July 18, 2008

CERTIFICATION BULLETIN NO. 2008-14

To: ULC Listees of Automobile Fire Fighting Apparatus; CCN: AZYFC
Field Service Representatives

Subject: Second Edition of the Standard for Automobile Fire Fighting Apparatus,
CAN/ULC-S515-04

The inspection and performance testing of fire fighting apparatus is conducted in accordance with the latest edition of the Standard for Automobile Fire Fighting Apparatus, CAN/ULC-S515-04.

The current ULC label, attached to fire apparatus upon completion of the performance testing and apparatus examination, has been modified to include reference to this edition of the Standard. Specifically, the additional wording is "Standard – CAN/ULC-S515-04" inserted under the serial number of the label.

In order to formally standardize the examination and performance testing of fire fighting apparatus, Underwriters' Laboratories of Canada is introducing Standardized Appendix Pages (SAP) for this category. These will replace the current Appendix pages in each Listee's Follow-Up Service Procedure. No change in the current examination and performance testing of fire fighting apparatus will occur in introducing the SAP. Accordingly, all field inspections conducted after December 31, 2008 will be in accordance with the requirements of the SAP.
