STANDARDS BULLETIN 2009-19

First Edition CAN/ULC-62237-09

LIVE WORKING – INSULATING HOSES WITH FITTINGS FOR USE WITH HYDRALIC TOOLS AND EQUIPMENT

ULC is pleased to announce the publication of the First Edition of CAN/ULC-62237-09 (CEI/IEC 62237:2003, MOD), Live Working – Insulating Hoses with Fittings for Use with Hydraulic Tools and Equipment. This Standard has been approved by the ULC Committee on Live Working, and has been published under the date of May 2009.

This is an adoption, with Canadian deviations, of the International Electrotechnical Commission Standard CEI/IEC 62237:2003.

This National Standard of Canada is applicable to mobile insulating hoses with fittings used with hydraulic tools and equipment for live working at nominal voltages exceeding 1 kV r.m.s. at power frequency.

Insulating hoses with fittings are used to provide a connection between the hydraulic tool and the pump, which are at different potentials. They are not considered as a fixed component of a live working device (e.g. aerial device). They can be connected and disconnected under negligible pressure and can be directly handled by the user.

If you require any additional information, please contact Keith Jansa at (613) 755-2729 ext. 6227 or at email address: Keith.Jansa@ca.ul.com

This standard can be ordered for \$168.00 CAN (Hardcopy) from the ULC website (www.ulc.ca) online store.

Yours truly,
