Fire pump power transfer switches are automatic transfer switches that transfer a fire pump motor load from a normal supply to an alternate (on-site generated or second utility) supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished. No other loads, other than the fire pump motor, are intended to be connected to the fire pump power transfer switch.

If not marked to indicate that the alternate source is a second utility, the alternate source is considered to be an on-site generated supply. Such transfer switches include frequency sensing and sensing of at least one phase of the alternate (generator-set) source to enable transfer to the alternate source. Such transfer switches have a switching contact(s) to initiate the starting of an engine generator set. Such transfer switches may include a disconnect switch or an isolating switch for the alternate source (generator set). If it does, this transfer switch is equipped with pilot contacts for supervision and pilot contacts to override the engine start signal.

Additional sensing devices that may initiate or delay transfer have been investigated in accordance with the manufacturer’s marked operating values.

The enclosure of an enclosed transfer switch has been investigated for its ability to protect against water dripping on the enclosure from the downward vertical.

Transfer switches for use in fire pump circuits are not suitable for use as service equipment.

Transfer switches are required to be designed so that the load cannot remain simultaneously disconnected for both the normal and alternative sources when either or both sources are available.

These transfer switches are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

These transfer switches may be marked to indicate that protection is intended to be provided by fuses or by an inverse time circuit breaker. If there is no marking of a protective device type, transfer switches are considered suitably protected by either type of device. Transfer switches may be marked with a maximum rating of protective device. If not marked with a rating, the transfer switches are considered suitably protected by a protective device of the maximum rating required by the CEC.

Transfer switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which includes scheduled test operations switching full load.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Fire Pump Power Transfer Switch

**RELATED PRODUCTS**

Fire pump controller assemblies with a transfer switch are covered under Pump Controllers, Fire Certified for Canada (QYZS7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 178, “Automatic Transfer Switches.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark is applied to the switch panel on transfer switches investigated without regard to the enclosure in which they are mounted. When the Certification Mark is applied to the enclosure of an enclosed transfer switch, it indicates the certification of the complete enclosed assembly.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Pump Power Transfer Switch."

The Listing Mark is applied to the switch panel on transfer switches investigated without regard to the enclosure in which they are mounted. When the Listing Mark is applied to the enclosure of an enclosed transfer switch, it indicates the Listing of the complete enclosed assembly.

## TRANSFORMERS CERTIFIED FOR CANADA (XNWX7)

### TRANSFORMERS, CLASS 2 CERTIFIED FOR CANADA (XOKV7)

#### GENERAL

This category covers transformers suitable for use with Class 2 remote-control, low-energy power and signal circuits not exceeding 30 V rms, including bell or buzzer circuits, and rated 100 VA or less, and intended for use in Class 2 remote control and signal circuits in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

A Class 2 transformer that is energy-limiting has such winding impedance as to limit the output current.

A Class 2 transformer that is non-energy-limiting is equipped with a fuse or other overcurrent protective device that limits the output current.

#### PRODUCT MARKINGS

Class 2 transformers are marked, where readily visible after installation, with the catalog number or other identification and the electrical rating as follows:

- The primary voltage
- Frequency (if other than 60 Hz)
- Secondary rating in amperes or volt amperes
- "Class 2," except where the terminals are marked "BELL" or "CHIME"
- The primary terminals or leads are marked "LINE" or "PRIMARY" or equivalent
- The secondary terminals or leads are marked "LOAD" or "SECONDARY" or equivalent, unless marked "BELL" or "CHIME"

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," or intended for use in Canada, are marked "ISC-x-CAN," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

"CAN" represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0 and ANSI/UL 1446, "Systems of Insulating Materials – General," or intended for use in Canada and the United States, are marked "ISC-x," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

For a required overcurrent protector, the following statement is used: "CLASS 2 WHEN USED WITH PROTECTOR, MFG \_\_\_\_\_, CAT. NO. \_\_\_\_\_"

The month and year of manufacture, at a minimum, is marked on the transformer in a location accessible without the use of tools. Date coding, serial numbers or the equivalent may be used.

Unless marked "BELL" or "CHIME," transformers intended for intermittent duty are marked with the "ON" and "OFF" time.

A transformer with multiple secondary windings having an output exceeding 30 V rms is marked, where readily visible after installation, with the word "WARNING," and the following or equivalent: "Risk of electric shock or fire. Do not interconnect secondary windings."

Transformers intended for mounting in a conduit knockout and that have no means for maintaining a bonding path between the transformer and the equipment grounding conductor when the transformer is installed in a nonmetallic box are marked "Install in Metal Box Only."

#### PRODUCT IDENTITY

The following product identity appears on the product:  
Class 2 Transformer

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TRANSFORMERS, DISTRIBUTION, DRY TYPE, OVER 750 VOLTS CERTIFIED FOR CANADA (XPFS7)

#### USE AND INSTALLATION

This category covers dry-type distribution transformers, including solid-cast and resin-encapsulated transformers, rated 69 kV class or less, single- and three-phase.

Both the primary and secondary voltage ratings may be greater than 750 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Transformers having exposed live parts, such as at high-voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the CEC.

#### PRODUCT IDENTITY

The following product identity appears on the product:  
Distribution Transformer

The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 47 (2013), "Air-Cooled Transformers (Dry Type)."

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distribution Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

–Continued

The “Distribution Transformer” Listing Mark covers both the transformer and the enclosure.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TRANSFORMERS, DISTRIBUTION, LIQUID-FILLED TYPE, OVER 750 VOLTS CERTIFIED FOR CANADA (XPLH7)

### USE AND INSTALLATION

This category covers liquid-filled, distribution-type, pad-mounted and substation-type transformers, rated 69 kV class or less, single- and three-phase.

Both the primary and secondary voltage ratings may be greater than 750 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with the requirements of CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).

Transformers having exposed live parts, such as at high-voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the CEC.

The type of liquid used is identified on the transformer nameplate. Additional information on the fluid used is provided in Material Safety Data Sheets (MSDS Sheets) available from the transformer manufacturer.

### PRODUCT IDENTITY

The following product identity appears on the product:

Liquid-immersed Distribution Transformer

The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA C2.1 (2006), “Single-Phase and Three-Phase Liquid-Filled Distribution Transformers.”

Additional standards used, as applicable, are CSA C227.3 (2006), “Low-Profile, Single-Phase, Pad-Mounted Distribution Transformers with Separable Insulated High-Voltage Connectors,” and CSA C227.4 (2006), “Three-Phase, Pad-Mounted Distribution Transformers with Separable Insulated High-Voltage Connectors.”

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark covers both the transformer and the enclosure.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Liquid-Immersed Distribution Transformer.” The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

The Listing Mark covers both the transformer and the enclosure.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TRANSFORMERS, GENERAL PURPOSE CERTIFIED FOR CANADA (XPTQ7)

USE

–Continued

This category covers transformers of the compound filled, exposed core or open core, coil construction, general purpose and industrial control types, rated 750 V or less. Step-up, step-down, insulated and autotransformer types are also included.

Open core and coil power transformers for use in industrial control equipment are identified as “Industrial Control Transformers.”

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present, such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor speed controllers.

General purpose transformers are suitable for use in a maximum 25°C ambient unless otherwise marked. Industrial control transformers are suitable for use in a 40°C ambient.

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

Some transformers are marked to specify a minimum distance to a wall.

General purpose transformers are provided with leads, or with studs or terminal pads to which certified pressure wire connectors can be factory or field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG, and 75°C wire for sizes 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” must be observed in installations or use, suitable for special instructions are marked on the transformer.

### PRODUCT MARKINGS

All transformers are marked with the following:

1. The primary voltage, or voltages, and frequency (if other than 60 Hz)
2. Number of phases, if other than single-phase
3. All secondary voltages
4. The secondary capacity in amperes or volt-amperes

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0, “General Requirements - Canadian Electrical Code, Part II,” or intended for use in Canada, are marked “ISC-x-CAN,” where:

“ISC” stands for “Insulation System Class”

“x” is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

“CAN” represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to CAN/CSA-C22.2 No. 0 and ANSI/UL 1446, “Systems of Insulating Materials – General,” or intended for use in Canada and the United States, are marked “ISC-x,” where:

“ISC” stands for “Insulation System Class”

“x” is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

Terminals and leads are identified as such.

Autotransformers are marked “AUTOTRANSFORMER.”

Secondary terminals or leads on autotransformers intended for operation on circuits having a voltage to ground of 150 V or less are marked as required by CAN/CSA-C22.2 No. 0, “General Requirements – Canadian Electrical Code, Part II.”

If taps in windings are other than full capacity taps, they are so indicated.

Special-purpose enclosures, such as drip-tight, weatherproof, water-tight or dust-tight, or enclosures suitable for outdoors are marked as required by CAN/CSA-C22.2 No. 94, “Special Purpose Enclosures.”

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Autotransformer

General-purpose Transformer

Industrial Control Transformer

The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Transformers of the air-cooled, dry, ventilated and nonventilated types are covered under Power and General Purpose Transformers, Dry Type Certified for Canada (XQNX7).

–Continued

Reactors used for dimming, and variable voltage autotransformers are covered under Power Circuit and Motor-mounted Apparatus Certified for Canada (NMTR7).

Voltage regulators are covered under Power Supplies, General Purpose Certified for Canada (QQFU7).

Ballasts for mercury lamps and fluorescent lamps are covered under High-intensity-discharge Lamp Ballasts Certified for Canada (FLCR7) and Fluorescent Lamp Ballasts Certified for Canada (FKVS7), respectively.

Liquid-filled transformers are covered under Transformers, Distribution, Liquid-filled Type, Over 600 V Certified for Canada (XPLH7).

Class 2 transformers are covered under Transformers, Class 2 Certified for Canada (XOKV7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 66.1-2006, “Low Voltage Transformers – Part 1: General Requirements,” and CSA-C22.2 No. 66.2-2006, “Low Voltage Transformers – Part 2: General Purpose Transformers.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “General Purpose Transformer,” “Industrial Control Transformer” or “Auto-Transformer,” or other appropriate product name as shown in the individual Listings. The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TRANSFORMERS, IGNITION CERTIFIED FOR CANADA (XPZZ7)**

**USE**

This category covers ignition transformers designed for use on gas- or oil-burning equipment where the acceptability of the combination has been determined by UL. The transformers are designed for connection to supply circuits operating at not over 600 V. The output does not exceed 15,000 V open-circuit and, unless otherwise indicated in the individual certifications, the transformers are of the air-cooled, step-up type.

Interchangeable transformers certified as Class 6, 10, 12 or 14, have secondary voltage ratings of 6,000, 10,000, 12,000 and 14,000 V, respectively. These transformers have been investigated to determine that their ignition characteristics are such that they may be interchanged with other certified transformers of like class and secondary grounding. These transformers are intended for use, without further ignition performance tests, on certified oil or gas burners employing single spark gaps.

Noninterchangeable transformers are intended for specific applications or include ignition characteristics that preclude their interchangeability. Noninterchangeable transformers are acceptable only on specific gas- or oil-burning equipment with which they have been tested.

**PRODUCT MARKINGS**

All transformers are marked with the following:

1. Name, trademark, or other recognized symbol of identification of the manufacturer
2. Catalog number or equivalent
3. Electrical rating, consisting of:
  - a. low-potential voltage
  - b. frequency
  - c. volt-amperes or amperes based on input
  - d. all open-circuit high-potential rms voltages
  - e. high-potential short-circuit current in mA

–Continued

Transformers having the mid-point or one end of the high-potential winding grounded to the core and the enclosure are marked “MID-POINT (OR ONE END) OF HIGH VOLTAGE WINDING GROUNDED TO CORE AND CASE,” or the equivalent.

Transformers intended for use with a twin-gap or a multiple-gap ignition system are marked accordingly. In the case of a multiple-gap transformer, the marking indicates the number of secondary circuits for which the transformer is intended, and which pair of terminals is associated with each secondary winding, unless such identification is obvious.

Ignition transformers suitable for use under the interchangeability program are identified as such.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Interchangeable Ignition Transformer
- Noninterchangeable Ignition Transformer

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 13 (1962), “Transformers for Luminous-Tube Signs, Oil- or Gas-Burner Ignition Equipment, Cold-Cathode Interior Lighting.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Interchangeable Ignition Transformer” or “Noninterchangeable Ignition Transformer.” The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

A green background identifies the Listing Mark for interchangeable transformers; a red background identifies the Listing Mark for noninterchangeable transformers.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER AND GENERAL-PURPOSE TRANSFORMERS, DRY TYPE CERTIFIED FOR CANADA (XQNX7)**

**USE AND INSTALLATION**

This category covers single-phase and polyphase transformers of the air-cooled, dry, ventilated and nonventilated types rated 750 V or less. Step-up, step-down, insulated, and autotransformer types are also included.

The transformers are provided with leads, or with the studs or terminal pads to which certified pressure-wire connectors can be factory or field installed to accommodate field wiring. The adequacy of the wire-bending space in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC), has not been determined and should be investigated at the time of the installation.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG and 75°C wire for sizes 1/0 AWG and larger.

Unless otherwise marked, these transformers have not been investigated for use where a significant nonsinusoidal current is present. Examples of equipment that may draw nonsinusoidal currents are uninterruptible power supplies, electronic ballasts, data processing equipment and solid-state motor speed controllers.

K-factor-rated transformers have not been investigated for use with harmonic loads where the rms current of any single harmonic higher than the tenth is greater than 1/h of the fundamental rms current.

The transformer ratings are based on installation in a maximum 40°C ambient unless otherwise marked.

Transformers with ventilating openings should be installed so that the ventilating openings are not blocked. Some transformers are marked to specify a minimum distance to a wall.

–Continued

The suitability of the transformer circuit grounding, grounding electrode connections, and equipment grounding connections in accordance with the CEC should be determined by the Authority Having Jurisdiction at the time of installation.

In cases where the nature or construction of the transformer is such that special precautions beyond the requirements of the CEC must be observed in installations or use, suitable special instructions are marked on the transformer.

**PRODUCT MARKINGS**

All transformers are marked with the following:

1. Catalog, style, model or other identifying designation
2. High and low voltages
3. Frequency
4. Number of phases, unless clearly indicated on the connection diagram
5. Output amperes or kVA
6. Rated temperature rise, in degrees Celsius
7. Percent impedance

Transformers investigated for use where significant nonsinusoidal current is present are marked "Suitable for nonsinusoidal current load with K factor not to exceed \_\_\_\_," where the blank is filled in with one of the standard K factor ratings of 4, 9, 13, 20, 30, 40 or 50. (The K factor specified is the summation of the per unit rms current at harmonic "h" squared times the harmonic order squared.)

If taps are provided, transformers are marked with the tap voltages, either as actual voltages or as a percentage of the rated voltage.

Autotransformers are marked "AUTOTRANSFORMER."

Transformers provided with an enclosure are marked with the environmental type number(s).

Transformers having terminations, other than leads, suitable for aluminum are marked "CU-AL."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Air-cooled Power Transformer
- Dry-type General-purpose and Power Transformer
- Power Transformer

The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Voltage regulators are covered under Power Supplies, General Purpose Certified for Canada (QQFU7).

Ballasts for mercury lamps and fluorescent lamps are covered under High-intensity-discharge Lamp Ballasts Certified for Canada (FLCR7) and Fluorescent Lamp Ballasts Certified for Canada (FKVS7), respectively.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 47 (2013), "Air-Cooled Transformers (Dry Type)"

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Transformer," "Air-Cooled Power Transformer" or "Dry Type General Purpose and Power Transformer," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TRANSFORMERS, TOY CERTIFIED FOR CANADA (XRBV7)**

**GENERAL**

–Continued

This category covers direct-plug-in or cord-connected portable, step-down transformers of the low-secondary-voltage type suitable for supply current to electrically operated toys or hobby sets.

**ACCESSORIES**

An accessory to a certified toy or hobby transformer is provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified toy or hobby transformer specified in the markings or instructions. Such accessories serve to provide conditioning or control of the transformer output voltage, current or power.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Hobby Transformer
- Hobby Transformer Accessory
- Toy Transformer
- Toy Transformer Accessory

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 173 (1983), "Transformers for Toy and Hobby Use."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Toy Transformer," "Hobby Transformer," "Toy Transformer Accessory" or "Hobby Transformer Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TRANSFORMERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XPAF7)**

**TRANSFORMERS, GENERAL PURPOSE FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XPJF7)**

**GENERAL**

This category covers transformers of the compound filled, exposed core or open core and coil construction (industrial control type) type, rated 600 V or less. Step-up, step-down, insulated, and autotransformer types are also included. Autotransformers are so marked.

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor-speed controllers.

The transformer rating is based on installation in a maximum 25°C ambient unless otherwise marked.

**PRODUCT MARKINGS**

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

–Continued

Some transformers are marked to specify a minimum distance to a wall. General-purpose transformers are provided with leads, or with studs or terminal pads to which certified pressure-wire connectors can be factory or field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for size 14–1 AWG, and 75°C wire for size 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” must be observed in installations or use, suitable for special instructions are marked on the transformer.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Autotransformer for Use in Hazardous Locations
- General-purpose Transformer for Use in Hazardous Locations
- Industrial Control Transformer for Use in Hazardous Locations

The word “Transformer” may be abbreviated “Xfmr,” “Xfmr” or “Xformer.”

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standards used to investigate products in this category are CSA-C22.2 No. 107.1 (2001), “General Use Power Supplies,” or CSA-C22.2 No. 47 (2013), “Air-Cooled Transformers (Dry Type),” or CSA-C22.2 No. 66.1 (2006), “Low Voltage Transformers – Part 1: General Requirements,” and CSA-C22.2 No. 66.2 (2006), “Low Voltage Transformers – Part 2: General Purpose Transformers.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “General Purpose Transformer for Use in Hazardous Locations,” “Industrial Control Transformer for Use in Hazardous Locations” or “Auto-Transformer for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TRASH COMPACTORS CERTIFIED FOR CANADA (XUTS7)**

This category covers equipment intended to reduce the volume of trash by means of mechanical compaction.

**COMMERCIAL TRASH COMPACTORS CERTIFIED FOR CANADA (XUUC7)**

**USE AND INSTALLATION**

This category covers commercial-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. They may be provided with a facility to tie the compacted trash into bales. They are intended for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” These compactors are motor operated and are provided with overcurrent or overheating protective devices.

Commercial-use compactors are intended to be installed, maintained and operated by competent personnel who are fully instructed concerning the hazards involved.

**TRASH COMPACTORS CERTIFIED FOR CANADA (XUTS7)**

–Continued

**PRODUCT IDENTITY**

The following product identity appears on the product:

Commercial Compactor

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Trash compactors for household use are covered under Household Trash Compactors Certified for Canada (XUUM7).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWXG7).

Waste disposers are covered under Waste Disposers Certified for Canada (ZDHR7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, “Motor-Operated Appliances (Household and Commercial).”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. **HOUSEHOLD TRASH COMPACTORS CERTIFIED FOR CANADA (XUUM7)**

**USE**

This category covers household-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. These compactors are intended for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” These motor-operated compactors are rated 250 V or less and are provided with overcurrent or overheating protective devices.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Household Trash Compactor

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Trash compactors for commercial use are covered under Commercial Trash Compactors Certified for Canada (XUUC7).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWXG7).

**TRUCKS, INDUSTRIAL CERTIFIED FOR CANADA (XVHZ7)**

This category covers industrial-type material handling equipment of the power-operated or walking type, such as lift trucks, platform trucks, towing tractors, etc.

These devices may be electric battery-powered or internal combustion engine-powered.

**TRUCKS, ELECTRIC BATTERY-POWERED CERTIFIED FOR CANADA (XVXX7)**

**Trucks, Industrial, Type E Certified for Canada (XWJV7)**

**USE**

This category covers electric-battery-powered trucks having minimum acceptable safeguards against inherent fire and electric shock hazards.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Type E Industrial Truck

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C583, “Guide for the Investigation of Electric Battery Powered Industrial Trucks.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO FIRE AND ELECTRIC SHOCK HAZARDS ONLY**

**Alternate UL Mark**

**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**TRUCKS, INTERNAL COMBUSTION  
ENGINE-POWERED CERTIFIED FOR  
CANADA (XXLR7)**

**Trucks, Industrial, Type D Certified for Canada  
(XXYZ7)**

**USE**

This category covers diesel-engine-powered trucks having minimum acceptable safeguards against inherent fire hazards.

These trucks are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these trucks should conform to the requirements of Authorities Having Jurisdiction.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Type D Industrial Truck

–Continued

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C558, "Guide for the Investigation of Internal Combustion Engine-Powered Industrial Trucks."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Trucks, Industrial, Type DS Certified for Canada  
(XYMX7)**

**USE**

This category covers diesel-engine-powered trucks which are investigated under requirements similar to those applying to Type D trucks. Special features are provided as additional safeguards to further reduce the inherent fire hazards of the electric, fuel and exhaust systems.

These trucks are regarded as presenting inherent fire hazards which should be recognized. Storage and use of these trucks should conform to the requirements of Authorities Having Jurisdiction.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Type DS Industrial Truck

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO FIRE AND ELECTRIC SHOCK HAZARDS ONLY**

**Alternate UL Mark**

**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**ELECTRICAL ACCESSORY FOR USE IN INDUSTRIAL TRUCKS**

**AS TO FIRE AND ELECTRIC SHOCK HAZARD ONLY**

**Control No.**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**UNINTERRUPTIBLE POWER-SUPPLY EQUIPMENT CERTIFIED FOR CANADA (YEDU7)**

**USE AND INSTALLATION**

This category covers indoor- and outdoor-use uninterruptible power-supply (UPS) equipment that may be stationary or fixed. This equipment is rated 600 V or less.

This category also covers large UPS equipment requiring field assembly of modules or subassemblies, which are appropriately marked as indicated below.

A UPS is used to provide alternating-current power to a load for some period of time in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

These products include the following equipment intended for use with a UPS: (1) battery supply modules with or without batteries, (2) remote status panels, (3) bypass switches, (4) maintenance bypass switches, (5) battery circuit disconnect switches, (6) rectifier and power conversion units, and (7) power distribution panels.

The investigation of UPS equipment does not include the effects on the load that may be caused by momentary disruption of alternating-current power.

A UPS identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Products suitable for use in computer rooms are marked "Suitable for Computer Room Applications," or the equivalent.

This category does not cover a UPS intended as a component of a fire-protective or burglary-protective signaling system.

**REBUILT PRODUCTS**

This category also covers UPS equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt UPS equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt UPS equipment is subject to the same requirements as new UPS equipment.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Uninterruptible Power Supply

UPS

UPS Battery Supply

UPS Equipment Accessory

UPS Equipment Enclosure

UPS Equipment Part

UPS Equipment Subassembly

UPS Inverter

UPS Power Distribution Panel

UPS Rectifier/Charger

UPS Status Panel

UPS Transfer Switch

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

UPS systems for use with professional medical and dental equipment are covered under Uninterruptible Power Supplies for Use in Health Care Facilities Certified for Canada (KFFG7).

Battery-powered emergency equipment for controlling lighting and/or power is covered under Emergency Lighting and Power Equipment Certified for Canada (FTBR7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), "General Use Power Supplies," or CSA-C22.2 No. 107.3 (2005), "Uninterruptible Power Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Uninterruptible Power Supply" (or "UPS"), "UPS Battery Supply," "UPS Status Panel," "UPS Transfer Switch," "UPS Inverter," "UPS Rectifier/Charger," "UPS Equipment Enclosure," "UPS Equipment Part," "UPS Equipment Subassembly," "UPS Equipment Accessory," "UPS Power Distribution Panel," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**UNINTERRUPTIBLE POWER-SUPPLY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (YEEU7)**

**USE AND INSTALLATION**

This category covers indoor- and outdoor-use uninterruptible power-supply (UPS) equipment that may be stationary or fixed. This equipment is rated 600 V or less.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
 Uninterruptible Power Supply for Use in Hazardous Locations  
 UPS Battery Supply for Use in Hazardous Locations  
 UPS Equipment Accessory for Use in Hazardous Locations  
 UPS Equipment Enclosure for Use in Hazardous Locations  
 UPS Equipment Part for Use in Hazardous Locations  
 UPS Equipment Subassembly for Use in Hazardous Locations  
 UPS Inverter for Use in Hazardous Locations  
 UPS Power Distribution Panel for Use in Hazardous Locations  
 UPS Rectifier/Charger for Use in Hazardous Locations  
 UPS Status Panel for Use in Hazardous Locations  
 UPS Transfer Switch for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

**RELATED PRODUCTS**

UPS equipment intended for use in unclassified locations is covered under Uninterruptible Power-supply Equipment Certified for Canada (YEDU7).

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), "General Use Power Supplies," or CSA-C22.2 No. 107.3 (2005), "Uninterruptible Power Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Uninterruptible Power Supply for Use in Hazardous Locations," "UPS Battery Supply for Use in Hazardous Locations," "UPS Transfer Switch for Use in Hazardous Locations," "UPS Inverter for Use in Hazardous Locations," "UPS Rectifier/Charger for Use in Hazardous Locations," "UPS Equipment Enclosure for Use in Hazardous Locations," "UPS Equipment Part for Use in Hazardous Locations," "UPS Equipment Subassembly for Use in Hazardous Locations," "UPS Equipment Accessory for Use in Hazardous Locations" or "UPS Power Distribution Panel for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**UNIT SUBSTATIONS CERTIFIED FOR CANADA (YEFR7)**

**GENERAL**

This category covers unit substations rated 600 V or less intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and in accordance with the installation instructions provided on the unit substation.

A unit substation consists of a transformer in combination with primary and/or secondary overcurrent protective devices or switching devices housed in a single enclosure.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Some unit substations are suitable for use as service equipment and are so marked. Such marking is part of the Certification Mark as noted below, or is an integral part of other required markings.

Certified unit substations are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking shall be independent of any marking on termi-

**UNIT SUBSTATIONS CERTIFIED FOR CANADA (YEFR7)**

nal connectors and shall be on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors, the marking will indicate "Use copper or aluminum wire." A unit substation employing terminals for main or branch circuit units individually marked "Cu-A1" will be marked "Use copper-A1 wire" or "Use copper wire only." The latter statement indicates that wiring space or other factors make the unit substation unsuitable for aluminum conductors.

Unless the unit substation is marked with both the size and temperature rating of wire to be used, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG and 75°C ampacities for wire 1/0 AWG and larger.

Unit substations have the secondary neutral bonded to the enclosure and have provision on the neutral for connection of a grounding conductor. A terminal is also provided on the enclosure near the line terminals for use with an equipment grounding conductor between the unit substation and the enclosure of equipment on the line side of the unit substation for use when a metallic conduit system is not provided.

The suitability of unit substations for use on high capacity circuits has not been investigated.

Unit substations are marked with enclosure type number 1, 2 or 3R as described in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Unit substations marked with enclosure type 3RX provide the same level of protection as type 3R enclosures, and are provided with an additional level of corrosion protection for the enclosure.

A unit substation marked "Type 3R" may also be marked "Rainproof."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
 Unit Substation

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 31, "Switchgear Assemblies," and CAN/CSA-C22.2 No. 47, "Air-Cooled Transformers (Dry Type)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unit Substation."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**UNIT SUBSTATIONS OVER 600 VOLTS CERTIFIED FOR CANADA (YEFV7)**

**USE AND INSTALLATION**

This category covers three-phase articulated and integral unit substations for step-down operation. Articulated substations are rated through 10,000 kVA, at primary voltages above 600 V through 38 kV (nominal 35 kV). Integral substations are rated through 2500 kVA at primary voltages above 600 V through 38 kV.

Articulated unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as multiple self-enclosed pieces of equipment intended for connection in the field.

Integral unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as a single self-enclosed piece of equipment. Sections may be shipped separately.

An articulated unit substation may consist of several separately certified pieces of equipment. Only those sections provided with unit substation

**UNIT SUBSTATIONS OVER 600 VOLTS CERTIFIED FOR CANADA (YEFV7)**

Certification Marks have been investigated as part of an articulated unit substation. The suitability of other assemblies will need to be determined by the Authority Having Jurisdiction.

The transformer section(s) house the three-phase power transformer(s) for step-down operation. These unit substation transformers are dry-type distribution transformers including solid cast and resin encapsulated types.

The input sections may consist of a terminal chamber, metal-clad switchgear, or metal-enclosed interrupter switchgear.

The output sections may consist of metal-clad switchgear, metal-enclosed interrupter switchgear, a motor control center, molded-case circuit breaker equipment, fused switch equipment, a dead-front switchboard, a panel-board or similar types of distribution or control equipment.

A transition section may be located between a transformer section and an input section, between a transformer section and an output section, between different types of input sections, or between different types of output sections. Transition sections may be integral parts of two adjacent sections, an integral part of one of the sections, or a separate section.

The transformer ratings determine the kVA and voltage capabilities of the overall integral unit substation.

These unit substations are intended for installation in accordance with the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and in accordance with the installation instructions provided on the equipment.

**PRODUCT MARKINGS**

A master nameplate is mounted on an external surface of the enclosure and visible after normal installation of the equipment. This master nameplate includes the following information as a minimum: manufacturer's name and equipment identification number, kVA rating or ratings if force cooled, primary and secondary lightning impulse withstand voltage (BIL) ratings, primary and secondary voltage ratings, primary and secondary continuous current ratings, transformer design impedance, and total weight. If metal-clad switchgear or metal-enclosed interrupter switchgear is connected to the transformer primary, the nameplate also includes a short-time current carrying rating and momentary current rating.

Each section of the unit substation also has its own rating based on the requirements in standards applicable for that section of the equipment. These individual section ratings are coordinated to be equal to or greater than the rating of the unit substation.

The enclosure of the integral unit substation or the several enclosures of an articulated unit substation are marked to indicate the exposure category (A, B or C) for which it is intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; and enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only.

An enclosure that has been investigated to determine it is rainproof is marked "Rainproof," "Outdoor" or "3R." The enclosure may be either nonventilated or ventilated.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Unit Substation Section and "\_\_\_ of \_\_\_," where the first space is stamped with a number indicating the position (reading from left to right) that the section occupies in the series of sections constituting the unit substation, and the second space indicates the total number of sections which are provided as part of the unit substation.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 31 (1989), "Switchgear Assemblies," and CAN/CSA-C22.2 No. 47 (1990), "Air Cooled Transformers (Dry Type)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory), together with the word "LISTED," a control number, the product name "Unit Substation Section," and "\_\_\_ of \_\_\_," where the first space is stamped with a number indicating the position (reading from left to right) that the section occupies in the series of sections constituting the unit substation, and the second space indicates the total number of sections which are provided as part of the unit substation.

\*\*\*\*\*

**UNIT SUBSTATIONS OVER 600 VOLTS CERTIFIED FOR CANADA (YEFV7)**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VAPORIZERS CERTIFIED FOR CANADA (YEIV7)**

**GENERAL**

This category covers devices intended for vaporization of water, certain medicaments in water solution, and glycol.

If a flammable liquid or other flammable material, particularly if more volatile or flammable than kerosene (38°C flash, closed cup) is used in these devices, there may be danger of fire or explosion, especially in closed rooms or confined spaces.

Portable electric vaporizers of the resistance-wire type present certain inherent hazards. Care should be exercised to prevent their contact with readily combustible materials, such as blankets, bedding, curtains and draperies.

**FACTORS NOT INVESTIGATED**

The physiological effects of the liquids, including the medicaments which may be employed, have not been investigated.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vaporizer."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VALVES CERTIFIED FOR CANADA (YEW7)**

These valves are for use in the assembly of appliances or equipment or in piping handling gases or liquids. The various categories identify the specific or general kind of service for which the valve is intended.

**CHECK VALVES CERTIFIED FOR CANADA (YFKR7)**

Check valves are for various specific uses including prevention of return-flow, hydraulic back pressure, excess flow and for equalizing or controlling fluid flow.

**Anhydrous-ammonia Check Valves Certified for Canada (YFXZ7)**

**USE AND INSTALLATION**

This category covers filler valves, vapor-return valves, back-pressure check valves, and excess-flow check valves. Filler valves and vapor-return valves, where so indicated in the individual certifications, are intended to be installed in conjunction with a separate back-pressure check or a separate excess-flow check valve.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Back-pressure Valve for Anhydrous Ammonia, \_\_\_ kPa max

–Continued

- Excess-flow Valve for Anhydrous Ammonia, \_\_\_\_ kPa max
- Filler Valve for Anhydrous Ammonia, \_\_\_\_ kPa max
- Vapor-return Valve for Anhydrous Ammonia, \_\_\_\_ kPa max

**Note:** The pressure rating is required only if the valve is rated in excess of 1720 kPa gauge.

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C125, “Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief).”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, one of the following product names as appropriate: “Excess Flow Valve,” “Filler Valve,” “Vapor-Return Valve” or “Back Pressure Valve,” and the statement “for Anhydrous Ammonia \* kPa max.”

\* Pressure rating required only if valve is rated in excess of 1720 kPa gauge.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LP-gas Check Valves Certified for Canada (YHNT7)**

**USE AND INSTALLATION**

This category covers filler, vapor-return, back-pressure check, excess-flow check, and similar valves as indicated in the individual certifications. Filler valves and vapor-return valves, where so indicated, are intended to be installed in conjunction with a separate back-pressure or a separate excess-flow check valve.

Back-pressure and excess-flow check valves may be installed in either liquid or vapor lines unless otherwise indicated. They are for use in systems using Transport Canada cylinders or containers constructed in accordance with the “Canadian Pressure Vessel Code.” They are suitable for use with LP-gas in either the liquid or gaseous phase at working pressures of at least 1720 kPa gauge pressure. Those suitable for use at pressures in excess of 1720 kPa are marked with the maximum pressure.

These devices are intended for installation and use in accordance with CSA-B149.2, “Propane Storage and Handling Code.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Back-pressure Valve for LP-Gas \_\_\_\_ kPa max\*
- Excess-flow Valve for LP-Gas \_\_\_\_ kPa max\*
- Filler Valve for LP-Gas \_\_\_\_ kPa max\*
- Vapor-return Valve for LP-Gas \_\_\_\_ kPa max\*

\* The pressure rating is required only if the valve is rated in excess of 1720 kPa.

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**VALVES, AUTOMATIC, FOR GAS APPLIANCES CERTIFIED FOR CANADA (YINV7)**

**USE AND INSTALLATION**

This category covers automatic valves rated 600 V or less that are constructed entirely of new, unused parts and materials, and intended for use with one or more of the following fuels in the gaseous state: natural gas, manufactured gas, LP-gas, or LP-gas-air mixtures as indicated in the individual certifications. These valves may be individual automatic valves, or valves utilized as parts of automatic gas ignition systems.

These valves have a maximum operating gas pressure rating of 1/2, 2, 5 psi (3.5, 13.8, 34.5 kPa), or when higher than 5 psi (34.5 kPa), in 5 psi (34.5 kPa) increments up to and including a maximum operating pressure of 60 psi (413.7 kPa). They are capable of operation at ambient temperatures of 32 to 125°F (0 to 51.5°C), unless a higher and/or a lower temperature are specified in the individual certifications. Valves marked “Commercial/Industrial (C/I) Safety Shutoff Valve” have an operating pressure rating greater than 1/2 psi (3.5 kPa), a capacity rating greater than 400,000 Btu/hr, and close in less than 2 seconds after being de-energized.

These valves are intended for stationary installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” and CAN/CSA-B149.1 (2000), “Natural Gas and Propane Installation Code.”

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Automatic Valve for Gas Appliances

**RELATED PRODUCTS**

Electrically operated valves intended for other applications are covered under Valves, Electrically Operated Certified for Canada (YIOZ7).

Electrically operated valves intended for other applications in hazardous (classified) locations are covered under Valves, Electrically Operated for Use in Hazardous Locations Certified for Canada (YTSX7).

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI Z21.21a/CSA 6.5a (2001), “Automatic Valves for Gas Appliances.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**VALVES, ELECTRICALLY OPERATED CERTIFIED FOR CANADA (YIOZ7)**

**USE AND INSTALLATION**

This category covers electrically operated valves, which are designated general-purpose valves or safety valves as indicated in the individual certifications. These valves may be equipped with complementary or optional mechanical actuators.

A general-purpose valve is intended to control the flow of a fluid, but is not intended for use as a safety valve. It may be a normally closed or normally open valve.

A safety valve is a normally closed valve of the “On” and “Off” type intended to be actuated by a safety control or an emergency device to prevent the delivery of a fluid. It may also be used as a general-purpose valve. A multiple port valve may be designated as a safety valve only with respect to its normally closed port.

These valves are intended for stationary installation in an ambient temperature normally prevailing in habitable spaces and for handling fluids at a temperature not exceeding 25°C (77°F) as defined by CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” unless otherwise indicated.

The specific fluid(s) for which the valve is certified, together with the fluid temperature and ambient temperature ratings, are marked on the valve.

**PRODUCT IDENTITY**

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 139 (1982), “Electrically Operated Valves.”

VALVES CERTIFIED FOR CANADA (YEW7T)

–Continued

Products intended for automotive use with CNG are additionally investigated to ANSI/AGA NGV3.1/CGA NGV 12.3 (1995), “Fuel System Components for Natural Gas Powered Vehicles.”

Products intended for automotive use with LP-gas are additionally investigated to CSA 12.2 (2002), “Propane Fuel System Components for Use on Highway Vehicles.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with word “LISTED,” a control number, and one of the following product names as appropriate: “General Purpose Valve,” “Safety Shut off Valve,” “Safety Valve,” “Shut off Valve” or “Positive Shut off Valve.” The product name may be preceded by “Section of” and is followed by one of the following statements as appropriate: “Assembly Consisting of Coil (or Actuator) (No.) and Body (No.),” “For Automotive Use Only” or “For Use with (No.) Pilot Safety Control Switch.”

The specific fluid(s) for which the valve is Listed together with the fluid temperature and ambient temperature ratings are also included on the Listing Mark or marked elsewhere on the valve.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**REGULATORS CERTIFIED FOR CANADA (YJQV7)**

For Listing purposes, gas regulators are divided into two groups: Compressed Gas Regulators and LP-Gas Regulators. Regulators designated as Compressed Gas Regulators are not investigated for their ability to maintain the delivery pressure within predetermined limits. Regulators designated as LP-Gas Regulators are investigated to determine that they are capable of controlling and maintaining a uniform gas delivery pressure.

**Compressed Gas Regulators Certified for Canada (YKFT7)**

**USE**

This category covers regulators designed for use with the compressed gases specified in the individual certifications, to reduce the storage cylinder pressure or line pressure of not more than 37.91 mPa (5500 psig) to the use pressure.

**FACTORS NOT INVESTIGATED**

The regulating performance, the effects of overpressure on connected equipment, and the physiological effects of the use of medical equipment regulators have not been investigated.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Compressed Gas Regulator

**RELATED PRODUCTS**

LP-gas pressure regulators for equipment intended for installation and use in accordance with CAN/CSA-B149.1, “Natural Gas and Propane Installation Code,” and CAN/CSA-B149.2, “Propane Storage and Handling Code,” are covered under LP-Gas Regulators Certified for Canada (YKSR7 and YKSR8).

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C252 (1975), “Guide for the Investigation of Gas Pressure Regulators.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

—Continued

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Compressed Gas Regulator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LP-gas Regulators Certified for Canada (YKSR7)**

**USE**

This category covers regulators intended to be used in accordance with CSA B149.2, "Propane Storage and Handling Code," in LP-gas systems other than automotive, utilizing Department of Transportation, Transport Canada or CSA containers.

First-stage regulators are designed for vapor service to reduce pressure from the container to a nominal pressure of 68.7 kPa or less. Second-stage regulators are designed to reduce the first-stage outlet operating pressure to a pressure equal to or less than 356 mm water column. Integral two-stage regulators combine a first-stage and a second-stage regulator into a single unit.

Second-stage regulators are equipped with a threaded vent opening or other means for connection of vent piping required of regulators to be located inside a building or to be included in the assembly of underground systems.

If so indicated in the individual certifications, these regulators may incorporate a manual- or automatic-changeover control manifold.

High-pressure regulators are designed for handling LP-gas in either the gaseous or liquid phase to reduce prevailing container pressure to a lower pressure in excess of 6.9 kPa. High-pressure regulators are not required to be equipped with integral relief valves but may be so equipped if indicated in the individual certifications.

Single-stage regulators are designed for vapor pressure to reduce pressure from the container to a nominal pressure of 6.9 kPa or less. They are for use with small portable appliances and outdoor cooking appliances.

Special-purpose regulators are designed to reduce the prevailing cylinder, tank or other pressure in excess of 6.9 kPa to a lower pressure. These regulators are not intended for installation in two-stage piping systems that serve 3.5 kPa appliance systems.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
LP-Gas Regulator

**RELATED PRODUCTS**

For automotive-type LP-gas regulators, see LP-Gas Accessories, Automotive Type Certified for Canada (TPV7).

**ADDITIONAL INFORMATION**

For additional information, see Regulators Certified for Canada (YJQV7) and Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC-C144 (1975), "Guide for the Investigation of Pressure Regulating Valves."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "LP-Gas Regulator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELIEF VALVES CERTIFIED FOR CANADA (YLFZ7)**

**LP-gas Relief Valves Certified for Canada (YNWZ7)**

**Relief Valves, Hydrostatic, LP-gas Certified for Canada (YOKX7)**

**USE AND INSTALLATION**

This category covers valves intended for the relief of hydrostatic pressures only. Hydrostatic-relief valves are intended for installation in pipelines, charging manifolds, and other equipment handling LP-gas in the liquid phase. They are intended for installation and use in accordance with CSA B149.2, "Propane Storage and Handling Code."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Hydrostatic-relief Valve for LP-Gas

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C132, "Safety Relief Valves for Anhydrous Ammonia and Propane."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

\_\_\_ kPa MAX  
Alternate UL Mark  
UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydrostatic Relief Valve," and the statement "For LP-Gas \* kPa max."

\* Pressure rating not required if marked elsewhere on the valve

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Relief Valves, Safety, LP-gas Certified for Canada (YOYV7)**

**USE AND INSTALLATION**

This category covers safety-relief valves intended for installation on LP-gas containers, other than those constructed according to Transport Canada specifications, in accordance with CSA B149.2, "Propane Storage and Handling Code." They are used to safeguard such containers against excessive pressures caused by exposure to external heat, by overfilling, or by filling with LP-gas having a vapor pressure in excess of that for which the container is designed.

The maximum allowable working pressure (MAWP) of the tank determines the start-to-discharge pressure setting of the relief valve to be used. This setting is made by the valve manufacturer, and the adjustment is sealed to discourage tampering.

Safety-relief valves are rated according to their discharge capacities in dm<sup>3</sup>/s of air at 16°C and 101.3 kPa. This rate of discharge, the set pressure in kilopascals, and the manufacturer's name and valve number designation are marked on each relief valve or multiple-head unit or manifold.

The rate of discharge of the valve or valves used on the container is intended to be in accordance with the provisions of the requirements of the provincial or territorial authority where the tank is to be installed.

Safety-relief valves may be furnished by the manufacturer either separately or threaded into and incorporated in the assembly of a certified multiple-head unit.

–Continued

The rate of discharge indicated on the relief valve applies only when the valve is mounted in a straight coupling in the top of a tank, and no restriction to flow is introduced on either the inlet or outlet side of the valve. Relief valves installed otherwise may have restrictions set up which will materially reduce the indicated rate of discharge.

When relief valves displaying a Certification Mark are installed in a head unit or manifold other than that with which valves have been flow tested and rated, used with vapor tubes, or mounted in any fittings in such manner as to introduce restrictions to flow ahead of the valve inlet, and/or the flow is restricted on the outlet side of the valve by the use of undersize pipe and fitting for venting the discharge, it is necessary to determine the resulting loss. Flow tests must be conducted to ascertain the reduction in flow, and the relief valve manufacturer should be consulted for such information.

When the relief valves are incorporated in the assembly of a multiple-head unit or a manifold by the valve manufacturer, the rate of discharge is indicated on the body of the head unit or manifold. The rating indicated on the body of the head unit or manifold is the total rated discharge of the valves in the unit, as determined by conducting flow tests with the relief valve or valves installed in the unit.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
LP-Gas Safety Relief Valve

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C132 (1992), "Safety Relief Valves for Anhydrous Ammonia and Propane."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "LP-Gas Safety Relief Valve."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SHUTOFF VALVES CERTIFIED FOR CANADA (YPMT7)**

Shut-off valves following are exclusive of the electrically operated types and are manually, float, or pressure actuated.

**Anhydrous-ammonia Shutoff Valves Certified for Canada (YQAR7)**

**USE**

This category covers anhydrous-ammonia shutoff valves, including gas-line service and other types as indicated in the individual certifications. They are suitable for handling either liquid or gaseous anhydrous ammonia at a maximum working pressure of 1720 kPa. Those suitable for use at pressures in excess of 1720 kPa are marked with the maximum working pressure.

These valves are suitable for installation where a positive shutoff is required unless otherwise specified in the individual certifications. Metal-to-metal seat-type valves are suitable for installation only in branch or bypass lines where a positive shutoff is not essential.

**PRODUCT MARKINGS**

Valves are marked with the designation "Metal-to-Metal Seat" and "\_\_\_ kPa max," if applicable.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Shutoff Valve for Anhydrous Ammonia  
Shutoff Valve for NH<sub>3</sub>

**ADDITIONAL INFORMATION**

–Continued

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C125, "Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief)."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shut-off Valve for Anhydrous-Ammonia (NH<sub>3</sub>)."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Compressed Gas Shutoff Valves Certified for Canada (YQNZ7)**

**USE**

This category covers compressed gas shutoff valves intended for use in pipelines and with compressed gas containers in systems storing and handling various compressed gases other than those for LP-gas and anhydrous ammonia.

The valve types and the maximum working pressures for gas-line service valves are indicated in the individual certifications.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Shutoff Valve for [name of gas]

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C842, "Guide for the Investigation of Valves for Flammable and Combustible Liquids."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

\_\_\_ kPa MAX

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Flammable Liquid Shutoff Valves Certified for Canada (YRBX7)**

**USE**

This category covers valves of the gate, globe, angle, needle, and other types designed for use in pipe lines or equipment assemblies for gasoline, kerosene, fuel oil, petroleum, dry-cleaning solvent, etc. Valves may be of the manual, self-closing remote control, or other types as designated in the individual certifications.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Shutoff Valve for Flammable Liquid

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C842, "Guide for the Investigation of Valves for Flammable and Combustible Fluids."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. **LP-gas Shutoff Valves Certified for Canada (YSDT7)**

**USE AND INSTALLATION**

This category covers LP-gas shutoff valves, including gas-line service valves and other valves as identified in the individual certifications. These valves are intended for use and installation in accordance with CSA B149.2, "Propane Storage and Handling Code." They are suitable for use with LP-gas in either the liquid or gaseous phase at working pressures of at least 1720 kPa. Those suitable for use at pressures in excess of 1720 kPa are marked with the maximum working pressure.

These valves are suitable for installation where a positive shutoff is required unless otherwise specified in the individual certifications. Metal-to-metal seat-type valves are suitable for installation only in branch or bypass lines where a positive shutoff is not essential.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Shutoff Valve for LP-Gas  
Shutoff Valve with Metal-to-Metal Seat for LP-Gas  
ADDITIONAL INFORMATION

## VALVES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (YTSX7)

### GENERAL

This category covers electrically operated valves which, for the purpose of certification, are designated as follows:

**General-purpose valve** — A valve intended to control the flow of a fluid, but not to be depended upon to act as a safety valve. It may be a normally closed or normally open valve.

**Safety valve** — A normally closed valve of the “On” and “Off” type intended to be actuated by a safety control or an emergency device to prevent the unsafe delivery of a fluid. It may also be used as a general-purpose valve.

A multiple port valve may be designated as a safety valve only with respect to its normally closed port.

Unless otherwise indicated, these valves are intended for connection to rigid conduit in an ambient temperature normally prevailing in habitable spaces and for handling fluids at a temperature not exceeding 25°C (77°F) rated 600 V and less.

Identification of the specific fluid(s) for which the valves is certified, together with the fluid temperature and ambient temperature ratings, is included in installation instructions or marked on the valve or on a tag attached to the valve.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- General-purpose Valve for Use in Hazardous Locations
- Safety Valve for Use in Hazardous Locations

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 139 (1982), “Electrically Operated Valves.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “General Purpose Valve for Hazardous Locations” or “Safety Valve for Hazardous Locations.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## VAPOR RECOVERY SYSTEMS CERTIFIED FOR CANADA (YUJZ7)

### VAPOR RECOVERY SYSTEM ACCESSORIES, FLAMMABLE LIQUID CERTIFIED FOR CANADA (YUNT7)

#### USE AND INSTALLATION

This category covers accessories such as vapor-processing equipment intended for use by manufacturers and installers of vapor-recovery systems, installed in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

These products are intended for use with the following fuels:

- a) Gasoline
- b) Gasoline/ethanol blends designated as “gasohol” (E10 maximum)

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Vapor-processing Equipment
- Vapor-recovery Equipment

Other product identities may be used as shown in the individual certifications.

#### ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

#### REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following as applicable:

- CSA-C22.2 No. 0.4, “Bonding of Electrical Equipment (Protective Grounding)”
- CSA-C22.2 No. 0.5, “Threaded Conduit Entries”
- CSA-C22.2 No. 22, “Electrical Equipment for Flammable and Combustible Fuel Dispensers”
- CSA B346, “Power-Operated Dispensing Devices for Flammable Liquids”
- CAN/CSA-C22.2 No. 157 (1992), “Intrinsically Safe and Non-Intensive Equipment for Use in Hazardous Locations”
- CSA-C22.2 No. 30 (1986), “Explosion-Proof Enclosures for Use in Class I Hazardous Locations”
- CAN/ULC-S634 (1999), “Hose Swivel Connectors for Flammable and Combustible Liquids”

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

#### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Vapor Processing Equipment” or “Vapor Recovery Equipment,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## VENDING MACHINES CERTIFIED FOR CANADA (YWV7)

### GENERAL

This category covers commercial vending machines, which include payment-accepting machines for vending nonrefrigerated food and beverages, general merchandise, etc.

This equipment is rated 250 V or less, single-phase, and may be either cord or permanently connected to the source of supply in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” and CAN/CSA-C22.2 No. 0, “General Requirements – Canadian Electrical Code, Part II.”

Accessories, such as a coin/currency mechanism and debit/credit card readers, may be field installed if the vending machine is marked to specify the types of accessories that are acceptable.

Vending machines of certain types are designated for permanent connection to water supplies and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

The burglary and theft protection features of these machines have not been investigated unless specifically indicated in the individual certifications.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name, model number and electrical rating.

These appliances are marked on or adjacent to the electrical rating plate with one of the following: "Suitable for Indoor Use Only," "Suitable for Protected Locations — See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on an appliance intended for use in a protected location, indicating the manufacturer's recommendations concerning the use or installation, or both, of any canopy, marquee, shelter, etc., that may be necessary for the protection of the appliance. The instructions may be located inside the appliance if they are accessible through the front door.

**REBUILT PRODUCTS**

This category also covers vending machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt vending machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt vending machines are subject to the same requirements as new vending machines.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Vending Machine

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Machines for vending refrigerated food and beverages are covered under Vending Machines, Refrigerated Certified for Canada (SQMX7).

Games, rides and similar payment-accepting amusement products are covered under Amusement and Gaming Machines Certified for Canada (ASMU7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 128, "Vending Machines."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vending Machine," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VENTILATING EQUIPMENT FOR  
COMMERCIAL COOKING  
APPLIANCES CERTIFIED FOR  
CANADA (YXLT7)**

Ventilating equipment includes fire dampers and hoods, grease extractors, exhaust hoods, power ventilators and grease ducts intended for

**VENTILATING EQUIPMENT FOR COMMERCIAL COOKING  
APPLIANCES CERTIFIED FOR CANADA (YXLT7)**

installation in ventilating systems serving commercial cooking equipment. This equipment is intended for installation in accordance with the National Fire Protection Association Standard for the Installation of Equipment for the removal of Smoke and Grease Laden Vapors from Commercial Cooking Equipment, NFPA 96, or other recognized codes or standards as indicated for the individual product categories.

**EXHAUST HOODS WITH EXHAUST  
DAMPERS CERTIFIED FOR CANADA  
(YXZR7)**

**GENERAL**

This category covers exhaust hoods with exhaust dampers intended to be installed over commercial cooking equipment. These hoods are provided with fire-actuated automatic dampers. The hoods with dampers are intended to be used in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations." These products may be provided with manually or automatically operated cleaning or washing systems. These systems are not investigated for grease-extraction efficiency. These systems are not investigated for their suitability as fire-extinguishing-system units for the protection of grease-removal devices and hoods, unless specifically indicated in the individual certifications.

All exhaust hood dampers are marked relative to minimum exhaust air flow and maximum supply air flow directed into the hood and/or out the bottom (if provided).

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Damper and Hood for Kitchen Exhaust Ducts
- Damper Assembly for Kitchen Exhaust Ducts
- Exhaust Hood with Exhaust Damper

**ADDITIONAL INFORMATION**

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S646, "Exhaust Hoods and Related Controls for Commercial and Institutional Cooking Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Damper and Hood for Kitchen Exhaust Ducts," "Damper Assembly for Kitchen Exhaust Ducts" or "Exhaust Hood with Exhaust Damper."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**EXHAUST HOODS WITHOUT EXHAUST  
DAMPERS CERTIFIED FOR CANADA  
(YYCW7)**

**GENERAL**

This category covers exhaust hoods without exhaust dampers intended for placement over restaurant-type cooking equipment in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

These products are intended for use with certified fire-extinguishing-system units. They may be provided with manually or automatically operated cleaning or washing systems. These systems are not investigated for grease-extraction efficiency. These systems are not investigated for their suitability as fire-extinguishing-system units for the protection of grease-removal devices and hoods, unless specifically indicated in the individual certifications. Electrical components, if provided, are investigated for compliance with established requirements.

All hoods are marked relative to minimum exhaust air flow and maximum supply air flow, directed into the hood and/or out the bottom (if provided).

**VENTILATING EQUIPMENT FOR COMMERCIAL COOKING  
APPLIANCES CERTIFIED FOR CANADA (YXL7)**

–Continued

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Exhaust Hood Without Exhaust Damper  
Hood for Kitchen Exhaust Ducts

**ADDITIONAL INFORMATION**

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S646, "Exhaust Hoods and Related Controls for Commercial and Institutional Cooking Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hood for Kitchen Exhaust Ducts" or "Exhaust Hood Without Exhaust Damper."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**GREASE DUCTS FOR RESTAURANT  
COOKING APPLIANCES CERTIFIED FOR  
CANADA (YYGQ7)**

**USE AND INSTALLATION**

This category covers grease ducts intended for restaurant cooking appliances. Grease ducts are designed to be used with restaurant kitchen hoods and associated ventilating equipment, and are intended to be installed in accordance with the manufacturer's recommended installation instructions and ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."

This category covers grease ducts and grease duct systems intended to be installed at the minimum clearances specified in the individual certifications, where 457 mm clearance is specified in ANSI/NFPA 96. These grease ducts are not intended to be wrapped with certified enclosure systems unless specified in the individual certifications of the grease duct and the enclosure system certification.

Each grease duct system consists of one or more parts, such as straight sections, elbows, tees, wyes and transitions. Tees and wyes are intended for use in common ducts or to provide cleanout and access openings when installed as indicated in the installation instructions. Grease duct parts may be provided with fittings to accept sensors, or wash, sprinkler and spray nozzles. Maximum lengths and heights are limited by certified support and re-support assemblies as indicated in the installation instructions.

Authorities Having Jurisdiction should be consulted before installation.

**RELATED PRODUCTS**

Restaurant exhaust hoods are covered under Exhaust Hoods with Exhaust Dampers Certified for Canada (YXZR7) and Exhaust Hoods Without Exhaust Dampers Certified for Canada (YYCW7).

Accessories intended for use with hoods and/or ducts are covered under Hood and Duct Accessories Certified for Canada (YYXS7).

Exhaust ventilators are covered under Power Ventilators for Restaurant Exhaust Appliances Certified for Canada (YZHW7).

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S662, "Factory-Built Grease Ducts."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOOD AND DUCT ACCESSORIES  
CERTIFIED FOR CANADA (YYXS7)**

**USE AND INSTALLATION**

This category covers accessories intended for use with hoods and/or ducts installed over commercial cooking equipment.

Authorities Having Jurisdiction should be consulted to determine that these accessories are acceptable for use in any given location.

**ADDITIONAL INFORMATION**

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ANSI/UL 1978, "Grease Ducts," and ANSI/NFPA 96, "Installation of Equipment for the Removal of Smoke and Grease Laden Vapors from Commercial Cooking Equipment."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hood and Duct Accessory," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOODS/RECIRCULATING SYSTEMS FOR  
USE WITH SPECIFIED COMMERCIAL  
COOKING APPLIANCES CERTIFIED FOR  
CANADA (YZCT7)**

**USE AND INSTALLATION**

This category covers products intended for installation with specific certified commercial cooking appliances, such as fryers, griddles, broilers and other appliances, that are installed in commercial establishments where food is prepared.

Recirculating systems consist of a fan, collection hood, and an air-filtering system consisting of a grease filter, and may incorporate other air-filtering devices. These systems incorporate a fire-extinguishing system that has been investigated with the specified cooking equipment.

These recirculating systems are intended for venting filtered cooking effluent into the room in which the equipment is located. These products are not intended for connection to a ducted exhaust system.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

–Continued

One of the following product identities appears on the product:  
 Ductless Hood  
 Recirculating System

**RELATED PRODUCTS**

Products intended for connection to a ducted exhaust system are covered under Exhaust Hoods with Exhaust Dampers Certified for Canada (YXZR7) and Exhaust Hoods Without Exhaust Dampers Certified for Canada (YYCW7).

Commercial cooking appliances with integral recirculating ventilation systems are covered under Commercial Cooking Appliances with Integral Recirculating Ventilation Systems Certified for Canada (KNKG7).

Commercial cooking appliances with integral systems for limiting the emission of grease-laden air are covered under Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air Certified for Canada (KNLZ7).

**ADDITIONAL INFORMATION**

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 109, "Commercial Cooking Appliances," and ANSI/UL 710B, "Recirculating Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**FOR USE WITH UL-CERTIFIED [Company name] MODEL(S) COMMERCIAL COOKING APPLIANCE(S)**

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT NAME\*]**

**POWER VENTILATORS FOR RESTAURANT EXHAUST APPLIANCES CERTIFIED FOR CANADA (YZHW7)**

**GENERAL**

This category covers power roof- and wall-mounted ventilators, duct fans of the straight-through type, and proximity-type ventilators consisting of an impeller and motor in a housing. Roof- and wall-mounted ventilators have a weather-resistant housing and are supported by a weather-resistant steel base designed to fit, by means of a steel curb, over a roof or wall exhaust duct opening for venting restaurant cooking appliances.

These ventilators are designed for the removal of smoke and grease-laden vapors at an exhaust air temperature not exceeding the maximum temperature shown in the individual certifications and on the certified device.

Power ventilators for restaurant exhaust appliances are intended for installation in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations." Authorities Having Jurisdiction should be consulted to determine that these appliances are acceptable for use in any given location.

Proximity-type ventilators have an enclosure and are positioned adjacent to the cooking appliance that they serve.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
 Power Ventilator for Restaurant Exhaust Appliances

**RELATED PRODUCTS**

–Continued

For other types of power ventilators, see Ventilators, Power Certified for Canada (ZACT7).

**ADDITIONAL INFORMATION**

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 113, "Fans and Ventilators," and ULC-S645, "Power Roof Ventilators for Commercial and Institutional Kitchen Exhaust Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VENTILATORS, POWER CERTIFIED FOR CANADA (ZACT7)**

**GENERAL**

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, by means of a curb, over a wall or roof opening.

These ventilators are intended primarily for commercial or industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust-type and makeup-air-type devices. Makeup-air-type ventilators equipped for evaporative cooling are covered under Humidifiers Certified for Canada (AHIV7).

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
 Power Ventilator

**RELATED PRODUCTS**

Ventilators intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances are covered under Power Ventilators for Restaurant Exhaust Appliances Certified for Canada (YZHW7).

For other types of fans and blowers, see Fans, Electric Certified for Canada (GPVV7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, "Fans and Ventilators."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## INDUSTRIAL MATERIAL HANDLERS CERTIFIED FOR CANADA (ZAJ57)

### USE

This category covers products intended for continuous movement of material-laden air.

The instruction manual states these devices are intended for exhausting, material conveying, pollution control and air circulation. These devices are certified as to risk of electric shock and mechanical hazards only.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Industrial Material Handler

### ADDITIONAL INFORMATION

For additional information, see Ventilators, Power Certified for Canada (ZACT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 113, "Fans and Ventilators."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**AS TO ELECTRIC SHOCK AND MECHANICAL HAZARDS ONLY**

**Alternate UL Mark**

### UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

### INDUSTRIAL MATERIAL HANDLER

**AS TO ELECTRIC SHOCK AND MECHANICAL HAZARD ONLY  
Control No.**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## VENTILATORS, POWER FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (ZANE7)

### GENERAL

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, usually by means of a curb, over a wall or roof opening. Power ventilators consist of an assembly of UL-certified parts.

These ventilators are intended for industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust type and makeup air type devices. Makeup air-type ventilators are not equipped for evaporative cooling.

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

These ventilators are not intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances.

Metallic impellers are constructed of medium brass or aluminum, with a hardness not over Rockwell B66. Belt-driven power ventilators are investigated for the potential risk of ignition from temperature as a result of belt slippage.

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

### PRODUCT IDENTITY

The following product identity appears on the product:

Power Ventilator for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 113 (2010), "Fans and Ventilators."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## VENTS, SMOKE AND HEAT CERTIFIED FOR CANADA (ZAQR7)

This category covers automatically-operated roof vents and power ventilators for smoke control systems intended for the purpose of localizing the heat released by a fire to the immediate fire area, lowering building temperatures, exhausting smoke, and improving accessibility for fire fighting personnel to permit close approach and direct action against the fire.

The advantages or disadvantages of venting and the conditions under which venting should be provided have not been investigated.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## POWER VENTILATORS FOR SMOKE- CONTROL SYSTEMS CERTIFIED FOR CANADA (ZAXH7)

### USE AND INSTALLATION

This category covers power ventilators for smoke-control systems intended for installation in buildings in accordance with ANSI/NFPA 92A, "Smoke-Control Systems Utilizing Barriers and Pressure Differences," and ANSI/NFPA 92B, "Smoke Management Systems in Malls, Atria, and Large Spaces."

**VENTS, SMOKE AND HEAT CERTIFIED FOR CANADA  
(ZAQR7)**

790

–Continued

These ventilators have been investigated with respect to their operation during exposure to elevated temperatures. Information regarding the duration of the exposure and the temperature to which the ventilator has been subjected is marked on the product and indicated in the individual certifications.

Power ventilators for smoke-control systems have not been investigated as being suitable for any specific building design, nor has their effectiveness in controlling the flow of smoke been determined. The performance of these products is subject to the conditions of installation; therefore, the Authority Having Jurisdiction should be consulted prior to installation.

These power ventilators are intended to be connected to and controlled by smoke-control system equipment (see UUKL7).

**PRODUCT IDENTITY**

The following product identity appears on the product:

Power Ventilator for Smoke-control Systems

**ADDITIONAL INFORMATION**

For additional information, see Vents, Smoke and Heat Certified for Canada (ZAQR7) and Building Materials Certified for Canada (AABM7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 113, "Fans and Ventilators," and ULC/ORD-C793, "Guide for the Investigation of Automatically Operated Smoke and Heat Roof Vents."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator for Smoke Control Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ROOF VENTS, AUTOMATICALLY  
OPERATED CERTIFIED FOR CANADA  
(ZBDZ7)**

**GENERAL**

This category covers automatically operated smoke and heat roof vents consisting of (1) fusible-link-actuated type having a body frame, one or more damper panels and hatches, and automatic operating mechanism, or (2) plastic-dome type. The vents may be operated manually and/or automatically in the event of fire. Automatic operation does not depend on electrical power or other energy sources that may be interrupted during a fire.

These vents automatically operate by the use of a plastic dome shrinking and falling out of place due to fire exposure. The temperature of operation of the plastic dome-type vents is indicated in the individual certifications.

An optional automatically operated smoke and heat plenum vent can be used as an accessory to a certified door-type automatically operated roof vent for smoke and heat.

Smoke and heat roof vents provided with plastic domes or plastic damper panels are either designed in a manner that flying brands would not be likely to lodge on them, or are protected by a steel wire screen.

For information concerning the spacing of vents and venting ratios, refer to ANSI/NFPA 204M, "Guide for Smoke and Heat Venting."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Automatically Operated Plenum Vent  
Automatically Operated Roof Vent

**ADDITIONAL INFORMATION**

For additional information, see Vents, Smoke and Heat Certified for Canada (ZAQR7) and Building Materials Certified for Canada (AABM7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C793 (1973), "Guide for the Investigation of Automatically Operated Smoke and Heat Roof Vents."

**UL MARK**

**VENTS, SMOKE AND HEAT CERTIFIED FOR CANADA (ZAQR7)**

–Continued

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELECTRICAL INDUSTRIAL  
VIBRATORS FOR USE IN  
HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (ZBRX7)**

**GENERAL**

This category covers devices designed to produce controlled vibration by electromagnetic means or motor rotor eccentrics, and that have provisions for mounting to impart the vibrating motion to industrial material-handling equipment, such as sieves and hoppers.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Electric Industrial Vibrator for Use in Hazardous Locations  
Industrial Vibrator for Use in Hazardous Locations  
Industrial Vibrator-Motor for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (2011), "Electric Motors and Generators for Use in Hazardous (Classified) Locations."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Industrial Vibrator for Hazardous Locations," "Industrial Vibrator for Hazardous Locations" or "Industrial Vibrator-Motor for Hazardous Locations."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## VIDEO AND AUDIO EQUIPMENT, PROFESSIONAL CERTIFIED FOR CANADA (ZCBy7)

### USE AND INSTALLATION

This category covers video and audio monitoring, processing, receiving, recording, and reproducing equipment and accessories intended for use and maintenance by technically trained professional personnel in broadcast and recording studios, remote field locations, head end facilities or similar controlled access locations.

Many of these units and systems require special installation such as a separate transformer, power supply, special grounding methods, special mounting, special cable construction, interconnection between units by means of one or more of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Such features are covered in the manufacturer's installation instructions.

Information concerning field-wiring connections, mounting location, mounting method, clearances, servicing, and the like are marked on the unit or specified in instructions accompanying the unit.

### PRODUCT TYPES

Professional video and audio equipment includes video and audio tape recorders, editing, processing and amplification equipment, signal transmission equipment, television cameras, and video monitors, and the like.

Accessory equipment includes wall-mounting brackets, console enclosures, battery packs, and racks intended for use with professional video and audio equipment are also covered under this category.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Professional Audio Equipment
- Professional Video Equipment
- Professional Video Product

Other product identities may be used as shown in the individual certifications, preceded by the words "Professional" or "Professional-use."

### RELATED PRODUCTS

For video tape recorders, video cameras and related accessories intended for household or commercial use, see Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7).

For television receivers, commercial and household video monitors and video products incorporating a cathode ray tube display, see Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7).

For household audio tape recorders and players, and related accessories, see Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7). For commercial audio and radio equipment, systems and accessories, see Commercial Audio and Radio Equipment, Systems and Accessories Certified for Canada (AZJX7) and also Audio/Video Apparatus Certified for Canada (AZSQ7). For commercial phonographs, tape playing and recording equipment, see Commercial Phonographs, Tape Playing and Recording Appliances and Accessories Certified for Canada (AZQW7) and Audio/Video Apparatus Certified for Canada (AZSQ7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, "Audio, Video, and Similar Electronic Equipment," CAN/CSA-C22.2 No. 60950 or 60950-1, "Safety of Information Technology Equipment," or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus - Safety Requirements."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Professional Video Equipment," "Professional Audio Equipment" or "Professional Video Product," or the specific product name (prefixed by "Professional" or "Professional Use") as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WASHING MACHINES CERTIFIED FOR CANADA (ZCTT7)

### USE AND INSTALLATION

This category covers washing machines and combination washer-dryers tested with water as the cleaning liquid. Unless specifically marked, these products are intended for open type installations, which do not include stacking of units or locating in closets, alcoves, or other confined areas.

These products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Motor-overcurrent protection is included in motor-operated combination washer-dryers if adequate protection would not be provided by the branch circuits to which they would properly be connected.

The normal use of a combination washer-dryer may create a large volume of humid air that may be vented to the room interior. Unless the appliance is properly oriented this moisture could affect electrical wiring or other electrical devices in the vicinity.

Provision should be made for the periodic removal of accumulation of lint that might result from normal operation of a combination washer-dryer.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the CEC must be observed in installation or use, the necessary special instructions are provided on or with the equipment. An individual branch circuit should be provided for each combination washer-dryer.

Electrically operated washing machines employing wringers are investigated from the standpoint of personal injury as well as electrical hazards. All such devices are required to comply with safety requirements designed to reduce the likelihood of accidents. All wringers are provided with a readily accessible release mechanism, clearly marked to indicate its function.

### REBUILT PRODUCTS

This category also covers washing machines, other than combination washer-dryers, that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt washing machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt washing machines are subject to the same requirements as new washing machines.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Washer
- Washing Machine

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

### RELATED PRODUCTS

For electric clothes dryers, see Clothes Dryers Certified for Canada (KMEX7).

For dryers other than electrically heated types, see Dryers Certified for Canada (LEFZ7), Gas-fired Clothes Dryers, Type 1 Certified for Canada (LETA7) and Gas-fired Clothes Dryers, Type 2 Certified for Canada (LETX7).

Products Verified for energy efficiency are covered under Clothes Washers, Household Verified for Energy Efficiency (ZZSR).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 169, "Electric Clothes Washing Machines and Extractors."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Washing Machine" or "Washer," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WASTE DISPOSERS CERTIFIED FOR CANADA (ZDHR7)

### USE AND INSTALLATION

This category covers waste disposers intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Commercial waste disposers, because of the volume of material handled and the manner in which they are utilized, do not necessarily incorporate the safeguards which are a part of the household type. Commercial units are intended to be utilized only by competent personnel who are fully instructed concerning the hazards involved.

### PRODUCT IDENTITY

The following product identity appears on the product:

Waste Disposer

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waste Disposer," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WASTE DISPOSERS, PULPER TYPE CERTIFIED FOR CANADA (ZDIB7)

### GENERAL

This category covers commercial pulper-type waste disposers that are intended to grind food waste, food-service products such as paper, cardboard, plastic utensils and wrapping materials, and general office waste.

The waste materials are ground in a chamber supplied with running water to produce a slurry, which is then conveyed to a waterpress assembly by an auger-type drive. Excess water is pressed out of the pulpy waste, and the waste water is discharged into a sanitary drain or recycled back to the grinding chamber. The de-watered pulp is disposed of in a waste container.

### PRODUCT IDENTITY

The following product identity appears on the product:

Pulper-type Waste Disposer

Other product identities may be used as shown in the individual certifications.

—Continued

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pulper-Type Waste Disposer," or other appropriate product name as shown in the individual Listing.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WASTE DISPOSERS, SINK MOUNTED CERTIFIED FOR CANADA (ZDII7)

### USE

This category includes waste disposers for household or commercial use, which are intended to convert primarily organic types of waste material to a form which can be accommodated by the soil pipe attached to plumbing systems.

### PRODUCT IDENTITY

The following product identity appears on the product:

Waste Disposer

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waste Disposer," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WATER SOFTENERS, DEMINERALIZERS AND WATER TREATMENT UNITS CERTIFIED FOR CANADA (ZDUZ7)

### USE AND INSTALLATION

This category covers water softeners, demineralizers, pipe descaling systems, and other water treatment units and control assemblies rated 300 v maximum. It includes products employing the following or a combination of the following water treatment methods: cation exchange, ozone generation, filtering, reverse osmosis, ultraviolet radiation, and ionization. These products are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

This category does not cover the aesthetic or health effects of the water treatment technology.

Products intended for use outdoors are marked "Suitable for Outdoor Use."

Industrial equipment is intended for permanent connection to the power supply.

Control assemblies include all switches, valves, etc., necessary for regeneration, but do not include connecting pipes or tanks.

Care should be taken during installation to consider possible cross-contamination of the water supply due to low pressure or reverse action. Authorities Having Jurisdiction should be consulted for plumbing requirements for sanitation and plumbing connections.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Water Clarifier
- Water Demineralizer
- Water Softener

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Equipment used in spas or swimming pools is covered under Water Treatment Equipment Certified for Canada (WDLC7).

Aquarium equipment is covered under Aquarium Equipment Certified for Canada (AVRR7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Water Softener," "Water Demineralizer" or "Water Clarifier," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WATER TREATMENT UNITS EMPLOYING OZONE GENERATION CERTIFIED FOR CANADA (ZEIX7)

### GENERAL

This category covers water treatment equipment employing ozone generation, investigated with respect to mechanical, electric shock, and fire hazards only.

The methods for controlling ozone release or the effectiveness of the water treatment have not been investigated.

—Continued

### PRODUCT IDENTITY

The following product identity appears on the product:  
Ozone Generator

### RELATED PRODUCTS

Water treatment units employing ozone generators and intended for use only with swimming pools, spas and hot tubs are covered under Ozone Generators Certified for Canada (WCKA7) or Water Treatment Equipment Certified for Canada (WDLC7).

Aquarium equipment is covered under Aquarium Equipment Certified for Canada (AVRR7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

### AS TO RISK OF ELECTRIC SHOCK, FIRE AND MECHANICAL INJURY ONLY

#### Alternate UL Mark

### UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

### OZONE GENERATOR WITH RESPECT TO RISK OF ELECTRIC SHOCK, FIRE AND MECHANICAL INJURY ONLY

#### Control No.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WELDING MACHINES CERTIFIED FOR CANADA (ZGLZ7)

### USE

This category covers portable and stationary transformer-type arc-welding equipment rated 600 V or less. This equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The welding machines are designed to be operated at rated input and output. They are occasionally operated under heavy overloads. The nature of the service for which they are intended requires frequent loading and unloading so their duty under heavy overload is of an intermittent nature. This overload is somewhat analogous to the inherent overload capacity of motors and transformers, and it is not covered at present by any definite requirements and is not investigated by UL. However, the abuse of this excess current capacity — the overloading of a welding machine, except for relatively short periods of time may be hazardous and should receive careful consideration by all those concerned.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Welding Machine

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 60 (1990), "Arc-Welding Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Machine," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WELDING MACHINE ACCESSORIES  
CERTIFIED FOR CANADA (ZGPU7)**

**USE**

This category covers products designed to be used with certified arc-welding machines, such as wire feeders and vacuum units for welding-smoke removal. This category also covers arc-cutting equipment, such as arc-cutting power supplies, for industrial applications. These products are intended for installation and use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**PRODUCT IDENTITY**

The following product identity appears on the product:

Welding Machine Accessory

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Welding Machines Certified for Canada (ZGLZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 60, "Arc-Welding Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Machine Accessory," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WHEELCHAIR LIFTS AND STAIRWAY  
CHAIRLIFTS CERTIFIED FOR  
CANADA (ZGUW7)**

**USE**

This category covers permanently installed vertical and inclined wheelchair lifts and inclined stairway chairlifts for use by the physically disabled in both commercial and private residence locations.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Stairway Chairlift  
Wheelchair Lift

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Building Materials Certified for Canada (AABM7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-B355 (1986), "Elevating Devices for the Handicapped," and CAN/CSA-B613 (1987), "Elevating Devices for the Handicapped in Private Residences."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wheelchair Lift" or "Stairway Chairlift," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WIRE CERTIFIED FOR CANADA  
(ZGZX7)**

**FLEXIBLE CORD CERTIFIED FOR CANADA  
(ZJCZ7)**

**GENERAL**

This category covers flexible cord constructed and certified for use in accordance with Section 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). All conductors are stranded copper.

**Voltage Rating**

Types TX and PXT are rated 125 V.  
Types E (12 - 2 AWG), ETT (12 - 2 AWG), ETP (12 - 2 AWG), EO (12 - 2 AWG), CXWT (14 - 12 AWG), S, SO, SOO, SOW, SOOW, ST, STO, STOO, STW, STOW and STOOW are rated 600 V.

Types E (20 - 12 AWG), ETT (20 - 12 AWG), ETP (20 - 12 AWG), EO (20 - 12 AWG), CXWT (18 - 16 AWG), SV, SVO, SVOO, SJ, SJO, SJOO, SJOW, SJOOW, SPT-1, SPT-1W, SPT-2, SPT-2W, SPT-3, NISPT-1, NISPT-2, SVT, SVTO, SVTOO, SJT, SJTO, SJTOO, SJTW, SJTOW, SJTOOW, TPT, TST, DRT, PXWT HPN, HSI, HSJO, HSJOW, HSJOO and HSJOOW are rated 300 V.

Types E, EO, ETT and ETP in 12 AWG are rated 300 or 600 V, depending on insulation thickness.

**Temperature Rating**

Types S, SO, SOO, SOW, SOOW, SJ, SJO, SJOO, SJOW, SJOOW, SPT-1, SPT-1W, SPT-2, SPT-2W, SPT-3, NISPT-1, NISPT-2, SVT, SVTO, SVTOO, SJT, SJTO, SJTOO, SJTW, SJTOW, SJTOOW, ST, STO, STOO, STW, STOW and STOOW are rated 60, 75, 90 or 105°C.

Types SV, SVO and SVOO are rated 60, 75 or 90°C.

Type DRT is rated 60 or 90°C.

Types TX, PXT, TPT, TST, E, EO, ETT, CXWT, and PXWT are rated 60°C.

Types HPN, HSI, HSJO, HSJOW, HSJOO and HSJOOW are rated 90 or 105°C.

**Cord Types or Characteristics Not Covered by the CEC**

Type TX is a twisted assembly of two conductors intended for use in decorative-lighting equipment.

Types HSJOW and HSJOOW are outdoor-use versions of types HSJO and HSJOO, respectively.

**PRODUCT MARKINGS**

"VW-1" indicates that the finished cord and the individual conductors comply with a vertical flame test.

"FT-1" indicates that only the finished cord complies with a vertical flame test.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Flexible Cord

**ADDITIONAL INFORMATION**

–Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 49, “Flexible Cords and Cables.”

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

**UL MARK**

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flexible Cord.”

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**GAS-TUBE-SIGN AND IGNITION CABLE CERTIFIED FOR CANADA (ZJQX7)**

**GENERAL**

This category covers gas-tube-sign and ignition cable certified as single conductor Type GTO-5 (5,000 V), GTO-10 (10,000 V) or GTO-15 (15,000 V) intended for use with gas-tube systems for signs, outline lighting and interior lighting, and for use also in the ignition systems of oil- and gas-burning equipment at voltages up to 15,000 V.

Ignition cable is certified as single conductor Type ICS for use in the ignition systems of oil- and gas-burning equipment at voltages up to 10,000 V.

The letter “L” is used as a suffix in combination with any of the preceding Type GTO letter designations to indicate that an outer covering of lead has been applied.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Gas-Tube-Sign and Ignition Aluminum Cable (for cable containing aluminum conductors)

Gas-Tube-Sign and Ignition Cable (for cable containing copper conductors)

**ADDITIONAL INFORMATION**

For conductor terminal information and additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 127, “Equipment and Lead Wires.”

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The UL symbol on the product and the Listing Mark of UL on the attached tag, the coil, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” and the product name as appropriate: A cable containing a copper conductor has the product name “Gas Tube Sign and Ignition

–Continued

Cable”; a cable containing an aluminum conductor has the product name “Gas Tube Sign and Ignition Aluminum Cable.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PROCESSED WIRE CERTIFIED FOR CANADA (ZKLU7)**

**GENERAL**

This category covers Listed wire, flexible cord and cable, and Classified cable that has been subjected to processing subsequent to Labeling and identified as either processed wire or respooled.

Listed wire, flexible cord and cable identified as “Listed Processed Wire” has been cut into certain lengths from which the insulation may be stripped from one or both ends. The stripped ends may be soldered or tinned and may have simple terminals of the eyelet, ring, open spade or quick-connect type attached by crimping, soldering or welding.

These lengths may be packaged for further processing. Single lengths of Listed processed wire and cable may be paralleled with other insulated wire and cable and may be held together by an open binder.

Products identified as “Listed Processed Wire – Respooled” are single, continuous lengths of wire, flexible cord or cable cut from a longer length and coiled or placed on a spool or reel.

Products identified as “Classified Processed Wire” has been cut into certain lengths from which the insulation may be stripped from one or both ends. These lengths may be packaged for further processing. Single lengths of Classified processed wire may be paralleled with other insulated cable and may be held together by an open binder.

Products identified as “Classified Processed Wire – Respooled” are single, continuous lengths of Classified cable cut from a long length and coiled or placed on a spool or reel.

The tag markings from the wire spooler reel (e.g., voltage, temperature, insulation thickness, usage) are provided on the processed wire tag attached to the product.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Processed Wire

Processed Wire – Respooled

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 49, “Flexible Cords and Cables,” CSA-C22.2 No. 75, “Thermoplastic-Insulated Wires and Cables,” or CSA-C22.2 No. 38, “Thermoset Insulated Wires and Cables,” and CAN/CSA-C22.2 No. 65, “Wire Connectors,” or CSA-C22.2 No. 188, “Splicing Wire and Cable Connectors.”

**UL MARK**

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing or Classification Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing or Classification and Follow-Up Service. The Listing or Classification Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED” or “CLASSIFIED” respectively, a control number, and the product name “Processed Wire” or “Processed Wire – Respooled.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**THERMOSET-INSULATED WIRE CERTIFIED FOR CANADA (ZKST7)**

**GENERAL**

This category covers thermoset-insulated wire intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The wire tabulated below is rated 600 or 1000 V, except that Types RW75, R90 and RW90 in conductor sizes 8 AWG and larger may be rated up to 5000 V.

**PRODUCT MARKINGS**

The wire is designated as follows:

**RW75, RWU75** — Indicates a single-conductor thermoset-insulated construction having ratings of 75°C wet or dry. Type RW75 may also be cabled together with one or more Type RW75 conductors and jacketed.

**RW90, RWU90** — Indicates a single-conductor thermoset-insulated construction having ratings of 90°C wet or dry. Type RW90 may also be cabled together with one or more Type RW90 conductors and jacketed.

**R90** — Indicates a single-conductor thermoset-insulated construction having a rating of 90°C dry. Type R90 may also be cabled together with one or more Type R90 conductors and jacketed.

The above types may have the following optional ratings marked on the surface of the wire, where applicable:

The voltage rating, if other than 600 V.

"MINUS 40 C" — indicates that it can be handled down to -40°C.

"ALUMINUM" (or "ALUM") — indicates aluminum conductor.

"FTI" — indicates the wire meets the requirements of the FT1 Flame Test.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Insulated Aluminum Wire (for thermoset-insulated wire that contains aluminum conductors)

Insulated Wire (for thermoset-insulated wire that contains copper conductors)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 38, "Thermoset-Insulated Wires and Cables."

**UL MARK**

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoset-insulated wire that contains copper conductors has the product name "Insulated Wire"; thermoset-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**THERMOPLASTIC-INSULATED WIRE CERTIFIED FOR CANADA (ZLGR7)**

**USE**

This category covers thermoplastic-insulated wire and cable rated 600 V and intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**PRODUCT TYPES**

The wire and cable is designated as follows:

**TW, TWU** — Indicates a single-conductor, thermoplastic-insulated construction having ratings of 60°C wet or dry.

**TW-75, TWU-75** — Indicates a single-conductor, thermoplastic-insulated construction having ratings of 75°C wet or dry.

**T-90 NYLON** — Indicates a single-conductor, thermoplastic-insulated, nylon-jacketed construction having a rating of 90°C dry.

—Continued

**TWN75** — Indicates a single-conductor, thermoplastic-insulated, nylon-jacketed construction having a rating of 75°C wet or dry.

**SUBMERSIBLE PUMP CABLE** — Indicates a 2, 3 or 4 conductor cable, with or without an overall jacket and bonding conductor, suitable for handling at -40°C.

**PRODUCT MARKINGS**

The above types may have the following ratings marked on the surface of the wire, where applicable:

"OIL RESISTANT" or "PR" (multinational marking) — Indicates 60°C oil resistance.

"MINUS 40C" — Indicates that it can be handled at temperatures down to -40°C.

"NYLON" — Indicates use of a nylon jacket (Types TW, TWU, TW-75, TWN75 and TWU-75 only).

"GASOLINE RESISTANT" or "GR" (multinational marking) — Indicates resistance to gasoline at ambient temperatures.

"ALUMINUM" or "ALUM" — Indicates aluminum conductor.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Insulated Aluminum Wire (for thermoplastic-insulated wire that contains aluminum conductors)

Insulated Wire (for thermoplastic-insulated wire that contains copper conductors)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 75, "Thermoplastic-Insulated Wires and Cables."

**UL MARK**

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulated Wire" for products containing copper conductors, or "Insulated Aluminum Wire" for products containing aluminum conductors.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**UNDERGROUND LOW-ENERGY CIRCUIT CABLE CERTIFIED FOR CANADA (ZLIA7)**

**USE**

This category covers wire and cable for use as extra-low-voltage control circuits (LVT) in wire sizes 22 to 16 AWG, as extra-low-voltage control cable (ELC) in wire sizes 26 to 16 AWG, in golf course sprinkler systems (GCS) or lawn sprinkler systems (LSS) in wire sizes 20 to 2 AWG, and low-voltage landscape lighting (LVLL) or underground low-energy circuits (ULEC) in wire sizes 18 to 8 AWG, intended for operation at no more than 30 V and 60°C, and as low-energy control cable (LECC) in wire size 18 AWG, intended for operation at no more than 30 V and 105°C.

**PRODUCT MARKINGS**

The wire is marked with the Listee's name, trade name or file number, type designation, conductor size, voltage rating and temperature rating (LECC only).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Lawn Sprinkler System Wire

LSS Wire

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

–Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 35, “Extra-low-voltage Control Circuit Cable, Low-energy Control Cable, and Extra-low-voltage Control Cable.”

**UL MARK**

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the specific name or type designation of the wire, such as “Lawn Sprinkler System Wire” (or “LSS Wire”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WELDING CABLE CERTIFIED FOR CANADA (ZMAY7)**

**USE AND INSTALLATION**

This category covers welding cable, which is a single-conductor cable intended for use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

This cable is rated 60, 75, 90 or 105°C and is used in the secondary circuit of electric welders. The cable has no voltage rating. The cable is flame rated minimum FT2.

Welding cable employs flexible stranded copper conductors, 8 AWG – 300 kcmil, the individual strands of which are 34, 32 or 30 AWG.

**PRODUCT MARKINGS**

The temperature and flame ratings are identified by tag marking and by printing on the surface of the insulation. Cable is rated 60°C unless marked otherwise.

Cable marked “Oil Resistant” is suitable for exposure to oil at 60°C.

This cable may be marked “-40C.” If so marked, the cable complies with a cold bend test and a low-temperature impact test at -40°C. Cable marked “-50C,” “-60C” or “-70C” complies with a cold bend test and a low-temperature impact test at -50, -60 or -70°C, as applicable.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Welding Cable

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 96, “Portable Power Cables.”

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The UL symbol on the product and the Listing Mark of UL on the attached tag, the coil, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Welding Cable.”

\*\*\*\*\*

–Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WIRE, SPECIAL PURPOSE CERTIFIED FOR CANADA (ZMHX7)**

**GENERAL**

This category covers constructions of wire and cable, each intended for the particular application marked on the product, tag, carton or reel. Included in this category are: Golf Course Sprinkler (GCS) Wire, Lawn Sprinkler System (LSS) Wire, Low Voltage Landscape Lighting (LVLL) Wire, and Underground Low Energy Circuit (ULEC) Cable, all rated 60°C, 30 V.

**PRODUCT MARKINGS**

Information regarding installation, ampacity, etc., where appropriate, is included in the marking found on the tag, reel or carton.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Golf Course Sprinkler Wire
- GCS Wire
- Lawn Sprinkler System Wire
- LSS Wire
- Low-voltage Landscape Lighting Wire
- LVLL Wire
- Underground Low-energy-circuit Cable
- ULEC Cable

The name of the category “Special Purpose Wire Certified for Canada” is not used.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in CSA Technical Information Letter No. J-17C, “Interim Certification Requirements for Golf Course Sprinkler (GCS) or Lawn Sprinkler System (LSS) Wire and Cable, for Low Voltage Landscape Lighting (LVLL) Wire and Cable, and for Underground Low Energy Circuits (ULEC).”

**UL MARK**

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the attached tag, the reel or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the specific name or type designation of the wire, such as “Lawn Sprinkler System Wire” (or “LSS Wire”). The name of the category “Special Purpose Wire Certified for Canada” is not used.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WIRE CONNECTORS CERTIFIED FOR CANADA (ZMKQ7)

### CRIMP TOOLS CERTIFIED FOR USE WITH SPECIFIED WIRE CONNECTORS CERTIFIED FOR CANADA (ZMLS7)

#### USE

This category covers crimp tools suitable for use with specific certified Grounding and Bonding Equipment Certified for Canada (KDER7), Electrical Quick-connect Terminals Certified for Canada (RFVW7) and Wire Connectors and Soldering Lugs Certified for Canada (ZMVV7) in accordance with the Certification Mark and a compatibility list provided with the tool.

The inside cover of the tool storage case or a permanently attached label to the tool itself contains a compatibility list which tabulates the company name and catalog number of the crimp tool and the company name, catalog number, wire size and number of crimps of the applicable certified grounding and bonding connectors, quick-connect terminals, and wire connectors for which the crimp tool has been investigated.

#### PRODUCT IDENTITY

The following product identity appears on the product:

Crimp Tool

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 41 (2013), "Grounding and Bonding Equipment," CSA-C22.2 No. 153 (2009), "Electrical Quick-Connect Terminals," CSA-C22.2 No. 188 (2013), "Splicing Wire Connectors," and/or CSA-C22.2 No. 65 (2013), "Wire Connectors."

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

#### FOR USE WITH UL-CERTIFIED \* IDENTIFIED IN THE INSTRUCTIONS PROVIDED

\* One or more of the following: GROUNDING AND BONDING CONNECTORS, QUICK-CONNECT TERMINALS, WIRE CONNECTORS

Alternate UL Mark

#### UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

#### CRIMP TOOL FOR USE WITH UL LISTED \* IDENTIFIED IN THE INSTRUCTIONS PROVIDED Control No.

\* One or more of the following: GROUNDING AND BONDING CONNECTORS, QUICK CONNECT TERMINALS, WIRE CONNECTORS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## MULTI-POLE SPLICING WIRE CONNECTORS CERTIFIED FOR CANADA (ZMNA7)

#### USE AND INSTALLATION

This category covers insulated multi-pole mating and nonmating splicing wire connectors intended for field wiring and factory wiring. Multi-pole splicing wire connectors are intended to facilitate the connection of hard-wired utilization equipment (e.g., prefabricated wiring assemblies, ceiling fans, smoke detectors, lighting products) to the branch-circuit conductors of buildings. They are multi-polarity devices used to connect to two or more branch-circuit conductors.

This category also covers luminaire disconnects, which are intended to be used:

—Continued

1. internal to luminaires to facilitate replacement of the ballast, or
2. for LED retrofit applications.

Luminaire disconnects are not intended to be directly attached to the branch-circuit conductors for the purpose of interrupting (making and breaking) branch circuits other than those for the luminaire associated with the disconnect. Luminaire disconnects may have one or more conductors per contact.

Mating connectors consist of two separable mating members (usually consisting of a male/female connection) that can be readily engaged or disengaged without the use of tools. They are provided with a latching mechanism and are physically keyed to maintain correct polarity. Luminaire (ballast) disconnects need not be provided with a latch or locking mechanism, and have not been investigated as latching- or locking-type devices.

Nonmating connectors are single devices used to facilitate the direct connection to the branch-circuit conductors.

Multi-pole splicing wire connectors are not intended to be permanently mounted. They are floating in an outlet, junction box or within a piece of equipment, such as a luminaire.

These wire connectors are suitable for currents not exceeding the ampacity of insulated conductors or the rated ampacity of the connector.

These wire connectors are intended for use in installations covered by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**Reusability** — These connectors have not been investigated for reusability, except for spring-action-type connectors without the one-time-use-only marking.

**Make and break** — These wire connectors have been subjected to 10 operations of making and breaking 150% of current.

**Box fill** — These wire connectors have not been investigated for volume (box fill) and their acceptance in this capacity should be determined by the Authority Having Jurisdiction.

**Use of specific tools** — A specific tool and die used to assemble a multi-pole splicing wire connector to a conductor is identified on the connector, or on or within the unit container of the connector. The identification consists of a catalog or type designation, color coding, die index number, or equivalent means.

**Multiple crimping operations** — The number of crimps necessary to make a connection using the specific tool is identified on the connector, or on or within the unit container of the connector. Absence of information implies a single crimp.

**Conductor strip length** — Multi-pole splicing wire connectors requiring a specific strip length have this information identified on the connector, or on or within the unit container of the connector, on an insulating cover, or on the tool or tool-carrying case.

#### PRODUCT MARKINGS AND RATINGS

**Wire size** — Multi-pole splicing wire connectors are rated for copper conductors only. The wire size or wire range is marked on the connector, or on or within the unit container.

Multi-pole splicing wire connectors have not been investigated for use with aluminum conductors.

**Multiple conductors** — Multi-pole splicing wire connectors generally accommodate a single conductor under each clamping mechanism unless otherwise identified (e.g., the number of conductors located parenthetically in front of the wire size or range). Some connectors may have a single-conductor wire range as well as a second multiple-conductor wire range.

**Wire stranding** — Unless clearly marked "Solid," "SOL," "Stranded" or "STR" for a given wire size, wire range or wire combination, conductors in the range 10–30 AWG are both solid and stranded, and 6–8 AWG are for stranded wire only.

**Stranded conductor Class** — Multi-pole splicing wire connectors are rated for use with stranded Class B concentric, Class B compressed, and Class C concentric copper conductors.

**Strip length** — Multi-pole splicing wire connectors are marked with an insulation strip length for the conductor before assembly to the wire connector.

**Conductor material** — Multi-pole splicing wire connectors are marked "CU" or "Copper Wire Only."

**Ampacity level** — Other than luminaire disconnects, multi-pole splicing wire connectors are suitable for currents not exceeding the ampacity of insulated conductors rated 90°C. Use of higher-temperature-rated conductors is permitted, provided the ampacity levels continue to be based on the 90°C ratings.

**Assigned ampere rating** — A luminaire (ballast) disconnect is marked with its assigned ampere rating on the device or the unit container.

**Luminaire disconnect** — Multi-pole splicing wire connectors are intended to hot disconnect a ballast within a luminaire and are marked "Luminaire Disconnect."

**Insulation temperature rating (maximum operating temperature)** — Insulated multi-pole splicing wire connectors are marked with an insulation temperature rating. Insulated connectors, insulating caps and insulat-

—Continued

ing covers that have an insulation temperature greater than the connector ampacity level are marked “Temperature Rating of Insulating Material °C.”

**Voltage rating** — Insulated multi-pole splicing wire connectors are marked with a voltage rating on the device or the unit container.

**Flammability rating** — Insulated multi-pole splicing wire connectors may be additionally marked with a flammability rating of V-2, V-1, V-0, VTM-2, VTM-1 or VTM-0.

**Assigned torque rating** — Multi-pole splicing wire connectors may be marked with an assigned torque value for which the connector was investigated.

**Circuit identification** — Unless provided with color-coded integral lead wires, multi-pole splicing wire connectors are marked to identify each terminal with the intended conductor polarity (e.g., G, B, W, L1, L2). Color-coded integral lead wires may also be used for circuit identification. The ground terminal, if provided, is marked with the international symbol for ground or with “G,” “GR,” “GND,” “Ground,” “Grounding,” or similar marking. An integral lead wire for grounding is color-coded green.

**One-time use** — Multi-pole splicing wire connectors employing spring-action-type terminations and intended for one-time use only are marked “One-Time Use Only - Do Not Reuse,” or the equivalent.

**Limited current interruption** — Mating-type multi-pole splicing wire connectors are marked “Limited Number of Current Interrupting Operations,” or the equivalent, to identify that the device has been investigated for a maximum of 10 make-and-break current operations.

**Installation instructions** — Multi-pole splicing wire connectors are marked “To be sold only with installation instructions.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Luminaire Disconnect

Multi-pole Splicing Wire Connector

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 2459 (2008), “Insulated Multi-Pole Splicing Wire Connectors.”

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Multi-pole Splicing Wire Connector” or “Luminaire Disconnect,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WIRE CONNECTORS AND SOLDERING LUGS CERTIFIED FOR CANADA (ZMVV7)**

**USE**

This category covers single-polarity wire connectors for use with all alloys of copper or aluminum conductors, or both, for the purpose of providing contact between current-carrying parts. Wire connectors may be uninsulated, supplied with integral insulation, or separable insulation in the form of insulating caps or covers.

**Terminal connectors** establish a connection between one or more conductors to a terminal plate or stud, or to any similar device by means of mechanical pressure. They are fixed in position.

—Continued

**Splicing wire connectors** establish a connection between two or more conductors by means of mechanical pressure and are not intended to be permanently mounted. They are floating, such as a twist-on connector in an outlet box.

**Insulating caps or covers** are for general use when installed on specific connectors. Information covering use of the caps or cover on specific connectors appears on the unit containers in which the caps or covers are packaged.

**Soldering lugs** are terminal connectors designed for attachment to a conductor by means of solder (nonpressure).

**Reusability** — Wire connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

**Direct burial** — Wire connectors have not been investigated for direct burial. See **RELATED PRODUCTS** below.

**Use in service equipment** — Where wire connectors are used as a part of service equipment, dead-front switchboards, panelboards, meter sockets, enclosed switches, circuit breakers, etc., reference should be made to the General Information for those categories concerning the use of the wire connectors. When wire connectors suitable for use with aluminum conductors are employed in such equipment, the suitability for wiring with aluminum conductors of such equipment will be indicated by a marking on the equipment and is independent of any marking on the wire connector.

**INSTALLATION**

Wire connectors are intended for use in installations covered by CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC), and should be installed using the prescribed manufacturer’s installation instructions.

Stacking of connectors (multiple connectors assembled using a single bolt, nut and washers) may be permitted where mechanical interference is reduced or eliminated with the use of offset tangs, stacking adapters, and the like. The surface contact area of the mounting tang should make complete contact with the mounting surface or the previously stacked connector tang.

**PRODUCT MARKINGS AND RATINGS**

**Wire size and wire combinations** — Wire connectors are rated for 30 AWG or larger copper conductors and/or 12 AWG or larger aluminum conductors. The wire size, wire range or wire combinations are marked on the connector, or on or within the unit container. Wire connectors additionally investigated for metric-size conductors are marked with the metric wire sizes expressed in mm<sup>2</sup>.

**Multiple conductors** — Connectors generally accommodate a single conductor under a clamping mechanism unless otherwise identified, such as with the number of conductors located parenthetically in front of the wire size or range. Some connectors may have a single-conductor wire range as well as a second multiple-conductor wire range. Some connectors, such as twist-on connectors, will have multiple conductors expressed in a list of wire combinations.

**Parallel conductors** — Connectors intended for paralleling of conductors are intended to be used in accordance with Section 12-108 of the CEC. Parallel connectors may have multiple-conductor clamping mechanisms, each accepting a single conductor or a singular clamping mechanism accepting multiple conductors.

**Wire stranding** — Unless clearly marked “Solid,” “SOL,” “Stranded” or “STR” for a given wire size, wire range or wire combination, conductors in the range 30–10 AWG are both solid and stranded, and 8 AWG and larger are for stranded wire only. Connectors additionally rated for metric conductor sizes may be marked with the letter “r” for rigid solid and rigid stranded conductors, or the letter “f” for flexible conductors.

**Stranded conductor Class** — Connectors rated for use with stranded conductors are for the following strand configurations:

- Aluminum – Class B concentric, compressed or compact, and SIW (single input wire)
- Copper – Class B concentric or compressed, Class B compact (sizes 8 AWG and larger) and Class C concentric

Wire connectors additionally rated for use with compact copper conductors are additionally marked “For compact-stranded copper conductors” or equivalent on the connector, or on or within the unit container.

Wire connectors additionally rated for use with other Class conductors, such as Class M, are marked on the connector, or on or within the unit container or information sheet within the unit container with the additional class designation and number of strands.

**Strip length** — Some connectors or their unit containers are marked with a strip length for the conductor before assembly to the wire connector.

**Conductor material** — Wire connectors or the unit containers are marked with the type of conductor material(s) as follows:

—Continued

Marking (or equivalent)	For Use With
"CU"	Copper wire only
"AL"	Aluminum wire only
"AL-CU" or "CU-AL"	Copper to copper, aluminum to aluminum, and copper to aluminum but not intermixed or in direct physical contact
"AL-CU (intermixed - dry locations)"	Copper to copper, aluminum to aluminum, and copper to aluminum intermixed

Except as otherwise noted on or in the shipping carton, copper and aluminum conductors are not intended to be used in direct physical contact in the same connector. A wire connector for securing an aluminum wire in combination with a copper conductor, where physical contact occurs between the wires of different metals, is limited to dry locations only and is marked "AL-CU (intermixed - dry locations)."

**Ampacity level rating:**

- A. **Equipment use** — Equipment wiring requirements may restrict the sizing, ampacity and temperature ratings of connected conductors. Equipment requirements may limit 90°C or higher-rated conductors to 60 or 75°C ampacity in accordance with Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).
- B. **General use** — Connectors rated 75°C are intended for use at ampacities not greater than those for 75°C-rated conductors, and connectors rated 90°C are for use at ampacities not greater than those for 90°C-rated conductors. Connectors may be marked with "75C" or "90C" to represent these levels. Alternatively, these rating levels may be represented by a 7 or 9 associated with the marking "CU," "AL" or "AL-CU," e.g., "AL9," "AL9CU," "AL7CU," "CU7," "CU9." Connectors not marked with an ampacity number 7 or 9 have an assumed level per the following table. Use of higher-temperature-rated conductors is not prohibited, provided the ampacity levels continue to be based on the 75 or 90°C ratings.

Connectors are rated and marked as follows:

Type of Connector	Rated For	Wire Range	Temp Marking	Rating
Terminal (CU body)	CU only	All	Not marked	90
Terminal (AL body)	CU only	All	75 or 90	As marked@
Terminal	AL or AL-CU	All	75 or 90	As marked@
Splicing wire	CU only	30-6	Not marked	90
Splicing wire (CU body)	CU only	4 and larger	Not marked	90
Splicing wire (AL body)	CU only	4 and larger	75 or 90	As marked
Splicing wire	AL or AL-CU	30-6	Not marked	75
Splicing wire	AL or AL-CU	4 and larger	75 or 90	As marked

@ Terminal connectors rated for 6 AWG or smaller conductors may have the markings on the connector, the unit container, or on an information sheet packed in the unit container.

**Insulation temperature rating (maximum operating temperature)** — Insulated connectors, insulating caps and insulating covers have an insulation temperature rating marked on the device or the unit container. Insulated connectors, insulating caps and insulating covers that have an insulation temperature greater than the connector ampacity level rating are marked "Temperature Rating of Insulating Material \_\_\_\_°C."

**Voltage rating** — Uninsulated wire connectors are rated for general use in circuits up through 2000 V. Uninsulated wire connectors may be used in circuits over 2000 V up through 35,000 V where the effects of corona have been investigated in the end-use application. Uninsulated wire connectors are not marked with a voltage rating.

Insulated wire connectors, insulating caps and insulating covers have voltage ratings for which they have been found acceptable. The voltage rating is marked on the device or the unit container and may be stated as "300 volts maximum," "600 volts maximum," or "600 volts maximum building wire, 1000 volts maximum, in signs or luminaires," or equivalent wording.

**Flammability rating** — Insulated connectors and insulating caps and covers may be additionally marked with a flammability rating of V-2 or VTM-2 or better.

**Assigned torque rating** — A connector or its unit container may be marked with an assigned torque value for which the connector was investigated.

**INSTALLATION INSTRUCTIONS**

**Use of specific tools** — A specific tool and die used to assemble a wire connector to a conductor is identified on the connector, or on or within the unit container of the connector. The identification consists of a catalog or type designation, color-coding, die index number, or equivalent means. Color-coding of the crimp barrel is common.

**Multiple crimping operations** — The number of crimps necessary to make a connection using the specific tool is identified on the connector, or

—Continued

on or within the unit container of the connector. Location and number of crimping points is commonly located on the crimp barrel of the connector.

**Conductor strip length** — Wire connectors requiring a specific strip length have this information identified on the connector, on or within the unit container of the connector, on an insulating cover, or on the tool or tool-carrying case. Strip-length marking is optional for some constructions.

**Preliminary preparation of conductor** — Some wire connectors supply instructions for the preliminary preparation of conductors, such as use of conductor termination compound (antioxidant compound) or pre-twisting of conductors, on or within the unit container.

**Pre-twisting** — Some connectors may specify that conductors are to be pre-twisted before assembly onto the connector.

**Conductor termination compound** — Some connectors are shipped pre-filled with conductor termination compound (antioxidant compound). For non-pre-filled connectors, conductor termination compound may be used if recommended by the connector manufacturer as preliminary preparation of the conductor. Wire brushing of the conductor may also be performed if recommended.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Soldering Lug
- Splicing Wire Connector
- Terminal Connector
- Wire Connector

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Sealed wire-connector systems intended for direct burial, below-grade use, or similar damp or wet locations are covered under Sealed Wire-connector Systems Certified for Canada (ZMWQ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 65, "Wire Connectors," and CSA-C22.2 No. 188, "Splicing Wire and Cable Connectors."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Wire Connector," "Soldering Lug," "Terminal Connector," "Splicing Wire Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SEALED WIRE-CONNECTOR SYSTEMS CERTIFIED FOR CANADA (ZMWQ7)**

**USE AND INSTALLATION**

This category covers sealed wire-connector systems intended for wet or damp locations and other installations, such as direct burial, below grade, or above grade where protected from direct exposure to sunlight. These systems may also be used indoors or in dry locations.

Sealed wire-connector systems are intended for use in installations covered by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Sealed wire-connector systems have not been investigated for direct exposure to sunlight. Additional performance considerations to show equivalency to the connected conductors should be considered for UV exposure.

This category covers a complete system or insulating caps, covers, resins, tubing and tapes that are part of the system for use with specific wire connectors where the seal is made at the conductor. Pressure wire connectors may or may not be provided with the system.

–Continued

**CONDUCTOR TYPES**

Sealed wire-connector systems are intended for use with Types USE, RHW, XHHW, RW90 EP, RW90 XLPE or TWU, 30 AWG through 2000 kcmil copper or aluminum conductors with currents not exceeding the ampacity of insulated conductors rated either 75 or 90°C and intended for use at 600 V or less.

When so marked, sealed wire-connector systems may also be intended for use with conductors of single- or multiple-conductor underground feeder cable (Type UF), golf course sprinkler cable, underground low-energy cable, irrigation cable, or other cable with insulation acceptable for direct burial, below grade use, or wet locations.

**PRODUCT MARKINGS AND RATINGS**

Sealed wire-connector systems are marked with the following:

1. catalog number
2. wire range or wire combinations
3. voltage rating
4. operating temperature rating
5. the statement “For Use in Wet or Damp Locations”
6. special conductor types, if applicable

Sealed wire-connector systems are marked with the following:

1. all required wire-connector markings and assembly information (see ZMVV7)
2. complete assembly instructions for the sealed wire-connector system

Sealed wire-connector systems not provided with a wire connector in the same unit container include a statement that the sealed wire-connector system is intended to be used only with certified wire connectors and are marked with one or more of the following:

1. the catalog number of the specific wire connector intended to be used
2. the physical dimensions of a specific wire connector intended to be used, or
3. the minimum and maximum envelope dimensions of any wire connector intended to be used

Some sealed wire-connector systems may additionally be marked “Direct Burial,” “Raintight,” “Watertight” or “Submersible,” as applicable.

All markings on located on:

1. all parts that comprise the system,
2. the packaging carton,
3. the unit container, or
4. the information sheet provided in each unit container.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Sealed Wire-connector System

**RELATED PRODUCTS**

See Wire Connectors and Soldering Lugs Certified for Canada (ZMVV7) for additional information on wire connectors used within a sealed wire-connector system.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 198.2 (2005), “Sealed Wire Connector Systems.”

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Sealed Wire Connector System.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WIRED CABINETS CERTIFIED FOR CANADA (ZNXR7)**

**USE AND INSTALLATION**

This category covers wired cabinets, such as illuminated and nonilluminated jewelry, display and showcases.

Wired cabinets may be permanently connected or cord-and-plug connected. Cord-and-plug-connected wired cabinets are limited to groups of not more than six sections coupled together by flexible cord and locking connectors, with one of the wired-cabinet sections connected by a flexible cord and plug cap rated 15 or 20 A to a permanently installed receptacle in the building structure.

Permanently wired cabinets may be provided with convenience outlets for connection of equipment, such as POS (point-of-sale) equipment. Cord-and-plug-connected wired cabinets may have receptacles installed for connection of factory-installed equipment, such as luminaires. These receptacles are not intended for powering additional equipment and are occupied by factory-installed equipment.

Wired cabinets may be divided into sections when of such size that shipment as one cabinet is impractical. Each major subassembly bears a “Wired Cabinet Section” Certification Mark. Each group of wired-cabinet sections are provided with installation instructions describing or illustrating the proper assembly and electrical connection of the sections when applicable.

These products are intended to be installed in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Wired Cabinet

Wired Cabinet Section \_\_\_ of \_\_\_ (the first blank identifies the number of the section, and the second blank identifies the total number of sections that constitute the complete wired cabinet)

**RELATED PRODUCTS**

Other commercial display cabinets are covered under Commercial Displays Certified for Canada (IYMX7).

Cabinets provided with or designed for use with refrigeration equipment are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated Certified for Canada (AAVU7).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, Internet communication stands and the like, are covered under Custom-built Kiosks Certified for Canada (EMHH7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0 (2010), “General Requirements – Canadian Electrical Code, Part II,” and CSA-C22.2 No. 0.4 (2004), “Bonding of Electrical Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Wired Cabinet” or “Wired Cabinet Section \_\_\_ of \_\_\_” (the first blank identifies the number of the section, and the second blank identifies the total number of sections that constitute the complete wired cabinet).

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## POSITIONING DEVICES CERTIFIED FOR CANADA (ZODZ7)

### GENERAL

This category covers cable ties, cable-tie mounts, and similar types of related hardware for field installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

The investigation of cable ties to CAN/CSA-C22.2 No. 62275 (2010), "Cable Management Systems – Cable Ties for Electrical Installations," generally includes flammability, installation, minimum and maximum operating temperature, minimum installation temperature, and mechanical property considerations. In addition, cable ties may also be investigated for smoke and heat generation, corrosion resistance, and weatherability characteristics as appropriate for the product.

The investigation of fixing devices (cable-tie mounts) to CAN/CSA-C22.2 No. 62275 (2010) generally includes flammability, minimum and maximum operating temperature, and mechanical property considerations. In addition, fixing devices may also be investigated for smoke and heat generation, corrosion resistance, and weatherability characteristics as appropriate for the product.

The investigation of devices to CSA-C22.2 No. 18.5 (2002), "Positioning Devices," generally includes flammability, maximum operating temperature, and mechanical property considerations. In addition, such devices may also be investigated for smoke and heat generation, corrosion resistance, and weatherability characteristics as appropriate for the product.

### RATINGS

#### Type Designations for Products Investigated to CAN/CSA-C22.2 No. 62275 (2010)

**Type 2** — A Type 2 product retains 100% of its declared loop tensile strength (cable ties) or declared mechanical strength (fixing devices) after test conditions. The declared maximum operating temperature for products designated and marked as "Type 2" is based solely on performance criteria in CAN/CSA-C22.2 No. 62275 (2010). The polymeric material comprising the product has not been separately investigated for long-term thermal properties according to CAN/CSA-C22.2 No. 0.17 (2000), "Evaluation of Properties of Polymeric Materials."

**Type 21** — A Type 21 product retains 100% of its declared loop tensile strength (cable ties) or declared mechanical strength (fixing devices) after test conditions. The declared maximum operating temperature for products designated and marked as "Type 21" is limited to the Relative Thermal Index – Strength (RTI – Strength) at 1.5 mm (0.06 in.) thickness for the polymeric material that comprises the product. The RTI – Strength for the material is determined by separate investigation for long-term thermal properties according to CSA-C22.2 No. 0.17 (2000), and the declared maximum operating temperature of the product is based on the performance criteria in CAN/CSA-C22.2 No. 62275 (2010).

**Type 2S and Type 21S** — Type 2S and Type 21S products meet the same requirements as Type 2 and Type 21 products, respectively, but have been additionally investigated for use as primary support for a flexible conduit, flexible tubing, or cable in accordance with the CEC. Such products may also be marked "Support" in lieu of the "S" designation.

#### Products Investigated to CSA-C22.2 No. 18.5 (2002)

**Load Rating** — When a load rating is declared, the device retains the declared mechanical strength following test conditions.

**Temperature Rating** — The temperature rating of the device is limited to the RTI – Strength at 1.5 mm (0.06 in.) thickness for the polymeric material that comprises the product. The RTI – Strength for the material is determined by separate investigation for long-term thermal properties according to CAN/CSA-C22.2 No. 0.17 (2000), and the declared maximum operating temperature of the product is based on the performance criteria in CSA-C22.2 No. 18.5 (2002).

**Limited Support** — Products marked "Limited Support" are able to provide support for nonflexible conduit or tubing up to the maximum load rating marked on the device. The devices are not intended to provide primary support for nonflexible conduit or tubing at the maximum spacing intervals specified in the CEC.

### MARKINGS

For cable ties investigated to CAN/CSA-C22.2 No. 62275 (2010), the product, the smallest unit container in which the product is packaged, or the installation instructions provided with the product are marked with the manufacturer's identifier (company name or registered trademark), catalog or model number, the product's maximum and minimum operating temperature, minimum installation temperature if below 0°C, minimum and maximum bundle diameter, loop tensile strength, and type designation in accordance with CAN/CSA-C22.2 No. 62275 (2010).

For separately supplied fixing devices investigated to CAN/CSA-C22.2 No. 62275 (2010), the product, the smallest unit container in which the product is packaged, or the installation instructions provided with the product are marked with the manufacturer's identifier (company name or registered trademark), catalog or model number, the product's maximum

and minimum operating temperature, declared mechanical strength, and type designation in accordance with CAN/CSA-C22.2 No. 62275 (2010).

Fixing devices or cable ties having integral fixing devices investigated to CAN/CSA-C22.2 No. 62275 (2010) that are dependent on specific maximum and minimum mounting-hole size, panel thickness, mounting orientation, or other variables critical to proper installation include this information in their marking on the product, smallest unit container in which the product is packaged, or installation instructions provided with the product.

For devices investigated to CSA-C22.2 No. 18.5 (2002), the product or the smallest unit container in which the product is packaged is marked with the product's maximum load and thermal ratings, together with the manufacturer's identifier (company name or registered trademark) and catalog or model number.

Products covered under this category have not been investigated for outdoor use unless marked "Resistant to Ultraviolet Light," "For Use Outdoors," "For Use Outdoors or Indoors," or similar wording, in which case they have been found acceptable for both indoor and outdoor use.

All metallic products are suitable for use in air-handling areas and may be marked "Suitable for use in air handling spaces in accordance with Rules 12-010 (3), (4), and (5), and 12-020 of the Canadian Electrical Code," "AH-1," or equivalent wording, as appropriate.

All nonmetallic and composite products that have been investigated to determine their suitability for use in air-handling areas may be marked "Suitable for use in air handling spaces in accordance with Rules 12-010 (3), (4), and (5), and 12-020 of the Canadian Electrical Code," "AH-2," or equivalent wording, as appropriate.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Cable Tie  
Positioning Device

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 18.5 (2002), "Positioning Devices," or CAN/CSA-C22.2 No. 62275 (2010), "Cable Management Systems – Cable Ties for Electrical Installations."

### UL MARK

The Certification Mark of UL on the product, or on the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product, or on the smallest unit container in which the product is packaged with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Positioning Device" or "Cable Tie," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## WIRE-PULLING COMPOUNDS CERTIFIED FOR CANADA (ZOKZ7)

### USE

This category covers wire-pulling compounds intended for use as lubricants in installing electrical conductors in raceways. These compounds have been investigated to determine their compatibility with specific types of wire and cable jacket or other exterior coverings.

Other compound properties including friction reduction, toxicity and combustibility have not been investigated.

### PRODUCT IDENTITY

The following product identity appears on the product:

Wire-pulling Compound

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 249, "Standard Tests for Determining Compatibility of Cable-Pulling Lubricants With Wire and Cable."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wire-pulling Compound."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WIREWAY, AUXILIARY GUTTERS  
AND ASSOCIATED FITTINGS  
CERTIFIED FOR CANADA (ZOYX7)**

**USE**

This category covers wireway, auxiliary gutters and fittings for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part

I." Products installed in accordance with product markings and manufacturer's instructions are suitable for use as equipment grounding conductors.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Wireway or Auxiliary Gutter
- Wireway or Auxiliary Gutter Fitting

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 26 (2013), "Construction and Test of Wireways, Auxiliary Gutters and Associated Fittings."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wireway or Auxiliary Gutter" or "Wireway or Auxiliary Gutter Fitting."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

# ULC DIRECTORIES AND STANDARDS

## DIRECTORIES PUBLISHED BY UNDERWRITERS LABORATORIES OF CANADA

You can order or view on-line the following ULC directories.

Building Materials

Burglar and Fire Alarm Systems and Components

Fire Protection Equipment

Fire Resistance

Firestop Systems and Components

Heating and Ventilating Equipment and Flammable Liquids and Gases Equipment

**The label or certification mark on a product is evidence that such a device or material has been produced under the Listing Program of Underwriters Laboratories of Canada. Such marking does not mean that products of the same classification are necessarily equivalent in quality or merit.**

**Directories can be ordered in softcover (single and in sets) as well. These can be ordered by going to <http://www.ulc.ca>, click on "ULC Standards" then click on "Sales of ULC Standards Materials" then click on "ULC Online Store" and select "Listing Directories." ULC standards and ORDs can also be ordered from the same site or by calling 1-866-937-3852 ext. 61744, fax to 613-231-5977 or by e-mail at [publications@ulc.ca](mailto:publications@ulc.ca) (in subject line enter: Standards Order Request). ULC also has a number of resellers of its standards and ORDS. Email the publication department or check on our website for a current list.**

## ADVISORY COUNCILS

Issues relating to ULC Standards and Other Recognized Documents having a bearing on certifications covered in this directory are brought to the Advisory Council of Underwriters Laboratories of Canada for information, input and comment. In addition to the above, Underwriters Laboratories of Canada liaises as appropriate with various federal, provincial, territorial and municipal regulatory authorities.

The foregoing advisory bodies are also consulted by the staff of Underwriters Laboratories of Canada in connection with the development or revision of ULC Standards and Other Recognized Documents and with respect to special problems that may arise in connection with the Laboratories' engineering and certification services.

## STANDARDS AND OTHER RECOGNIZED DOCUMENTS OF UNDERWRITERS LABORATORIES OF CANADA

ULC Standards develops and publishes standards and specifications for products having a bearing on fire, safety and security, crime prevention, thermal insulation and systems, air barriers, live working and other areas. ULC Standards is accredited by the Standards Council of Canada as a Standards Development Organization under the National Standards System of Canada.

If you are interested in taking part in Standards Development please contact the Manager of Standards, ULC Standards. If you are interested in having a standard developed please contact the Director of Standards, ULC Standards. ULC Standards has 17 Standards development committees covering the following areas

Committee on Fire Tests –ULC- S100A

Committee on Security and Burglar Alarm Equipment and Systems – ULC-S300A

Committee on Physical Security Equipment – ULC-S300B

Committee on Automobile Theft Deterrent Equipment and Systems – ULC-S300V

Committee on Live Working – ULC – S400A

Committee on Solid State Lighting – ULC – S400B

Committee on Portable Fire Extinguishers – ULC-S500A

Committee on Fire Fighting Apparatus and Equipment – ULC-S500B

Committee on Fire Alarm Equipment and Systems – ULC-S500F

Committee on Fire Fighting Foams – ULC-S500G

Committee on Stationary Steel Storage Containers for Flammable and Combustible Liquids – ULC-S600A

Committee on Stationary Non-Metallic Storage Containers for Flammable and Combustible Liquids – ULC-S600B

Committee on Factory-Built Fireplaces, Chimneys and Vents – ULC-S600E

Committee on Fittings for Flammable and Combustible Liquids – ULC-S600H

Committee on Kitchen Exhaust Equipment and Systems - ULC-S600K

Committee on Oil-Water Separators – ULC-S600L

Committee on Thermal Insulation Materials and Systems – ULC-S700A

Committee on Air Barrier Materials and Systems – ULC-S700B

Committee on Electric Utility Workplace Electrical Safety – ULC - S800A

The Engineering Department of Underwriters Laboratories of Canada also develops and publishes Other Recognized Documents (ORDs) to deal with certification of products where standards do not yet exist or do not deal with the product.

A list of Standards and ORDs currently available may be obtained through our web site at <http://www.ulc.ca>. In addition, the current standards work program of ULC Standards Department can be found on the same web site by selecting “ULC Standards” as well as being linked through the web site of the Standards Council of Canada at <http://www.scc.ca>. This work program is updated online on a regular basis

Where applicable, conformance of a product with pertinent requirements found in Canadian Codes and Standards and regulations published by other agencies is required before certification is established. For further details concerning the significance of the certification, reference should be made to the explanatory texts preceding each of the various classifications of products covered herein.

For judging acceptability of devices incorporating electrical features, reference is made to applicable requirements contained in the Canadian Electrical Code, Parts I and II, and compliance therewith is a prerequisite to certification.

## Other UL Services

In addition to its Certification, Listing, Classification and Component Recognition Services, UL can provide manufacturers with a variety of related assessment, inspection and facility registration services.

### Specialized Services

UL has specialized services and staff to assist customers and others with various product certification and information needs.

#### Local Engineering Services

UL's Local Engineering Services (LES) offices give customers access to UL engineers in their own local areas. In key centers around the U.S., UL operates LES offices that offer fast and convenient service. Customers can use these offices as quick sources of information or to receive on-site product investigations, Field Engineering Services or other engineering evaluations locally. The locations and addresses of these LES offices are listed at the back of the White Book.

#### Fact-Finding Investigations

In the interest of public safety, UL conducts Fact-Finding Investigations on an individual contract basis for manufacturers, trade associations, government agencies and others. Fact-Finding Investigations provide information or data that the sponsor can use, in seeking support for a proposed amendment to a nationally recognized installation code. These investigations result in a Fact-Finding Report. Contact a Customer Service Professional for referral to the appropriate engineering staff.

#### Research Services

UL also serves the interests of the public by conducting research investigations -- both for its own use and use by others -- on products or materials to help identify safety concerns and to assist in the development of appropriate safety requirements. This research is particularly useful when new technologies emerge or new safety concerns are explored. UL's research expertise and facilities are available to manufacturers, trade associations, government and other groups. Contact a Customer Service Professional for referral to the appropriate engineering staff.

#### Verification Services — Commercial Inspection, Testing and Auditing

UL Verification Services offers expertise in commercial testing, inspection and auditing that is recognized and respected around the world. Currently, UL Verification Services provides support to the appliance, high-tech, lighting, and retail industries through our global footprint, technical expertise, commitment to quality and unmatched customer service. Our full range of technical services support manufacturing business operations from initial design through prototyping and into final production and enhance retail or go-to-market supply chain quality management operations. For more information, call Customer Service at 1-877-UL-HELPS (1-877-854-3577) or e-mail [cits@ul.com](mailto:cits@ul.com).

# UL Information Services

## UL's Technical Information Services

Manufacturers, AHJs and other groups look to UL as a uniquely broad and accessible source of technical information in areas such as product testing and certification, domestic and international standards, international compliance requirements, and quality system registration. UL provides a variety of technical information services.

### Online Certifications Directory

UL's Online Certifications Directory of UL certified products can be accessed at [www.ul.com/database](http://www.ul.com/database).

### The White Book and CDs

The UL White Book/CD and the Canadian White Book CD are published annually. Order these by visiting <http://www.ul.com/info/uldirs.htm> or by contacting UL at (847) 664-3035 or fax (847) 664-6243.

Following are the distribution months.

<u>Title</u>	<u>Month Distributed</u>
Guide Information for Electrical Equipment - The White Book - Print and CD	April
Guide Information for Canadian Certified Equipment - The Canadian White Book - CD	June

### UL's Website

Visit [www.ul.com](http://www.ul.com) for information on UL's products and services. Topics include:

- UL Marks
- UL product testing and certification, facility registration, and related services
- Seminars
- Technical information resources, such as Standards (including access to the Standards Electronic Bulletin Board System) and UL's Online Certifications Directory
- UL news and activities, including the latest news releases
- Information for AHJs, consumers and retailers

### **Regulatory Services Staff**

To contact UL Regulatory Services staff members, call 800-595-9844 or e-mail [ulregulatoryservices@ul.com](mailto:ulregulatoryservices@ul.com) or visit [www.ul.com/codeauthorities](http://www.ul.com/codeauthorities). For more detailed contact information including contact names, phone, fax and e-mail addresses, visit the code authorities website at [www.ul.com/codeauthorities](http://www.ul.com/codeauthorities).

# INDEX OF ULC PRODUCT CATEGORIES AND INDUSTRY TERMS

This index includes all product categories sorted alphabetically. In addition, those product categories that are a sub-set of a main product category are indented under the main category to illustrate the grouping of a family of related categories. This index also includes specific product types covered within a product category and these product names are followed by the applicable product category title in parentheses.

# INDEX OF CUL PRODUCT CATEGORIES AND INDUSTRY TERMS

This index includes all product categories sorted alphabetically. In addition, those product categories that are a sub-set of a main product category are indented under the main category to illustrate the grouping of a family of related categories. This index also includes specific product types covered within a product category and these product names are followed by the applicable product category in parentheses.

	Page		Page		Page
<b>A</b>					
Aboveground Flammable-liquid Tanks Certified for Canada (EEEV7) .....	301	Accessories for Condensing Units Certified for Canada (see Condensing and Compressor Units Certified for Canada (SGYU7)) .....	647	Accessories for Quick-opening Devices Certified for Canada (see Quick-opening Devices, Accelerators and Exhausters Certified for Canada (VJPZ7)) .....	708
Aboveground Flexible Connectors for Flammable-liquid Tanks Certified for Canada (see Flexible Connectors for Flammable Liquids Certified for Canada (QLWV7)) .....	305	Accessories for Ducted Heat Recovery Ventilators Certified for Canada (see Heat-recovery Ventilators, Ducted Certified for Canada (LZTW7)) .....	492	Accessories for Refrigerating Units Certified for Canada (see Units, Refrigerating Certified for Canada (SPYZ7)) .....	656
Aboveground Steel Tanks for Fuel Oil and Lubricating Oil Certified for Canada (see Oil-burner-fuel Tanks Certified for Canada (EFGR7)) .....	302	Accessories for Fuel Cell Multimode Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories for Room Air Conditioners Certified for Canada (see Air Conditioners, Room Certified for Canada (ACOT7)) .....	199
Aboveground Tanks, Closed-top Diked for Flammable Liquids Certified for Canada (see Aboveground Flammable-liquid Tanks Certified for Canada (EEEV7)) .....	301	Accessories for Fuel Cell Stand-alone Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories for Single-point Locks and Latches and Fire-exit Hardware Certified for Canada (GWVW7) .....	369
Aboveground Tanks, Flammable Liquid Certified for Canada (see Aboveground Flammable-liquid Tanks Certified for Canada (EEEV7)) .....	301	Accessories for Fuel Cell Utility Interactive Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories for Special Purpose Air Conditioners Certified for Canada (see Air Conditioners, Special Purpose Certified for Canada (ACVS7)) .....	199
Aboveground Tanks, Secondary Containment for Flammable Liquids Certified for Canada (see Aboveground Flammable-liquid Tanks Certified for Canada (EEEV7)) .....	301	Accessories for Household Freezers Certified for Canada (see Household Refrigerators and Freezers Certified for Canada (SHZZ7)) .....	648	Accessories for Special Systems Certified for Canada (VLTR7) .....	711
Absorption Air Conditioning Equipment Certified for Canada (KTfV7) .....	454	Accessories for Household Refrigerators Certified for Canada (see Household Refrigerators and Freezers Certified for Canada (SHZZ7)) .....	648	Accessories for Wind Turbine Multimode Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598
Accelerators Certified for Canada (see Quick-opening Devices, Accelerators and Exhausters Certified for Canada (VJPZ7)) ...	708	Accessories for Ice Cream Makers Certified for Canada (see Ice Cream Makers Certified for Canada (SINX7)) .....	648	Accessories for Wind Turbine Stand-alone Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598
Access Control System Units Certified for Canada (ALVY7) .....	206	Accessories for Ice Makers Certified for Canada (see Ice Makers Certified for Canada (SJBV7)) .....	649	Accessories for Wind Turbine Utility Interactive Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598
Access Control System Units for Use in Hazardous Locations Certified for Canada (AATF7) .....	196	Accessories for Microturbine Multimode Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories, Air Conditioning Equipment Certified for Canada (ABFY7) .....	197
Access Control Systems for Use in Hazardous Locations Certified for Canada (see Access Control System Units for Use in Hazardous Locations Certified for Canada (AATF7)) .....	196	Accessories for Microturbine Stand-alone Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories, Air-duct Mounted Certified for Canada (ABQK7) .....	198
Access Frame and Fire Door Assemblies Certified for Canada (see Access-type Fire Doors Certified for Canada (GSOT7)) .....	356	Accessories for Microturbine Utility Interactive Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories, Gas System Certified for Canada (JPJT7) .....	424
Access-type Fire Doors Certified for Canada (GSOT7) .....	356	Accessories for Photovoltaic Multimode Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories, Refrigeration for Use in Zone Classified Hazardous Locations Certified for Canada (STFZ7) .....	659
Accessories for Beverage Coolers or Beverage Cooler-dispensers Certified for Canada (see Beverage Coolers and Beverage Cooler-dispensers Certified for Canada (SFWY7)) .....	645	Accessories for Photovoltaic Stand-alone Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories, Releasing Device Certified for Canada (SYSW7) .....	659
Accessories for Burners Certified for Canada (KTIQ7) .....	455	Accessories for Photovoltaic Utility Interactive Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Accessories, Transfer Switch Certified for Canada (WPVQ7) .....	735
Accessories for Commercial Food-preparing Machines Certified for Canada (see Food-preparing Machines, Commercial Certified for Canada (IPST7)) .....	408	Accessories for Quick-opening Devices, Accelerators and Exhausters Certified for Canada (see Quick-opening Devices, Accelerators and Exhausters Certified for Canada (VJPZ7)) .....	708	Accessory Clips Certified for Canada (see Wall and Partition Facings and Accessories Certified for Canada (CLBV7)) .....	259
Accessories for Commercial Refrigerator and/or Freezer Certified for Canada (see Commercial Refrigerators and Freezers Certified for Canada (SGKW7)) .....	646	Accessories for Refrigerating Units Certified for Canada (see Units, Refrigerating Certified for Canada (SPYZ7)) .....	656	Accessory Interface Boxes Certified for Canada (see Graphic Arts Equipment Certified for Canada (KCQT7)) .....	429
Accessories for Compressor Units Certified for Canada (see Condensing and Compressor Units Certified for Canada (SGYU7)) .....	647	Accessories for Room Air Conditioners Certified for Canada (see Air Conditioners, Room Certified for Canada (ACOT7)) .....	199	Accordions, Electronic Certified for Canada (see Musical Instruments Certified for Canada (PWHZ7)) .....	573
Accessories for Condensing or Compressor Units Certified for Canada (see Condensing and Compressor Units Certified for Canada (SGYU7)) .....	647	Accessories for Single-point Locks and Latches and Fire-exit Hardware Certified for Canada (GWVW7) .....	369	Accumulators, Refrigerant Certified for Canada (SKXY7) .....	650
Accessories for Condensing Units Certified for Canada (see Condensing and Compressor Units Certified for Canada (SGYU7)) .....	647	Accessories for Special Purpose Air Conditioners Certified for Canada (see Air Conditioners, Special Purpose Certified for Canada (ACVS7)) .....	199	Acid Bath Heaters Certified for Canada (see Heaters, Industrial and Laboratory Certified for Canada (KQLR7)) .....	446
Accessories for Condensing Units Certified for Canada (see Condensing and Compressor Units Certified for Canada (SGYU7)) .....	647	Accessories for Special Systems Certified for Canada (VLTR7) .....	711	Acorn Clamps Certified for Canada (see Grounding and Bonding Equipment Certified for Canada (KDER7)) .....	430
Accessories for Condensing Units Certified for Canada (see Condensing and Compressor Units Certified for Canada (SGYU7)) .....	647	Accessories for Wind Turbine Multimode Inverters Certified for Canada (see Static Inverters, Converters and Accessories for Use in Independent Power Systems Certified for Canada (QIKH7)) .....	598	Acoustical Materials Certified for Canada (BIYR7) .....	232

Page	Page	Page			
Acoustical Materials Certified for Canada (BYIT7) .....	245	Certified for Canada (EBNV7)) .....	298	Air Conditioner Sections, Special Purpose Certified for Canada (see Heating and Cooling Equipment Certified for Canada (LZFE7)) .....	485
Across-the-line Starters Certified for Canada (see Motor Controllers, Manual Certified for Canada (NLRV7)) .....	524	Adapters for Use in Hazardous Locations Certified for Canada (see Conduit Fittings for Use in Zone Classified Hazardous Locations Certified for Canada (EBMB7)) .....	298	Air Conditioners, Central Cooling Certified for Canada (see Heating and Cooling Equipment Certified for Canada (LZFE7)) .....	485
Across-the-line Starters for Use in Hazardous Locations Certified for Canada (see Magnetic Motor Controllers for Use in Hazardous Locations Certified for Canada (NPKR7)) .....	530	Adapters, Incandescent-to-mercury Vapor Certified for Canada (see Lampholders, Fittings Certified for Canada (OKQR7)) .....	550	Air Conditioners for Use in Hazardous Locations Certified for Canada (AIDR7) .....	203
Across-the-line Starters for Use in Hazardous Locations Certified for Canada (see Magnetic Motor Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWER7)) .....	536	Adapters, Lamp Certified for Canada (see Lamps, Self-ballasted and Lamp Adapters Certified for Canada (OOLR7)) .....	552	Air Conditioners, Mini-split Certified for Canada (see Air Conditioners, Room Certified for Canada (ACOT7)) .....	199
Across-the-line Starters for Use in Hazardous Locations Certified for Canada (see Manual Motor Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWFU7)) .....	536	Adapters, Lampholder Certified for Canada (see Lampholders, Adapters Certified for Canada (OLRX7)) .....	550	Air Conditioners, Packaged Terminal, Replacement Certified for Canada (see Packaged Terminal Air Conditioners, Replacement Certified for Canada (ADAU7)) .....	200
Across-the-line Starters, Manual for Use in Hazardous Locations Certified for Canada (see Manual Motor Controllers for Use in Hazardous Locations Certified for Canada (NPXZ7)) .....	531	Adapters, LP-gas Certified for Canada (see LP-gas Adapters and Miscellaneous Fittings Certified for Canada (HVEX7)) .....	381	Air Conditioners, Room, for Use in Hazardous Locations Certified for Canada (see Room Air Conditioners for Use in Hazardous Locations Certified for Canada (AINU7)) .....	203

## Appendix A ULC's Online Certification Directories Quick Guide

Annexe A  
Guide de consultation rapide des répertoires de certifications ULC en ligne

**Free of charge to all users, ULC's Online Certification Directories is an electronic, "intelligent" version of our renowned ULC Product Directories. Updated daily, the Online Certification Directories have advanced search capabilities and, for most product categories, contains more information about product Listings than is available in print.**

Les répertoires de certifications ULC en ligne sont offerts sans frais à tous les utilisateurs et constituent une version électronique « intelligente » de nos fameux répertoires de produits ULC. Mis à jour quotidiennement, les répertoires de certifications en ligne offrent des fonctions de recherche avancées et contiennent, pour la plupart des catégories de produits, plus de renseignements sur les inscriptions de produits que les versions papier.

**Log on to the ULC's Online Certification Directories today at [www.ulc.ca/ulc\\_directories](http://www.ulc.ca/ulc_directories) to verify ULC Listings and Classifications.**

Ouvrez une session dès aujourd'hui à l'adresse [www.ulc.ca/ulc\\_directories](http://www.ulc.ca/ulc_directories) et accédez aux répertoires de certifications ULC en ligne pour consulter les inscriptions et les classifications ULC.

**The following ULC Online Certification Directories Quick Guide provides tips for searching ULC's Online Certification Directories using various types of information such as company name, ULC File Number, model number, etc.**

Le Guide de consultation rapide des certifications ULC en ligne suivant donne des conseils pour faire des recherches dans les répertoires de certifications ULC en ligne en utilisant différents types de renseignements, notamment le nom de l'entreprise, le numéro de fichier ULC, le numéro de modèle, etc.

**Contact your local Regulatory Services Representative for further assistance with the ULC Online Certification Directories.**

Communiquez avec votre représentant local des services de réglementation pour obtenir de l'aide supplémentaire sur les répertoires de certifications ULC en ligne.

**Quick Guide to  
ULC's Online Certification Directories**  
Guide de consultation rapide  
des répertoires de certifications ULC en ligne

**Welcome to the ULC Online Certification Directories, a faster way to access ULC Listings and Classifications. You can use the ULC Online Certification Directories to:**

**Verify a ULC Listing or Classification**

**Verify a ULC Listed product use**

**Verify a product safety standard**

Bienvenue aux répertoires de certifications ULC en ligne, une manière plus rapide d'avoir accès aux inscriptions et aux classifications ULC. Vous pouvez utiliser les répertoires de certifications ULC en ligne pour :

vérifier une inscription ou une classification ULC;  
vérifier l'utilisation d'un produit inscrit ULC;  
vérifier la norme de sécurité d'un produit.

**Search The ULC Online Certification Directories Using:**

- **Company name/location**
- **ULC File Number**
- **ULC Category Code/Guide Information**
- **Standard or ORD Number**
- **ULC Guide Number (used up to 2003)**
- **Fire Resistance Assemblies and Systems**
- **Keyword**

Effectuez une recherche dans les répertoires de certifications ULC en ligne en utilisant :

- le nom de l'entreprise ou l'emplacement;
- le numéro de dossier ULC;
- le numéro de code de catégorie ULC ou le Guide information;
- le numéro de norme ou ORD;
- le numéro du guide ULC (utilisé jusqu'en 2003);
- les systèmes et assemblages résistant au feu;
- un mot clé.

**To begin, log on to:**

Pour commencer, ouvrez une session à l'adresse suivante :

[www.ULC.ca](http://www.ULC.ca)

Now Click on "ULC Online Directories" which appears in the column on the left hand side of the page. You will go to the primary search engine:

Cliquez maintenant sur « ULC Online Directories » (répertoires ULC en ligne) qui apparaît dans la colonne gauche de la page. Cela vous amènera au premier moteur de recherche :

**BOOKMARK THIS PAGE**

**MARQUEZ CETTE PAGE D'UN SIGNET**

**From here you can enter anyone of several choices, by company name, by ULC Category Code, by ULC File Number or by a keyword search. Just enter the information and click on "Search".**

À partir de là, vous pouvez entrer n'importe quel choix parmi plusieurs, nom d'entreprise, code de catégorie ULC, numéro de fichier ULC ou effectuer une recherche par mot clé. Vous n'avez qu'à entrer l'information et à cliquer sur « Search » (recherche).

On the primary search page, there is a pull-down "Specific Searches", on the right of the page that allows additional specific searching by, among other things:

- **Standard Number**
- **Fire Resistance Assemblies**
- **ULC Category Titles with Category Code Lists (this is the Guide Information)**

Sur la page de recherche principale, une liste déroulante « Specific searches » (recherches spécifiques), à droite de la page, permet des recherches additionnelles spécifiques, en utilisant entre autres :

- le numéro de la norme;
- les assemblages résistant au feu;
- les titres de catégorie ULC avec les listes de code de catégorie (c'est le Guide information).

**Search results often yield multiple hits, which are listed in alphabetical order. To reduce the number of hits, you can choose "Refine Your Search", located towards the top of the table.**

Les résultats de la recherche donnent souvent lieu à de multiples appels de fichiers énumérés par ordre alphabétique. Pour réduire le nombre d'appels de fichiers, vous pouvez choisir « Refine Your Search » (affiner votre recherche), près de la partie supérieure du tableau.

**Once you have determined the listing you want to see, click in the appropriate link in the "Link to File" column (at the right side) and you get...**

Une fois que vous avez défini l'inscription que vous désirez voir, cliquez sur le lien approprié dans la colonne « Link to File » (Lier au fichier) (du côté droit) et vous aurez...

ULC's Online Certifications Directory Quick Guide  
Guide de consultation rapide du répertoire de  
certifications UL en ligne

**This shows the listing information. To see a description/specifications for the category (in this example it is “XHEZC”), click on “See Guide Information for ....” towards the upper left side of the page. The ULC Guide outlines the scope and limitations of a product category, the standard used to carry out the evaluation, and the applicable marking requirements by which the product can be identified in the field.**

Cet écran montre l'information relative à l'inscription. Pour voir une description ou les spécifications de la catégorie (dans cet exemple, c'est « XHEZC »), cliquez sur « See Guide Information for .... » (voir le Guide information pour..) près de la partie supérieure gauche de la page. Le Guide ULC précise la portée et les limites d'une catégorie de produit, la norme utilisée pour effectuer l'évaluation, et les exigences applicables relatives à la marque par lesquelles le produit peut être identifié sur place.

## 2. SEARCH BY FILE NUMBER

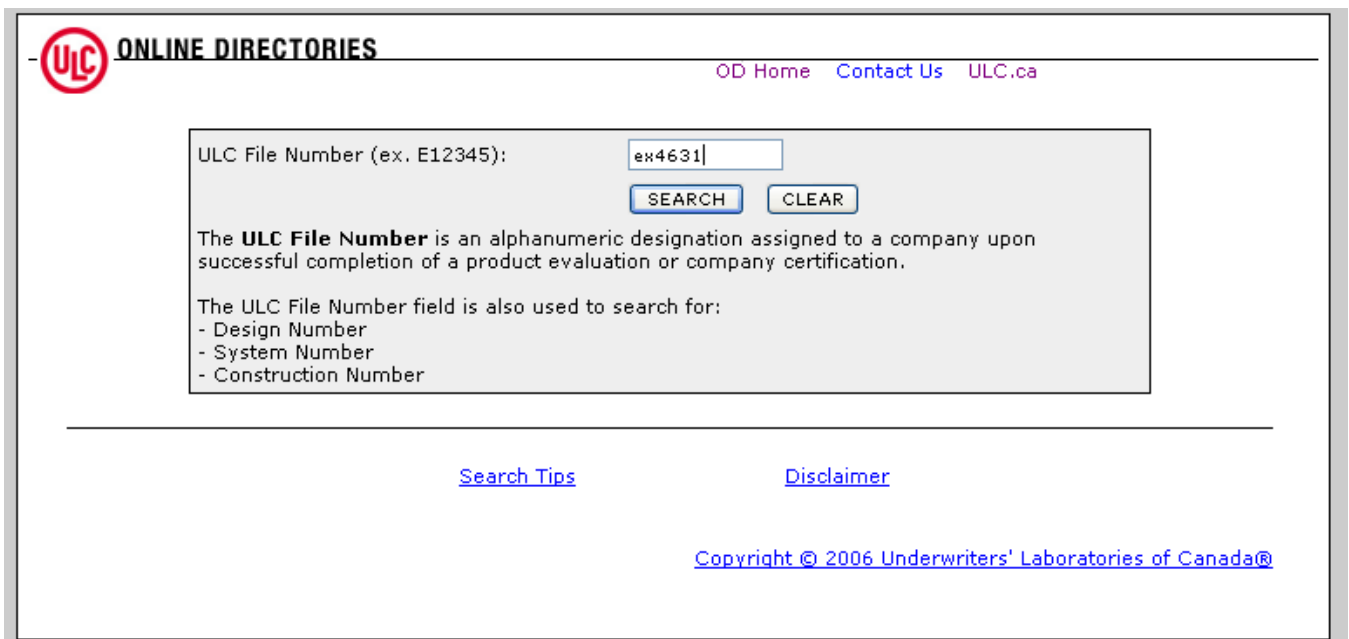

### 2. RECHERCHE PAR NUMÉRO DE FICHER

**A file number is an alphanumeric designation assigned by ULC and associated with a specified company and product category.**

Un numéro de fichier est une désignation alphanumérique assignée par ULC et liée à une entreprise et à une catégorie de produit spécifiques.

**To search by “File Number”, enter the file number in the appropriate box (note there is a 'Help' box for this field) or select ULC File number under “Specific Searches” and then enter the file number in the search box.**

Pour effectuer une recherche par « File number » (numéro de fichier), entrez le numéro de fichier dans la case appropriée (prenez note qu'il y a une case « Help » [aide] dans ce champ) ou sélectionnez un numéro de fichier ULC sous « Specific Searches » (recherches spécifiques), puis entrez le numéro de fichier dans la case de recherche.

The screenshot shows the ULC Online Directories search page. At the top left is the ULC logo and the text "ONLINE DIRECTORIES". To the right are links for "OD Home", "Contact Us", and "ULC.ca". The main search area contains a text input field labeled "ULC File Number (ex. E12345):" with the value "ex4631" entered. Below the input field are "SEARCH" and "CLEAR" buttons. A text box below the input field explains that the ULC File Number is an alphanumeric designation assigned to a company upon successful completion of a product evaluation or company certification. It also lists that the field is used to search for: Design Number, System Number, and Construction Number. At the bottom of the page are links for "Search Tips" and "Disclaimer", and a copyright notice: "Copyright © 2006 Underwriters' Laboratories of Canada®".

**This will take you to a specific file ...**

Cette option vous mènera à un fichier spécifique...

Search results

**Number of hits:** 1 The maximum number of hits returned is 4500.

You may choose to [Refine Your Search.](#)

Company Name	Category Name	Link to File
3M COMPANY	Clean Agent Extinguishing Media	<a href="#">GOZNC.EX4631</a>

[Search Tips](#)

**As with the previous example, click on the 'Link To File' to get the listing information.**  
Comme dans l'exemple précédent, cliquez sur « Link to File » (lier au fichier) pour obtenir l'information relative à l'inscription.

3. **SEARCH BY CATEGORY CODE / GUIDE INFORMATION**  
3. RECHERCHE PAR CODE DE CATÉGORIE OU GUIDE INFORMATION

**A Category Code is an alphabetic or alphanumeric code used to identify product categories covered by ULC's Listing, Classification, & Recognition Services. (For example: XHJZC, BXUVC, etc.)**

Un code de catégorie est un code alphabétique ou alphanumérique utilisé pour identifier les catégories de produits couvertes par les services d'inscription, de classification et de reconnaissance ULC. (Par exemple : XHJZC, BXUVC, etc.)

**The Guide Information for each product category provides important information regarding the scope and limitations of ULC Certifications and a general description of the ULC marking authorized for products in that category.**

Le Guide information pour chaque catégorie de produit fournit d'importantes informations relatives à la portée et aux limites des certifications ULC et une description générale de la marque ULC autorisée pour les produits de cette catégorie.

**To search for a specific Category Code, enter the Category Code in the 'ULC Category Code' field in the main 'Search' page. (Hint: You can also use the pull-down menu 'Specific Searches' on the right of the page. Using the 'ULC Category Code' on this pull-down menu has the advantage of providing a link to a 'List ULC Category Guides with Category Titles Alphabetically by Category Titles'. It also lets you display the 'Guide Information' only. See Slide below.)**

Pour effectuer une recherche d'un code de catégorie spécifique, entrez le code de catégorie dans le champ « ULC Category Code » (code de catégorie ULC) de la page de recherche principale. (Conseil : Vous pouvez aussi utiliser le menu déroulant « Specific Searches » (recherches spécifiques) du côté droit de la page. L'utilisation du « ULC Category Code » (code de catégorie ULC) sur ce menu déroulant a l'avantage de fournir un lien à « List ULC Category Guides with Category Titles Alphabetically by Category Titles » (établir la liste des guides de catégorie ULC avec les titres de catégorie énumérés alphabétiquement). Cela vous permet aussi d'afficher le Guide information seulement. (Voir la diapositive ci-dessous)

## 4. SEARCH BY ULC GUIDE NUMBER

### 4. RECHERCHE PAR LE NUMÉRO DU GUIDE ULC

Up until 2003 ULC did not use Category Code but used what were called Guide Numbers. To ensure that those familiar with the ULC Guide Number can still find the information they need and identify the replacement Category Code, you can search for the Guide Number table and then select the corresponding Category Code.

Jusqu'en 2003, ULC n'utilisait pas le code de catégorie mais plutôt ce qui était appelé les numéros du Guide. Pour ceux qui connaissent bien les numéros du Guide ULC, ils peuvent encore trouver l'information dont ils ont besoin et identifier le code de catégorie de remplacement, en recherchant le tableau des numéros du Guide et en sélectionnant ensuite le code de catégorie correspondant.

## 5. SEARCH BY STANDARD NUMBER

### 5. RECHERCHE PAR LE NUMÉRO DE NORME

**This option searches all the ULC Guide Information for the requested standard number. To begin, go to the 'Specific Searches' pull-down menu on the right side of the 'Search' page. Pull down to 'Standard Number' and you get ...**

Cette option effectue une recherche du numéro de norme demandé dans tout le Guide information ULC. Pour commencer, allez au menu déroulant « Specific Searches » (recherches spécifiques) du côté droit de la page « Search » (recherche). Faites défiler la page jusqu'à « Standard Number » (numéro de la norme) et vous avez...

**ULC ONLINE DIRECTORIES** [OD Home](#) [Contact Us](#) [ULC.ca](#)

Search Category Guides by Standard Number:

Enter a **Standard Number**, such as 60950 or 430.

If there are two different standards organizations using the same number for dissimilar Standards, enter an identifier with the number, such as "UL 1977" or "NFPA 1977".

Standard types that are searchable include many national and international Standards:

IEEE, NEMA, ISO, ASTM, CSA, CAN/CSA, IEC, SAE, NSF, ANSI, US Coast Guard, Canadian Coast Guard, ASHRAE, ARI, ICC, DIN, ISA, DOE, EPA, FDA, SEMI, CGA, CAN/CGA, UL, ULC, CAN/ULC, ULC/ORD, CAN4, ASSE, IMO/SOLAS, ETA/TIA, ASME, TP, NFPA, CGSB, AWWA, Uniform Building Code (UBC), and Federal Specification.

[Search Tips](#) [Disclaimer](#)

[Copyright © 2006 Underwriters' Laboratories of Canada®](#)

**Now, enter in the exact standard (e.g., ULC-S115, CAN/ULC-S603) in the field and click 'Search'. This will result in the ULC Guide Information for one or more categories. Choose the appropriate category by clicking the 'Guide Info' under the 'Link To File' column.**

Maintenant, entrez le numéro exact de la norme (p. ex. ULC-S115, CAN/ULC-S603) dans le champ et cliquez sur « Search » (recherche). Le Guide information ULC vous donnera une ou plusieurs catégories. Choisissez la catégorie appropriée en cliquant sur le « Guide Info » sous la colonne « Link to File » (lier au fichier).

**(Note: if the search does not result in any hits, try again using only the standard number or \*s followed by the standard number or for an ORD \*c followed by the ORD number)**

(Remarque : Si la recherche ne donne aucun appel de fichier, essayez de nouveau en utilisant uniquement le numéro de la norme ou \*s suivi du numéro de la norme ou pour un ORD, \*c suivi du numéro ORD.)

6. **SEARCH BY FIRE RESISTANCE ASSEMBLIES AND SYSTEMS**  
6. RECHERCHE D'ASSEMBLAGES ET DE SYSTÈMES RÉSISTANT AU FEU

**A search of fire resistance assemblies and systems can be done two ways, depending on the information available to you.**

Une recherche d'assemblages et de systèmes résistant au feu peut être effectuée de deux façons, selon l'information dont vous disposez.

**If you know the exact number for the design or system, go to the 'Specific Searches' pull-down menu on the right side of the main 'Search' page and select "Fire Resistance Assemblies" and you will see ...**

Si vous connaissez le numéro exact du modèle ou du système, allez au menu déroulant « Specific Searches » (recherches spécifiques) à droite de la page principale de recherche et sélectionnez « Fire Resistance Assemblies » (assemblages résistant au feu) et vous aurez ceci...

**ULC ONLINE DIRECTORIES** [OD Home](#) [Contact Us](#) [ULC.ca](#)

**Fire Resistance Assemblies (BXUVC)**

The summarized form of the test assembly is identified by an alphanumeric design number. The prefix letter designates the group of construction, the first digit designates the type of protection, and the other digits identify the particular assembly.

**NUMBERING SYSTEM FOR FIRE RESISTANCE ASSEMBLIES**

Types of Construction	TYPES OF PROTECTION									
	Membrane Protection				Direct Applied Protection					Unprotected
	000-099	100-199	200-299	300-399	400-499	500-599	600-699	700-799	800-899	900-999
<b>Floors &amp; Ceilings:</b> A, B or C Concrete and Cellular Steel Deck	<a href="#">Concealed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Exposed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Metal Lath</a>	<a href="#">Gypsum Board</a>	<a href="#">Miscel- laneous</a>	<a href="#">Cemen- titious</a>	<a href="#">Sprayed Fibre</a>	<a href="#">Unprotected</a>
D, E or F Concrete and Steel Floor Units	<a href="#">Concealed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Exposed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Metal Lath</a>	<a href="#">Gypsum Board</a>	<a href="#">Miscel- laneous</a>	<a href="#">Cemen- titious</a>	<a href="#">Sprayed Fibre</a>	<a href="#">Unprotected</a>
G, H or I Concrete and Steel Joists	<a href="#">Concealed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Exposed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Metal Lath</a>	<a href="#">Gypsum Board</a>	<a href="#">Miscel- laneous</a>	<a href="#">Cemen- titious</a>	<a href="#">Sprayed Fibre</a>	<a href="#">Unprotected</a>
J or K Concrete	<a href="#">Concealed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Exposed Grid System</a>	<a href="#">(Spare)</a>	<a href="#">Metal Lath</a>	<a href="#">Gypsum Board</a>	<a href="#">Miscel- laneous</a>	<a href="#">Cemen- titious</a>	<a href="#">Sprayed Fibre</a>	<a href="#">Unprotected</a>

Using the scroll bars at the right side and bottom of the page, scroll down the left hand column to find the type of construction needed, then scroll across the top to see the types of protection. Then, click on the appropriate link.

En utilisant les barres de défilement à droite et au bas de la page, faites dérouler la colonne de gauche pour trouver le type de fabrication nécessaire, puis faites défiler horizontalement pour voir les types de protection. Puis, cliquez sur le lien approprié.

**For example, 'Floors & Ceilings', with 'Wood Joists' and 'Gypsum Board' would bring up the following Designs from L500 to M599 ...**

Par exemple, « Floors & Ceilings » (planchers et plafonds) avec « Wood Joists » (solives de bois) et « Gypsum Board » (panneau de gypse) donneraient les modèles suivants de L500 à M599...

## Appendix B UL Online Certifications Directory Quick Guide

Annexe B  
Guide de consultation rapide du répertoire de certifications UL en ligne

**Free of charge to all users, UL's Online Certifications Directory is an electronic, "intelligent" version of our renowned UL Product Directories. Updated daily, the Online Certifications Directory has advanced search capabilities and, for most product categories, contains more information about product Listings than is available in print.**

Le répertoire de certifications UL en ligne est offert sans frais à tous les utilisateurs et constitue une version électronique « intelligente » de nos fameux répertoires de produits UL. Mis à jour quotidiennement, le répertoire de certifications en ligne offre des fonctions de recherche avancées et contient, pour la plupart des catégories de produits, plus de renseignements sur les inscriptions de produits que les versions papier.

**Log on to the UL Online Certifications Directory today at [www.ul.com/database](http://www.ul.com/database) to verify CUL Listings and Classifications.**

Ouvrez une session dès aujourd'hui à l'adresse [www.ul.com/database](http://www.ul.com/database) et accédez au répertoire de certifications UL en ligne pour consulter les inscriptions et les classifications CUL.

**The following UL Online Certifications Directory Quick Guide provides tips for searching UL's Online Certifications Directory using various types of information such as company name, UL File Number, model number, etc.**

Le Guide de consultation rapide des certifications UL en ligne suivant donne des conseils pour faire des recherches dans le répertoire de certifications UL en ligne en utilisant différents types de renseignements, notamment le nom de l'entreprise, le numéro de fichier UL, le numéro de modèle, etc.

**Contact your local Regulatory Services Representative for further assistance with the UL Online Certifications Directory.**

Communiquez avec votre représentant local des services de réglementation pour obtenir de l'aide supplémentaire sur le répertoire de certifications UL en ligne.

## **Online Certification Directory Quick Guide**

Guide de consultation rapide du répertoire de certifications en ligne

**Welcome to the UL Online Certifications Directory, a faster way to access UL Certifications. You can use the UL Online Certification Directory to:**

Bienvenue au répertoire de certifications UL en ligne, une manière plus rapide d'avoir accès aux certifications UL. Vous pouvez utiliser le répertoire de certifications en ligne UL pour :

- **Verify a UL Certification**
- **Verify a UL Certified product use**
- **Verify a product safety standard**
- vérifier une certification UL;
- vérifier l'utilisation d'un produit certifié UL;
- vérifier la norme de sécurité d'un produit.

**Search The UL Online Certification Directory Using:**

- **Company name/location**
- **Keyword**
- **Standard Number**
- **UL File Number**
- **UL Category Code/Guide Information**
- **Fire Resistance Assemblies and Systems**
- **Food Safety Equipment**
- **Sprinkler Identification Number**

Effectuez une recherche dans le répertoire de certifications UL en ligne en utilisant :

- le nom de l'entreprise ou l'emplacement;
- un mot clé;
- le numéro de la norme;
- le numéro de dossier UL;
- le numéro de code de catégorie UL ou le Guide information;
- les systèmes et assemblages résistant au feu;
- l'équipement de sécurité alimentaire;
- le numéro d'identification de gicleur.

**To begin, log on to [www.ul.com/database](http://www.ul.com/database)**

Pour commencer, ouvrez une session à l'adresse [www.ul.com/database](http://www.ul.com/database).

## Search By Company Name:

Recherche par nom d'entreprise :

**To begin a search for information regarding a specific company, enter the company name and other available information in the fields provided, and then click "Search".**

Pour entreprendre une recherche d'information concernant une entreprise spécifique, entrez le nom de l'entreprise et les autres renseignements disponibles dans les champs fournis à cet effet, puis cliquez sur « Search » (recherche).

**Refine your search for Fire Resistive Hourly Ratings or Companies**

Fire Resistive Hourly Rating:

Company Name within Fire Resistive System, Design, or Assembly:

**Refining using multiple pieces of information is possible by using “and”, “or” and “not” statements, and wildcards as demonstrated through the “Search Tips” link or the following Tips for Effective Searches:**

Il est possible d'affiner une recherche en utilisant des éléments d'information comme « and » (et), « or » (ou) et « not » (sans) ou des caractères de remplacement tels que l'illustre le lien « Search Tips » (conseils de recherche) ou les Conseils pour des recherches efficaces suivants :

### TIPS FOR EFFECTIVE SEARCHES

#### CONSEILS POUR DES RECHERCHES EFFICACES

##### Select a search method

- Match all words - type **AND** between words (i.e., display and nwgq)
- Match any word - type **OR** between words (i.e., hair dryer or blow dryer)
- Match phrase(s) - type exact phrase (i.e., washing machine)

- **Exclude a word - type NOT before word (i.e., roof panel not metal)**
- **Match a partial word or phrase - To replace any characters or words that you may not know, add an asterisk (\*) in the middle or at the end of the characters or words in your search.**

### Examples

- **Company Name - company\***
- **Keyword - submersible\***

Sélectionnez une méthode de recherche

- Apparier tous les mots : tapez AND (et) entre les mots (p. ex. display and nwgq)
- Apparier n'importe quel mot : tapez OR (ou) entre les mots (p. ex. hair dryer or blow dryer)
- Apparier les syntagmes : tapez le syntagme exact (p. ex. washing machine)
- Exclure un mot : tapez NOT (sans) avant le mot (p. ex. roof panel not metal)
- Apparier un mot ou un syntagme partiel. Pour remplacer des caractères ou des mots que vous ne connaissez pas, ajoutez un astérisque (\*) au milieu ou à la fin de la chaîne de caractères ou de mots dans votre recherche.

### Exemples

- Company Name (Nom d'entreprise) – company\* (entreprise)
- Keyword (Un mot clé) – submersible\*

**Once the number of “hits” has been reduced, click on the appropriate link in the “Link to File” column to view the company’s current Certification(s) or refine further by again clicking “Refine Your Search.”**

Une fois que le nombre d'appels de fichiers a été réduit, cliquez sur le lien approprié dans la colonne « Link to File » (lier au fichier) pour visualiser les certifications actuelles de l'entreprise ou affinez davantage votre recherche en cliquant de nouveau sur « Refine Your Search » (affiner votre recherche).

**Search by Standard Number:**

Recherche par « Standard Number »(numéro de norme) :

**This option searches all UL Guide Information for the requested standard number (UL and other). Your results, a list of product categories whose products were evaluated to or whose Guide Information references the standard.**

Cette option effectue une recherche du numéro de norme demandé (UL et autres) dans tout le Guide information UL. Vos résultats, une liste de catégories de produits dont les produits ont été évalués ou pour lesquels le Guide information fait référence à la norme.

**To begin search, enter the exact standard (ASTM E84, UL 300, ANSI/NSF 61, etc.) number in the available “Standard Number“ field and click “Search.”**

Pour commencer la recherche, entrez le numéro exact de la norme (ASTM E84, UL 300, ANSI/NSF 61, etc.) dans le champ « Standard Number » (numéro de norme) disponible et cliquez sur « Search » (recherche).

**This search results in the UL Guide Information for one or more categories. Choose the correct category by clicking the “GuideInfo” link in the “Link to File” column.**

Les résultats de cette recherche vous donneront une ou plusieurs catégories dans le Guide information UL. Choisissez la catégorie appropriée en cliquant sur le lien « GuideInfo » de la colonne « Link to File » (lier au fichier).

Company Name	Category Name	Link to File
Guide Information	Fire Door and Window Frames	<a href="#">GVTV.GuideInfo</a>

Model number information is not published for all product categories. If you require information about a specific model number, please contact [Customer Service](#) for further assistance.

**Note: If your search does not result in any “Hits”, try it again using only the number (i.e. E84, 300, 61, etc.).**

*Remarque : Si votre recherche ne donne aucun appel de fichiers, essayez de nouveau en n'utilisant que le numéro (p. ex. E84, 300, 61, etc.).*

### **Search By UL File Number:**

Recherche par « UL File Number » (numéro de fichier UL) :

**A “File Number” is an alphanumeric designation (e.g. E12346, MH3456, R4600, etc.) assigned by UL and associated with a specified company and product category.**

Un « File Number » (numéro de fichier) est une désignation alphanumérique (p. ex. E12346, MH3456, R4600, etc.) assignée par UL et liée à une entreprise et à une catégorie de produit spécifiques.

**To search by “File Number”, first use the drop-down menu on the main page.**

Pour effectuer une recherche par « File Number » (numéro de fichier), utilisez d'abord le menu déroulant de la page principale.

Next, enter the file number and click “Search”.

Tapez ensuite le numéro de fichier et cliquez sur « Search » (recherche).

As in the previous example, click the appropriate File Number link in the “Link to File” column.

Comme dans l'exemple précédent, cliquez sur le numéro de fichier approprié dans la colonne « Link to File » (Lier au fichier).

Company Name	Category Name	Link to File
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	<a href="#">Sample File</a>
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	<a href="#">Sample File</a>
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	<a href="#">Sample File</a>

## Search by UL Category Code:

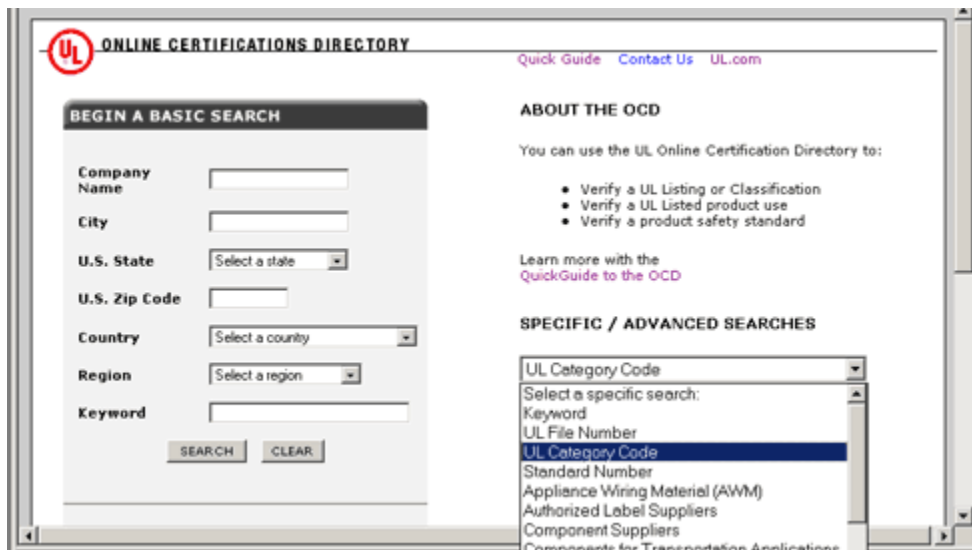

Recherche par « UL Category Code » (code de catégorie UL) :

“Category Code” allows for four search options. They are 1) UL Category Code, 2) Keyword search within Guide Information only, 3) Keyword Search within Product Category Title only, and 4) Category Code Hierarchy view.

Le « Category Code » (code de catégorie) offre quatre options de recherche. Ce sont 1) « UL Category Code » (le code de catégorie UL), 2) la recherche par « Keyword » (mot clé) dans le Guide information seulement, 3) la recherche par « Keyword » (mot clé) dans « Product Category Title » (titre de catégorie de produit) seulement, et 4) la vue de la « Category Code Hierarchy » (hiérarchie du code de catégorie).

**A UL Category Code is an alphanumeric designation (GBTV, QMFZ2) assigned by UL and associated with a specific product category. To search by UL Category Code, use the drop-down menu on the main page.**

Un code de catégorie UL est une désignation alphanumérique (GBTV, QMFZ2) assignée par UL et liée à une catégorie de produit spécifique. Pour effectuer une recherche par « UL Category Code » (code de catégorie UL), utilisez d'abord le menu déroulant de la page principale.

**To search for keywords in either the Guide Information or product category title, enter the information in the respective “Keyword search within Guide Information Only” “or “Keyword search within Product Category Title only” field and click “Search.” Note: This “keyword” search function searches only the UL Guide Information. To search for keyword(s) throughout the entire database, use the Keyword option described in full below.**

Pour effectuer une recherche par mots clés dans le Guide information ou dans le titre de catégorie de produit, entrez l'information dans le champ respectif « Keyword search within Guide Information Only » (recherche par mot-clé dans le Guide information seulement) ou « Keyword search within Product Category Title only » (recherche de mot clé dans le titre de catégorie de produit seulement) et cliquez sur « Search » (recherche). **Remarque :** Cette fonction de recherche par mot clé n'effectue les recherches que dans le Guide information UL. Pour effectuer une recherche par mots clés dans toute la base de données, utilisez l'option « Keyword » (mot clé) dont la description détaillée est donnée ci-après.

[See General Information for Fire Doors](#)

**GENERAL**

This category covers fire door frames, fire window frames, and twenty minute type door frames or window frames without hose stream.

Fire door and fire window frames are intended for the protection of openings in walls when installed in accordance with ANSI/NFPA 80, "Standard for Fire Doors and Fire Windows" and ANSI/SDI A250.11, "Recommended Erection Instructions for Steel Frames." Installation instructions are not required to be shipped with frames that are to be installed in accordance with ANSI/NFPA 80.

**Search Fire Resistance:**

Recherche de résistance au feu :

**A search for fire resistive assemblies or systems can be performed two ways, depending on the information available.**

Une recherche sur les assemblages et les systèmes résistant au feu peut être effectuée de deux façons, selon l'information disponible.

**Enter the exact UL Design, System, Construction or Assembly number in the appropriate field and click "Search."**

Entrez le numéro UL exact de modèle, de système, de fabrication ou d'assemblage dans le champ approprié et cliquez sur « Search » (recherche).

**Fire-resistance-rated Systems and Products**

These designs, systems, assemblies, and products all include, or are related to, hourly fire-resistance ratings.

**SEARCH FOR A DESIGN**

Search for a Design No.

SEARCH HINTS: To search for a particular design (or assembly or system), enter the design number above. To search for designs within a series enter the alpha character(s) followed by the first numeric character and an \* (e.g., searching for L5\* yields result for all L500 series designs). If your initial search yields an excessive number of matches, select "Refine Your Search" and tighten the search parameters

Cliquez sur le lien « Fire Resistance Ratings » (Degré de résistance au feu)

The screenshot shows the UL Online Certifications Directory page for "Fire-resistance-rated Systems and Products". The page features a search bar for design numbers, a list of related information links, and a section for further assistance. The search bar includes a "SEARCH" button and a "CLEAR" button. The related information section lists various fire-resistant products and systems, including fire-resistance ratings, through-penetration firestop systems, joint systems, perimeter fire-containment systems, fire door and fire window assemblies, dampers, grease duct assemblies, structural steel used in petrochemical facilities, electrical circuit protective systems, thermal barrier systems, and ventilation duct assemblies. The further assistance section provides links to correlate international building code requirements with UL certifications, architectural services, customer services, regulatory services, obtain UL standards, training courses on fire resistance, and general information on fire resistance ratings (BXRH).

**Click the blue “Numbering System for Fire Rated Assemblies” link to view the interactive Fire Resistive Design Matrix.**

Cliquez sur le lien en bleu « Numbering System for Fire Rated Assemblies » (numérotage de système pour les assemblages cotés pour leur résistance au feu) pour afficher la Matrice de conception résistante au feu interactive.

The screenshot shows the UL Online Certifications Directory page for "Fire-resistance Ratings". The page provides information on the category, including floor-ceilings, roof-ceilings, beams, columns, walls, and partitions. It also mentions the test methods and acceptance criteria used for US and Canadian applications. The page features a search bar for design numbers and a section for related information. The search bar includes a "SEARCH" button and a "CLEAR" button. The related information section lists various fire-resistance ratings and systems, including fire-resistance related definitions, guide information for general information on fire-resistance ratings (ANSI/UL 263 (BXUV) and CAN/ULC-S101 (BXUV7)), scope of ANSI/UL 263, locate suitable fire-resistance designs, and UL Qualified Contractor Program.

UL's Online Certifications Directory Quick Guide  
Guide de consultation rapide du répertoire de certifications UL en ligne

Scroll down the left-hand column to the type of construction needed; then, scroll across to view the types of membrane protection. Click the appropriate link. For example, **Floors & Ceilings assemblies with concrete and cellular steel floor (construction) + Exposed Grid System (protection) = all current Designs between A200-A299.**

Faites défiler la colonne gauche jusqu'au type de fabrication nécessaire; puis, faites défiler horizontalement pour voir les types de protection de membrane. Cliquez sur le lien approprié. Par exemple, « Floors & Ceilings » (planchers et plafonds) avec « Concrete and cellular steel floor » (plancher en béton et en acier cellulaire) (fabrication) + « Exposed Grid System » (système de grille apparent) (protection) = tous les modèles actuels entre A200-A299.

[Search Tips](#)      [Disclaimer](#)

Click “Refine Your Search” to further narrow your results. Refine your results using hourly ratings (drop down menu) and/or a key word or phrase, such as a fixture, batts and blankets, or even a specific manufacturer’s name.

Cliquez sur « Refine Your Search » (affiner votre recherche) pour concentrer davantage vos résultats. Affinez vos résultats en utilisant les taux horaires (du menu déroulant), un mot clé ou un syntagme, comme accessoire fixe, coussins et matelas isolants, ou même le nom d'un fabricant en particulier.

**Note: Remember, “Keyword” searches benefit from using “and”, “or” and “not” statements, and wildcards.**

*Remarque : Ne pas oublier que dans les recherches par mot clé, il y aurait avantage à utiliser les mots « and » (et), « or » (ou) et « not » (sans), de même que les caractères de remplacement.*

---

### **Troubleshooting:**

Diagnostic de pannes :

**If the search results yield 0 hits the screen will read “Sorry, No Match Found.” Use your browser's “Back” button to return to the search page. Verify the input information, correct and click “Search”.**

Si le résultat de la recherche ne donne aucun appel de fichiers, l'écran affichera « Sorry, No Match Found » (Désolé, aucune correspondance n'a été trouvée). Utilisez le bouton « Back » (précédent) de votre navigateur pour retourner à la page de recherche. Vérifiez l'information entrée, corrigez et cliquez sur « Search » (recherche).

**If the input information was correct, try using alternate wording (e.g. sheetrock vs. wallboard).**

Si l'information entrée était exacte, essayez d'utiliser une autre formulation (p. ex. panneau de placoplâtre par opposition à panneau mural).
