STANDARDS BULLETIN 2009-27

Second Edition CAN/ULC-61328-09

LIVE WORKING – GUIDELINES FOR THE INSTALLATION OF TRANSMISSION LINE CONDUCTORS AND EARTHWIRES – STRINGING EQUIPMENT AND ACCESSORY ITEMS

ULC is pleased to announce the publication of the Second Edition of CAN/ULC-61328-09 (CEI/IEC 61328:2003, MOD), Live Working – Guidelines for the Installation of Transmission Line Conductors and Earthwires – Stringing Equipment and Accessory Items. This Standard has been approved by the ULC Committee on Live Working, and has been published under the date of July 2009.

This is an adoption, with Canadian deviations, of the International Electrotechnical Commission Standard CEI/IEC 61328:2003.

This National Standard of Canada provides recommendations for the selection and testing where necessary of conductor stringing equipment and accessory items used for the installation of overhead conductors and overhead earthwires.

Procedures are recommended for proper earthing in order to protect equipment, components and personnel from the induced or fault currents, which can result in some circumstances.

The equipment under consideration in this National Standard of Canada is used for transmission voltages, which are usually considered to be 100 kV and above, but may be as low as 60 kV. Many of the requirements and tests stated apply also to equipment used in distribution systems with less than 100 kV.

If you require any additional information, please contact Keith Jansa at (613) 755-2729 ext. 6227 or at email address: Keith.Jansa@ca.ul.com

This standard can be ordered for \$251.00 CAN (Hardcopy) from the ULC website (www.ulc.ca) online store.

Yours truly,

UNDERWRITERS LABORATORIES OF CANADA
