STANDARDS BULLETIN 2009-29

AMENDMENT TO EDITION OF A STANDARD

Third Edition ULC-S620-07

STANDARD FOR HOSE NOZZLE VALVES FOR FLAMMABLE AND COMBUSTIBLE LIQUIDS

ULC is pleased to announce the release of the Amendment to the Third Edition of CAN/ULC-S620-07, Standard for Hose Nozzle Valves for Flammable and Combustible Liquids. This Amendment has been approved by the ULC Committee on Fittings for Flammable and Combustible Liquids, and has been published under the date of July 2009.

This National Standard of Canada covers minimum requirements for hose nozzle valves that are intended to be used to control the flow of flammable and combustible liquids, which are handled at temperature within the range of -40 °C to +50 °C at a working pressure of not less than 350 kPa. The hose nozzle valves are of the types used in the assembly of motor fuel dispensing equipment. They are of the automatic or manually operated type, to the exclusion of types operated wholly or partially by electricity.

Amendment 1 contains revisions to correct the requirements in Clause 3.4.2, which speaks of the materials for fluid confining parts use in a hose nozzle valve. This Standard is now being re-published to include Amendment 1 of the Third Edition of CAN/ULC-S620, and all users are advised to obtain this complete version.

Should you require any additional information, please contact Tess Hofileña at (416) 757-5250 ext. 61212 or at email address: Theresa.Hofilena@ca.ul.com.

This Amended Third Edition of the standard can be ordered for CAN \$210.00 from the ULC website (www.ulc.ca) ULC online store.

Yours truly,
