, UL can provide manufacturers with a variety of related assessment, inspection and facility registration services.

Specialized Services

UL has specialized services and staff to assist customers and others with various product certification and information needs.

Local Engineering Services

UL's Local Engineering Services (LES) offices give customers access to UL engineers in their own local areas. In key centers around the U.S., UL operates LES offices that offer fast and convenient service. Customers can use these offices as quick sources of information or to receive on-site product investigations, Field Engineering Services or other engineering evaluations locally. The locations and addresses of these LES offices are listed at the back of the White Book.

Fact-Finding Investigations

In the interest of public safety, UL conducts Fact-Finding Investigations on an individual contract basis for manufacturers, trade associations, government agencies and others. Fact-Finding Investigations provide information or data that the sponsor can use, in seeking support for a proposed amendment to a nationally recognized installation code. These investigations result in a Fact-Finding Report. Contact a Customer Service Professional for referral to the appropriate engineering staff.

Research Services

UL also serves the interests of the public by conducting research investigations -- both for its own use and use by others -- on products or materials to help identify safety concerns and to assist in the development of appropriate safety requirements. This research is particularly useful when new technologies emerge or new safety concerns are explored. UL's research expertise and facilities are available to manufacturers, trade associations, government and other groups. Contact a Customer Service Professional for referral to the appropriate engineering staff.

Verification Services — Commercial Inspection, Testing and Auditing

UL Verification Services offers expertise in commercial testing, inspection and auditing that is recognized and respected around the world. Currently, UL Verification Services provides support to the appliance, high-tech, lighting, and retail industries through our global footprint, technical expertise, commitment to quality and unmatched customer service. Our full range of technical services support manufacturing business operations from initial design through prototyping and into final production and enhance retail or go-to-market supply chain quality management operations. For more information, call Customer Service at 1-877-UL-HELPS (1-877-854-3577) or e-mail cits@ul.com.

UL Information Services

UL's Technical Information Services

Manufacturers, AHJs and other groups look to UL as a uniquely broad and accessible source of technical information in areas such as product testing and certification, domestic and international standards, international compliance requirements, and quality system registration. UL provides a variety of technical information services.

Online Certifications Directory

UL's Online Certifications Directory of UL certified products can be accessed at www.ul.com/database.

The White Book and CDs

The UL White Book/CD and the Canadian White Book CD are published annually. Order these by visiting https://applications.tweddle.com/ulecommerce/Products.aspx.

Following are the distribution months.

Title	Month Distributed
Guide Information for Electrical Equipment - The White Book - Print and CD	April
Guide Information for Canadian Certified Equipment - The Canadian White Book - CD	September

UL's Website

Visit www.ul.com for information on UL's products and services. Topics include:

- UL Marks
- UL product testing and certification, facility registration, and related services
- Seminars
- Technical information resources, such as Standards (including access to the Standards Electronic Bulletin Board System) and UL's Online Certifications Directory
- UL news and activities, including the latest news releases
- Information for AHJs, consumers and retailers

Regulatory Services Staff

To contact UL Regulatory Services staff members, call 800-595-9844 or e-mail ulregulatoryservices@ul.com or visit www.ul.com/codeauthorities. For more detailed contact information including contact names, phone, fax and e-mail addresses, visit the code authorities website at www.ul.com/codeauthorities.

INDEX OF ULC PRODUCT CATEGORIES AND INDUSTRY TERMS

This index includes all product categories sorted alphabetically. In addition, those product categories that are a sub-set of a main product category are indented under the main category to illustrate the grouping of a family of related categories. This index also includes specific product types covered within a product category and these product names are followed by the applicable product category title in parentheses.

Quick Guide to
ULC's Online Certification Directories

Guide de consultation rapide
des répertoires de certifications ULC en ligne

Welcome to the ULC Online Certification Directories, a faster way to access ULC Listings and Classifications. You can use the ULC Online Certification Directories to:

Verify a ULC Listing or Classification
Verify a ULC Listed product use
Verify a product safety standard

Bienvenue aux répertoires de certifications ULC en ligne, une manière plus rapide d'avoir accès aux inscriptions et aux classifications ULC. Vous pouvez utiliser les répertoires de certifications ULC en ligne pour :

vérifier une inscription ou une classification ULC;
vérifier l'utilisation d'un produit inscrit ULC;
vérifier la norme de sécurité d'un produit.

Search The ULC Online Certification Directories Using:

- **Company name/location**
- **ULC File Number**
- **ULC Category Code/Guide Information**
- **Standard or ORD Number**
- **ULC Guide Number (used up to 2003)**
- **Fire Resistance Assemblies and Systems**
- **Keyword**

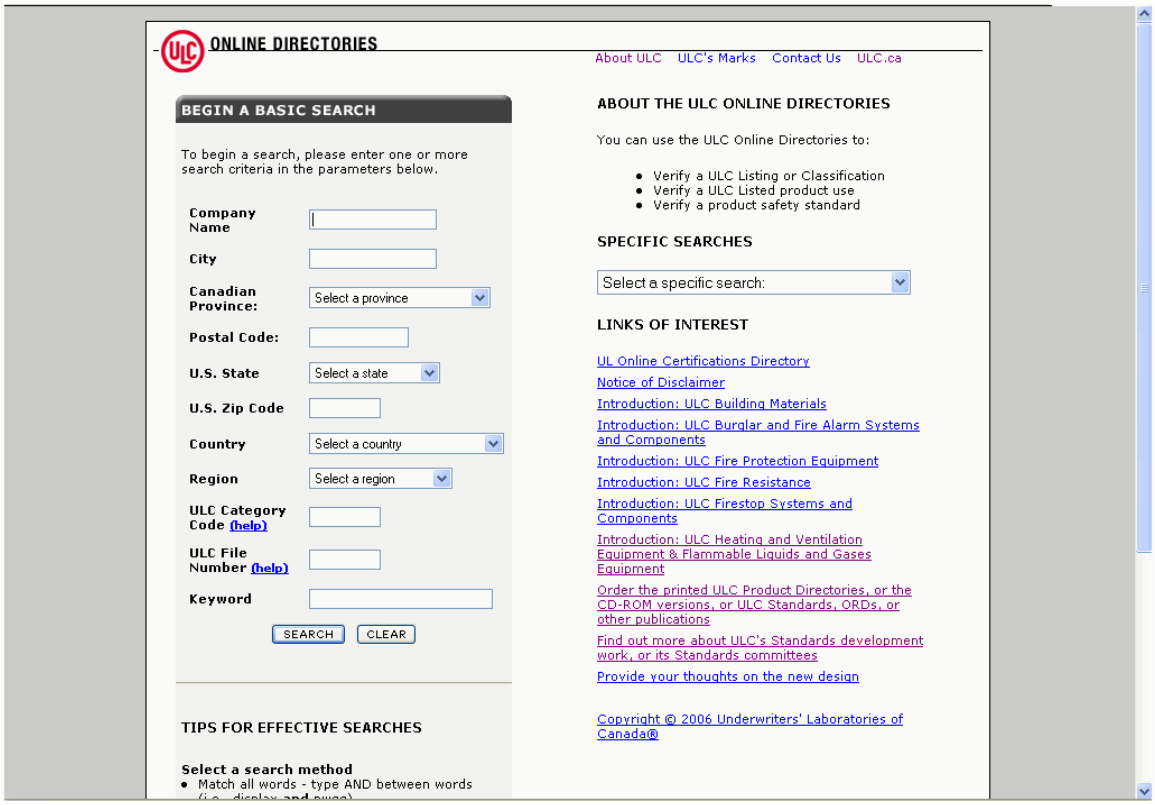
Effectuez une recherche dans les répertoires de certifications ULC en ligne en utilisant :

- le nom de l'entreprise ou l'emplacement;
- le numéro de dossier ULC;
- le numéro de code de catégorie ULC ou le Guide information;
- le numéro de norme ou ORD;
- le numéro du guide ULC (utilisé jusqu'en 2003);
- les systèmes et assemblages résistant au feu;
- un mot clé.

To begin, log on to:
Pour commencer, ouvrez une session à l'adresse suivante :

www.ULC.ca

Now Click on "ULC Online Directories" which appears in the column on the left hand side of the page. You will go to the primary search engine:
Cliquez maintenant sur « ULC Online Directories » (répertoires ULC en ligne) qui apparaît dans la colonne gauche de la page. Cela vous amènera au premier moteur de recherche :



BOOKMARK THIS PAGE
MARQUEZ CETTE PAGE D'UN SIGNET

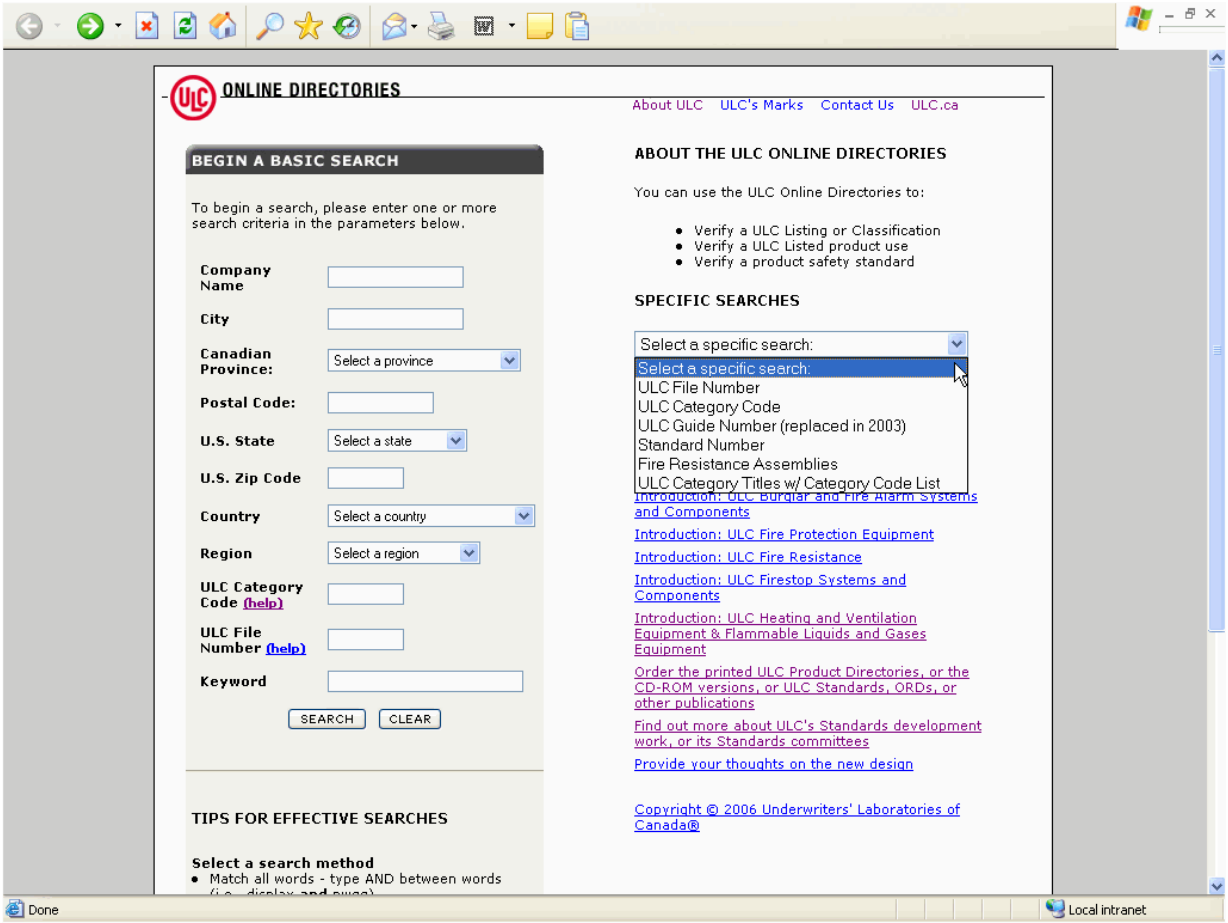
From here you can enter anyone of several choices, by company name, by ULC Category Code, by ULC File Number or by a keyword search. Just enter the information and click on "Search".
À partir de là, vous pouvez entrer n'importe quel choix parmi plusieurs, nom d'entreprise, code de catégorie ULC, numéro de fichier ULC ou effectuer une recherche par mot clé. Vous n'avez qu'à entrer l'information et à cliquer sur « Search » (recherche).

On the primary search page, there is a pull-down "Specific Searches", on the right of the page that allows additional specific searching by, among other things:

- **Standard Number**
- **Fire Resistance Assemblies**
- **ULC Category Titles with Category Code Lists (this is the Guide Information)**

Sur la page de recherche principale, une liste déroulante « Specific searches » (recherches spécifiques), à droite de la page, permet des recherches additionnelles spécifiques, en utilisant entre autres :

- le numéro de la norme;
- les assemblages résistant au feu;
- les titres de catégorie ULC avec les listes de code de catégorie (c'est le Guide information).



1. SEARCH BY "COMPANY NAME"
1. RECHERCHE PAR « COMPANY NAME » (nom d'entreprise)

To begin this search, enter the "Company Name" and other available information in the fields provided, then click "Search".
Avant d'entreprendre cette recherche, entrez le « Company Name » (nom d'entreprise) et les autres renseignements disponibles dans les champs fournis à cet effet, puis cliquez sur « Search » (recherche).

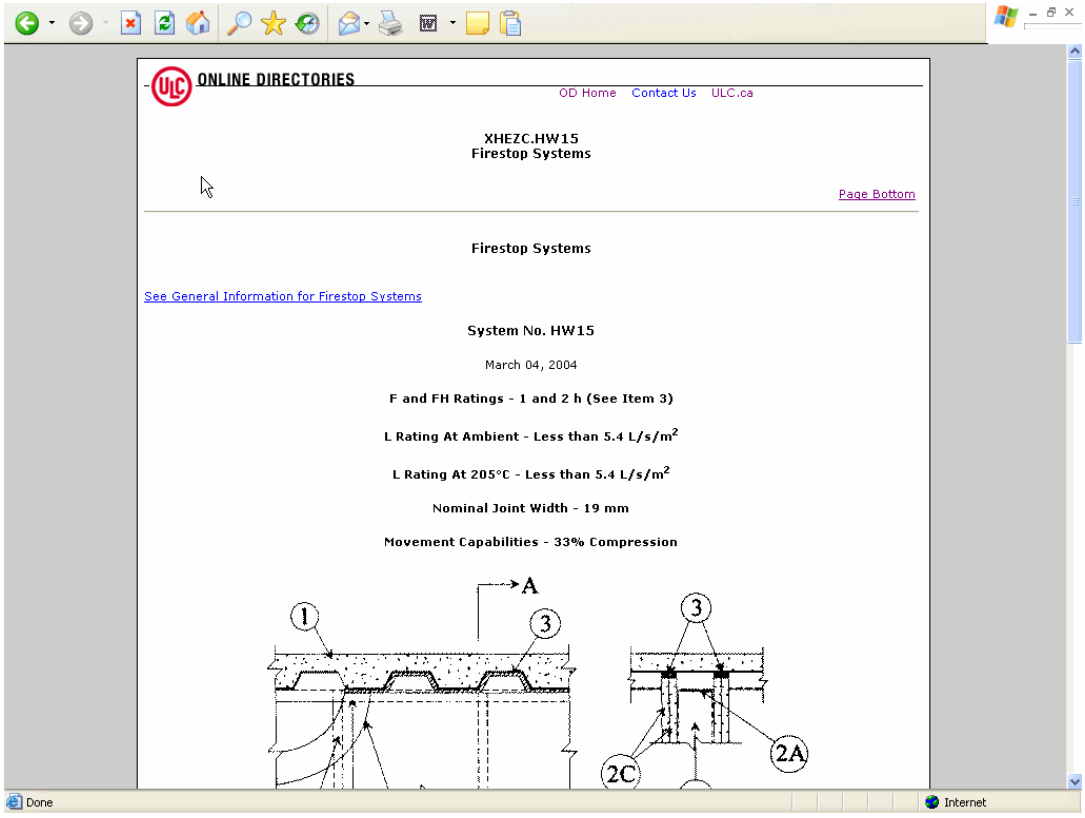
Page: 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9

Search results often yield multiple hits, which are listed in alphabetical order. To reduce the number of hits, you can choose "Refine Your Search", located towards the top of the table.
Les résultats de la recherche donnent souvent lieu à de multiples appels de fichiers énumérés par ordre alphabétique. Pour réduire le nombre d'appels de fichiers, vous pouvez choisir « Refine Your Search » (affiner votre recherche), près de la partie supérieure du tableau.

Once you have determined the listing you want to see, click in the appropriate link in the "Link to File" column (at the right side) and you get…
Une fois que vous avez défini l'inscription que vous désirez voir, cliquez sur le lien approprié dans la colonne « Link to File » (Lier au fichier) (du côté droit) et vous aurez...



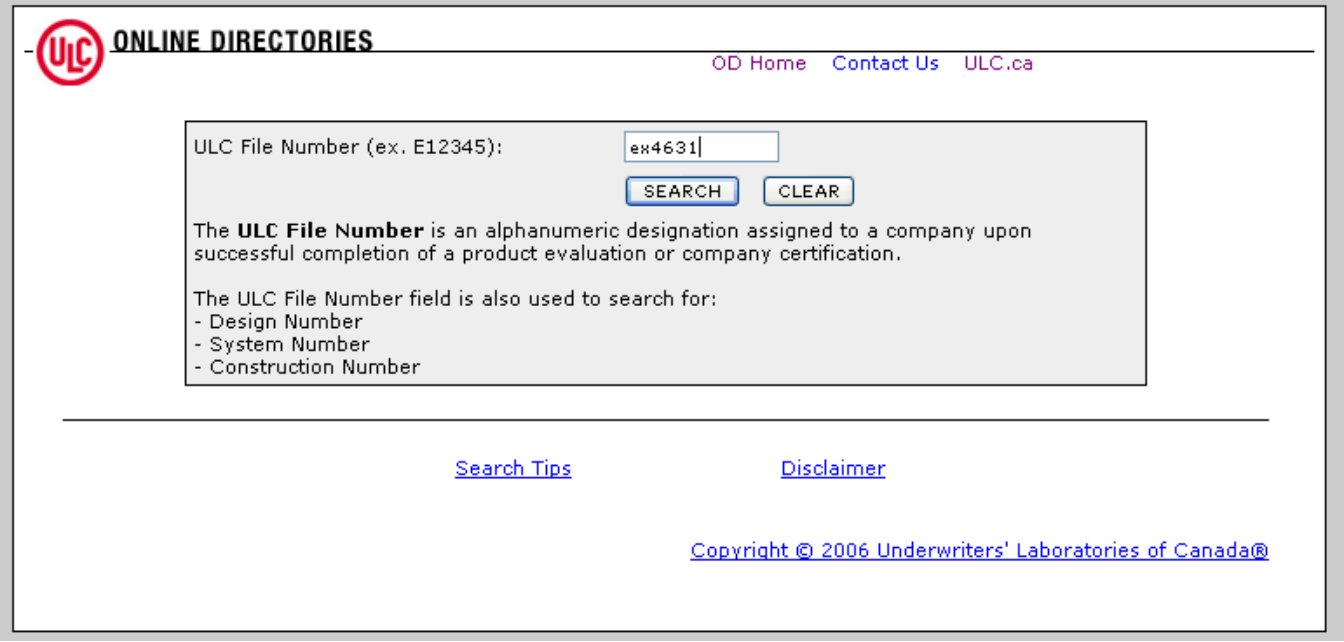
This shows the listing information. To see a description/specifications for the category (in this example it is "XHEZC"), click on "See Guide Information for …." towards the upper left side of the page. The ULC Guide outlines the scope and limitations of a product category, the standard used to carry out the evaluation, and the applicable marking requirements by which the product can be identified in the field.

Cet écran montre l'information relative à l'inscription. Pour voir une description ou les spécifications de la catégorie (dans cet exemple, c'est « XHEZC »), cliquez sur « See Guide Information for …. » (voir le Guide information pour..) près de la partie supérieure gauche de la page. Le Guide ULC précise la portée et les limites d'une catégorie de produit, la norme utilisée pour effectuer l'évaluation, et les exigences applicables relatives à la marque par lesquelles le produit peut être identifié sur place.

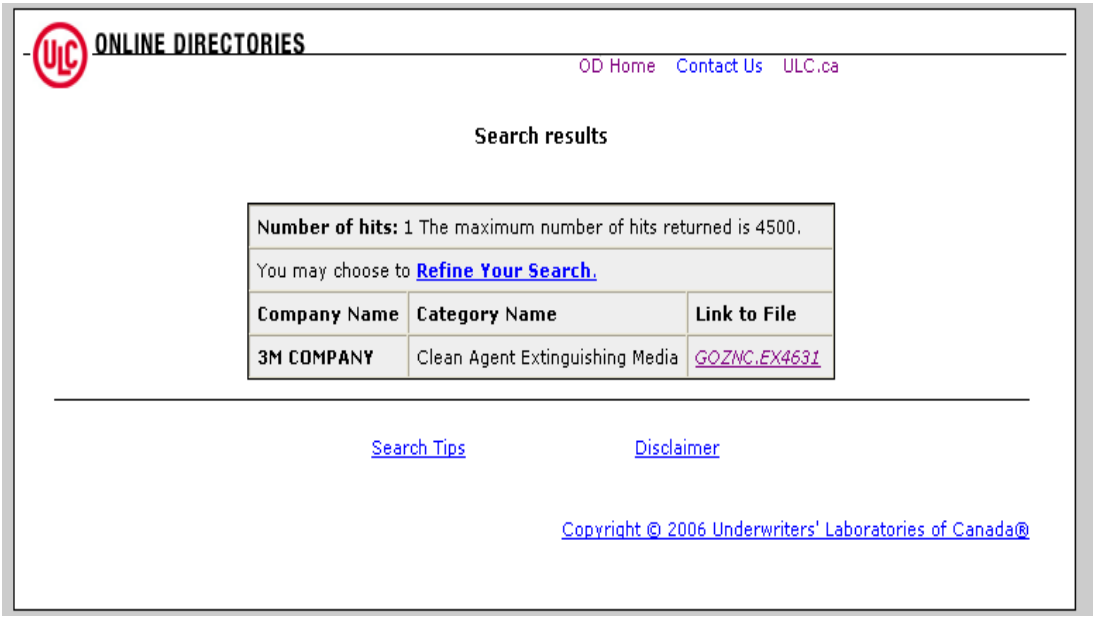
2. **SEARCH BY FILE NUMBER**
2. RECHERCHE PAR NUMÉRO DE FICHIER

A file number is an alphanumeric designation assigned by ULC and associated with a specified company and product category.
Un numéro de fichier est une désignation alphanumérique assignée par ULC et liée à une entreprise et à une catégorie de produit spécifiques.

To search by "File Number", enter the file number in the appropriate box (note there is a 'Help' box for this field) or select ULC File number under "Specific Searches" and then enter the file number in the search box.
Pour effectuer une recherche par « File number » (numéro de fichier), entrez le numéro de fichier dans la case appropriée (prenez note qu'il y a une case « Help » [aide] dans ce champ) ou sélectionnez un numéro de fichier ULC sous « Specific Searches » (recherches spécifiques), puis entrez le numéro de fichier dans la case de recherche.



This will take you to a specific file …
Cette option vous mènera à un fichier spécifique...



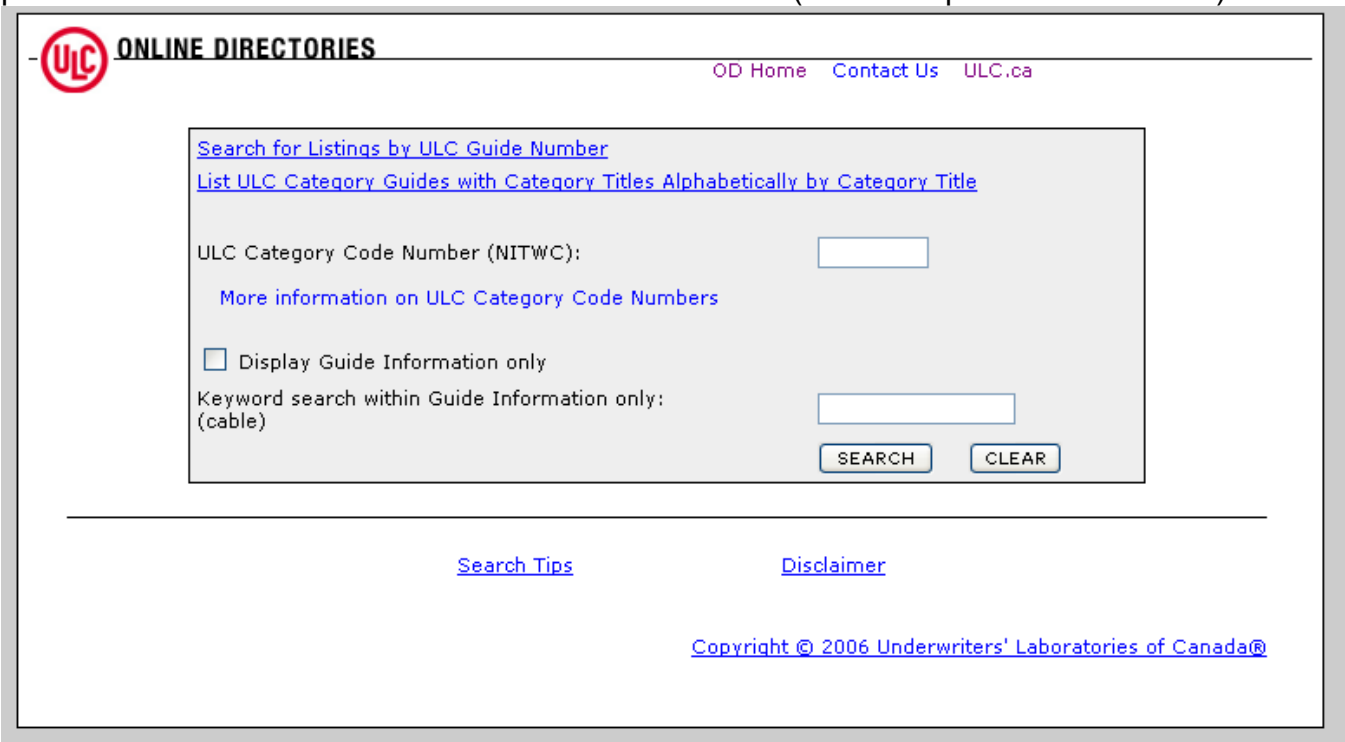
As with the previous example, click on the 'Link To File" to get the listing information.
Comme dans l'exemple précédent, cliquez sur « Link to File » (lier au fichier) pour obtenir l'information relative à l'inscription.

3. SEARCH BY CATEGORY CODE / GUIDE INFORMATION
3. RECHERCHE PAR CODE DE CATÉGORIE OU GUIDE INFORMATION

A Category Code is an alphabetic or alphanumeric code used to identify product categories covered by ULC's Listing, Classification, & Recognition Services. (For example: XHJZC, BXUVC, etc.)
Un code de catégorie est un code alphabétique ou alphanumérique utilisé pour identifier les catégories de produits couvertes par les services d'inscription, de classification et de reconnaissance ULC. (Par exemple : XHJZC, BXUVC, etc.)

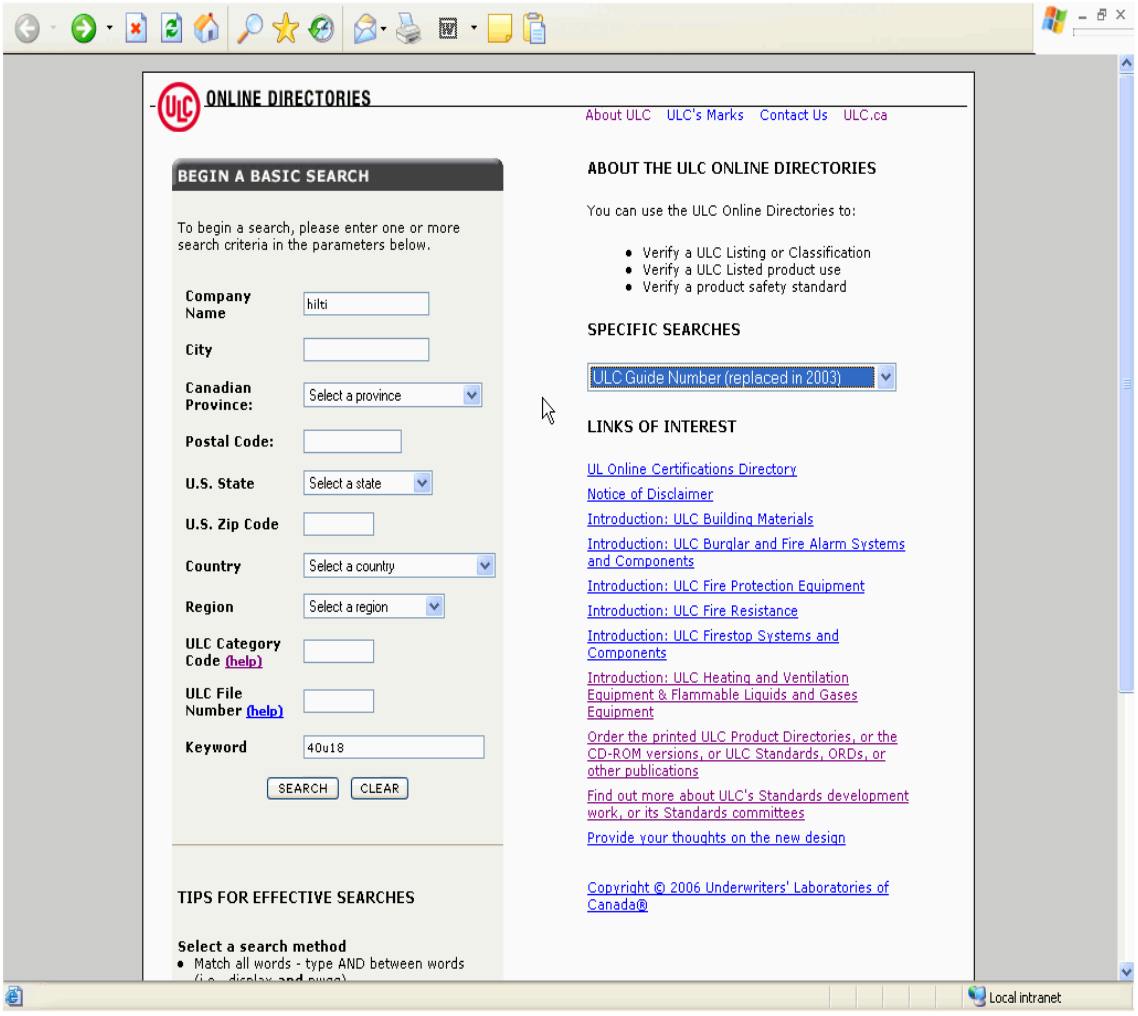
The Guide Information for each product category provides important information regarding the scope and limitations of ULC Certifications and a general description of the ULC marking authorized for products in that category.
Le Guide information pour chaque catégorie de produit fournit d'importantes informations relatives à la portée et aux limites des certifications ULC et une description générale de la marque ULC autorisée pour les produits de cette catégorie.

To search for a specific Category Code, enter the Category Code in the 'ULC Category Code' field in the main 'Search' page. (Hint: You can also use the pull-down menu 'Specific Searches' on the right of the page. Using the 'ULC Category Code' on this pull-down menu has the advantage of providing a link to a 'List ULC Category Guides with Category Titles Alphabetically by Category Titles'. It also lets you display the 'Guide Information' only. See Slide below.)
Pour effectuer une recherche d'un code de catégorie spécifique, entrez le code de catégorie dans le champ « ULC Category Code » (code de catégorie ULC) de la page de recherche principale. (Conseil : Vous pouvez aussi utiliser le menu déroulant « Specific Searches » (recherches spécifiques) du côté droit de la page. L'utilisation du « ULC Category Code » (code de catégorie ULC) sur ce menu déroulant a l'avantage de fournir un lien à « List ULC Category Guides with Category Titles Alphabetically by Category Titles » (établir la liste des guides de catégorie ULC avec les titres de catégorie énumérés alphabétiquement). Cela vous permet aussi d'afficher le Guide information seulement. (Voir la diapositive ci-dessous)

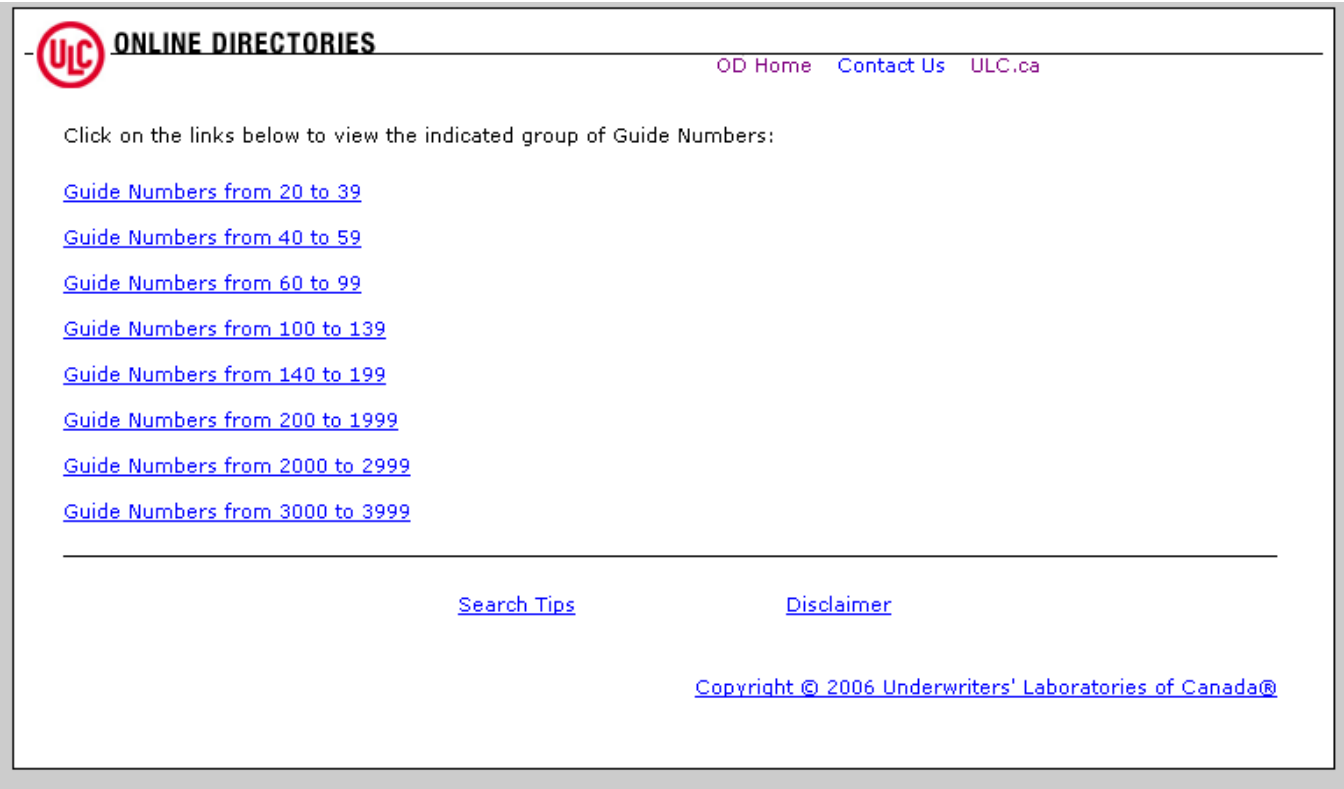


4. SEARCH BY ULC GUIDE NUMBER
4. RECHERCHE PAR LE NUMÉRO DU GUIDE ULC

Up until 2003 ULC did not use Category Code but used what were called Guide Numbers. To ensure that those familiar with the ULC Guide Number can still find the information they need and identify the replacement Category Code, you can search for the Guide Number table and then select the corresponding Category Code.
Jusqu'en 2003, ULC n'utilisait pas le code de catégorie mais plutôt ce qui était appelé les numéros du Guide. Pour ceux qui connaissent bien les numéros du Guide ULC, ils peuvent encore trouver l'information dont ils ont besoin et identifier le code de catégorie de remplacement, en recherchant le tableau des numéros du Guide et en sélectionnant ensuite le code de catégorie correspondant.

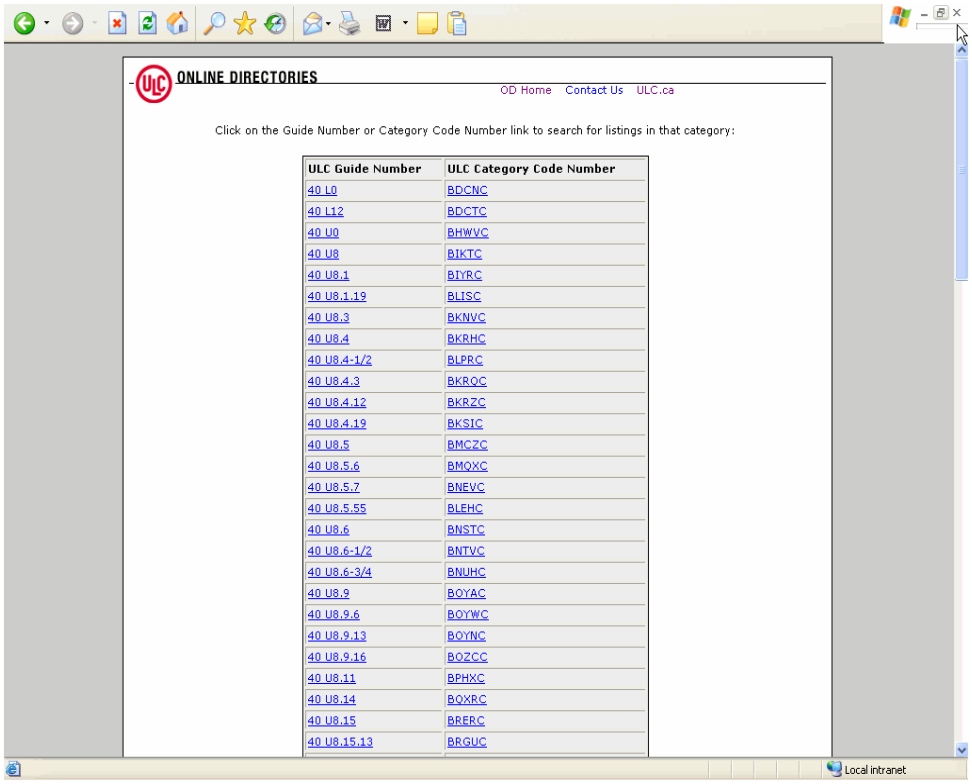


Under specific search choose "ULC Guide Number. The following window will pop up.
Sous « Specific Search » (recherche spécifique), choisissez « ULC Guide Number » (numéro du Guide ULC). La fenêtre suivante s'ouvrira.



Find the ULC Guide Number range you want and click on it. The next window will show all the ULC Guide Numbers in the selected range and for each of them the corresponding Category Code Number.
Trouvez la plage de numéros du Guide ULC voulue et cliquez dessus. La fenêtre suivante affichera tous les numéros du Guide ULC de la plage sélectionnée ainsi que, pour chacun d'eux, le numéro de code de catégorie correspondant.

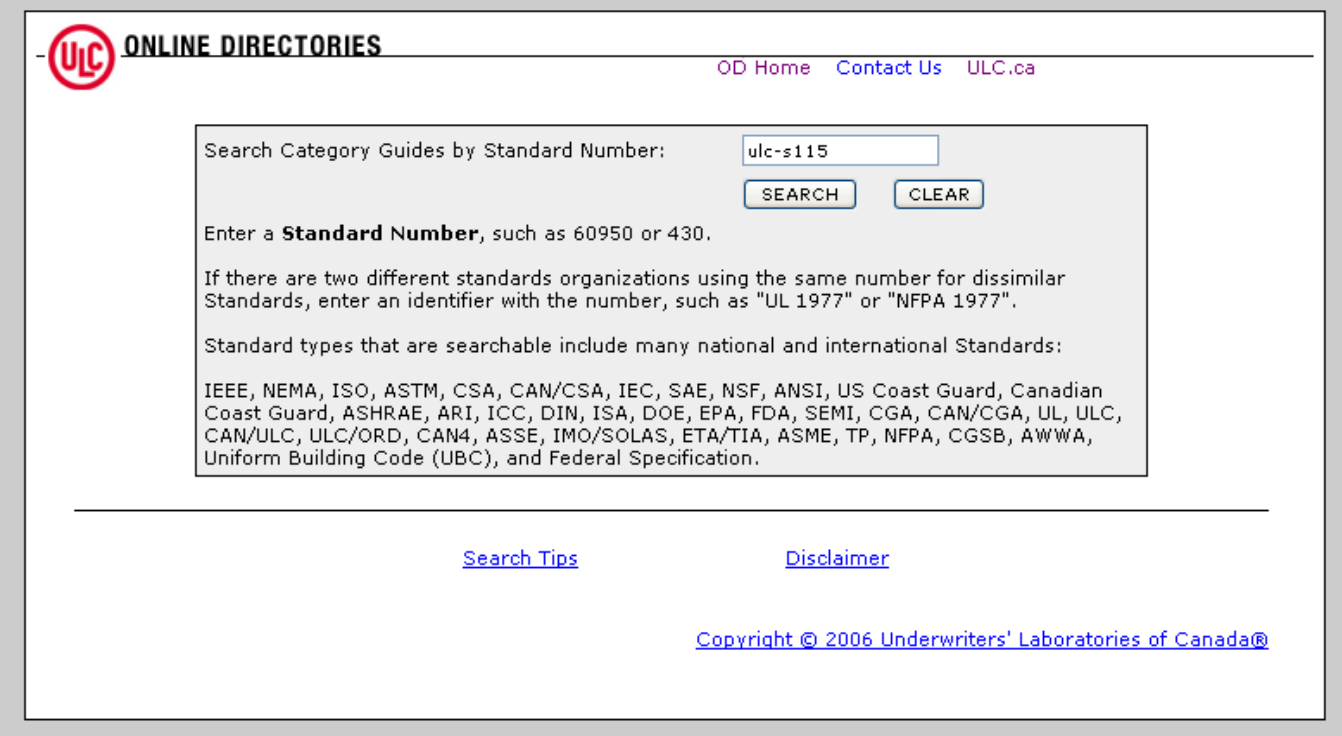
Note: Category Code Numbers assigned after 2003 will not have a corresponding ULC Guide Number.
Remarque : Les numéros de code de catégorie assignés après 2003 n'auront pas de numéro du Guide ULC correspondant.



Select the ULC Category Code Number you want and click on it.
Sélectionnez le numéro de code de catégorie ULC que vous désirez et cliquez dessus.

5. SEARCH BY STANDARD NUMBER
5. RECHERCHE PAR LE NUMÉRO DE NORME

This option searches all the ULC Guide Information for the requested standard number. To begin, go to the Specific Searches' pull-down menu on the right side of the 'Search' page. Pull down to 'Standard Number" and you get …
Cette option effectue une recherche du numéro de norme demandé dans tout le Guide information ULC. Pour commencer, allez au menu déroulant « Specific Searches » (recherches spécifiques) du côté droit de la page « Search » (recherche). Faites défiler la page jusqu'à « Standard Number » (numéro de la norme) et vous avez...



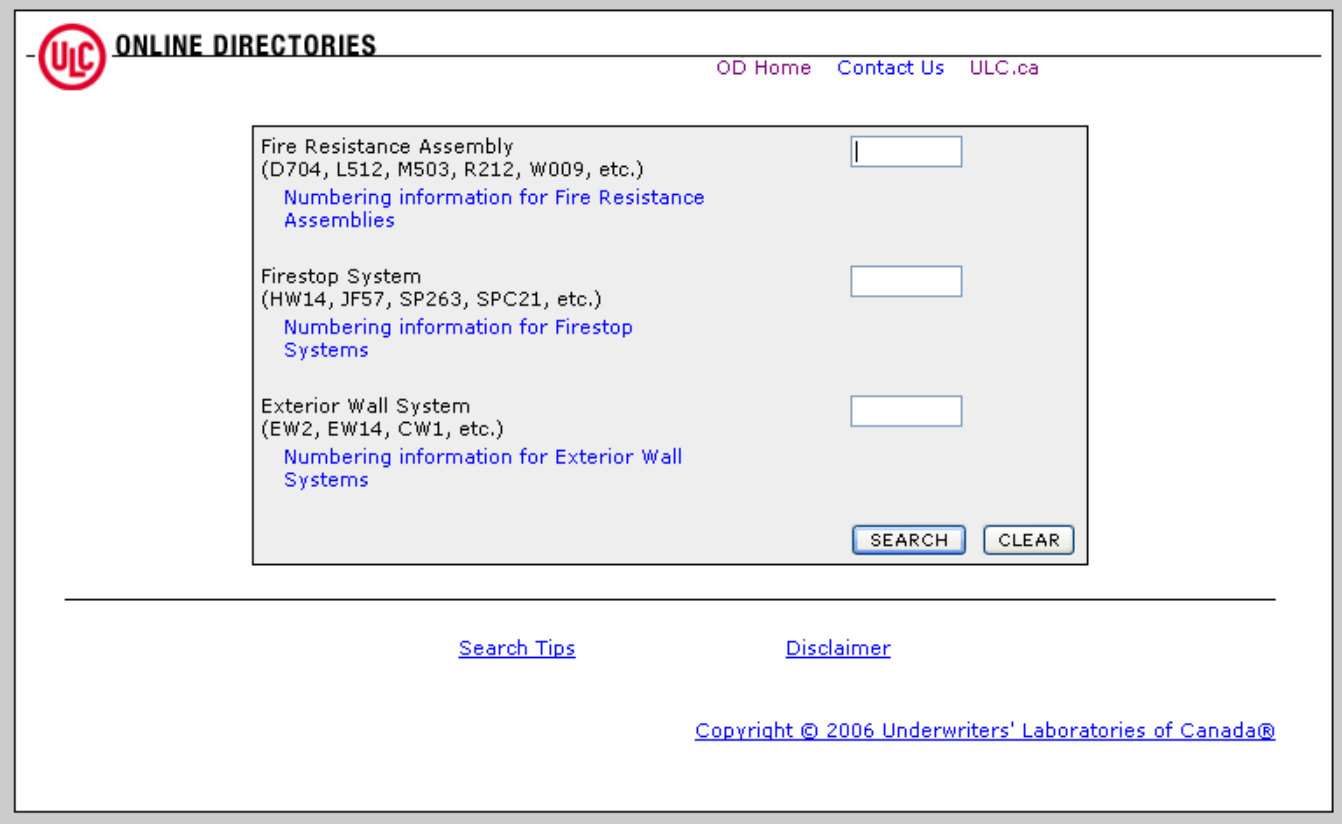
Now, enter in the exact standard (e.g., ULC-S115, CAN/ULC-S603) in the field and click 'Search'. This will result in the ULC Guide Information for one or more categories. Choose the appropriate category by clicking the 'Guide Info' under the 'Link To File' column.
Maintenant, entrez le numéro exact de la norme (p. ex. ULC-S115, CAN/ULC-S603) dans le champ et cliquez sur « Search » (recherche). Le Guide information ULC vous donnera une ou plusieurs catégories. Choisissez la catégorie appropriée en cliquant sur le « Guide Info » sous la colonne « Link to File » (lier au fichier).

(Note: if the search does not result in any hits, try again using only the standard number or *s followed by the standard number or for an ORD *c followed by the ORD number)
(Remarque : Si la recherche ne donne aucun appel de fichier, essayez de nouveau en utilisant uniquement le numéro de la norme ou *s suivi du numéro de la norme ou pour un ORD, *c suivi du numéro ORD.)

6. SEARCH BY FIRE RESISTANCE ASSEMBLIES AND SYSTEMS
6. RECHERCHE D'ASSEMBLAGES ET DE SYSTÈMES RÉSISTANT AU FEU

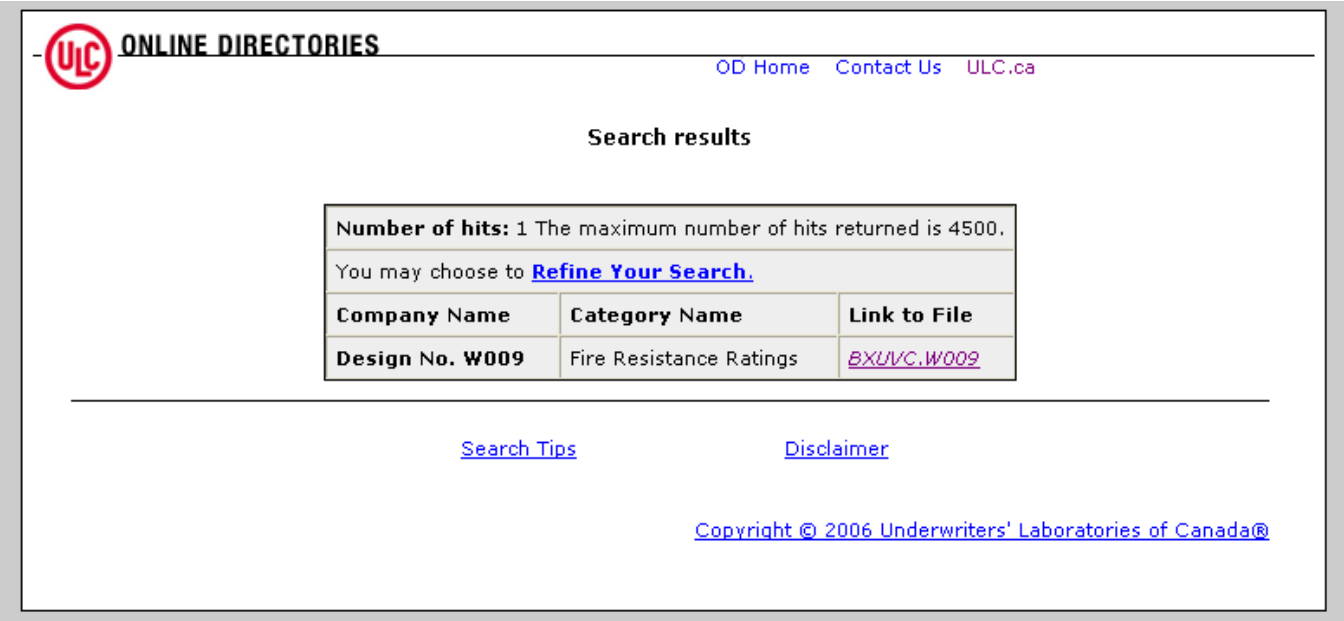
A search of fire resistance assemblies and systems can be done two ways, depending on the information available to you.
Une recherche d'assemblages et de systèmes résistant au feu peut être effectuée de deux façons, selon l'information dont vous disposez.

If you know the exact number for the design or system, go to the 'Specific Searches' pull-down menu on the right side of the main 'Search' page and select "Fire Resistance Assemblies" and you will see …
Si vous connaissez le numéro exact du modèle ou du système, allez au menu déroulant « Specific Searches » (recherches spécifiques) à droite de la page principale de recherche et sélectionnez « Fire Resistance Assemblies » (assemblages résistant au feu) et vous aurez ceci…



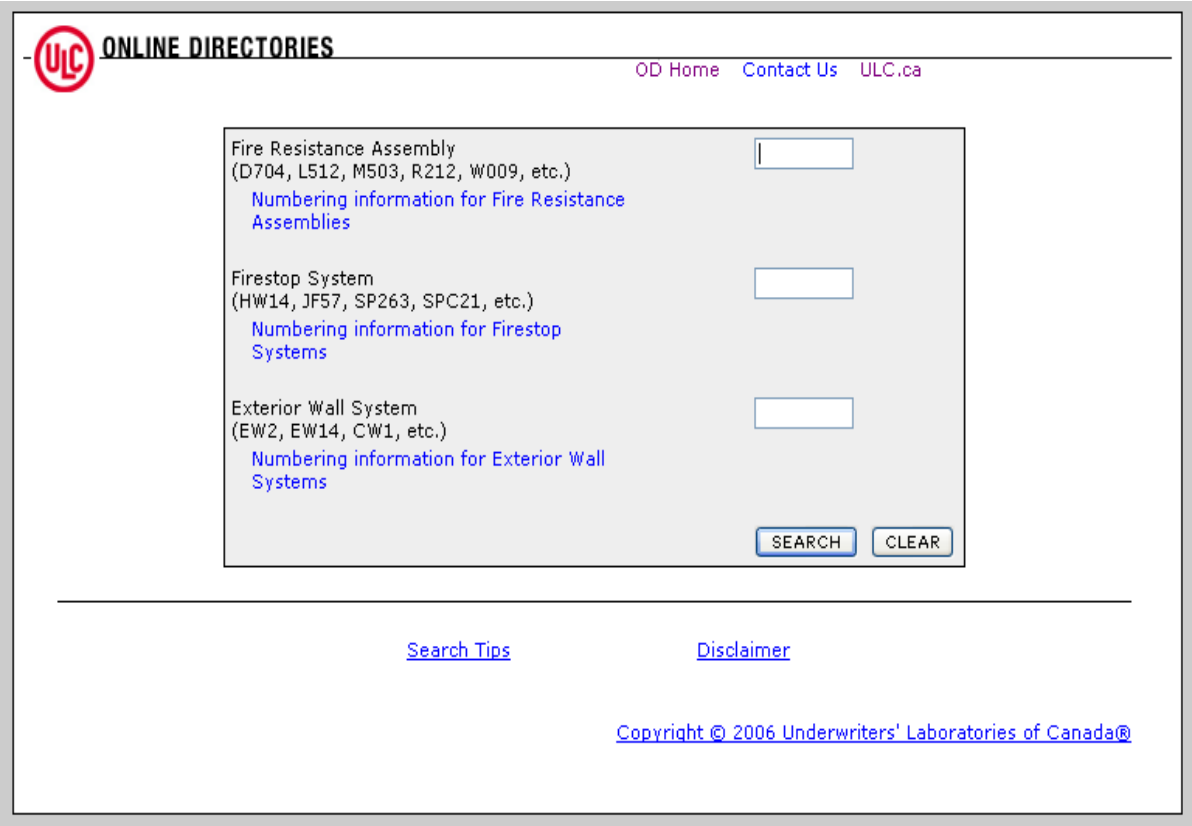
Enter the exact number in the appropriate field. Once you get the Search result, click on the 'Link To File' and you will get the complete ULC design …
Entrez le numéro exact dans le champ approprié. Une fois que vous avez obtenu le résultat de la recherche, cliquez sur « Link to File » (Lier au fichier) et vous obtiendrez le modèle ULC complet …

(Note: Images can be downloaded.)
(Remarque : Les images peuvent être téléchargées.)



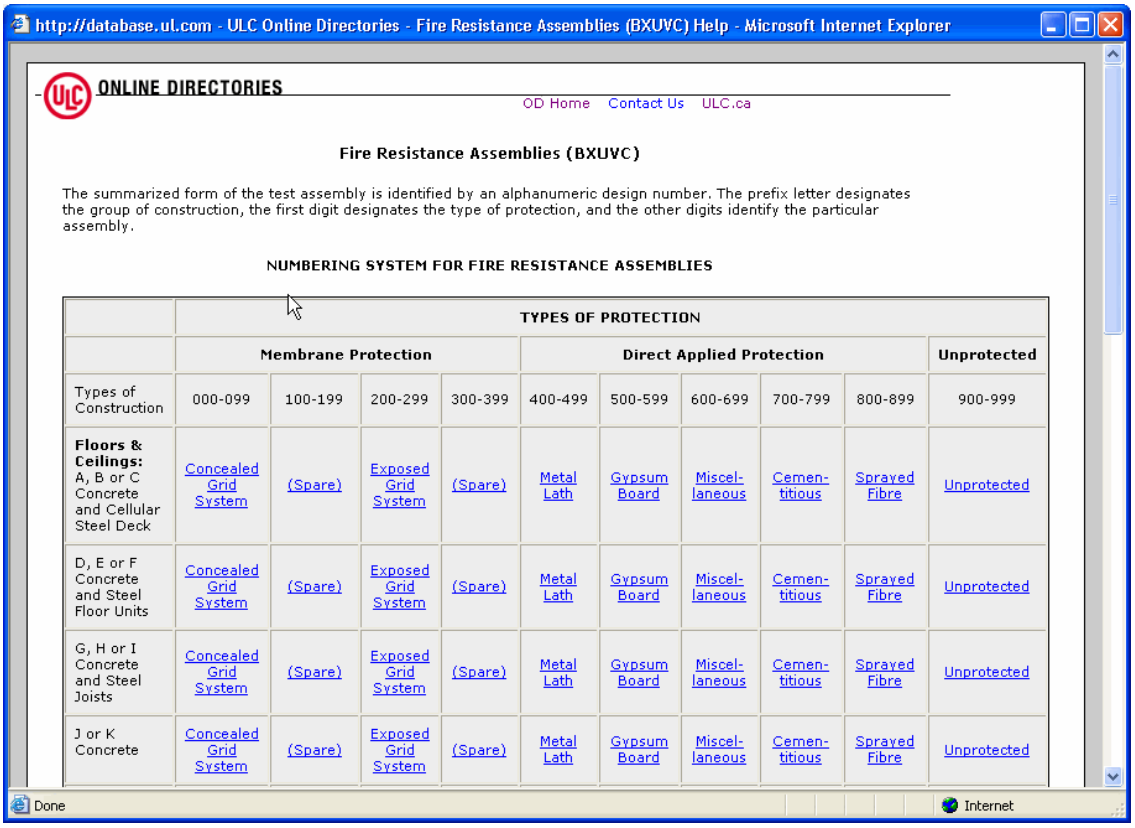
What do you do if you do not know the design number? (Note: This feature is only applicable to assemblies, and not to Firestop and exterior wall systems.)
Que faire lorsque vous ne connaissez pas le numéro de modèle? (Remarque : Cette caractéristique ne s'applique qu'aux assemblages, et non aux éléments coupe-feu ni aux systèmes de murs extérieurs.)

Again, on the main 'Search' page, go to the 'Specific Searches' pull-down menu, open it and click on 'Fire Resistance Assemblies' and you go to …
Encore une fois, sur la page de recherche principale, allez au menu déroulant « Specific Searches » (recherches spécifiques), ouvrez-le et cliquez sur « Fire Resistance Assemblies » (assemblages résistant au feu) et vous allez à...



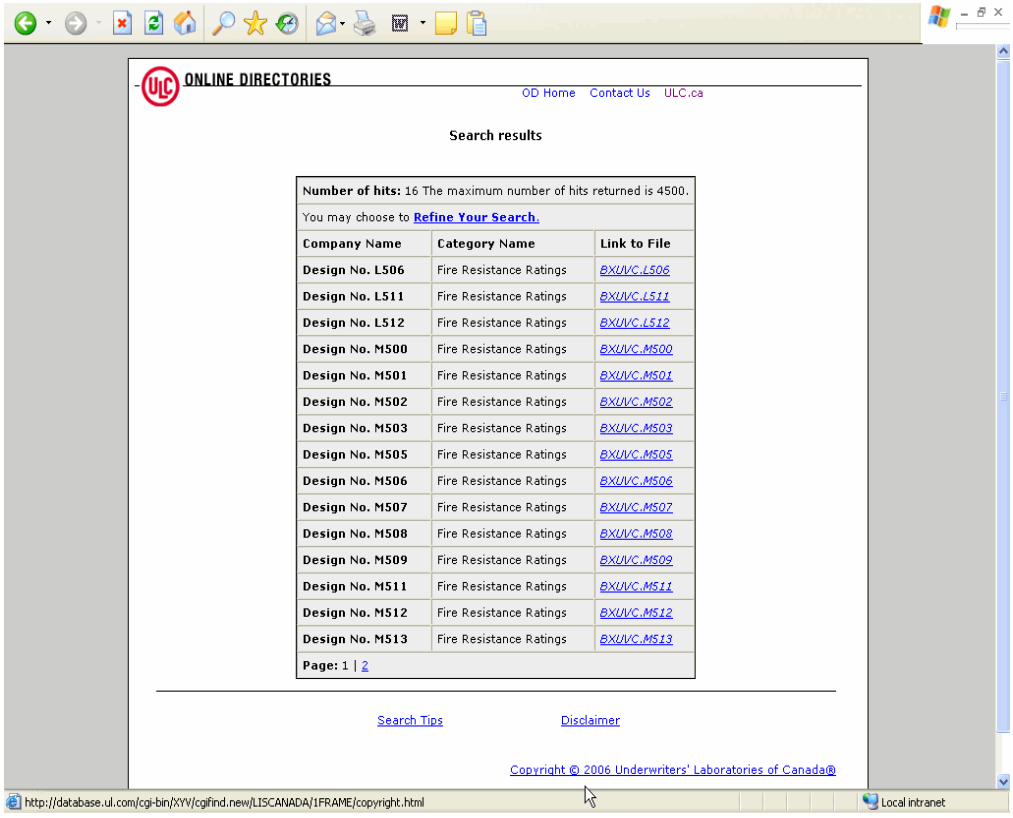
This time, click on the text 'Numbering Information for Fire Resistance Assemblies', (under the 'Fire Resistance Assembly Rating' heading. And you will link to the Fire Resistance Assemblies matrix chart …

Cette fois, cliquez sur le texte « Numbering Information for Fire Resistance Assemblies » (Numérotage de l'information pour les assemblages résistant au feu) (sous l'en-tête « Fire Resistance Assembly Rating » (évaluation des assemblages résistant au feu). Et vous serez en lien avec le graphique matriciel des assemblages résistant au feu ...



Using the scroll bars at the right side and bottom of the page, scroll down the left hand column to find the type of construction needed, then scroll across the top to see the types of protection. Then, click on the appropriate link.
En utilisant les barres de défilement à droite et au bas de la page, faites dérouler la colonne de gauche pour trouver le type de fabrication nécessaire, puis faites défiler horizontalement pour voir les types de protection. Puis, cliquez sur le lien approprié.

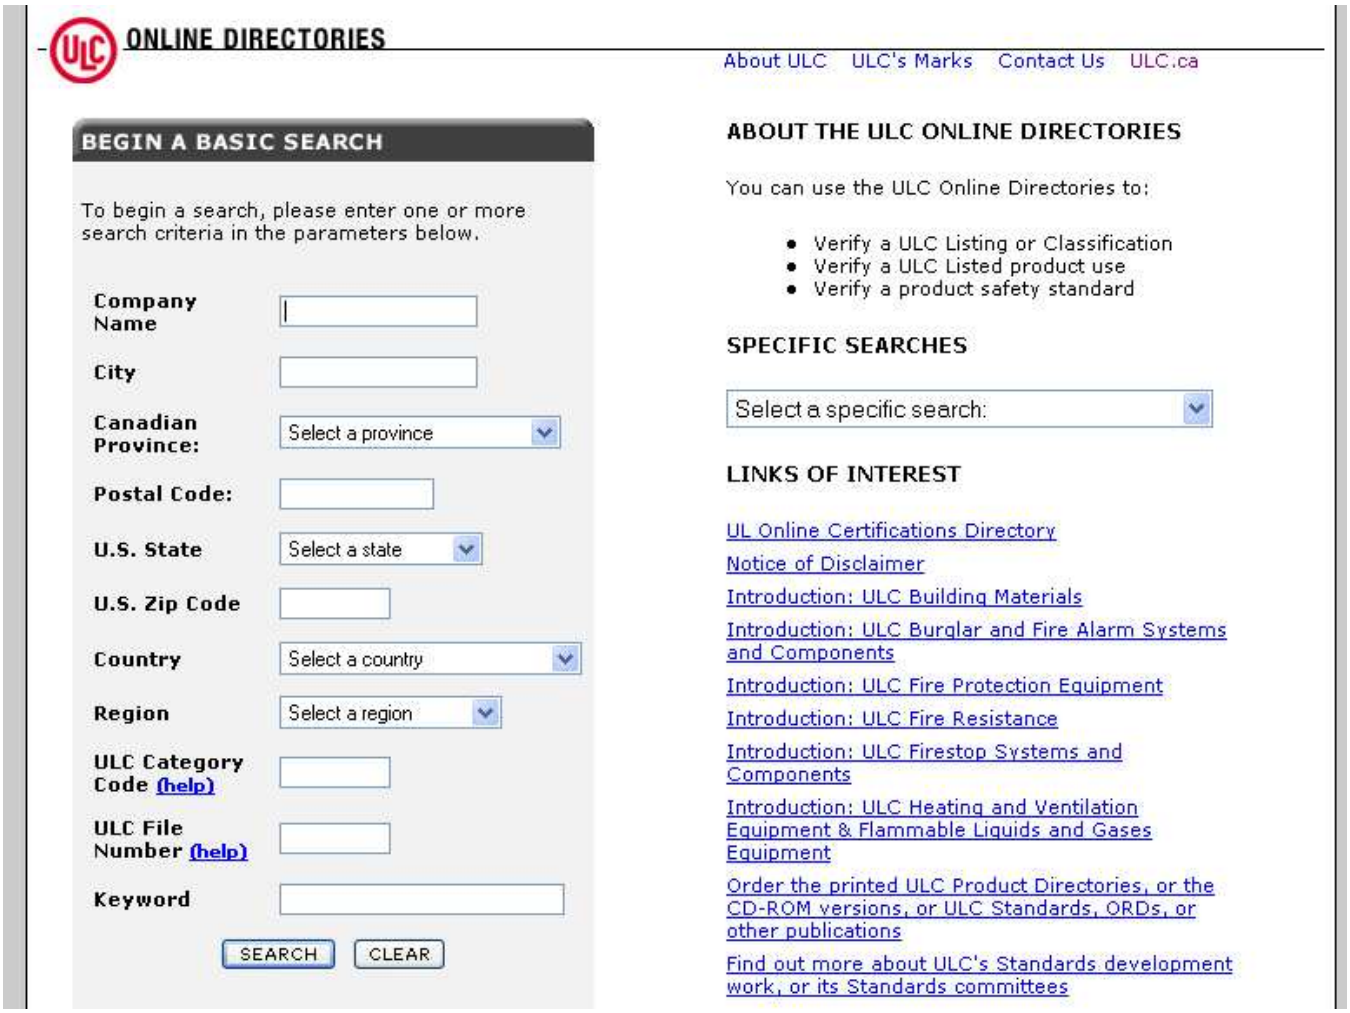
For example, 'Floors & Ceilings', with 'Wood Joists' and 'Gypsum Board' would bring up the following Designs from L500 to M599 …
Par exemple, « Floors & Ceilings » (planchers et plafonds) avec « Wood Joists » (solives de bois) et « Gypsum Board » (panneau de gypse) donneraient les modèles suivants de L500 à M599...



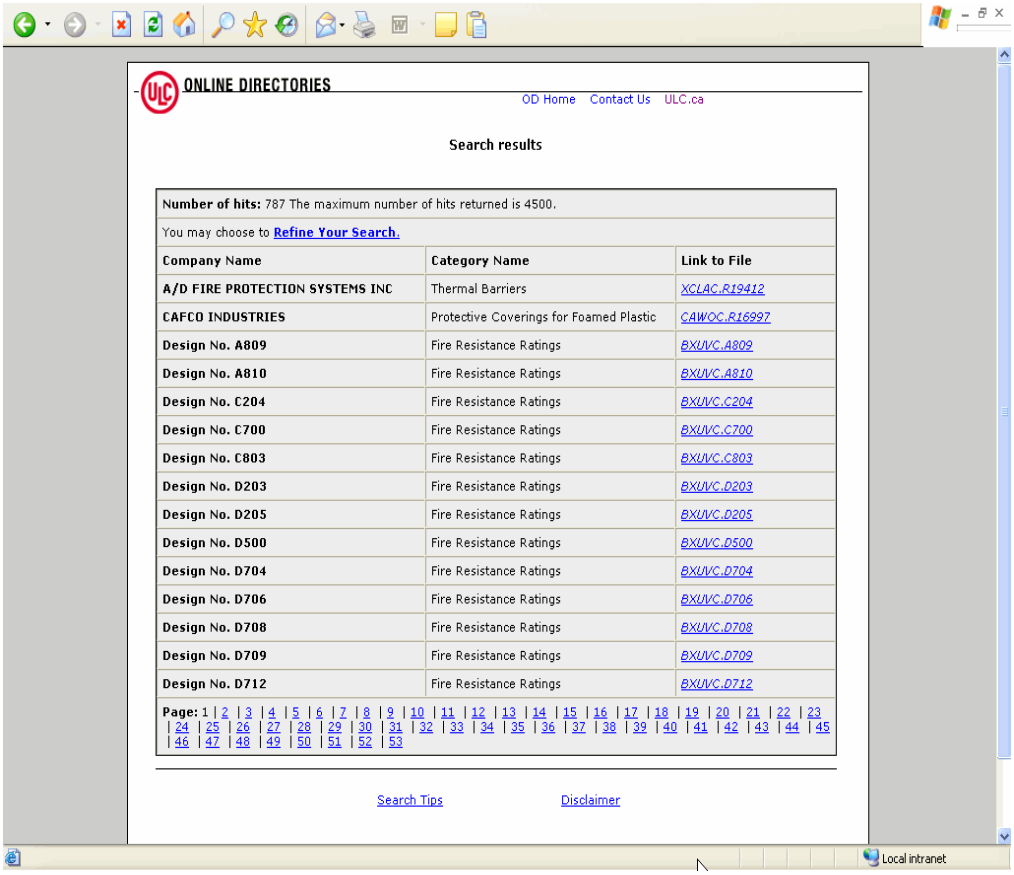
Remember, you can always 'Refine Your Search' if you have a large number of listings. Just click on 'Refine Your Search' at the top of the Table.
N'oubliez pas que vous pouvez toujours « Refine Your Search » (affiner votre recherche) si vous avez un grand nombre d'inscriptions. Cliquez simplement sur « Refine your Search » (affiner votre recherche) en haut du tableau.

7. SEARCH BY KEYWORD
7. RECHERCHE PAR MOT CLÉ

The 'Keyword' search function searches the entire Online Certification Directory database. Using the 'Tips for Effective Searches' provided, enter the available information and click 'Search'
La fonction de recherche « Keyword » (mot clé) effectue des recherches dans toute la base de données du répertoire de certifications en ligne. En utilisant les « Tips for Effective Searches » (conseils pour des recherches efficaces) qui vous sont fournis, entrez l'information disponible et cliquez sur « Search » (recherche).



For example, entering 'Fire Resistance' will give the following 'hits' …
Par exemple, si vous entrez « Fire Resistance » (résistant au feu), vous obtiendrez les appels de fichiers suivants :



Again, when a large number of hits appear, you can refine your search, or you can click on the appropriate link in the 'Link To File' column.
Encore une fois, lorsqu'un grand nombre d'appels de fichiers se produit, vous pouvez affiner votre recherche, ou vous pouvez cliquer sur le lien approprié dans la colonne « Link to File » (Lier au fichier).

NOTE: If a search result yields '0" hits the screen will read "Sorry, No Match Found". When this shows, click on the 'Back' or 'Previous Page' button to return to the main search page. Verify the input information was correct and click 'Search' again.
REMARQUE : Si le résultat d'une recherche ne donne aucun appel de fichier, l'écran affichera « Sorry, No Match Found » (désolé, aucune correspondance n'a été trouvée). Lorsque cela survient, cliquez sur le bouton « Back » (précédent) ou « Previous Page » (page précédente) pour revenir à la page de recherche principale. Vérifiez si l'information entrée était exacte et cliquez de nouveau sur « Search » (recherche).

If the input information was correct, try using alternate wording.
Si l'information entrée était exacte, essayez d'utiliser une autre formulation.

****

Online Certification Directory Quick Guide

Guide de consultation rapide du répertoire de certifications en ligne

Welcome to the UL Online Certifications Directory, a faster way to access UL Certifications. You can use the UL Online Certification Directory to:
Bienvenue au répertoire de certifications UL en ligne, une manière plus rapide d'avoir accès aux certifications UL. Vous pouvez utiliser le répertoire de certifications en ligne UL pour :

- **Verify a UL Certification**
- **Verify a UL Certified product use**
- **Verify a product safety standard**
- vérifier une certification UL;
- vérifier l'utilisation d'un produit certifié UL;
- vérifier la norme de sécurité d'un produit.

Search The UL Online Certification Directory Using:

- **Company name/location**
- **Keyword**
- **Standard Number**
- **UL File Number**
- **UL Category Code/Guide Information**
- **Fire Resistance Assemblies and Systems**
- **Food Safety Equipment**
- **Sprinkler Identification Number**

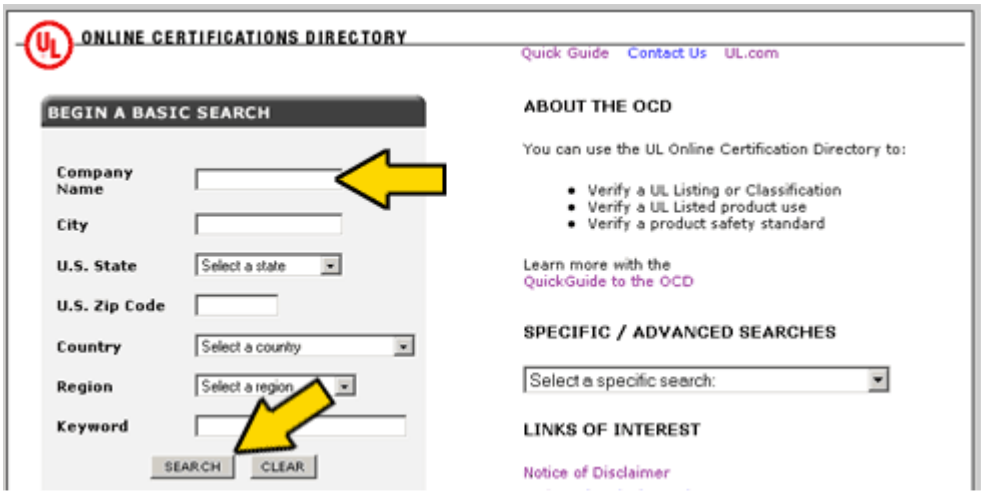
Effectuez une recherche dans le répertoire de certifications UL en ligne en utilisant :

- le nom de l'entreprise ou l'emplacement;
- un mot clé;
- le numéro de la norme;
- le numéro de dossier UL;
- le numéro de code de catégorie UL ou le Guide information;
- les systèmes et assemblages résistant au feu;
- l'équipement de sécurité alimentaire;
- le numéro d'identification de gicleur.

To begin, log on to www.ul.com/database
Pour commencer, ouvrez une session à l'adresse www.ul.com/database.

Search By Company Name:
Recherche par nom d'entreprise :

To begin a search for information regarding a specific company, enter the company name and other available information in the fields provided, and then click "Search".
Pour entreprendre une recherche d'information concernant une entreprise spécifique, entrez le nom de l'entreprise et les autres renseignements disponibles dans les champs fournis à cet effet, puis cliquez sur « Search » (recherche).



Search results often yield multiple "hits," which are listed in alphabetical order by Company Name.
Les résultats de la recherche donnent souvent lieu à de multiples appels de fichiers énumérés par ordre alphabétique de nom d'entreprise.

To reduce the number of "hits," choose "Refine Your Search."
Pour réduire le nombre d'appels de fichiers, choisissez « Refine Your Search » (affiner votre recherche).

To refine, enter additional information in the "Keyword" field and click "Search".
Pour affiner votre recherche, entrez de l'information additionnelle dans le champ « Keyword » (mot clé) et cliquez sur « Search » (recherche).

Refining using multiple pieces of information is possible by using "and", "or" and "not" statements, and wildcards as demonstrated through the "Search Tips" link or the following Tips for Effective Searches:
Il est possible d'affiner une recherche en utilisant des éléments d'information comme « and » (et), « or » (ou) et « not » (sans) ou des caractères de remplacement tels que l'illustre le lien « Search Tips » (conseils de recherche) ou les Conseils pour des recherches efficaces suivants :

TIPS FOR EFFECTIVE SEARCHES
CONSEILS POUR DES RECHERCHES EFFICACES

Select a search method

- **Match all words - type AND between words (i.e., display and nwgq)**
- **Match any word - type OR between words (i.e., hair dryer or blow dryer)**
- **Match phrase(s) - type exact phrase (i.e., washing machine)**

- **Exclude a word - type NOT before word (i.e., roof panel not metal)**
- **Match a partial word or phrase - To replace any characters or words that you may not know, add an asterisk (*) in the middle or at the end of the characters or words in your search.**

  Examples
  - **Company Name - company***
  - **Keyword - submersible***

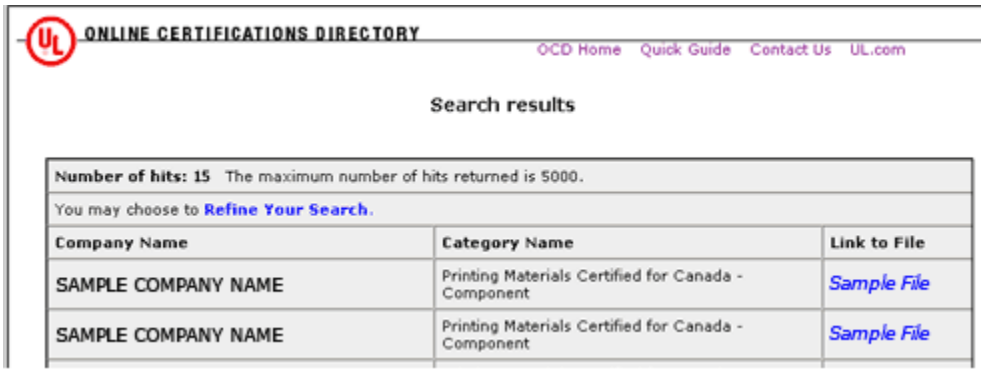
Sélectionnez une méthode de recherche

- Apparier tous les mots : tapez AND (et) entre les mots (p. ex. display and nwgq)
- Apparier n'importe quel mot : tapez OR (ou) entre les mots (p. ex. hair dryer or blow dryer)
- Apparier les syntagmes : tapez le syntagme exact (p. ex. washing machine)
- Exclure un mot : tapez NOT (sans) avant le mot (p. ex. roof panel not metal)
- Apparier un mot ou un syntagme partiel. Pour remplacer des caractères ou des mots que vous ne connaissez pas, ajoutez un astérisque (*) au milieu ou à la fin de la chaîne de caractères ou de mots dans votre recherche.

  Exemples
  - Company Name (Nom d'entreprise) – company* (entreprise)
  - Keyword (Un mot clé) – submersible*

Once the number of "hits" has been reduced, click on the appropriate link in the "Link to File" column to view the company's current Certification(s) or refine further by again clicking "Refine Your Search."

Une fois que le nombre d'appels de fichiers a été réduit, cliquez sur le lien approprié dans la colonne « Link to File » (lier au fichier) pour visualiser les certifications actuelles de l'entreprise ou affinez davantage votre recherche en cliquant de nouveau sur « Refine Your Search » (affiner votre recherche).



ONLINE CERTIFICATIONS DIRECTORY

OCD Home Quick Guide Contact Us UL.com

Search results

Number of hits: 15 The maximum number of hits returned is 5000.

You may choose to **Refine Your Search**.

Company Name	Category Name	Link to File
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	*Sample File*
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	*Sample File*

The electronic Certifications contain the same, if not more, UL Certification information than is available in the printed directory.

Les certifications en ligne contiennent autant, sinon plus, d'informations quant aux certifications UL que le répertoire imprimé.

To view the description/specifications for the category, click the "See General Information for…" link located above the company name.
Pour voir une description et les spécifications de la catégorie, cliquez sur le lien « See General Information for...» (voir les renseignements généraux sur...) au-dessus du nom de l'entreprise.

Note: wording may read "Guide Information for …" in place of General Information.
Remarque : le libellé peut se lire « Guide Information for » (Guide information pour) au lieu de « General Information » (renseignements généraux).

UL Guide Information outlines the scope and limitations of a product category, the Standard for Safety used to evaluate products, and the applicable UL Mark by which the products can be identified in the field. View the next level of Guide Information by again clicking the "See General Information for…" link.
Le Guide information UL précise la portée et les limites d'une catégorie de produits, les normes de sécurité utilisées pour évaluer les produits, et la marque UL applicable par laquelle le produit peut être identifié sur place. Visualisez le prochain niveau du Guide information en cliquant de nouveau sur le lien « See General Information for... » (voir Renseignements généraux pour...).

Search By Keyword:
Recherche par mot clé :

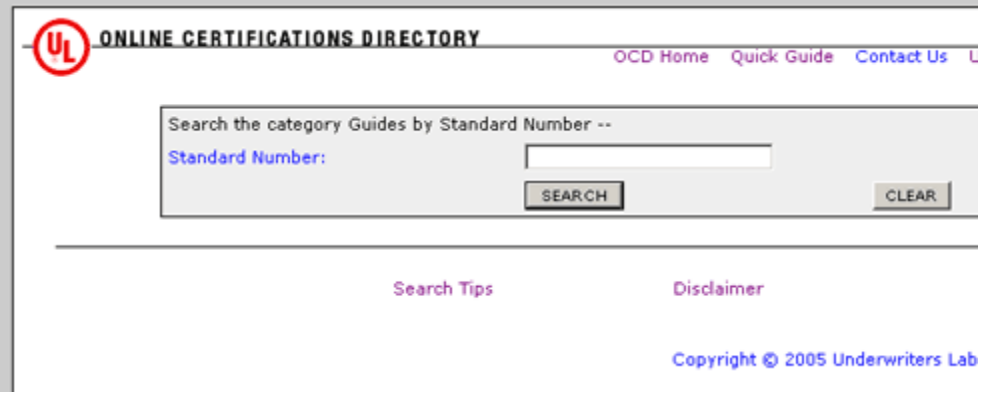
This "Keyword" search function will search the entire Online Certification Directory database. Using the "Search Tips" provided, enter the available information and click "Search".
Cette fonction de recherche par « Keyword » (mot clé) effectuera des recherches dans toute la base de données du répertoire de certifications en ligne. En utilisant les « Search Tips » (conseils de recherche) fournis, entrez l'information disponible et cliquez sur « Search » (recherche).

Refine your search or click the appropriate link in the "Link to File" column.
Affinez votre recherche ou cliquez sur le lien approprié de la colonne « Link to File » (lier au fichier).

Search by Standard Number:
Recherche par « Standard Number »(numéro de norme) :

This option searches all UL Guide Information for the requested standard number (UL and other). Your results, a list of product categories whose products were evaluated to or whose Guide Information references the standard.
Cette option effectue une recherche du numéro de norme demandé (UL et autres) dans tout le Guide information UL. Vos résultats, une liste de catégories de produits dont les produits ont été évalués ou pour lesquels le Guide information fait référence à la norme.

To begin search, enter the exact standard (ASTM E84, UL 300, ANSI/NSF 61, etc.) number in the available "Standard Number" field and click "Search."
Pour commencer la recherche, entrez le numéro exact de la norme (ASTM E84, UL 300, ANSI/NSF 61, etc.) dans le champ « Standard Number » (numéro de norme) disponible et cliquez sur « Search » (recherche).



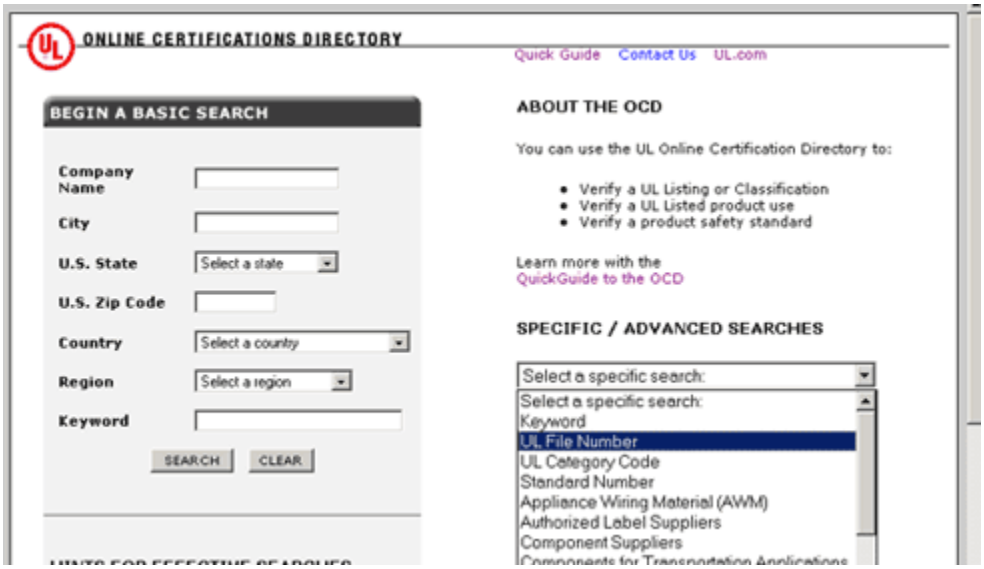
This search results in the UL Guide Information for one or more categories. Choose the correct category by clicking the "GuideInfo" link in the "Link to File" column.
Les résultats de cette recherche vous donneront une ou plusieurs catégories dans le Guide information UL. Choisissez la catégorie appropriée en cliquant sur le lien « GuideInfo » de la colonne « Link to File » (lier au fichier).

Note: If your search does not result in any "Hits", try it again using only the number (i.e. E84, 300, 61, etc.).
Remarque : Si votre recherche ne donne aucun appel de fichiers, essayez de nouveau en n'utilisant que le numéro (p. ex. E84, 300, 61, etc.).

Search By UL File Number:
Recherche par« UL File Number » (numéro de fichier UL) :

A "File Number" is an alphanumeric designation (e.g. E12346, MH3456, R4600, etc.) assigned by UL and associated with a specified company and product category.
Un « File Number » (numéro de fichier) est une désignation alphanumérique (p. ex. E12346, MH3456, R4600, etc.) assignée par UL et liée à une entreprise et à une catégorie de produit spécifiques.

To search by "File Number", first use the drop-down menu on the main page.
Pour effectuer une recherche par « File Number » (numéro de fichier), utilisez d'abord le menu déroulant de la page principale.



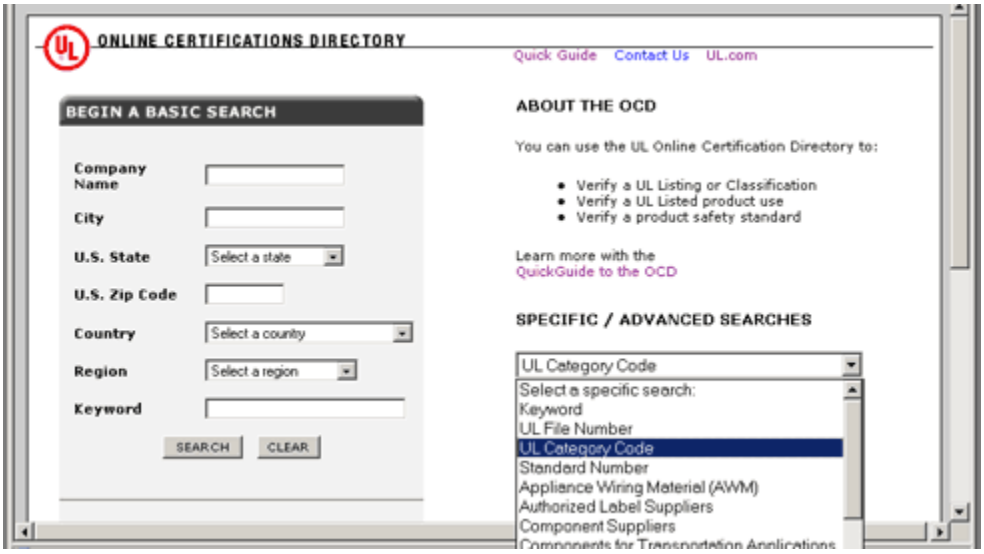
Next, enter the file number and click "Search".
Tapez ensuite le numéro de fichier et cliquez sur « Search » (recherche).

As in the previous example, click the appropriate File Number link in the "Link to File" column.
Comme dans l'exemple précédent, cliquez sur le numéro de fichier approprié dans la colonne « Link to File » (Lier au fichier).

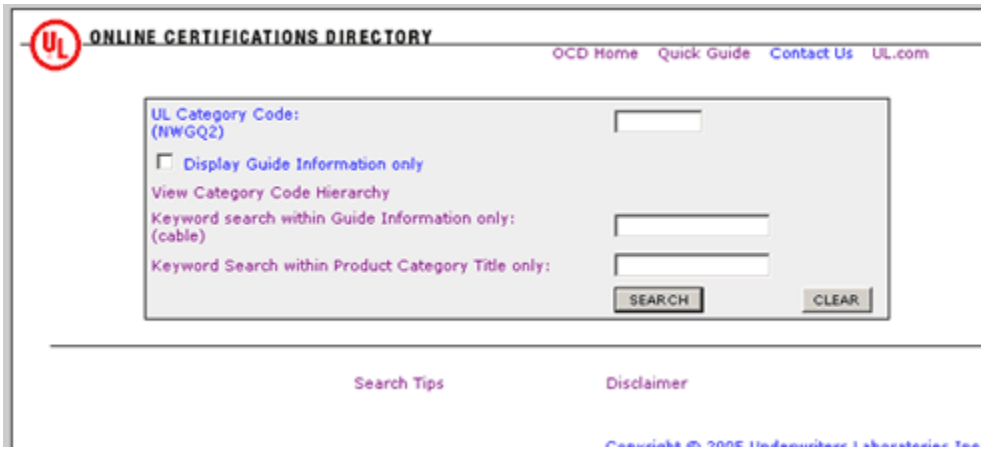
Search by UL Category Code:
Recherche par « UL Category Code » (code de catégorie UL) :

“Category Code” allows for four search options. They are 1) UL Category Code, 2) Keyword search within Guide Information only, 3) Keyword Search within Product Category Title only, and 4) Category Code Hierarchy view.
Le « Category Code » (code de catégorie) offre quatre options de recherche. Ce sont 1) « UL Category Code » (le code de catégorie UL), 2) la recherche par « Keyword » (mot clé) dans le Guide information seulement, 3) la recherche par « Keyword » (mot clé) dans « Product Category Title » (titre de catégorie de produit) seulement, et 4) la vue de la « Category Code Hierarchy » (hiérarchie du code de catégorie).

A UL Category Code is an alphanumeric designation (GBTV, QMFZ2) assigned by UL and associated with a specific product category. To search by UL Category Code, use the drop-down menu on the main page.
Un code de catégorie UL est une désignation alphanumérique (GBTV, QMFZ2) assignée par UL et liée à une catégorie de produit spécifique. Pour effectuer une recherche par « UL Category Code » (code de catégorie UL), utilisez d'abord le menu déroulant de la page principale.



To search for keywords in either the Guide Information or product category title, enter the information in the respective “Keyword search within Guide Information Only” “or “Keyword search within Product Category Title only” field and click “Search.” Note: This “keyword” search function searches only the UL Guide Information. To search for keyword(s) throughout the entire database, use the Keyword option described in full below.
Pour effectuer une recherche par mots clés dans le Guide information ou dans le titre de catégorie de produit, entrez l'information dans le champ respectif « Keyword search within Guide Information Only » (recherche par mot-clé dans le Guide information seulement) ou « Keyword search within Product Category Title only » (recherche de mot clé dans le titre de catégorie de produit seulement) et cliquez sur « Search » (recherche). **Remarque :** Cette fonction de recherche par mot clé n'effectue les recherches que dans le Guide information UL. Pour effectuer une recherche par mots clés dans toute la base de données, utilisez l'option « Keyword » (mot clé) dont la description détaillée est donnée ci-après.



To search for the UL Guide Information for a specific category code, enter the category code in the available "Category Code" field, click the "Display Guide Information Only" box and then click "Search".
Pour effectuer une recherche dans le Guide information UL pour un code de catégorie spécifique, entrez le code de catégorie dans le champ disponible « Category Code », cliquez sur la case « Display Guide Information Only » (afficher le Guide information seulement), puis cliquez sur « Search » (recherche).

Note: Omitting the "Display Guide Information Only" box will result in the UL Guide Information AND all current Certifications for a given category code.
Remarque : Le fait d'omettre la case « Display Guide Information Only » (afficher le Guide information seulement) entraînera une recherche dans le Guide information UL ET dans toutes les certifications actuelles pour un code de catégorie donné.

This search results in the UL Guide Information for one or more categories. Choose the correct category by clicking the "GuideInfo" link in the "Link to File" column.
Les résultats de cette recherche vous donneront une ou plusieurs catégories dans le Guide information UL. Choisissez la catégorie appropriée en cliquant sur le lien « GuideInfo » de la colonne « Link to File » (lier au fichier).

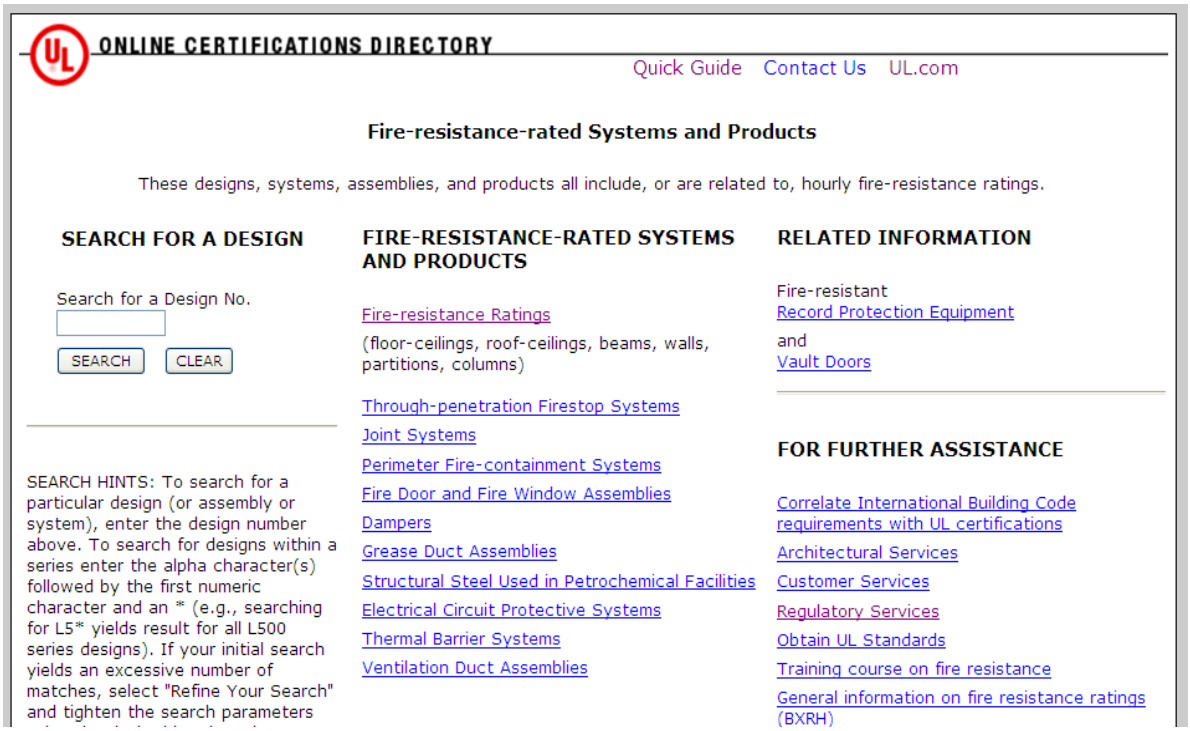
To view all current UL Certifications for a Category Code from within the Guide Information, click "View Listings".
Pour visualiser toutes les certifications UL actuelles pour un code de catégorie du Guide information, cliquez sur « View Listings » (voir inscriptions).

Click the appropriate link in the "Link To File" to view the individual UL Certifications.
Cliquez sur le lien approprié « Link to File » (lier au fichier) pour visualiser les certifications UL individuelles.

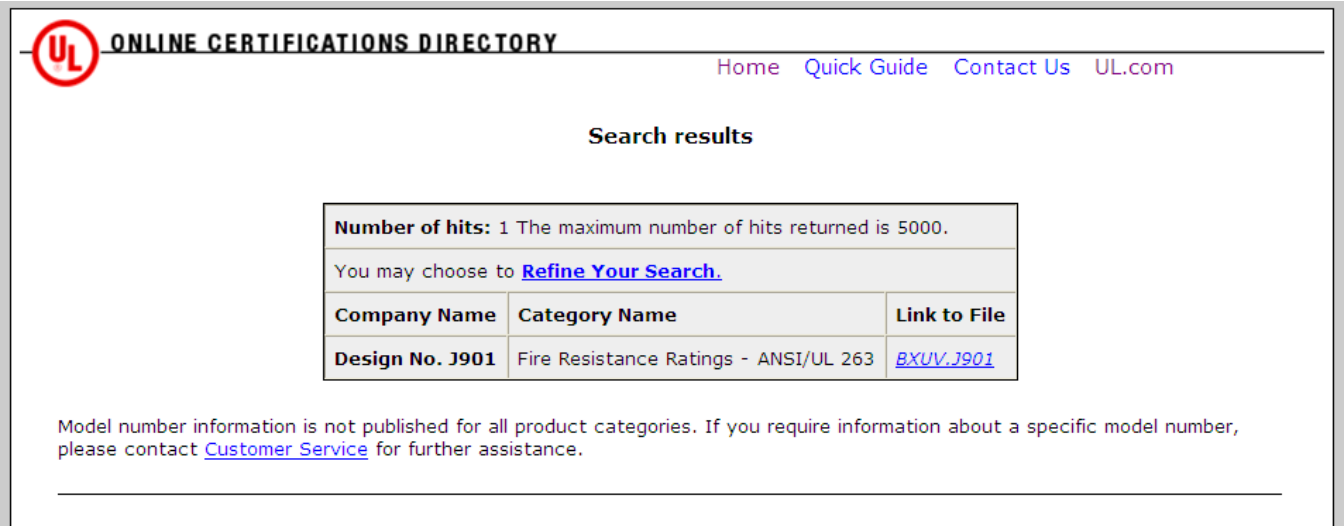
Search Fire Resistance:
Recherche de résistance au feu :

A search for fire resistive assemblies or systems can be performed two ways, depending on the information available.
Une recherche sur les assemblages et les systèmes résistant au feu peut être effectuée de deux façons, selon l'information disponible.

Enter the exact UL Design, System, Construction or Assembly number in the appropriate field and click "Search."
Entrez le numéro UL exact de modèle, de système, de fabrication ou d'assemblage dans le champ approprié et cliquez sur « Search » (recherche).

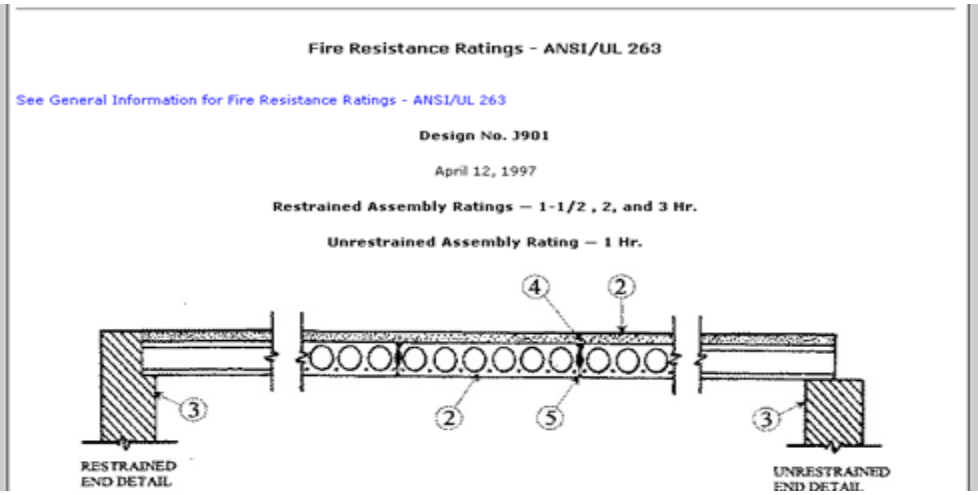


Click the appropriate link in the “Link to File” column.
Cliquez sur le lien approprié dans la colonne « Link to File » (lier au fichier).



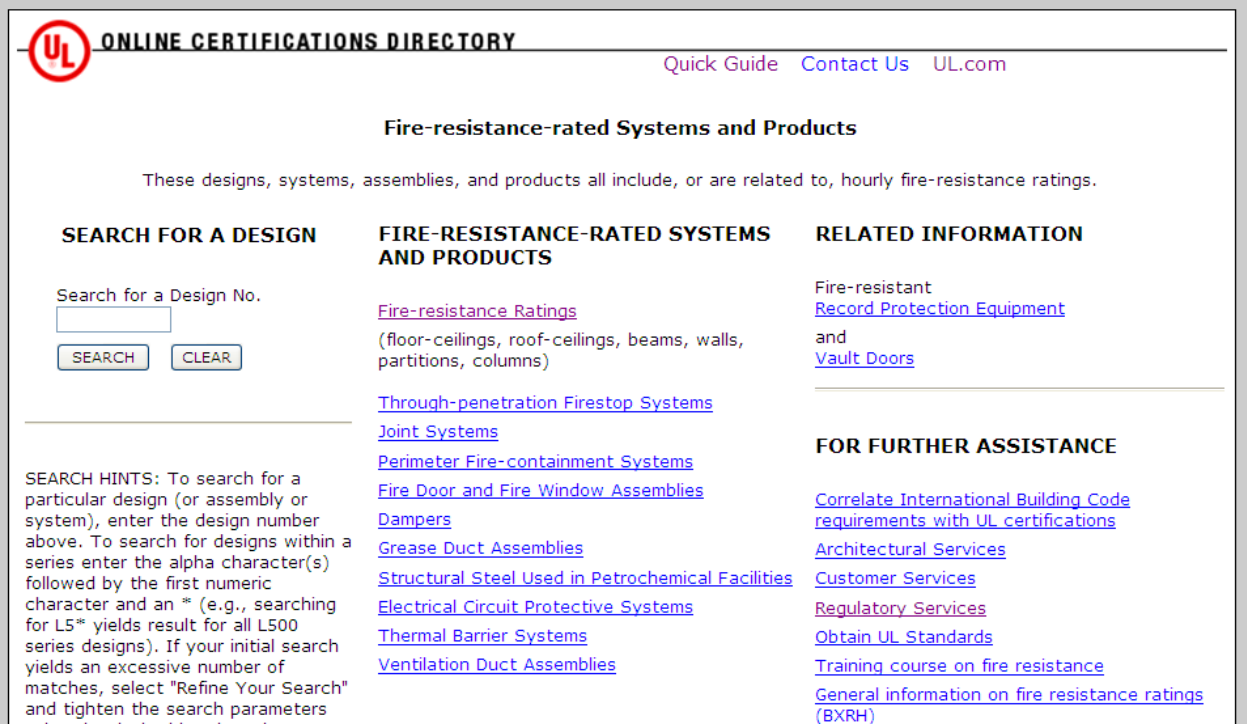
The result is a complete UL Design, including illustration and specifications.
Vous aurez comme résultat le modèle UL complet, y compris l'illustration et les spécifications.

Note: Images can be downloaded for use in architectural drawings.
Remarque : Les images peuvent être téléchargées pour être utilisées dans des dessins d'architecture.

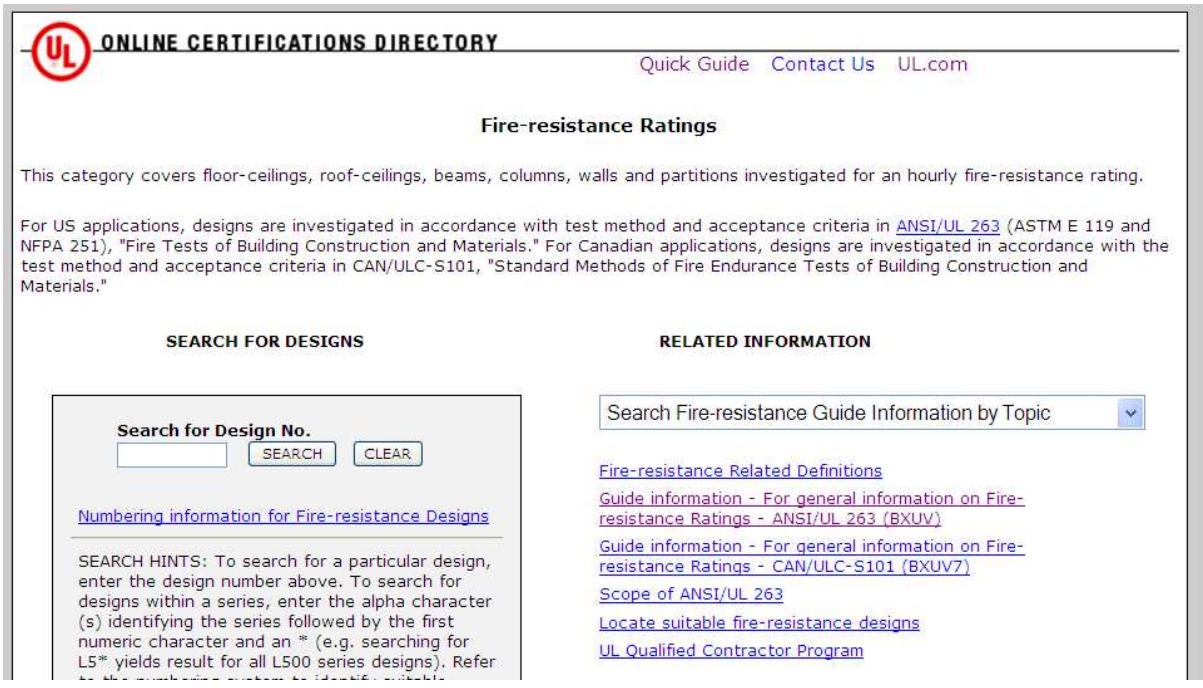


But what do you do when you don't know the design or system number?
Mais que faire lorsqu'on ne connaît pas le numéro de modèle ni le numéro de système?

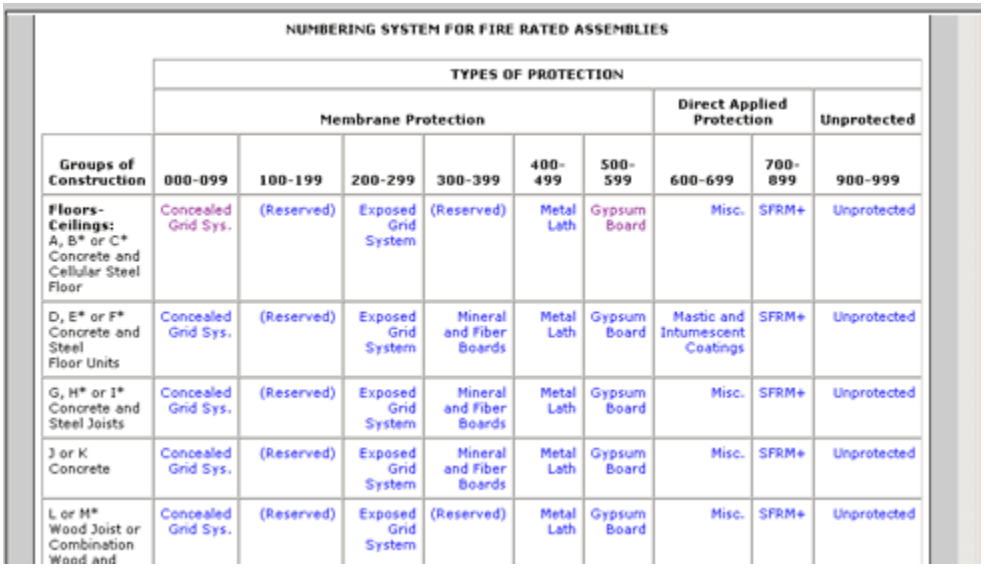
Click on the Fire Resistance Ratings link
Cliquez sur le lien « Fire Resistance Ratings » (Degré de résistance au feu)



Click the blue "Numbering System for Fire Rated Assemblies" link to view the interactive Fire Resistive Design Matrix.
Cliquez sur le lien en bleu « Numbering System for Fire Rated Assemblies » (numérotage de système pour les assemblages cotés pour leur résistance au feu) pour afficher la Matrice de conception résistante au feu interactive.



Scroll down the left-hand column to the type of construction needed; then, scroll across to view the types of membrane protection. Click the appropriate link. For example, Floors & Ceilings assemblies with concrete and cellular steel floor (construction) + Exposed Grid System (protection) = all current Designs between A200-A299.
Faites défiler la colonne gauche jusqu'au type de fabrication nécessaire; puis, faites défiler horizontalement pour voir les types de protection de membrane. Cliquez sur le lien approprié. Par exemple, « Floors & Ceilings » (planchers et plafonds) avec « Concrete and cellular steel floor » (plancher en béton et en acier cellulaire) (fabrication) + « Exposed Grid System » (système de grille apparent) (protection) = tous les modèles actuels entre A200-A299.



NUMBERING SYSTEM FOR FIRE RATED ASSEMBLIES

	TYPES OF PROTECTION								
	Membrane Protection						Direct Applied Protection		Unprotected
Groups of Construction	000-099	100-199	200-299	300-399	400-499	500-599	600-699	700-899	900-999
Floors-Ceilings: A, B* or C* Concrete and Cellular Steel Floor	Concealed Grid Sys.	(Reserved)	Exposed Grid System	(Reserved)	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected
D, E* or F* Concrete and Steel Floor Units	Concealed Grid Sys.	(Reserved)	Exposed Grid System	Mineral and Fiber Boards	Metal Lath	Gypsum Board	Mastic and Intumescent Coatings	SFRM+	Unprotected
G, H* or I* Concrete and Steel Joists	Concealed Grid Sys.	(Reserved)	Exposed Grid System	Mineral and Fiber Boards	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected
J or K Concrete	Concealed Grid Sys.	(Reserved)	Exposed Grid System	Mineral and Fiber Boards	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected
L or M* Wood Joist or Combination Wood and	Concealed Grid Sys.	(Reserved)	Exposed Grid System	(Reserved)	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected

You may choose to **Refine Your Search.**

Company Name	Category Name	Link to File
Design No. A202	Fire Resistance Ratings - ANSI/UL 263	*BXUV.A202*
Design No. A210	Fire Resistance Ratings - ANSI/UL 263	*BXUV.A210*
Design No. A211	Fire Resistance Ratings - ANSI/UL 263	*BXUV.A211*
Design No. A212	Fire Resistance Ratings - ANSI/UL 263	*BXUV.A212*

Model number information is not published for all product categories. If you require information about a specific model number, please contact Customer Service for further assistance.

Search Tips Disclaimer

Click “Refine Your Search” to further narrow your results. Refine your results using hourly ratings (drop down menu) and/or a key word or phrase, such as a fixture, batts and blankets, or even a specific manufacturer’s name.
Cliquez sur « Refine Your Search » (affiner votre recherche) pour concentrer davantage vos résultats. Affinez vos résultats en utilisant les taux horaires (du menu déroulant), un mot clé ou un syntagme, comme accessoire fixe, coussins et matelas isolants, ou même le nom d'un fabricant en particulier.

Note: Remember, "Keyword" searches benefit from using "and", "or" and "not" statements, and wildcards.
Remarque : Ne pas oublier que dans les recherches par mot clé, il y aurait avantage à utiliser les mots « and » (et), « or » (ou) et « not » (sans), de même que les caractères de remplacement.

Troubleshooting:
Diagnostic de pannes :

If the search results yield 0 hits the screen will read "Sorry, No Match Found." Use your browser's "Back" button to return to the search page. Verify the input information, correct and click "Search".
Si le résultat de la recherche ne donne aucun appel de fichiers, l'écran affichera « Sorry, No Match Found » (Désolé, aucune correspondance n'a été trouvée). Utilisez le bouton « Back » (précédent) de votre navigateur pour retourner à la page de recherche. Vérifiez l'information entrée, corrigez et cliquez sur « Search » (recherche).

If the input information was correct, try using alternate wording (e.g. sheetrock vs. wallboard).
Si l'information entrée était exacte, essayez d'utiliser une autre formulation (p. ex. panneau de placoplâtre par opposition à panneau mural).
