**Open-type equipment** — Open-type industrial control equipment is intended for installation within a suitable enclosure. Examples of installation issues to consider when determining the suitability of the equipment enclosure include the following, as applicable: 1) the involved area classification, 2) protection against any specific environmental conditions, 3) thread engagement, and 4) whether a tool is required for opening of the enclosure. Installation requirements relating to the suitability of the enclosure are specified in the instructions or markings for the open-type equipment.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CONTROL PANELS AND ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NNNY7)**

**GENERAL**

This category covers control panels and assemblies consisting of enclosures and electrical components such as push-button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Lead wire seals are not required between the modular enclosures. However, conduit runs entering an assembly should be sealed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," unless factory-made seals are provided and the product is marked to so indicate.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on certified assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations and while heavily blanketed with combustible dust for Class II locations.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
  - Control Assembly Body for Use in Hazardous Locations
  - Control Assembly Cover for Use in Hazardous Locations
  - Control Panel for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NNGZ7)**

—Continued

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Assembly Body for Hazardous Locations," "Control Assembly Cover for Hazardous Locations" or "Control Panel for Hazardous Locations."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Flame-control Panels for Use in Hazardous Locations Certified for Canada (NNTE7)**

**GENERAL**

This category covers flame-control panels intended for application in the control of fossil-fuel-burning equipment, such as incinerators, kilns and drying ovens. Flame-control panels have been certified only as to electrical fire and shock hazards. The compatibility of the panel with the controlled equipment from the standpoint of programming the burner(s) and preventing hazardous conditions due to firing of fuel has not been determined.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Flame-control Panel for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Control Panels and Assemblies for Use in Hazardous Locations Certified for Canada (NNNY7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY**

**Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**FLAME-CONTROL PANEL FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY**

No.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR CANADA  
(NNGZ7)**

**ENCLOSED SLIP RINGS FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR  
CANADA (NNTR7)**

**USE AND INSTALLATION**

This category covers enclosed slip rings intended to transfer power to industrial equipment.

A terminal compartment is provided for connection to threaded rigid conduit systems.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Enclosed Slip Ring for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Slip Ring for Use in Hazardous Locations."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTOR CONTROLLERS FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR  
CANADA (NNUX7)**

Motor controllers are Listed under the following categories:

- Auxiliary Devices
- Combination Motor Controllers
- Float- and Pressure-Operated Motor Controllers
- Magnetic Motor Controllers
- Manual Motor Controllers
- Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

Industrial control equipment is Listed with maximum ratings of 200 hp and/or 300 amp and 600 V.

Industrial control equipment marked "Rain tight" is subjected to a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

If the sealed rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS  
LOCATIONS CERTIFIED FOR CANADA (NNGZ7) 529**

**Auxiliary Devices for Use in Hazardous  
Locations Certified for Canada (NOIV7)**

**GENERAL**

This category covers auxiliary devices intended for use in control circuits of magnetic motor controllers and the like, and consist of the following devices: machine-operated switches, pushbutton stations (including pilot lights and selector switches), magnetically operated switches, and miscellaneous manually operated switches.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Pilot lights without guards should be used only where not subject to breakage.

Enclosures furnished without mechanisms are marked to identify the mechanisms that are to be used.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Industrial Control Equipment for Hazardous Locations
- Industrial Control Equipment for Use in Hazardous Locations
- Industrial Control Equipment Enclosure for Hazardous Locations
- Industrial Control Equipment Enclosure for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

**ADDITIONAL INFORMATION**

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

Electronic, thermal and magnetic overload relays in this category are investigated to CSA-C22.2 No. 14, or CAN/CSA-C22.2 No. 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and CAN/CSA-C22.2 No. 60947-4-1, "Low-Voltage Switchgear and Controlgear - Part 4-1: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

*Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.*

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."; the words "Hazardous Locations" may be abbreviated "Haz. Loc."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR CANADA  
(NNGZ7)**

530

**Combination Motor Controllers for Use in  
Hazardous Locations Certified for Canada  
(NOTH7)**

**GENERAL**

This category covers combination motor controllers, which provide the motor branch-circuit functions of the motor controller, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Industrial Control Equipment Enclosure for Hazardous Locations

Industrial Control Equipment Enclosure for Use in Hazardous Locations

Industrial Control Equipment for Hazardous Locations

Industrial Control Equipment for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

**ADDITIONAL INFORMATION**

For additional information, see Motor Controllers for Use in Hazardous Locations Certified for Canada (NNUX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Float- and Pressure-operated Motor Controllers  
for Use in Hazardous Locations Certified for  
Canada (NOWT7)**

**GENERAL**

This category covers float- and pressure-operated switches, including vacuum-operated switches. These devices are intended for direct control of motors, use in control circuits of magnetic motor controllers and the like, and control of other types of loads.

Unless otherwise indicated on the product, these devices are intended for use only with air, water, or other nonhazardous fluids.

Unless otherwise indicated on the product, these devices are intended for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature.

These devices have not been investigated for use in connection with automatic sprinkler or similar protective equipment.

**Power Conversion Equipment for Use in  
Hazardous Locations Certified for Canada  
(NQMD7)**

**USE**

This category covers equipment that supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also includes power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type.

**PRODUCT MARKINGS**

Power conversion equipment incorporating overload protection for motors and not intended for remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection, such as thermal overload relays, or a thermally protected motor must be provided.

Power conversion equipment is marked with input and output electrical ratings.

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment for Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."; the words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PROGRAMMABLE CONTROLLERS FOR  
USE IN HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (NRAG7)**

**GENERAL**

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

This category does not cover programmable controllers intended for use in safety-related functions (i.e., functional-safety applications).

**REBUILT PRODUCTS**

This category also covers programmable controllers and their accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Industrial Control Equipment for Hazardous Locations  
Industrial Control Equipment for Use in Hazardous Locations  
Programmable Controller for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

The words "Programmable Controller" may be abbreviated "Prog. Cntrl."

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 142, "Process Control Equipment," or CAN/CSA-C22.2 No. 61010-1, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements," and CAN/CSA-IEC 61010-2-201, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-201: Particular Requirements for Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR CANADA  
(NNGZ7)**

–Continued

*Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.*

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Industrial Control Equipment for Hazardous Locations” (or “Ind. Cont. Eq. for Haz. Loc.”), “Industrial Control Equipment for Use in Hazardous Locations” (or “Ind. Cont. Eq. for Use in Haz. Loc.”) or “Programmable Controller for Use in Hazardous Locations” (or “Prog. Cntrl. for Use in Haz. Loc.”), or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word “Rebuilt,” “Remanufactured,” “Reconditioned” or “Refurbished” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL CONTROL EQUIPMENT  
RELATING TO HAZARDOUS  
LOCATIONS CERTIFIED FOR  
CANADA (NRAW7)**

**INDUSTRIAL CONTROL PANELS RELATING  
TO HAZARDOUS LOCATIONS CERTIFIED  
FOR CANADA (NRBX7)**

**GENERAL**

This category covers industrial control panels relating to hazardous locations, which are factory-wired assemblies of industrial control equipment such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit-protective devices.

Industrial control panels relating to hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of industrial control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Enclosed Industrial Control Panel Relating to Hazardous Locations with Intrinsically Safe Circuit Extensions

Open Industrial Control Panel Relating to Hazardous Locations with Intrinsically Safe Circuit Extensions

**RELATED PRODUCTS**

Industrial control panels for general use are covered under Industrial Control Panels Certified for Canada (NITW7).

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions" or "Enclosed Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWEX7)**

The Listing covers the following products:

- Control Panels and Assemblies
- Motor Controllers
- Programmable Controllers

Enclosed industrial control equipment is intended for use as indicated in the general guide information at the front of Part II of the Directory (AANZ7) Section.

Industrial Control Equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Industrial Control Equipment for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

If the rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600 per cent of the overload relay current element trip rating. The designations "Class 10, Class 20 and Class 30" are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked Class 10 or Class 30 respectively. Overload relays with a maximum tripping time of 20 seconds may be marked Class 20. Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWEX7)**

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CONTROL PANELS AND ASSEMBLIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWF A7)**

**USE**

This category covers control panels and assemblies consisting of enclosures and electrical components such as push button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product. Modular assemblies must be installed in accordance with the installation instructions provided with each part.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other Listed ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on Listed assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations.

The plugs of the receptacle-plug combinations are for use with extra-hard-usage flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Control Assembly Body for Use in Hazardous Locations
- Control Assembly Cover for Use in Hazardous Locations
- Control Panel for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

together with the word "LISTED," a control number, and the product name "Control Panel for Use in Hazardous Locations," "Control Assembly Cover for Use in Hazardous Locations" or "Control Assembly Body for Use in Hazardous Locations."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTOR CONTROLLERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWF7)**

Motor controllers are Listed under the following categories:

- Auxiliary Devices
- Combination Motor Controllers
- Float-and Pressure-Operated Motor Controllers
- Magnetic Motor Controllers
- Manual Motor Controllers
- Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Auxiliary Devices for Use in Zone Classified Hazardous Locations Certified for Canada (NWFN7)**

**GENERAL**

This category covers devices such as machine-operated switches, push-button stations (including parts, such as pilot lights, meters, terminal blocks and selector switches), magnetically operated switches, and miscellaneous manually operated switches intended for use in control circuits of magnetic motor controllers, and the like.

Pilot lights without guards should be used only where not subject to breakage.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Enclosures furnished without mechanisms are marked to identify the mechanisms intended to be used.

**REBUILT PRODUCTS**

This category also covers auxiliary devices that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt auxiliary devices are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt auxiliary devices are subject to the same requirements as new auxiliary devices.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Industrial Control Equipment Enclosure for Hazardous Locations
- Industrial Control Equipment Enclosure for Use in Hazardous Locations
- Industrial Control Equipment for Hazardous Locations
- Industrial Control Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

Electronic, thermal and magnetic overload relays in this category are investigated to CSA-C22.2 No. 14, or CAN/CSA-C22.2 No. 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and CAN/CSA-C22.2 No. 60947-4-1, "Low-Voltage Switchgear and Controlgear – Part 4-1: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

*Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.*

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Combination Motor Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWFP7)**

**GENERAL**

This category covers combination motor controllers.

Combination motor controllers provide the motor branch-circuit functions of motor controllers, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

**PRODUCT MARKINGS**

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Industrial Control Equipment Enclosure for Hazardous Locations
- Industrial Control Equipment Enclosure for Use in Hazardous Locations
- Industrial Control Equipment for Hazardous Locations
- Industrial Control Equipment for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWEX7)

**PROGRAMMABLE CONTROLLERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWGD7)**

**USE AND INSTALLATION**

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also includes power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

**PRODUCT MARKINGS**

These products are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Industrial Control Equipment for Hazardous Locations
- Industrial Control Equipment for Use in Hazardous Locations

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Industrial Control Equipment for Use in Zone Classified Hazardous Locations Certified for Canada (NWEX7) and Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 142, "Process Control Equipment," or CAN/CSA-C22.2 No. 61010-1, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements," and CAN/CSA-IEC 61010-2-201, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-201: Particular Requirements for Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

*Note: The standard edition and any revision date, if applicable, of the basic unclassified locations standard(s) used to investigate products in this category is recorded in the Report and not in the Guide Information or individual certifications.*

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc.") or "Industrial Control Equipment for Hazardous Locations" (or "Ind. Cont. Eq. for Haz. Loc."), or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT CERTIFIED FOR CANADA (NWGQ7)

**INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT CERTIFIED FOR CANADA (NWGQ7)**

**USE**

This category covers equipment, appliances and systems rated 600 V or less normally found in offices, and other business establishments, residences (homes), educational facilities, and other similar environments classified as ordinary locations.

**EQUIPMENT TYPES**

Equipment may be electronic or electromechanical in design or a combination thereof.

Various groupings of equipment are covered under this category, such as:

**Displays:** Flat-panel displays, LCD displays, monitors, plasma displays.  
**Information processing equipment:** Central processing units (CPUs), hand-held computers (personal assistants), laptop computers, notebook computers, pen-based computers, personal computers, point-of-sale terminals, scanners (including portable barcode scanners), servers, work stations.  
**Accessories:** Docking stations, flash memory cards, keyboards, mouse, PCMCIA-memory-modem cards, port replicators, trackballs.

**Information storage equipment:** Automated information storage equipment, CD-ROM/RW drives, disk drives, DVD drives, tape drives, optical drives.

**Telecommunication equipment:** Cellular site equipment, cordless telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems, powerline communication equipment, private automated branch exchanges (PABXs), telephone answering machines, telephone sets, voicemail systems, IP telephones, IP systems, wireless telephone systems.

**Office appliances:** Adding machines, bursters, calculators, collators, dication and transcribing machines, electric typewriters, erasers, folding, embossing and sealing machines, label printers, microfilm readers, motor-operated file cabinets, overhead projectors, paper cutters, paper shredders, pencil sharpeners, sorters, stackers, staplers.

**Printers/Reproduction equipment:** Copiers, duplicating machines, microfilm printers, mimeograph machines, plotters, printers.

**Mailing, banking and currency-handling equipment:** Cash registers, coin counters, feeders and dispensers, accounting machines, check-writing, -assigning, -dating, -inserting, -mailing, -numbering and -stamping machines, point-of-sale terminals.

**Multimedia equipment/accessories:** Cable modems, digital cameras, DLP projectors, LCD projectors, microphones, set-top boxes, speakers, video conferencing systems.

**Network equipment:** Baluns, bridges, fiber optic transceivers, hubs, nodes, Power over Ethernet (PoE) equipment (e.g., power source equipment [PSE] and powered devices [PD]), repeaters, routers, switches, transceivers.

**Wireless (RF, infrared) transceiving equipment:** RF modems, hand-held computers with integral transceivers.

**Static-neutralizing equipment:** Power units with discharge bars used with or within copiers, collators, film-plate processors, digital printers, duplicating machines and similar equipment.

**Interconnecting cable assemblies:** Cable assemblies intended for use beneath raised floors of computer rooms.

Included within the above groupings is equipment which is battery powered, either by standard-size consumer-replaceable batteries (e.g., AA, C, D), or nonstandard sizes specified by manufacturer, type and ratings.

This category also covers power distribution units (PDUs) and computer power centers investigated as part of a computer system for use exclusively in computer rooms. This equipment is connected to branch circuits, and it distributes power to other units in the computer system by means of interconnecting cable assemblies complying with one or more of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part 1" (CEC). Many of these units require special installation, such as a separate transformer, special grounding methods, motor-generator equipment, air conditioning, etc. Such features are covered in the manufacturer's installation instructions.

**INSTALLATION**

Some equipment has been investigated for installation in a restricted access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions that state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment will also be marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

When certified equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit should be separately provided.

Equipment intended to be installed in closed and multiunit standard racks and cabinets has been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions.

Equipment identified with an Enclosure Type designation, or as "Rain-tight" or "Rainproof," is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

This equipment is intended for installation and use in accordance with the CEC, and the instructions are on or with the equipment.

#### ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specified or generic certified equipment specified in the marking or instructions.

#### SPECIAL CONSIDERATIONS

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

Equipment investigated with respect to security or burglary resistance is covered under Antitheft Alarms and Devices Certified for Canada (ATJT7) and other associated categories. Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security.

The burglary and theft protection features of coin-operated equipment, banking and currency-handling equipment, cash registers, coin counters and the like have not been investigated.

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems Certified for Canada (TPEU7). ATMs that have not been investigated for security protection are covered under Bank Equipment Certified for Canada (BALT7).

Equipment intended for use on commercial transport aircraft and passenger areas of commercial cargo aircraft, as specified in the individual certifications, are investigated within the scope of the standard(s) noted under REQUIREMENTS below. The investigation addresses use in unclassified locations as well as on aircraft, and specifically takes into account appropriate operating parameters and installation considerations including, as applicable, (a) electrical clearances based on a cabin pressurization of approximately 8000 ft (2400 m), (b) aircraft cabin temperature per the manufacturer's specification, (c) interface with the aircraft electrical infrastructure using a method that the aircraft has been designed to accommodate (such as by common electrical attachment plug and outlet configurations, special-purpose mated connections, standard communication and data ports), and (d) the equipment either being such size as to be covered under the existing airline regulations for stowage of portable electronic devices (such as laptops) during takeoff and landing, or having provision for stowage by airline personnel during takeoff and landing so as to not introduce a risk of injury due to kinetic energy (such as service-cart-mounted devices). The investigation does not take into account governmental regulations for airworthiness and therefore Authorities Having Jurisdiction should be consulted for the use on aircraft.

#### PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

For commercial/industrial equipment establishing a virtual environment (virtual reality) as a function, the physiological effects of cyber sickness, motion sickness and similar side effects have not been investigated. Use of the equipment, including related precautions, if any, is intended to be in accordance with the manufacturer's instructions.

#### CATEGORY IDENTIFIER

One of the following category identifiers appears on the product:

60950-1  
60950-21  
60950-22  
60950-23  
CAN/CSA-C22.2 No. 60950-1  
CAN/CSA-C22.2 No. 60950-21  
CAN/CSA-C22.2 No. 60950-22  
CAN/CSA-C22.2 No. 60950-23  
Copier  
Cordless Telephone  
Info. Tech. Equip.  
Information Technology Equipment  
I.T.E.  
ITE  
Modem  
NWGQ7  
Paper Shredder  
Personal Computer

Other category identifiers may be used as shown in the individual certifications.

The category identifier for field-installed accessories includes the word "Accessory."

#### RELATED EQUIPMENT

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Uninterruptible power-supply (UPS) equipment intended for indoor and outdoor use that may be stationary or fixed is covered under Uninterruptible Power-supply Equipment Certified for Canada (YEDU7).

Automatic transfer switches intended for use in optional standby systems in accordance with the CEC are covered under Automatic Transfer Switches for use in Optional Standby Systems Certified for Canada (WPXT7).

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

Static neutralizing equipment is covered under Static Neutralizing Equipment Certified for Canada (VWWZ7). High-voltage parts that may be accessible after installation have been investigated as limited-current circuits.

Filing cabinets covered under this category have not been investigated with respect to fire resistance or security. Fire-resistant filing cabinets are covered under Record Protection Equipment Certified for Canada (RYPH7).

Other equipment associated with information technology/processing but not intended for use in offices, residences or computer rooms is covered under Graphics Arts Equipment Certified for Canada (KCQT7), Inspection and Measuring Electrical Equipment Certified for Canada (NYOK7), Teaching and Instruction Equipment Certified for Canada (WYFW7), Laboratory Use Medical Equipment Certified for Canada (OGTK7), Medical Equipment Certified for Canada (PIDF7), Marking and Coding Equipment, Electronic Certified for Canada (PGBE7) and Photographic Equipment Certified for Canada (QINT7). Other multimedia equipment and accessories are covered under Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7). Other telecommunication appliances and equipment is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7).

Modular assemblies of telecommunication equipment (e.g., racks, circuit card assemblies) which are designed for field installation by trained service personnel are covered under Custom-Built Telecommunication Equipment Certified for Canada (WYKM7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies is covered under Communication Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunication equipment that will be installed at a later time are covered under Information Technology and Telecommunication Equipment Cabinets, Enclosures and Racks Certified for Canada (NWIN7).

Power distribution products intended for indoor use as relocatable multiple-outlet extensions of a single branch circuit not for exclusive use of ITE and consisting of an attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles are mounted are covered under Relocatable Power Taps Certified for Canada (XBYS7).

Power distribution products intended for installation in modular furniture are covered under Furniture Power Distribution Units Certified for Canada (IYNC7).

Equipment intended to protect against mains transients is covered under Surge-protective Devices Certified for Canada (VZCA7).

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1 (2007), "Information Technology Equipment - Safety - Part 1: General Requirements," in conjunction with CAN/CSA-C22.2 No. 60950-21 (2003), "Information Technology Equipment - Safety - Part 21: Remote Power Feeding," CAN/CSA-C22.2 No. 60950-22 (2007), "Information Technology Equipment - Safety - Part 22: Equipment to be Installed Outdoors," and/or CAN/CSA-C22.2 No. 60950-23 (2007), "Information Technology Equipment - Safety - Part 23: Large Data Storage Equipment."

#### UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which

the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and the category identifier "Information Technology Equipment" (or "Info. Tech. Equip.," "I.T.E." or "ITE"), "NWGQ7," or the standard number with or without the "CAN/CSA-C22.2 No." prefix (e.g., "CAN/CSA-C22.2 No. 60950-1," "60950-1"). The Listing Mark may also include one of the following product names: "Copier," "Modem," "Paper Shredder," "Personal Computer," "Cordless Telephone," or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word "Accessory."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWHC7)**

**GENERAL**

This category covers information technology equipment for use in hazardous (classified) locations such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and/or electronic.

**SPECIAL CONSIDERATIONS**

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security or burglary resistance.

**PHYSIOLOGICAL EFFECTS**

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters/receivers are additionally investigated for short-term characteristics to ANSI/IEEE C95.1 (1999), "Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

**PRODUCT IDENTITY**

The following product identity appears on the product:

Information Technology Equipment for Use in Hazardous Locations (or I.T.E. for Use in Hazardous Locations or Info. Tech. Equip. for Use in Hazardous Locations)

Other product identities may be used as shown in the individual certifications.

**RELATED EQUIPMENT**

Graphic display and touch panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Zone Classified Hazardous Locations Certified for Canada (NWGD7).

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1 (2003), "Information Technology Equipment - Safety - Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Information Technology Equipment for Use in Hazardous Locations" (or "I.T.E. for Use in Hazardous Locations" or "Info. Tech. Equip. for Use in Hazardous Locations") or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NWHP7)**

**GENERAL**

This category covers information technology equipment such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and/or electronic.

**REBUILT PRODUCTS**

This category also covers information technology equipment that is rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt information technology equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt information technology equipment is subject to the same requirements as new information technology equipment, including production-line tests as applicable.

**SPECIAL CONSIDERATIONS**

Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security.

**PHYSIOLOGICAL EFFECTS**

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters/receivers are additionally investigated for short-term characteristics to ANSI/IEEE C95.1 (1999), "Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Information Technology Equipment for Hazardous Locations

Information Technology Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

The words "Information Technology Equipment" may be abbreviated "Info. Tech. Equip." or "I.T.E."

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

**RELATED EQUIPMENT**

Graphic display and touch-panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Hazardous Locations Certified for Canada (NRAG7).

Card readers and data-entry-terminal equipment for information technology and telecommunications equipment is covered under Office Appliances and Business Equipment for Use in Hazardous Locations Certified for Canada (QAVS7).

Scanner and barcode-reader equipment for information technology and telecommunications equipment is covered under Data Processing Equipment, Electronic for Use in Hazardous Locations Certified for Canada (ENWS7).

#### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

#### REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment - Safety - Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name Information Technology Equipment for Hazardous Locations (or "Info. Tech. Equip. for Hazardous Locations," "Info. Tech. Equip. for Haz. Loc.," "I.T.E. for Hazardous Locations" or "I.T.E. for Haz. Loc.") or "Information Technology Equipment for Use in Hazardous Locations" (or "Info. Tech. Equip. for Use in Hazardous Locations," "Info. Tech. Equip. for Use in Haz. Loc.," "I.T.E. for Use in Hazardous Locations" or "I.T.E. for Use in Haz. Loc."), or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Reconditioned" or "Refurbished" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## INFORMATION TECHNOLOGY AND COMMUNICATIONS EQUIPMENT CABINET, ENCLOSURE AND RACK SYSTEMS CERTIFIED FOR CANADA (NWIN7)

#### GENERAL

This category covers cabinet, enclosure and rack/frame systems that are not complete but include components and assemblies that are intended to power, protect, heat, cool, or otherwise support information technology (IT) or telecommunications equipment, audio/video equipment (A/V), or the like that will be installed at a later time. They usually include mounting hardware, shelves or space for the installation of additional electronic equipment. These cabinet, enclosure and rack/frame systems are intended to be used by manufacturers in the construction of complete IT and communications equipment, or by service providers for the installation of network infrastructure equipment.

A marking includes a configuration list, or diagram of the components, and assemblies provided with the product covered under the system category. In addition, it is the responsibility of the Authority Having Jurisdiction over the final installation to determine if the final configuration meets the necessary criteria for installation and use.

As appropriate, this equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

Equipment covered under this category includes, but is not limited to, indoor and outdoor cabinets and enclosures, racks, frames (nonenvironmentally controlled cabinets, pedestals, enclosures, etc.), and the like. For the purpose of identification in this Guide Information, all of the equipment (cabinets, racks and enclosures) covered under this category is referred to as "ITC equipment cabinets."

Equipment intended for outdoor use is marked with an enclosure Type designation and provides a degree of protection. The absence of a Type rating will presume no environmental conditions have been assessed, and will automatically designate the equipment with a "Type 0" rating. Cabinets and enclosures may incorporate multiple Type designations for differing compartments if marked on the equipment. In addition, equipment may optionally be investigated and marked for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)." IP codes are not intended to replace Type ratings.

Except for equipment identified with a specific temperature range, outdoor equipment has been investigated over a temperature range of -33°C to +40°C. The effects of insolation (solar loading) have also been considered.

For equipment containing certified primary protectors for telecommunications circuits (see QGVV7), the individual certification information for the protectors should be consulted for information regarding the installation and use of the protectors.

#### INSTALLATION

Some ITC equipment cabinet, enclosure, and rack/frame systems have been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such ITC equipment is provided with a marking or installation instructions which state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment is also marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

Equipment installed in a restricted-access location generally receives power from a centralized dc power source. If field-wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the applicable provisions of the CEC.

All wiring is intended to conform to the wiring methods outlined in the CEC.

#### ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with certified equipment as specified in the markings or instructions.

#### PRODUCT MARKINGS

The product marking includes a configuration list or diagram of components and accessories when included with the product.

Equipment containing service equipment is marked with the service panel input and output ratings. Short-circuit capacity may additionally be investigated and marked.

Equipment containing air conditioning or heat exchangers is marked with the BTU rating for the heat it can eliminate from the equipment interior. This rating is based solely on the manufacturer's specifications and has not been investigated or verified by UL. In addition, the heat release data for any installed equipment that is part of the cabinet system is also included. The heat release from power supplies is specified for the power supply operating under full load (basically the inefficiency of the power conversion process) but the heat release from powered equipment not included as part of the cabinet system is not included.

Equipment containing ac or dc power supplies or distribution is marked with an appropriate electrical rating for the power it can provide to installed units.

#### FACTORS NOT INVESTIGATED

Other features that may affect the operation or performance of the installed equipment have not been investigated.

The suitability of an enclosure system, including any installed equipment, to connect to environmental air-distribution systems in buildings has not been investigated.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- A/V Cabinet System
- A/V Enclosure System
- A/V Rack System
- CATV Cabinet System
- CATV Enclosure System
- CATV Rack System
- Communications Cabinet System
- Communications Enclosure System
- Communications Rack System
- IT Cabinet System
- IT Enclosure System

- IT Rack System
- ITC Cabinet System
- ITC Enclosure System
- ITC Rack System
- Telecom Cabinet System
- Telecom Enclosure System
- Telecom Rack System
- Telecommunications Cabinet System
- Telecommunications Enclosure System
- Telecommunications Rack System

Other product identities may be used as shown in the individual certifications, preceded by the word “Telecom,” “Telecommunications,” “Communications,” “IT,” “ITC,” “A/V” or “CATV,” and a specific application, such as “Cell System,” “Wireless” or “Remote Terminal,” or other applications as shown in the individual certifications (e.g., “Remote Terminal IT Enclosure System”).

The product identity for field-installed accessories includes the word “Accessory.”

**RELATED PRODUCTS**

Complete ITC equipment cabinets are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7), Telephone Appliances and Equipment Certified for Canada (WYQQ7), Communications Service Equipment Certified for Canada (DUZO7), Custom-built Telecommunications Equipment Certified for Canada (WYKM7), Communications-circuit Accessories Certified for Canada (DUXR7), Audio and Video Equipment Certified for Canada (AZUJ7), Audio and Radio Equipment, Commercial Certified for Canada (AZCY7), Commercial Audio and Radio Equipment, Systems and Accessories Certified for Canada (AZJX7), Commercial Phonographs, Tape-playing and Recording Appliances and Accessories Certified for Canada (AZQW7), Audio/Video Apparatus Certified for Canada (AZSQ7), Closed-circuit Television Equipment Certified for Canada (DRQH7), Television/Video Equipment for Use in Health Care Facilities Certified for Canada (KFCV7), Video and Audio Equipment, Professional Certified for Canada (ZCBY7), and similar categories that cover complete equipment.

Cabinets and enclosures that do not include any additional components or assemblies may also be covered under Industrial Control Panels Certified for Canada (NITW7) and investigated to CAN/CSA-C22.2 No. 94-1991, “Special Purpose Enclosures.”

Protectors for paired-conductor communications circuits are covered under Primary Protectors for Communications Circuits Certified for Canada (QVGV7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1 (2007), “Information Technology Equipment – Safety – Part 1: General Requirements.” Outdoor Type ratings are investigated to CAN/CSA-C22.2 No. 94 (1991), “Special Purpose Enclosures.” Components and assemblies provided/installed as part of a communications rack or cabinet are investigated to the applicable UL requirements as appropriate for the component or assembly.

Service equipment, such as meter-socket accessories (see PKAX7), are investigated to CSA-C22.2 No. 115 (1989), “Meter Mounting Devices.”

Special-purpose air conditioners (see ACVS7) are investigated to CAN/CSA-C22.2 No. 236 (1990), “Heating and Cooling Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number or file number, and one of the following product names: “Enclosure System,” “Cabinet System,” “Rack System,” preceded by “Telecom,” “Telecommunications,” “Communications,” “IT,” “ITC,” “A/V,” “CATV,” a specific application such as “Cell System,” “Wireless” or “Remote Terminal,” or other appropriate product name as shown in the individual Listings.

For field-installed accessories, the product name includes the word “Accessory.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSECT- AND RODENT-CONTROL EQUIPMENT CERTIFIED FOR CANADA (NYKX7)**

**GENERAL**

This category covers insecticide sprayers, vaporizers, dispensers, dusters and traps for insect or rodent control, insect electrocution equipment, ultrasonic generators for insect and/or rodent control, and commercial room treatment heaters for insect eradication.

Insecticide vaporizers and dispensers are provided with instructions that call attention to possible danger of dispensing unrecognized materials in kitchens above uncovered food, or in occupied sleeping quarters.

If a flammable dust or liquid, particularly if more volatile or flammable than kerosene (38°C flash point, closed cup), or other flammable material is used in a vaporizer or sprayer, there may be danger of fire or explosion, especially in closed rooms or confined spaces.

Motors used in ultrasonic generators for rodent control are prevented from hazardous overheating by inherent overheating devices, overcurrent protective devices or the inherent impedance of the windings, since these products are intended to operate continuously and unattended.

This equipment is provided with instructions for proper use and installation.

The effectiveness of the product in performing its intended function has not been investigated.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category, except commercial room treatment heaters for insect eradication, are:

- CAN/CSA-C22.2 No. 0 (1991), “General Requirements – Canadian Electrical Code, Part II”
- CAN/CSA-C22.2 No. 0.4 (2004), “Bonding of Electrical Equipment”
- CAN/CSA-C22.2 No. 189 (1989), “High-Voltage Insect Killers”
- CAN/CSA-C22.2 No. 68 (2009), “Motor-Operated Appliances (Household and Commercial)”
- CAN/CSA-C22.2 No. 64 (2010), “Household Cooking and Liquid-Heating Appliances”

The basic standards used to investigate commercial room treatment heaters for insect eradication are CSA-C22.2 No. 46 (1988), “Electric Air Heaters,” and CAN/CSA-C22.2 No. 0 (1991).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Insect and Rodent Control Equipment,” “Insect Trap,” “Insecticide Dispenser,” “Insect Controller,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSPECTION AND MEASURING ELECTRICAL EQUIPMENT CERTIFIED FOR CANADA (NYOK7)**

**USE**

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and for making measurements and tests such as might be associated with manufacturing processes and quality control procedures.

**FACTORS NOT INVESTIGATED**

These products have been investigated with respect to risk of fire, shock and injury to persons. The accuracy of measured, analyzed or prepared quantities has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Inspection Equipment
- Measuring Equipment

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Additional equipment that may be used for measuring purposes is covered under Laboratory Use Electrical Equipment Certified for Canada (OGTK7) and Measuring, Testing and Signal Generation Equipment Certified for Canada (PICQ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements," or CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment" or "Measuring Equipment," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSPECTION AND MEASURING ELECTRICAL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (NYPA7)**

**USE**

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality-control procedures.

The accuracy of the equipment has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Inspection Equipment for Use in Hazardous Locations
- Measuring Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment for Use in Hazardous Locations" or "Measuring Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSPECTION AND MEASURING ELECTRICAL EQUIPMENT, SPECIAL INSPECTION EQUIPMENT CERTIFIED FOR CANADA (NYQD7)**

**GENERAL**

This category covers portable, mobile, stationary, and fixed units or systems intended primarily for the purpose of identifying materials, examining and investigating materials, including x-ray scanning (luggage) units, and other equipment that uses special technologies to perform its function.

Equipment not covered under this category includes, but is not limited to, medical x-ray equipment (including x-ray equipment designed to operate on supply potentials of over 600 V), equipment incorporating unenclosed aerial conductors, separate devices, such as tables, timers, etc., that are not limited in design to x-ray applications, and equipment which is not necessary for successful operation of x-ray equipment. See Inspection and Measuring Electrical Equipment Certified for Canada (NYOK7) and Medical Equipment Certified for Canada (PIDF7).

This equipment has been Classified as to electrical fire, shock, and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and must, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

**FACTORS NOT INVESTIGATED**

These products generate radiation or contain radioactive materials or involve working with toxic materials or other potentially harmful technologies, where data regarding levels of exposure and physiological effects are not investigated. The accuracy of measured, analyzed or prepared quantities has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Special Inspection Equipment
- Special Measuring Equipment

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements," or CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY**

**Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY\*]  
WITH RESPECT TO ELECTRICAL FIRE, SHOCK AND  
MECHANICAL HAZARDS ONLY  
Control No.**

**\* SPECIAL INSPECTION EQUIPMENT or SPECIAL MEASURING EQUIPMENT, or the name of the specific type of product**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INTERIOR BUILDING  
CONSTRUCTIONS CERTIFIED FOR  
CANADA (OEQX7)**

**BUILDING UNITS CERTIFIED FOR CANADA  
(OERQ7)**

**GENERAL**

This category covers insulated building units consisting of proprietary mixes of organic and/or inorganic materials formed into panels, boards or sheets fabricated into sizes, thicknesses and shapes. These units are certified as to fire growth and damageability under specified room fire conditions.

Building units are intended for use in wall, ceiling, or wall-ceiling constructions as stated in the individual certifications.

Fire investigations of these constructions determine whether the degree of contribution to an igniting fire by any or all of the materials used to form the assembly is sufficient to cause significant fire growth and damage beyond the area of ignition fire exposure.

These insulated building units are investigated in a full-scale room fire test to ULC/ORD-C376, "Fire Growth of Foamed Plastic Insulated Building Panels in a Full-Scale Room Configuration." The room consists of four walls at right angles, a floor, and a ceiling. The room interior is 3.6 m long, 2.4 m wide and 2.4 m high. The floor and one of the 2.4 m x 2.4 m walls are constructed of noncombustible materials. The noncombustible wall has an open doorway measuring 2.0 m high and 0.8 m wide. The other three walls and the ceiling are constructed from the panels under investigation. Where the panels are not used for ceiling application, the test ceiling will be selected to represent the worst-case condition anticipated in the field and will be described in the individual certifications.

The panels are subjected to an ignition source as described in ULC/ORD-C376, located in one of the two corners opposite the doorway, for a period of not less than 15 minutes. These panels have demonstrated that their contribution to fire growth within the room is sufficiently low to an extent that flames do not exit the open doorway, the floor heat flux level does not exceed 20 kW/m<sup>2</sup>, and the room temperature does not exceed 600°C as measured 300 mm from the corner diagonally opposite to the ignition source and between 670 mm and 2100 mm from the floor.

Where sprinkler protection is specified, one sprinkler head is located 75 mm below the ceiling, 2.0 m from the 2.4 m wall, and 1.2 m from the 3.6 m wall adjacent to the ignition source. The type of sprinkler head and minimum water flow rate is specified in the individual certifications. A requirement of the sprinkler system is that it is consistent with ANSI/NFPA 13, "Installation of Sprinkler Systems," and with generally accepted practices for the intended installation.

–Continued

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Building Unit for Ceiling Construction
- Building Unit for Wall Construction
- Building Unit for Wall-Ceiling Construction

**RELATED PRODUCTS**

The suitability of field-applied interior-finish materials that may be attached or applied to walls, ceilings, or wall-ceiling surfaces with respect to flame spread and smoke developed should be investigated on the basis of the surface-burning characteristics applicable to these materials; refer to Surface-Burning Characteristics Certified for Canada (BIKT7).

Building units investigated with respect to surface-burning characteristics are covered under Building Units Certified for Canada (BLBT7).

**ADDITIONAL INFORMATION**

For additional information, see Building Materials Certified for Canada (AABM7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C376, "Fire Growth of Foamed Plastic Insulated Building Panels in a Full-Scale Room Configuration."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO FIRE GROWTH AND DAMAGEABILITY**

**Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**BUILDING UNITS FOR \* CONSTRUCTION  
AS TO FIRE GROWTH AND DAMAGEABILITY

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**EQUIPMENT AND SYSTEMS FOR  
USE IN HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (OERX7)**

**GENERAL**

This category covers products and systems investigated for use in hazardous (classified) locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications, together with nonincendive types of protection.

This equipment has not been investigated for performance of its intended function.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Carbon Monoxide Detector for Use in Hazardous Locations
- Combustible-gas Detector for Use in Hazardous Locations
- Flashlight for Use in Hazardous Locations
- Headlight for Use in Hazardous Locations
- Ultrasonic Sensor for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Gas detectors investigated for their performance relative to their ability to detect gas are covered under Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations Certified for Canada (JTPX7).

**544 EQUIPMENT AND SYSTEMS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OERX7)**

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are CAN/CSA-C22.2 No. 157 (1992), "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations," and CSA-C22.2 No. 213 (1987), "Non-Incendive Electrical Equipment for Use in Class I, Division 2 Hazardous Locations."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO INTRINSIC SAFETY ONLY**

or

**AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY**

**Alternate UL Mark**

**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY**

Control No.

or

**[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY**

The words "HAZARDOUS LOCATIONS" may be abbreviated "HAZ. LOC."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ION GENERATORS CERTIFIED FOR CANADA (OETX7)**

**GENERAL**

This category covers portable air ionizers of the household and commercial types intended for emitting charged ions into the atmosphere. These appliances may or may not employ mechanical filters.

**REBUILT PRODUCTS**

This category also covers ion generators that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt ion generators are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt ion generators are subject to the same requirements as new ion generators.

**FACTORS NOT INVESTIGATED**

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Ion Generator

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners Certified for Canada (AGGZ7).

Air-filtering appliances utilizing mechanical filtration only or ultraviolet/germicidal lamps are covered under Air-filtering Appliances Certified for Canada (AEDX7).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners Certified for Canada (EOGX7).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted Certified for Canada (ABQK7).

Power supplies intended for use in electrostatic air-cleaning equipment are covered under Power Supplies, Electrostatic Air-cleaning Equipment Certified for Canada (QQCH8).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 187, "Electrostatic Air Cleaners."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ion Generator," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OEVX7)**

**GENERAL**

This category covers products and systems investigated as to intrinsic safety only, as it pertains to use in hazardous locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications.

This equipment has not been investigated for performance of its intended function.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Carbon Monoxide Monitor for Use in Hazardous Locations

Multi-gas Monitor for Use in Hazardous Locations

Pressure Transducer for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standards used to investigate products in this category are CAN/CSA-C22.2 No. 60079-0 (2011), "Explosive Atmospheres - Part 0: Equipment - General Requirements," and CAN/CSA-C22.2 No. 60079-11 (2011), "Explosive Atmospheres - Part 11: Equipment Protection by Intrinsic Safety 'I.'"

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OEVX7)**

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**CERTIFIED ONLY AS TO INTRINSIC SAFETY  
Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY  
Control No.**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ISOLATION POWER TRANSFORMERS, MARINE CERTIFIED FOR CANADA (OFLZ7)**

**USE AND INSTALLATION**

This category covers products designed and intended for installation in accordance with CSA-C22.2 No. 183.1 (1982), "Alternating-Current (AC) Electrical Installations on Boats." These products typically have a 1:1 turns ratio and are primarily used to electrically isolate the boat from the shore power to mitigate the effects of galvanic currents.

These products have not been investigated for use in hazardous (classified) locations or areas requiring ignition protected equipment unless marked "Ignition Protected."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Isolation Power Transformer

**ADDITIONAL INFORMATION**

For additional information, see Marine Products Certified for Canada (AAMP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No.47 (1990), "Air-Cooled Transformers (Dry Type)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Isolation Power Transformer."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OGNA7)**

**GENERAL**

This category covers laboratory equipment and accessories, such as blenders, stirrers, and other types of products as described in the individual certifications, designed for technological activities involving:

1. The measurement of physical or chemical properties of materials.
  2. The measurement, control, and/or display of the functional performance of a piece of equipment.
  3. Qualitative or quantitative constituent analysis of substances.
  4. Preparation of materials for further analysis or measurements.
- These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been investigated.

This category does not cover laboratory equipment intended for patient contact.

**REBUILT PRODUCTS**

This category also covers laboratory equipment and accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt laboratory equipment and accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment and accessories are subject to the same requirements as new laboratory equipment and accessories.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Laboratory Equipment for Use in Hazardous Locations  
Motor-operated Laboratory Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Other equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory for use in Hazardous Locations Certified for Canada (KGIZ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 151 (1986), "Laboratory Equipment," or CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-operated Laboratory Equipment for Use in Hazardous Locations" or "Laboratory Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LABORATORY HOODS AND CABINETS CERTIFIED FOR CANADA (OGOY7)**

**USE AND INSTALLATION**

This category covers laboratory hoods intended to provide an enclosed countertop work area with exhaust for capture and removal of vapors, mists and particulate matter from the work area.

Unless specifically marked on the equipment, suitability for use with perchloric acid, radiological materials, or the like has not been investigated.

Requirements for the installation of this equipment are included in CSA Z316.5 (1994), "Fume Hoods and Associated Exhaust Systems."

This category does not cover biological containment cabinets.

**PRODUCT MARKINGS**

Laboratory hoods and cabinets are marked with (1) the manufacturer's name, trade name or trademark or other descriptive marking by which the organization responsible for the product may be identified, (2) a distinctive catalog or model number or the equivalent, (3) the electrical rating, and (4) the date or other dating period of manufacture not exceeding any three consecutive months.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Laboratory Hood

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA Z316.5, "Fume Hoods and Associated Exhaust Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Hood."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LABORATORY-USE ELECTRICAL EQUIPMENT CERTIFIED FOR CANADA (OGTK7)**

**USE**

This category covers laboratory equipment and accessories designed for technological activities involving:

- (a) The measurement of physical or chemical properties of materials.
- (b) The measurement of the functional performance of a piece of equipment.
- (c) Qualitative or quantitative constituent analysis of substances.
- (d) Preparation of materials for further analysis or measurements.

These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been evaluated.

**REBUILT PRODUCTS**

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Laboratory Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Additional equipment that may be used in laboratories is covered under Laboratory Equipment Certified for Canada (OGGS7), Heaters, Industrial and Laboratory Certified for Canada (KQLR7) and Electrical and Electronic Measuring and Testing Equipment Certified for Canada (FHCW7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 1010.1 (1992), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part I: General Requirements."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Equipment," or other appropriate product name as shown in the individual Listings.

The Listing Mark for rebuilt laboratory equipment includes the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" preceding the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LABORATORY ELECTRICAL EQUIPMENT FOR USE IN HEALTH CARE APPLICATIONS CERTIFIED FOR CANADA (OGUI7)**

**USE**

This category covers laboratory equipment for health care applications, used to measure, indicate, monitor or analyze substances, or to prepare materials. Examples include but are not limited to centrifuges, hot plates and stirrers, sterilizers, fiber-optic illuminators and laboratory mixers.

**MODULAR SYSTEMS**

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

**ACCESSORIES AND SUBASSEMBLIES**

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

**REBUILT PRODUCTS**

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

**FACTORS NOT INVESTIGATED**

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
  - Laboratory Electrical Equipment for Use in Health Care Applications
  - Laboratory Electrical Equipment Accessory for Use in Health Care Applications (for field-installed accessories)
  - Laboratory Electrical Equipment Module for Use in Health Care Applications (for field-installed modules)
  - Laboratory Electrical Equipment Subassembly for Use in Health Care Applications (for field-installed subassemblies)
- Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Laboratory equipment intended for patient contact is covered under Medical Equipment Certified for Canada (PIDF7).

–Continued

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7), Measuring, Testing and Signal Generation Equipment Certified for Canada (PICQ7) and Laboratory Use Electrical Equipment Certified for Canada (OGTK7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 1010.1 (1992), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements,” or CAN/CSA-C22.2 No. 61010-1 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements,” and one or more of the following Particular Standards as applicable:

- CAN/CSA-C22.2 No. 61010-2-010 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-010: Particular Requirements for Laboratory Equipment for the Heating of Materials”
- CAN/CSA-C22.2 No. 1010.2.020 (1994), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-020: Particular Requirements for Laboratory Centrifuges”
- CAN/CSA-C22.2 No. 1010.2.041 (1996), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-041: Particular Requirements for Autoclaves Using Steam for the Treatment of Medical Materials, and for Laboratory Processes”
- CAN/CSA-C22.2 No. 61010-2-042 (1998), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-042: Particular Requirements for Autoclaves and Sterilizers Using Toxic Gas for the Treatment of Medical Materials, and for Laboratory Processes”
- CAN/CSA-C22.2 No. 61010-2-043 (1998), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-043: Particular Requirements for Dry Heat Sterilizers Using Either Hot Air or Hot Inert Gas for the Treatment of Medical Materials, and for Laboratory Processes”
- CAN/CSA-C22.2 No. 61010-2-045 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-045: Particular Requirements for Washer Disinfectors Used in Medical, Pharmaceutical, Veterinary and Laboratory Fields”
- CAN/CSA-C22.2 No. 61010-2-051 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-051: Particular Requirements for Laboratory Equipment for Mixing and Stirring”
- CAN/CSA-C22.2 No. 61010-2-061 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-061: Particular Requirements for Laboratory Atomic Spectrometers with Thermal Atomization and Ionization”
- CAN/CSA-C22.2 No. 61010-2-081 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-081: Particular Requirements for Automatic and Semi-Automatic Laboratory Equipment for Analysis and Other Purposes”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

When the size or shape of a subassembly makes it impractical to bear the complete Certification Mark, the product may be marked with the UL symbol, “OGUI7” and the file number, provided that the complete Certification Mark appears on the smallest shipping container.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Laboratory Electrical Equipment for Use in Health Care Applications,” or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, “OGUI7” and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

For field-installed modules, accessories and subassemblies, the product name includes the word “Module,” “Accessory” or “Subassembly” (e.g., “Laboratory Equipment Accessory”).

For rebuilt equipment, the word “Rebuilt,” “Remanufactured,” “Refurbished” (or “Refurb”) or “Reconditioned” precedes the product name.

–Continued

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LABORATORY IN VITRO DIAGNOSTIC ELECTRICAL EQUIPMENT CERTIFIED FOR CANADA (OGUR7)**

**USE**

This category covers laboratory equipment used to measure, indicate, monitor or analyze specimens, including blood and tissue samples, solely or principally for the purpose of providing information concerning one or more of the following:

- a physiological or pathological state, or
- a congenital abnormality;
- the determination of safety and compatibility with potential recipients;
- the monitoring of therapeutic measures.

Self-test IVD medical equipment is intended by the manufacturer for use by laypersons in a home environment. Examples include but are not limited to blood analyzers, blood gas analyzers and tissue analyzers, blood glucose monitors, immunoassay analyzers, microtitre plate readers, differential analyzers, chemistry analyzers, and similar products.

**MODULAR SYSTEMS**

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

**ACCESSORIES AND SUBASSEMBLIES**

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

**REBUILT PRODUCTS**

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

**FACTORS NOT INVESTIGATED**

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
  - Laboratory In Vitro Diagnostic Electrical Equipment
  - Laboratory In Vitro Diagnostic Electrical Equipment Accessory (for field-installed accessories)
  - Laboratory In Vitro Diagnostic Electrical Equipment Module (for field-installed modules)
  - Laboratory In Vitro Diagnostic Electrical Equipment Subassembly (for field-installed subassemblies)

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Remanufactured,” “Refurbished” (or “Refurb”) or “Reconditioned” precedes the product identity.

**RELATED PRODUCTS**

Laboratory equipment intended for patient contact is covered under Medical Equipment Certified for Canada (PIDF7).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7), Measuring, Testing and Signal Generation Equipment Certified for Canada (PICQ7) and Laboratory Use Electrical Equipment Certified for Canada (OGTK7).

**ADDITIONAL INFORMATION**

## LABORATORY-USE ELECTRICAL EQUIPMENT, SPECIAL LABORATORY EQUIPMENT CERTIFIED FOR CANADA (OGVH7)

**GENERAL**

This category covers laboratory equipment that uses special technologies to measure, indicate, monitor or analyze substances, or to prepare materials, or to sterilize materials or areas, and other laboratory equipment that uses special technologies to perform its function. Examples include but are not limited to room sterilizers, equipment sterilizers, disinfection equipment, laboratory air cleaners, and decontamination equipment.

This equipment has been certified as to electrical fire, shock and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation should, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons, and should also be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

**MODULAR SYSTEMS**

Special laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

**ACCESSORIES AND SUBASSEMBLIES**

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

**FACTORS NOT INVESTIGATED**

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Laboratory Disinfecting Equipment
- Laboratory Disinfecting Equipment Accessory (for field-installed accessories)
- Laboratory Disinfecting Equipment Module (for field-installed modules)
- Laboratory Disinfecting Equipment Subassembly (for field-installed subassemblies)
- Room Decontamination Equipment
- Room Decontamination Equipment Accessory (for field-installed accessories)
- Room Decontamination Equipment Module (for field-installed modules)
- Room Decontamination Equipment Subassembly (for field-installed subassemblies)
- Room Sanitizer
- Room Sanitizer Accessory (for field-installed accessories)
- Room Sanitizer Module (for field-installed modules)
- Room Sanitizer Subassembly (for field-installed subassemblies)

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Laboratory equipment intended for patient contact is covered under Medical Equipment Certified for Canada (PIDF7).

- Additional equipment that may be used in laboratories is covered under: Heaters, Industrial and Laboratory Certified for Canada (KQLR7)
- Laboratory Electrical Equipment for Use in Health Care Applications Certified for Canada OGUI7)
- Laboratory In Vitro Diagnostic Electrical Equipment Certified for Canada (OGUR7)
- Laboratory-use Electrical Equipment Certified for Canada (OGTK7)
- Measuring, Testing and Signal-generation Equipment Certified for Canada (PICQ7)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY**

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT NAME\*]**

**AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY**

**Control No.**

\* LABORATORY DISINFECTING EQUIPMENT, ROOM DECONTAMINATION EQUIPMENT, ROOM SANITIZER, or other appropriate product name as shown in the individual Classifications

For field-installed modules, accessories and subassemblies, the product name includes the word "MODULE," "ACCESSORY" or "SUBASSEMBLY" (e.g., "ROOM SANITIZER ACCESSORY").

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LADDERS CERTIFIED FOR CANADA (OHZR7)**

**USE**

This category covers portable ladders constructed of wood, metal or reinforced plastic which are intended for general use in households or in commercial establishments. These consist of combination ladders, extension ladders, extension trestle ladders, platform ladders, sectional ladders, single ladders, special-purpose ladders, step stools, step ladders and trestle ladders.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Metal Ladder
- Reinforced Plastic Ladder
- Wood Ladder

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-Z11 (2012), "Portable Ladders."

All portable ladders covered by this standard are classified as follows:

GRADE	LOAD RATING
1AA	Special duty
1A	Extra heavy duty
1	Heavy
2	Medium
3	Light

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal Ladder," "Wood Ladder" or "Reinforced Plastic Ladder," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LAMP HOLDERS CERTIFIED FOR CANADA (OIMZ7)**

**LAMP HOLDERS, ELECTRIC DISCHARGE CERTIFIED FOR CANADA (OJAX7)**

**Lampholders, Electric Discharge, Over 1000 Volts Certified for Canada (OJOV7)**

**USE**

This category covers lampholders and electrode receptacles for use with electric discharge lamps and tubes.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Discharge Lampholder
- Lampholder

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 34 (1987), "Electrode Receptacles, Fittings, and Connectors for Gas Tubes," and CAN/CSA-C22.2 No. 43 (2008), "Lampholders."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder" or "Electric Discharge Lampholder," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Lampholders, Electric Discharge, 1000 Volts or Less Certified for Canada (OKCT7)**

**USE**

This category covers lampholders and combination lampholders with starter holders intended for use with electric discharge or fluorescent lamps.

—Continued

This category also covers GU24 and GU24-1 holders for fluorescent and LED self-ballasted lamps and lamp adapters with mating pin bases.

**Lampholders for High Temperature** — Thermoplastic lampholders investigated for use at temperatures greater than 90°C (194°F) are indicated in the individual certifications. These products are marked with “HT#” (where “#” is the temperature rating).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Discharge Lampholder
- Lampholder

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Separate starter holders are covered under Holders for Automatic Starters Certified for Canada (FLPZ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, “Lampholders.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Lampholder” or “Electric Discharge Lampholder,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LAMP HOLDERS, FITTINGS CERTIFIED FOR CANADA (OKQR7)**

**GENERAL**

This category covers attachments and parts intended for use with screw-shell lampholders to modify the lampholders for certain conditions of usage.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Lampholder Fitting
- Shadeholder

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, “Lampholders,” in addition to the requirements contained in CSA Electrical Bulletin No. 1444A, “Diode Lamp-Life Extenders.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with

—Continued

the word “LISTED,” a control number, and the product name “Lampholder Fitting” or “Shadeholder,” or other appropriate name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LAMP HOLDERS, INCANDESCENT CERTIFIED FOR CANADA (OLDZ7)**

**Lampholders, Adapters Certified for Canada (OLRX7)**

**GENERAL**

This category covers screw-shell lamp adapters. Included are male-to-female screw-shell adapters and screw-shell adapters provided with attachment-plug blades or receptacles.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Adapter
- Incandescent Lampholder Adapter
- Lampholder Adapter

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

For plug-in devices with a lampholder intended to be used as a night-light, see Nightlights Certified for Canada (QOYX7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, “Lampholders.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Adapter,” “Lampholder Adapter” or “Incandescent Lampholder Adapter,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Lampholders, Candelabra and Miniature Certified for Canada (OMFV7)**

**GENERAL**

This category covers screw-shell lampholders of the candelabra (E12) and miniature (E10) base sizes.

Candelabra and candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Candelabra Lampholder
- Lampholder
- Miniature Lampholder

–Continued

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 43, “Lamp holders.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Lamp holder,” “Miniature Lamp holder” or “Candelabra Lamp holder.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Lamp holders, Intermediate Base Certified for Canada (OMTT7)**

**GENERAL**

This category covers screw-shell lamp holders of the intermediate (E17) base size.

Candle lamp holders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw shell and terminals, to enclose the entire lamp holder and provide the required depth of lamp cavity.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Intermediate Lamp holder
- Lamp holder

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, “Lamp holders.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Lamp holder” or “Intermediate Lamp holder.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Lamp holders, Medium Base Certified for Canada (ONHR7)**

**GENERAL**

This category covers screw-shell lamp holders of the admedium (E29) and medium (E26) base sizes.

Candle lamp holders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw shell and terminals, to enclose the entire lamp holder and provide the required depth of lamp cavity.

An admedium (E29) base is not intended for use with ordinary incandescent lamps.

Switched lamp holders are tested on circuits involving a potential to ground of 125 V.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Incandescent Lamp holder
- Incandescent Lamp holder (Douille)
- Lamp holder
- Lamp holder (Douille)
- Medium Lamp holder
- Medium Lamp holder (Douille)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 43, “Lamp holders.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. **LAMPS CERTIFIED FOR CANADA  
(OOKH7)**

**LAMPS, INCANDESCENT, MEDIUM BASE  
CERTIFIED FOR CANADA (OOKZ7)**

**USE**

This category covers incandescent, medium screw-base lamps up to 300 W intended for general lighting and for luminaires and portable luminaires.

This category does not cover lamps designated for specific uses, such as traffic signal, vibration, street-lighting lamps, etc.

**PRODUCT MARKINGS**

**LAMPS CERTIFIED FOR CANADA (OOKH7)**

–Continued

The following product markings are permanent, legible, and located where readily accessible for viewing after assembly of the lamp in the final product, except as permitted otherwise:

1. Applicant’s identification
2. Voltage and wattage rating
3. Additional markings as may be required by the applicable standard(s) for specific modules or usages

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Lamp
- Light Bulb
- Medium-base Incandescent Lamp

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0 (1991), “General Requirements – Canadian Electrical Code, Part II,” and CSA-C22.2 No. 84 (2005), “Incandescent Lamps,” in addition to the applicable requirements of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Medium-base Incandescent Lamp,” “Lamp” or “Light Bulb.”

**LAMPS, SELF-BALLASTED AND LAMP  
ADAPTERS CERTIFIED FOR CANADA  
(OOLR7)**

**USE AND INSTALLATION**

This category covers self-ballasted lamps consisting of a ballast, transformer or power supply, and an integrated or replaceable lamp, for direct connection to a lampholder. Products in this category employ various lamp technologies including, but not limited to, fluorescent lamps and high-intensity-discharge (HID) lamps. Devices with an integral lamp are termed “self-ballasted”; devices with a replaceable lamp are termed “adapters.” These products are intended for operation at the voltage marked on the product.

This category does not cover:

- Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires
- LED lamps

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA\_ANSLG C81.61, “Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.” When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in CSA-C22.2 No. 250.0, “Luminaires.”

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have been investigated for use in the smaller of a 152 mm (6 in.) or 203 mm (8 in.) diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

These products may be used with dimmers unless marked to prohibit such use (e.g., “DO NOT USE WITH DIMMERS” or “NOT FOR USE WITH DIMMERS”).

These products have not been investigated for use in emergency lighting equipment or exit signs.

**PRODUCT IDENTITY**

LAMPS CERTIFIED FOR CANADA (OOKH7)

–Continued

One of the following product identities appears on the product:

- Lamp Adapter
- Self-ballasted Lamp

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires are covered under Lamps, Self-ballasted and Lamp Adapters Certified for Canada (OOLR8).

Self-ballasted light-emitting-diode (LED) lamps are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV7).

LED lamps intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV8).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 1993 (2012), “Self-Ballasted Lamps and Lamp Adapters,” in addition to the requirements contained in CSA Technical Information Letter No. B-81 (2014), “Interim Certification Requirements for Self Ballasted Tubular LED (TLED) Type A Lamps.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Self-ballasted Lamp” or “Lamp Adapter,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LAMPS, SELF-BALLASTED, LIGHT-EMITTING-DIODE TYPE CERTIFIED FOR CANADA (OOLV7)**

**USE AND INSTALLATION**

This category covers self-ballasted light-emitting-diode (LED) lamps, rated up to 347 V ac nominal, provided with ANSI lamp bases.

Self-ballasted lamps have integral control and driver circuitry allowing direct connection to a voltage source (e.g., mains, transformer) without the use of an external constant-current source such as a driver or ballast. Such lamps are intended for operation at their marked voltage(s).

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA ANSLG C81.61, “Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.” When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in CSA-C22.2 No. 250.0, “Luminaires.”

LED lamps intended to replace or supplant traditional incandescent lamps are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have been investigated for use in the smaller of a 152 mm (6 in.) or 203 mm (8 in.) diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

LED lamps intended to replace or supplant traditional fluorescent lamps have been investigated for use in totally enclosed lamp compartments

LAMPS CERTIFIED FOR CANADA (OOKH7)

–Continued

with 25.4 mm (1 in.) of clearance around the sides and underneath the lamp, unless marked not for use in a totally enclosed luminaire.

Products marked “Suitable for Use in Open Luminaires” are intended to replace tungsten-halogen lamps in applications where the luminaire is open and does not require an additional lamp containment barrier.

These products may be used with dimmers unless marked to prohibit such use (e.g., “DO NOT USE WITH DIMMERS” or “NOT FOR USE WITH DIMMERS”).

These products have not been investigated for use in emergency lighting equipment or exit signs.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- LED Lamp

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

LED lamps intended for connection to constant-current power sources (e.g., LED drivers), or those intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type Certified for Canada (OOLV8).

LED retrofit kits intended for field installation in UL-certified luminaires or office-furnishing lights are covered under Light-emitting-diode Retrofit Luminaire Conversion Kits Certified for Canada (IFAR7).

Self-ballasted fluorescent and high-intensity-discharge (HID) lamps and lamp adapters are covered under Lamps, Self-ballasted and Lamp Adapters Certified for Canada (OOLR7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 1993 (2012), “Self-Ballasted Lamps and Lamp Adapters,” in addition to the requirements contained in CSA Technical Information Letter No. B-81 (2014), “Interim Certification Requirements for Self Ballasted Tubular LED (TLED) Type A Lamps.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “LED Lamp,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LAMPS, SPECIALTY CERTIFIED FOR CANADA (OONB7)**

**USE**

This category covers specialty lamps, usually of the common bulb shapes, containing assemblies of light sources (such as miniature incandescent bulbs, light-emitting diodes) and associated electrical components, and provided with bases of various sizes, usually of the standard configurations covered in ANSI/ANSLG C81.61, “American National Standard for Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.”

These lamps are intended for use in certified equipment, such as exit fixtures or exit lights, where the product marking specifies the use of a lamp covered under this category.

**PRODUCT MARKINGS**

The lamp or the smallest unit container is marked with the wattage, voltage, manufacturer’s identification and catalog number.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Specialty Lamp

—Continued

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 43 (2004), "Lampholders," CSA-C22.2 No. 84 (1995), "Incandescent Lamps," and CSA-C22.2 No. 1993 (2012), "Self-Ballasted Lamps and Lamp Adapters."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**FOR USE IN PRODUCTS MARKED**

**TO USE UL-CERTIFIED LAMP, [company identification], [lamp catalog number(s)]**

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**SPECIALTY LAMP**

**LAUNDRY EQUIPMENT ACCESSORIES CERTIFIED FOR USE IN SPECIFIED EQUIPMENT CERTIFIED FOR CANADA (OOWK7)**

**USE AND INSTALLATION**

This category covers accessories that allow operation of washing machines and clothes dryers through card-reading controls. These accessories are rated 600 V ac or less and are investigated for installation on specific models of washing machines and clothes dryers as indicated in the installation instructions.

Laundry-control accessories are intended to be installed by trained service personnel in accordance with the accessory manufacturer's installation instructions and CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 169, "Electric Clothes Washing Machines and Extractors," and/or CAN/CSA-C22.2 No. 112, "Electric Clothes Dryers."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**FOR USE IN UL-CERTIFIED ELECTRIC WASHERS**

or

**FOR USE IN UL-CERTIFIED ELECTRIC DRYERS**

**Alternate UL Mark**

**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification

and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**LEAK-DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (OPDH7)**

**GENERAL**

This category covers leak-detection equipment, including control units, indicators, sensors, probes and auxiliary devices used as part of leak-detection systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Leak-detection Equipment for Use in Hazardous Locations

Leak-detection Equipment (Associated Apparatus)

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Leak Detection Equipment for Use in Hazardous Locations" or "Leak Detection Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LIGHTNING PROTECTION CERTIFIED FOR CANADA (OVGR7)**

**LIGHTNING CONDUCTORS, AIR TERMINALS AND FITTINGS CERTIFIED FOR CANADA (OVTZ7)**

**GENERAL**

This category covers lightning-protection components intended to be installed to provide a lightning-protection system complying with CAN/CSA-B72 (1987), "Installation Code for Lightning Protection Systems."

**LIGHTNING PROTECTION CERTIFIED FOR CANADA  
(OVGR7)**

–Continued

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Air Terminal
- Fitting
- Lightning Conductor

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-B72 (1987), "Installation Code for Lightning Protection Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lightning Conductor," "Air Terminal" or "Fitting."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LINE ISOLATION MONITORS  
CERTIFIED FOR CANADA (OWLS7)**

**USE**

This category covers line isolation monitors, with or without supplementary remote indicating units, intended for use in isolated (ungrounded) power distribution systems in hospitals and other health care facilities. These devices are used to monitor the impedances to ground of an isolated circuit and provide a visual and audible indication of an abnormal leakage condition of the circuit being monitored.

The monitor and supplementary indicating units are intended to be installed in any of the following locations:

- (a) Nonhazardous ordinary locations
- (b) In operating rooms, 5 ft or more above the floor level
- (c) Included as part of an isolated power-supply center

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Line Isolation Monitor
- Line Isolation Monitor Accessory

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 204 (1984), "Line Isolation Monitors," and CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Line Isolation Monitor" or "Line Isolation Monitor Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LOCKS CERTIFIED FOR CANADA  
(OWV7)**

**HIGH-SECURITY ELECTRONIC LOCKS  
CERTIFIED FOR CANADA (OZDC7)**

This category covers high security electronic locks intended for attachment on doors of safes, chests, vaults, automated banking machines, depository units, and the like. The locks are intended to provide a means of locking the boltwork against unauthorized opening. Electronic combination locks are investigated primarily for resistance to unauthorized opening and security against mechanical attack in an attempt to release the locking mechanism.

Electronic locks provide resistance to unauthorized opening for a limited period of time. Electronic combination locks covered under this category may or may not have integral protection against entry by force.

Electronic locks are powered by electrical circuits, or they generate their own power as a function of their operation.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Electronic Locks, High Security Certified for  
Canada (OZDU7)**

**USE**

This category covers burglary-resistant electronic combination locks designed for attachment to doors of safes, chests, vaults, automated banking machines, depository units, and the like. The locks are intended to provide a means of locking the boltwork against unauthorized opening.

These locks are highly resistant to expert or professional manipulation. The protection against expert manipulation includes an audit trail and a resistance to tampering after installation. Combination locks categorized as High are considered suitable for use on torch-resistant safes and chests, Class TRTL-15X6 and TRTL-30X6 vaults, automated banking machines, and night depositories.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Burglary-resistant Electronic Combination Lock

**ADDITIONAL INFORMATION**

For additional information, see Electronic Locks Certified for Canada (OZDC7) and Security Equipment Certified for Canada (ALOV7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC-S334, "Burglary Resistant Electronic Combination Locks."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SECURITY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Burglary Resistant Electronic Combination Lock."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## LOCKING CYLINDERS CERTIFIED FOR CANADA (OZMV7)

### USE

This category covers key-operated cylinders used in door locks and shunt switches for local and police-station-connected burglar alarm systems. The locking cylinders are intended to protect against unauthorized opening by picking or drilling the cylinder.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Locking Cylinder

### ADDITIONAL INFORMATION

For additional information, see Security Equipment Certified for Canada (ALOV7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328, "Burglary Resistant Key Locks."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SECURITY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Locking Cylinder."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## Cabinet-locking Cylinders Certified for Canada (OZQI7)

### USE

This category covers key-operated cabinet-locking cylinders intended for use in cabinets and drawers. The cabinet-locking cylinders are intended to protect against unauthorized opening by picking or drilling the cylinder.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Cabinet-locking Cylinder

### ADDITIONAL INFORMATION

For additional information, see Locking Cylinders Certified for Canada (OZMV7) and Security Equipment Certified for Canada (ALOV7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328 (1998), "Burglary Resistant Key Locks."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SECURITY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Cabinet Locking Cylinder."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## Door Locks Certified for Canada (OZTU7)

### USE

This category covers key-actuated locking assemblies for use on doors of stores, buildings, residences, and the like, to resist unauthorized opening by picking, impression techniques or drilling the lock cylinder or assembly, sawing or drilling the lock bolt, pulling the lock cylinder or other method involving the use of small hand tools.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Door Lock

### ADDITIONAL INFORMATION

For additional information, see Locking Cylinders Certified for Canada (OZMV7) and Security Equipment Certified for Canada (ALOV7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328, "Burglary Resistant Key Locks."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SECURITY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Door Lock."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## Door-lock Accessories Certified for Canada (OZWZ7)

### USE

This category covers door-lock accessories that are used in conjunction with door locks to increase their resistance to unauthorized opening.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Door Lock Accessory

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Locking Cylinders Certified for Canada (OZMV7) and Security Equipment Certified for Canada (ALOV7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S328 (1998), "Burglary Resistant Key Locks."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SECURITY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Security Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Security Listing Mark for these products includes the UL Mark for Canada symbol with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Door Lock Accessory," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## LOW-VOLTAGE AC POWER-SWITCHING DEVICES CERTIFIED FOR CANADA (PAPU7)

### GENERAL

This category covers devices such as low-voltage ac power circuit breakers, low-voltage dc power circuit breakers, low-voltage ac power circuit protectors, low-voltage ac integrally-fused power circuit breakers, and low-voltage power-switching device adapters.

Low-voltage power-switching devices have been investigated for continuous duty at 100% of their current ratings and are designed to provide service-entrance, feeder or branch-circuit protection. They may be manually and/or electrically operable.

These low-voltage power-switching devices, enclosures and adapters are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are on a wiring diagram or other readily-visible location.

Stationary equipment is normally bus connected. However, terminal pads are provided which can accommodate field-installed pressure-wire connectors.

### PRODUCT MARKINGS AND RATINGS

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and on the use of 75°C wire for higher amp-rated circuits.

Low-voltage power-switching devices suitable for use with an accessory are marked to indicate the accessory(s), the electrical rating and proper connections (if not obvious).

Low-voltage power-switching devices without enclosures are intended for use only in Listed enclosures or as part of other Listed equipment which has been and are marked for use with a specific low-voltage power switching device.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## ADAPTERS, LOW-VOLTAGE AC POWER-SWITCHING DEVICES CERTIFIED FOR CANADA (PAQQ7)

### GENERAL

This category covers equipment designed to adapt low-voltage power-switching devices to receiving devices, such as individual enclosures, dead-front switchboards (switchgear), panelboards, etc. Field installation is intended only in those receiving devices which are specifically marked for their use.

These adapters have been investigated in conjunction with power-switching devices and have been found suitable to carry 100% of the current rating of the power-switching device, and to withstand the maximum fault-current levels specified on the power-switching device.

### PRODUCT MARKINGS

The adapters are marked to indicate the power-switching device with which they may be used.

### PRODUCT IDENTITY

The following product identity appears on the product:

Low-voltage Power-switching-device Adapter

### ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), "Switchgear Assemblies."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

—Continued

together with the word "LISTED," a control number, and the product name "Low Voltage Power Switching Device Adapter."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## LOW-VOLTAGE AC POWER CIRCUIT BREAKERS CERTIFIED FOR CANADA (PAQX7)

### GENERAL

This category covers low-voltage power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection or serve as a disconnecting means. They are covered by the classifications indicated by the label designation as follows:

**Low-voltage ac power circuit breaker** — Without enclosure, and with or without noninterchangeable trip devices.

**Low-voltage ac power breaker frame** — Frame only of power circuit breaker with provision for interchangeable trip devices. A certified low-voltage ac power circuit breaker frame is certified for use only with certified low-voltage ac power circuit breaker trip device.

**Low-voltage ac power circuit breaker trip device** — Trip device only of power circuit breaker having provisions for interchangeable trip devices.

The frame size determines the maximum continuous current rating for all parts of a low-voltage ac power circuit breaker except the coils of the direct acting trip device. The rating of the trip device determines the actual continuous current rating.

The trip devices may contain ground-fault current, longtime-delay overcurrent, short-time-delay overcurrent and instantaneous overcurrent trip elements that may be adjustable. The tolerance of the marked position of the longtime-delay overcurrent trip setting is plus or minus 10%.

A ground-fault current trip element is one that functions at all values of current at or above a predetermined value of fault current to ground.

An instantaneous overcurrent trip element is one that functions with no purposely delayed action at all values of current at or above a predetermined value of overcurrent.

A long-time overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time or instantaneous pick-up settings of the circuit breaker.

A short-time-delay overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time current rating of the circuit breaker.

Circuit breakers without enclosures are intended for use only as part of other certified equipment investigated and marked for use with specific circuit breakers.

### PRODUCT MARKINGS

Low-voltage ac power circuit breakers are marked with maximum voltage, frequency, continuous current, short-time current, short-circuit current (interrupting rating) and control voltage ratings. The short-time current rating is the designated limit of fault current that the low-voltage ac power circuit breaker can successfully carry for a short interval. Other rating information, such as the nominal design voltage and time-delay overcurrent trip setting, may be provided.

Circuit breakers without trip devices cannot of themselves respond to overcurrent, short-circuit or ground faults and are marked "No Over-Current Protection Provided" or "If Over-Current Protection is Required, Use With Type \_\_\_ Protective Relays." Circuit breakers without trip devices can respond to overcurrent when properly connected to protective relays.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Low-voltage AC Power Circuit Breaker

Low-voltage AC Power-breaker Frame

Low-voltage AC Circuit-breaker Trip Unit

### ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), "Switchgear Assemblies."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Low-Voltage AC Power Circuit Breaker,” “Low Voltage AC Power Breaker Frame” or “Low Voltage AC Circuit Breaker Trip Unit.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LOW-VOLTAGE AC INTEGRALLY-FUSED  
POWER CIRCUIT BREAKERS CERTIFIED  
FOR CANADA (PASQ7)**

**GENERAL**

This category covers low-voltage ac integrally fused power circuit breakers rated 600 V maximum. Low-voltage ac integrally fused power circuit breakers include all the mechanical features of low-voltage ac power circuit breakers and, in addition, have current limiters or current-limiting fuses that function to increase the fault-current interrupting rating of the low-voltage ac integrally fused power circuit breakers.

These devices have been investigated for use on three-phase circuits having available fault currents of 200,000 rms symmetrical amps, maximum.

In addition to overcurrent trip elements of the low-voltage ac power circuit breakers, these are provided with an anti-single-phase tripping device that automatically opens the circuit breaker contacts in response to circuit interruption by the current limiter or the current-limiting fuse.

These devices are intended for use in certified switchgear or switchboards with certified adapters.

**PRODUCT MARKINGS**

Low-voltage ac integrally fused circuit breakers are marked with the maximum voltage, frequency, continuous current, short-circuit current (interrupting rating), intended fuse rating and type, and control voltage ratings. Other rating information, such as the nominal design voltage and time-delay overcurrent tripping setting, may be provided.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Low-voltage AC Integrally Fused Power Circuit Breaker

**ADDITIONAL INFORMATION**

For additional information, see Low-voltage AC Power-switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (2010), “Switchgear Assemblies.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Low Voltage AC Integrally Fused Power Circuit Breaker.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LOW-VOLTAGE DC POWER CIRCUIT  
BREAKERS CERTIFIED FOR CANADA  
(PAXW7)**

**USE**

This category covers stationary and draw-out low-voltage dc air and power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

Air circuit breakers are rated at a nominal voltage of 750 V dc and less. Power circuit breakers are rated at a nominal voltage greater than 750 V dc and up to 3000 V dc.

Low-voltage dc air and power circuit breakers are separated into four types: general purpose, rectifier, high speed and semi-high speed.

These products are intended for use in certified switchgear or switchboards with certified adapters.

**PRODUCT MARKINGS**

These products are marked with the type of circuit breaker, frame size, rated maximum voltage, rated continuous current, rated peak current (when applicable), rated short-time current (where applicable), rated short-circuit current and rated control voltage.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- General-purpose DC Air Circuit Breaker
- General-purpose DC Power Circuit Breaker
- High-speed DC Air Circuit Breaker
- High-speed DC Power Circuit Breaker
- Rectifier DC Air Circuit Breaker
- Rectifier DC Power Circuit Breaker
- Semi-high-speed DC Air Circuit Breaker
- Semi-high-speed DC Power Circuit Breaker

**ADDITIONAL INFORMATION**

For additional information, see Low Voltage AC Power Switching Devices Certified for Canada (PAPU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 31, “Switchgear Assemblies,” and IEEE C37.14, “Low-Voltage DC Power Circuit Breakers Used in Enclosures.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “DC Air Circuit Breaker” or “DC Power Circuit Breaker,” preceded by the applicable product type: “General-purpose,” “High-speed,” “Semi-high-speed” or “Rectifier.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TRIP DEVICES CERTIFIED FOR USE IN  
LOW-VOLTAGE AC POWER CIRCUIT  
BREAKERS CERTIFIED FOR CANADA  
(PAYK7)**

**USE**

This category covers trip devices suitable for use in place of the original trip device of a low-voltage ac power circuit breaker. Certification covers only the trip device in its ability to sense and respond to overcurrent and fault-current conditions.

This category does not cover the circuit breaker on which the trip device is mounted.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Trip Device

**ADDITIONAL INFORMATION**

**LOW-VOLTAGE AC POWER-SWITCHING DEVICES  
CERTIFIED FOR CANADA (PAPU7)**

**Trip Devices Certified for Use in Low-voltage AC Power  
Circuit Breakers Certified for Canada (PAYK7)–Continued**

For additional information, see Low-voltage AC Power Circuit Breakers Certified for Canada (PAQX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), “Switchgear Assemblies.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**CSA-C22.2 NO. 31  
Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**TRIP DEVICE  
IN ACCORDANCE WITH CSA-C22.2 No. 31-M89  
Control No.**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MANAGEMENT EQUIPMENT,  
ENERGY CERTIFIED FOR CANADA  
(PAZX7)**

**USE**

This category covers energy management equipment that energizes or de-energizes electrical loads to achieve the desired use of electrical power. This equipment normally controls electrical loads by responding to sensors or transducers monitoring power consumption, by sequencing, by cycling the loads through the use of preprogrammed data logic circuits, or any combination thereof. Devices responding to signals from a utility company may receive the signals over the power lines or as radio signals.

Typical loads controlled are space heating, air conditioning, lighting and other similar loads.

Devices are intended to be used only within the manufacturer’s brand and product series as indicated in the manufacturer’s instructions. Exceptions are specifically identified.

**PRODUCT MARKINGS**

“Energy Management Equipment Enclosure,” “Energy Management Equipment Enclosure Part,” “Energy Management Equipment Subassembly” and “Energy Management Equipment Accessory” require modular labeling. The marking on the individual subassembly, or smallest container, will make reference to 1) a wiring diagram for interconnection of a system, and 2) the various combinations of subassemblies that may be employed to comprise the system unit.

**FACTORS NOT INVESTIGATED**

The effects of the controls on the performance ratings of the connected loads have not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Enclosed Energy Management Equipment
- Energy Management Equipment
- Energy Management Equipment Accessory
- Energy Management Equipment Enclosure
- Energy Management Equipment Enclosure Part
- Energy Management Equipment Subassembly
- Open Energy Management Equipment

The word “Management” may be abbreviated “Mgmt” or “Mgt” (with or without a period); the word “Equipment” may be abbreviated “Equip” or “Eqpt” (with or without a period).

**RELATED PRODUCTS**

Signal system units incorporating energy management systems are covered under Signal System Units Certified for Canada (UDTZ7).

Switching devices operated by a clock mechanism and other similar type products used to energize or de-energize loads are covered under Switches, Clock Operated Certified for Canada (WGZR7).

Energy-usage-monitoring equipment (not controlling loads directly) is covered under Energy Usage Monitoring Systems Certified for Canada (FTRZ7).

Measurement equipment is covered under Measuring, Testing and Signal-generation Equipment Certified for Canada (PICQ7).

Temperature-indicating and -regulating switches are covered under Temperature-indicating and -Regulating Equipment Certified for Canada (XAPX7) and Controllers, Refrigeration Certified for Canada (SDFY7).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric Certified for Canada (WJCT7).

Plug-in, locking-type photocontrols for use with area lighting intended for parking lot and roadway lighting are covered under Photocontrols, Plug-in, Locking Type Certified for Canada (WJFX7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (2012), “Signal Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Energy Management Equipment,” “Open Energy Management Equipment,” “Enclosed Energy Management Equipment,” “Energy Management Equipment Enclosure,” “Energy Management Equipment Enclosure Part,” “Energy Management Equipment Subassembly” or “Energy Management Equipment Accessory.”

The word “Management” may be abbreviated “Mgmt” or “Mgt” (with or without a period); the word “Equipment” may be abbreviated “Equip” or “Eqpt” (with or without a period).

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MANIFOLDS CERTIFIED FOR  
CANADA (PBBZ7)**

**USE**

This category covers manifolds for high-pressure gas cylinders that are designed to eliminate pipe joints where valves, gauges, etc. are to be grouped at a central location. The individual Listings identify the fluids with which these devices are intended to be used.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMPRESSED GAS MANIFOLDS  
CERTIFIED FOR CANADA (PCRT7)**

**USE**

This category covers compressed gas manifolds intended for use with oxygen, nitrogen, nitrous oxide, carbon dioxide, air, inert gases, anhydrous ammonia, and fuel gases other than acetylene, and may be of the portable or stationary type. These manifolds are intended for connecting together two or more compressed gas cylinders. The manifolds are marked to indicate the gas or gases and pressures for which they are designed.

–Continued

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Manifold – Compressed Gas

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C407 (1974), “High-Pressure Gas Manifolds.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

\_\_\_ PSI MAX FOR USE WITH [gas]

**Alternate UL Mark**

**UL MARK**

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged or the Listing Mark on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Manifold – Compressed Gas.” The statement “\_\_\_ psi max for use with [gas]” is also included if not marked elsewhere on the product.  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LP-GAS CONTROL MANIFOLDS CERTIFIED FOR CANADA (PDFR7)**

**USE AND INSTALLATION**

This category covers various types of manifolds intended to be used in LP-gas systems to interconnect two containers. They serve to allow gas flow from one container at a time and, in the case of line breakage from one of the containers, will prevent both containers from emptying. They may be of the block, disc check, manually operated, or automatic-changeover types. Certain automatic-changeover manifolds also serve as first-stage regulators since they reduce the pressure to the second-stage regulator. Manual- or automatic-changeover manifolds may be incorporated in the assembly of integral two-stage regulators.

These devices are intended to be installed and used in accordance with CSA B149.2, “Propane Storage and Handling Code.”

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Control Manifold for LP-Gas

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ULC/ORD-C407 (1974), “Guide for the Investigation of High-Pressure Gas Manifolds,” ULC/ORD-C125 (1992), “Valves for Anhydrous Ammonia and Propane (Other Than Safety Relief),” and/or ULC/ORD-C144 (1975), “Guide for the Investigation of Pressure-Regulating Valves.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products

–Continued

manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Control Manifold for LP-Gas.”  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MARKING AND CODING EQUIPMENT, ELECTRONIC CERTIFIED FOR CANADA (PGBE7)**

**USE AND INSTALLATION**

This category covers electronic marking and coding equipment rated 600 V or less. Included in this category are ink jet printers or similar systems for production line labeling and/or coding. Units covered under this category normally are located in commercial or industrial environments. This equipment may be cord connected or have provision for field wiring. The units are marked with the type or types of ink for which they have been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Ink Jet Coding Machine
- Ink Jet Marking Machine
- Laser Coding Machine
- Laser Marking Machine
- Marking and Coding Equipment

**RELATED PRODUCTS**

Printing equipment intended for use in other applications is covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 950 (1993), “Safety of Information Technology Equipment, Including Electrical Business Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Marking and Coding Equipment,” “Ink Jet Coding Machine,” “Ink Jet Marking Machine,” “Laser Coding Machine” or “Laser Marking Machine.”  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MASSAGE AND EXERCISE MACHINES CERTIFIED FOR CANADA (PGXX7)**

**GENERAL**

This category covers motor-operated massage and exercise machines, such as vibrating and massaging chairs, hand-held massagers, exercise

treadmills, and the like. Motor-operated massage machines include electric vibrators of the magnetic and motor-driven types.

**FACTORS NOT INVESTIGATED**

Any physiological effects produced from the use of these massage and exercise machines have not been investigated.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Massage Machine" or "Exercise Machine," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MATERIAL LIFTS CERTIFIED FOR CANADA (PGZH7)**

**USE**

This category covers manually or electrically operated material lifts intended to lift or support material loads. They are not intended to lift or support people.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Electrically Operated Material Lift  
Manually Operated Material Lift

**ADDITIONAL INFORMATION**

For additional information, see Building Materials Certified for Canada (AABM7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA B44, "Safety Code for Elevators."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manually-Operated Material Lift" or "Electrically-Operated Material Lift."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MATTRESSES AND BEDDING EQUIPMENT CERTIFIED FOR CANADA (PHIA7)**

**MATTRESSES CERTIFIED FOR FLAMMABILITY CERTIFIED FOR CANADA (PHIX7)**

**USE**

This category covers mattresses and mattress sets intended for use in residential and institutional environments. Specific institutional occupancies include but are not limited to hotels, motels, nursing homes, hospitals, educational, detention, and correctional institutions.

Authorities Having Jurisdiction should be consulted as to the specific requirements covering the acceptance and use of these products in the intended occupancies.

**PRODUCT TESTING**

These products exhibit resistance to rapid heat release when exposed to an open flame ignition source. The mattresses and mattress sets are constructed with elements that either (1) have been treated for the reduction of flammability, (2) are inherently resistant to ignition and flame growth, or (3) are manufactured with a fire barrier.

Mattresses and mattress sets are subjected to the open burning calorimeter test with rate of heat release (HRḂ) from the burning sample determined by an oxygen consumption technique.

**FACTORS NOT INVESTIGATED**

Mattresses and mattress sets have not been investigated for the effect of larger or different placements of the ignition source or with respect to the contribution of the mattresses or mattress sets to a developing fire condition with multiple mattress items or other surrounding materials or products.

The effects of aging and wear on the fire-retardant characteristics of the product have not been investigated.

The density of smoke and toxicity of the products of combustion have not been investigated. It should be recognized that the products of combustion from fires may be toxic to varying degrees, inasmuch as they may include smoke (particulate), carbon dioxide, carbon monoxide, and other vapors and gases, depending upon the conditions of burning and the materials involved. Occupancy tenability depends upon the conditions of heating or burning and the degree of confinement (ventilation) of the products of combustion or decomposition.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Mattress
- Mattress Set

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S137, "Standard Method of Test for Fire Growth of Mattresses (Open Flame Test)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO FLAMMABILITY**

**Alternate UL Mark**

**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME\*]  
AS TO FLAMMABILITY

Control No.

\* MATTRESS or MATTRESS SET

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEASURING, TESTING AND SIGNAL-GENERATION EQUIPMENT CERTIFIED FOR CANADA (PICQ7)**

**GENERAL**

This category covers equipment intended primarily for metering and testing of electrical and electronic circuits, such as ammeters, voltmeters, power meters, frequency counters, chart recorders, oscilloscopes, and related accessories, kits and probes. This category also covers equipment designed to provide electrical or electronic signals for test purposes, such as signal generators or injectors, and frequency synthesizers.

**FACTORS NOT INVESTIGATED**

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically certified in the individual certifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Measuring and Testing Equipment
- Measuring Equipment
- Signal-generation Equipment
- Testing Equipment

Other product identities may be used as shown in the individual certifications, or combinations of the product identities.

**RELATED PRODUCTS**

This category does not cover medical and dental or process-control metering and testing equipment. Certifications of equipment that measure the functional performance (nonelectrical or nonelectronic) of other equipment, the physical or chemical properties of materials or qualitative or quantitative constituent analysis of materials and preparation of materials for further analysis or measurement are covered under Laboratory-use Electrical Equipment Certified for Canada (OGTK7).

Additional certifications are covered under Electrical and Electronic Measuring and Testing Equipment Certified for Canada (FHCW7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements." In addition, CSA-C22.2 No. 61010-2-032 (2004), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-032: Particular Requirements for Hand-Held and Hand-Manipulated Current Sensors for Electrical Test and Measurement," and/or CAN/CSA-C22.2 No. 61010-031 (2007), "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 031: Safety Requirements for Hand-Held Probe Assemblies for Electrical Measurement and Test," may be used where applicable.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Measuring and Testing Equipment," "Measuring Equipment," "Testing Equipment," "Signal Generation Equipment," or the name of the specific type of product as shown in the individual Listings, or combinations of the preceding identities.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEDICAL EQUIPMENT CERTIFIED FOR CANADA (PIDF7)**

**USE AND INSTALLATION**

This category covers equipment intended to diagnose, treat, or monitor a patient under medical supervision, and which makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer.

This equipment has been certified with respect to electric shock, fire, mechanical and other specified hazards incident to its use in unclassified locations. The other specified hazards are included in CAN/CSA-C22.2 No. 601.1, the Particular and/or Collateral Standards and applicable supplements and amendments to which the equipment has been investigated.

The nature of some of this equipment, such as X-ray, nuclear imaging, and magnetic resonance equipment, is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

Baby incubators and similar equipment for use with oxygen-enriched atmospheres have been investigated with respect to the increased hazard resulting from the presence of oxygen and electrical parts within the equipment.

**REBUILT PRODUCTS**

This category also covers medical equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt medical equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt medical equipment is subject to the same requirements as new medical equipment.

**FIELD-INSTALLED EQUIPMENT**

Products covered under this category include equipment intended to be field installed, in accordance with the instructions provided, to certified equipment of the same manufacturer. The field-installed equipment is appropriately marked as noted below.

**FACTORS NOT INVESTIGATED**

The physiological effects, beneficial or otherwise, which may be produced by this equipment have not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Field-installed Medical Equipment
- Medical Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Medical equipment that includes refrigerated components, such as refrigeration therapy equipment, is covered under Refrigerated Medical Equipment Certified for Canada (SOP7).

Equipment investigated to determine its suitability for use in hazardous (classified) locations as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I," is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

For household health care equipment, see Personal Hygiene and Health Care Appliances Certified for Canada (QGRZ7).

For heating pads, see Heating Pads, Electric Certified for Canada (MNUV7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 601.1, "Medical Electrical Equipment - Part 1: General Requirements."

**Particular Standards** — CAN/CSA-C22.2 No. 601.1 contains requirements for safety which are generally applicable to all medical equipment.

**MEDICAL EQUIPMENT CERTIFIED FOR CANADA (PIDF7)**

For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX). However, unless otherwise indicated in the deviations, the requirements of a Particular Standard do not modify the deviations. Where Particular Requirements exist, the General Standard is not used alone.

**Collateral Standards** — When the equipment falls within the scope of one or more Collateral Standards (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) such standard(s) may, optionally, also be used. Unless otherwise indicated in the deviations, the requirements of a Collateral Standard do not modify the deviations.

**Product Marking (with respect to applicable standards)** — As part of the Certification Mark, reference to CAN/CSA-C22.2 No. 601.1 is included. For products that have been investigated in accordance with the applicable Particular (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX) and/or related Collateral (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) Standards, reference to these standards is made on the product or in the accompanying documents.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY**

**IN ACCORDANCE WITH [standard\*]**

\* Based on the certification coverage of the product, the standard number may be CAN/CSA-C22.2 No. 601.1 for products investigated to Canadian requirements only, or UL 60601-1, UL 2601-1 or both, and CAN/CSA-C22.2 No. 601.1 for products investigated to both U.S. and Canadian requirements. Additionally, the standard number may include any applicable Particular (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX) and/or related Collateral (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) Standards for which the product has been found to comply by UL.

**Alternate Marking Options**

1. The Certification Mark includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), a file number, the phrase “SEE ACCOMPANYING DOCUMENTS” or “IEC 348, Symbol 14  $\Delta$ ,” and the standard number\*. At a minimum, the standard number\* always includes CAN/CSA-C22.2 No. 601.1 for products investigated to Canadian requirements only, and UL 60601-1, UL 2601-1 or both, with or without CAN/CSA-C22.2 No. 601.1, for products investigated to both U.S. and Canadian requirements. In addition, the product’s accompanying documents will contain the complete Certification Mark as described above.
2. For products with limited space for markings, the Certification Mark includes the UL symbol, the words “CERTIFIED” and “SAFETY,” and

the IEC 348, Symbol 14  $\Delta$ . In addition, the product’s accompanying documents will contain the complete Certification Mark as described above.

3. For products (such as implantable devices) where the Certification Mark is not feasible, the complete Certification Mark will appear on the carton or on the smallest unit container in which the product is packaged. The product’s accompanying documents may also contain the complete Certification Mark as described above.

\* Based on the certification coverage of the product, the standard number may be CAN/CSA-C22.2 No. 601.1 for products investigated to Canadian requirements only, or UL 60601-1, UL 2601-1 or both, and CAN/CSA-C22.2 No. 601.1 for products investigated to both U.S. and Canadian requirements. Additionally, the standard number may include any applicable Particular (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX) and/or related Collateral (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) Standards for which the product has been found to comply by UL.

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MEDICAL EQUIPMENT+  
WITH RESPECT TO ELECTRICAL SHOCK, FIRE AND MECHANICAL  
HAZARDS ONLY  
IN ACCORDANCE WITH [standard\*]  
Control No.**

+ or other appropriate product name as shown in the individual Classifications

**MEDICAL EQUIPMENT CERTIFIED FOR CANADA (PIDF7) 563**

For rebuilt or remanufactured products the word “Rebuilt,” “Remanufactured,” “Refurbished” or “Reconditioned” precedes the product name. For field-installed products the words “Field Installed” precedes the product name.

**Alternate Marking Options**

1. The Classification Mark includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol, the product name as described above, the phrase “SEE ACCOMPANYING DOCUMENTS,” or the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 -  $\Delta$ ), the standard number\* and a control number. As a minimum, the standard number\* always includes CAN/CSA-C22.2 No. 601.1 for products investigated to Canadian requirements only, and UL 60601-1, UL 2601-1 or both, with or without CAN/CSA-C22.2 No. 601.1, for products investigated to both U.S. and Canadian requirements. In addition, the product’s accompanying documents will contain the complete Classification Mark.
2. For products with limited space for markings, the Classification Mark includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol, the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 -  $\Delta$ ), and a control number. In addition, the product’s accompanying documents will contain the complete Classification Mark.
3. For products (such as implantable devices) where the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or smallest unit container in which the product is packaged. The product’s accompanying documents may also contain the complete Classification Mark.

\* Based on the certification coverage of the product, the standard number may be CAN/CSA-C22.2 No. 601.1 for products investigated to Canadian requirements only, or UL 60601-1, UL 2601-1 or both, and CAN/CSA-C22.2 No. 601.1 for products investigated to both U.S. and Canadian requirements. Additionally, the standard number may include any applicable Particular (IEC 60601-2-XX, CAN/CSA-C22.2 No. 601.2.XX) and/or related Collateral (IEC 60601-1-XX, CAN/CSA-C22.2 No. 601.1.XX) Standards for which the product has been found to comply by UL.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEDICAL EQUIPMENT FOR USE IN  
HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (PINR7)**

**GENERAL**

This category covers portable suction, pressure and anesthesia units, portable baby incubators, surgical devices and similar equipment designed for professional use by attendants in hospitals. This equipment has been investigated solely from the standpoint of electrical, fire, explosion, and accident hazards. Other hazards, such as physiological effects, have not been investigated.

Except for low-voltage battery-powered devices, connections to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Medical Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEDIUM-VOLTAGE POWER CABLE  
CERTIFIED FOR CANADA (PITY7)**

**GENERAL**

This category covers shielded and concentric neutral power cable rated 5000 to 46,000 V intended for transmission and distribution of electrical energy for use either indoors or outdoors in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This cable is single or multiconductor, aluminum or copper, with solid extruded dielectric insulation and may have an extruded jacket, metallic covering or combination of both over the single conductors or over the assembled conductors in a multiconductor power cable.

Shielded cable is suitable for use in wet or dry locations at a maximum conductor temperature of 90°C.

**PRODUCT MARKINGS**

Cable marked "Sunlight Resistant" may be exposed to the direct rays of the sun.

Cable may be optionally marked "FT1," or cable intended for installation in cable trays in accordance with the CEC is marked "FT4."

Cable with aluminum conductors is marked with the word "Aluminum" (or "AL").

The cable is marked with the conductor size, type of insulation (VLPE or EP), voltage rating and insulation level (100% or 133%), conductor material, the legend "Semiconducting — Remove When Terminating or Splicing" (or equivalent) on the surface of the semiconducting layer of the insulation shield in English or in French, the flame rating (if applicable) on the outer covering or jacket, an optional "Sunlight Resistant" marking if applicable, a power cable symbol and the year of manufacture.

Cable employing compact conductors is marked "CPT."

Cable employing solid conductors is marked "SOL."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Medium-voltage Power Cable
- Shielded and Concentric Neutral Power Cable

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C68.3 (1997), "Shielded and Concentric Neutral Power Cables Rated 5-46 kV."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shielded and Concentric Neutral Power Cable" or "Medium-voltage Power Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

urer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**METAL-CLAD CABLE CERTIFIED  
FOR CANADA (PJAZ7)**

**GENERAL**

This category covers Types AC90, ACWU90, RA90 and TECK 90 cable intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

AC90 and ACWU90 cable is rated for use up to 600 V, and certified in sizes 14 AWG through 2000 kcmil for copper, and 12 AWG through 2000 kcmil for aluminum, and employs thermoset- or thermoplastic-insulated conductors. AC90 and ACWU90 cable consists of one or more insulated conductors with an overall interlocked metal armor. One or more grounding conductors may be employed. ACWU90 cable employs an overall jacket of thermoset or thermoplastic material. Single-conductor cable in sizes 4 AWG and smaller, and single-conductor cable without a concentric bonding conductor in sizes larger than 4 AWG is green or green with yellow stripes.

TECK 90 cable is rated for use up to 5000 V, and certified in sizes 14 AWG through 2000 kcmil for copper, and 12 AWG through 2000 kcmil for aluminum, and employs thermoset- or thermoplastic-insulated conductors. TECK 90 cable rated 5000 V employs conductors no smaller than 8 AWG. TECK 90 cable consists of one or more insulated conductors, with or without one or more grounding conductors, an inner jacket of thermoplastic or thermosetting material, and an overall interlocked steel, copper or aluminum armor. The armor on single-conductor cable is aluminum or copper.

RA90 cable is rated for use up to 5000 V, and certified in sizes 14 AWG through 2000 kcmil for copper, and 12 AWG through 2000 kcmil for aluminum, and employs thermoset-insulated conductors. RA90 cable consists of one or more insulated conductors with an overall smooth, seamed, seamless or corrugated aluminum armor. One or more grounding conductors may be employed. RA90 cable may employ an overall jacket of thermoplastic material.

**PRODUCT MARKINGS**

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

AC90, ACWU90 and RA90 cable that complies with Appendix C of CSA-C22.2 No. 0.3, "Test Methods for Electrical Wires and Cables," for "FT4 - ST1," may be marked with the suffix "ST1."

AC90, ACWU90 and RA90 cable that complies with the Acid Gas Evolution Test of CSA-C22.2 No. 0.3 may be marked with the suffix "AG14."

"FT1" indicates that the TECK 90 cable meets the requirements of the FT1 Flame Test.

"FT4" indicates that the AC90, ACWU90, RA90 or TECK 90 cable meets the requirements of the FT4 Flame Test.

"-25C" (or "MINUS 25 C") indicates that the cable complies with a cold bending test at -25°C.

"-40C" (or "MINUS 40 C") indicates that the cable complies with a cold bending test at -40°C.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Metal-clad Aluminum Cable (for metal-clad cable that contains aluminum conductors)
- Metal-clad Cable (for metal-clad cable that contains copper conductors)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 123, "Aluminum Sheathed Cables," CAN/CSA-C22.2 No. 131, "Type TECK 90 Cable," and CSA-C22.2 No. 51, "Armoured Cables."

**UL MARK**

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify prod-

ucts manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper conductors has the product name "Metal-clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## METER-MOUNTING EQUIPMENT CERTIFIED FOR CANADA (PJSR7)

This category covers meter-mounting equipment, which consists of an enclosure, wiring terminals and provision for fastening of the meter to the equipment. Meter-mounting equipment does not include load-making or load-breaking devices. It may include provisions for current transformers but not the transformers.

Transformer-rated meter-mounting devices intended for field installation of current transformers, busbars, and connectors for supply conductors are marked to show:

- the ampere rating and type of current transformers that may be used;
- the method of assembly; and
- the secondary wiring method or the following marking: "This Device Is Supplied Without Secondary Wiring. The Meter Socket Must Be Wired In Accordance With The Local Utility's Requirements."

Meter-mounting equipment is marked with a current rating. Multiple-position meter socket assemblies are provided with current ratings for each individual meter socket and an overall rating for the assembly. The overall rating is the rating for which the assembly is approved, but not necessarily the sum of the current ratings of the individual meter sockets.

This equipment is intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is on a wiring diagram or other readily visible location and is independent of any marking on a terminal connector unless the terminal connector is an integral, nonremovable part of the meter socket jaw.

Wire connectors in Listed meter-mounting equipment are intended to accommodate one conductor only unless use with more than one conductor is clearly indicated on the wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 75°C ampacities for wire as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

Meter-mounting equipment is marked with the enclosure type described in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## METER-SOCKET BASES CERTIFIED FOR CANADA (PJWT7)

### GENERAL

This category covers meter-socket bases, which are bases intended to accommodate plug-in-type watt-hour and similar meters rated for use with current transformers. They are designed to be installed, with the meter, inside enclosures to allow for connection in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Meter-socket bases are rated 600 V ac maximum. Meter-socket bases rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amps. For short-circuit-current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter-socket bases are marked with a continuous amp rating. They may, in addition, have a maximum use (intermittent) rating of not more than 125% of the continuous amp rating.

–Continued

### PRODUCT IDENTITY

The following product identity appears on the product:  
Unenclosed Meter Socket

### RELATED PRODUCTS

Meter sockets with meters protruding through the enclosure are covered under Meter Sockets Certified for Canada (PJYZ7)

### ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment Certified for Canada (PJSR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 115 (1989), "Meter Mounting Devices."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unenclosed Meter Socket."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## METER SOCKETS CERTIFIED FOR CANADA (PJYZ7)

### GENERAL

This category covers meter sockets, which are complete enclosures accommodating plug-in-type watt-hour and similar meters. They provide terminating means for conductors of wiring systems recognized by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The tightening torque required for terminal screws is specified by a marking.

Terminal-wire connectors may be omitted and, if omitted, a marking specifies which connectors are intended to be used. Instructions for the field installation of connectors are provided with the connectors.

Ratings of certified single-position meter sockets are limited to 600 V ac maximum and to 200 A maximum. Ratings of certified multiple-position meter socket assemblies are limited to 600 V ac maximum with an overall current rating of 600 A maximum (200 A maximum per meter socket).

### PRODUCT IDENTITY

The following product identity appears on the product:  
Meter Socket

### ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment Certified for Canada (PJSR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 115 (1989), "Meter-Mounting Devices."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Socket Accessory," "Temporary Jumper Cover Accessory" or "Meter Socket Extender," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**METERS CERTIFIED FOR CANADA  
(PKQT7)**

**FLAMMABLE-LIQUID METERS CERTIFIED  
FOR CANADA (PLRZ7)**

**USE**

This category covers positive-displacement (quantity) meters intended to be used in dispensing devices at operating pressures of 345 kPa (50 psig) or less.

- These meters are intended for use with the following fuels:
- a) Gasoline
  - b) Gasoline/ethanol blends designated as "gasohol" (E10 maximum)
  - c) Diesel fuel
  - d) Fuel oil
  - e) Kerosene

These products are intended to be installed and used in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**FACTORS NOT INVESTIGATED**

The suitability of registers, counters, or computers used or provided with these meters, or the accuracy of measurement resulting from or required in actual application, has not been investigated.

**PRODUCT IDENTITY**

**METERS CERTIFIED FOR CANADA (PKQT7)**

–Continued

The following product identity appears on the product:  
Meter for Flammable Liquid

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C25, "Meters for Flammable and Combustible Liquids and Propane."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**FLAMMABLE-LIQUID METERS, REBUILT  
CERTIFIED FOR CANADA (PLSF7)**

**USE**

This category covers rebuilt positive-displacement (quantity) meters intended to be used in dispensing devices at operating pressures of 344.83 kPa or less.

These meters are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt meters are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt meters are subject to the same requirements as new meters.

- These meters are intended for use with the following fuels:
- a) Gasoline
  - b) Gasoline/ethanol blends designated as "gasohol" (E10 maximum)
  - c) Diesel fuel
  - d) Fuel oil
  - e) Kerosene
- These meters are intended to be installed and used in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**FACTORS NOT INVESTIGATED**

The suitability of registers, counters or computers used or provided with these meters, or the accuracy of measurement resulting from or required in actual application, has not been investigated.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Rebuilt Meter for Flammable Liquid

**RELATED PRODUCTS**

Meters intended for use with flammable and combustible liquids are covered under Flammable-liquid Meters Certified for Canada (PLRZ7).

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C25, "Meters for Flammable and Combustible Liquids and Propane."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## LP-GAS METERS CERTIFIED FOR CANADA (PMFX7)

### USE

This category covers LP-gas meters intended for the handling of LP-gas in the liquid state and designed for working pressures of 1724 kPa or more, as indicated in the individual certifications.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Meter for LP-Gas

### ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C25, “Meters for Flammable and Combustible Liquids and Propane.”

### UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, the product name “Meter for LP-Gas,” and the statement “\_\_\_ kPa max.”  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## MICROWAVE AND CABLE COMMUNICATION EQUIPMENT CERTIFIED FOR CANADA (POFV7)

This category covers microwave communication equipment, cable communication equipment, communication antennas and antenna positioning equipment intended for household or commercial use.

This equipment has been investigated with respect to risk of fire, electric shock and personal injury. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury have included only the equipment specifically Listed in the individual Listings.  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## COMMUNICATION ANTENNAS CERTIFIED FOR CANADA (POQQ7)

### USE

This category covers satellite and microwave receiving and transmitting antennas and accessories intended for household or commercial use, such as satellite antenna dishes, microwave antenna horns or waveguides, receiving and transmitting antennas, antenna mounting/support hardware (e.g., tripods, masts, polar mounts) and similar products.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Antenna Equipment
- Microwave and Cable Communication Equipment
- Microwave Antenna Equipment
- Satellite Antenna Equipment

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

These products may also be covered under Audio/Video Apparatus Certified for Canada (AZSQ7) and Audio and Video Equipment Certified for Canada (AZUJ7).

### ADDITIONAL INFORMATION

For additional information, see Microwave, and Cable Communication Equipment Certified for Canada (POFV7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 1, “Audio, Video, and Similar Electronic Equipment”.

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Microwave and Cable Communication Equipment,” “Satellite Antenna Equipment,” “Microwave Antenna Equipment,” “Antenna Equipment” or “...Product,” or other appropriate product name as shown in the individual Listings.  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## MINERAL-INSULATED CABLE ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (POWD7)

### GENERAL

This category covers lengths of mineral-insulated metal-sheathed cable with one or both ends factory terminated with a certified mineral-insulated cable fitting. The fittings provide threaded connection of the cable to hazardous locations equipment.

### PRODUCT IDENTITY

The following product identity appears on the product:

- Mineral-insulated Cable Assembly for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 174, “Cables and Cable Glands for Use in Hazardous Locations.”

**UL MARK**

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MINERAL-INSULATED METAL-SHEATHED CABLE CERTIFIED FOR CANADA (PPKV7)**

**GENERAL**

This category covers mineral-insulated metal-sheathed cable consisting of one or more solid copper conductors insulated with highly compressed magnesium oxide or silicon dioxide and enclosed in a continuous copper or alloy steel sheath. It is intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Type MI cable is labeled in sizes 18 AWG to 1000 kcmil single conductor, 18 to 4 AWG, two and three conductor, 18 to 6 AWG four conductor, and 18 to 10 AWG seven conductor constructions. The cable is rated 600 V, and employs a copper sheath.

Type LWMI cable is labeled in sizes 18 to 10 AWG for on to seven conductor constructions and is rated 600 V. Type LWMI cable is also labeled in sizes 18 to 10 AWG for 2 and 3 conductor constructions rated 300 V. The cable employs a copper sheath.

Type SSMI cable is similar to MI except that it employs a stainless steel alloy sheath.

Type SSLWMI cable is similar to LWMI except that it employs a stainless steel alloy sheath.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Mineral-insulated Metal-sheathed Cable

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 124, "Mineral-Insulated Cable."

**UL MARK**

The Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Metal-Sheathed Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTOR-GENERATOR SETS  
CERTIFIED FOR CANADA (PQYW7)**

**USE**

This category covers close-coupled combinations of electric motors and generators for indoor use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I.". This equipment is designed as frequency converters or to provide a voltage regulating function provided by the mechanical inertia, and may be intended for portable, permanent or mobile installations.

This category does not cover electric machines for use in aircraft, marine service installations, drives for land transportation equipment, machines used in underground mining, hazardous environments or environments having abnormal temperatures.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Flywheel Energy Storage System  
Motor-Generator Set  
Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

This category does not cover electrical generating equipment driven by gasoline, LP-gas, or diesel fueled internal combustion engines. These products are covered under Engine Generators Certified for Canada (FTR7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 100 (2004), "Motors and Generators," and CSA-C22.2 No. 14 (1995), "Industrial Control Equipment," as it applies to the product.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-Generator Set" or "Flywheel Energy Storage System," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS CERTIFIED FOR CANADA  
(PRGY7)**

**USE**

This category covers three-phase motors:

1. intended to be field installed in accordance with Section 28 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC),
2. 5 hp and larger,
3. greater than 177.8 mm (7 in.) in diameter,
4. where the motor overload protection required by Section 28 of the CEC takes the form of a separate overload device or control.

**PRODUCT MARKINGS AND INSTALLATION**

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7). The motor may also be marked "Raintight" or "Rainproof."

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open-type motor is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the motor, provided in the installation instructions or as a stuffer sheet provided with the motor.

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

**FIELD PROVISIONS**

Motors are provided with a means to electrical connect the motor with the electrical system in the field.

Suitability of guards for the shaft or other moving parts must be determined in the end-use application.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Electric Motor

**RELATED PRODUCTS**

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations Certified for Canada (PTDR7), Motors, Specialty for Use in Hazardous Locations Certified for Canada (PUCJ7) and Motors, Division 2 for Use in Hazardous Locations Certified for Canada (PTHE7).

Motors incomplete in construction are covered under Motors Certified for Canada (PRGY8).

Products Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZYKH).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 100, "Motors and Generators."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to CSA-C22.2 No. 0.2, "Insulation Coordination."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS, INVERTER DUTY  
CERTIFIED FOR CANADA (PRHJ7)**

**USE**

This category cover squirrel cage, polyphase induction motors intended for use with variable voltage and variable frequency controls (commonly referred to as inverters) that are:

1. three-phase,
2. intended to be field installed in accordance with Section 28 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC),
3. 5 hp and larger,
4. greater than 177.8 mm (7 in.) in diameter, and
5. where the motor overload protection required by Section 28 of the CEC takes the form of a separate overload device or control.

The requirements for this category are intended to investigate the suitability of the motor for normal use when fed from an inverter supply through a manufacturer-declared range of operating conditions.

This category does not cover:

1. the efficacy of motor-temperature protection under abnormal conditions,

2. the operation of a motor in hazardous (classified) locations.

Though the motors covered under this category may be provided with Recognized overtemperature protection, the suitability of the overtemperature protection has not been investigated and must be determined in the end-use application.

**INSTALLATION**

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions, or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate that raintight or wet-location hubs complying with the requirements in CAN/CSA-C22.2 No. 18.3, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identify the parts for bonding and specify the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

**PRODUCT MARKINGS**

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

These motors are marked with:

1. the manufacturer's name or identification,
2. the motor catalog or model number,
3. the rated voltage,
4. the full-load amperes, watts or kilowatts, or both,
5. the rated speed,
6. the rated horsepower or output wattage,
7. the rated temperature rise or the insulation system class,
8. the rated ambient temperature,
9. the rated frequency, expressed in one of the following terms: hertz (or Hz); ac-dc (frequency in Hz)/dc (e.g., 60/dc); ac only; direct current, and
10. the number of phases.
11. A continuous-duty motor is marked "Continuous" (or "CONT").
12. A direct-current motor is marked to indicate the winding type: straight shunt, stabilized shunt, compound or series.
13. A multi-speed motor is marked with the amperes and horsepower at each speed.

These motors are marked to indicate the temperature rating (e.g., 60°C only, 60/75, or 75°C only) of the field-installed conductors for which the equipment has been investigated.

Motors equipped with electrically-powered, condensation-prevention heaters are marked with the rated heater voltage, number of phases, and the rated power in watts.

Air-over motors are marked "Air Over" (or "AO") or "Air-Over Motor" (or "AOM").

An alternating-current motor is marked with a code letter to indicate the locked-rotor amperes in accordance with the CEC.

A wound-rotor induction motor is marked with the secondary volts and full-load amperes.

A motor rated for short-time or intermittent duty is marked on the nameplate with the words "intermittent duty" (or "int. duty") and with the time rating in minutes or hours, or a combination of minutes and hours. The rating may be for "On" time only or include specifications for both "On" and "Off" periods.

If the acceptability of a Type 2 or 3R enclosure is dependent upon a particular mounting orientation, the enclosure is marked to indicate the required orientation.

A cast-metal enclosure marked Type 3, 3R or 3S is marked to indicate that, after determining the mounting position of the enclosure, any holes drilled in the field are intended to be located in the lowest part of the bottom wall.

*Exception: If a manufacturer intends that a cast-metal enclosure be acceptable for field drilling and tapping of holes for conduit connections, the enclosure is marked to indicate the location and trade sizes of conduit for which the enclosure has been found to be acceptable. If counter-boring is necessary to accommodate certain sizes of conduit, such information is also given.*

**Note:** The instructions for drilling and tapping may be provided on an instruction sheet provided with the enclosure or marked on the packaging carton.

Any environmental-type enclosure intended for use with conduit hubs and/or other field-installed equipment, but shipped from the factory without them, is marked or provided with instructions that identify the type of equipment intended to be used to maintain the environmental integrity of the enclosure. This may be accomplished by identifying the necessary environmental type designation or by identifying the specific manufacturer and model number of the field-installed equipment.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Inverter-duty Motor

**RELATED PRODUCTS**

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations Certified for Canada (PTDR7), Motors, Specialty for Use in Hazardous Locations Certified for Canada (PUCJ7), and Motors, Division 2 for Use in Hazardous Locations Certified for Canada (PTHE7).

Motors incomplete in construction and intended for factory installation are covered under Motors Certified for Canada (PRGY8).

Motors Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZYKH).

USE IN ZONE CLASSIFIED  
HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (PRSN7)**

**MOTORS, SPECIALTY FOR USE IN ZONE  
CLASSIFIED HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (PRZM7)**

**USE AND INSTALLATION**

This category covers specialty motors.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

The Certification Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

**MOTORS, DIVISION 2 FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PTHE7)**

**GENERAL**

This category covers electric motors intended for use in Class I, Division 2, Groups A, B, C and D, and Class II, Division 2, Groups F and G hazardous (classified) locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the motor is acceptable for Groups A, B, C and D. The motor is also marked with the operating-temperature code designating the maximum internal or external surface temperature determined at rated full-load steady-state conditions, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current-interrupting contacts immersed in oil, located in a nonincendive circuit or located in a purged and pressurized enclosure. If the motor is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor is de-energized, and vice versa. The maximum surface temperature of the space heater is considered in determining the marked operating temperature of the motor.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The motor is marked with the operating temperature or operating-temperature code designating the maximum full-load external temperature

**MOTORS AND GENERATORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PSBV7)**

–Continued

determined at rated full-load steady-state conditions when operating in free air (not dust blanketed), if the external temperature is greater the 100°C.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Electric Motor for Division 2 Hazardous Locations

**RELATED PRODUCTS**

For Division 1 motors, see Motors for Use in Hazardous Locations Certified for Canada (PTDR7).

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in CSA Electrical Certification Notice No. 672, "Motors Used in Division 2 Locations" (January 23, 1990).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Division 2 Hazardous Locations."  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS AND GENERATORS, REBUILT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (PTKQ7)**

**USE**

This category covers rebuilt motors and generators for use in Class I, Groups C and D, and Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, rebuilt motors and generators for use in Class I and Class II hazardous locations are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Certification Mark on a rebuilt motor or generator applies to the motor or generator, but not to any equipment driven by or driving the motor or generator. In the case of a rebuilt motor-generator set provided with a common base, the motor and generator will each bear its respective Certification Mark.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Rebuilt Electric Generator for Use in Hazardous Locations  
Rebuilt Electric Motor for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 145 (1986), "Motors and Generators for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MULTIOUTLET ASSEMBLIES CERTIFIED FOR CANADA (PVGT7)**

**USE AND INSTALLATION**

This category covers metal raceways and power-pole assemblies with factory-installed conductors and attachment-plug receptacles without provision for field installation of additional conductors, except where the product is marked to indicate the number, type and size of additional conductors that may be field installed.

This category also covers nonmetallic raceways with factory-installed conductors and attachment-plug receptacles either factory installed or separately certified as Multioutlet Assembly Fittings Certified for Canada (PVUR7) for field installation.

Separation of communication, signal and data circuits from branch-circuit wiring is provided in the assembly where the conductors are installed at the factory. Separate channels are provided in assemblies intended to be field wired with circuits requiring separation.

Power-pole multioutlet assemblies may be provided with hard-usage flexible cord not exceeding 3 m in length and terminated with an attachment plug when operating at 300 V or less. Authorities Having Jurisdiction should be consulted before installation.

Multioutlet assemblies are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**PRODUCT IDENTITY**

The following product identity appears on the product:

Multioutlet Assembly

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 62 (1993), "Surface Raceway Systems," and CAN/CSA-C22.2 No. 62.1, "Nonmetallic Surface Raceways and Fittings."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MULTIOUTLET ASSEMBLY FITTINGS CERTIFIED FOR CANADA (PVUR7)**

**USE AND INSTALLATION**

This category covers multioutlet assembly fittings intended for use with multioutlet metal raceways and power-pole assemblies. Fittings may consist of flexible metal conduit or armored cable to be connected to multioutlet assemblies by means of nonstandard wired plug-in devices or prefabricated component parts, such as preformed corners and the like.

Multioutlet assembly fittings are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Elbow
- End Fitting
- Multioutlet Assembly Fitting

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Multioutlet Assemblies Certified for Canada (PVGT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 62 (1993), "Surface Raceway Systems," and CAN/CSA-C22.2 No. 62.1, "Nonmetallic Surface Raceways and Fittings."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly Fitting," "Elbow" or "End Fitting," or other appropriate product name as shown in the individual Listings.

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## MUSICAL INSTRUMENTS CERTIFIED FOR CANADA (PWHZ7)

### USE

This category covers electrical devices that produce music under the direct control of the player. This category also covers accessories for use with musical instruments, such as rhythm generators, tone cabinets, music tuners, and the like.

### PRODUCT IDENTITY

The following product identity appears on the product:

Musical Instrument

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

For devices that reproduce music from records, magnetic tape or other recording media, see Audio and Radio Equipment, Commercial Certified for Canada (AZCY7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, "Audio, Video, and Similar Electronic Equipment" or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus - Safety Requirements."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Musical Instrument" or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## NEON TRANSFORMERS AND POWER SUPPLIES CERTIFIED FOR CANADA (PWIK7)

### USE

This category covers indoor and outdoor use neon transformers and power supplies intended for use with display signs, outline lighting and luminaires employing gas-filled glass tubing identified as neon or electric discharge tubing.

These transformers and power supplies have been investigated for secondary-circuit ground-fault protection.

Neon transformers and power supplies are intended for use in or with electric signs and outline lighting within the scope of CAN/CSA-C22.2 No. 207-M89, "Portable and Stationary Electric Signs and Displays," and for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category also covers neon transformer and power-supply accessories intended for use with specific neon transformers and power supplies.

### PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," "Weatherproof" or "WP." Products

marked "Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 8 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

- **Type 2** - Neon supply with input and output terminals or leads that should be enclosed in accordance with the CEC.
- **Type 3** - Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the CEC.
- **Type 4** - Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.
- **Type 5** - Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system and provided with integral receptacles for output connection.
- **Type 6** - Cord-connected neon supply provided with integral receptacles for output connection.
- **Type 7** - Cord-connected neon supply with output terminals or leads that should be enclosed in accordance with the CEC.
- **Type 8** - Cord-connected neon supply with enclosed output terminals or leads.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

Transformers and power supplies marked "For Moving Vehicle Use Only" are intended for use only in moving vehicles and not for use in a freestanding sign, or building mounted sign or outline lighting product.

Neon transformer and power-supply accessories are marked "For Use With XXX Neon Transformer" or "For Use With XXX Neon Power Supply," where "XXX" indicates the model number, catalog number, part number, or other specific identifier of the neon transformer or neon power supply.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Neon Power Supply
- Neon Power-supply Accessory
- Neon Transformer
- Neon Transformer Accessory

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 255 (2004), "Neon Transformers and Power Supplies."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Neon Transformer," "Neon Power Supply," "Neon Transformer Accessory" or "Neon Power Supply Accessory."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## NONMETALLIC-SHEATHED CABLE CERTIFIED FOR CANADA (PWVX7)

### GENERAL

This category covers Types NMWU and NMD90 nonmetallic-sheathed cable, rated 300 V, intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and certified in copper sizes 14 to 2 AWG inclusive and aluminum sizes 12 to 2 AWG inclusive.

### PRODUCT MARKINGS

Cable with aluminum alloy 1350 conductors is surface marked "ALUMINUM," "ALUM" or "AL."

Cable with ACM conductors is surface marked "ALUMINUM-ACM," "ALUM-ACM" or "AL-ACM."

Wire and cable employing compact-stranded copper conductors is so identified on the tag, coil or reel by "COMPACT STRAND."

When Type NMD90 cable is provided with nylon sheaths over the insulated conductors, "NMD90 NYLON" is marked on the surface of the jacket. Type NMD90 cable employing cross-linked polyethylene insulation is surface marked on the jacket "NMD90 XLPE."

The words "RED-BLACK" are marked on the surface of the jacket of two-conductor cable employing red and black insulation. Two-conductor cable may be marked "-25C," "MINUS 25C," "-40C" or "MINUS 40C" if it complies with the applicable requirement.

This cable is marked with the flame rating "FT1."

### PRODUCT IDENTITY

The following product identity appears on the product:  
Nonmetallic-sheathed Cable

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 48 (1990), "Nonmetallic Sheathed Cable."

### UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic-sheathed Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## NONMETALLIC-SHEATHED-CABLE CONNECTORS CERTIFIED FOR CANADA (PXJV7)

### USE

This category covers nonmetallic-sheathed cable connectors intended for use with nonmetallic-sheathed cable for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

All male threaded fittings have only been investigated for use with lock-nuts.

The individual certifications may have details about the size and number of the nonmetallic-sheathed cable each connector will secure.

**Reusability** — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

### MARKINGS

Connectors which are also suitable for use with service-entrance cable, flexible nonmetallic tubing or flexible cord are so indicated on the device or carton.

—Continued

Except for duplex connectors or when otherwise marked on the carton to indicate connecting of more than one cable or cord, the connectors in this category have been investigated for connecting one cable only.

### PRODUCT IDENTITY

One of the following product identities appears on the product:  
Nonmetallic-sheathed-cable Connector

N.M. Cable Connector

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Connectors covered under Armored Cable Connectors Certified for Canada (AWSX7) and Conduit Fittings Certified for Canada (DWT7) are also suitable for use with nonmetallic-sheathed cable when specifically indicated on the device or carton.

Connectors suitable for flexible cord only are covered under Outlet Bushings and Fittings Certified for Canada (QCRV7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 18.3 (2004 and/or 2012), "Conduit, Tubing, and Cable Fittings."

### UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic-sheathed Cable Connector" (or "N.M. Cable Connector"), or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## NONMETALLIC-SHEATHED CABLE INTERCONNECTORS CERTIFIED FOR CANADA (QAAV7)

### GENERAL

This category covers self-contained interconnectors employing pressure cable connectors, insulation displacement or insulation piercing connectors for splicing or tapping nonmetallic (NM) sheathed cable. These interconnectors are intended for installation and use in accordance with Section 12 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These devices have been investigated for equivalency to Type NM cable in insulation and temperature rise, and for capability to withstand fault currents, vibration and mechanical shock that may occur during transport of the units in which they are used.

### PRODUCT MARKINGS

The devices are marked with the Listee's name or identification, catalog number or equivalent, and complete electrical ratings.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

N.M. Cable Interconnector

Nonmetallic-sheathed-cable Interconnector

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 18.3, "Conduit, Tubing, and Cable Fittings," and CSA-C22.2 No. 182.3, "Special Use Attachment Plugs, Receptacles, and Connectors."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Interconnector" (or "N.M. Cable Interconnector"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMMERCIAL SEATING SYSTEMS  
CERTIFIED FOR CANADA (QAHU7)**

**GENERAL**

This category covers single- or multiple-seating systems that may be provided with an integral table and contain electrical accessories, such as an electrical distribution system, lighting and receptacle outlets. The seating system may also be provided with channels for routing communication wiring. The seating is intended to be permanently mounted to the building structure.

This category covers only the electrical hazards associated with the product.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Powered Seating System

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Electrical accessories designed for field installation, such as receptacles, electrical distribution systems, power distribution elements, etc., are covered under Office Furnishings Certified for Canada (QAWZ7) and are marked to identify the specific seating system with which they have been investigated for use.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 203 (1991), "Modular Wiring Systems for Office Furniture," CSA-C22.2 No. 250.0 (2008), "Luminaires," and/or CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO ELECTRICAL HAZARD ONLY**

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**POWERED SEATING SYSTEM\*  
FOR ELECTRICAL HAZARD ONLY  
Control No.**

\* or other appropriate product name as shown in the individual Classifications

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OFFICE APPLIANCES AND  
BUSINESS EQUIPMENT FOR USE IN  
HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (QAVS7)**

**GENERAL**

This category covers equipment and appliances normally used in business establishments classified as hazardous locations. The equipment and appliances may be electromechanical and/or electronic.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Business Equipment for Use in Hazardous Locations

Office Appliance for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Appliance for Use in Hazardous Locations" or "Business Equipment for Use in Hazardous Locations."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OFFICE FURNISHINGS CERTIFIED  
FOR CANADA (QAWZ7)**

**USE AND INSTALLATION**

This category covers office furnishings that consist of electrical distribution systems, components and accessories to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). They may form part of a panel or office furnishing assembly and include the necessary wiring, raceways, outlets, switches, and interconnections between office furnishings.

Products specifically designed and arranged for field installation in office furnishings such as lighting units and clocks are covered as accessories under Office Furnishing Accessories Certified for Use with Specified Equipment Certified for Canada (QAXE7) and are marked to identify the specific office furnishing with which they have been investigated.

Office furnishing electrical systems may be suitable for connection to optional standby power systems in accordance with the CEC.

Office furnishing electrical systems are available in single-phase and three-phase wiring systems and may provide multi-circuit branch circuits to an office furnishing. Some office furnishings are connected to more than one source of supply, such as an uninterruptible power supply, in addition to the building service-entrance power.

When the office furnishing electrical system is supplied with hospital-grade receptacles, the office furnishing electrical system is not suitable for use in general patient care areas or critical patient care areas. The electrical system has not been investigated for use in patient care areas as stated in Section 24 of the CEC.

**INSTRUCTIONS AND PRODUCT MARKINGS**

Each office furnishing electrical component that is shipped separately from the major office furnishing unit to which it is to be connected is marked "For Use with Office Furnishing System Series \_\_\_\_," in which the appropriate series or catalog number is designated.

Each top- and base-feed wiring assembly is marked with a diagram or the equivalent, indicating the methods of connection to the branch circuit and the electrical rating.

Each top- and base-feed wiring assembly is marked with "WARNING" and the following or equivalent statement: "Connect to branch circuit at one point only."

Each convenience receptacle is marked by a letter, number, color, or similar designation to indicate the circuit in the system to which the receptacle is connected. The identification is consistent throughout any one office furnishing electrical system and with any markings on the diagram for the branch-circuit connections.

The instructions indicate that not more than 12 outlets should be connected to one circuit.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Office Furnishing  
Office Furnishing Accessory

**RELATED PRODUCTS**

Certified partitions that extend to the ceiling or used to support the building structure are covered under Sections and Units Certified for Canada (QQXX7).

Composite panels certified with respect to the CEC and/or one or more model building codes, plumbing codes or provincial building codes are covered under Composite Panels Certified for Canada (QRSY7).

Lighting units intended for use with office furnishings are covered under Office Furnishing Lights Certified for Canada (QAXB7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 203 (1991), "Modular Wiring Systems for Office Furniture."

Some office furnishing systems covered under this category have also been investigated to CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies," and CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Flooring, Floor Coverings, and Miscellaneous Materials and Assemblies."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

For those products which are also certified by UL to CAN/ULC-S102 and CAN/ULC-S102.2, the following information is included on the product:

**ALSO CERTIFIED TO CAN/ULC-S102 AND CAN/ULC-S102.2 AS TO SURFACE-BURNING CHARACTERISTICS**

+ Flame-spread and smoke-developed values applicable to the product  
\*\*\*\*\*  
**Alternate UL Mark**  
**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Furnishing" or "Office Furnishing Accessory."

**Combination Listing/Classification Mark** — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to CAN/ULC-S102 and CAN/ULC-S102.2. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following:

**ALSO CLASSIFIED IN ACCORDANCE WITH CAN/ULC-S102 and CAN/ULC-S102.2 SURFACE-BURNING CHARACTERISTICS**

+ Flame-spread and smoke-developed values applicable to the product  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OFFICE FURNISHING LIGHTS CERTIFIED FOR CANADA (QAXB7)**

**GENERAL**

This category covers lights intended for use with office furnishings when installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." This category covers both freestanding and mounted lights that may be electrically or mechanically connected to an office furnishing. Products specifically designed and arranged for use with an individual design of office furnishing are marked to identify the specific office furnishing with which they have been investigated.

Products that require electrical assembly in the field are covered as kits or light accessories in the individual certifications. Kits and light accessories are completely wired to the extent permitted by the intended field installation, with all splices and connections completed and with all electrical components mounted.

A kit forms a complete office furnishing light when assembled in accordance with the instructions provided.

A light accessory and the required office furnishing or a combination of light accessories form a complete office furnishing light when assembled in accordance with the instructions provided.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

**REBUILT PRODUCTS**

This category also covers office furnishing lights that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishing lights are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishing lights are subject to the same requirements as new office furnishing lights.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Office Furnishing Light  
Office Furnishing Light Accessory  
Office Furnishing Light Kit  
Office Furnishing Luminaire  
Office Furnishing Luminaire Accessory  
Office Furnishing Luminaire Kit

For rebuilt products, the word "Rebuilt" precedes the product identity.

**RELATED PRODUCTS**

Office furnishing lights investigated to CSA-C22.2 No. 12, "Portable Luminaires," or CSA-C22.2 No. 9.0, "General Requirements for Luminaires," may also be covered under Luminaires, Portable Certified for Canada (QOWZ7).

Office furnishing light accessories investigated to CSA-C22.2 No. 12 may also be covered under Portable Luminaire Kits and Subassemblies Certified for Canada (QPAU7).

Office furnishing light accessories investigated to CSA-C22.2 No. 250.0, "Luminaires," may also be covered under Luminaire Fittings Certified for Canada (IFFX7).

**ADDITIONAL INFORMATION**

For additional information, see Office Furnishings Certified for Canada (QAWZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 250.0, "Luminaires," CSA-C22.2 No. 9.0, "General Requirements for Luminaires," CSA-C22.2 No. 12, "Portable Luminaires," and CAN/CSA-C22.2 No. 203, "Modular Wiring Systems for Office Furniture," in addition to the requirements contained in CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Office Furnishing Light,” “Office Furnishing Light Kit,” “Office Furnishing Light Accessory” or “Rebuilt Office Furnishing Light.” The word “Luminaire” may be used in lieu of “Light.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## OFFICE FURNISHING ACCESSORIES CERTIFIED FOR USE WITH SPECIFIED EQUIPMENT CERTIFIED FOR CANADA (QAXE7)

**USE AND INSTALLATION**

This category covers office furnishing accessories, such as lighting units, receptacles, clocks, power distribution systems and system components, intended for field installation in specific combinations that have been investigated for use with the specific office furnishing systems.

These accessories have been investigated for use with other manufacturers’ certified office furnishings, as indicated in the Certification Mark or the referenced compatibility list.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Desk
- Filing Cabinet
- Shelf
- Storage Unit
- Work Station

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 203 (1991), “Modular Wiring Systems for Office Furniture.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**FOR USE WITH UL-CERTIFIED [manufacturer’s name and model no(s).]**

**OFFICE FURNISHING PANEL SYSTEM**

or

**FOR CATALOG NUMBERS OF COMPATIBLE EQUIPMENT,  
REFER TO PUBLICATION NO. \_\_\_ PROVIDED WITH THIS**

**PRODUCT.**

**IF ADDITIONAL INFORMATION IS NECESSARY, CONTACT THE  
FACTORY.**

The referenced publication is a compatibility list that tabulates the company names, catalog numbers and electrical ratings of the certified accessories, and the company name(s) and catalog number(s) of the applicable UL-certified products with which the accessories have been investigated. One copy of the compatibility list and the installation instructions are provided with each accessory.

**Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY\*]**

**FOR USE WITH UL LISTED [manufacturer’s name and model no(s).]  
OFFICE FURNISHING PANEL SYSTEM**

**Control No.**

or

**[PRODUCT IDENTITY\*]**

**FOR CATALOG NUMBERS OF COMPATIBLE EQUIPMENT,

**IF ADDITIONAL INFORMATION IS NECESSARY, CONTACT THE  
FACTORY.**

**Control No.**

\* as shown in the individual Classifications

The referenced publication is a compatibility list that tabulates the company names, catalog numbers and electrical ratings of the Classified accessories, and the company name(s) and catalog number(s) of the applicable UL Listed products with which the accessories have been investigated. One copy of the compatibility list and the installation instructions are provided with each accessory.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## OPTICAL FIBER CABLE CERTIFIED FOR CANADA (QAYK7)

**USE**

This category covers optical fiber cable, which is a jacketed cable for use within buildings in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” in telecommunications systems.

**PRODUCT MARKINGS**

Optical fiber cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket consisting of the manufacturer’s identification (name, trademark or color threads), cable type designation as noted below, flame classification as specified for the applicable cable type, and the temperature rating if above 60°C. Optical fiber cable may optionally be marked “sunlight resistant” (or “sun res” or “SR”).

**Type Designations and Associated Flame Ratings**

**OFNG, OFCG, OFNR or OFCR** — The char length of this cable does not exceed 1.5 m (4 ft 11 in.) when tested in accordance with the Vertical-Tray Flame Test, Method 2 – FT4 in CSA-C22.2 No. 2556, “Wire and Cable Test Methods.” Smoke measurements are optional; the total smoke released does not exceed 150m<sup>2</sup> and the peak smoke release rate does not exceed 0.40 m<sup>2</sup>/s when tested in accordance with the ST1 Limited Smoke Test in CSA-C22.2 No. 2556. The flame rating “FT4” or “FT4-ST1,” as applicable, follows the Type designation.

**OFNP or OFCP** — This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 1.50 m (5 ft), when tested per ANSI/NFPA 262, “Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces,” (CSA FT6 flame test). The flame rating “FT6” follows the Type designation.

**OFNH, OFCH, OFN or OFC** — This cable complies with the FT1 Flame Test requirements when tested in accordance with the FT1 flame test in CSA-C22.2 No. 2556. The flame rating “FT1” follows the Type designation.

A “C” in the third position of the Type designation indicates that the cable contains noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers.

An “N” in the third position of the Type designation indicates that the cable contains no metallic members and no other electrically conductive materials.

Cable marked “sunlight resistant” (or “sun res” or “SR”) may be exposed to the direct rays of the sun.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Optical Fiber Cable

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 232, "Optical Fiber Cables."

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark  
UL MARK**

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable."

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OPTICAL FIBER CABLE, FIELD ASSEMBLED CERTIFIED FOR CANADA (QAZD7)**

**USE AND INSTALLATION**

This category covers field-assembled optical fiber cable, which is an on-site assembly of one or more optical fiber members and an optical fiber jacket. Field-assembled optical fiber cable is intended for installation in buildings in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The optical fiber jacket is installed in a manner similar to conduit or raceway. Once the jacket is installed, the optical fiber members are inserted into the jacket, completing the assembly.

**PRODUCT MARKINGS**

Optical fiber cable is identified by a marking on the surface of the jacket. This marking includes the flame rating "FT1" or the suffix "H," "FT4" or the suffix "G" or "R," or "FT6" or the suffix "P," in addition to the Listee's name and catalog designation and one of the following Type designations:

- OFC** — Indicates cable that contains noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers.
- OFN** — Indicates cable that contains no metallic members and no other electrically conductive materials.

Cable marked "Sunlight Resistant" (or "Sun Res" or "SR") may be exposed to the direct rays of the sun.

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged includes the following: "For Use Only with Optical Fiber Members, Cat. No.\_\_\_\_, manufactured by [company name]."

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber members are packaged contains the following: "[Company name] Optical Fiber Members, For Use Only With Optical Fiber Jacket Cat. No. \_\_\_\_\_, manufactured by [company name]."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Field-assembled Optical Fiber Cable.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 232, "Optical Fiber Cables."

**UL MARK**

The UL symbol on the optical fiber jacket and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The UL symbol on the optical fiber jacket and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the optical

–Continued

fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Field Assembled Optical Fiber Cable."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OPTICAL FIBER/COMMUNICATIONS/SIGNALING/ COAXIAL CABLE RACEWAY CERTIFIED FOR CANADA (QAZM7)**

**USE AND INSTALLATION**

This category covers raceway and fittings intended for the installation of conductive and nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The raceway is only suitable for the installation of the optical fiber cable, communications cable, signaling cable, and coaxial cable noted in the following information. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceway or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

Pliable raceway is a raceway that can be bent by hand without the use of tools. The smallest radius of the curve of the inner edge of any bend to which the raceway may be bent without cracking either on the outer surface or internally is not less than 2-1/2 times the outside diameter of the raceway.

When investigated to ULC/ORD-C2024, "Standard Method of Fire Tests for Optical Fibre Cable Raceway," the following markings apply:

A raceway marked "Plenum – OFCR FT-6" is suitable for use in ducts, plenums or other spaces used for environmental air when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-6." This raceway exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-spread distance of 1.50 m when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ULC/ORD-C2024. This raceway is identified by a marking on the surface of the raceway or on a marker tape. This raceway is also suitable for installation in risers when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-4" or "FT-6," and general-purpose use when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-1," "FT-4" or "FT-6."

A raceway marked "Riser – OFCR FT-4" is suitable for installation in risers when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-4" or "FT-6." This raceway has fire-resistant characteristics capable of preventing the carrying of fire from floor to floor. This raceway meets the test requirements of the Test for Flame Propagation (Riser) in ULC/ORD-C2024. This raceway is identified by a marking on the surface of the raceway or on a marker tape. The raceway is also suitable for general-purpose use when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-1," "FT-4" or "FT-6."

A raceway marked "General – OFCR FT-1" is suitable for general-purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable, communications cable, signaling cable, and coaxial cable marked "FT-1," "FT-4" or "FT-6." This raceway is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ULC/ORD-C2024.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
- Coaxial Cable Raceway
  - Communications Cable Raceway
  - Optical Fiber/Communications/Signaling/Coaxial Cable Raceway
  - Optical Fiber Raceway
  - Signaling Cable Raceway

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S143, "Standard Method of Fire Tests for Non-Metallic Electrical and Optical Fibre Cable Raceway Systems."

Optical fiber/communications/signaling/coaxial cable raceway investigated prior to July 22, 2013, was investigated to ULC/ORD-C2024, "Standard Method of Fire Tests for Optical Fibre Cable Raceway."

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The UL symbol and the product name "Optical Fiber Raceway," "Communications Cable Raceway," "Signaling Cable Raceway," "Coaxial Cable Raceway" or "Optical Fiber/Communications/Signaling/Coaxial Cable Raceway" on the raceway, and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the appropriate product names as indicated above.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## OPTICAL FIBER/COMMUNICATIONS/ SIGNALING/COAXIAL CABLE OUTLET BOXES CERTIFIED FOR CANADA (QAZR7)

**USE AND INSTALLATION**

This category covers outlet boxes and other device-mounting products intended to support outlets for use with or without raceways and fittings that contain nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable. These products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The products and raceways are only suitable for the installation of the optical fiber, communications cable, signaling cable, and coaxial cable. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceways or fittings of other systems.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Communications Cable Outlet Box
- Optical Fiber Outlet Box
- Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 18.1 (2013), "Metallic Outlet Boxes," and CSA-C22.2 No. 18.2 (2006), "Nonmetallic Outlet Boxes."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark on the product, or the UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products

manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Outlet Box," "Communications Cable Outlet Box" or "Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## OUTLET BOX ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QAZV7)

**GENERAL**

This category covers conduit box bodies, flat and domed covers, fixture hanger covers, threaded extensions, sealing hub covers, and similar subassemblies of outlet boxes, fixture fittings and conduit fittings. They are intended to be assembled at the factory or in the field by the user to form a complete explosion-proof or dust-ignition-proof enclosure. Information on restrictions in the use and assembly of these devices are marked on each part.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Outlet Box Accessory for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

See Outlet Boxes for Use in Hazardous Locations Certified for Canada (QBCR7), Conduit Fittings for Use in Hazardous Locations Certified for Canada (EBNV7) and Luminaire Fittings for Use in Hazardous Locations Certified for Canada (IGIV7).

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box Accessory for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## CABLE ROUTING ASSEMBLIES CERTIFIED FOR CANADA (QBAA7)

**USE AND INSTALLATION**

This category covers routing assemblies for the installation of conductive and nonconductive optical fiber cable and communications cable. The

routing assemblies are only suitable for the installation of optical fiber and communications cable noted in the following information. Individual routing assembly systems differ in their construction and, therefore, their components are not interchangeable with other routing assemblies or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends, and fittings such as expansion joints, female and male adapters, and couplings.

These routing assemblies may or may not incorporate end fixtures or covers.

These routing assemblies are resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ULC/ORD-C2024, "Standard Method of Fire Tests for Optical Fibre Cable Raceway."

When investigated to ULC/ORD-C2024, the following markings apply:

A routing assembly marked "Plenum - OFCR FT-6" is suitable for use in ducts, plenums or other spaces used for environmental air when used to enclose optical fiber or communications cable marked "FT-6." This exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 1.50 m when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ULC/ORD-C2024. This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape. This routing assembly is also suitable for installation in risers when used to enclose optical fiber or communications cable marked "FT-4" or "FT-6" and general use when used to enclose optical fiber or communications cable marked "FT-1," "FT-4" or "FT-6."

A routing assembly marked "Riser - OFCR FT-4" is suitable for installation in risers when used to enclose optical fiber or communications cable marked "FT-4" or "FT-6." This routing assembly has fire-resistant characteristics capable of preventing the spread of fire from floor to floor. This routing assembly meets the test requirements of the Test for Flame Propagation (Riser) in ULC/ORD-C2024. This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape. The routing assembly is also suitable for general use when used to enclose optical fiber or communications cable marked "FT-1," "FT-4" or "FT-6."

A routing assembly marked "General - OFCR FT-1" is suitable for general use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber or communications cable marked "FT-1," "FT-4" or "FT-6."

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
- Communications Cable Routing Assembly
- General-use Cable Routing Assembly
- Optical Fiber/Communications Cable Routing Assembly
- Optical Fiber Routing Assembly
- Plenum Cable Routing Assembly
- Riser Cable Routing Assembly

**RELATED PRODUCTS**

Optical fiber and communications cable raceways are covered under Optical Fiber/Communications/Signaling/Coaxial Cable Raceway Certified for Canada (QAZM).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S143, "Standard Method of Fire Tests for Non-Metallic Electrical and Optical Fibre Cable Raceway Systems."

Cable routing assemblies investigated prior to July 22, 2013, were investigated to ULC/ORD-C2024, "Standard Method of Fire Tests for Optical Fibre Cable Raceway."

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The UL symbol on the product and the complete Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "General-use Cable Routing Assembly," "Riser Cable Routing Assembly," "Plenum Cable Routing Assembly," "Optical Fiber Routing Assembly," "Communications Cable Routing Assembly" or "Optical Fiber/Communications Cable Routing Assembly."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufac-

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OUTLET AND JUNCTION BOXES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QBCR7)**

**GENERAL**

This category covers Class I, Division 1, Class II and Class III outlet, conduit, junction, and pull boxes, including intrinsically safe constructions, that may consist of equipment or components including terminals, terminal strips, terminal blocks, jumpers, busbars and conduit fittings.

These boxes are for use in threaded rigid conduit or steel intermediate metal conduit wire raceways, or with other approved wiring methods for hazardous (classified) locations in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." They may provide for splicing of conductors, but conductors are not intended to be sealed in conduit boxes. The boxes are marked or provided with instructions to indicate when accessories such as unions and sealing fittings are furnished with the box.

Boxes marked "rain tight" have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in entrance of water. Boxes identified with an enclosure type designation are intended for use as indicated in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

Cast-metal boxes suitable for field drilling and tapping of holes for conduit connections and mounting are marked to indicate the location and the trade sizes of the openings either on the box, as part of the instructions, or on the packaging carton.

Cast-aluminum alloy boxes are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt-base paint or the equivalent, along with indication that the boxes are acceptable for installation in concrete or cinder fill either on the box, as part of the instructions, or on the packaging carton.

Where field installation of certain types of equipment or components is acceptable (which may include terminals, terminal strips, terminal blocks, jumpers, busbars and conduit fittings), the installation instructions provided with the product will specify the type, number and mounting arrangements for the equipment or components to be installed.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
- Conduit Box for Use in Hazardous Locations
- Junction and Pull Box for Use in Hazardous Locations
- Junction Box for Use in Hazardous Locations
- Pull Box for Use in Hazardous Locations
- Outlet Box for Use in Hazardous Locations

The words "Hazardous Locations" may be abbreviated "Haz. Loc."

**RELATED PRODUCTS**

See Conduit Fittings for Use in Hazardous Locations Certified for Canada (AAIZ7).

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category may include one of the following, depending upon the construction and application:

- CAN/CSA-C22.2 No. 94 (1991), "Special Purpose Enclosures"
- CSA-C22.2 No. 94.1 (2007), "Enclosures for Electrical Equipment, Non-Environmental Considerations"
- CSA-C22.2 No. 94.2 (2007), "Enclosures for Electrical Equipment, Environmental Considerations"
- CSA-C22.2 No. 40 (1989), "Cutout, Junction, and Pull Boxes"
- CSA-C22.2 No. 14 (2013), "Industrial Control Equipment"
- CSA-C22.2 No. 158 (2010), "Terminal Blocks"
- CSA-C22.2 No. 18.3 (2004), "Conduit, Tubing, and Cable Fittings"

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by

UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Box for Hazardous Locations," "Conduit Box for Use in Hazardous Locations," "Junction and Pull Box for Use in Hazardous Locations," "Junction Box for Use in Hazardous Locations," "Pull Box for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## ACTIVE OPTICAL CABLE ASSEMBLIES CERTIFIED FOR CANADA (QBDV7)

**GENERAL**

This category covers factory-assembled active optical cable (AOC) assemblies. AOC is a cabling technology that accepts the same electrical interfaces as a traditional copper cable, but uses optical fiber between the connectors. AOC uses electrical-to-optical transceivers on the cable ends to access the performance capabilities of optical fiber while retaining compatibility with standard electrical interfaces.

AOC assemblies consist of optical fiber or hybrid (optical fiber/copper) cable and electrically active connectors incorporating optical transceivers. This AOC utilizes Class 1 lasers with the light source wholly contained within the cable assembly. The electrical circuits are powered by a Class 2 power source or an information technology (computer) equipment limited-power circuit as defined in Section 16 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). Hybrid cable may be used to carry electrical power to the far end of the cable and is suitably rated for the voltage and current involved.

**USE AND INSTALLATION**

This category covers AOC assemblies intended for installation between units of electronic equipment where the interconnecting cable is outside of the equipment enclosures. AOC assemblies are not a permanent wiring method except as described in the CEC articles below.

When constructed with a certified cable identified by a marking on the surface of the jacket as a type permitted in Sections 16, 56 or 60 of the CEC, AOC assemblies may be installed in accordance with those sections.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Active Optical Cable
- [Technology\*] Active Optical Cable

The words "Active Optical Cable" may be abbreviated "AOC."

\* "Technology" refers to the copper technology of the interface, such as "HDMI," "Thunderbolt" or "Ethernet."

**RELATED PRODUCTS**

Active connectors such as those that incorporate active optical transceivers are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ8) or Audio/Video, Information and Communication Technology Equipment Certified for Canada (AZOA8).

Optical fiber cable (without connectors) for use within buildings in accordance with Section 56 of the CEC is covered under Optical Fiber Cable Certified for Canada (QAYK7).

Factory-assembled optical fiber cable assemblies and factory-/field-installed connector products intended for residential and/or commercial applications as part of an optical fiber wiring system without active optical transceivers are covered under Optical Fiber Cable Assemblies and Connectors Certified for Canada (QBFA7).

Communications interconnecting cable, patch cords, extension cords and the like without active optical transceivers and not intended for use in residential and/or commercial applications as connected premises in accordance with the CEC are covered under Communications-circuit Accessories Certified for Canada (DUXR7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are:

All assemblies: TIA-455-6-B (2003), "FOTP-6 - Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

Optical fiber cable identified as a type permitted for permanent installation in public or private premises by Section 56 of the CEC: CSA-C22.2 No. 232 (2009), "Optical Fiber Cables."

Hybrid cable identified as a type permitted for permanent installation in public or private premises by Sections 16 or 60 of the CEC: CSA-C22.2 No. 214 (2008), "Communications Cables."

Optical fiber cable for use in patch cords and not intended for permanent installation in public or private premises as described in the CEC: CSA-C22.2 No. 2556 (2007), "Wire and Cable Test Methods" (FT-1 rating).

Hybrid cable for use in patch cords and not intended for permanent installation in public or private premises as described in the CEC: CSA-C22.2 No. 210 (2011), "Appliance Wiring Material Products" (FT-1 rating).

**UL MARK**

The Certification Mark of UL on the product or on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Active Optical Cable" or "[Technology] Active Optical Cable," where "Technology" refers to the copper technology of the interface, such as "HDMI," "Thunderbolt" or "Ethernet."

The words "Active Optical Cable" may be abbreviated "AOC."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS CERTIFIED FOR CANADA (QBFA7)

**GENERAL**

This category covers factory-assembled optical fiber cable assemblies and factory/field-installed connector products intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber cable assemblies consist of optical fiber cable and optical fiber cable connectors. When constructed with a certified cable identified by a marking on the surface of the jacket as a type permitted in Section 56 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), optical fiber cable assemblies may be installed in accordance with that Section.

Optical fiber cable connectors are intended for factory assembly or for field assembly by trained service personnel.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Optical Fiber Cable Assembly
- Optical Fiber Connectors

**RELATED PRODUCTS**

Optical fiber cable (without connectors) for use within buildings in accordance with the CEC is covered under Optical Fiber Cable Certified for Canada (QAYK7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate optical fiber connectors is CAN/CSA-C22.2 No. 0.17 (2000), "Evaluation of Properties of Polymeric Materials."

The basic standards used to investigate optical fiber cable assemblies are CSA-C22.2 No. 232 (2009), "Optical Fiber Cables" (where certified cable is

employed) or CSA-C22.2 No. 2556 (2007), "Wire and Cable Test Methods" (for noncertified cable VW-1 or FT-1 rating) and, for connectors, CAN/CSA-C22.2 No. 0.17 (2000) and TIA-455-6-B (2012), "FOTP-6 - Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

**UL MARK**

The Certification Mark of UL on the product or on the attached tag or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable Assembly" or "Optical Fiber Connector."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OUTLET BOXES AND FITTINGS  
CERTIFIED FOR CANADA (QBPZ7)**

**METALLIC OUTLET BOXES CERTIFIED  
FOR CANADA (QCIT7)**

**GENERAL**

This category covers metallic flush device boxes, conduit boxes, floor boxes, outlet boxes, outlet box hoods, special-purpose boxes (e.g., concrete and boxes for ceiling fans), extension rings, metallic covers, and cover plates for flush-mounted wiring devices intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Units of measure for markings are SI (metric) units unless otherwise specified. Markings expressed in equivalent units are optional.

**COVER POSITION FOR 4-BY-4 BOX**

This box accommodates two standard cover configurations.

**EXTENSION RINGS**

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

**BOX EXTENDER**

Adjustable-depth box extenders intended for adjustment during installation are marked with the maximum allowable amount of extension. The smallest unit shipping carton is also marked with the following or equivalent: "MAXIMUM EXTENSION \_\_ mm (\_\_ in)" or "EXTENSION MAXIMUM \_\_mm (\_\_ in)."

**CLAMPS**

Each cable opening, except a round knockout, is provided with a clamp. The carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with armored cable, TECK cable or aluminum-sheathed cable ("A"): flexible metal conduit - F, nonmetallic-sheathed cable - "N," or flexible tubing (loom) - "T." If suitable for all types, the clamp is marked "ALL." Clamps suitable for nonmetallic-sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations. Clamps have been tested for securing only one cable per clamp, except multiple-section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout. If clamps have been tested only for 14/2 or for a cable size larger than 14/2, the cable size or size range is marked on the clamp or its smallest unit shipping carton. If clamps have been tested with 14/2 and the largest size cable the cable entry can physically accommodate, no marking is required.

**KNOCKOUT ENTRY**

Knockouts for the entrance of conduit or cable are not located in the sides of a gangable (sectional) box, including boxes intended to accommodate a switch rated at 347 V ac.

**FIXTURE/LUMINAIRE SUPPORT**

A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire is suitable for fixtures/luminaires weighing up to 23

**OUTLET BOXES AND FITTINGS CERTIFIED FOR CANADA  
(QBPZ7)**

-Continued

kg. A bar hanger or a box designed to be supported from a ceiling grid is marked "Not for Fixture/Luminaire or Fan Support." An instruction sheet is provided. The box is marked with the maximum weight it can support, but not exceeding 23 kg.

**CEILING PADDLE FAN SUPPORT**

An outlet box intended to support a ceiling-suspended fan weighing a maximum 15.9 kg or 23 kg is visibly and clearly marked "ACCEPTABLE FOR FAN SUPPORT OF \_\_ kg (\_\_ lb) OR LESS" and "CONVIENT AU SUPPORT D'UN VENTILATEUR DE \_\_ kg (\_\_ lb) OU MOINDRE," with blanks filled in with maximum values. Each ceiling fan support box is provided with size No. 10-32 retaining screws and external tooth lock washers for securing the fan or the outlet box cover to the box.

**INTEGRAL CONNECTORS**

Boxes with integral connectors for electrical metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

**GROUNDING MEANS**

A minimum of one installed grounding screw per gang or device, or other means, is provided to connect the branch-circuit grounding conductors to the box and to connect a bonding jumper from the box to the grounding terminal of a wiring device. An identified hole, threaded or not, is not acceptable for grounding.

**CONCRETE TIGHT**

Boxes suitable for installation in concrete are identified as "concrete tight" on the carton. They may have no means of support other than the concrete and often accommodate covers at top and bottom. Outlet boxes intended for use in concrete slab ceilings have knockouts located to allow the conduit to be installed above crossed reinforcing bars without being offset or bent.

**FLOOR BOXES**

Floor boxes designed for floor installation are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type such as "Floor Box" or "Floor Box, Concrete Tight," as appropriate. Floor boxes may be provided with wiring devices.

**WET AND DAMP LOCATIONS**

Boxes and covers intended for use in wet locations are marked "Wet Location." Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed are marked "Wet Location Only When Cover Closed." Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked "Extra-Duty."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Extension Ring
- Flush Device Box
- Outlet Box
- Outlet Box and Cover

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies Certified for Canada (QQYZ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 18.1 (2004), "Metallic Outlet Boxes," and CAN/CSA-C22.2 No. 42.1 (2000 or 2013), "Cover Plates for Flush-Mounted Wiring Devices,"

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and

Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Outlet Box,” “Outlet Box and Cover,” “Extension Ring,” “Flush Device Box,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## NONMETALLIC OUTLET BOXES CERTIFIED FOR CANADA (QCMZ7)

### GENERAL

This category covers nonmetallic flush device boxes, conduit boxes, floor boxes, outlet boxes, outlet box and bar hanger assemblies, outlet box hoods, special-purpose boxes (e.g., concrete and boxes for ceiling fans), extension rings, metallic and nonmetallic box extenders, covers, and cover plates for flush-mounted wiring devices intended for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Units of measure for markings will include SI (metric) units, unless otherwise specified. Markings expressed in equivalent units are optional.

### COVER MOUNTING SCREW HOLES FOR 4-BY-4 BOX

This box accommodates two standard cover configurations.

### BOX EXTENDER

Adjustable-depth box extenders intended for adjustment during installation are marked with the maximum allowable amount of extension. The smallest unit shipping carton is also marked with the following or equivalent: “MAXIMUM EXTENSION \_\_\_ mm (\_\_\_ in)” or “EXTENSION MAXIMUM \_\_\_ mm (\_\_\_ in).”

### CABLE AND CLAMPS

Each cable opening, except a round knockout, is provided with a clamp. The carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with nonmetallic-sheathed cable “N” or flexible tubing (loom) “T.” Clamps have been tested for securing only one cable per clamp, except multiple-section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout. If clamps have been tested only for 14/2 or for a cable size larger than 14/2, the cable size or size range is marked on the clamp or its smallest unit shipping carton. If clamps have been tested with 14/2 and the largest size cable the cable entry can physically accommodate, no marking is required.

Boxes intended for use with nonmetallic-sheathed cable or open wiring are suitable for use with cable or wire rated 90°C.

### FOR USE WITH RIGID PVC CONDUIT

Nonmetallic boxes for use with rigid PVC conduit are intended for use at a maximum working temperature of 75°C.

### FIXTURE/LUMINAIRE SUPPORT

A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire is suitable for fixtures/luminaires weighing up to 13 kg or less or up to 23 kg. The box is marked either 13 kg or 23 kg.

A bar hanger or a box not intended to be used with a box for fixture/luminaire or ceiling fan support, but designed only to be supported from a ceiling grid is marked “Not for Fixture/Luminaire or Fan Support.”

### CEILING FAN SUPPORT

An outlet box intended to support a ceiling-suspended fan weighing a maximum 15.9 kg or 23 kg is visibly and clearly marked “ACCEPTABLE FOR FAN SUPPORT OF \_\_\_ kg (\_\_\_ lb) OR LESS” and “CONVIENT AU SUPPORT D’UN VENTILATEUR DE \_\_\_ kg (\_\_\_ lb) OU MOINDRE,” with blanks filled in with maximum values. Each ceiling fan support box is provided with size No. 10-32 retaining screws and external tooth lock washers for securing the fan or the outlet box cover to the box.

### GROUNDING MEANS

A metal strap or plate with a minimum of one installed grounding screw is provided for bonding connection in a box of nonmetallic material, and is securely mounted to the box. A means is provided for continuous bonding of multiple wiring devices.

### CONCRETE TIGHT

Boxes suitable for installation in concrete are designated as “concrete tight” on the carton. They may have no means of support other than the concrete and often accommodate covers at top and bottom. Outlet boxes intended for use in concrete slab ceilings have knockouts located to allow the conduit to be installed above crossed reinforcing bars without being offset or bent.

–Continued

### FLOOR BOXES

Floor boxes designed for floor installation are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor-cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type, such as “Floor Box” or “Floor Box, Concrete Tight,” as appropriate. Floor boxes may be provided with wiring devices.

### WET LOCATIONS

Boxes and covers are intended for use in wet locations are marked “Wet Location” or “Rain tight.” Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked “Wet Location Only When Cover Closed.” Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked “Extra-Duty.”

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Extension Ring
- Flush Device Box
- Outlet Box
- Outlet Box and Cover

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies Certified for Canada (QQYZ7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 18.2, “Nonmetallic Outlet Boxes,” CAN/CSA-C22.2 No. 42.1 (2000 or 2013), “Cover Plates for Flush-Mounted Wiring Devices,” and CAN/CSA-C22.2 No. 85, “Rigid PVC Boxes and Fittings.”

### UL MARK

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Alternate UL Mark

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Outlet Box,” “Outlet Box and Cover,” “Extension Ring” or “Flush Device Box,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## OUTLET BUSHINGS AND FITTINGS CERTIFIED FOR CANADA (QCRV7)

### GENERAL

This category covers supports for outlet and flush-device boxes; bushings for use in metal studs; fittings for use in or on outlet and flush-device boxes, such as knockout reducers, seals and insulating inserts, and cord-grip attachments; insulating gaskets used behind a cover plate for flush-mounted wiring devices to stop drafts; pulling, strain-relief and support grips; locknuts for conduit; sealing rings, service-entrance heads for rigid conduit or electrical metallic tubing; cable riser supports; and bushings for use on the ends of rigid or flexible conduit, electrical metallic tubing, or armored cable, where a change to open wiring is made. These bushings are suitable for temperatures of 150°C if they are black or brown in color, 90°C if they are any other color unless specifically marked for a higher

**OUTLET BOXES AND FITTINGS CERTIFIED FOR CANADA (QBPZ7)**

584

—Continued

temperature. These products are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

All male threaded fittings have only been investigated for use with lock-nuts.

**Reusability** — Bushings and fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

Service-entrance heads or hoods are intended to be used on rigid conduit or electrical metallic tubing that is mounted with the conductor openings facing toward the ground. Service-entrance heads or hoods are suitable for outdoor use and in wet locations.

**ENVIRONMENTAL ENCLOSURE TYPE RATINGS**

Each fitting may be marked with one or more of the following Environmental Enclosure Type ratings for which it was investigated: Type 1, 2, 3, 3R, 3S, 4, 4X, 5, 6, 6P, 12, 12K, 13. The intended uses for each Environmental Enclosure Type are indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Bar Hanger
- Offset Adapter
- Outlet Bushing
- Outlet Fitting

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are:

- CAN/CSA-C22.2 No. 18.1 (2004), "Metallic Outlet Boxes"
- CSA-C22.2 No. 18.3 (2004 and/or 2012), "Conduit, Tubing, and Cable Fittings"
- CAN/CSA-C22.2 No. 42.1, "Cover Plates for Flush-Mounted Wiring Devices"
- CAN/CSA-C22.2 No. 85 (1989), "Rigid PVC Boxes and Fittings"
- CSA-C22.2 No. 211.0, "General Requirements and Methods of Testing for Nonmetallic Conduit"

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Bushing," "Outlet Fitting," "Offset Adapter," "Bar Hanger," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OUTLET CIRCUIT TESTERS CERTIFIED FOR CANADA (QCYU7)**

**GENERAL**

This category covers portable devices with fixed attachment-plug blades, or probes attached to flexible leads, used to indicate various wiring conditions in branch circuits by a pattern of lights or other similar means along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI), connected to the branch circuit.

These devices are not comprehensive diagnostic instruments.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Circuit Tester

**RELATED PRODUCTS**

Ground-continuity-indicating devices constructed integral with cord-connector bodies for use on construction sites are covered under Attachment Plugs, Fuseless Certified for Canada (AXUT7) as "cord-connector bodies."

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 160 (1985), "Voltage and Polarity Testers."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Tester."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PACKAGED PUMPING SYSTEMS CERTIFIED FOR CANADA (QCZJ7)**

**GENERAL**

This category covers fluid handling systems consisting of pumps, electric motors, frequency drives, control valves, gauges and piping mounted on a structural steel base. They are used for plumbing boosters, heat transfer, hot water heating, HVAC chilled and hot water packages, irrigation, boiler feed and condensate packages, and similar applications.

This category also covers fountain pumping systems intended for connection to permanently-installed architectural and floating fountains. They are intended for installation in accordance with Section 68 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). If provided with a control panel, its nameplate includes "Industrial Control Panel for Floating Fountain," "Industrial Control Panel for Permanently Installed Fountain" or "Fountain Control Panel."

**RATINGS**

Packaged pumping systems are rated 600 V or less. The supply input is rated in full load amperes, voltage, number of phases, frequency, and the rating of the largest motor load.

The system and components of the system are intended to be used within the rated working pressure and with the appropriate liquids in accordance with system markings.

**SPECIAL CONSIDERATIONS**

These pumping systems have not been investigated for the handling of hazardous materials or for use in hazardous (classified) locations as defined in the CEC.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Packaged Fountain Pumping System
- Packaged Pumping System

**RELATED PRODUCTS**

Systems covered under this category may also be covered under Drinking Water System Components Certified for Canada (FDNP7). The investigation of drinking water system components is conducted with respect to contaminants that can be introduced into the drinking water supply from their base metal alloy, plastic resin, or other nonmetallic parts such as gaskets, seals, coatings, adhesives, filter media, cement linings or the like.

Systems investigated together with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment Certified for Canada (LZFE7) or Specialty Refrigeration Equipment Certified for Canada (SROT7).

Pumps intended for use with flammable liquids are covered under Pumps, Power Operated, Flammable Liquid Certified for Canada (RCRX7).

Prepackaged combinations of components, such as pumps, filters, heaters, blowers, lights and controls, intended for use with field-supplied hot tubs or spas are covered under Hot Tub and Spa Equipment Assemblies Certified for Canada (WBYQ7).

Pumps investigated for use with or in proximity to swimming pools or spas are covered under Pumps Certified for Canada (WCSX7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and CAN/CSA-C22.2 No. 108, "Liquid Pumps."

The basic standard used to investigate packaged pumping systems for heating and cooling equipment in this category is CSA-C22.2 No. 236, "Heating and Cooling Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark covers only the equipment mounted to the common structural frame.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Packaged Pumping System" or "Packaged Fountain Pumping System."

The Listing Mark covers only the equipment mounted to the common structural frame.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS CERTIFIED FOR CANADA (QDFT7)**

This category covers painting equipment, air compressors and vacuum pumps intended for use on nominal system voltages of 600 V and less, except that where the appliances are driven by universal type motors or electromagnetic mechanisms, the scope is limited to appliances rated for use on nominal system voltages of 240 V or less. These appliances are cord-connected or provided with means for field wiring connections.

This equipment is intended for household, commercial or industrial use as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). This includes sprayers intended for extensive open spraying of paints having a flash point higher than 60°C, but excludes electrostatic sprayers and types for use in spray booths or other areas when hazardous concentrations of flammable vapors are likely to occur.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding to comply with the provisions of the CEC. Such appliances are distinctively marked "Double-Insulated" or with the symbol .

The instructions and warnings supplied with and applicable to each piece of equipment should be carefully observed. In cases where the nature or construction of the equipment is such that precautions beyond the requirements in the CEC must be observed in installation or use, suitable warnings are marked on the equipment.

The burglary and theft protection features of coin-operated machines have not been investigated.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMPRESSORS, VACUUM PUMPS AND PNEUMATIC PAINT SPRAYERS CERTIFIED FOR CANADA (QDGS7)**

**USE AND INSTALLATION**

This category covers air compressors and vacuum pumps, including pneumatic-type paint sprayers.

Pressure vessels, included with products under this category, are subject to the applicable requirements in CSA-B51, "Boiler, Pressure Vessel, and Pressure Piping Code."

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**REBUILT PRODUCTS**

This category also covers compressors, vacuum pumps and pneumatic paint sprayers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are subject to the same requirements as new compressors, vacuum pumps and pneumatic paint sprayers.

**FACTORS NOT INVESTIGATED**

This equipment has not been investigated for use as medical and dental equipment, or heating, air conditioning or refrigeration equipment.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Painting Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

High-pressure paint sprayers, paint mixers and paint pigment dispensers are covered under Painting Equipment Certified for Canada (QDIQ7).

**ADDITIONAL INFORMATION**

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps Certified for Canada (QDFT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Painting Equipment" or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELECTROSTATIC PAINT-SPRAYING EQUIPMENT CERTIFIED FOR CANADA (QDHR7)**

**USE**

This category covers electrostatic paint-spraying equipment, including control panels and power packs, intended to be installed and operated in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and "National Fire Code of Canada" requirements applicable to spray application using flammable and combustible materials.

–Continued

With respect to the possibility of igniting solvent vapors and paint deposits in a spray booth by a spark from this equipment, Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Electrostatic Paint-spraying Equipment

**ADDITIONAL INFORMATION**

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps Certified for Canada (QDFT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 187, “Electrostatic Air Cleaners.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electrostatic Paint-spraying Equipment.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PAINTING EQUIPMENT CERTIFIED FOR CANADA (QDIQ7)**

**USE**

This category covers motor-operated equipment used for the preparation or application of paint, such as paint mixers, paint pigment dispensers, paint rollers and high-pressure airless paint sprayers.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with CAN/CSA C22.1, “Canadian Electrical Code, Part I.”

**REBUILT PRODUCTS**

This category also covers painting equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt painting equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt painting equipment is subject to the same requirements as new painting equipment.

Rebuilt products covered under this category are marked “Rebuilt” or “Reconditioned.”

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Painting Equipment

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Paint heaters and paint dryers are covered under Heaters, Industrial and Laboratory Certified for Canada (KQLR7).

Pneumatic paint sprayers are covered under Compressors, Vacuum Pumps and Pneumatic Paint Sprayers Certified for Canada (QDGS7).

**ADDITIONAL INFORMATION**

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps Certified for Canada (QDFT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, “Motor-Operated Appliances (Household and Commercial).”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

Painting Equipment Certified for Canada (QDIQ7)–Continued

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Painting Equipment” or other appropriate product name as shown in the individual Listings.

For rebuilt products the word “Rebuilt” or “Reconditioned” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PANELBOARDS CERTIFIED FOR CANADA (QEUY7)**

**USE, INSTALLATION AND MARKINGS**

This category covers panelboards and enclosed panelboards rated 600 V or less.

Panelboards are intended for mounting in cabinets, cutout boxes, or enclosures designed for the purpose. The enclosure may be provided with the panel or provided separately. Only panelboards marked to indicate that they are for use in a specific enclosure (identified by either catalog number or specific dimensional information) and panelboards labeled as “Enclosed Panelboards” have been investigated to determine that wiring space is adequate, or have been investigated for short-circuit-current ratings greater than 10,000 A rms symmetrical.

Enclosed panelboards identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Some enclosed panelboards have one or more openings for plug-in watt-hour or similar meters. Such panelboards, when marked for outdoor use have, except for the joint between the plug-in meter and opening, been investigated for rain tightness.

Some panelboards are suitable for use as service equipment and may be so marked. Such marking is part of the Listing Mark as noted below or is an integral part of other required markings. Panelboards marked to indicate that they are suitable for use as service equipment and which can be removed from the enclosure are marked to identify the specific box or boxes in which they are intended to be installed. If the acceptability of such a panelboard for use as service equipment depends upon the condition of installation or use, the panelboard is marked to indicate those conditions.

Some panelboards incorporate neutrals factory bonded to the frame or enclosure. Such units are marked “Suitable Only for Use as Service Equipment.”

Panelboards marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Panelboards are marked with their short-circuit current rating in rms symmetrical amps. The marking states that short-circuit-current ratings are limited to the lowest interrupting rating of (1) any device installed or intended to be installed therein, and/or (2) any combination series-connected device. However, for combination series-connected devices, the short-circuit-current rating marked on the panelboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the panelboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the panelboard in accordance with the marked instructions.

Panelboards to which units (circuit breakers, switches, etc.) may be added in the field are marked with the name or trademark of the manufacturer and the catalog number or equivalent of those units that are intended to be installed in the field.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches, other than fused power circuit devices, should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU7) and fused power circuit devices (see IYSR7) used in panelboards are suitable for continuous use at 100% of their rating.

Some panelboards may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum

## PANELBOARDS, LIGHT AND POWER FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QFKR7)

### USE

This category covers manually operable, air-break-type enclosed panelboards employing circuit breakers having automatic overload protection. These enclosed panelboards are intended for lighting and low-capacity power distribution.

These panelboards are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Each marking is independent of any marking on the terminal connectors and is on a wiring diagram or other readily visible location.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Enclosed Panelboard for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

### REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Panelboard for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PARTS CLEANERS CERTIFIED FOR CANADA (QGDS7)

### USE

This category covers parts cleaners, which are units intended for use with solvents and water-based cleaning solutions, as indicated in the individual certifications. Water-based cleaning solutions are considered to be noncombustible, alkaline (pH of more than 7) liquids in their unused state.

Parts cleaners with electric components are intended only for use with fluids having a flash point not less than 60°C (140°F) as indicated in the individual certifications. Parts cleaners for use with fluids having a flash point less than 60°C (140°F), which results in the generation of a hazardous (classified) location in and around the equipment, have been investigated accordingly.

### REBUILT PRODUCTS

This category also covers parts cleaners that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt parts cleaners are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt parts cleaners are subject to the same requirements as new parts cleaners.

### FACTORS NOT INVESTIGATED

The physiological effects of the cleaning solution in any form have not been investigated.

### PRODUCT IDENTITY

conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors as well as copper conductors, the panelboard is marked "Use Copper or Aluminum Wire." A panelboard employing terminals or main or branch circuits units, individually marked "CU-AL," will be marked as noted above or "Use Copper Wire Only." The latter statement indicates that wiring space or other factors make the panelboard unsuitable for aluminum conductors.

Unless the panelboard is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Notes to Table 2 and Table 4 of the CEC. Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Panelboard
- Enclosed Panelboard

The product identity may include the wording "Suitable for Use as Service Equipment," where appropriate.

The product identity "Enclosed Panelboard" covers both the panel and the enclosure with which it is provided.

### RELATED PRODUCTS

Large single panels, frames, or assemblies of panels on which are mounted on the face, back, or both, switches, overcurrent and other protective devices, buses, and usually instruments; accessible from the rear as well as from the front and not intended to be installed in cabinets are covered under Switchboards, Dead-front Certified for Canada (WEVZ7).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches Certified for Canada (WPTZ7).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels Certified for Canada (NITW7).

Distribution equipment containing only one circuit subdivision, unless also provided with a meter socket, is covered under Circuit Breakers, Molded Case and Circuit-breaker Enclosures Certified for Canada (DIVQ7).

Distribution equipment intended to serve as a means for distributing power required to operate mobile or temporarily installed equipment is covered under Power Outlets and Power Outlet Fittings Certified for Canada (QPYV7).

Factory-wired assemblies of controllers, timers, temperature-regulating equipment and the like, intended for control of equipment for use with swimming pools, hot tubs and/or spas are covered under Controls Certified for Canada (WAWU7).

Factory-wired assemblies intended for the control of architectural and floating fountains are covered under Architectural and Floating Fountains Certified for Canada (AWEG7).

Portable power distribution equipment is covered under Power Distribution Equipment, Portable Certified for Canada (QPRW7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 29 (2011), "Panelboards and Enclosed Panelboards."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Panelboard" or "Enclosed Panelboard." The product name may include the wording "Suitable for Use as Service Equipment," where appropriate. The product name "Enclosed Panelboard" covers both the panel and the enclosure with which it is provided.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

One of the following product identities appears on the product:

- Parts Cleaner
- Parts Washer
- Section of Parts Cleaner
- Section of Parts Washer

The “Section of” product identities are followed by a statement, as appropriate: “Consisting of Sink (or, as appropriate) Assembly Part No. (Cat. No., etc.) and a Control (or, as appropriate) assembly Part No. (Cat. No., etc.).”

For rebuilt products, the word “Rebuilt,” “Renovated” or “Reconditioned” precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, “Motor-Operated Appliances (Household and Commercial).”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Parts Cleaner” or “Parts Washer.” The product name may be preceded by “Section of” and is followed by the statement, as appropriate, “Consisting of sink (or as appropriate) assembly Part No. (Cat. No., etc.) and a control (or as appropriate) assembly Part No. (Cat. No., etc.).”

For rebuilt products, the word “Rebuilt,” “Renovated” or “Reconditioned” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PASSENGER BOARDING BRIDGES CERTIFIED FOR CANADA (QGLA7)

**USE AND INSTALLATION**

This category covers passenger boarding bridges intended to be installed at airport terminals or marinas or ship ports for the purpose of loading or unloading passengers on or off aircraft or boats and similar watercraft. This equipment is intended to be operated only by trained personnel. Except for the passenger tunnel and cab when stationary, access to the bridge and the area in which the bridge operates is restricted.

Passenger boarding bridges are assemblies of two or more component sections. These sections may include, but are not limited to, a rotunda, rotunda support, tunnel, rotating cab and driver or prime mover. The rotunda provides for the connection of the bridge to the airport terminal building or marina or ship port. The cab provides for the connection of the bridge to the aircraft or watercraft. The tunnel may consist of one or more sections having a telescoping construction to facilitate outward movement of the bridge to meet the aircraft or watercraft. The driver or prime mover consists of one or more motors and drive train, which provide for proper positioning of the bridge to accommodate different types of aircraft and aircraft parking configurations and watercraft and watercraft parking configurations. Bridges are provided with one or more services for connection to utility power. Power is supplied throughout the bridge by S- or SJ-type cable suitable for outdoor use and wire protected by rigid conduit with appropriate fittings or appropriate raceway. Electrical equipment within the bridge may include industrial control panels, disconnect switches, limit switches, proximity switches, luminaires, light switches, GFCI receptacles, alarms and smoke detectors. Bridges may be provided with optional equipment such as an air conditioner and power supply for the aircraft or watercraft when the aircraft or watercraft is parked. This equipment is normally attached to the underside of the bridge.

Bridges are completely assembled at the factory for inspection and functionality testing prior to shipping. Bridges are disassembled, shipped in sections, reassembled at the installation site and retested for functionality. As part of disassembly the air handler, aircraft power unit, and rotunda

support may be removed. Bridges are provided with various control, monitoring, signaling and alarm devices to prevent movement of the bridge that would result in damage to the bridge, aircraft or airport structures or watercraft or marina or ship port structures and alert personnel in the vicinity of the bridge that bridge movement is imminent.

This category also covers accessories for passenger boarding bridges intended to be installed at gate areas of airport terminals or marinas or ship ports. These accessories may be installed on or remote from the passenger boarding bridge. In either case they are associated with the operation of the passenger boarding bridge. The accessories include, but are not limited to, management systems for air-handling hoses, air-handling units, aircraft power units, and control, monitoring, signaling and alarm devices to regulate movement of the bridge.

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Passenger Boarding Bridge
- Passenger Boarding Bridge Accessory

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14 (2010), “Industrial Control Equipment,” and CAN/CSA-C22.2 No. 247 (1992), “Operators and Systems of Doors, Gates, Draperies and Louvres.”

The basic standard used to investigate passenger boarding bridge accessories in this category is CSA-C22.2 No. 14 (2010).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Passenger Boarding Bridge” or “Passenger Boarding Bridge Accessory.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PERSONNEL ELECTROSTATIC CONTROL DEVICES CERTIFIED FOR CANADA (QGOE7)

**USE**

This category covers wrist straps, ground heel straps, etc., designed to be worn by personnel to bleed off electrostatic-charge buildup on the wearer’s body. These devices are not intended to evaluate the electrostatic-discharge performance.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in UL Subject 2329, “Outline of Investigation for Personnel Electrostatic Control Devices.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to

identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrostatic Control Device" or "Static Control Device."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PERSONAL GROOMING APPLIANCES CERTIFIED FOR CANADA (QGRQ7)

This category covers cosmetic and grooming appliances and related equipment for use in beauty salons, barber shops, and residences. Appliances include barber chairs, curling irons, hair conditioning machines, hair dryers, manicure sets, permanent wave machines, shampoo machines, styling dryers, and untanglers (detanglers). These units are identified as to household or commercial use in the individual Listings.

The physiological effects of the medicaments or cosmetic materials that may be employed in association with these appliances have not been investigated.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PERSONAL GROOMING APPLIANCES, COMMERCIAL CERTIFIED FOR CANADA (QGRT7)

### GENERAL

This category covers cosmetic and grooming appliances intended for commercial use in beauty salons, barber shops, nail care centers, and cosmetic studios. Appliances include hair dryers, barber chairs, wig and brush dryers, facial therapy units, hair spray systems, permanent wave machines, manicure sets, curling irons, cosmetology equipment, and hair conditioning machines.

### FACTORS NOT INVESTIGATED

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

### PRODUCT MARKINGS

Grooming appliances with air discharge, curling irons, hair crimping and hair straightening personal grooming products intended for commercial applications are permanently marked with the following marking (or equivalent) as detailed in the individual certification reports: "WARNING: NOT FOR HOUSEHOLD USE - MAY CAUSE BURNS."

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Commercial Fingernail-polish-drying Lamp
- Commercial Gel-curing UV Lamp
- Commercial Hair Dryer
- Commercial Hair-washing System
- Commercial Nail Tech Tool
- Commercial Wax Depilator

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 36, "Hairdressing Equipment."

Additional standards that may be used to investigate products in this category in conjunction with CSA-C22.2 No. 36 are:

- CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances"
- CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)"
- CAN/CSA-C22.2 No. 224, "Radiant Heaters and Infrared and Ultra-violet Lamp Assemblies for Cosmetic or Hygienic Purposes in Non-medical Applications"

–Continued

Additional standards may be applicable based on the features employed.

Alternatively, these products may be investigated to CAN/CSA-C22.2 No. 60335-1 (2011), "Safety of Household and Similar Electrical Appliances - Part 1: General Requirements," and CAN/CSA-E60335-2-23 (2005), "Household and Similar Electrical Appliances - Safety - Part 2-23: Particular Requirements for Appliances for Skin or Hair Care."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PERSONAL GROOMING APPLIANCES, HOUSEHOLD CERTIFIED FOR CANADA (QGRW7)

### GENERAL

This category covers cosmetic and grooming appliances and related equipment for use household use. Appliances include curling irons, hair dryers, manicure sets, hair setters, tweezers, facial saunas, styling dryers, and untanglers (detanglers).

### FACTORS NOT INVESTIGATED

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 36, "Hairdressing Equipment."

Additional standards that may be used to investigate products in this category in conjunction with CSA-C22.2 No. 36 are:

- CSA-C22.2 No. 64, "Household Cooking and Liquid-Heating Appliances"
- CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)"
- CAN/CSA-C22.2 No. 224, "Radiant Heaters and Infrared and Ultra-violet Lamp Assemblies for Cosmetic or Hygienic Purposes in Non-medical Applications"

Additional standards may be applicable based on the features employed.

Alternatively, these products may be investigated to CAN/CSA-C22.2 No. 60335-1 (2011), "Safety of Household and Similar Electrical Appliances - Part 1: General Requirements," and CAN/CSA-E60335-2-23 (2005), "Household and Similar Electrical Appliances - Safety - Part 2-23: Particular Requirements for Appliances for Skin or Hair Care."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as

illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PERSONAL SUN AND HEAT EQUIPMENT CERTIFIED FOR CANADA (QGRX7)**

**GENERAL**

This category covers personal sun and heat equipment of the household and commercial variety, including tanning beds and booths for use in commercial tanning salons, intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

This category also covers sun equipment provided with UV-A and UV-B fluorescent and/or high-intensity discharge (HID) lamps.

**FACTORS NOT INVESTIGATED**

The physiological effects, beneficial or otherwise, that may be produced by these lamps have not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Heat Unit
- Sun Bed
- Tanning Booth

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

For sun and heat equipment intended to therapeutic use, see Medical Equipment Certified for Canada (PIDF7).

For sun and heat equipment of the household variety intended for portable use, see Sun and Heat Lamps Certified for Canada (QPDY7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, “General Requirements – Canadian Electrical Code, Part II,” and CAN/CSA-C22.2 No. 224, “Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Sun Bed,” “Tanning Booth” or “Heat Unit,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PERSONAL HYGIENE AND HEALTH CARE APPLIANCES CERTIFIED FOR CANADA (QGRZ7)**

**GENERAL**

This category covers appliances, primarily cord connected, intended for use in households or similar locations, not necessarily under professional supervision, such as toothbrushes, oral irrigation appliances, denture cleaners, hydromassage units, etc.

This category also covers toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, which are intended to connect to the already-provided plumbing accessories (toilet bowl).

**FACTORS NOT INVESTIGATED**

The physiological effect of the use of these appliances, beneficial or otherwise, has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Health Care Appliance
- Personal Hygiene Appliance

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Medical and dental equipment intended for professional use is covered under Medical Equipment Certified for Canada (PIDF7).

Other household-related equipment is covered under Personal Grooming Appliances, Commercial Certified for Canada (QGRT7), Personal Grooming Appliances, Household Certified for Canada (QGRW7), Heating Pads, Electric Certified for Canada (MNUV7), Massage and Exercise Machines Certified for Canada (PGXX7) and Personal Sun and Heat Equipment Certified for Canada (QGRX7).

Toilets are covered under Plumbing Accessories Certified for Canada (QMTX7).

Facial saunas are covered under Personal Grooming Appliances, Household Certified for Canada (QGRW7) and Personal Grooming Appliances, Commercial Certified for Canada (QGRT7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68 (2009), “Motor-Operated Appliances (Household and Commercial),” with relevant requirements from CAN/CSA-C22.2 No. 64 (2010), “Household Cooking and Liquid-Heating Appliances,” and/or CAN/CSA-C22.2 No. 224 (1989), “Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications.”

Alternatively, these products may be investigated to CAN/CSA-C22.2 No. 60335-1 (2011), “Safety of Household and Similar Appliances – Part 1: General Requirements,” and CAN/CSA-E60335-2-23 (2005), “Household and Similar Electrical Appliances – Safety – Part 2-23: Particular Requirements for Appliances for Skin or Hair Care.”

Alternatively, oral hygiene products may be investigated to CAN/CSA-C22.2 No. 60335-1 (2011) and CAN/CSA-C22.2 No. 60335-2-52 (2014), “Household and Similar Electrical Appliances – Safety – Part 2-52: Particular Requirements for Oral Hygiene Appliances.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Personal Hygiene Appliance” or “Health Care Appliance,” or the name of the specific product as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT CERTIFIED FOR  
CANADA (QGSY7)**

**OCCUPATIONAL FALL RESTRAINTS AND  
SUSPENSION DEVICES CERTIFIED FOR  
CANADA (QGTW7)**

**USE**

This category covers the following devices intended for individual worker protection against falls when working in elevated or suspended positions:

- Body belts
- Full-body harnesses
- Connecting components, which include
  - Carabiners
  - D-rings
  - O-rings
  - Self-locking connectors
  - Snap hooks

These products are not intended for recreational use or for fire-fighting operations.

This category does not cover anchorages or anchorage connectors.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is one of the following:

- CAN/CSA-Z259.1 (issue date), "Body Belts and Saddles for Work Positioning and Travel Restraint"
- CAN/CSA-Z259.10 (issue date), "Full Body Harnesses Occupational Products – General Instruction No. 1"
- CAN/CSA-Z259.12 (issue date), "Connecting Components for Personal Fall Arrest Systems"

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

- BODY BELT**  
CAN/CSA-Z259.1  
or  
**FULL-BODY HARNESS**  
CAN/CSA-Z259.10  
or  
**CARABINER**  
CAN/CSA-Z259.12  
or  
**D-RING**  
CAN/CSA-Z259.12  
or  
**O-RING**  
CAN/CSA-Z259.12  
or  
**SELF-LOCKING CONNECTOR**  
CAN/CSA-Z259.12  
or  
**SNAP HOOK**  
CAN/CSA-Z259.12  
**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

- BODY BELT**  
IN ACCORDANCE WITH CAN/CSA-Z259.1-[issue date]  
Control No.  
or  
**FULL-BODY HARNESS**  
IN ACCORDANCE WITH CAN/CSA-Z259.10-[issue date]  
Control No.  
or

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**EYE AND FACE PROTECTION CERTIFIED  
FOR CANADA (QGUU7)**

**USE**

This category covers products intended for eye and face protection for occupational and educational operations or processes involving hazards to the eyes or face. Typical hazards include flying objects and particles, splashing liquids, molten metal, and ultraviolet, visible and infrared radiation, but do not include X-rays, gamma rays, high-energy particulate radiation, radioactive materials, lasers or masers. Products include spectacles, goggles, face shields, and welding helmets, hand shields and hoods.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Face Shield
- Goggles
- Spectacles
- Welding Hand Shield
- Welding Helmet
- Welding Hood

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products (AAME).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA Z94.3 (2007), "Eye and Face Protectors."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Spectacles," "Goggles," "Face Shield," "Welding Helmet," "Welding Hand Shield," "Welding Hood."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL WORKERS' PROTECTIVE  
APPAREL CERTIFIED FOR CANADA  
(QGVW7)**

**Workwear for Protection Against Hydrocarbon  
Flash Fire Certified for Canada (QGWB7)**

**USE**

This category covers workwear for protection against hydrocarbon flash fire which is intended to provide a minimum degree of protection to the wearer and reduce the severity of injury against unplanned exposure to hydrocarbon flash fire.

**PERSONAL PROTECTIVE EQUIPMENT CERTIFIED FOR CANADA (QGSY7)**

592

–Continued

This protective clothing is not intended to be used as specialized protective clothing, such as proximity suits, firefighters' protective clothing, and fire-entry clothing; nor is it intended to protect against chemical, radiological, electrical or biological hazards.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CGSB-155.20, "Workwear for Protection Against Hydrocarbon Flash Fire."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**WORKWEAR FOR PROTECTION AGAINST HYDROCARBON FLASH FIRE**

CAN/CGSB-155.20-[issue date]

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**LEG PROTECTION FOR CHAIN SAW USERS CERTIFIED FOR CANADA (QGWF7)**

**USE**

This category covers protective garments and devices, including aprons, leggings, pants, trousers and chaps. They are intended to be worn by chain-saw users to reduce leg injuries during work with running chain saws. These products incorporate materials and construction methods designed to provide cut-resistance protection to the legs during accidental contact with a running power-saw chain.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/BNQ 1923-450 (1991), "Leg Protective Device for Chain Saw Users."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**LEG-PROTECTIVE DEVICE FOR CHAIN SAW USERS STANDARD FOR LEG PROTECTIVE DEVICE FOR CHAIN SAW USERS**

CAN/BNQ 1923-450

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**OCCUPATIONAL HEAD PROTECTION CERTIFIED FOR CANADA (QGWR7)**

**USE**

This category covers protective headwear for use by industrial, construction, mining, utility, and forestry workers. This headwear is intended to reduce the forces of impact and penetration and may provide protection from an applied voltage. The headwear is described by impact and penetration types and dielectric class as follows:

**TYPE 1** — Headwear intended to provide impact and penetration protection for the crown area of the head only.

**TYPE 2** — Headwear intended to provide impact and penetration protection for the crown and lateral areas of the head.

**CLASS C** — Headwear that does not provide dielectric protection.

**CLASS E** — Headwear intended to provide protection against an applied voltage up to a maximum of 20,000 V.

**CLASS G** — Headwear intended to provide protection against an applied voltage up to a maximum of 2,200 V.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-Z94.1, "Industrial Protective Headwear - Performance, Selection, Care, and Use."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**OCCUPATIONAL HEAD PROTECTION**

CAN/CSA-Z94.1-[issue date]

**TYPE +, CLASS ++**

+ 1 or 2  
++ C, E or G

**Alternate UL Mark**

**PROTECTIVE FOOTWEAR CERTIFIED FOR CANADA (QGWT7)**

**GENERAL**

This category covers products intended for individual occupational protection of the feet.

–Continued

These products offer the following protection:

- Toe protection (mandatory), Grade 1, 2 or 3, with Grade 1 offering the most protection and Grade 3 the least
- Sole penetration protection (optional)
- Electric shock resistance (optional)
- Static dissipation (optional)

**PRODUCT MARKINGS**

The grade of toe protection and type of any additional protection provided by these products is permanently marked in a conspicuous location on at least one boot of each pair of footwear.

Footwear with **toe protection only** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection

Footwear with **sole penetration protection** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection
- An equilateral triangle incorporating the “UL CLASSIFIED” Mark for Canada symbol
- Label size: Equilateral triangle, 1-in. sides
- Color:
  - Black UL Mark for Canada symbol on Green Triangle (Grade 1)
  - Black UL Mark for Canada symbol on Yellow Triangle (Grade 2)
  - Black UL Mark for Canada symbol on Red Triangle (Grade 3)

Footwear with **electric shock resistance (dielectric protection)** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection
- A rectangular patch on the outside of the right boot with the Omega symbol (Ω) and the “UL CLASSIFIED” Mark for Canada symbol
- Label size: 1 in. x 5/8 in.
- Color: Orange UL Mark for Canada symbol and the Omega symbol (Ω) on White Rectangle

Footwear with **static dissipation protection** is marked as follows:

- A UL PROTECTIVE FOOTWEAR label stating the grade of toe protection
- A rectangular patch with the letters “SD,” the electrical grounding symbol, and the “UL CLASSIFIED” Mark for Canada symbol
- Label size: 1 in. x 5/8 in.
- Color: Green UL Mark for Canada symbol, “SD” and the electrical grounding symbol on Fluorescent Yellow Rectangle

In addition to the above markings, one boot from each pair is marked with:

- The name of the certified company
- The size
- The month and year of manufacture

The grade of toe protection and type of any additional protection provided by these products is noted in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-Z195, “Protective Footwear.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**PROTECTIVE FOOTWEAR  
STANDARD FOR PROTECTIVE FOOTWEAR  
CAN/CSA-Z195-[issue date]  
Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

–Continued

**PROTECTIVE FOOTWEAR

**EMERGENCY SERVICES  
PROTECTIVE CLOTHING AND  
EQUIPMENT CERTIFIED FOR  
CANADA (QGUY7)**

**PROTECTIVE CLOTHING AND EQUIPMENT  
FOR WILDLAND FIRE FIGHTING CERTIFIED  
FOR CANADA (QGVD7)**

**USE**

This category covers fireline workwear intended to provide a degree of protection against the adverse effects of fire to a fire fighter’s body during forest fire fighting. Protective does not mean that a wearer will suffer no burns if exposed to fire while wearing workwear meeting this standard.

Fireline workwear is single-layer protective workwear that covers the body from the neck to the wrists and feet; it may or may not cover the neck. It is intended to be worn as the outermost garment. It does not refer to add-on accessories, such as, but not limited to, a belt, backpack and external harness.

Fireline workwear is not intended to be used as specialized protective clothing such as proximity suits, structural fire fighters’ protective clothing, or workwear for protection against hydrocarbon flash fire and fire-entry clothing. It is not intended to provide for protection from chemical, radiological, electrical or biological hazards.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CGSB 155.22, “Fireline Workwear for Forest Firefighters.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**PROTECTIVE CLOTHING AND EQUIPMENT  
FOR WILDLAND FIREFIGHTING  
CANADIAN GENERAL STANDARDS BOARD  
STANDARD CAN/CGSB-155.22-[issue date]  
Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## FIRE FIGHTERS' PROTECTIVE CLOTHING CERTIFIED FOR CANADA (QGVG7)

### USE

This category covers protective clothing intended to protect fire fighters against heat and flame encountered during fires and related life-saving activities.

This protective clothing is not intended for use in aircraft rescue and fire fighting, hazardous material emergencies, or wildland fire fighting, and is not intended for approach, proximity or entry fire exposures.

### ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CGSB-155.1, "Firefighters' Protective Clothing for Protection Against Heat and Flame."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**FIREFIGHTERS' PROTECTIVE CLOTHING  
CANADIAN GENERAL STANDARDS BOARD  
STANDARD ON FIREFIGHTERS' PROTECTIVE CLOTHING FOR  
PROTECTION AGAINST HEAT AND FLAME  
CAN/CGSB-155.1-[issue date]**

or

**FIREFIGHTERS' PROTECTIVE CLOTHING  
CAN/CGSB-155.1-[issue date]**

### Alternate UL Mark

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**FIREFIGHTERS' PROTECTIVE CLOTHING  
IN ACCORDANCE WITH THE CANADIAN GENERAL STANDARDS  
BOARD  
STANDARD ON FIREFIGHTERS' PROTECTIVE CLOTHING FOR  
PROTECTION AGAINST HEAT AND FLAME  
CAN/CGSB-155.1-[issue date]**

### Control No.

The Classification Mark may be abbreviated as follows:

**FIREFIGHTERS' PROTECTIVE CLOTHING  
IN ACCORDANCE WITH CAN/CGSB-155.1-[issue date]**  
Control No.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PHONOGRAPHS AND CD PLAYERS, COIN OPERATED CERTIFIED FOR CANADA (QGXX7)

### USE

This category covers coin-operated phonographs, compact disc (CD) players and accessories for use on supply circuits in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." This equipment is designed for use in commercial establishments.

Coin-operated phonographs and CD players are intended for the reproduction of music, speech, or other sound utilizing records or compact discs. Each unit has complete reproduction facilities including record selection and playing mechanisms, amplifiers and speakers. Remote record selection and coin-acceptance mechanisms may also be included. These units are intended for indoor use only unless specified otherwise in the individual certifications.

### RELATED PRODUCTS

Commercial phonographs that are not coin operated are covered under Commercial Phonographs, Tape-playing and Recording Appliances and Accessories Certified for Canada (AZQW7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 1, "Audio, Video and Similar Electronic Equipment," or CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, "Audio, Video and Similar Electronic Apparatus - Safety Requirements."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Coin-operated Phonograph," "Coin-operated CD Player" or "Wall Box," or the name of the specific type of product as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT CERTIFIED FOR CANADA (QHWJ7)

### BUILDING-INTEGRATED PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR CANADA (QHZZ7)

### USE AND INSTALLATION

This category covers flat-plate building-integrated photovoltaic (BIPV) modules and panels intended for mounting integrally to the structural or protective surfaces of a building. BIPV modules and panels are investigated for one of three primary installation methods: (1) intended to serve as the roof, or as a majority component of the roofing system of a building, (2) intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., or (3) intended to serve as part of a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure.

When intended to serve as the roof, or as a majority component of the roofing system of a building, the BIPV module serves as a primary component of the building's fire resistance and waterproofing membrane. These functions have been investigated as appropriate to the extent of those functions served. Standards used in roofing system investigations have been employed as appropriate to the nature of construction and use of the system. Roofing-type BIPV products have been investigated to those roofing standards, as appropriate to their construction and use.

When intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module is assumed to serve as a primary component of the building's exterior surface and is accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), either applied to the interior of the system or integral to the support structure. BIPV modules intended to be mounted or retained within a metallic support structure have been investigated to CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," for fire-resistance classification appropriate to the installation requirements (typically Class A). The combination of BIPV modules and the intended support structure should act as structurally reliable building components in terms of both loading and fire resistance.

When intended to serve as part of a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module

–Continued

is assumed not to serve as a primary component of the building's exterior surface and is not accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required for structural BIPV systems, and the intended support structure should act as structurally reliable control of the module system alone, as required in ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels."

In either the structural or nonstructural curtain wall, facade, atrium, skylight, etc. installation mode, the BIPV panel may be identified to be suitable for use with specific UL-certified BIPV mounting systems covered under Building-Integrated Photovoltaic Mounting Systems Certified for Canada (QHZZ7).

The modules and panels are marked with manufacturer and model identification. The wiring system indicates the proper terminal polarity. The installation instructions supplied provides all required electrical data, such as voltages, currents, power ratings, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed) and appropriate means of connection between the modules and between the module array and the load, in accordance with the CEC.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the fire-resistance classification required.

**FLAME CLASSES**

When applicable, BIPV modules and panels intended for installation as a roofing system are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that are not installed as roofing systems are identified with respect to their fundamental resistance to external fire exposure, or are marked "Not Fire Rated."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- BIPV Module
- BIPV Module for Use with Certified Structural Support Systems
- BIPV Photovoltaic Panel
- BIPV Roofing Product

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Framed PV modules or panels that include a mounting means as part of the product and are not intended to be installed into or as part of the building surface or structure are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Building Materials Certified for Canada (AABM7) and Roofing Materials and Systems Certified for Canada (AARM7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels."

In addition, CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

Some products covered under this category have also been investigated to one or more of the following design qualification standards:

- IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- EN 61215, "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- IEC 61646, "Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- EN 61646, "Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"
- IEC 61730-1, "Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction," and IEC 61730-2, "Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing"
- EN 61730-1, "Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction," and EN 61730-2, "Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing"

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

For those products which are also certified by UL to IEC and/or EN design qualification standards, one or more of the following statements is included on the product:

- ALSO CERTIFIED TO IEC 61215-[issue date]
- ALSO CERTIFIED TO EN 61215-[issue date]
- ALSO CERTIFIED TO IEC 61646-[issue date]

–Continued

ALSO CERTIFIED TO EN 61646-[issue date]

ALSO CERTIFIED TO IEC 61730-1-[issue date] and IEC 61730-2-[issue date]

ALSO CERTIFIED TO EN 61730-1-[issue date] and EN 61730-2-[issue date]

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "BIPV Module," "BIPV Photovoltaic Panel," "BIPV Roofing Product," "BIPV Module for Use with Classified Structural Support Systems," or other appropriate product name as shown in the individual Listings.

**Combination Listing/Classification Mark** — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to IEC and/or EN design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH \*," where "\*" is one or more of the following:

- IEC 61215-(issue date)
  - EN 61215-(issue date)
  - IEC 61646-(issue date)
  - EN 61646-(issue date)
  - IEC 61730-1-(issue date) and IEC 61730-2-(issue date)
  - EN 61730-1-(issue date) and EN 61730-2-(issue date)
- \*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEMS CERTIFIED FOR CANADA (QHZZ7)**

**USE AND INSTALLATION**

This category covers building-integrated photovoltaic (BIPV) mounting systems intended for use with specific certified BIPV modules and panels (see Building-Integrated Photovoltaic Modules and Panels Certified for Canada (QHZZ7)) that have been investigated for mounting integral to the structure of a building. The systems have been investigated for electric shock and fire hazards only.

Installation of BIPV modules and mounting systems integral to or in addition to a building's roof system may adversely affect the roof-covering materials' resistance to external fire exposure if the module and mounting system combination has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules and mounting system have an equal or greater fire-resistance rating than the roof-covering material.

The installation of these BIPV mounting systems and related modules or panels is intended to be in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

**FLAME CLASSES**

When applicable, BIPV modules and mounting systems intended for installation as part of a roof are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules, panels and mounting systems that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire-retardant-treated Wood Certified for Canada (TFXX7) and Roofing Systems Certified for Canada (TGFU7).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- BIPV Mounting System
- Building-integrated Photovoltaic Mounting System

**RELATED PRODUCTS**

Rack-mounted PV modules and panels that include an integral mounting means not intended to be installed into or as part of the building structure or facade are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

**ADDITIONAL INFORMATION**

–Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Building Materials Certified for Canada (AABM7) and Roofing Materials Certified for Canada (AARM7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C1703, “Flat-Plate Photovoltaic Modules and Panels.”

BIPV modules and mounting systems integral to or in addition to a building’s roof system are additionally investigated to CAN/ULC-S107, “Methods of Fire Tests of Roof Coverings,” and may be certified for degree of wind resistance to CSA-A123.5 (2005), “Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules,” as appropriate to the nature of construction and installation.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO ELECTRIC SHOCK AND FIRE HAZARDS ONLY**

Alternate UL Mark

**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME\*]

**AS TO RISK OF ELECTRIC SHOCK AND FIRE HAZARDS ONLY**

+

Control No.

\* **BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEM (or BIPV MOUNTING SYSTEM)**

+ For products additionally investigated for resistance to external fire exposure, the Classification Mark includes the words **CLASS A**, **CLASS B** or **CLASS C**, as appropriate.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC CHARGE CONTROLLERS CERTIFIED FOR CANADA (QIBP7)**

**USE AND INSTALLATION**

This category covers permanently connected photovoltaic charge controllers that control the state of charge of storage batteries used in photovoltaic power systems.

These photovoltaic charge controllers are rated 600 V dc or less and are intended to be installed in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

These products include photovoltaic charge controller subassemblies for field installation in the terminal compartment of a photovoltaic module, in accordance with the instructions supplied with the subassembly. The markings identify the modules in which the subassemblies may be installed. The modules and subassemblies are products of the same manufacturer.

Controllers identified with an enclosure type designation or as “Rain tight” or “Rainproof” are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Photovoltaic Charge Controller

Photovoltaic Charge Controller Subassembly

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), “General Use Power Supplies.”

**UL MARK**

–Continued

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Charge Controller” or “Photovoltaic Charge Controller Subassembly,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR CANADA (QIGU7)**

**USE AND INSTALLATION**

This category covers flat-plate photovoltaic modules and panels. These modules and panels are intended for mounting on buildings or on ground-supported frames. Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building’s roof, or (3) on a rack with a space above the roof surface.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to power conditioning units which convert the dc power, the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current, and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, power conditioning unit or controller is intended to be in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Photovoltaic Module

Photovoltaic Panel

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C1703, “Flat-Plate Photovoltaic Modules and Panels.” In addition, CAN/ULC-S107, “Methods of Fire Tests of Roof Coverings,” is used to determine the module’s resistance to external fire exposure for modules marked Class A, B or C.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Module” or “Photovoltaic Panel.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PHOTOVOLTAIC MODULES AND PANELS, REMANUFACTURED CERTIFIED FOR CANADA (QIGZ7)

### USE AND INSTALLATION

This category covers remanufactured flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Remanufactured flat-plate photovoltaic modules and panels are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Remanufactured flat-plate photovoltaic modules and panels are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Remanufactured flat-plate photovoltaic modules and panels are subject to the same requirements as new remanufactured flat-plate photovoltaic modules and panels.

Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may adversely affect the roof covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Remanufactured photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

### FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roofing Systems Certified for Canada (TGFU7).

### PRODUCT IDENTITY

One of the following product identities appears on the product:  
Remanufactured Photovoltaic Module  
Remanufactured Photovoltaic Panel

### RELATED PRODUCTS

Additional certifications of flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels." In addition, CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Remanufactured Photovoltaic Module" or "Remanufactured Photovoltaic Panel."

\*\*\*\*\*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PHOTOVOLTAIC MODULES AND PANELS WITH SYSTEM VOLTAGE RATINGS OVER 600 VOLTS CERTIFIED FOR CANADA (QIIA7)

### USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels with system voltage ratings above 600 V up to and including 1000 V.

These modules and panels are intended for mounting on ground-supported frames, and may be mounted on a building roof when the maximum system voltage of the photovoltaic installation is limited to 600 V. Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may or may not adversely affect the roof-covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

### FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their classification for resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials Certified for Canada (TEVT7) and Roofing Systems Certified for Canada (TGFU7).

### PRODUCT IDENTITY

One of the following product identities appears on the product:  
Photovoltaic Module Over 600 Volts  
Photovoltaic Panel Over 600 Volts

### RELATED PRODUCTS

Modules and panels with maximum system voltage ratings of 600 V or less are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels."

In addition, CAN/ULC-S107, "Methods of Fire Tests of Roof Coverings," is used to determine the module's resistance to external fire exposure for modules marked Class A, B or C.

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

### Additional Certification Markings

For products additionally investigated for resistance to external fire exposure, the Certification Mark includes the words "Class A," "Class B" or "Class C," as appropriate.

### Alternate UL Mark UL MARK

—Continued

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Module Over 600 Volts" or "Photovoltaic Panel Over 600 Volts."

For products additionally investigated for resistance to external fire exposure, the Listing Mark includes the words **Class A**, **Class B** or **Class C**, as appropriate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### DISTRIBUTED GENERATION POWER SYSTEMS ACCESSORY EQUIPMENT CERTIFIED FOR CANADA (QII07)

#### GENERAL

This category covers actuators, blocking diodes, conduit boxes, photovoltaic combiner boxes, controllers (control boxes), communication modules, disconnects, distribution panels and transition boxes.

This equipment is intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Distributed Generation Communications Module
- Distributed Generation Interface Module
- Distributed Generation System Distribution Panel
- Distributed Generation Utility Interconnection Controller
- Photovoltaic Combiner Box
- Photovoltaic Disconnect
- Photovoltaic System Control Box
- Photovoltaic System Ground Fault Detector Interrupter
- Photovoltaic System Transition Box

Other product identities may be used as shown in the individual certifications.

#### RELATED PRODUCTS

See Static Inverters and Converters for Use in Independent Power Systems Certified for Canada (QIKH7) and Photovoltaic Modules and Panels Certified for Canada (QIGU7).

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), "General Use Power Supplies."

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Distributed Generation Utility Interconnection Controller," "Photovoltaic System Ground Fault Detector Interrupter," "Photovoltaic System Transition Box," "Photovoltaic Disconnect," "Photovoltaic System Control Box," "Distributed Generation System Distribution Panel," "Distributed Generation Interface Module," "Distributed Generation Communications Module," "Photovoltaic Combiner Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### STATIC INVERTERS, CONVERTERS AND ACCESSORIES FOR USE IN INDEPENDENT POWER SYSTEMS CERTIFIED FOR CANADA (QIKH7)

#### USE AND INSTALLATION

This category covers permanently connected inverters and converters for use in electric power systems. Inverters are devices that change DC power to AC power. Converters are devices that accept AC or DC power input and convert it to another form of AC or DC power for direct utilization by a load or accumulation in an energy storage system (batteries, capacitors, etc.). Electric power systems are defined as facilities that deliver electric power to a load. Devices covered in this category are classed as Utility Interactive, Stand-alone or Multimode. Utility Interactive devices operate in parallel with the utility grid. Stand-alone devices are intended to operate independent of the utility grid. Multimode devices can operate as both or either Stand-alone (utility independent) or Utility Interactive devices. Optional accessories intended for use with these units are also covered under this category.

These products may contain energy storage devices and associated charge controllers.

These devices are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

The devices may be connected to different types and combinations of distributed generation (DG) sources: generator sets, photovoltaic cells, fuel cells, wind and microturbines or other sources as specified in the manufacturer's installation instructions.

Some devices in this category must be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer required.

These products may require external output overcurrent protection, which will be specified in product markings and installation instructions. The products require external overcurrent protection to be sized at 125% of the product output current rating unless otherwise specified.

These products may require that overcurrent protection be provided in the source circuits. These protection ratings will be specified in the product installation instructions.

Devices containing charge controllers are provided with instructions to indicate the type of battery for which they are intended.

Units suitable for use with certified field-installed accessories are marked to identify the specific accessories that may be used.

For units that are shipped in multiple sections where the end product requires that all of the sections be included and assembled to make a complete certified product, the sections include the same end-product Certification Mark and are differentiated by section number as specified under **UL MARK** below.

For units that are shipped in multiple sections consisting of a complete end product and associated optional accessories investigated for use with the complete certified end product, the complete end product has a single Certification Mark and the accessory(ies) are labeled as specified under **UL MARK** below with one of the applicable accessory markings.

#### SURGE TESTING

These products are investigated to surge categories for the Ring Wave and Combination Wave Surge Tests in IEEE C62.41.2 (2002), "Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits." These particular surge waveforms that are applied to the DG equipment are based upon distance between the DG equipment and the service entrance equipment. These location categories have associated peak values of voltage and current for the standard surge-testing waveforms as noted below. A manufacturer may also choose to test at a custom value for the Ring Wave and Combination Wave. These values are stated in the individual certifications for the product tested.

#### STANDARD WAVEFORM PEAK VALUES

Surge Category	Ring Wave	Combination Wave
A	6 kV/0.20 kA	N/A
B	6 kV/0.50 kA	6 kV/3 kA
C	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

- "Standard 1.2/50 us - 8/20 us Combination Wave"
- "Standard 0.5 us - 100 kHz Ring Wave"

Refer to IEEE C62.41.2 (2002) for additional details on standard wave parameters and tolerances.

#### CODES

Wind Turbine Stand-alone Inverter
Wind Turbine Utility Interactive Inverter

Other product designations may be used as shown in the individual certifications.

If the source type does not appear in the product designation it must be indicated on the product as a separate marking.

**RELATED PRODUCTS**

Power converters and inverters intended for use in recreational or land vehicles and the like are covered under Power Converters/Inverters and Power Converter/Inverter Systems Certified for Canada (QPPY7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), “General Use Power Supplies.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

For multi-piece units, the Certification Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for certification. The Certification Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each enclosure section of a certified inverter assembly is provided with a “Section \_\_\_\_ of \_\_\_\_” marking, where the second blank indicates the total number of enclosure sections contained in the certified inverter assembly and the first blank indicates the respective enclosure section number bearing the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product designation. The product designation is the combination of the specific DG source and the type of inverter or converter product. Acceptable product designations include:

- “Fuel Cell Multimode Inverter”
  - “Fuel Cell Stand-alone Inverter”
  - “Fuel Cell Utility Interactive Inverter”
  - “Microturbine Multimode Inverter”
  - “Microturbine Stand-alone Inverter”
  - “Microturbine Utility Interactive Inverter”
  - “Photovoltaic Multimode Inverter”
  - “Photovoltaic Stand-alone Inverter”
  - “Photovoltaic Utility Interactive Inverter”
  - “Wind Turbine Multimode Inverter”
  - “Wind Turbine Stand-alone Inverter”
  - “Wind Turbine Utility Interactive Inverter”
- (or equivalent)

The product designation for accessories is one of the product designations noted above, preceded by the words “Accessory for.”

For multi-piece units, the Listing Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for Listing. The Listing Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each

—Continued

enclosure section of a Listed inverter assembly is provided with a “Section \_\_\_\_ of \_\_\_\_” marking, where the second blank indicates the total number of enclosure sections contained in the Listed inverter assembly and the first blank indicates the respective enclosure section number bearing the UL Mark.

If the source type does not appear in the product designation it must be indicated on the product as a separate marking.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## MOUNTING SYSTEMS, MOUNTING DEVICES, CLAMPING DEVICES AND GROUND LUGS FOR USE WITH PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR CANADA (QIMS7)

### USE AND INSTALLATION

This category covers photovoltaic (PV) mounting systems, mounting devices, clamping devices (which may be for bonding and/or mechanical loading) and ground lugs intended for use with specific PV modules and panels and specified module frames and mounting structures as identified in the individual Listings. These systems and devices are investigated for one of two installation types: (1) ground mounted, or (2) intended to serve as part of a nonstructural component of a building, such as a stand-alone system on a building, curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure. Both mounting systems and clamping devices may be investigated for mechanical mounting alone, or mechanical mounting and ground bonding as identified in the individual Listings. Ground lugs may be investigated for use with specific PV modules, specific PV module frames, or specific mounting-system rails.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

### RELATED PRODUCTS

PV modules and panels are covered under Photovoltaic Modules and Panels Certified for Canada (QIGU7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1703, “Flat-Plate Photovoltaic Modules and Panels.”

Ground lugs are additionally investigated to CSA-C22.2 No. 41 (2007), “Grounding and Bonding Equipment.”

### UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Photovoltaic Mounting System,” “Photovoltaic Module Clamping Device,” “Photovoltaic Mounting Device,” “Photovoltaic Bonding Device,” “Photovoltaic Mounting and Bonding Device” or “Photovoltaic Ground Lug.” The word “Photovoltaic” may be abbreviated “PV.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PHOTOGRAPHIC EQUIPMENT CERTIFIED FOR CANADA (QINT7)

### GENERAL

This category covers photographic equipment and accessories investigated in accordance with requirements applicable in Canada, and includes various equipment, such as photographic flash units, chargers for photographic flash units, motorized projection screens, photographic equipment controllers and interconnect devices, film editors, photographic enlargers,

power supplies for photographic accessories, vacuum pumps for use with printing frames, and photographic print processors, all cord-and-plug connected.

This category also covers photographic developing and reproduction equipment, generally of a commercial nature, including photocopying equipment, enlargers, photo printing equipment, and printers; equipment may be cord connected or permanently connected.

This category also covers accessories for field installation on photographic equipment as identified on the products or the installation instructions.

### REBUILT PRODUCTS

This category also covers photographic equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt photographic equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt photographic equipment is subject to the same requirements as new photographic equipment.

### PRODUCT IDENTITY

The following product identity appears on the product:

Photographic Equipment

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product identity.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 118, “Construction and Test of Picture Machines and Appliances,” or CAN/CSA-C22.2 No. 60950 or 60950-1, “Safety of Information Technology Equipment,” or CAN/CSA-E60335-2-56, “Safety of Household and Similar Electrical Appliances — Part 2: Particular Requirements for Projectors and Similar Appliances.”

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photographic Equipment,” or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PIN-AND-SLEEVE-TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS CERTIFIED FOR CANADA (QLGD7)

### RATINGS

Pin-and-sleeve-type plugs, receptacles and cable connectors are rated 600 V or less, ac or dc, and in amperes. Devices intended for use with motor loads are identified by a horsepower rating. Devices not intended for current interruption are marked “NOT FOR INTERRUPTING CURRENT,” or with an equivalent statement.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, e.g., a 120/208 V, 3-phase device is tested on a circuit involving a potential to ground of 120 V.

### GROUNDING

Devices having a terminal identified by a green-colored finish or by the word “green” are grounding types. The pin or contact member connected to this terminal is for equipment grounding only.

\*\*\*\*\*

**PIN-AND-SLEEVE-TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS CERTIFIED FOR CANADA (QLGD7)**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ATTACHMENT PLUGS, PIN-AND-SLEEVE TYPE CERTIFIED FOR CANADA (QLHN7)**

**GENERAL**

This category covers pin-and-sleeve-type attachment-plug bodies, attachment plugs with and without fuses, and cable connectors.

The terminations of these devices are intended for use with flexible cord or cable having copper conductors. The ampacity of the flexible cord or cable is based on Table 12 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Unless the product is marked with both the size and temperature rating of the flexible cord or cable to be used, the termination provisions are based on the use of 60°C flexible cord or cable.

This category does not cover devices to be molded on flexible cord or cable, unassembled devices to be factory assembled to flexible cord or cable, general use, special use, or locking type attachment plugs and/or cord connectors.

**PRODUCT MARKINGS**

These devices are marked as follows:

1. Listee's name or identification on device and carton
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification by color or otherwise
5. Date code or equivalent
6. Additional markings as required

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Connector
- Pin-and-Sleeve Attachment Plug
- Plug

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors Certified for Canada (QLGD7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 182.1 (2013), "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pin-and-Sleeve Attachment Plug," "Plug" or "Connector," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES, PIN-AND-SLEEVE TYPE CERTIFIED FOR CANADA (QLIW7)**

**GENERAL**

This category covers pin-and-sleeve-type receptacles and other devices intended for direct connection to wiring systems recognized by CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). This category also covers other pin-and-sleeve-type receptacles, outlet devices and power inlets intended for use in appliances and other equipment.

The terminations of these devices are intended for use with the copper conductors and are marked to indicate the conductor size and temperature

**PIN-AND-SLEEVE-TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS CERTIFIED FOR CANADA (QLGD7)**

–Continued

rating of all field-installed conductors. Such markings are located where readily visible on the device or in a wiring diagram provided with the device. If no marking is provided, conductor sizes are based on the use of 60°C insulated conductor column for circuits rated 100 A or less, and the use of 75°C insulated conductor column for circuits rated more than 100 A, as specified in Table 2 of the CEC.

Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (devices rated 100 A or less) or 75°C ampacity (devices rated over 100 A).

This category does not cover general use, special use, or locking-type receptacles, switched receptacles or current taps.

**PRODUCT MARKINGS**

These devices are marked as follows:

1. Listee's name or identification on device and carton
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification by color or otherwise
5. Date code or equivalent
6. Additional markings as required

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Pin-and-Sleeve Receptacle
- Power Inlet
- Receptacle

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors Certified for Canada (QLGD7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 182.1 (2013), "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pin-and-Sleeve Receptacle," "Receptacle" or "Power Inlet," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PIPE JOINT SEALING COMPOUNDS CERTIFIED FOR CANADA (QLSR7)**

**USE**

This category covers compounds intended for use in joining threaded metal pipe connections in piping systems intended for the containment of alcohol, alcohol fuel blends, natural gas and methane, oxygen, petroleum distillates (gasoline, kerosene, etc.), propane and butane, steam and water (potable and nonpotable), as indicated in the individual certifications. The maximum pressure for each application is indicated in the individual certifications. Unless indicated otherwise, these products are free from any tendency to heat spontaneously.

These products have also been certified as to their fire hazard. Using the method for classification of the fire hazard of liquids specified in UL 340, "Tests for Comparative Flammability of Liquids," they have been rated on a numerical scale of hazard from 0 to 100 as indicated in the table below.

General Classification	Numerical Classification
Diethyl ether	100
Gasoline	90 to 100
Ethyl alcohol	60 to 70
Kerosene	30 to 40 <sup>a</sup>
Paraffin oil	10 to 20 <sup>b</sup>
Water or nonflammable	0 or nonflammable

<sup>a</sup> A standard kerosene of 37.8°C (100°F) flash point (closed cup) is rated 30 to 40.  
<sup>b</sup> A paraffin oil of 226.7°C (440°F) flash point (closed cup) is rated 10 to 20.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
 Pipe Joint Sealing Compound  
 Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S642, "Compounds and Tapes for Threaded Pipe Joints."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO FIRE HAZARD.  
 CLASSED @  
 FOR USE IN DEVICES HANDLING  
 GASOLINE AND PETROLEUM OILS (MAX PRESS \* kPa),  
 NATURAL GAS (MAX PRESS \* kPa),  
 PROPANE OR BUTANE (MAX PRESS \* kPa). (as appropriate)  
 [HAS SOME TENDENCY TO HEAT SPONTANEOUSLY. (as appropriate)]**

@ Statement of flammability rating per UL 340  
 \* The pressure specified for the product in the individual certifications

**Alternate UL Mark  
 UL MARK**

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**AS TO FIRE HAZARD. [PRODUCT NAME]  
 CLASSED @  
 FOR USE IN DEVICES HANDLING  
 GASOLINE AND PETROLEUM OILS (MAX PRESS \* kPa),  
 NATURAL GAS (MAX PRESS \* kPa),  
 PROPANE OR BUTANE (MAX PRESS \* kPa). (as appropriate)  
 [HAS SOME TENDENCY TO HEAT SPONTANEOUSLY. (as appropriate)]  
 Control No.**

@ Statement of flammability rating per UL 340  
 \* The pressure specified for the product in the individual Classifications  
 \*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PLUMBING ACCESSORIES  
 CERTIFIED FOR CANADA (QMTX7)**

**USE**

This category covers plumbing accessories connected to or used with plumbing in commercial locations or residential occupancies, including lawn sprinklers, electric faucets, shower controls, urinal controls and toilet-flushing systems.

This category also covers toilets, bidets, and combination toilet/bidets. Products suitable for outdoor use and those for use with heated liquids are so marked.

**FACTORS NOT INVESTIGATED**

These products have not been investigated with respect to the effect of their use with corrosive liquids or aqueous solutions containing corrosive materials.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
 Electric Faucet  
 Lawn Sprinkler Control

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, that connect to separate plumbing features are covered under Personal Hygiene and Health Care Appliances Certified for Canada (QGRZ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14 (1991), "Industrial Control Equipment," and CAN/CSA-C22.2 No. 68 (1992), "Motor-Operated Appliances (Household and Commercial)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
 UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lawn Sprinkler Control" or "Electric Faucet," or other appropriate product name shown in the individual Listings.  
 \*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PLUMBING ACCESSORIES FOR  
 RECREATIONAL VEHICLES  
 CERTIFIED FOR CANADA (QNAW7)**

**USE**

This category covers products connected to or used with plumbing in recreational vehicles, including water controls, mechanical valves, electric faucets, toilet-flushing systems, sewage pumps, grinder pumps, chemical-feed pumps, transfer pumps and liquid-circulating pumps.

Products suitable for outdoor use, exposure to road splashing, and for use with hot liquids are so marked.

**FACTORS NOT INVESTIGATED**

This equipment has not been investigated with respect to the effect of its use with corrosive liquids or aqueous solutions containing corrosive materials, nor for use with drinking water.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
 RV Electric Faucet  
 RV Sewage Pump

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Products investigated for use with drinking water are covered under Drinking Water System Components Certified for Canada (FDNP7).

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-Z240 RV Series (1986), "Recreational Vehicles," CSA B125 (1993), "Plumbing Fittings," CSA B45 Series (1994), "Plumbing Fixtures," and CAN/CSA-C22.2 No. 68 (1992), "Motor-Operated Appliances."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "RV Sewage Pump" or "RV Electric Faucet," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PLUMBING ACCESSORIES FOR USE  
IN HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (QNHV7)**

**USE AND INSTALLATION**

This category covers pump assemblies and controls for use in pumping sewage. Assemblies exposed to sewage have constructions intended to reduce corrosion of enclosure parts and explosion-proof joints. They have not been investigated for use where severe corrosive conditions are likely to be present.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Control Unit for Use in Hazardous Locations
- Submersible Sump Pump for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 145 (1986), "Motors and Generators for Use in Hazardous Locations," in addition to the standards referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Unit for Use in Hazardous Locations" or "Submersible Sump Pump for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PLUMBING PRODUCTS CERTIFIED  
FOR CANADA (QNJA7)**

These products include plastic plumbing fixtures, plumbing fixture fittings and plumbing pipe and pipe fittings.

**PLUMBING FIXTURES CERTIFIED FOR  
CANADA (QNNA7)**

**Ceramic Plumbing Fixtures Certified for Canada  
(QNNK7)**

**USE AND INSTALLATION**

This category covers vitreous and nonvitreous ceramic plumbing fixtures, such as water closets, lavatories, urinals, bidets, bathtubs, shower bases, sinks and drinking fountains, intended for residential or commercial installation in accordance with the "National Plumbing Code of Canada."

Unless otherwise indicated in the individual certifications, these fixtures do not include supply fittings.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Ceramic Bathtub
- Ceramic Bidet
- Ceramic Drinking Fountain
- Ceramic Lavatory
- Ceramic Plumbing Fixture
- Ceramic Shower Base
- Ceramic Sink
- Ceramic Urinal
- Ceramic Water Closet

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ASME A112.19.2/CSA B45.1 (2013), "Ceramic Plumbing Fixtures."

Fixtures with integral supply fittings have additionally been investigated to ASME A112.18.1/CSA B125.1 (2012), "Plumbing Supply Fittings."

Fixtures with integral supply fittings intended for use with potable water have additionally been investigated to NSF/ANSI 61 (2012), "Drinking Water System Components - Health Effects."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "PERFORMANCE," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Ceramic Plumbing Fixture," "Ceramic Water Closet," "Ceramic Lavatory," "Ceramic Urinal," "Ceramic Bidet," "Ceramic Bathtub," "Ceramic Shower Base," "Ceramic Sink" or "Ceramic Drinking Fountain."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Plastic Plumbing Fixtures Certified for Canada  
(QNNP7)**

**GENERAL**

This category covers plumbing fixtures such as, but not limited to, bathtubs, shower receptors and shower stalls, lavatories, water closets, sinks, bidets and urinals made primarily of plastic. These products are intended for commercial or residential installations in accordance with the applicable model plumbing codes.

**PRODUCT MARKINGS**

Products investigated to the standards noted below are marked with the certified company's name, trade name, trademark, or other mark known to identify the manufacturer, in a location readily visible after installation. These products are also marked with the date of manufacture. Water closets and each component of a water closet, if the fixture is made up of two or more components, are marked to identify whether they are a low-consumption (6 LPF) or watersaver (13.25 LPF) type. Urinals are marked to indicate whether they are a low-consumption (3.8 LPF) or watersaver

–Continued

(5.7 LPF) type. The marking on the packaging of water closets and urinals includes the manufacturer's recommended working pressure. Special-purpose fixtures that do not comply with the dimensional requirements in the standards are marked with an "N" to indicate that they are "nonstandard" type fixtures. Plumbing fixtures intended for use only in recreational vehicles are marked with "RV."

**PRODUCT IDENTITY**

The following product identity appears on the product:

Plastic Plumbing Fixture

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-B45.0, "Plumbing Fixtures," and CSA-B45.5, "Plastic Plumbing Fixtures."

Products with integral waste fittings have also been investigated to ANSI/ASME A112.18.2/CSA B125.2 (2011), "Plumbing Waste Fittings."

Some products covered under this category have also been investigated to CSA B651 (2004), "Accessible Design for the Built Environment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "PERFORMANCE" and "HEALTH EFFECTS," the geographic identifier(s), and a file number.

**Additional Certification Markings**

For those products which are also certified by UL to CSA B651, the following information is included on the product:

**ALSO CERTIFIED TO CSA B651**

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plastic Plumbing Fixture," or other appropriate product name as shown in the individual Listings.

**Combination Listing/Classification Mark** — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to CSA B651. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the marking: "ALSO CLASSIFIED IN ACCORDANCE WITH CSA B651."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Enameled Cast Iron and Enameled Steel Plumbing Fixtures Certified for Canada (QNNV7)**

**GENERAL**

This category covers enameled cast iron and enameled steel plumbing fixtures, including bathtubs, drinking fountains and water coolers, sinks and lavatories, and shower receptors (also called shower pans or shower bases), intended for residential or commercial installation in accordance with the "National Plumbing Code of Canada."

**PRODUCT MARKINGS**

Special-purpose fixtures that do not comply with certain dimensional requirements specified in ASME A112.19.1/CSA B45.2, "Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures," are marked with the letter "N" to indicate the nonstandard nature of the fixture.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Enameled Cast Iron Bathtub
- Enameled Cast Iron Fixture
- Enameled Cast Iron Lavatory
- Enameled Cast Iron Shower Receptor
- Enameled Cast Iron Sink
- Enameled Steel Bathtub
- Enameled Steel Fixture
- Enameled Steel Lavatory
- Enameled Steel Shower Receptor
- Enameled Steel Sink

–Continued

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ASME A112.19.1/CSA B45.2 (2008), "Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "PERFORMANCE" and "HEALTH EFFECTS," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**ASME A112.19.1/CSA B45.2**

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Enameled Cast Iron Fixture," "Enameled Steel Fixture," "Enameled Cast Iron Bathtub," "Enameled Steel Bathtub," "Enameled Cast Iron Shower Receptor," "Enameled Steel Shower Receptor," "Enameled Cast Iron Sink," "Enameled Steel Sink," "Enameled Cast Iron Lavatory" or "Enameled Steel Lavatory," and the statement "LISTED IN ACCORDANCE WITH ASME A112.19.1/CSA B45.2."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Stainless Steel Plumbing Fixtures Certified for Canada (QNOA7)**

**USE**

This category covers stainless steel plumbing fixtures, such as sinks, bathtubs, shower bases, water closets, lavatories, bidets, urinals, water coolers and drinking fountains intended for installation in accordance with the "National Plumbing Code of Canada."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Stainless Steel Plumbing Fixture
- Stainless Steel Sink

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/ASME A112.19.3/CSA B45.4 (2008), "Stainless Steel Plumbing Fixtures."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "PERFORMANCE," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Stainless Steel Plumbing Fixture" or "Stainless Steel Sink."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELATED PLUMBING PRODUCTS  
CERTIFIED FOR CANADA (QNOK7)**

**Ballcocks, Flush Valves, Flushometer Valves  
and Flushometer Tanks Certified for Canada  
(QNOP7)**

**GENERAL**

This category covers ballcocks (fill valves), flush valves, flushometer valves and flushometer tanks intended for installation in water closets (toilets) and urinals in accordance with the "National Plumbing Code of Canada."

**PRODUCT TYPES**

**Ballcocks (Fill Valves)** — Ballcocks (also called anti-siphon-type flush tank fill valves) are water-supply valves installed within water-closet tanks that refill the tank after flushing the water closet.

**Flush Valves** — Flush valves are valves located in a gravity-flush tank and used to flush a water closet, urinal or tank by discharging water into the fixture.

**Flushometer Valves and Tanks** — Flushometer valves are devices that are installed on a pressurized water-supply pipe for the purpose of discharging a predetermined quantity of water to a toilet or urinal for flushing purposes. These valves are designed to gradually close in order to minimize water hammer. Flushometer tanks are devices that accomplish the same purpose as flushometer valves; however, they consist of a valve integrated with an accumulator vessel. They are actuated by direct water pressure, which is generated by the accumulator.

**PRODUCT MARKINGS**

These products are marked with the certified company's name, trade name, trademark, or other mark known to identify the manufacturer. The packaging for all products covered under this category is also marked with the certified company's name, trade name, trademark, or other mark known to identify the manufacturer and the product's model number.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Ballcock
- Fill Valve
- Flush Valve
- Flushometer Tank
- Flushometer Valve

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA B125.3 (2011), "Plumbing Fittings," and ANSI/ASME A112.19.5/CSA B45.15 (2011), "Flush Valves and Spuds for Water Closets, Urinals, and Tanks."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "PERFORMANCE," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Ballcock," "Fill Valve," "Flush Valve," "Flushometer Tank" or "Flushometer Valve."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**General Plumbing and Associated Products  
Certified for Canada (QNPJ7)**

**GENERAL**

This category covers various plumbing products and fittings intended for commercial or residential installations.

**PRODUCT IDENTITY**

—Continued

One of the following product identities appears on the product:

- Combination Bathing/Shower
- Disinfection and Cleaning System for Patient Bathing Units
- Patient Bathing Unit
- Plastic Shower Stall
- Water Closet Personal Hygiene Device

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are one or more of the following:

- CSA B45.0 (2002), "General Requirements for Plumbing Fixtures"
- CSA B45.5 (2002), "Plastic Plumbing Fixtures"
- CSA B64.0 (2001), "Backflow Preventers and Vacuum Breakers"
- CSA B64.1.1 (2001), "Vacuum Breakers, Atmospheric Type (AVB)"
- CSA B64.1.2 (2001), "Vacuum Breakers, Pressure Type (PVB)"
- CSA B64.8 (2001), "Backflow Preventers, Dual Check Valve Type with Intermediate Vent (DuCV)"
- CSA B651 (2004), "Accessible Design for the Built Environment"

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "PERFORMANCE," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

[standard designation and date of standard]

**Alternate UL Mark**

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]  
IN ACCORDANCE WITH \*

**Control No.**

\* Standard designation and date of standard  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Plumbing-waste Fittings Certified for Canada  
(QNSW7)**

**GENERAL**

This category covers plumbing-waste fittings of sizes NPS-2 and smaller such as, but not limited to, sink, shower and bath drains, traps, strainers, grey-water diverters, and subdrains for built-up shower pans. These devices are intended to be used and installed in accordance with the "National Plumbing Code of Canada."

This category does not cover pipe, tubes, or pipe and tube fittings, such as couplings, elbows, unions or reducers.

**PRODUCT AND PACKAGE MARKINGS**

These products are marked with the certified company's name, trademark, or other mark to identify the manufacturer in a location visible after installation. Additional markings for specific product types are described in the individual Reports.

The packaging of these products includes the certified company's name and model designation.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Plumbing-waste Fitting

**RELATED PRODUCTS**

Plumbing supply fittings are covered under Plumbing Fixture Fittings Certified for Canada (QNSQ7).

Products certified to a plumbing standard for which no specific category has been established are covered under General Plumbing and Associated Products Certified for Canada (QNPJ7).

**ADDITIONAL INFORMATION**

–Continued

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/ASME A112.18.2/CSA B125.2 (2011), “Plumbing Waste Fittings.”

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “PERFORMANCE,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Plumbing Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Plumbing Listing Mark for these products includes the UL Mark for Canada symbol with the word “PLUMBING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Plumbing-waste Fitting.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PLUMBING FIXTURE FITTINGS CERTIFIED FOR CANADA (QNSQ7)**

**USE AND INSTALLATION**

This category covers plumbing fixture fittings such as, but not limited to, anti-scald shower control valves, hose-connected kitchen spray nozzles, hand-held showers, showerheads, and faucets for sinks, lavatories, bathtubs and showers.

This category does not cover pipe fittings, such as couplings, elbows, unions or reducers.

These devices are intended for installation and use in accordance with the manufacturer’s instructions and the “National Plumbing Code of Canada.”

Fittings having a primary or secondary outlet that can terminate in non-potable water have been investigated for backflow prevention. This includes faucets with pull-out spouts or hose-connected spray nozzles and hand-held showers.

**PRODUCT MARKINGS**

These products are marked with the certified company’s name, trade name, trademark, or other mark known to identify the manufacturer, in a location readily visible after installation. Fittings for use only in recreational vehicles are marked with “RV.” Each showerhead, sink faucet and lavatory faucet and its packaging are marked with the flow rate in L/min. The packaging for all products covered under this category is also marked with the certified company’s name and the product’s model number.

**PACKAGE MARKINGS**

The packaging of these products includes the certified company’s name and model designation.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Plumbing Fixture Fitting

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Devices and fittings (e.g., lavatory faucets, bar faucets, kitchen sink faucets, supply stops, endpoint control valves) that come into contact with drinking (potable) water and drinking water treatment chemicals have been investigated to NSF/ANSI 61, “Drinking Water System Components – Health Effects.”

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Plumbing Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ANSI/ASME A112.18.1/CSA B125.1 (2005), “Plumbing Supply Fittings,” and CSA B125.3 (2005), “Plumbing Fittings.”

Other standards that may be used are noted in the individual Reports.

**UL MARK**

–Continued

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “PERFORMANCE” and “HEALTH EFFECTS,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Plumbing Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Plumbing Listing Mark for these products includes the UL Mark for Canada symbol with the word “PLUMBING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Plumbing Fixture Fitting,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LEAD CONTENT VERIFICATION OF PRODUCTS IN CONTACT WITH POTABLE WATER CERTIFIED FOR CANADA (QNVB7)**

**GENERAL**

This category covers drinking water system products, including, but not limited to, components, materials and process media (activated carbon, sand, etc.) that come in contact with, convey or dispense water intended for human consumption by drinking or cooking. The investigation includes determination of compliance with design requirements with respect to lead (Pb), including a weighted average Pb content of not more than 0.25%, and testing of the required materials to verify the Pb content. Products, components and materials covered under this category have been investigated for compliance with NSF/ANSI 372, “Drinking Water System Components – Lead Content.”

NSF/ANSI 372 does not cover structural integrity, performance or other health risk aspects such as contaminants that may leach into the water from materials of which the product, component, or material is manufactured. The final acceptance of a product, component, or material is dependent upon its compliance with the requirements and standards that a local, state, federal, or other jurisdictional body has defined for the product or component.

**INSTALLATION**

These products and components are intended to be installed and used in accordance with applicable codes and regulations. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water-supply lines.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Faucet  
Valve

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Products in contact with potable water are also covered under Drinking Water System Components Certified for Canada (FDNP7).

Water coolers, drinking water fountains and remote chillers are also covered under Drinking-water Coolers Certified for Canada (SRJX7).

Faucets and related plumbing fixture fittings are also covered under Plumbing Fixture Fittings Certified for Canada (QNSQ7).

Submersible well pumps are also covered under Pumps, Electrically Operated, Liquid Certified for Canada (REUZ7).

Household freezers are also covered under Household Freezers Certified for Canada (SHMR7).

Refrigerators intended for use in recreational vehicles are also covered under Recreational Vehicle Refrigerators and Freezers Certified for Canada (SKKQ7).

Refrigerators intended for commercial use are also covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Refrigerators in combination with ranges, microwave ovens and/or sinks are also covered under Kitchen Units, Refrigerated Certified for Canada (SJPT7).

**LEAD CONTENT VERIFICATION OF PRODUCTS IN CONTACT WITH POTABLE WATER CERTIFIED FOR CANADA (QNVB7)**

Commercial electric cooking and warming equipment is also covered under Commercial Cooking Appliances Certified for Canada (KNGT7) and Custom-built Food Service Equipment Certified for Canada (KNNS7).

Gas-fired food service equipment is also covered under Gas-fired Food Service Equipment Certified for Canada (LGQX7).

Refrigerators and freezers intended for commercial use are also covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

**ADDITIONAL INFORMATION**

For additional information, see Plumbing and Associated Products Certified for Canada (AAPP7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is NSF/ANSI 372 (2011), "Drinking Water System Components - Lead Content."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "HEALTH EFFECTS," the geographic identifier(s), and a file number.

For process media shipped in bulk quantities, the Certification Mark may appear on a Bill of Lading or a Bulk Shipment Certificate.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**NSF/ANSI 372**

The words "AS TO ≤ 0.25% Pb ONLY" may be used in lieu of "NSF/ANSI 372" described above until July 1, 2013. After July 1, 2013, the words "NSF/ANSI 372" shall be used.

For products that are also certified by UL under another category, as an alternative to the complete Certification Mark described above, the words "ALSO CERTIFIED TO NSF/ANSI 372" (or "NSF/ANSI 372") may be used adjacent to the applicable UL Mark.

**Alternate UL Mark**

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. For process media shipped in bulk quantities, the Classification Mark may appear on a Bill of Lading or a Bulk Shipment Certificate. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY\*]**

**IN ACCORDANCE WITH NSF/ANSI 372**

**Control No.**

\* VALVE, FAUCET, or other appropriate product identity as shown in the individual Classifications

The Classification Mark may be abbreviated as follows:

**UND. LAB. CLASSIFIED**

**IN ACCORDANCE WITH NSF/ANSI 372**

**Control No.**

or

**UND. LAB. CLFD**

**IN ACCORDANCE WITH NSF/ANSI 372**

**Control No.**

The words "AS TO ≤ 0.25% Pb ONLY" may be used in lieu of "IN ACCORDANCE WITH NSF/ANSI 372" described above until July 1, 2013. After July 1, 2013, the words "IN ACCORDANCE WITH NSF/ANSI 372" shall be used.

For products that are also Listed or Classified by UL under another category, as an alternative to the complete Classification Mark described above, the words "ALSO CLASSIFIED" (or "ALSO CLFD") and the text "IN ACCORDANCE WITH NSF/ANSI 372" may be used adjacent to the applicable UL Mark.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE ELECTRIC HAND LAMPS CERTIFIED FOR CANADA (QORX7)**

GENERAL

This category covers portable electric hand lamps of the incandescent and fluorescent lamp types, rated 125 V, 300 W or less.

Incandescent-type lamps have a length of flexible cord and an attachment plug for connection to a source of supply, an insulating handle, a lamp guard, and provisions for temporary support. Fluorescent-type lamps have a lamp reflector assembly, a length of flexible cord with either an in-line ballast and attachment plug or a direct plug-in type ballast. Both fluorescent and incandescent types are not intended for outdoor use or for use in hazardous locations or above hazardous locations as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Portable Hand Lamp

Portable Luminaire

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, "Portable Luminaires," and CSA Technical Information Letter No. B-67, "Interim Certification Requirements for Extension Hand-lamps."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Hand Lamp" or "Portable Luminaire."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE LIGHTING PRODUCTS CERTIFIED FOR CANADA (QOTU7)**

**GENERAL**

This category covers lampshades, nightlights, light-emitting-diode (LED) nightlights, office furnishing lights, portable cabinet luminaires, portable cabinet LED luminaires, portable luminaire kits and subassemblies, portable luminaires, portable LED luminaires, portable work lights, and sun and heat lamps.

**RELATED PRODUCTS**

Portable lighting products and associated furnishings investigated for use together are covered under Furnishings, Household and Commercial Certified for Canada (IYQX7).

Portable lighting products used as hand lamps are covered under Portable Electric Hand Lamps Certified for Canada (QORX7).

Portable lighting products intended for seasonal use are covered under Seasonal and Holiday Decorative Product Accessories Certified for Canada (DGWU7), Outfits, Decorative Certified for Canada (DGXW7) or Strings, Decorative Lighting Certified for Canada (DGZZ7).

Portable lighting products intended for use in hazardous (classified) locations are covered under Portable Lighting Units for Use in Hazardous Locations Certified for Canada (QPKX7).

Portable lighting products intended for temporary use (such as at construction sites or car sales lots) are covered under Temporary-lighting Strings Certified for Canada (XBRT7).

Portable lighting products intended for theatrical use are covered under Stage and Studio Luminaires and Connector Strips Certified for Canada (IFDZ7).

**PORTABLE CABINET LIGHT-EMITTING-DIODE LUMINAIRES CERTIFIED FOR CANADA (QOVA7)**

**USE AND INSTALLATION**

This category covers surface- and recess-mounted portable cabinet light-emitting-diode (LED) luminaires intended for installation into open or

–Continued

enclosed portable cabinets, such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage portable LED luminaires intended for installation in cabinets provided or marked for use with a power supply of the direct-plug-in or attachment-plug-equipped, cord-connected type.

This category also covers portable cabinet LED luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies, intended for use with portable cabinet LED luminaires.

These products are not intended for installation in recessed walls or ceilings where the wiring is concealed or passed through openings in the structure.

Portable cabinet LED luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet LED luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

Portable cabinet LED luminaires of all types should not be located less than 30.5 cm (12 in.) apart and should be provided a 13 mm (1/2 in.) minimum clearance between the top and any horizontal surface, unless the instructions indicate a lesser spacing.

Portable cabinet LED luminaires investigated only for surface mounting inside a cabinet and not intended for recessed mounting are marked “SUITABLE FOR SURFACE MOUNTING ONLY.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Portable Cabinet LED Luminaire
- Portable Cabinet LED Luminaire Accessory
- Portable Cabinet Light-emitting-diode Luminaire
- Portable Cabinet Light-emitting-diode Luminaire Accessory

**RELATED PRODUCTS**

Portable luminaires intended for installation other than in cabinets are covered under Luminaires, Portable Certified for Canada (QOWZ7).

Portable cabinet luminaires that do not employ LEDs as their primary light source are covered under Portable Cabinet Luminaires Certified for Canada (QOVJ7).

LED luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Light-emitting-diode Surface-mounted Luminaires Certified for Canada (IFAM7) for surface mounting, or Light-emitting-diode Recessed Luminaires Certified for Canada (IFAO7) for recessed mounting.

Low-voltage LED lighting systems intended for installation in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings Certified for Canada (IFDR7).

Portable cabinet LED luminaires investigated for use with specific cabinet or display designs are certified together with the cabinet or display as Furnishings, Household and Commercial Certified for Canada (YQX7).

**ADDITIONAL INFORMATION**

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 9.0, “General Requirements for Luminaires,” in addition to the requirements contained in CSA Technical Information Letter No. B-60, “Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires” (issued 5-17-1993).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Portable Cabinet Light-emitting-diode Luminaire” (or “Portable Cabinet LED Luminaire”) or “Portable Cabinet Light-emitting-diode Luminaire Accessory” (or “Portable Cabinet LED Luminaire Accessory”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

–Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE CABINET LUMINAIRES  
CERTIFIED FOR CANADA (QOVJ7)**

**USE AND INSTALLATION**

This category covers surface- and recess-mounted portable cabinet luminaires intended for installation into open or enclosed cabinets such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage portable luminaires intended for installation in cabinets provided or marked for use with a power supply of the direct-plug-in or attachment-plug equipped, cord-connected type.

These products are not intended for installation in recessed walls or ceilings where the wiring is concealed or passes through openings in the structure.

Portable cabinet luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket, or spacer.

Portable cabinet luminaires of all types should not be located less than 30.5 cm (12 in.) apart and should be provided a 13 mm (1/2 in.) minimum clearance between the top and any horizontal surface, unless the instructions indicate a lesser spacing.

Portable cabinet luminaires investigated only for surface mounting inside a cabinet and not intended for recessed mounting are marked “SUITABLE FOR SURFACE MOUNTING ONLY.”

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Portable Cabinet Light
- Portable Cabinet Luminaire

**RELATED PRODUCTS**

Portable LED cabinet luminaires are covered under Portable Cabinet Light-emitting-diode Luminaires Certified for Canada (QOVA7).

Portable luminaires intended for installation other than in cabinets are covered under Luminaires, Portable Certified for Canada (QOWZ7) and Light-emitting-diode Luminaires, Portable Certified for Canada (QOVZ7).

Incandescent and fluorescent luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passes through openings in the structure, are covered under Incandescent Surface-mounted Luminaires Certified for Canada (IEZ7) and Fluorescent Surface-mounted Luminaires Certified for Canada (IEU7), respectively.

Low-voltage lighting systems intended for installation in permanently-installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Incandescent Luminaires and Fittings Certified for Canada (IFDR7).

Portable cabinet luminaires investigated for use with specific cabinet or display designs, along with the cabinet or display, are covered under Furnishings, Household and Commercial Certified for Canada (YQX7).

**ADDITIONAL INFORMATION**

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 9.0, “General Requirements for Luminaires,” in addition to the requirements contained in CSA Technical Information Letter No. B-60, “Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires” (issued 5-17-1993).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

**LIGHT-EMITTING-DIODE LUMINAIRES, PORTABLE CERTIFIED FOR CANADA (QOVZ7)**

**GENERAL**

This category covers portable light-emitting-diode (LED) luminaires whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

This category also covers low-voltage portable LED luminaires provided or marked for use with a power supply of the direct-plug-in or attachment-plug-equipped, cord-connected type.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

**PRODUCT MARKINGS**

Products investigated as Convertible Units are marked to indicate acceptability as a LED luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Certification Mark, "SUITABLE FOR WET LOCATIONS."

Undercabinet portable LED luminaires are marked "SUITABLE FOR UNDERCABINET MOUNTING."

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
  - Portable LED Luminaire
  - Portable Light-emitting-diode Luminaire

**RELATED PRODUCTS**

Portable cabinet LED luminaires are covered under Portable Cabinet Light-emitting-diode Luminaires Certified for Canada (QOVA7).

Portable electric hand lamps are covered under Portable Electric Hand Lamps Certified for Canada (QORX7).

Nightlights are covered under Nightlights Certified for Canada (QOYX7).

Portable luminaires that comply with CAN/CSA-C22.2 No. 207, "Portable and Stationary Electric Signs and Displays," may also be certified as Signs Certified for Canada (UXYT7).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies Certified for Canada (QPAU7).

**ADDITIONAL INFORMATION**

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate undercabinet-type luminaires in this category is CSA-C22.2 No. 9.0, "General Requirements for Luminaires."

The basic standard used to investigate luminaires other than undercabinet type in this category is CSA-C22.2 No. 12, "Portable Luminaires."

CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993), is also used in addition to the above standards.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Listing Mark for this category requires the use of a holographic label.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Light-emitting-diode Luminaire" (or "Portable LED Luminaire").

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LIGHT-EMITTING-DIODE NIGHTLIGHTS CERTIFIED FOR CANADA (QOWC7)**

**USE**

This category covers light-emitting-diode (LED) nightlights for direct-plug-in use in parallel-slot, general-purpose receptacles rated 15 or 20 A, 125 V.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
  - LED Nightlight
  - Light-emitting-diode Nightlight

**RELATED PRODUCTS**

Nightlights employing light sources other than LED are covered under Nightlights Certified for Canada (QOYX7).

LED lighting products intended for use as nightlights, but provided with a power-supply cord, are covered under Light-emitting-diode Luminaires, Portable Certified for Canada (QOVZ7).

**ADDITIONAL INFORMATION**

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 256, "Direct Plug-In Nightlights."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Light-emitting-diode Nightlight" (or "LED Nightlight").

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LUMINAIRES, PORTABLE CERTIFIED FOR CANADA (QOWZ7)**

**GENERAL**

This category covers portable luminaires whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

This category also covers low-voltage portable luminaires provided or marked for use with a power supply of the direct-plug-in or attachment-plug-equipped, cord-connected type.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain

610 PORTABLE LIGHTING PRODUCTS CERTIFIED FOR CANADA (QOTU7)

–Continued

types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

**PRODUCT MARKINGS**

Products investigated as Convertible Units are marked to indicate acceptability as a luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Certification Mark, “Suitable for Wet Locations.”

Undercabinet portable luminaires are marked “SUITABLE FOR UNDER-CABINET MOUNTING.”

**REBUILT PRODUCTS**

This category also covers portable luminaires that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable luminaires are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable luminaires are subject to the same requirements as new portable luminaires.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Portable Luminaire

For rebuilt products, the word “Rebuilt” precedes the product identity.

**RELATED PRODUCTS**

Portable LED luminaires are covered under Light-emitting-diode Luminaires, Portable Certified for Canada (QOVZ7).

Portable cabinet luminaires are covered under Portable Cabinet Luminaires Certified for Canada (QOVJ7).

Portable cabinet LED luminaires are covered under Portable Cabinet Light-emitting-diode Luminaires Certified for Canada (QOVA7).

Portable electric hand lamps are covered under Portable Electric Hand Lamps Certified for Canada (QORX7).

Nightlights are covered under Nightlights Certified for Canada (QOYX7).

Portable luminaires that comply with CAN/CSA-C22.2 No. 207, “Portable and Stationary Electric Signs and Displays,” may also be certified as Signs Certified for Canada (UXYT7).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies Certified for Canada (QPAU7).

**ADDITIONAL INFORMATION**

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate undercabinet-type luminaires in this category is CSA-C22.2 No. 9.0, “General Requirements for Luminaires.”

The basic standard used to investigate luminaires other than undercabinet type in this category is CSA-C22.2 No. 12, “Portable Luminaires.”

CSA Technical Information Letter No. B-60, “Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires” (issued 5-17-1993), is also used in addition to the above standards.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Portable Luminaire” or “Rebuilt Portable Luminaire.”

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE LUMINAIRE ACCESSORIES, KITS AND SUBASSEMBLIES CERTIFIED FOR CANADA (QPAU7)**

**USE AND INSTALLATION**

This category covers portable luminaire accessories, kits and subassemblies of the following types.

**Portable Luminaire Accessory** — Portable luminaire accessories are intended to be used with portable luminaires and consist of components such as interconnecting cord sets, dimmer and switch assemblies, and conversion kits to enable the portable luminaire to be converted to a fixed unit (luminaire) in accordance with CSA-C22.2 No. 250.0, “Luminaires.”

**Portable Luminaire Kit** — Portable luminaire kits are intended to be used for making complete portable luminaires using ordinary tools to assemble and/or attach the parts to a support base in accordance with the instructions provided with the kit. All parts needed to assemble the product in accordance with the instructions are provided.

**Portable Luminaire Subassembly** — Portable luminaire subassemblies are intended to be used for modernizing, or replacing parts on existing luminaires in accordance with the instructions provided with the subassembly. They may also be used for constructing new portable luminaires in accordance with the instructions provided with the subassembly. All electrical components needed to assemble the product in accordance with the instructions are provided.

**MARKINGS AND INSTRUCTIONS**

Portable luminaire accessory conversion kits are provided with mounting and installation instructions and markings to indicate that they are capable of being used as fixed units (luminaires) when used with the appropriate portable luminaires. The portable luminaires are identified by catalog or model number.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Portable Lamp Subassembly
- Portable Luminaire Accessory
- Portable Luminaire Kit
- Portable Luminaire Subassembly

**ADDITIONAL INFORMATION**

**PORTABLE LIGHTING PRODUCTS CERTIFIED FOR CANADA (QOTU7)**

–Continued

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 12 (1982), “Portable Luminaires,” in addition to the requirements contained in CSA Technical Information Letter No. B-60, “Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires” (issued 5-17-1993).

Portable luminaire accessory conversion kits and their associated portable luminaires are additionally investigated to CSA-C22.2 No. 250.0, “Luminaires.”

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Portable Luminaire Accessory,” “Portable Luminaire Kit,” “Portable Lamp Subassembly” or “Portable Luminaire Subassembly.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE WORK LIGHTS CERTIFIED FOR CANADA (QPCJ7)**

**USE AND INSTALLATION**

This category covers cord-and-plug-connected lights for illumination of work areas such as construction sites, loading docks, and machinery work stations. Work lights are not intended to be hand held during use. Work lights are not intended for use in hazardous (classified) locations as defined in CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

This category also covers work light accessories intended for use with specific work lights.

Work lights may be freestanding, clamp-on, or similar portable mounting means, or be provided with a means for mounting to a tool, machine or a similar movable object.

Work lights may be placed on combustible floors. Special care must be employed to avoid overturning and to keep away from draperies, furniture, etc.

**PRODUCT MARKINGS**

A work light marked “Dry Location Use” is intended to be used only in a dry location.

A work light marked “Suitable for Wet Location Use” is intended for use in a wet or dry location.

A work light marked “Suitable for Outdoor Use Only” is suitable for use in a wet location and is intended to be used only in an outdoor location.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Portable Work Light
- Work Light
- Work Light Accessory

**RELATED PRODUCTS**

Portable outdoor flood lights for illumination or landscape, outdoor decorations, patios and play areas are covered under Luminaires, Portable Certified for Canada (QOWZ7), suitable for wet locations.

For other portable lighting products, see Luminaires, Portable Certified for Canada (QOWZ7) and Portable Electric Hand Lamps Certified for Canada (QORX7).

**ADDITIONAL INFORMATION**

For additional information, see Portable Lighting Products Certified for Canada (QOTU7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

**SUN AND HEAT LAMPS CERTIFIED FOR CANADA (QPDY7)**

**USE**

This category covers portable sun and heat lamps of the household variety intended for the production of ultraviolet (sun) radiation, infrared (heat), radiation, or both.

**FACTORS NOT INVESTIGATED**

The physiological effects, beneficial or otherwise, which may be produced by these lamps have not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Heat Lamp
- Infrared Lamp
- Sun Lamp
- Ultraviolet Lamp

**RELATED PRODUCTS**

Sun and heat lamps intended for professional use are covered under Medical Equipment Certified for Canada (PIDF7).

Sun and heat equipment for household and commercial use is covered under Personal Sun and Heat Equipment Certified for Canada (QGRX7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, “General Requirements – Canadian Electrical Code, Part II,” and CAN/CSA-C22.2 No. 224, “Radiant Heaters and Infrared and Ultraviolet Lamp Assemblies for Cosmetic or Hygienic Purposes in Nonmedical Applications.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PORTABLE LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QPKX7)

### GENERAL

This category covers portable luminaires (lighting units). Portable luminaires have provision for connection of a three-conductor, flexible, extra-hard-usage cord having grounding conductor, and are provided with a seal between the lamp compartment and the terminal enclosure.

Connections to the fixed portion of the supply require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Portable Lighting Unit for Use in Hazardous Locations
- Portable Luminaire for Use in Hazardous Locations

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 12 (1982), "Portable Luminaires," and CSA-C22.2 No. 137 (1981), "Electric Luminaires for Use in Hazardous Locations," in addition to the requirements contained in CSA Technical Information Letter No. B-60, "Interim Certification Requirements for Polymeric Enclosure Materials for Portable Luminaires" (issued 5-17-1993).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Portable Lighting Unit for Hazardous Locations" or "Portable Luminaire for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PORTABLE POWER CABLE CERTIFIED FOR CANADA (QPMU7)

### USE

This category covers portable power cable constructed as described in and certified for use in accordance with Section 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Portable power cable consists of either a single insulated conductor with no jacket, or two or more insulated conductors, with or without grounding conductors, with an overall jacket. The insulation and jacket are both thermoset, except for Type PPC/TPE, which employs thermoplastic elastomer insulation, and Types MP and MP-GC, which employ a thermoset insulation and a thermoplastic or thermoset jacket. Insulation may be applied in one or two layers.

Types G, G-GC, G-BGC, W and SHD-GC are intended for supplying power to mobile equipment and machinery and are rated 90°C (194°F)

dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil. This cable employs flexible stranded conductors in the AWG sizes indicated below. The voltage ratings are as indicated below.

Types PPC and PPC/TPE are intended for temporary installations, such as portable stage lighting and temporary outdoor functions, and are rated 600 V, 60, 75, 90 or 105°C dry. This cable employs flexible stranded copper conductors in a size range of 8 AWG to 300 kcmil using strands of 34 or 30 AWG, and is flame rated minimum FT5.

Types MP and MP-GC are intended for use in underground mines where subject to occasional removal and change of location, and in rugged environments. This cable is rated 90°C (194°F) dry, 75°C (167°F) wet, and 60°C (140°F) where exposed to oil, and is flame rated minimum FT5. The voltage ratings are as indicated below.

### CABLE TYPES

**Type G Cable** — A round, portable power cable with three or four insulated conductors, uninsulated ground wires, an overall jacket in conductors sized 12 AWG to 500 kcmil, or a two- or three-conductor cable in flat configuration in conductors sized 6 AWG to 4/0, both rated 2 kV.

**Type G-GC Cable** — A round, portable cable with three insulated conductors, uninsulated ground wires, ground-check conductor(s), an overall jacket using conductors sized 12 AWG to 500 kcmil, or a three- or four-conductor cable in flat configuration in conductors sized 6 AWG to 4/0, both rated 2 kV.

**Type G-BGC Cable** — A round, portable cable with three insulated conductors, uninsulated ground wires, ground-check conductor(s), and an overall jacket. The ground-check conductor is located in the center interstice of the three-phase conductor. The conductors are sized 12 AWG to 500 kcmil, rated 2 kV.

**Type W Cable** — A single conductor cable, in conductors sized 8 AWG to 1000 kcmil, a round, portable power cable with two, three or four insulated conductors, an overall jacket in conductors sized 12 AWG to 500 kcmil, or a two-conductor cable in flat configuration in conductors sized 8 AWG to 4/0, rated 2 kV.

**Type SHD-GC Cable** — A round, portable power cable with three insulated conductors, two uninsulated grounding conductors, a ground-check conductor, and an overall jacket. The conductors are sized 14 AWG to 500 kcmil, and the cable is rated 2 to 25 kV.

**Type PPC/TPE Cable** — A single-conductor, nonjacketed power cable.

**Type PPC** — A single conductor, nonjacketed power cable.

**Type MP** — A round power cable with three insulated, shielded conductors and three bare bonding conductors with conductors sized 6 AWG to 500 kcmil, rated 5 to 25 kV.

**Type MP-GC** — A round power cable with three insulated, shielded conductors, two bare bonding conductors, one ground check conductor with conductors sized 6 AWG to 500 kcmil, rated 5 to 25 kV.

### PRODUCT MARKINGS

The type and flame ratings are identified by tag markings and by printing on the surface of the insulation. This cable may be marked "-40C." If so marked, the cable complies with a cold bend test (not a suppleness test) at -40°C. Cable marked "-50C," "-60C" or "-70C" complies with a bend test (not a suppleness test) at the applicable low temperature.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Portable Power Cable

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are CSA-C22.2 No. 96, "Portable Power Cables," and CSA-C22.2 No. 96.1, "Mine Power Feeder Cables."

### UL MARK

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## POWER AND CONTROL TRAY CABLE CERTIFIED FOR CANADA (QPOR7)

### GENERAL

This category covers instrumentation and control cable consisting of two or more insulated conductors, with or without one or more grounding (bonding) conductors, with or without one or more optical fiber members, and covered with a nonmetallic jacket. One or more grounding (bonding) conductors may be insulated or bare. Any fully insulated grounding (bonding) conductor is colored green or green with a yellow stripe. The cable is rated 150, 300 or 600 V.

The cable is certified in conductor sizes 18 to 4/0 AWG copper and 12 to 4/0 AWG aluminum rated 600 V, and 26 to 14 AWG for cable rated 300 V and 150 V. The type of insulation is surface marked (PVC, XLPE, EP, PE or TPE) on the cable. Conductor sizes within a cable may be mixed. A mixture of copper and aluminum circuit conductors is not provided within the same cable.

### PRODUCT MARKINGS

Cable employing aluminum conductors is marked "ALUMINUM" (or "ALUM" or "AL"). When any wire or cable contains ACM (aluminum conductor material) conductor(s), it is marked "ALUMINUM ACM" (or "ALUM ACM" or "AL ACM").

The cable is marked -25°C or -40°C. Cable employing thermocouple conductors is marked with the type designation of the thermocouple alloy.

Cable employing a shield is surface-marked "Shielded."

The cable is surface-marked with the temperature rating, "Wet" or "Dry" where applicable, "Control" and/or "Instrumentation Cable" or "Thermocouple Cable" where applicable, "CIC" for control and instrumentation cable nonarmored, or "ACIC" for armored control and instrumentation cable, and the flame rating. Cable that has been investigated to the CSA FT4 Flame Test is surface-marked "FT4." Otherwise, cable is marked "FT1."

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Aluminum Control and Instrumentation Cable (for control and instrumentation cable that contains aluminum conductors)

Control and Instrumentation Cable (for control and instrumentation cable that contains copper conductors)

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 239, "Control and Instrumentation Cables."

### UL MARK

The Certification Mark of UL on the attached tag, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the attached tag, the reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Control and instrumentation cable that contains copper conductors has the product name "Control and Instrumentation Cable"; control and instrumentation cable that contains aluminum conductors has the product name "Aluminum Control and Instrumentation Cable."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## POWER CONVERTERS/INVERTERS AND POWER CONVERTER/INVERTER SYSTEMS CERTIFIED FOR CANADA (QPPY7)

### USE AND INSTALLATION

This category covers (1) fixed and stationary power converters, power inverters, power converter systems and power inverter systems for use in recreational vehicles in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," (2) portable stationary and fixed power converters, power inverters, power converter systems and power inverter systems for use in land vehicles, and (3) accessories for power converters and power inverters.

Power converters are primarily rectifying units intended for connection to a 120 V or 120/240 V, 15 or 20 A branch circuit supplied from the recreational vehicle panelboard and designed to provide low direct voltage for equipment in the recreational vehicle. A power converter may also include a battery charging feature.

Power inverters are intended for connection to a battery source within a vehicle. They are designed to supply ac voltage for equipment in a land vehicle. A power inverter may be provided with an ac transfer option to supply the output from an ac distribution system when the inverter is connected to such a system. A power inverter may also include a battery charger feature.

Power converter systems consist of a power converter and not more than three integral line voltage branch circuit protective devices. Power inverter systems consist of a power inverter and not more than three integral line voltage branch circuit protective devices. A main disconnecting means is provided if more than two branch circuit protective devices are incorporated.

A power converter system or power inverter system may serve the function of a distribution panelboard in a land vehicle. They are intended to be connected directly to an ac distribution system by means of a power supply cord.

### REBUILT PRODUCTS

This category also covers units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt units are subject to the same requirements as new products.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Power Converter
- Power Converter System
- Power Inverter
- Power Inverter System

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 107.1 (1991), "Commercial and Industrial Power Supplies."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Power Converter," "Power Converter System," "Power Inverter," "Power Inverter System," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## POWER DISTRIBUTION CENTERS FOR COMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (QPQY7)

### GENERAL

This category covers power distribution centers for communications equipment rated 600 V or less.

Power distribution centers contain equipment such as circuit breakers, supplementary protectors, contactors, fuses, switches, including pullout types and related accessory equipment.

Some centers incorporate constructions designed to provide safety for the operator. These centers are dead-front but may be open at the back, bottom, top or sides. Other centers may employ special alarm indicating fuses that have exposed live parts extending through the front. The distribution centers that incorporate special alarm fuses or that are not provided with a complete enclosure are intended for installation in places accessible only to qualified persons and are so marked.

### INSTALLATION

Some equipment has been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions, stating "To be installed only in a Restricted Access Location," or similar wording.

A certified subassembly such as a fuse panel, circuit breaker panel or the like has been investigated for use in a power distribution center or cabinet and is suitable for field installation. The subassembly is installed in accordance with the manufacturer's installation instructions, and the catalog number or equivalent of the subassembly and power distribution center or cabinet is referenced in the instructions.

### PRODUCT MARKINGS

Power distribution centers are marked with their short circuit current rating. This marking may be presented as a dc rating in amps, a description of the battery power supply, such as "Suitable For Use In Circuits Powered By Up To Five Banks Of 48 V, 200 A-Hr. Batteries," or a combination of both. A battery "bank" consists of a sufficient number of series-connected batteries to obtain the required system voltage. A number of "banks" are then wired in parallel to obtain the desired system A-Hr. capacity.

A distribution center having provision for the field installation of additional equipment such as circuit breakers, contactors, switches or the like is marked with the name or trademark of the manufacturer and the catalog number or equivalent of those devices that are intended to be installed in the field.

Power distribution centers are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 - 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Power Distribution Center for Communications Equipment
- Power Distribution Center for Communications Equipment Subassembly

### RELATED EQUIPMENT

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950, "Safety of Information Technology Equipment," or CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment - Safety - Part 1: General Requirements."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Center for Communications Equipment" or "Power Distribution Center for Communications Equipment Subassembly."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## POWER-DISTRIBUTION EQUIPMENT, PORTABLE CERTIFIED FOR CANADA (QPRW7)

### USE

This category covers portable power-distribution units and devices for use in the following locations:

- Theatre installations in accordance with Section 44 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC)
- Amusement parks, midways, carnivals, film and TV sets, TV remote broadcasting locations, and traveling shows in accordance with Section 66 of the CEC
- Temporary wiring at construction sites in accordance with Section 76 of the CEC

### RATINGS

This category covers units rated at 600 V or less, single- or multi-phase. Units are rated maximum 1600 A.

**Short-circuit Rating** — Units are intended for connection to supplies with a maximum available fault current of 10,000 A.

### PRODUCT MARKINGS

**Accessibility** — Units intended for use in areas not accessible by the general public are marked "For Use in Areas Not Readily Accessible by the General Public."

**Conductors in Parallel** — Units intended for paralleled conductors on a single circuit are marked "WARNING - Risk of Fire - Not for Multiple Circuits. Single Circuit with Parallel Conductors Only."

**Duty Rating** — Outputs are not suitable for continuous use unless marked otherwise.

**Ground-fault Protection** — Only those receptacles so marked are provided with ground-fault circuit protection for personnel.

**Neutral Connection** — Equipment rated for use on 3-phase, 4-wire with ground supplies and intended for use with electronic dimmers are marked "130 Percent Neutral - Suitable for Use with Electronic Dimmers." Equipment for use on both 208Y-/120-volt, 3-phase, 4-wire and 120-/240-volt, single-phase supplies at the full current rating on both systems are marked "200 Percent Neutral."

**Qualified Personnel** — Units intended for use by qualified personnel are marked "FOR USE BY QUALIFIED PERSONNEL ONLY" and "The routing of portable supply conductors, the making and breaking of supply connectors, and the energization and de-energization of supply services shall be performed by qualified personnel only."

**Enclosure Type** — Enclosures are marked with a Type designation indicating the external conditions for which they are intended. Intended uses for the various Type designations are indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7). Enclosures may additionally be marked with descriptive terms such as "Raintight," "Watertight," "Corrosion Resistant" and the like.

**Receptacle Ratings** — Equipment with receptacles that are not suitable to be disconnected under load are marked "Do Not Disconnect Under Load," or other similar marking to indicate the limitation of the receptacle.

**Single-pole Inlets and Outlets** — Equipment with separate, single-pole devices for input or output and without sequential interlocking provisions are marked "WARNING - Risk of Electric Shock. Plug connection should be in the following order:

- a) Equipment grounding conductor connectors,
- b) Grounded circuit conductor connectors, and
- c) Ungrounded conductor connectors.

Disconnection should be in reverse order."

### RELATED PRODUCTS

Units intended for use in theater or studio rigging immediately adjacent to stage luminaires are covered under Stage and Studio Luminaires and Connector Strips Certified for Canada (IFDZ7).

Portable cord-connected units rated 250 V ac or less, 20 A or less, intended for indoor use as multiple-outlet extensions of a branch circuit to a central location to supply laboratory equipment, a home workshop, home movie lighting control, etc., are covered under Relocatable Power Taps Certified for Canada (XBYS7).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables are covered under Cord Sets and Power-supply Cords Certified for Canada (ELBZ7).

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PORTABLE POWER-DISTRIBUTION UNITS AND DEVICES CERTIFIED FOR CANADA (QPSH7)

### GENERAL

This category covers portable power-distribution equipment of standardized type or configuration. Each unit has a marked model, type or catalog number.

Portable power-distribution units are assemblies of certified products or components, or both, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, control components, receptacles for attachment plugs, stage- and studio-type inlets and connectors, and the like.

This category also covers cable-mounted busbar clamps for use with portable power-distribution units as well as partially enclosed, plastic-framed cable-splicing blocks.

#### Busbar Clamps (Sister Lugs)

Busbar clamps are intended for use by qualified personnel only. Cable terminating to busbar clamps should be tied or otherwise supported so that flexing or strain on the conductors is not transmitted to the conductor termination at the busbar clamp. Soldering-lug-type units are not suitable to terminate an equipment-grounding conductor. Busbar clamps are marked with their range of intended wire sizes and their maximum current rating.

#### Cable-splicing Blocks (Spiders)

Partially enclosed, plastic-framed cable-splicing blocks are suitable for outdoor use. They are suitable for exposure to rain or water spray when not energized. Following such an exposure they are intended to be dried and inspected prior to energization. They are intended for use by qualified personnel in areas not readily accessible by the general public. They are intended for installations covered by Section 44 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

#### Construction-site Units

Units identified as "Construction-site Portable Power-distribution Units" or with similar identifiers that are marked as providing ground-fault protection for personnel protect the output circuits in the presence of one or more of the following conditions:

1. Any two power-supply conductors are reversed.
2. There is an open circuit in either the grounded supply conductor or any of the ungrounded supply conductors.

Protection is provided by exhibiting the performance characteristics of a Class A ground-fault circuit interrupter or by de-energizing the protected output circuits.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Busbar Clamp
- Construction-site Port Pwr-dist Unit
- Construction-site Portable Power-distribution Unit
- Open-frame Cable-splicing Block (for partially enclosed, plastic-framed cable-splicing blocks)
- Port Pwr-dist Unit
- Portable Power-distribution Unit

The word "Equipment" may be substituted for "Unit."

### ADDITIONAL INFORMATION

For additional information, see Power-distribution Equipment, Portable Certified for Canada (QPRW7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 14, "Industrial Control Equipment."

### UL MARK

For portable power-distribution units and partially enclosed, plastic-framed cable-splicing blocks:

—Continued

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For busbar clamps:

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify portable power-distribution units manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Distribution Unit" (or "Port Pwr Dist Unit") or "Construction Site Portable Power Distribution Unit" (or "Construction Site Port Pwr Dist Unit"). The word "Equipment" may be substituted for "Unit."

The Listing Mark of partially enclosed, plastic-framed cable-splicing blocks is the same as that specified above except the product name is "Open Frame Cable Splicing Block."

The Listing Mark on the smallest unit container in which busbar clamps are packaged and additionally provided with the UL Mark for Canada symbol on the busbar clamp is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for busbar clamps includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Busbar Clamp."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## POWER OUTLETS AND POWER- OUTLET FITTINGS CERTIFIED FOR CANADA (QPYV7)

### GENERAL

This category covers power outlets and power-outlet fittings.

**Power outlets** are enclosed assemblies that may include components such as receptacles, circuit breakers, fuseholders, fused switches, buses, and watt-hour meter-mounting means. Power outlets are permanently installed and, although not restricted to such use, are intended for use:

- At outdoor locations, such as on farms, at building sites, and the like, where power is required to operate portable, mobile, or temporarily installed equipment
- To supply power to a mobile home or a recreational vehicle
- To supply shore power to boats

**Power-outlet fittings** may be panels or combination units incorporating receptacles, disconnecting means, overcurrent protection or other such devices. A separable mounting post or pedestal to which power outlets are to be mounted is also considered a fitting. Power-outlet fittings are intended for factory or field assembly into or in conjunction with specific power outlets. Power outlets are marked to indicate those fittings with which they are intended to be used.

### USE AND INSTALLATION

Power outlets are mounted using a post or pedestal, each detailed as follows:

**Post type** power outlets are intended to be mounted in concrete at or below grade level, or intended to be secured to some other mounting support. The mounting post contains markings indicating the proper grade level.

**Pedestal type** power outlets are intended for mounting on a concrete slab.

Unless marked otherwise, a mounting post, pedestal or fitting is not intended to serve as the sole support of a mast for overhead wiring.

Power outlets are not intended for use in recreational vehicle parks or in marinas unless so marked.

Power outlets are suitable as service equipment if marked “Suitable For Use As Service Equipment” or, where the neutral is factory bonded to the enclosure, “Suitable For Use Only As Service Equipment.”

Power outlets containing overcurrent protection are marked with their short-circuit current ratings in rms symmetrical amps.

Where in normal operation the load will continue for three hours or more, circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Investigation of a power outlet includes a test designed to simulate exposure to beating rain to determine that such exposure will not interfere with successful operation of the apparatus within the enclosure nor result in wetting of the exposed faces of receptacles and associated attachment plugs.

Power outlets are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Power Outlet
- Power-outlet Fitting

**RELATED PRODUCTS**

Portable power distribution equipment is covered under Portable Power Distribution Units and Devices Certified for Canada (QPSH7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 29 (2011), “Panelboards and Enclosed Panelboards.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Power Outlet” or “Power Outlet Fitting.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER SUPPLIES CERTIFIED FOR CANADA (QQAQ7)**

These categories cover the following types of power supplies intended for use in ordinary locations in accordance with the Canadian Electrical Code.

- General Purpose Power Supplies
- Specialty Power Supplies
- Information Technology Equipment Power Supplies
- Telephone Power Supplies

The investigation of a device covered in these categories does not include the effects it may have on the system or equipment connected thereto.

A power supply not covered under one of the above mentioned categories and for use with only a specific product may be covered under the category of the specific product.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER SUPPLIES, GENERAL PURPOSE CERTIFIED FOR CANADA (QQFU7)**

**GENERAL**

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 750 V, direct and alternating current.

Power supplies marked “Intended for Installation in a Protected Environment” or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

**REBUILT PRODUCTS**

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Power Supply

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1, “Power Supplies.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Power Supply.”

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER SUPPLIES, INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT CERTIFIED FOR CANADA (QQGQ7)**

**GENERAL**

This category covers power supplies rated 600 V or less, intended for use with information technology equipment (ITE) including electrical business equipment. End-use products that employ these types of power supplies are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

All power-supply types covered under this category are marked with input and output electrical ratings that include the voltage and intended maximum load ratings in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is to be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

**REBUILT PRODUCTS**

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to

–Continued

the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- 60950-1
- 60950-22
- CAN/CSA-C22.2 No. 60950-1
- CAN/CSA-C22.2 No. 60950-22
- Information Technology Equipment Power Supply
- I.T.E. Power Supply
- ITE Power Supply
- QQGQ7 Power Supply

The product identity for accessories includes the word “Accessory.”

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 60950-1 (2007), “Information Technology Equipment – Safety – Part 1: General Requirements,” and CAN/CSA-C22.2 No. 60950-22 (2007), “Information Technology Equipment – Safety – Part 2: Equipment to be Installed Outdoors.”

All low-voltage outputs (maximum 42.4 V peak or 60 V dc) are safety extra-low-voltage (SELV) as defined in CAN/CSA-C22.2 No. 60950-1, and, where noted in the test report, SELV for wet locations as defined in CAN/CSA-C22.2 No. 60950-22. An output marked “LPS” has been determined to have an output level at or below the limited power-source level specified in CAN/CSA-C22.2 No. 60950-1, as it relates to the requirements for equipment supplied by the output.

An output marked “Class 2” has additionally been investigated to CAN/CSA-C22.2 No. 223 (1991), “Power Supplies with Extra Low Voltage Class 2 Outputs.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

For accessories, the Certification Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number or file number, and the category identifier “Information Technology Equipment Power Supply” (or “I.T.E. Power Supply” or “ITE Power Supply”), “QQGQ7 Power Supply,” or the standard number with or without the “CAN/CSA-C22.2 No.” prefix (e.g., “CAN/CSA-C22.2 No. 60950-1,” “60950-1”).

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word “Accessory.”

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER SUPPLIES, SPECIALTY CERTIFIED FOR CANADA (QQIJ7)**

**USE**

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 750 V, direct and alternating current.

These power supplies are intended for, but not necessarily limited to, specific uses such as to supply electroplating equipment, cathodic protection equipment, power supply/battery charger combinations, and industrial equipment, including inverters and converters.

–Continued

This category also covers Class 2 power units that are permanently connected, or that are cord-connected with input rated greater than 250 V. Other types of Class 2 power units are covered under Transformers, Class 2 Certified for Canada (XOKV7) and Direct-plug-in and Cord-connected Class 2 Power Units Certified for Canada (EPBU7).

**PRODUCT MARKINGS**

Power supplies marked “Intended for installation in a protected environment” or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- CCTV Camera Power Supply
- DC Power Supply
- Low-voltage-lighting Power Supply
- School Laboratory Power Supply
- Specialty Power Supply

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

See Power Supplies, General Purpose Certified for Canada (QQFU7).

**ADDITIONAL INFORMATION**

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 107.1 (2001), “General Use Power Supplies.”

Products with a marked Class 2 output are additionally investigated to CAN/CSA-C22.2 No. 223 (1991), “Power Supplies with Extra-Low-Voltage Class 2 Outputs.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER SUPPLIES, TELEPHONE CERTIFIED FOR CANADA (QQJE7)**

**GENERAL**

This category covers indoor- and outdoor-use telecommunication power supplies having input ratings of not more than 750 V, direct and alternating current, intended for use with telephone exchange equipment, telephone appliances, and telephone accessories.

**REBUILT PRODUCTS**

This category also covers telephone power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt telephone power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt telephone power supplies are subject to the same requirements as new telephone power supplies.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Telecommunication Power Supply
- Telephone Power Supply

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

**RELATED PRODUCTS**

See Power Supplies, General Purpose Certified for Canada (QQFU7).

**ADDITIONAL INFORMATION**

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

–Continued

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 225, “Telecommunication Equipment,” and CSA-C22.2 No. 107.1, “General Use Power Supplies.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Telecommunication Power Supply” or “Telephone Power Supply.”

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER SUPPLIES FOR USE WITH AUDIO/VIDEO, INFORMATION AND COMMUNICATION TECHNOLOGY EQUIPMENT CERTIFIED FOR CANADA (QQJQ7)**

**GENERAL**

This category covers power supplies rated 600 V or less, intended for use with products covered under Audio/Video Equipment Certified for Canada (AZOE7), Communication Technology Equipment Certified for Canada (AZOJ7) and Information Technology Equipment Certified for Canada (AZOT7).

These power supplies are stand-alone units that deliver power to the above end-use products via external interconnecting means.

This category also covers modular accessory power supplies. Such power supplies are types that are intended for field installation within computing, telecommunication, or similar equipment. These modular power supplies are also provided with installation instructions relative to safe installation.

All power-supply types covered under this category are marked with input and output ratings that include the voltage and intended maximum load rating in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit will be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the specific system or equipment to which it is connected.

**REBUILT PRODUCTS**

This category also covers products that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt products are subject to the same requirements as new products.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Power Supply

Other product identities may be used as shown in the individual certifications.

The product identity for accessories includes the word “Accessory.”

For rebuilt products, the word “Rebuilt,” “Remanufactured,” “Refurbished” or “Reconditioned” precedes the product identity, or is otherwise marked on the product nameplate.

**ADDITIONAL INFORMATION**

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 62368-1 (2012), “Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements.”

**Power Supplies for Use with Audio/Video, Information and Communication Technology Equipment Certified for Canada (QQJQ7)–Continued**

All low-voltage outputs are Class 1 electrical energy sources (ES1) as defined in CAN/CSA-C22.2 No. 62368-1. An output marked “LPS,” “PS1” or “PS2” has been determined to have an output level at or below the limited power-source level, Class 1 electrical power source (PS1) or Class 2 electrical power source (PS2), respectively, specified in CAN/CSA-C22.2 No. 62368-1, as it relates to the requirements for equipment supplied by the output.

An output marked “Class 2” has additionally been investigated to CAN/CSA-C22.2 No. 223 (1991), “Power Supplies with Extra-Low-Voltage Class 2 Outputs.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

For accessories, the Certification Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Power Supply,” or other appropriate product name as shown in the individual Listings.

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word “Accessory.”

For rebuilt products, the word “Rebuilt,” “Remanufactured,” “Refurbished” or “Reconditioned” precedes the product name, or is otherwise marked on the product nameplate.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PREFABRICATED ASSEMBLIES CERTIFIED FOR CANADA (QQRX7)**

This category covers prefabricated assemblies, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site. Materials, including the methods used for the installation of electrical, mechanical, heating and plumbing equipment incorporated in these assemblies by their manufacturer are based on the “National Electric Code of Canada,” “National Building Code of Canada,” “National Fire Code of Canada,” “National Plumbing Code of Canada,” and/or the “National Farm Building Code of Canada.”

Authorities Having Jurisdiction should be consulted before installation.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MANUFACTURED WIRING SYSTEMS CERTIFIED FOR CANADA (QQVX7)**

**USE AND INSTALLATION**

This category covers prefabricated wiring systems that may incorporate modular multipole connectors, AC90 cable, ACWU90 cable, flexible metal conduit, hard usage cord, outlet boxes, splitter assemblies, remote control switching assemblies and devices. The wiring systems cannot be field inspected by the Authority Having Jurisdiction (AHJ) without damage to the assembly.

–Continued

These prefabricated modules and assemblies are intended for installation rearrangement and inspection in accessible locations in accordance with the CEC. AHJs should be consulted before installation.

This equipment is intended to be connected to supply circuits of up to 600 V ac and maximum rating of 30 A per circuit.

A manufactured wiring system is suitable for interconnection with another Listee's manufactured wiring system when specifically identified in the installation instructions.

**PRODUCT MARKINGS**

Devices of manufactured wiring systems that are not intended for interrupting current are marked "NOT FOR INTERRUPTING CURRENT."

Each bi-directional wiring assembly is marked "WARNING: Risk of Fire or Electric Shock," and the following or equivalent: "Do not electrically connect to more than one source of supply. Always determine that the wiring assembly is electrically connected to one and only one source of supply."

Manufactured wiring systems suitable for installation in patient care areas are marked "Suitable for patient care areas of health care facilities other than anesthetizing locations."

Manufactured wiring systems suitable for installation in ducts are marked "Acceptable for use in ducts."

Manufactured wiring systems suitable for installation in air-handling spaces other than ducts are marked "Acceptable for use in environmental air-handling spaces (plenums)."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Distribution Box
- Tap Box

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 203.1 (1994), "Manufactured Wiring Products."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distribution Box" or "Tap Box," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SECTIONS AND UNITS CERTIFIED FOR CANADA (QQXX7)**

**USE AND INSTALLATION**

This category covers factory-built assemblies for use within, or as part of the building structure of buildings for commercial, industrial and residential use. These assemblies may incorporate pre-installed electrical power distribution systems comprised of certified electrical components, which are usually concealed and may not be accessible for inspection at the installation site. Some assemblies may incorporate additional certified equipment.

The structural requirements vary with the type of building construction, occupancy and location of installation and are not investigated under this category unless specified in the individual certifications.

Raised floor systems have been investigated for support of weight loads and corrosion protection of steel parts as identified in the individual certifications.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT MARKINGS**

Some assemblies covered under this category have additionally been investigated to CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies," and may

–Continued

be marked with a designation "FHC X/Y" on the assembly that denotes these products have a flame-spread value of "X" or less and a smoke-developed value of "Y" or less.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Prefabricated Dental Unit
- Prefabricated Hospital Console
- Prefabricated Wall Panel

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," and CAN/CSA-C22.2 No. 0.4, "Bonding of Electrical Equipment."

The basic standard used to investigate products in this category for flame-spread and smoke-developed values is CAN/ULC-S102, "Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies." Such products are noted in the individual certifications.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

One Certification Mark is applied to each section or unit.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Prefabricated \*."

\* The appropriate product name as shown in the individual Listings  
One Listing Mark is applied to each section or unit.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WIRING ASSEMBLIES CERTIFIED FOR CANADA (QQYZ7)**

**GENERAL**

This category covers prefabricated wiring systems comprised of certified electrical components that could be field assembled and inspected by an Authority Having Jurisdiction (AHJ), but are assembled in the factory prior to field installation.

Prefabricated wiring assemblies incorporate certified conduit, tubing, or cable, conductors and fittings intended for field installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC). They may be factory assembled to outlet or junction boxes, box mounting brackets, and wiring devices.

Prefabricated wiring assemblies are marked with the conduit, tubing or cable type, and the conductor size and type to permit determination of their suitability for a specific application and ampacity in accordance with the CEC. A parts list is provided with each assembly to identify the extent of the product.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, are based on the CEC, the "National Building Code of Canada," "National Fire Code of Canada," and/or the "National Farm Building Code of Canada."

**Wiring Assembly Kits**

Wiring assembly kits for final assembly in the field consist of a package that contains some or all: length(s) of certified conduit, tubing or cable, certified fittings appropriate for the type of conduit, tubing, or cable, outlet or junction boxes, conductors, or other devices.

The packaging for wiring assembly kits is marked with the conduit, tubing, or cable size and type, and the conductor size and type, if provided, to permit determination of their suitability for a specific application and ampacity in accordance with the CEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

**PREFABRICATED ASSEMBLIES CERTIFIED FOR CANADA  
(QQRX7)**

620

–Continued

**Conduit Kits**

Conduit kits for final assembly in the field consist of a package that contains some or all: length(s) of certified conduit or tubing, certified fittings appropriate for the type of conduit or tubing, outlet or junction boxes, or other devices.

The packaging for conduit kits is marked with the conduit or tubing size and type to permit determination of their suitability for a specific application with the CEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

**Surface Raceway Kits**

Surface raceway kits for final assembly in the field consist of a package that contains some or all: lengths of certified surface metal or nonmetallic surface raceways, certified fittings appropriate for the surface raceway, or other devices.

The packaging for surface raceway kits is marked with the raceway size and the number, type and size of conductors that may be installed in the certified raceway, to permit determination of its suitability for a specific application in accordance with the CEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Conduit Kit
- Surface Raceway Kit
- Wiring Assembly
- Wiring Assembly Kit

**RELATED PRODUCTS**

For factory-built modules and cable sets incorporating fixtures, switches, connectors and receptacles, see Manufactured Wiring Systems Certified for Canada (QQVX7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**UL MARK**

The Certification Mark of UL on the factory-assembled wiring assembly or the packaging of a wiring assembly kit is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the factory-assembled wiring assembly or the packaging of a wiring assembly kit is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Wiring Assembly," "Wiring Assembly Kit," "Conduit Kit" or "Surface Raceway Kit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PREFABRICATED BUILDINGS  
CERTIFIED FOR CANADA (QRAR7)**

These are factory-built buildings and building assemblies incorporating pre-installed materials and equipment which after installation, are usually concealed and may not be accessible for inspection at the installation site.

They are intended for installation subject to approval by the authority having jurisdiction.

The buildings and building assemblies have been investigated in accordance with one or more Canadian Building, Plumbing, Electrical Codes, etc. applicable to the requirements of the local regulatory authority.

As an alternate, the building and building assemblies have been investigated in accordance with one or more specific areas of a code such as electrical, plumbing, mechanical, structural, etc.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

**PREFABRICATED BUILDINGS CERTIFIED FOR CANADA  
(QRAR7)**

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PREFABRICATED UNITS CERTIFIED FOR  
CANADA (QRHQ7)**

**USE AND INSTALLATION**

Prefabricated units are factory built assemblies for varying uses such as rooms within buildings or rooms within rooms of buildings for commercial, industrial or residential use, outdoor or exterior roofed structures, and canopies.

Information covering the electrical equipment and appliances factory furnished as part of the prefabricated unit, and items such as site-completed work subject to review by the Authority Having Jurisdiction, are contained on the manufacturer's data plate attached to each unit.

These prefabricated units are intended for installation subject to approval by the Authority Having Jurisdiction.

**REQUIREMENTS**

These units have been investigated in accordance with the applicable sections of one or more Canadian Codes (such as Building, Fire, Plumbing) to meet the needs of the local jurisdiction. As an alternate, the units may have been investigated in accordance with only one or more specific areas such as electrical, plumbing, mechanical, etc.

**ADDITIONAL INFORMATION**

For additional information, see Prefabricated Buildings Certified for Canada (QRAR7).

**LOOK FOR CLASSIFICATION MARK ON PRODUCT**

The Classification Mark of UL on the product is the only method provided by UL to identify prefabricated units manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), "PREFABRICATED UNIT IN ACCORDANCE WITH (Canadian Building Code, Canadian Electrical Code, etc.)."

The Classification Mark includes reference to the specific codes (including editions) to which the product was investigated. One Classification Mark is applied to each prefabricated unit at a location visible after the unit is erected. In addition, a manufacturer's data plate is applied adjacent to the UL Mark, where necessary, to convey applicable information such as the equipment and appliances factory furnished as part of the classified unit, the structural design loads, and any site-completed items subject to review by the Authority Having Jurisdiction. If the unit is shipped knocked down, the number and description of the sections required to complete the unit is included on the data plate.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMMERCIAL AND INDUSTRIAL  
BUILDINGS CERTIFIED FOR CANADA  
(QRNZ7)**

This category includes automotive service station buildings, toll booths, electrical distribution buildings, and similar prefabricated buildings.

These factory built buildings have been classified in accordance with one or more Canadian codes (building, plumbing, electrical, etc.) to meet the needs of the local jurisdiction.

As an alternate, the building has been classified in accordance with one or more specified areas of a Building Code such as electrical, plumbing, mechanical, structural, etc. Information covering the electrical equipment and appliances factory furnished as part of the building, and the items such as site-completed work subject to review by the local regulatory authority, are contained on the manufacturer's data plate attached to each building.

Prefabricated commercial and industrial buildings are intended for installation subject to approval by the authority having jurisdiction.

The Classification Marking of UL on the product is the only method provided by UL to identify Commercial and Industrial Buildings produced under its Classification and Follow-Up Service.

The Classification Marking includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), the product identity "Industrial Buildings", "In accordance with Canadian Electrical Code, Canadian Building Code, etc." including the manufacturer's name and address, serial number of the building units/sections and a reference to a manufacturer's data plate posted at or near the electrical distribution panel.

One Classification Marking is applied to each building at a location visible after the building is erected. In addition, information covering the

**PREFABRICATED BUILDINGS CERTIFIED FOR CANADA (QRAR7)**

–Continued

equipment and appliances factory furnished as part of the Classified, site-completed building and, if the building is shipped knock down, the number and description of the sections required to complete the building is included on a data plate.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMPOSITE PANELS CERTIFIED FOR CANADA (QRSY7)**

**USE AND INSTALLATION**

This category covers composite panels, which are factory-built panel assemblies intended for use within or as part of the structure of buildings for commercial, industrial and residential use. These assemblies incorporate pre-installed branch-circuit electrical power distribution systems that are usually concealed and may not be accessible for inspection at the installation site. Some panels incorporate audio, lighting, ventilation fans, and other certified utilization equipment.

The structural strength requirements vary with live loads, dead loads, and seismic conditions of each locality. Authorities Having Jurisdiction should be consulted with respect to their requirements for panel systems.

**INSTALLATION INSTRUCTIONS**

A copy of the installation and operation instructions are provided with each panel if shipped separately or with each set of panels intended to be installed as a system.

The composite panel system is provided with an assembly diagram and with an electrical diagram specifying the specific locations of the field-installed wiring connections, the connections between composite panel sections, factory-installed utilization equipment, and the intended field-wiring branch-circuit-conductor connection points of the panel system.

The installation instructions indicate which circuits are factory installed.

**PRODUCT MARKINGS**

Each input power feed conduit whip, cord or building field-wiring-connection point to the panel system is marked with a schematic wiring diagram or the equivalent, indicating the circuits and conductors provided and the required rating of the branch circuit to which it is to be connected.

A panel system with other than a single-phase circuit has the convenience receptacles and utilization equipment marked by a letter, number, color, or a similar designation to indicate the circuit in the system to which the receptacle or utilization equipment is connected.

Each panel system electrical accessory that is shipped separately from the major panel system to which it is to be connected is marked with respect to its intended use and interrelationship with the panel system; for example, "For Use with Composite Panel Series \_\_\_\_\_," in which the appropriate series or catalog number is designated. When separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

**ADDITIONAL INFORMATION**

For additional information, see Building Materials Certified for Canada (AABM7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**COMPOSITE PANEL  
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**  
or  
**COMPOSITE PANEL ACCESSORY  
FOR USE WITH PANEL SERIES [panel designation]  
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**  
Alternate UL Mark  
**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products

**PREFABRICATED BUILDINGS CERTIFIED FOR CANADA (QRAR7)**

–Continued

includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**COMPOSITE PANEL  
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**  
Control No.  
or  
**COMPOSITE PANEL ACCESSORY  
FOR USE WITH PANEL SERIES [panel designation]  
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY**  
Control No.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PRESS AND OTHER POWER-OPERATED MACHINE CONTROLS AND SYSTEMS CERTIFIED FOR CANADA (QUEQ7)**

This category covers controls and systems intended for industrial or commercial application on power-operated machines intended for such uses as pressing, punching, shearing or breaking operations. They may be designed for use on particular types of equipment such as pneumatic- or hydraulic-powered devices or mechanically operated part or full revolution types of machines. The control or system is intended to reduce the risk of bodily injury resulting from machine operation. The intended use of the control is noted in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PRESENCE-SENSING DEVICES CERTIFIED FOR CANADA (QUHP7)**

**USE**

This category covers presence-sensing devices intended for use in machine control systems where they can be interconnected to the control system. Presence-sensing devices detect the presence of an object or body part and are used as a part of the machine safeguarding system to reduce the risk of bodily injury from moving machine parts. These products are limited to use on part revolution types of machines or machines where operation can be interrupted and motion stopped at any point in the machine operation cycle.

Presence-sensing devices investigated for press initiation are noted in the individual certifications.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Presence-sensing Device

**RELATED PRODUCTS**

Presence-sensing devices employing active opto-electronic protective devices (AOPD) consisting of one or more light beams for the sensing function are covered under Active Opto-electronic Protective Devices Certified for Canada (NIPF7).

Presence-sensing devices employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) consisting of one or more laser scanners for the sensing function are covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection Certified for Canada (NIPM7).

**ADDITIONAL INFORMATION**

For additional information, see Press and Other Power-operated Machine Controls and Systems Certified for Canada (QUEQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 0.8, "Safety Functions Incorporating Electronic Technology," and CSA-C22.2 No. 14, "Industrial Control Equipment."

**UL MARK**

**PROCESS CONTROL EQUIPMENT, ELECTRICAL CERTIFIED FOR CANADA (QUYX7)**

**GENERAL**

This category covers process control equipment rated 600 V maximum and intended for use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators).

Equipment intended to be installed only in process control panels is so identified.

Process control equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with provided installation instructions.

Open-type process control equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Open-type Process Control Equipment
- Process Control Accessory
- Process Control Enclosure
- Process Control Enclosure Part
- Process Control Equipment
- Process Control Subassembly

The words “Process Control Equipment” may be abbreviated “Proc. Cont. Eq.”

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Process control equipment intended for mounting in hazardous (classified) locations or with circuits that extend into hazardous (classified) locations is covered under Process Control Equipment for Use in Hazardous Locations Certified for Canada (QUZW7) and Process Control Equipment for Use in Zone Classified Hazardous Locations Certified for Canada (QVAJ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

When the size or shape of a subassembly makes it impractical to bear the complete Certification Mark, the product may be marked with the UL symbol, “QUYX7” and the file number, provided that the complete Certification Mark appears on the smallest shipping container.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Process Control Equipment,” “Open-type Process Control Equipment,” “Process Control Enclosure,” “Process Control Enclosure Part,” “Process Control Subassembly,” “Process Control Accessory,” or other appropriate product name as shown in the individual Listings. The words “Process Control Equipment” may be abbreviated “Proc. Cont. Eq.”

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL Mark for Canada symbol, “QUYX7” and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QUZW7)**

**USE AND INSTALLATION**

This category covers process control equipment rated 600 V maximum and intended for use in accordance with CAN/CSA-C22.1, “Canadian

Electrical Code, Part I.” These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators), including associated apparatus providing intrinsically safe outputs (e.g., barriers providing intrinsically safe circuit extensions).

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is certified as part of the system unless otherwise indicated and is used as intended.

Equipment intended to be installed only in process control panels is so identified in the individual certifications. Such equipment is not intended for field installation.

Safety may be affected if the manufacturer’s installation instructions are not followed.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Process Control Equipment for Use in Hazardous Locations
- Process Control Equipment (Associated Apparatus)
- Process Control System for Use in Hazardous Locations
- Process Control Unit for Use in Hazardous Locations
- Process Control Unit (Associated Apparatus)

The words “Process Control Equipment” may be abbreviated “Proc. Cont. Eq.”

The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

Other product identities may be used as shown in the individual certifications.

#### RELATED PRODUCTS

Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

Process control equipment intended for use in unclassified locations is covered under Process Control Equipment, Electrical Certified for Canada (QUYX7).

#### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

#### REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), “Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

When the size or shape of a subassembly makes it impractical to bear the complete Certification Mark, the product may be marked with the UL symbol, “QUZW7” and the control number, provided that the complete Certification Mark appears on the smallest shipping container.

#### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Process Control Equipment for Use in Hazardous Locations,” “Process Control System for Use in Hazardous Locations,” “Process Control Unit for Use in Hazardous Locations,” “Process Control Equipment (Associated Apparatus),” “Process Control Unit (Associated Apparatus),” or other appropriate product name as shown in the individual Listings. The words “Hazardous Locations” may be abbreviated “Haz. Loc.” The words “Process Control Equipment” may be abbreviated “Proc. Cont. Eq.”

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL Mark for Canada symbol, “QUZW7” and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PROCESS CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (QVAJ7)

#### USE AND INSTALLATION

This category covers process control equipment rated 600 V maximum and intended for use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code.” These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators).

Equipment intended to be installed only in process control panels is so identified in the individual Listings. Such equipment is not intended for field installation.

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is Listed as part of the system, unless otherwise indicated, and is used as intended.

Safety may be affected if the manufacturer’s installation instructions are not followed.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Process Control Equipment for Use in Hazardous Locations
- Process Control System for Use in Hazardous Locations
- Process Control Unit for Use in Hazardous Locations
- Process Control Equipment (Associated Apparatus)
- Process Control Unit (Associated Apparatus)

The words “Process Control Equipment” may be abbreviated “Proc. Cont. Eq.”

The words “Hazardous Locations” may be abbreviated “Haz. Loc.”

Other product identities may be used as shown in the individual certifications.

#### RELATED PRODUCTS

Equipment investigated for use only in hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

Process control equipment intended for use in unclassified locations is covered under Process Control Equipment, Electrical Certified for Canada (QUYX7).

#### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

#### REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 61010-1 (2004), “Safety Requirements for Measurement, Control, and Laboratory Use – Part 1: General Requirements.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

When the size or shape of a subassembly makes it impractical to bear the complete Certification Mark, the product may be marked with the UL symbol, “QVAJ7” and the file number, provided that the complete Certification Mark appears on the smallest shipping container.

#### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Process Control Equipment for Use in Hazardous Locations,” “Process Control System for Use in Hazardous Locations,” “Process Control Unit for Use in Hazardous Locations,” “Process Control Equipment (Associated Apparatus),” “Process Control Unit (Associated Apparatus),” or other appropriate product name as shown in the

individual Listings. The words "Hazardous Locations" may be abbreviated "Haz. Loc." The words "Process Control Equipment" may be abbreviated "Proc. Cont. Eq."

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL Mark for Canada symbol, "QVAJ7" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PROTECTORS CERTIFIED FOR CANADA (QV GK7)

### PRIMARY PROTECTORS FOR COMMUNICATIONS CIRCUITS CERTIFIED FOR CANADA (QVGV7)

#### GENERAL

This category covers protectors intended for use on communication circuits as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

These protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at or over 300 V to ground as defined in the CEC. These devices may also be used to protect against electrical transients from an electromagnetic disturbance or higher than normal voltages induced on the communication circuits due to close proximity of the protected circuit to electric light or power conductors.

This category includes both fuse and fuseless protectors. Requirements for the location and installation of primary protectors are contained in the CEC. The individual certifications provide the following information: Protector block number, catalog numbers of arresters that may be employed in a certified block, types of arresters, design features, maximum fusing wire that is used in series with the block, and indoor or outdoor use.

The maximum size fusing wire is indicated by the following alphabetical designations:

- A - 24 AWG, copper wire with thermoplastic insulation
- B - 22 AWG, copper wire with thermoplastic insulation
- C - 20 AWG, 40% copper-clad wire
- D - 26 AWG, copper wire with thermoplastic insulation

Protector blocks suitable for outdoor use are also suitable for use indoors. Blocks marked for indoor use are suitable for installation only indoors.

This category also covers network interface devices, which are two-compartment enclosures that serve to provide a demarcation between the equipment of the private residence and the outside plant. The first compartment, located on the incoming side of the telephone line, may employ a certified compatible telephone protector, where the compatibility is determined by UL. The second compartment employs terminals and standard telephone jacks for use by the resident. Indoor and outdoor certification is subject to the same requirements used in the investigation of telephone protectors.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Network Interface Device
- Signal Circuit Protector
- Signal Circuit Protector Enclosure
- Telephone Protector

#### RELATED PRODUCTS

Separate network interface devices intended for use without a protector are covered under Communication Circuit Accessories Certified for Canada (DUXR7).

Protectors intended for use with municipal fire alarm circuits are covered under Miscellaneous Devices Certified for Canada (UXKV7).

Secondary protectors intended for telephone, telegraph, fire alarm and similar signaling circuits are covered under Secondary Protectors for Communications Circuits Certified for Canada (QVRG7).

#### ADDITIONAL INFORMATION

For additional information, see Protectors Certified for Canada (QV GK7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 226, "Protectors in Telecommunication Networks."

—Continued

#### UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Signal Circuit Protector," "Telephone Protector," "Network Interface Device" or "Signal Circuit Protector Enclosure."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### SECONDARY PROTECTORS FOR COMMUNICATIONS CIRCUITS CERTIFIED FOR CANADA (QV R G7)

#### GENERAL

This category covers secondary protectors intended for use on communication circuits as defined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

These protectors are intended to suppress abnormal voltage and/or current conditions that bypass the primary protector. These devices limit currents to less than the current-carrying capacity of certified communication wire employed in the communication loop of the protected premise. Any overvoltage protection and/or grounding connection is intended to be electrically located on the equipment side of the protector's current-limiting means.

Secondary protectors covered under this category have been investigated for use only on the equipment side of a primary protector (QVGV7) and are intended to be installed only on the protected portion of a communication circuit. In those cases where a primary protector is not required, as defined in the CEC, the secondary protector may be installed or connected into the communication circuit without the use of a primary protector.

The current-limiting, fusing or extinguishing operation may be accomplished by a current-protection device located within the secondary protector, or the secondary protector may be used with a "sneak-current protector." A sneak-current protector serves to limit abnormal fault current that is generated due to contact of the telephone lines with AC power lines. The sneak-current protector is a separate device or module that is intended for mounting on a certified compatible base assembly. This current-protection system may employ a fuse, current-limiting circuitry or other similar means to limit the abnormal fault current condition.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Secondary Protector
- Secondary Telephone Protector
- Sneak-current Protector

#### RELATED PRODUCTS

Other telephone equipment is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7).

Primary telephone protectors are covered under Primary Protectors for Communication Circuits Certified for Canada (QVGV7).

Wire and cable intended to be permanently installed in a building in accordance with the CEC is covered under the appropriate wire and cable categories.

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA C22.2 No. 226 (1992), "Protectors in Telecommunication Networks."

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

**PROTECTORS CERTIFIED FOR CANADA (QV GK7)**

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Secondary Protector,” “Secondary Telephone Protector” or “Sneak Current Protector.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PROTECTORS FOR USE IN  
HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (QV SC7)**

**ISOLATED LOOP CIRCUIT PROTECTORS  
FOR USE IN HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (QV SI7)**

**USE**

This category covers protectors intended for use on Class 2 or Class 3 remote control, signaling and power-limited circuits or fire-protection-signaling circuits.

These protectors are intended as suppression devices for abnormal voltage conditions that may exist on the circuit due to electrical transients from an electromagnetic disturbance. These protectors are not intended for use on circuits exposed to accidental contact with electric light or power conductors operating at over 300 V to ground.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Isolated Loop Circuit Protector for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Isolated Loop Circuit Protector for Use in Hazardous Locations.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMPING EQUIPMENT FOR FIRE  
SERVICE CERTIFIED FOR CANADA  
(QV UT7)**

The following information and listings relate to fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with the requirements of the Standard of the National Fire Protection Association for the Installation of Centrifugal Fire Pumps, NFPA 20.

Authorities having jurisdiction should be consulted before installation.

**CENTRIFUGAL FIRE PUMPS CERTIFIED  
FOR CANADA (QV WQ7)**

Centrifugal fire pumps intended for installation in accordance with NFPA 20 have the following rated capacities: 100, 190, 380, 570, 760, 950, 1140, 1510, 1700, 1890, 2850, 3800, 4750, 5700, 7600, 9500, 11400, 13200, 15100, 17000, 18900 L/M or larger. Residential fire pumps intended for installation in accordance with NFPA 13D have rated capacities as indicated in the individual Listings.

Centrifugal fire pumps intended for installation in accordance with NFPA 20 are rated at net head pressures of 280 kPa or more. Residential fire pumps are rated at net head pressures as indicated in the individual Listings.

Where a range of rated net head pressure is shown, the manufacturer can furnish impellers to produce any rated pressure in that range.

The term “Rated Net Pressure” represents the capability of each pump at rated speed and rated capacity.

A Split Case, End Suction, or In-Line pump shall be supplied with water under positive pressure. The “Rated Net Pressure” will be the pressure at the discharge side of the pump minus the pressure at which water is supplied to the pump.

Vertical turbine pumps are capable of lifting water from a source such as a cistern, pond, creek, river, or from other sources. It should be noted that the lift distance is to be measured from the surface to the water source. Where a pump is located above the water surface, the pressure at the discharge side of the pump will be less than the “Rated Net Head Pressure” by an amount, expressed in psi, approximately equivalent to the vertical distance in feet between the center line of the pump discharge and surface of the water source plus loss due to friction in the suction pipe.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Centrifugal Fire Pumps, End Suction Certified  
for Canada (QV ZU7)**

**USE AND INSTALLATION**

This category covers end-suction centrifugal fire pumps intended to deliver the capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.”

These pumps are intended to be installed with the shaft in the horizontal position. The maximum working pressure (kPa) is the maximum pressure that can be developed at the discharge flange under any operating condition. The values indicated in the individual certifications are the maximum for a given model designation; accordingly, the ratings and limitations indicated in the individual certifications and marked on the pump are not intended to be modified.

The rated speed marked on the pump by the manufacturer may vary within + or - 4% of rated speed referenced in the individual certifications.

Where the pump flange pressure rating is less than the maximum allowable discharge head pressures shown in the individual certifications, the flange rating is to prevail.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Centrifugal Fire Pump – End Suction

The basic standard used to investigate products in this category is ULC/ORD-C448, “Guide for the Investigation of Pumps for Fire Protection Service.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Centrifugal Fire Pump – End Suction.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Centrifugal Fire Pumps, In-line Certified for Canada (QXCZ7)**

**USE AND INSTALLATION**

This category covers in-line centrifugal fire pumps intended to deliver the capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.”

These pumps are intended to be installed with the shaft in the vertical position, unless specifically indicated in the individual certifications.

The maximum working pressure (kPa) is the maximum pressure that can be developed at the discharge flange under any operating condition. The values indicated in the individual certifications are the maximum for a given model designation; accordingly, each pump is designed to accommodate specific installation needs and the ratings and limitations indicated in the individual certifications and marked on the pumps are not intended to be modified.

The rated speed marked on the pump by the manufacturer may vary within + or - 4% of rated speed referenced in the individual certifications.

Where the pump flange pressure rating is less than the maximum allowable discharge head pressure shown in the individual certifications, the flange rating is to prevail.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Centrifugal Fire Pump – In-line

**PUMPING EQUIPMENT FOR FIRE SERVICE CERTIFIED FOR CANADA (QVUT7)**

**Centrifugal Fire Pumps, Split Case Certified for Canada (QXJY7)**

**USE AND INSTALLATION**

This category covers split-case pumps intended to deliver the rated capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.”

These pumps are intended to be installed with the shaft in the horizontal position, unless specifically indicated in the individual certifications that the pump is designed for installation in the vertical position.

The maximum working pressure (kPa) is the maximum pressure that can be developed at the discharge flange under any operating condition. The values indicated in the individual certifications are the maximum for a given model designation; accordingly, each pump is designed to accommodate specific installation needs and the ratings and limitations indicated in the individual certifications and marked on each pump are not intended to be modified.

Where the pump flange rating is less than the maximum allowable discharge head pressure shown in the individual certifications, the flange rating is to prevail.

**Centrifugal Fire Pumps, Vertical Turbine Certified for Canada (QXXW7)**

**USE AND INSTALLATION**

This category covers vertical shaft turbine-type fire pumps intended for use in conditions where the source of water is below ground level.

These pumps are intended to deliver the rated capacities and net head pressures shown in the individual certifications. Requirements for installation and use of these pumps are contained in ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.” Manufacturers may furnish pumps with oil-lubricated or water-lubricated line shafts except as noted.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Centrifugal Fire Pump – Vertical Turbine

**ADDITIONAL INFORMATION**

For additional information, see Centrifugal Fire Pumps Certified for Canada (QWWQ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C448, “Guide for the Investigation of Pumps for Fire Protection Service.”

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INTERNAL-COMBUSTION ENGINES FOR DRIVING STATIONARY FIRE PUMPS CERTIFIED FOR CANADA (QYLU7)**

**USE AND INSTALLATION**

This category covers diesel engines intended for driving stationary fire pumps.

The horsepower ratings presented in individual certifications represent the engine horsepower available at standard SAE conditions for 91 m above sea level (74 cm Hg) and 25°C air temperature, with allowance made for power consumption by accessories, normal engine wear and manufacturing tolerances. Engines are rated at a specific speed or for a speed range or ranges as indicated in the individual certifications. For engines rated for a speed range or ranges, the rated horsepower within the specified speed range or ranges is to be determined by the use of linear interpolation between the rated horsepower at the minimum and maximum speeds. Requirements for installation and use of these engines are contained in ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.”

Diesel engines are intended to be mounted horizontally unless otherwise indicated.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Internal-combustion Engine for Driving Stationary Fire Pumps

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C448A, “Guide for the Investigation of Diesel Engines for Driving Centrifugal Fire Pumps.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Internal Combustion Engine for Driving Stationary Fire Pumps.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMP CONTROLLERS, FIRE CERTIFIED FOR CANADA (QZS7)**

**GENERAL**

This category covers fire pump controllers, circuit breakers for fire pump controllers, emergency manual operators and remote alarm panels. Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic and automatic types for electric-

**PUMPING EQUIPMENT FOR FIRE SERVICE CERTIFIED FOR CANADA (QVUT7)**

–Continued

driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated in the individual certifications, these controllers are intended for use with spark-ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark-ignition internal combustion engines are intended for such engines installed prior to 1974.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.”

Fire pump controllers intended for starting and stopping additive pump motors are marked “Additive Pump Controller” or “Limited-service Additive Pump Controller.”

Controllers intended for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers intended for squirrel-cage motors may be for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

“Limited-service controllers” are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required markings.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Additive Pump Controller
- Fire Pump Controller
- Limited-service Additive Pump Controller
- Limited-service Controller

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, “Industrial Control Equipment,” and ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Fire Pump Controller,” “Limited Service Controller,” “Additive Pump Controller,” “Limited Service Additive Pump Controller.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMP CONTROLLERS, FIRE, OVER 750 VOLTS CERTIFIED FOR CANADA (QZGR7)**

**GENERAL**

This category covers fire pump controllers having ac voltage ratings in the range of 2.2 kV to 2.5 kV, 4.0 kV to 5.0 kV or 6.2 kV to 7.2 kV, intended for starting and stopping centrifugal fire pumps, and including nonautomatic and automatic types for electric-driven pumps.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, “Installation of Stationary Pumps for Fire Protection.”

These fire pump controllers are intended for use with squirrel-cage motors rated 7.2 kV or less.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on

**PUMPING EQUIPMENT FOR FIRE SERVICE CERTIFIED FOR CANADA (QVUT7)**  
628

–Continued

the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of  $1.73 \times 10^6$ .

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled. Accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Some fire pump controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

Fire pump controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required markings.

Fire pump controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Fire pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

High-voltage Fire Pump Controller

High-voltage Foam Pump Controller

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Fire Pump Controller" or "High Voltage Foam Pump Controller."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMP CONTROLLERS, FIRE, RESIDENTIAL CERTIFIED FOR CANADA (QZKE7)**

**GENERAL**

This category covers fire pump controllers intended for starting, stopping and protecting centrifugal fire pumps in one- and two-family dwellings and manufactured homes. These controllers are the automatic or non-automatic type for electric-driven pumps.

The equipment and systems employing these controllers are intended for installation and use in accordance with ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

Residential fire pump controllers are intended for use with squirrel-cage motors rated 250 V or less.

This equipment has been investigated for use on single-phase alternating-current circuits having available fault-current levels not exceeding the short-circuit withstand rating appearing on the nameplate.

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly they are tested at six times the continuous current rating of the controller at rated voltage.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Residential pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Residential Fire Pump Controller

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection," as applicable to limited-service fire pump controllers.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Fire Pump Controller."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMPING EQUIPMENT FOR FIRE SERVICE FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RAHW7)**

This category covers fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

**FIRE PUMP CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RCYW7)**

**USE**

This category covers fire pump controllers, circuit breakers for fire pump controllers, and emergency manual operators.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic types and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated, these controllers are intended for use with spark ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark ignition internal combustion engines are intended for such engines installed prior to 1974.

Controllers for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers for squirrel-cage motors may be used for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

Limited-service controllers are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required marking.

 Fire Pump Controller for Use in Hazardous Locations  
 Foam Pump Controller for Use in Hazardous Locations  
 Limited Service Controller for Use in Hazardous Locations  
 Limited Service Foam Pump Controller for Use in Hazardous Locations  
 Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category are CSA-C22.2 No. 14, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection." The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fire Pump Controller for Use in Hazardous Locations," "Limited Service Controller for Use in Hazardous Locations," "Foam Pump Controller for Use in Hazardous Locations," "Limited Service Foam Pump Controller for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMPS CERTIFIED FOR CANADA (RAOV7)**

These pumps, which may be of the positive displacement piston, rotary gear, centrifugal, or vane type, are intended for handling liquids which may be combustible, corrosive or flammable. The various listings and classifications identify such liquids.

**FLAMMABLE LIQUID PUMPS CERTIFIED FOR CANADA (RBQR7)**

**Pumps, Power Operated, Flammable Liquid Certified for Canada (RCRX7)**

**USE AND INSTALLATION**

This category covers power-operated pumps of the types indicated in the individual certifications. Each pump includes means to limit the discharge pressure to 345 kPa (50 psi) or less unless indicated in the individual certifications.

Booster pumps are intended for use with existing self-contained, power-operated dispensing devices if the vertical distance from the booster pump manifold outlet to the dispensing device inlet is not less than 152 cm.

Replacement pump-motor assemblies may be incomplete in their construction, and are only intended for use with equipment as specified in the installation instructions. Pumps intended for use in Class I, Group D hazardous (classified) locations are indicated in the individual certifications.

Pump-motor assemblies include electric motors and appropriate junction boxes that are suitable for use in Class I, Group D hazardous (classified) locations, unless indicated otherwise in the individual certifications.

**PUMPS CERTIFIED FOR CANADA (RAOV7)**

–Continued

A motor controller specified in conjunction with a pump-motor assembly is suitable for use with that assembly. Unless indicated otherwise, the controller is not suitable for use in hazardous (classified) locations.

These pumps are intended for use with the following fuels:

- a) Gasoline
- b) Gasoline/ethanol blends designated as "gasohol" (E10 maximum)
- c) Diesel fuel
- d) Fuel oil
- e) Kerosene

These products are intended for installation and use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Pump Controller
- Power-operated Pump for Petroleum Products
- Power-operated \* Pump for Petroleum Products (where "\*" is "Transfer," "Booster," or other appropriate product identity as shown in the individual certifications)
- Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are:  
 CSA B346 (1980), "Power-Operated Dispensing Devices for Flammable Liquids"  
 CSA-C22.2 No. 22, "Electrical Equipment for Flammable and Combustible Fuel Dispensers"  
 CSA-C22.2 No. 25, "Enclosures for Use in Class II, Groups, E, F and G Hazardous Locations"  
 CSA-C22.2 No. 30, "Explosion-Proof Enclosures for Use in Class I Hazardous Locations"  
 CAN/CSA-C22.2 No. 157, "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations"

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Operated Pump for Petroleum Products," "Power Operated \* Pump for Petroleum Products" (where "\*" is "Transfer," "Booster," or other appropriate product name as shown in the individual Listings) or "Electric Pump Controller," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMPS, ELECTRICALLY OPERATED, LIQUID CERTIFIED FOR CANADA (REUZ7)**

**USE**

This category covers submersible and nonsubmersible pumps for household, commercial or industrial use, including pumps for fountains, circulation, wells, sewage, effluent, irrigation, building sites (contractor type), sumps and general utility.

Pumps suitable for outdoor use and those for use with heated water are so marked.

These pumps have not been investigated for use with or in proximity to swimming pools or spas, for fire service, or for contact with drinking water.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Sewage Pump
- Sump Pump
- Water-circulating Pump

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 108, "Liquid Pumps."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sump Pump," "Water Circulating Pump" or "Sewage Pump," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMPS, NONFLAMMABLE LIQUID, MARINE CERTIFIED FOR CANADA (RFIX7)**

**USE AND INSTALLATION**

This category covers electrically operated nonflammable liquid pumps rated less than 50 V dc for use on board boats, including potable water pumps.

These pumps are intended for installation and operation in accordance with the manufacturer's instructions and the applicable requirements of the Canadian Coast Guard, and the applicable requirements of CSA-C22.2 No. 183.2 (1983), "DC Electrical Installations on Boats."

All pumps are required to comply with the requirements for ignition protection and are so marked.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Nonflammable Liquid Pump

**ADDITIONAL INFORMATION**

For additional information, see Marine Products Certified for Canada (AAMP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is UL 1113, "Electrically Operated Pumps for Nonflammable Liquids, Marine."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Nonflammable Liquid Pump."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RFPW7)**

**GENERAL**

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas in accordance with ANSI/NFPA 496, "Purged and Pressurized Enclosures for Electrical Equipment." This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

**TYPES**

ANSI/NFPA 496 specifies the following purged pressurization types:

**Type X** — Reduces the classification within an enclosure from Division 1 to unclassified

**Type Y** — Reduces the classification within an enclosure from Division 1 to Division 2

**Type Z** — Reduces the classification within an enclosure from Division 2 to unclassified

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Purge Control for Use in Hazardous Locations
- Purge Control Accessory for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**CERTIFIED IN ACCORDANCE WITH THE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD FOR PURGED AND PRESSURIZED ENCLOSURES FOR ELECTRICAL EQUIPMENT NFPA 496**

**Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY\*] FOR USE IN HAZARDOUS LOCATIONS IN ACCORDANCE WITH THE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD FOR PURGED AND PRESSURIZED ENCLOSURES FOR ELECTRICAL EQUIPMENT NFPA 496**

\* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RFBZ7)

**PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RFPZ7)**

**GENERAL**

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas.

There are three pressurization types:

- px** — Reduces the classification within an enclosure from Zone 1 to unclassified
- py** — Reduces the classification within an enclosure from Zone 1 to Zone 2
- pz** — Reduces the classification within an enclosure from Zone 2 to unclassified

This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Purge Control Accessory for Use in Hazardous Locations
- Purge Control for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 60079-2 (2012), "Explosive Atmospheres - Part 2: Equipment Protection by Pressurized Enclosures 'p'."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**CERTIFIED IN ACCORDANCE WITH CAN/CSA-C22.2 NO. 60079-2  
EXPLOSIVE ATMOSPHERES - PART 2:  
EQUIPMENT PROTECTION BY PRESSURIZED ENCLOSURES "p"  
Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY\*] FOR USE IN HAZARDOUS LOCATIONS  
IN ACCORDANCE WITH CAN/CSA-C22.2 NO. 60079-2  
EXPLOSIVE ATMOSPHERES - PART 2:  
EQUIPMENT PROTECTION BY PRESSURIZED ENCLOSURES "p"  
Control No.**

\* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELECTRICAL QUICK-CONNECT TERMINALS CERTIFIED FOR CANADA (RFVW7)**

**GENERAL**

This category covers quick-connect tabs and quick-connect connectors constructed from plain or plated copper alloy or of nickel or nickel alloy, herein referred to as quick-connect terminals. They are additionally defined as follows:

**Quick-connect Wiring Termination** — An electrical connection consisting of a male tab and a female connector that can be readily engaged or disengaged without the use of a tool.

**Terminal** — An electrical connecting device consisting of either a connector or tab.

**Tab** — A terminal that is inserted in a connector, manufactured to specified tolerances, and intended to mate with a connector to establish a connection in an electrical circuit.

**Connector** — A terminal that is pushed onto a tab.

Quick-connect terminals are intended for use with one or two copper conductors, 22-10 AWG. Ampacity for a two-wire combination is limited to the current associated with the largest of the two conductors.

Quick-connect terminals are not intended for disconnecting under load.

**PRODUCT MARKINGS**

Cartons containing quick-connect terminals are marked to indicate whether the tab or connector is suitable for the internal wiring of appliances, for field termination of conductors to electrical equipment, or for both.

Cartons containing quick-connect terminals are marked to indicate their suitability for termination of copper wire only.

Cartons containing insulated quick-connect terminals are marked with a voltage rating and the maximum operating temperature for which they have been found acceptable. The marked voltage rating may be 300 V maximum; 600 V maximum; or 600 V maximum building wire, 1000 V maximum signs or fixtures.

Quick-connect terminals to be assembled to wire using a special tool are intended to be assembled using the tool specified by the manufacturer on or in the shipping carton. Such tools are identified by an appropriate marking.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Quick-connect Connector
- Quick-connect Tab

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Quick-connect tabs or connectors constructed from plated steel, or unplated steel of a corrosion-resistant alloy are covered under Electrical Quick-connect Terminals Certified for Canada (RFVW8).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 153, "Electrical Quick-Connect Terminals."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Quick-connect Tab" or "Quick-connect Connector," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## RACEWAY CERTIFIED FOR CANADA (RGKT7)

### CELLULAR METAL FLOOR RACEWAY CERTIFIED FOR CANADA (RHZX7)

#### GENERAL

This category covers cellular metal floor raceway intended to enclose electrical conductors. This raceway is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Each component is provided with installation instructions to identify its relation to other components of the raceway system.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Cellular Metal Floor Raceway
- Cellular Metal Floor Raceway Bottom
- Cellular Metal Floor Raceway Cover Plate for Use with Listed Raceway Bottom

Other product identities may be used as shown in the individual certifications.

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 79, "Cellular Metal and Cellular Concrete Floor Raceways and Fittings."

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway," "Cellular Metal Floor Raceway Bottom," or "Cellular Metal Floor Raceway Cover Plate for Use with Listed Raceway Bottom," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### Cellular Metal Floor Raceway Fittings Certified for Canada (RINV7)

#### USE AND INSTALLATION

This category covers cellular metal floor raceway fittings intended to enclose electrical conductors. These fittings are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Each component is provided with installation instructions to identify its relation to other components of the raceway system.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Cellular Metal Floor Raceway Fitting
- End Closure
- Grommet

Other product identities may be used as shown in the individual certifications.

#### ADDITIONAL INFORMATION

For additional information, see Cellular Metal Floor Raceway Certified for Canada (RHZX7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 79, "Cellular Metal and Cellular Concrete Floor Raceways and Fittings."

#### UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by

—Continued

UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway Fitting," "End Closure" or "Grommet," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### SURFACE METAL RACEWAY CERTIFIED FOR CANADA (RJBT7)

#### USE

This category covers surface metal raceway intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

#### PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Surface Metal Raceway
- Surface Metal Raceway Base for Use with Labeled Raceway Cover
- Surface Metal Raceway Cover for Use with Labeled Raceway Base

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 62 (1993), "Surface Raceway Systems."

#### UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceways," "Surface Metal Raceway Base for Use with Labeled Raceway Cover," or "Surface Metal Raceway Cover for Use with Labeled Raceway Base."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### Surface Metal Raceway Fittings Certified for Canada (RJPR7)

#### USE

This category covers surface metal raceway fittings intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

#### PRODUCT MARKINGS

–Continued

Fittings suitable for supporting a ceiling-suspended fan weighing a maximum 15.9 kg or 23 kg is visibly and clearly marked “ACCEPTABLE FOR FAN SUPPORT OF \_\_\_ kg (\_\_\_ lb) OR LESS” and “CONVIENT AU SUPPORT D’UN VENTILATEUR DE \_\_\_ kg (\_\_\_ lb) OU MOINDRE,” with blanks filled in with maximum values. Each fitting is provided with size No. 10-32 retaining screws and external tooth-lock washers for securing the fan.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Hanger
- Side Feed
- Surface Metal Raceway Fitting

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 62 (1993), “Surface Raceway Systems.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Surface Metal Raceway Fitting,” “Hanger” or “Side Feed,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SURFACE NONMETALLIC RACEWAY  
CERTIFIED FOR CANADA (RJTX7)**

**USE**

This category covers surface nonmetallic raceway for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

**PRODUCT MARKINGS**

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on accompanying literature, or on the package in which it is shipped.

Raceway provided with adhesive strips is marked “For Class 2 Circuits Only” or “For Power and Communication Circuits, Use Screws,” or equivalent.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Surface Nonmetallic Raceway
- Surface Nonmetallic Raceway Base for Use with Labeled Raceway Cover
- Surface Nonmetallic Raceway Cover for Use with Labeled Raceway Base

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 62.1, “Nonmetallic Surface Raceways and Fittings.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark is applied to each length or package of complete raceway, raceway cover or raceway base.

–Continued

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Surface Nonmetallic Raceway,” “Surface Nonmetallic Raceway Base for Use with Labeled Raceway Cover” or “Surface Nonmetallic Raceway Cover for Use with Labeled Raceway Base.”

The Listing Mark is applied to each length or package of complete raceway, raceway cover or raceway base.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Surface Nonmetallic Raceway Fittings Certified  
for Canada (RJYT7)**

**USE**

This category covers surface nonmetallic raceway fittings intended for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

**PRODUCT MARKINGS**

A fitting intended for supporting a luminaire is marked “Suitable for a fixture not exceeding \_\_\_ kg (lb).” The specified luminaire weight should not exceed 22.7 kg (50 lb). The marking is readily visible after the fitting has been mounted.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Butt Joint Cover
- End Cap
- Surface Nonmetallic Raceway Fitting

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 62.1, “Nonmetallic Surface Raceways and Fittings.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Surface Nonmetallic Raceway Fitting,” “Butt Joint Cover” or “End Cap,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**UNDERFLOOR RACEWAY CERTIFIED FOR  
CANADA (RKCZ7)**

**USE**

This category covers metal underfloor duct systems designed for use as raceway for the installation of wire and cable in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” and the manufacturer’s installation instructions.

**PRODUCT MARKINGS**

–Continued

The raceway may consist of factory-constructed raceway or field-installed components forming a raceway. Each component is provided with installation instructions to identify its relation to the other components of the raceway.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Underfloor Raceway

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA C22.2 No. 80 (1978), "Underfloor Raceways and Fittings."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Underfloor Raceway Fittings Certified for Canada (RKQX7)**

**USE AND INSTALLATION**

This category covers underfloor raceway fittings intended for installation in underfloor raceway systems in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and the manufacturer's installation instructions.

Each component is provided with installation instructions to identify its relation to the other components of the raceway system.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Raceway Adapter  
Saddle Support  
Underfloor Raceway Fitting

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA C22.2 No. 80 (1978), "Underfloor Raceways and Fittings."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway Fitting," "Raceway Adapter" or "Saddle Support," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RADIO DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RMGR7)**

**GENERAL**

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

**REBUILT PRODUCTS**

This category also covers radio devices and their accessories that are rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt radio devices and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt radio devices and their accessories are subject to the same requirements as new radio devices and their accessories.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Radio Device for Use in Hazardous Locations  
The words "Radio Device" may be abbreviated "Rad. Dev."  
The words "Hazardous Locations" may be abbreviated "Haz. Loc."  
For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL Mark for Canada symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

For rebuilt products, the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RADIO DEVICES, REBUILT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RMGZ7)**

**USE**

This category covers rebuilt portable signal receivers, portable signal and voice receivers and portable voice transceivers. These products are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt products are subject to the same requirements as new products.

**PRODUCT MARKINGS**

These products are marked with the following:  
 The month and year that the product was repaired or rebuilt.  
 The standard number and edition to which the product was rebuilt,  
 as referenced under **REQUIREMENTS** below.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
 Rebuilt Radio Device for Use in Hazardous Locations  
 Repaired Radio Device for Use in Hazardous Locations  
 The words "Radio Device" may be abbreviated "Rad. Dev."  
 The words "Hazardous Locations" may be abbreviated "Haz. Loc."

**RELATED PRODUCTS**

See Radio Devices for Use in Hazardous Locations Certified for Canada (RMGR7).

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 157 (1992), "Intrinsically Safe and Non-Incendive Equipment for Use in Hazardous Locations," or CSA-C22.2 No. 213 (1987), "Non-Incendive Electrical Equipment for Use in Class I, Division 2 Hazardous Locations."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Radio Device for Use in Hazardous Locations" (or "Rebuilt RAD DEV for Use in Hazardous Locations" or "Rebuilt RAD DEV for HAZ LOC") or "Repaired Radio Device for Use in Hazardous Locations" (or "Repaired RAD DEV for Use in Hazardous Locations" or "Repaired RAD DEV for HAZ LOC").

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RADIO DEVICES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RMJA7)**

**GENERAL**

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
 Radio Device for Use in Hazardous Locations  
 The words "Radio Device" may be abbreviated "RAD DEV."  
 The words "Hazardous Locations" may be abbreviated "HAZ LOC."

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product, or the Certification Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RRAT7)**

**RECEPTACLE-ENCLOSURE COMBINATIONS WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RREG7)**

**GENERAL**

This category covers receptacle-enclosure combinations with plugs intended for use in one or more of the following hazardous locations, as indicated on the product, in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC): Class I, Groups A, B, C and D; Class II, Groups F and G.

These receptacle-enclosure combinations with plugs are (1) completely assembled at the factory or (2) intended for final assembly in the field using components specified in the product classification. Assembly of the receptacle-enclosure combinations with plugs in the field is intended to be in accordance with the instructions provided with the product by the manufacturer.

Enclosures covered under this category are for threaded rigid conduit connection, and the conductors between the receptacle and the enclosure are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord connecting to the plugs should be frequently inspected and replaced when necessary. Terminal connection to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at the current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacle-enclosure combinations with plugs certified for Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined in the CEC.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
 Receptacle-Enclosure Combination with Plug for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 159, "Attachment Plugs and Receptacles for Use in Hazardous Locations."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RRAT7)**

636

Receptacle-Enclosure Combinations with Plugs for Use in Hazardous Locations Certified for Canada (RREG7)—*Continued*

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO EXPLOSION AND FIRE HAZARDS ONLY**

**CLASS \_\_\_\_\_, GROUP \_\_\_\_\_**

**Alternate UL Mark**

**UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**RECEPTACLE-ENCLOSURE COMBINATION WITH PLUG FOR USE IN HAZARDOUS LOCATIONS**

**AS TO EXPLOSION AND FIRE HAZARD ONLY**

**CLASS \_\_\_\_\_, GROUP \_\_\_\_\_**

**Control No.**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RROR7)**

**GENERAL**

This category covers receptacles with plugs certified under Class I and Class II groups for Division 1 locations provided with receptacle conduit boxes for threaded rigid conduit connection. The conductors between receptacles and conduit boxes are factory sealed. The plugs are for use with certified extra-hard-usage flexible cord having a grounding conductor.

Receptacles certified for Class I, Division 2 locations only are intended for use with general-purpose enclosures for supply connections. The supply conductors are factory sealed in the receptacles. The plugs for use with such receptacles are suitable for Class I, Division 1 locations.

Receptacles with plugs certified for groups under Class I hazardous locations have been subjected to endurance tests and overload operation tests in the presence of the specific flammable vapor-air atmospheres.

Receptacles with plugs certified for use in Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Receptacles with plugs certified for Class II, Groups F and G hazardous locations have dust-tight terminal boxes and have been subjected to endurance tests and overload operation tests while heavily blanketed with combustible dust.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Plug for Use in Hazardous Locations

Receptacle Assembly for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAI7).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 159 (1987), "Attachment Plugs, Receptacles and Similar Wiring Devices for Use in Hazardous Locations: Class I, Groups A, B, C and D; Class II, Group G, in Coal or Coke Dust, and in Gaseous Mines."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

**RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RRAT7)**

—*Continued*

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Plug for Hazardous Locations" or "Receptacle Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RSPX7)**

**GENERAL**

This category covers receptacles that are (1) completely assembled at the factory or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is to be done in accordance with instructions provided with the product by the manufacturer.

Receptacles with plugs interlocked with switches certified under Class I and Class II groups are constructed with interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit to the switch compartments. The plugs are intended for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with plugs interlocked with switches certified for Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined by CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Devices provided with a factory seal of conductors between switch and the conduit box are so identified on the individual product.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Body Assembly for Use in Hazardous Locations

Plug for Use in Hazardous Locations

Receptacle Cover Assembly Interlocked with Switch for Use in Hazardous Locations

Receptacle Interlocked with Switch for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAI7).

**REQUIREMENTS**

The basic hazardous (classified) locations standard used to investigate products in this category is CSA-C22.2 No. 159 (1987), "Attachment Plugs, Receptacles and Similar Wiring Devices for Use in Hazardous Locations: Class I, Groups A, B, C and D; Class II, Group G, in Coal or Coke Dust, and in Gaseous Mines."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RRAT7)**

–Continued

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Receptacle Interlocked with Switch for Hazardous Locations,” “Plug for Hazardous Locations,” “Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations,” “Body Assembly for Hazardous Locations,” or other appropriate product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLE-PLUG COMBINATIONS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RSUN7)**

**RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (RSZD7)**

**USE**

This category covers receptacles that are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer. Care should be taken to ensure that minimum IP ratings are maintained for field-assembled increased safety enclosures.

Receptacles with plugs interlocked with switches are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit or other suitable wiring method to the switch compartments. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices are permitted for use. Portable equipment should be used only where necessary.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Body Assembly for Use in Hazardous Locations
- Plug for Use in Hazardous Locations
- Receptacle Cover Assembly Interlocked with Switch for Use in Hazardous Locations

Receptacle Interlocked with Switch for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

–Continued

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Receptacle Interlocked with Switch for Hazardous Locations,” “Plug for Hazardous Locations,” “Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations,” “Body Assembly for Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES CERTIFIED FOR CANADA (RTDV7)**

**GENERAL:**

These listings cover the following types of products:

Appliance, Equipment or Fixture Outlet - A female contact device for mounting on utilization equipment.

Receptacle - A female contact device intended to be installed on a wiring system to supply current to utilization equipment.

**RATINGS:**

These devices are rated in volts 600 volts or less, ac or dc; and in amps 200 amps or less. They may also be rated in horsepower.

Devices rated 250 volts are tested on circuits involving a nominal potential to ground of 125 volts. Devices having other voltage ratings are tested on circuits involving full rated potential to ground except for multiphase rated devices which are tested on circuits consistent with their voltage ratings, i.e. a 120/208 volt, 3-phase, device is tested on a circuit involving 120 volts to ground.

**BONDING:**

Devices having a terminal identified by a green colored finish or by the word “green” are bonding types. The blade, pin or contact member connected to this terminal is for equipment bonding purposes only.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES FOR PLUGS AND ATTACHMENT PLUGS CERTIFIED FOR CANADA (RTRT7)**

**GENERAL**

This category covers receptacles consisting of one or more female contact devices on the same yoke, installed at an outlet for the connection of one or more attachment plugs, and including duplex, single, flush mounted, surface mounted, split, isolated ground, hospital type and appliance receptacles, used mainly in household, office and industrial applications and in electrical and electronic equipment.

This category does not cover general-use attachment plugs and cord connectors, switched receptacles or current taps.

**TERMINALS**

Terminals of 15 A and 20 A receptacles are for use with copper conductors only. Screwless terminal connectors of the conductor push-in type are for use only with solid copper conductors.

Terminals of receptacles greater than 20 A not marked “AL-CU” are for use with copper conductors only.

Terminals of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with both solid and stranded building wires. Screwless terminal connectors of the conductor push-in type are limited to use on 14 AWG solid building wire only.

Single and duplex receptacles rated 15 A and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors may be used to feed a single set of branch-circuit conductors connected to other receptacles on a multioutlet branch circuit. These devices have not been tested for tapping off more than one circuit from the receptacle by utilizing both the side-wiring and back-wiring terminals on an outlet.

—Continued

Duplex receptacles rated 15 A and 20 A that are provided with break-off tabs may have those tabs removed so that the two outlets may be wired in a multiwire branch circuit.

**PRODUCT MARKINGS**

These devices are marked with:

1. Listee's name or identification on device
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification
5. Date code or equivalent (except on isolated ground types)
6. Additional markings as required

**Isolated Ground** — Receptacles in which the bonding terminal is purposely insulated from the receptacle mounting means are so identified by an orange triangle marked on the face of the receptacle and the marking "ISOLATED GROUND."

**Hospital Type** — Receptacles for hospital use in patient care areas are identified by the marking "Hospital Grade" and a green dot on the face of the receptacle. The identification is visible during installation on the wiring system.

**Receptacle Providing Power to Class 2 Equipment** — A flush-mounted receptacle with an integral power supply with one or more Class 2 output low-voltage connectors, a Class 2 separable conductor lead assembly, or both, intended to be installed in an outlet box.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Attachment Plug
- Attachment Plug with Overload Protection
- Fuseless Attachment Plug
- Plug
- Recept.
- Receptacle

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Receptacles Certified for Canada (RTDV7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 42 (2010), "General Use Receptacles, Attachment Plugs, and Similar Wiring Devices," in addition to the requirements contained in CSA Electrical Bulletin No. 84, "Class 2 Supply Outlets (USB) Installed on Faceplates of an Outlet Box, on a Yoke Similar to an Outlet Box Mounted Receptacle or Mounted on a Wall as a Self Contained Device" (dated May 29, 2014).

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Attachment Plug with Overload Protection," "Attachment Plug Fuseless," or other appropriate name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES, STAGE TYPE CERTIFIED FOR CANADA (RUF7)**

**GENERAL**

This category covers special-use attachment plugs, cord connectors, receptacles and equipment power inlets intended for use in theater and motion-picture applications in accordance with Sections 44 and 48 respectively, of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

—Continued

This category does not cover general-use attachment plugs and connector bodies, CO/ALR receptacles, switched receptacles or current taps.

**PRODUCT MARKINGS**

These devices are marked as follows:

1. Listee's name or identification on device and carton
2. Catalog number or equivalent on device or carton
3. Complete electrical rating
4. Terminal identification by color or otherwise
5. Date code or equivalent
6. "CU-AL" where applicable
7. Additional markings as required

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Connector
- Plug
- Stage-type Connector
- Stage-type Plug

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 182.3, "Special Use Attachment Plugs, Receptacles and Connectors."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following product names as appropriate: "Plug," "Connector," "Stage Type Plug," "Stage Type Connector," or other appropriate product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMBINATION RECEPTACLES WITH SWITCHES CERTIFIED FOR CANADA (RUSZ7)**

**GENERAL**

This category covers combination receptacle and switch devices on the same mounting yoke, intended for household, office and industrial applications.

These devices are marked as follows:

- a. Listee's name or identification on device
- b. Catalog number or equivalent on device or carton
- c. Complete electrical rating
- d. Terminal identification
- e. Date code
- f. Additional markings as required in the Reports

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Receptacle/Switch

**RELATED PRODUCTS**

See Snap Switches Certified for Canada (WJQR7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 42, "General Use Receptacles, Attachment Plugs and Similar Wiring Devices," and CSA-C22.2 No. 111, "General-Use Snap Switches."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol stamped or molded into the product and the Certification Mark on the smallest

unit packaging is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number. In lieu of the UL symbol stamped or molded into the product, “UNDERWRITERS LABORATORIES INC. LISTED” (or “UND. LAB. INC. LIST.”) may be stamped or molded into the product. When marked as such, the Certification Mark will appear on the smallest unit packaging.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Receptacle/Switch.”

In lieu of the UL symbol stamped or molded into the product, “UNDERWRITERS LABORATORIES INC. LISTED” (or “UND. LAB. INC. LIST.”) may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SINGLE-POLE, LOCKING-TYPE  
SEPARABLE ATTACHMENT PLUGS, PANEL  
INLETS, PANEL OUTLETS, ADAPTERS AND  
ACCESSORIES CERTIFIED FOR CANADA  
(RUUS7)**

**GENERAL**

This category covers single-pole, locking-type separable attachment plugs, cord connectors, panel inlets, panel outlets, adapters and accessories, rated up to a maximum of 800 A and up to 600 V ac or dc. These devices are intended to provide power from feeders or branch circuits, or are for direct connection to feeders or branch circuits in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

These devices are not intended for use in hazardous (classified) locations.

Attachment plugs and cord connectors are intended for use with single-conductor cable, having copper conductors only.

Inlets and outlets are intended for use with single-conductor cable, having copper conductors only, or to copper busbars.

**CURRENT INTERRUPTION**

These devices are not intended for connection or disconnection under load conditions.

**INTERMATEABILITY**

Devices identified as Series 15, 16 or 18 are capable of being mated together between different Listees’ lines of products. Devices that are not identified as Series 15, 16 or 18 are only intended to mate with the Listee’s same line of products covered under this category.

Refer to Annex B of CSA-C22.2 No. 1691, “Single Pole Locking-Type Separable Connectors,” for Series 15, 16 and 18 configurations.

**ENVIRONMENTAL RATING**

Devices identified as Series 15, 16 or 18 have a minimum environmental enclosure rating of Type 3R when mated, and are marked accordingly. Devices identified other than Series 15, 16 or 18 have a minimum rating of Type 1 and are marked accordingly.

**ELECTRICAL RATING**

Devices identified as Series 15 are rated 150 A maximum, 600 V maximum.

Devices identified as Series 16 or 18 are rated 400 A maximum, 600 V maximum.

Devices identified other than Series 15, 16 or 18 are rated in ampere, voltage and frequency ac or ac/dc, or in maximum ampere, maximum voltage and frequency ac or ac/dc, and are so marked.

**GROUNDED DEVICES**

Devices designated for connection to the grounded circuit conductor are identified by a white-colored housing. The pin or contact member connected to this terminal is for the grounded conductor only.

Panel inlets and panel outlets designated for connection to the grounded circuit conductor are identified by either a white-colored housing or by housing surfaces colored white adjacent to both the grounded terminal and grounded pin or contact.

–Continued

**GROUNDRING**

Devices designated for connection to the grounding circuit conductor are identified by a green- or green/yellow-colored housing. The pin or contact member connected to this terminal is for the grounding conductor only.

Panel inlets and panel outlets designated for connection to the grounding circuit conductor are identified by either a green-colored housing or by housing surfaces colored green adjacent to both the grounding terminal and grounding pin or contact.

**PRODUCT MARKINGS**

These devices are marked with:

1. The Listee’s name or identification
2. The electrical rating
3. The statement, “CAUTION – Risk of Electric Shock. Do Not Disconnect Under Load,” or equivalent following the word “CAUTION”
4. Series 15, 16 or 18 configurations, if applicable
5. The environmental type rating(s)

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Attachment Plug
- Connector
- Fuseless Attachment Plug
- Plug
- Recept.
- Receptacle

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Receptacles Certified for Canada (RTDV7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 1691 (2012), “Single Pole Locking-Type Separable Connectors.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Attachment Plug,” “Fuseless Attachment Plug,” “Plug,” “Receptacle” (or “Recept.”), “Connector,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECORD-PROTECTION DEVICES  
CERTIFIED FOR CANADA (RWIT7)**

This category covers record protection equipment intended to provide protection to paper records (Class 177) against loss by fire of controlled extent and severity for periods designated by the hourly ratings indicated in the individual Classifications.

Record protection equipment (Classes 66 and 52) is also intended to provide protection to records other than paper against loss by fire of controlled extent and severity for periods designated by the hourly ratings indicated in the individual Classifications. Class 66-rated devices afford protection to magnetic tapes and other types of magnetic data processing media, photographic film and records other than paper. Class 52-rated devices afford protection to certain types of flexible disks.

Record protection equipment investigated for impact resistance (as indicated in the individual Classifications) is intended to provide protection to records in buildings when collapse may or may not be expected to occur as a result of fire since the rating includes investigation of impact stability.

Record protection equipment not investigated for impact resistance is not intended to provide protection in buildings when collapse may be

**RECORD-PROTECTION DEVICES CERTIFIED FOR CANADA  
(RWIT7)**

640

expected to occur as a result of fire since the rating does not include an investigation of impact stability. Record protection equipment not investigated for impact resistance which is rated Class 177 provides less protection to records than does record protection equipment investigated for impact resistance rated Class 177 as evidenced by the location at which interior temperatures are measured during the fire tests.

The fire-resistance rating indicated in the individual Classifications may be seriously impaired by disturbance or injury of the insulation material due to fire, burglary or improper application of accessories. Repairs to insulation or steel components should be made at the manufacturer's factory.

Authorities Having Jurisdiction should be consulted as to which fire-resistance rating of a record protection device will be suitable for the situation where it is to be used.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECORD-PROTECTION EQUIPMENT  
CERTIFIED FOR CANADA (RYPH7)**

**GENERAL**

This category covers record-protection equipment consisting of self-contained devices that incorporate insulated bodies, doors, drawers or lids, or nonrated multidrawer devices housing individually rated containers that contain one or more inner compartments for storage of records. These devices are intended to provide protection to one or more types of records as evidenced by the assigned Class rating or ratings: Class 177 for paper, Class 66 for magnetic computer tapes and photographic film, and Class 52 for flexible disks. Inner compartments of record-protection equipment may bear labels indicating the Class ratings, if different from the Class rating of the basic outer unit.

Record-protection equipment is effective in withstanding:

1. A standardized fire of controlled extent and severity for one of the following periods: 4 hr reaching 1090°C, 2 hr reaching 1010°C, 1 hr reaching 927°C, or 1/2 hr reaching 843°C depending upon its hourly rating; before the interior temperature of the compartment exceeds the rated Class temperature (177°C, 66°C or 52°C) during the period of fire exposure and the cooling period inside the furnace after the fire exposure.
2. A sudden heating at 1090°C for 30 min (20 min for units rated 1/2 hr) without producing an explosion sufficient to cause an opening into the interior and without destroying the usability of paper contents.
3. At the option of the manufacturer, and as indicated in the individual certifications, an impact due to falling 9.1 m in the clear after being heated for 60 min, 45 min, 30 min or 20 min for devices rated 4, 2, 1 and 1/2 hr, respectively; and reheating in the inverted position for the same length of time (60 min, 45 min, 30 min or 20 min) after the impact without destroying the usability of the papers stored inside.

**FACTORS NOT INVESTIGATED**

The ability of nonpaper records to withstand the exposure, or store or retain data has not been investigated.

These devices have not been investigated for their acceptability of use after exposure to fire and being impacted.

These devices have not been investigated for security protection.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Record-protection Equipment

**ADDITIONAL INFORMATION**

For additional information, see Record-protection Devices Certified for Canada (RWIT7) and Fire-protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C72 (1992), "Tests for Fire Resistance of Record Protection Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO FIRE RESISTANCE  
RATING: CLASS +++  
or**

**RECORD-PROTECTION DEVICES CERTIFIED FOR CANADA  
(RWIT7)**

**Record-protection Equipment Certified for Canada  
(RYPH7)—Continued**

**AS TO FIRE AND IMPACT RESISTANCE  
RATING: CLASS ++++**

+ 177, 66 or 52  
++ 1/2, 1, 2, 3 or 4

When individual compartments are investigated, the products are marked with the following information:

**SEE MARKINGS INSIDE UNIT FOR CLASS RATING  
APPLICABLE TO INDIVIDUAL COMPARTMENTS**

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**RECORD PROTECTION EQUIPMENT  
AS TO FIRE RESISTANCE  
RATING: CLASS ++++ HR  
No.**

or

**RECORD PROTECTION EQUIPMENT  
AS TO FIRE AND IMPACT RESISTANCE  
RATING: CLASS ++++ HR  
No.**

+ 177, 66 or 52  
++ 1/2, 1, 2, 3 or 4

When individual compartments are investigated, the Classification Mark will also include the following statement:

**SEE MARKINGS INSIDE UNIT FOR CLASS RATING  
APPLICABLE TO INDIVIDUAL COMPARTMENTS**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**REELS, CORD FOR USE IN ZONE  
CLASSIFIED HAZARDOUS  
LOCATIONS CERTIFIED FOR  
CANADA (SAOD7)**

**USE AND INSTALLATION**

This category covers cord reels intended for use with extra-hard-usage cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems. Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Cord Reel for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## REELS, CORD FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (SAOX7)

### GENERAL

This category covers cord reels for use with extra-hard-usage flexible cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

### PRODUCT IDENTITY

The following product identity appears on the product:

Cord Reel for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## REELS, CORD AND CABLE CERTIFIED FOR CANADA (SBCV7)

### USE

This category covers reels, usually spring-powered, to pay out and retract flexible cord and cable, employed for supply of portable or mobile equipment.

Electrical ratings of reels are marked on the reels where readily visible. The reels are supplied with a length of cord or cable and intended for use with the reel. The electrical ratings cover the complete assemblies.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Cable Reel  
Cord Reel  
Reel

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 21, "Cord Sets and Power Supply Cords."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel," "Cable Reel" or "Reel."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA (SCER7)

This category covers mechanical compression refrigeration systems and absorption-type refrigeration systems, including refrigerant-containing components and associated controls intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Some of this equipment may employ water to directly or indirectly cool the refrigerant condenser. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## REFRIGERANT-LEAK-DETECTION EQUIPMENT CERTIFIED FOR CANADA (SCFE7)

### USE

This category covers electronic refrigerant-leak-detection equipment used to detect leaks in refrigeration systems.

Some equipment has been investigated for performance characteristics contained in SAE J1627, "Performance Criteria for Electronic Refrigerant Leak Detectors."

This equipment has not been investigated for operation in hazardous (classified) locations.

### PRODUCT MARKINGS

This equipment is marked with the manufacturer's name and model number.

Equipment investigated for performance in accordance with SAE J1627 is marked "Design Certified by Underwriters Laboratories Inc. to meet SAE J1627 [date] for [type of refrigerant]."

### PRODUCT IDENTITY

The following product identity appears on the product:

Refrigerant-leak-detection Equipment

### ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120 (1991), "Refrigeration Equipment."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

642

Refrigerant-leak-detection Equipment Certified for Canada  
(SCFE7)—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Leak Detection Equipment."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**REFRIGERANT RECOVERY/RECYCLING  
EQUIPMENT CERTIFIED FOR CANADA  
(SCFQ7)**

This category covers equipment intended to remove and/or recycle refrigerant from commercial and/or automotive refrigerant systems.

**Automotive Refrigerant-extraction Equipment  
Certified for Canada (SCHL7)**

**USE**

This category covers automotive refrigerant-extraction equipment intended to remove refrigerant from automotive refrigerant systems.

This equipment is rated 600 V or less and may be either cord or permanently connected to the source of supply in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA-C22.2 No. 0, "General Requirements - Canadian Electrical Code, Part II."

This equipment has been investigated to determine that it meets the extraction specifications for refrigerant recovery to ensure that venting of refrigerant will not occur, and may be marked "Design Certified by Underwriters Laboratories Inc. to Meet [applicable standard and issue date, e.g., SAE J2209 (issue date) for CFC-12] for use with [refrigerant type]. The refrigerant from this equipment must be processed to ARI Standard 700-88 before reuse in a mobile air conditioning system." This marking indicates that the equipment has been investigated for compliance with the applicable SAE requirements. The refrigerant removed by this equipment is intended to be returned to a refrigerant reclamation facility for processing.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name, model number, electrical rating, the type and amount of refrigerant and the design pressures.

Equipment intended for outdoor use is so marked.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Automotive Refrigerant-extraction Equipment

**RELATED PRODUCTS**

Equipment intended for recovery/recycling of refrigerants used air conditioning systems of mobile vehicles is covered under Refrigerant Recovery/Recycling Equipment, Automotive Certified for Canada (SCMA7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, "Refrigeration Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Commercial Refrigerant Recovery Equipment  
Certified for Canada (SCIJ7)**

**GENERAL**

These category covers refrigerant recovery equipment, including passive systems, intended to remove refrigerant from commercial refrigerant systems.

This equipment has been investigated for safety when removing refrigerant in any condition from a system and storing it in an external container without testing or processing the refrigerant. The use of this equipment to reduce contaminants, such as moisture, oil, noncondensable gas, acidity, particulate matter and the like, has not been investigated.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Refrigerant Recovery Equipment

**RELATED PRODUCTS**

Refrigerant recovery hose assemblies are covered under Tubing, Refrigerant Certified for Canada (SFC8).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, "Refrigeration Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Recovery Equipment."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Commercial Refrigerant Recovery/recycling  
Equipment Certified for Canada (SCKG7)**

**USE**

This category covers refrigerant recovery/recycling equipment intended to remove and recycle refrigerant from commercial refrigerant systems.

This equipment has been investigated for safety when removing and recycling refrigerant in any condition from a system or storing it in an external container without necessarily testing or processing the refrigerant. The use of this equipment to reduce contaminants, such as moisture, oil, noncondensable gas, acidity, particulate matter and the like, has not been investigated.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Commercial Refrigerant Recovery/Recycling Equipment

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

–Continued

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, “Refrigeration Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Refrigerant Recovery/recycling Equipment,  
Automotive Certified for Canada (SCMA7)**

**USE**

This category covers refrigerant recovery/recycling equipment used to service automobiles, light trucks, and other vehicles with air conditioning systems that employ a refrigerant. This equipment is intended to be used mainly in automotive service stations and repair facilities.

Equipment may be investigated to determine the minimum purity specifications for recycled refrigerant for use in mobile automotive air conditioning systems. Such equipment is marked “Design Certified by Underwriters Laboratories Inc. for Compliance with \*,” to indicate that the equipment has been investigated for compliance with the applicable SAE requirements.

Split-system equipment consisting of separate sections may be investigated to determine the minimum purity specifications for recycled refrigerant for use in mobile automotive air conditioning systems. Such equipment is marked “Design Certified by Underwriters Laboratories Inc. for compliance with [applicable standard and issue date, such as SAE J2210 (issue date) for HFC-134a] when used with [equipment manufacturer’s name, model designation and section identification],” to indicate that the equipment has been investigated for compliance with the applicable SAE requirements.

\* “SAE J1991 (date)” for CFC-12 or “SAE J2210 (date)” for HFC-134a

\*\* Equipment manufacturer’s name, model designation and section identification

The use of this equipment to service mobile vehicles for refrigerated cargo that have hermetically sealed, rigid-pipe air conditioning systems has not been investigated.

**RELATED PRODUCTS**

Refrigerant recovery hose assemblies are covered under Tubing, Refrigerant Certified for Canada (SFC58).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**REFRIGERATION ACCESSORIES  
CERTIFIED FOR CANADA (SCSQ7)**

**Controllers, Refrigeration Certified for Canada  
(SDFY7)**

**GENERAL**

This category covers electrical controls designed for refrigeration and air-conditioning equipment and for room temperature or humidity regulation. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).

These devices respond directly or indirectly to changes in temperature, humidity, refrigerant level, or pressure to affect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

**Ratings** — Refrigeration controllers are certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a direct-current (noninductive) rating is specified.

**Manual reset controls** — An “M1” or “M2” marking indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the “closed” position after normal operating conditions have been restored if the reset means is held in the “reset” position.
- **M2** – Controls that do not automatically reset to the “closed” position if the reset means is held in the “reset” position.

**Equipment suitable for outdoor use** — Equipment identified with an enclosure type designation or as “Rain tight” or “Rainproof” is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**Class 2 output circuits** — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**PRODUCT MARKINGS**

Refrigeration controllers are marked with the company name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Refrigeration Controller

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit Certified for Canada (MBPR7), Controls, Primary Safety Certified for Canada (MCCZ7) or Switches Certified for Canada (MFHX7).

Refrigerant valves are covered under Valves, Electrically Operated Certified for Canada (YIOZ7).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-Indicating and -Regulating Equipment Certified for Canada (XAPX7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 24, “Temperature-Indicating and -Regulating Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

**Refrigeration, Fittings Certified for Canada  
(SDTW7)**

**USE**

This category covers fittings intended for connecting refrigerant lines of refrigerating systems.

These fittings are also suitable for use in lines handling hazardous liquids and automotive applications.

**PRODUCT MARKINGS**

These products are marked with the manufacturer’s name.

The catalog number, type of refrigerant used and design pressure are marked on either the fitting or on the carton or container in which the fitting is shipped, or on a separate sheet or a specification tag included in each carton or container.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Refrigerant Fitting

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, “Refrigerant-Containing Components for Use in Electrical Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Fusible Plugs, Refrigerant Certified for Canada  
(SEHU7)**

**USE**

This category covers devices that have a predetermined-temperature fusible member for the relief of pressure.

**PRODUCT MARKINGS**

These products are marked with the manufacturer’s name.

The catalog number, type of refrigerant used and design pressure are marked on either the fusible plug or on the carton or container in which the fusible plug is shipped, or on a separate sheet or a specification tag included in each carton or container.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**Liquid Indicators, Refrigerant Certified for  
Canada (SEYW7)**

**USE**

This category covers liquid indicators located in the liquid line of a refrigerating system, and that have a sight port by which liquid flow may be observed.

**PRODUCT MARKINGS**

These products are marked with the manufacturer’s name.

The catalog number, type of refrigerant used and design pressure are marked on either the fitting or on the carton or container in which the fitting is shipped, or on a separate sheet or a specification tag included in each carton or container.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Refrigerant Liquid Indicator

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**Valves, Refrigerant Certified for Canada  
(SFJQ7)**

**USE**

This category covers charging valves and stop valves. Charging valves are used to charge or add refrigerant to the system, or add oil to the compressor crankcase. Stop valves are intended to shut off the flow of refrigerant.

–Continued

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name. The catalog number, type of refrigerant used and design pressure are marked on either the valve or on the carton or container in which the valve is shipped, or on a separate sheet or a specification tag included in each carton or container.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Refrigerant Valve

**ADDITIONAL INFORMATION**

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Valve."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**BEVERAGE COOLERS AND BEVERAGE COOLER-DISPENSERS CERTIFIED FOR CANADA (SFWY7)**

**GENERAL**

This category covers beverage coolers and beverage cooler-dispensers. Beverage coolers are intended to be connected to a field-installed dispensing means. Beverage cooler-dispensers include a factory-installed dispensing means. These products may be self-contained, sectional or remote. Accessories intended for use with beverage coolers and beverage cooler-dispensers are also covered under this category.

**INSTALLATION**

This equipment is rated 750 V ac or less and is intended to be installed in accordance with the requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA-B52, "Mechanical Refrigeration Code."

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in CAN/CSA-B52, but are included in ASHRAE 34-1992 (amendment), "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in CAN/CSA-B52, UL's Listing Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in CAN/CSA-B52 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by CAN/CSA-B52 and have been determined to be nonflammable or practically non-flammable.

A beverage cooler or beverage cooler-dispenser of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained beverage cooler or beverage cooler-dispenser consists of a completely factory assembled and factory tested refrigeration system in which all the refrigerant-containing parts are connected at the factory.

A remote beverage cooler or beverage cooler-dispenser is intended to be connected to a field-installed condenser or condensing unit located remote from the beverage cooler or beverage cooler-dispenser.

–Continued

Accessories for beverage coolers and beverage cooler-dispensers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

**PRODUCT MARKINGS**

Beverage coolers and beverage cooler-dispensers may be designed to accept accessories installed in the field. In such cases both the beverage cooler or beverage cooler-dispenser and the accessory are marked to relate the two for proper installation.

A section of a beverage cooler or beverage cooler-dispenser suitable for outdoor use is so marked. Sections not so marked are for indoor use only.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

**REBUILT PRODUCTS**

This category also covers beverage coolers and beverage cooler-dispensers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt beverage coolers and beverage cooler-dispensers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt beverage coolers and beverage cooler-dispensers are subject to the same requirements as new beverage coolers and beverage cooler-dispensers.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Beverage Cooler
  - Beverage Cooler Less Condenser
  - Beverage Cooler Less Condensing Unit
  - Beverage Cooler-Dispenser (for a self-contained unit)
  - Beverage Cooler-Dispenser Less Condenser
  - Beverage Cooler-Dispenser Less Condensing Unit (for a remote beverage cooler or beverage cooler-dispenser)
  - Section of Beverage Cooler
  - Section of Beverage Cooler-Dispenser (for each section of a beverage cooler or beverage cooler-dispenser shipped separately from the factory, the function of which is essential to the basic operation of the beverage cooler or beverage cooler-dispenser)
  - Accessory for Beverage Cooler or Beverage Cooler-Dispenser (for a part or device, the function of which supplements or modifies the basic operation of the beverage cooler or beverage cooler-dispenser)
- For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

**RELATED PRODUCTS**

Coin-operated equipment is covered under Vending Machines, Refrigerated Certified for Canada (SQMX7).

Nonrefrigerated dispensing equipment is covered under Food-preparing Machines, Commercial Certified for Canada (IPST7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Beverage Cooler," "Beverage Cooler-Dispenser" (for a self-contained unit), "Beverage Cooler Less Condenser," "Beverage Cooler-Dispenser Less Condenser," "Beverage Cooler Less Condensing Unit," "Beverage Cooler-Dispenser Less Condensing Unit" (for a remote beverage cooler or beverage cooler-dispenser), "Section of Beverage Cooler," "Section of Beverage Cooler-Dispenser" (for each section of a beverage cooler or beverage cooler-dispenser shipped separately from the factory, the function of which is essential to the basic operation of the beverage cooler or beverage cooler-dispenser), or "Accessory for Beverage Cooler or Beverage Cooler-Dispenser" (for a part or

—Continued

device, the function of which supplements or modifies the basic operation of the beverage cooler or beverage cooler-dispenser).

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMMERCIAL REFRIGERATORS AND FREEZERS CERTIFIED FOR CANADA (SGKW7)**

**GENERAL**

This category covers commercial refrigerators and freezers such as display cases, reach-in cabinets, meat cases, frozen food and merchandising cabinets, food service carts and soda fountain units. These products may be self-contained, sectional or remote. Accessories intended for use with commercial refrigerators and freezers are also covered under this category.

**INSTALLATION**

This equipment is rated 750 V ac or less and is intended to be installed in accordance with the requirements of CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” and CAN/CSA-B52, “Mechanical Refrigeration Code.”

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in CAN/CSA-B52, but are included in ASHRAE 34-1992 (amendment), “Designation and Safety Classification of Refrigerants.” The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in CAN/CSA-B52, UL’s Certification Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in CAN/CSA-B52 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by CAN/CSA-B52 and have been determined to be nonflammable or practically nonflammable.

Unitary refrigerators consist of a complete factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self contained refrigerator is a unitary refrigerator consisting of a completely factory assembled and factory tested refrigerating system in which all the refrigerant containing parts are permanently connected at the factory.

A remote refrigerator is a refrigerator intended to be connected to a field-installed condensing unit located remote from the refrigerator.

Accessories for commercial refrigerators and freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

**PRODUCT MARKINGS**

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial refrigerator or freezer and the accessory are marked to relate the two for proper installation.

Equipment or section(s) of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only.

Commercial refrigerators and freezers may employ a wireway to permit end-to-end installation. The wireway of such units is marked accordingly.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

**REBUILT PRODUCTS**

This category also covers commercial refrigerators and freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial refrigerators and freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial refrigerators and freezers are subject to the same requirements as new commercial refrigerators and freezers.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Accessory for Commercial Freezer (for each part of a commercial freezer shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial freezer)

Accessory for Commercial Refrigerator (for each part of a commercial

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

cial refrigerator shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator)

Accessory for Commercial Refrigerator/Freezer (for each part of a commercial refrigerator/freezer shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator/freezer)

Commercial Freezer (for a self-contained unit)

Commercial Freezer Less Condensing Unit (for a remote unit)

Commercial Refrigerator (for a self-contained unit)

Commercial Refrigerator Less Condensing Unit (for a remote unit)

Commercial Refrigerator/Freezer (for a self-contained unit)

Commercial Refrigerator/Freezer Less Condensing Unit (for a remote unit)

Section of Commercial Freezer (for a section or device, the function of which is essential to the basic operation of the commercial freezer)

Section of Commercial Refrigerator (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator)

Section of Commercial Refrigerator/Freezer (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator/freezer)

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

**RELATED PRODUCTS**

Refrigerators and freezers for household use are covered under Household Refrigerators and Freezers Certified for Canada (SHZZ7) and Household Freezers Certified for Canada (SHMR7).

Specialized refrigerators or freezers are covered under Refrigerators and Freezers, Special Purpose Certified for Canada (SOVQ7).

Door panel assemblies are covered under Door Panel Assemblies Certified for Canada (FDIT7).

Beverage coolers and beverage cooler-dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers Certified for Canada (SFWY7).

Nonrefrigerated cabinets are covered under Wired Cabinets Certified for Canada (ZNXR7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, “Refrigeration Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Commercial Refrigerator and/or Freezer” (for a self-contained unit), “Commercial Refrigerator and/or Freezer Less Condensing Unit” (for a remote unit), “Section of Commercial Refrigerator and/or Freezer” (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator or freezer), or “Accessory for Commercial Refrigerator and/or Freezer” (for each part of a commercial refrigerator which is shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator or freezer).

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## CONDENSING AND COMPRESSOR UNITS CERTIFIED FOR CANADA (SGYU7)

These units are intended to be installed in air conditioning and refrigeration systems in accordance with the requirements of the Canadian Electrical Code and The Mechanical Refrigeration Code, CSA Standard B52. Optional accessories for use with these units are also covered in this section. Presently listed equipment is rated 600 v or less.

Units in this category intended for refrigeration service may be of any Btu per hour capacity. For listings of units rated more than 135,000 Btu per hour and intended primarily for air conditioning application, see Air Conditioning Systems Equipment, in this Directory.

Condensing units include one or more compressors and air or water-cooled condensers with interconnecting refrigerant piping and with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit.

Compressor units include one or more compressors with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit and to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate.

Some units are intended for field connection to multiple refrigeration systems and include multiple condensing units, compressor units, or compressors, with single or multiple condensers, with associated piping, controls, and wiring, mounted on a common frame or in a common housing.

The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

These units are to be used only in systems with the specified refrigerant and operating at pressures not in excess of those indicated by the marked test pressures.

Units that have been investigated and found suitable for use with Listed field installed accessories are marked to identify the specific accessories that may be used.

Units which are suitable for outdoor installation are so marked. Units not marked as suitable for outdoor installation are for indoor use only.

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

The basic standard used to investigate products in this category is CAN/CSA C22.2 No. 236-M90 "Heating and Cooling Equipment".

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following product names as appropriate: "Condensing Unit", "Compressor Unit", "Accessory for Condensing Unit", "Accessory for Compressor Unit" or "Accessory for Condensing or Compressor Unit".

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## HOUSEHOLD FREEZERS CERTIFIED FOR CANADA (SHMR7)

### GENERAL

This category covers self-contained freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption type or thermoelectric type. Accessories intended for use with household freezers are also covered under this category.

This category will be obsoleted August 21, 2016. On or before this date, all household freezer certifications will be transferred to Household Refrigerators and Freezers Certified for Canada (SHZZ7).

### INSTALLATION

This equipment is intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household freezers are certified in three classes as follows:

**Freestanding** — A freezer intended for open-type installation only, not including stacking, locating in closets, alcoves, or other confined spaces.

—Continued

**Recessed Installation** — A freezer intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

**Built-in Installation** — A recessed-type freezer intended for slide-in installation into a confined space and trimmed to blend with room decor.

Accessories for household freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

### REBUILT PRODUCTS

This category also covers household freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household freezers are subject to the same requirements as new household freezers.

### PRODUCT MARKINGS

Household freezers may be designed to accept accessories in the field. In such cases both the freezer and the accessory are marked to relate the two for proper installation.

A freezer intended for freestanding use is so marked on the unit. Each freezer intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Accessory for Household Freezer

Household Freezer

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

### RELATED PRODUCTS

Household refrigerators are covered under Household Refrigerators and Freezers Certified for Canada (SHZZ7).

Freezers for commercial use are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Refrigerators and freezers in combination with ranges, microwave ovens and/or sinks are covered under Kitchen Units, Refrigerated Certified for Canada (SJPT7).

Products Verified for energy efficiency are covered under Refrigerators, Freezers and Wine Chillers, Household Verified for Energy Efficiency (ZZL).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

### ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 63, "Household Refrigerators and Freezers."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Freezer" or "Accessory for Household Freezer."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## HOUSEHOLD REFRIGERATORS AND FREEZERS CERTIFIED FOR CANADA (SHZZ7)

### GENERAL

This category covers self-contained refrigerators, freezers, and combination refrigerator-freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption type or thermoelectric type. Accessories intended for use with household refrigerators and freezers are also covered under this category.

### INSTALLATION

This equipment is intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household refrigerators, freezers, and combinations thereof are certified in three classes as follows:

**Freestanding** — Intended for open-type installation only, not including stacking, locating in closets, alcoves or other confined spaces.

**Recessed Installation** — Intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

**Built-in Installation** — Recessed-type appliances intended for slide-in installation, into a confined space and trimmed to blend with room decor.

Accessories are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted for requirements relating to connection to water supply lines.

### REBUILT PRODUCTS

This category also covers household refrigerators and freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household refrigerators and freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household refrigerators and freezers are subject to the same requirements as new household refrigerators and freezers.

### PRODUCT MARKINGS

Household refrigerators, freezers, and combinations thereof may be designed to accept accessories in the field. In such cases both the appliance and the accessory are marked to relate the two for proper installation.

A refrigerator, freezer, or combination thereof intended for freestanding use is so marked on the unit. Each appliance intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Accessory for Household Freezer
- Accessory for Household Refrigerator
- Household Freezer
- Household Refrigerator

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product identity.

### RELATED PRODUCTS

Household freezers may be covered under Household Freezers Certified for Canada (SHMR7) until August 21, 2016.

Refrigerators, freezers, and combinations thereof for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers Certified for Canada (SKKQ7).

Refrigerators, freezers, and combinations thereof for commercial use are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Refrigerators in combination with ranges, microwave ovens and/or sinks are covered under Kitchen Units, Refrigerated Certified for Canada (SJPT7).

Products Verified for energy efficiency are covered under Refrigerators, Freezers and Wine Chillers, Household Verified for Energy Efficiency (ZZL).

### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 63, "Household Refrigerators and Freezers," or CAN/CSA-C22.2 No. 60335-1 (2011), "Safety of Household and Similar Appliances - Part 1: General Requirements," and CAN/CSA-C22.2 No. 60335-2-24

—Continued

(2006), "Safety Requirements for Household and Similar Electrical Appliances, Part 2: Particular Requirements for Refrigerating Appliances, Ice-Cream Appliances and Ice-Makers."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Refrigerator," "Accessory for Household Refrigerator," "Household Freezer" or "Accessory for Household Freezer."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## ICE CREAM MAKERS CERTIFIED FOR CANADA (SINX7)

### GENERAL

This category covers equipment intended for preparing products such as hard ice cream, soft-serve ice cream, milk shakes and sherbets, and may include means for dispensing the product directly into containers. These products may be self-contained or sectional. Accessories intended for use with ice cream makers are also covered under this category.

### INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA-B52, "Mechanical Refrigeration Code."

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in CAN/CSA-B52, but are included in ASHRAE 34-1992 (amendment), "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in CAN/CSA-B52, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in CAN/CSA-B52 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by CAN/CSA-B52 and have been determined to be nonflammable or practically nonflammable.

Unitary ice cream makers consist of a complete factory-assembled and factory-tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice cream maker is a unitary ice cream maker consisting of a completely factory-assembled and factory-tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water-supply and waste-disposal lines.

### PRODUCT MARKINGS

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

Equipment or sections of the equipment suitable for outdoor use are so marked. Units not so marked are for indoor use only.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the ice cream maker and the accessory are marked to relate the two for proper installation.

### PRODUCT IDENTITY

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ice Cream Maker," "Section of Ice Cream Maker" or "Accessory for Ice Cream Maker."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ICE MAKERS CERTIFIED FOR CANADA  
(SJBV7)**

**GENERAL**

This category covers devices that automatically manufacture and harvest ice in cube, flake, or other readily usable form, with or without provision for storage or means of dispensing ice. These products may be self-contained or sectional. Accessories intended for use with ice makers are also covered under this category.

This category does not cover tray type ice makers, ice vending machines, or ice makers and ice maker kits used in household refrigerators and freezers. See **RELATED PRODUCTS** below.

**INSTALLATION**

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA B52, "Mechanical Refrigeration Code."

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in CAN/CSA B52, but are included in ASHRAE 34 (1992) (amendment), "Designation and Safety Classification of Refrigerants." REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

650

**KITCHEN UNITS, REFRIGERATED  
CERTIFIED FOR CANADA (SJPT7)**

**GENERAL**

This category covers refrigerators rated 250 V or less in combination with ranges, microwave ovens and/or sink units. Accessories intended for use with refrigerated kitchen units are also covered under this category.

**INSTALLATION**

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." The equipment is investigated and tested to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines, if applicable. Equipment connected to plumbing is intended for permanent connection to the source of supply.

**PRODUCT MARKINGS**

Kitchen units intended for recessed installation are marked to indicate the installation clearances.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the refrigerated kitchen unit and the accessory are marked to relate the two for proper installation.

**PRODUCT IDENTITY**

Household freezers are covered under Household Freezers Certified for Canada (SHMR7).

Refrigerators intended for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers Certified for Canada (SKKQ7).

Refrigerators intended for commercial use are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 63, "Household Refrigerators and Freezers."

The basic standard used to investigate the electric range portion of products in this category is CAN/CSA-C22.2 No. 61, "Household Cooking Ranges."

The basic standard used to investigate the microwave oven portion of products in this category is CAN/CSA-C22.2 No. 150, "Microwave Ovens."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerated Kitchen Unit" or "Accessory for Refrigerated Kitchen Unit."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECREATIONAL VEHICLE  
REFRIGERATORS AND FREEZERS  
CERTIFIED FOR CANADA (SKKQ7)**

**GENERAL**

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

—Continued

This category covers refrigerators, freezers, and combination refrigerator-freezers, rated 250 V or less ac and/or 30 V or less dc, intended for use in recreational vehicles. These products are electrically operated, self-contained devices consisting of a complete refrigeration system that may be of the mechanical compression type, absorption type or thermoelectric type. These products are not gas-fired.

**INSTALLATION**

These products are certified in two classes as follows:

**Freestanding** — A unit designed for installation in other than a confined space. Each unit intended for freestanding installation is so marked.

**Recessed** — A unit designed for installation in a confined space. Each unit intended for recessed installation has specified installation clearances, if clearances are required, marked on the unit. These units are also suitable for freestanding installation.

These products are intended for installation in accordance with the manufacturer's instructions and as marked on the product. They are intended to be secured to the recreational vehicle structure. Authorities Having Jurisdiction and applicable codes should be consulted as to the requirements for this equipment with respect to installation and use. Such codes include: CAN/CSA-C22.1, "Canadian Electrical Code, Part I," CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," CSA-Z240 RV Series, "Recreational Vehicles Code," and CSA/CSA B52, "Mechanical Refrigeration Code."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Recreational Vehicle Freezer  
Recreational Vehicle Refrigerator

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Electric household refrigerators and freezers are covered under Household Refrigerators and Freezers Certified for Canada (SHZZ7) and Household Freezers Certified for Canada (SHMR7), respectively.

Gas-fired or combination gas/electric recreational vehicle refrigerators are covered under Refrigerators Using Gas Fuel Certified for Canada (LPHR7).

See Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 63, "Household Refrigerators and Freezers."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Recreational Vehicle Refrigerator" or "Recreational Vehicle Freezer," or other appropriate product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**REFRIGERANT-CONTAINING  
COMPONENTS CERTIFIED FOR CANADA  
(SKQZ7)**

**Accumulators, Refrigerant Certified for Canada  
(SKXY7)**

**USE**

This category covers accumulators, which are storage chambers intended for low-side liquid refrigerant, and may be referred to as surge drums or

–Continued

surge headers. Refrigerant accumulators may also be pressure vessels whose volume is used in a refrigerant circuit to reduce pulsation.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the accumulator or on the carton or container in which the accumulator is shipped, or on a separate sheet or a specification tag included in each carton or container.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Refrigerant Accumulator

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Accumulator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Compressors, Refrigerant, Open Type, Remanufactured Certified for Canada (SLRG7)**

**GENERAL**

This category covers open-type remanufactured refrigerant compressors with a shaft or other moving part extending through its casing to be driven by an outside source of power thus requiring a shaft seal or equivalent rubbing contact between a fixed and moving part.

The performance of these devices when incorporated in an air conditioning or refrigeration system has not been investigated.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name.

The catalog number, type of refrigerant used and design pressure are marked on either the refrigerant compressor or on the carton or container in which the refrigerant compressor is shipped, or on a separate sheet or a specification tag included in each carton or container.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Remanufactured Open-type Refrigerant Compressor

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

–Continued

Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Remanufactured Open Type Refrigerant Compressor."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Condensers, Refrigerant Certified for Canada (SLSV7)**

**GENERAL**

This category covers refrigerant condensers intended to liquefy refrigerant vapor by removal of heat. They are air-cooled, evaporative or water-cooled types. Water-cooled types have not been investigated for use as water heaters. Water-cooled assemblies are shell-and-tube or tube-in-tube type.

**PRODUCT MARKINGS**

All condensers are marked with the manufacturer's name, model number and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Refrigerant condensers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and attached to the unit cooler that reads "The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in CAN/CSA B52 for the charged refrigerant. After charging, mark the installed equipment with the refrigerant type and oil used," or equivalent.

Finned tube assemblies incorporating a motor-driven fan (forced-air-cooled units) are also marked with the electrical rating. Forced-air-cooled condensers suitable for outdoor installation are so marked.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Refrigerant Condenser

**RELATED PRODUCTS**

Water-cooled condensers intended for use as water heaters are covered under Refrigerant Heat Recovery Equipment Certified for Canada (SOMU7) or Heat Reclaimers, Refrigerant Certified for Canada (SNLT7).

Condenser receivers are covered under Receivers, Refrigerant Certified for Canada (SOJV7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate forced-air-cooled condensers in this category is CAN/CSA-C22.2 No. 236, "Heating and Cooling Equipment."

The basic standard used to investigate all other condensers in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Condenser."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

652

**Driers, Filters and Strainers, Refrigerant Certified for Canada (SMGT7)**

**USE**

This category covers driers, filters and strainers.

A drier is a device containing a desiccant, the primary purpose of which is to collect and hold within the desiccant all water in the refrigerant system in excess of the amount that can be tolerated in the circulating refrigerant.

A filter is a device intended to remove solid material from the refrigerant.

A strainer is a device intended to withhold foreign matter from flowing liquid or gas refrigerant.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Driers, filters and strainers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Refrigerant Drier
- Refrigerant Filter
- Refrigerant Filter-Drier
- Refrigerant Strainer

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Refrigerant Filter," "Refrigerant Filter-Drier," "Refrigerant Strainer," "Refrigerant Drier," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Evaporators, Refrigerant Certified for Canada (SMUR7)**

**USE**

This category covers refrigerant evaporators intended to vaporize liquid refrigerant to produce refrigeration.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressure.

Evaporators not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped or on a separate sheet or tag of specification included in each carton or container.

**PRODUCT IDENTITY**

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

—Continued

The following product identity appears on the product:  
Refrigerant Evaporator

**RELATED PRODUCTS**

Evaporators provided with a fan for air circulation and intended for refrigeration purposes are covered under Unit Coolers Certified for Canada (SPLR7). Similar assemblies intended for air conditioning purposes are referenced as fan-coil units and covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Evaporator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Heat Exchangers, Refrigerant Certified for Canada (SNHZ7)**

**USE**

This category covers refrigerant heat exchangers designed to transfer heat between refrigerant in the high side and low side of the system. These devices may also be referred to as heat interchangers.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressure.

Heat exchangers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped or on a separate sheet or tag of specification included in each carton or container.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Refrigerant Heat Exchanger

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, "Refrigerant-Containing Components for Use in Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Refrigerant Heat Exchanger.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### Heat Reclaimers, Refrigerant Certified for Canada (SNLT7)

#### USE AND INSTALLATION

This category covers refrigerant heat reclaimers intended for installation in conjunction with air conditioning or refrigeration systems to extract heat from the refrigerant for heating water. The heat reclaimers consist of a refrigerant-to-water heat exchanger without any water-temperature control components.

Refrigerant heat reclaimers are intended to be installed in accordance with the manufacturer’s installation instructions provided with the heat reclaimer.

The efficiency of the heat reclaimer, the feasibility of interconnection with air conditioning or refrigeration systems, and the effect of the heat reclaimers on the operation of the air conditioning and refrigeration systems have not been investigated.

#### PRODUCT MARKINGS

These products are marked with the manufacturer’s name and model number. Unless provided with a separate marking as indicated below, the products are marked with the type(s) of refrigerant to be used and the refrigerant design pressures.

Heat reclaimers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped or on a separate sheet or tag of specification included in each carton or container.

Heat reclaimers intended for heating potable water are so identified in the individual certifications and by a marking on the heat reclaimer.

#### PRODUCT IDENTITY

The following product identity appears on the product:  
Refrigerant Heat Reclaimer

#### RELATED PRODUCTS

Similar equipment designed for use with specific makes and models of air conditioning or refrigeration systems is covered under Accessories, Air Conditioning Equipment Certified for Canada (ABFY7).

#### ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, “Refrigerant-Containing Components for Use in Electrical Equipment.”

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

#### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Refrigerant Heat Reclaimer.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### Mufflers, Refrigerant Certified for Canada (SNOY7)

#### USE

This category covers refrigerant mufflers located in the compressor discharge line to dampen or remove hot gas pulsations set up by the compressor.

#### PRODUCT MARKINGS

These products are marked with the manufacturer’s name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Refrigerant mufflers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

#### PRODUCT IDENTITY

The following product identity appears on the product:  
Refrigerant Muffler

#### ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, “Refrigerant-Containing Components for Use in Electrical Equipment.”

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

#### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Refrigerant Muffler.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### Oil Separators, Refrigerant Certified for Canada (SNVX7)

#### USE

This category covers refrigerant oil separators intended to separate oil and oil vapor from the refrigerant and usually installed in the compressor discharge line.

#### PRODUCT MARKINGS

These products are marked with the manufacturer’s name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Refrigerant oil separators not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

#### PRODUCT IDENTITY

The following product identity appears on the product:  
Refrigerant Oil Separator

#### ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, “Refrigerant-Containing Components for Use in Electrical Equipment.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Receivers, Refrigerant Certified for Canada  
(SOJV7)**

**USE**

This category covers shell-type receivers and condenser receivers permanently connected to an air conditioning or refrigeration system and intended for the storage of liquid refrigerant. These devices may additionally serve as condensers.

**PRODUCT MARKINGS**

These products are marked with the manufacturer’s name. Unless provided with a separate marking as indicated below, the products are marked with the catalog number, type(s) of refrigerant to be used and the refrigerant design pressures.

Refrigerant receivers not marked to indicate the catalog number, type of refrigerant used and design pressure are provided with a marking that may appear on the carton or container in which the component is shipped, or on a separate sheet or tag of specification included in each carton or container.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Condenser-Receiver
- Refrigerant Receiver

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 140.3, “Refrigerant-Containing Components for Use in Electrical Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Refrigerant Receiver” or “Condenser-Receiver.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**REFRIGERATED MEDICAL EQUIPMENT  
CERTIFIED FOR CANADA (SOPT7)**

**GENERAL**

This category covers self-contained, refrigerated medical equipment such as oxygen therapy and thermia devices designated for professional use by

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

–Continued

personnel in hospitals, nursing homes, medical care centers, medical offices and similar health care facilities.

This equipment has been investigated for electric shock, fire and mechanical hazards. Other risks, including those that may result from use of this equipment in the presence of flammable anesthetics, have not been investigated.

**INSTALLATION**

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

This equipment has been investigated to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

Oxygen therapy equipment has been investigated with respect to the increased risks resulting from the presence of oxygen and electrical parts within the equipment. In view of the practical design features it is essential for safety that all possible sources of ignition be kept away from these devices. Possible sources of ignition, against which precautions should be taken, include open flames, matches, cigarettes, accumulations of static electricity and reducing valves on oxygen tanks which occasionally project flame or sparks due to ignition or explosion of rubber valve seats. The canopy (tent), reducing valve, oxygen cylinders, etc., used with oxygen therapy equipment have not been investigated nor covered as part of the certified equipment.

**FACTORS NOT INVESTIGATED**

The effects on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Refrigerated Medical Equipment
- Refrigerated Oxygen Therapy Equipment

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Equipment investigated to determine its suitability or safety for use where a flammable anesthetic is likely to be present is covered under Medical Equipment for Use in Hazardous Locations Certified for Canada (PINR7).

Nonrefrigerated medical equipment is covered under Medical Equipment Certified for Canada (PIDF7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 120, “Refrigeration Equipment,” and CAN/CSA-C22.2 No. 601.1, “Medical Electrical Equipment, Part 1: General Requirements for Safety.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY**

**Alternate UL Mark  
UL MARK**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

## REFRIGERATION EQUIPMENT ACCESSORIES CERTIFIED FOR CANADA (SOSR7)

### USE AND INSTALLATION

This category covers devices investigated for installation on certified refrigeration equipment only as optional accessories, in accordance with the designation on the nameplate of the accessory and in the individual certification of the accessory. These accessories are rated 600 V ac or less, and are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

### ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 120, "Refrigeration Equipment," and CSA-C22.2 No. 128, "Vending Machines."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

\* ACCESSORY  
FOR USE WITH \*\* UL CERTIFIED MODEL \*\*\*  
#  
or  
\* ACCESSORY  
FOR USE WITH \*\* UL CERTIFIED ##

# Category of Listed equipment  
## Specific type or characteristic of equipment in the category  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## REFRIGERATORS AND FREEZERS, SPECIAL PURPOSE CERTIFIED FOR CANADA (SOVQ7)

### GENERAL

This category covers equipment designed for special purposes, such as environmental chambers, flammable-materials-storage refrigerators, plant-growth chambers, and self-contained refrigerators and freezers intended for use in laboratories in commercial occupancies.

### INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," and CAN/CSA B52, "Mechanical Refrigeration Code."

For permanently connected equipment, the proper method of electrical installation (number of branch circuits, disconnects, etc.) is shown on the wiring diagram and/or marking required to be attached to the unit.

Flammable-materials-storage refrigerators are marked to indicate that they are acceptable for storage of flammable liquids.

### PRODUCT MARKINGS

Laboratory refrigerators and freezers may use an ASHRAE 34 refrigerant, classified A3, as an additive. In accordance with System Application Rule (j) of Table 2 in CAN/CSA B52, use of A3 refrigerants is prohibited except in laboratories in commercial occupancies. Laboratory refrigerators are marked "This unit is intended for use in laboratories in commercial occupancies as defined in CAN/CSA B52."

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Environmental Chamber
- Laboratory Refrigerator
- Special-purpose Refrigerator and/or Freezer

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Refrigerators and freezers investigated to determine suitability for use in hazardous (classified) locations are covered under Commercial Refrigerators and Freezers for Use in Hazardous Locations Certified for Canada (STRV7).

Products investigated for storage of flammable or combustible liquids in excess of 10 gal are covered under Flammable-liquid Storage Cabinets Certified for Canada (EDJZ7).

Commercial refrigerators and freezers are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

### ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, "Refrigeration Equipment."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Special Purpose Refrigerator and/or Freezer," "Laboratory Refrigerator" or "Environmental Chamber," or other appropriate product name shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## UNIT COOLERS CERTIFIED FOR CANADA (SPLR7)

### USE

This category covers unit coolers, which are direct-cooling, factory-made encased assemblies, consisting of a cooling element, fan(s) and motor(s),

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

656

–Continued

intended for the free circulation of air for refrigeration purposes. They may also incorporate means for defrosting of the cooling element.

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

This equipment is intended for use in refrigeration systems charged with the refrigerant indicated on the device, but has not been investigated from the standpoint of operation when associated with other equipment used to form the complete refrigeration system.

**PRODUCT MARKINGS**

These products are marked with the manufacturer’s name, model number, electrical rating, design pressure and the type(s) of refrigerant to be used.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Unit Cooler

**RELATED PRODUCTS**

Equipment intended for air-conditioning purposes is referenced as fan-coil units and covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, “Refrigeration Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Unit Cooler.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**UNITS, REFRIGERATING CERTIFIED FOR CANADA (SPYZ7)**

**GENERAL**

This category covers complete refrigeration systems consisting of a hermetic motor compressor, condenser, evaporator, refrigerant control, electrical controls, wiring and associated refrigerant-containing components including tubing and may include a defrost system. These systems are primarily used to refrigerate cooling rooms and warehouses intended for the storage of food and other perishable products. These products may be self-contained or sectional. Accessories intended for use with refrigerating units are also covered under this category.

**INSTALLATION**

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

Refrigerating units consist of one or more factory-made sections. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

Accessories for refrigerating units are provided with instructions for installation into the product.

**PRODUCT MARKINGS**

The condensing sections of refrigerating units suitable for outdoor installation are so marked. Sections not marked as suitable for outdoor installation are for indoor use only.

Refrigerating units may be designed to accept accessories in the field. In such cases both the refrigerating unit and the accessory are marked to relate the two for proper installation.

**REBUILT PRODUCTS**

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

–Continued

This category also covers refrigerating units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerating units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt refrigerating units are subject to the same requirements as new refrigerating units.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Accessory for Refrigerating Unit (for each part of a refrigerating unit shipped separately from the factory, the function of which supplements or modifies the basic operation of the refrigerating unit)

Refrigerating Unit (for a self contained unit)

Section of Refrigerating Unit (for a part or device, the function of which is essential to the basic operation of the refrigerating unit)

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product identity.

**RELATED PRODUCTS**

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers Certified for Canada (SGKW7).

Nonelectrical insulated wall panels are covered under Building Units Certified for Canada (BLBT7).

Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies Certified for Canada (EDIT7).

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 120, “Refrigeration Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Refrigerating Unit” (for a self contained unit), “Section of Refrigerating Unit” (for a part or device, the function of which is essential to the basic operation of the refrigerating unit) or “Accessory for Refrigerating Unit” (for each part of a refrigerating unit shipped separately from the factory, the function of which supplements or modifies the basic operation of the refrigerating unit).

For rebuilt products the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VENDING MACHINES, REFRIGERATED CERTIFIED FOR CANADA (SQMX7)**

**GENERAL**

This category covers refrigerated vending machines designed for connection to alternating-current circuits rated not more than 600 V, and which incorporate refrigeration systems of the air-cooled or water-cooled type employing hermetic refrigerant motor-compressors.

This equipment consists of a complete refrigeration system and associated electrical controls for the system and for delivery of the product.

Accessories, such as a coin/currency mechanism and debit/credit card readers, may be field installed if the vending machine is marked to specify the types of accessories that are acceptable.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Where the equipment employs connection to a compressed carbon dioxide source, this category does not cover compressed carbon dioxide cylinders.

REFRIGERATION EQUIPMENT CERTIFIED FOR CANADA  
(SCER7)

–Continued

Some of this equipment employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

The burglary and theft features of these machines have not been investigated unless specifically indicated in the individual certifications.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

The venders are marked on or adjacent to the electrical rating plate with one of the following: "For Indoor Use Only," "Suitable for Protected Locations – See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on a vender intended for use in a protected location, indicating the manufacturer's recommendations concerning the use and/or installation of any canopies, marquees, shelters, etc., which may be necessary for the protection of the vender. The instructions may be located inside the vender if they are accessible through the front door.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Refrigerated Vending Machine

**RELATED PRODUCTS**

For certifications of machines that vend nonrefrigerated products, see Vending Machines Certified for Canada (YWXV7) or the specific category covering the equipment involved.

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 128, "Vending Machines."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. \*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WATER COOLERS CERTIFIED FOR CANADA (SRAV7)**

**Drinking-water Coolers Certified for Canada (SRJX7)**

**GENERAL**

This category covers bottle- and pressure-type drinking-water coolers rated up to 250 V. These coolers are provided with a complete refrigeration system and associated electrical controls, and may also include means for heating water.

These products may contain water purification parts or system(s). However, the parts or system(s) used to purify the water have not been investigated to determine their effectiveness in purifying water unless specifically stated in the individual certifications.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

**PRODUCT MARKINGS**

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

**PRODUCT IDENTITY**

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**COMMERCIAL PROCESSING LIQUID COOLERS CERTIFIED FOR CANADA (SRFR7)**

**GENERAL**

This category covers coolers intended to condition water or other fluids used for developing photographic film, cooling or thawing bulk product, cooling medical equipment, such as magnetic resonance imagers (MRI) or computer axial topography (CAT) scanners, and similar processes. The fluids intended for use in these coolers are limited to glycol, water, and water with additives. These coolers are not intended for the cooling of potable water. These units are provided with a complete refrigeration system and associated electrical controls and may also incorporate means for heating and circulating the water or other fluid.

If intended to be connected to the water supply, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

**PRODUCT MARKINGS**

These water coolers are marked with the manufacturer's name, model number, electrical rating, the refrigerant type, and the high- and low-side design pressures.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Commercial Processing Liquid Cooler

**RELATED PRODUCTS**

**SPECIALTY REFRIGERATION EQUIPMENT  
CERTIFIED FOR CANADA (SROT7)**

**GENERAL**

This category covers specialty refrigeration equipment. Compressor-evaporator units covered under this category are rated 135,000 Btu/h or less and include one or more compressors and evaporators with interconnecting refrigerant piping and with associated controls and wiring. These units are intended for field connection to a remote condenser having a marked working pressure not less than designated by the marking on the unit nameplate. The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Food Service Cart

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Refrigeration Equipment Certified for Canada (SCER7), Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7), Heating, Cooling, Ventilating and Cooking Equipment Certified for Canada (AAHC7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WATER COOLERS FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR  
CANADA (SUFT7)**

**GENERAL**

This category covers bottled water and line water-supplied types of water coolers.

These appliances are self-contained units with a complete refrigeration system and associated electrical controls. The refrigeration system has provision for connection to threaded rigid conduit.

Safety may be affected if the manufacturer’s installation instructions are not followed.

Appliances intended to be connected to external water sources have not been investigated with respect to pollution of water supply through reverse action due to low water pressure or other reasons.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Water Cooler for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAI7).

**ACCESSORIES, REFRIGERATION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (STFZ7)**

**Controllers, Refrigeration for Use in Zone Classified Hazardous Locations Certified for Canada (STGN7)**

**GENERAL**

This category covers temperature- and pressure-operated controllers.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 24-93, “Temperature-Indicating and -Regulating Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ7).

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Refrigeration Controller for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES CERTIFIED FOR CANADA (SYKJ7)**

**GENERAL**

This category covers products that include equipment for initiating, controlling and indicating signals pertaining to the protection of life and

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES CERTIFIED FOR CANADA (SYKJ7)**

property against fire, and that are intended to be installed, maintained, and operated as system arrangements in accordance with CAN/ULC-S524, “Installation of Fire Alarm Systems.”

Users of this equipment should consult Authorities Having Jurisdiction (AHJ) concerning the particular types to be used, number and location of stations, character and installation of wiring, methods to be followed in the receipt and disposition of signals, keeping of records, rendering of reports, and all other details having a bearing on adequate installation, maintenance and use of the system to be employed.

Certified protective fire alarm equipment is subjected to investigation to determine its suitability for its intended service and for installation, maintenance, and use in accordance with the applicable standard with particular regard to design and construction, practicability of application and reliability of performance, in addition to the possible electrical hazards involved in its use.

This equipment may be used in different combinations as system assemblies. All parts of such an assembly may be of one manufacture or of different manufactures. Special equipment designed for use with other particular equipment is indicated in the individual certifications.

A complete system is considered to be a combination of interrelated signal-initiating devices, signal-transmitting devices, signal-indicating devices and control unit installed in a protected premise in accordance with regulations enforced by the AHJ who determines the suitability of the installation for its particular application. This category covers only the equipment intended to be installed to form these systems and not to the systems as installed.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELEASING DEVICE EQUIPMENT CERTIFIED FOR CANADA (SYLX7)**

Releasing devices with accessory equipment are designed to release operating weights or air or water under pressure in the functioning of fire protection and fire alarm equipment.

They are available in both heat responsive (automatic) and manual types. The heat responsive types may be had in either fixed temperature or rate-of-rise types or a combination of these two.

The heat responsive portions of releasing devices are integral parts of some patterns. In other patterns they are separate parts, such as air chambers which are mounted in the fire area and connected by small-bore tubing to the releasing device; or thermostatically-operated electric switches (heat detectors) mounted in the fire area and connected by an electric wiring circuit to the releasing device. Devices which have normally open contacts are listed as Heat - Automatic Fire Detectors and those which have normally closed contacts are listed as Heat Detectors for Releasing Device Service.

Proper location and spacing of the auxiliary heat responsive devices (heat detectors, air chambers, tubing, etc.) involve consideration of service conditions throughout the area to be protected - such as ceiling construction, subdivisions of areas (including closets, small rooms, etc.) normal temperatures, high temperatures (if existent), resulting from manufacturing processes or other causes and draft conditions. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations. Individual listings should be consulted for details of spacing and location of the heat responsive devices.

The inspection authority having jurisdiction should be consulted in all cases before installation of systems or devices.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Accessories, Releasing Device Certified for Canada (SYSW7)**

**GENERAL**

This category covers accessory equipment intended to be used in conjunction with other suitable releasing-device equipment as indicated in the individual certifications to form part of a releasing-device system.

**PRODUCT MARKINGS**

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES  
CERTIFIED FOR CANADA (SYKJ7)**

Each product is marked to indicate its intended use. This consists of the term “Releasing Device” and the specific use description as indicated in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

- Fire Alarm and Security Equipment (for products where the word “SECURITY” is included in the Certification Mark)
- Fire Alarm and Security Equipment Subassembly (for products where the word “SECURITY” is included in the Certification Mark)
- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type EM (for Enclosed Energy Management Equipment)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)
- Type HN (for Hospital Signaling and Nurse Call Equipment)
- Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)
- Type IT (for Information Technology Equipment)
- Type IT Subassembly (for Information Technology Equipment Subassembly)
- Type S (for Security Equipment)
- Type S Subassembly (for Security Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

Where model numbers are indicated in the individual certifications, 100% of the manufacturer’s production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

**ADDITIONAL INFORMATION**

For additional information, see Releasing Device Equipment Certified for Canada (SYLX7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC-S527, “Control Units for Fire Alarm Systems.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word “SECURITY” is included in the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is “Fire Alarm and Security Equipment” or “Fire Alarm and Security Subassembly.”

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,”

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Releasing Devices Certified for Canada (SZNT7)**

**GENERAL**

This category covers releasing devices intended for use 1) in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual certifications, and 2) as a means of releasing air or water

–Continued

under pressure from a piping system and confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

A releasing device and its associated detection system may be adjusted to compensate for more or less severe ambient temperature changes by different settings of the release or by varying the size of the compensating vents in the system to increase or decrease the rate of pressure build-up caused by exposure to some given temperature rise. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Releasing Device” and the specific use description as indicated in the individual certifications.

**AUDIBLE-SIGNAL APPLIANCES CERTIFIED FOR CANADA (ULSZ7)**

**GENERAL**

This category covers electrically operated bells, buzzers, horns and similar signal-sounding appliances for fire-protective signaling service.

These appliances are not to be confused with audible-signal appliances for general signaling (nonfire alarm) use, which are covered under Audible-signal Appliances, General Signal Certified for Canada (UCST7).

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Audible Signal Appliance for Fire Alarm Service,” “Audible Signaling Appliance for Fire Alarm Service – Private Mode Only,” “Audible Signal Appliance Accessory” or “Audible Signaling Appliance for Fire Alarm Service Subassembly.”

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:  
Fire Alarm Equipment  
Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling categories. When applicable, the product identity may include “and General Signaling” or “and Emergency Signaling,” as appropriate (e.g., Fire Alarm and Emergency Signaling Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S525, “Audible Signal Devices for Fire Alarm Systems, Including Accessories.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

**BOXES, MANUALLY ACTUATED CERTIFIED FOR CANADA (UMGX7)**

A manually actuated box is an enclosed unit assembly of a mechanism having electrical contacts designed to transmit a signal when an integral part is operated manually. The signaling contacts are intended to be connected to circuits of private fire protective signaling systems.

**Boxes, Noncoded Certified for Canada (UNIU7)**

**GENERAL**

This category covers non-coded fire alarm boxes, which are boxes having electrical contacts actuated to change their normal position when a part is operated manually so as to produce a non-coded signal. This category also covers protective covers for fire alarm boxes.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Non-coded Alarm Box,” “Non-coded Watchman’s Station,” “Non-coded Fire and Watch Station,” “Alarm Back Box,” “Alarm Box Trim” or “Alarm Box Protective Cover.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Fire Alarm Equipment  
Fire Alarm Equipment Subassembly  
Type F (for Fire Alarm Equipment)  
Type F Subassembly (for Fire Alarm Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S528, “Manual Stations for Fire Alarm Systems, Including Accessories.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

**Alternate UL Mark

–Continued

F – Fire Alarm Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CONTROL UNITS, SYSTEM CERTIFIED FOR CANADA (UOJZ7)**

**GENERAL**

This category covers electrical control units for fire-protective signaling systems to be employed in indoor locations.

Products investigated for outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

A control unit consists of a unit assembly of electrical parts having provision for connection of power-supply circuits routed through the control unit equipment by a prescribed scheme of circuiting. The circuits are extended to separate devices by which the operating parts of the control units are actuated for signals and to separate or incorporated appliances by which the signals are indicated, so as to form a coordinated system combination for definite signaling services.

The Listee of a control unit furnishes the related actuating devices and signal-indicating appliances for use with the control unit or indicates the particular devices and appliances required and supplies any instructions necessary to complete their interconnection at the installation.

The individual Listings indicate that wiring diagrams have been submitted with the control unit, along with information regarding its intended application, and the unit has been tested with representative actuating devices and signal-indicating devices to be used with it as an interrelated assembly. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

Identification of the information in the individual certifications is as follows:

Local System Type (L)

**System Control Unit with Emergency Voice Communication** — A system control unit with emergency voice communication consists of a control unit that employs a speaker system in lieu of conventional general alarm-indicating circuits. The control unit may also have additional provision for telephone communication by use of hand sets. A tape deck with a prerecorded message may also be employed as a supplementary feature.

**System Control Unit with Emergency Telephone Communication** — A system control unit with emergency telephone communication consists of a control unit with conventional general alarm-indicating circuits and additionally employs telephone communication circuits to remote telephone hand sets for emergency communication during a fire condition, usually for use by fire department personnel.

The types of devices that can be connected for the service indicated in the individual certifications for each type control unit are as follows:

- A – Automatic fire alarm: Thermostats, smoke detectors, etc.
- M – Manual fire alarm: Manually operated boxes
- WF – Waterflow alarm: Waterflow switches
- SS – Supervisory: Gate valves, water-level switches, temperature switches, etc.
- WSS – Watchman’s supervisory service

The type of signaling service applicable to each type control unit is as follows: C – Coded; NC – Non-Coded; M – March Time; MX – Multiplex; RF – Radio Frequency; DAC – Digital Alarm Communicator.

- C – Coded
- NC – Noncoded
- M – March Time
- MX – Multiplex

Where more than one type of control unit is indicated for a model number, such as Type Fire Alarm (L, LS, A, RS), that particular model is suitable for all the indicated applications. The change from one type to another may be made by deletion or addition of a panel or module inside the control unit cabinet or revisions to operating software to provide the additional function. In other cases a control unit may be suitable for a dual function without any panel changes, such as a Type Fire Alarm (P, RS).

Authorities Having Jurisdiction should be consulted before installation or revision.

**PRODUCT MARKINGS**

Each complete product is marked to indicate its intended use. This consists of the word “Commercial,” followed by “Protected-Premises Control Unit,” consistent with the description in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

Fire Alarm and Security Equipment (for products where the word “SECURITY” is included in the Certification Mark)

Fire Alarm and Security Equipment Subassembly (for products where the word “SECURITY” is included in the Certification Mark)

Fire Alarm Equipment

Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

Type E (for Emergency Signaling Equipment)

Type E Subassembly (for Emergency Signaling Equipment Subassembly)

Type EM (for Enclosed Energy Management Equipment)

Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)

Type F (for Fire Alarm Equipment)

Type F Subassembly (for Fire Alarm Equipment Subassembly)

Type G (for General Signaling Equipment)

Type G Subassembly (for General Signaling Equipment Subassembly)

Type HN (for Hospital Signaling and Nurse Call Equipment)

Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)

Type IT (for Information Technology Equipment)

Type IT Subassembly (for Information Technology Equipment Subassembly)

Type S (for Security Equipment)

Type S Subassembly (for Security Equipment Subassembly)

Type T (for Telephone Equipment)

Type T Subassembly (for Telephone Equipment Subassembly)

Where model numbers are indicated in the individual certifications, 100% of the manufacturer’s production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC-S527, “Control Units for Fire Alarm Systems.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

The Certification Mark for fire alarm equipment may include the designation “\_\_\_ of \_\_\_.” The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

For products additionally investigated with respect to security applications, the word “SECURITY” is included in the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

The Listing Mark for fire alarm equipment may include the designation “\_\_\_ of \_\_\_.” The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is “Fire Alarm and Security Equipment” or “Fire Alarm and Security Subassembly.”

—Continued

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., “Fire Alarm and Telephone Equipment”).

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**

- S – Security Equipment
- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment
- EM – Enclosed Energy Management Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer’s production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CONTROL UNIT ACCESSORIES, SYSTEM  
CERTIFIED FOR CANADA (UOXX7)**

**GENERAL**

This category covers electrical units intended for use with fire-protective signaling systems employed in indoor locations in accordance with Section 32 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

- Fire Alarm and Security Equipment (for products where the word “SECURITY” is included in the Certification Mark)
- Fire Alarm and Security Equipment Subassembly (for products where the word “SECURITY” is included in the Certification Mark)
- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type EM (for Enclosed Energy Management Equipment)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)
- Type HN (for Hospital Signaling and Nurse Call Equipment)
- Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)
- Type IT (for Information Technology Equipment)
- Type IT Subassembly (for Information Technology Equipment Subassembly)
- Type S (for Security Equipment)
- Type S Subassembly (for Security Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

—Continued

Where model numbers are indicated in the individual certifications, 100% of the manufacturer’s production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Signal and Fire Alarm Equipment and Services Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC-S527, “Control Units for Fire Alarm Systems.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

The Certification Mark for fire alarm equipment may include the designation “\_\_\_ of \_\_\_.” The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

For products additionally investigated with respect to security applications, the word “SECURITY” is included in the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

The Listing Mark for fire alarm equipment may include the designation “\_\_\_ of \_\_\_.” The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is “Fire Alarm and Security Equipment” or “Fire Alarm and Security Subassembly.”

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., “Fire Alarm and Telephone Equipment”).

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**

- S – Security Equipment
- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment
- EM – Enclosed Energy Management Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer’s production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**DETECTORS, AUTOMATIC FIRE CERTIFIED  
FOR CANADA (UPLV7)**

**GENERAL**

This category covers individual devices or prescribed combinations of devices designed to detect flame, heat, smoke or combustion gases result-

Detectors, Automatic Fire Certified for Canada  
(UPLV7)–Continued

–Continued

ing from a fire and to automatically operate electrical contacts. The signaling contacts may be integral parts of an individual device or parts of a separate device to which the detecting element is connected as an extended component.

The signaling contacts of the detector are intended to be connected to the circuit conductors of the fire protective signaling system so that the fire alarm signal initiated by the detector will be indicated by the system.

The type of system (central station, proprietary, auxiliary, remote station or local) with which the detector can be used depends upon the design of the signaling circuit to which the detector contacts are intended to be connected. A detector may have noncoded signaling contacts connected directly to the actuating circuit of system control unit or to the actuating circuit of an electrically operated transmitter, which will transmit coded signals over the signaling line circuit of a local, auxiliary, proprietary, remote station, or central station system.

The wiring diagram of the transmitter or system control unit with which the detector is used will indicate the circuit application of the detector.

A combination-type detector depends upon two or more related but separate pieces of equipment which are designed to be installed together so as to form a complete detector.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Heat-automatic Fire Detectors Certified for Canada (UQGS7)**

**GENERAL**

This category covers thermostat-type automatic fire detectors (known as thermostats), which are integral assemblies of heat-responsive elements and noncoded electrical contacts that function automatically under conditions of increase in air temperature. These thermostats consist of detection heads intended for mounting to compatible component bases having electrical functions, or self-contained units for mounting to standard electrical utility boxes.

Thermostats are of the fixed temperature (F), combination fixed temperature and rate-of-rise (C), or rate compensation (R) type. There are basically two types: (1) A spot-pattern-type thermostat is one in which the thermally-sensitive element is a compact unit of small area; (2) a line-pattern-type thermostat (heat-sensitive cable [HSC]) is one in which the thermally-sensitive element is continuous along a line.

The possible contact configurations of these thermostats are as follows: One-pole, normally open-circuit type (1PNO); one-pole, normally closed-circuit type (1PNC); two-pole open-circuit type (2PNO); two-pole, normally closed-circuit type (2PNC); two-pole, normally open-circuit and closed-circuit type (2PNO/NC). Thermostats with normally open contacts are suitable for use as initiating devices of a fire-protective signaling system. Thermostats with normally closed contacts are suitable for use as the heat-responsive portion of a releasing device system.

These thermostats have been investigated for indoor use only unless otherwise indicated in the individual certifications. Ordinarily, thermostats are intended for locations where normal ceiling temperatures prevail (below 38°C). Locations where temperatures at ceiling are likely to be unduly high (from sources of heat other than fire conditions, such as boiler rooms, dry kilns, etc.) demand special consideration and selection of thermostats operating normally at higher temperatures, and which are capable of withstanding high temperatures for long periods of time. Care should be exercised to select thermostats having the proper temperature rating to guard against false alarms from premature operation:

- For ceiling temperatures not exceeding 38°C, install 71°C or equivalent (ordinary) rating thermostats
- For ceiling temperatures exceeding 38°C, but not 66°C, install 100°C or equivalent (intermediate) rating thermostats
- For ceiling temperatures exceeding 66°C, but not 107°C, install 141°C or equivalent (high) rating thermostats
- For ceiling temperatures exceeding 107°C, but not 149°C, install 182°C or equivalent (extra high) rating thermostats

The response sensitivity of thermostats to standard test fires is indicated by the "spacing" rating. The spacing rating is the maximum distance between adjacent thermostats installed on a symmetrical layout with the maximum right-angle distance to any wall or partition one-half the distance between thermostats. The fire tests conducted on thermostats are based on only one set of conditions, typically a 5-m high smooth ceiling, no air movement, and no physical obstructions between the fire source and the thermostat. Under other conditions and forms of ceiling construction, reduced spacing may be required to obtain equivalent performance.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room space area, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment, and to draft conditions likely to be encountered at the time of the fire.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of one of the following:

- For **nonseparable heads and bases**: "Heat Detector"
- For **separable heat detector heads**: "Heat Detector Head for Use with \* UL Listed Base"
- For **separable heat detector bases**: "Automatic Detector Base for Use with \* UL Listed Head"
- For **separable optional bases**: "Automatic Detector Subassembly"
- For **modules**: "Module for Use with \* UL Listed Automatic Detector Base"

\* Company name or File No. (Sxxxx)

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Detectors, Automatic Fire Certified for Canada (UPLV7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S530 (1991), "Heat Actuated Fire Detectors for Fire Alarm Systems."

**UL MARK**

A two-Certification-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Certification Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

A two-Listing-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Listing Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type," followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

**Type Codes:**

- F – Fire Alarm Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Smoke-automatic Fire Detectors Certified for Canada (UROX7)**

**GENERAL**

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units (see APPLICATIONS below).

—Continued

A heat detector and/or an audible-signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

**DETECTOR TYPES**

**Photoelectric (P)** — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

**Ionization (I)** — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

**Combination Photoelectric/Ionization (P/I)** — Employs both principles of detection in one unit.

**Projected Beam (PB)** — A light beam is projected across the space of area to be protected.

**Air Sampling (AS)** — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

**APPLICATIONS**

**Open-area Protection (OAP)** — Requires detector connection to a compatible system control unit for operation.

**Releasing Service (RS)** — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

**Open-area Protection with Releasing Service (OAP/RS)** — Incorporates supplementary switching contacts for additional connection to releasing devices.

**Duct Detector [D (ST)]** — Intended for installation on the side of a duct. Employs sampling tubes that extend into the duct.

**Duct Detector [D (I)]** — For installation inside a duct.

**COMPATIBILITY WITH CONTROL UNITS**

Smoke detectors for open-area protection are intended to be connected to the initiating-device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating device circuit of a system control unit, are compatible with the initiating device circuits of any certified system control unit if (1) failure of the power to the detector is supervised at the control unit, and (2) the smoke detector is powered from a "Regulated" power-supply output, or a "Special Application" power-supply output for which the voltage outputs have been investigated. Compatible models for "Special Application" outputs are indicated on the installation wiring diagram of the control unit and/or detectors.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating-device circuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Certification is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of control unit and/or detectors.

**INSTALLATION**

**Environmental Considerations** — Open-area detectors are intended for indoor use only where normal ceiling temperatures (max 37.8°C (100°F)) prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

**Effect of Velocity** — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests as measured in the duct test apparatus.

**Stability Test** — In view of the innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted

—Continued

(false) alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector may be required.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of one of the following:

For **nonseparable heads and bases**:

1. Smoke Detector (+) for Open Area Protection
2. Smoke Detector (+) for Open Area Protection. Also Suitable for Releasing Device Service.
3. Smoke Detector (+) for Releasing Device Service
4. Smoke Detector (+) for Duct Application

For **separable heads**:

1. Smoke Detector Head (+) for Use with a (\*) UL Listed Base
2. Smoke Detector Head (+) for Open Area Protection When Used with a (\*) UL Listed Base
3. Smoke Detector Head (+) for Open Area Protection When Used with a (\*) UL Listed Base. Also Suitable for Duct Application.
4. Smoke Detector Head (+) for Open Area Protection When Used with a (\*) UL Listed Base. Also Suitable for Releasing Device Service.
5. Smoke Detector Head (+) for Releasing Device Service When Used with a (\*) UL Listed Base
6. Smoke Detector Head (+) for Duct Application When Used with a (\*) UL Listed Base
7. Smoke Detector Head When Used with a (\*) UL Listed Smoke Duct Detector Housing

For **separable bases and duct housing**:

1. Detector Base (+) for Use with a (\*) UL Listed Head
2. Detector Base (+) for Open Area Protection When Used with a (\*) UL Listed Head
3. Detector Base (+) for Open Area Protection When Used with a (\*) UL Listed Head. Also Suitable for Duct Application.
4. Detector Base (+) for Open Area Protection When Used with a (\*) UL Listed Head. Also Suitable for Releasing Device Service.
5. Detector Base (+) for Open Area Protection When Used with a (\*) UL Listed Head. Also Suitable for Releasing Device Service and Duct Application.
6. Detector Base (+) for Releasing Device Service When Used with a (\*) UL Listed Head
7. Smoke-Duct Detector Housing for Use with (\*) UL Listed Head

For **separable system assemblies**:

1. Smoke Detector Projected Beam System Unit
  2. Smoke Detector Air Sampling System Unit
  3. Smoke Detector for Duct Application Subassembly
- + To be inserted when applicable: "with Integral Audible Signal," "with Integral Heat Detector" or "with Integral Audible Signal and Heat Detector"

\* Company name or File No. (Sxxxx)

Detectors marked with the designation "with Integral Audible Signal" include an audible-signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors marked with the designation "with Integral Heat Detector" include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the head detector results in the same alarm signal as obtained from the smoke detector.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

**RELATED PRODUCTS**

Combination door closers and holders incorporating automatic smoke detection components are covered under Combination Fire Door Closers and Holders Certified for Canada (GTIS7).

**ADDITIONAL INFORMATION**

For additional information, see Detectors, Automatic Fire Certified for Canada (UPLV7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S529, "Standard for Smoke Detectors for Fire Alarm Systems."

**UL MARK**

A two-Certification-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Certification Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

**Smoke Detectors for Special Applications Certified  
for Canada (URXG7)**

**USE AND INSTALLATION**

This category covers smoke-automatic fire detectors employing a special construction different from conventional detectors and designed to detect products of combustion in a specific location. These detectors are not intended as a substitute for open-area protection.

These detectors are intended to be installed in accordance with the manufacturer’s installation instructions, such as for extinguishing system applications. The sensitivity rating of the detector should be taken into consideration with regard to installation in an area to be protected under operating conditions to guard against false alarms. The detectors may be connected to the initiating-device circuits of certified control units that provide audible-alarm signals, or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

**Effect of Velocity** — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. Velocity limits for duct detectors are based on response to fire tests in CAN/ULC-S529, “Standard for Smoke Detectors for Fire Alarm Systems.”

**Detector Types**

**Photoelectric (P)** — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

**Ionization (I)** — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

**Combination Photoelectric/Ionization (P/I)** — Employs both principles of detection in one unit.

**Air Sampling (AS)** — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

**PRODUCT MARKINGS**

**EXTINGUISHING SYSTEM ATTACHMENTS  
CERTIFIED FOR CANADA (USQT7)**

**USE AND INSTALLATION**

This category covers devices having electrical signaling contacts and designed for attachment to extinguishing system equipment so as to provide one or more of the following: (1) alarm signals indicating discharge of extinguishing means, (2) supervisory signals indicating abnormal conditions of extinguishing system equipment, (3) supervisory signals indicating restoration to normal of extinguishing system equipment.

These devices may be used with wet-pipe or dry-pipe sprinkler systems as indicated in the individual certifications.

Authorities Having Jurisdiction should be consulted prior to installation.

**ATTACHMENT TYPES**

Extinguishing system attachments are classified as follows:

**Water-flow Alarm Signal Types**

**Alarm or Dry-pipe Valve Attachment** — Mechanically operated on lifting of alarm valve clapper, or pressure operated, by suitable connection to alarm or dry-pipe valve piping trim.

**Water-flow Indicator** — Paddle operated.

The signaling contacts of these attachments may be of the non-coded or coded type:

Non-coded types have contacts that perform a switching function and are intended for connection to actuating circuits of a separate electrically-operated transmitter or to the signaling line circuit of a separate electrical control unit by which their action is indicated. Coded types have contacts that perform a coded signaling impulse function resulting from the operation of a transmitting mechanism, which is a part of the attachment, and are for connection to the signaling line circuit of a separate electrical control unit by which their action is indicated.

Head losses due to hydraulic friction in a paddle-operated water-flow indicator at a flow velocity of 15 ft/sec (4.6 m/sec) do not exceed 3 psig (20.7 kPa) for pipe sizes up to and including 4 in. or 1 psig (6.9 kPa) for pipe sizes exceeding 4 in.

**Special Attachment** — Type not included by the above classification.

**Supervisory Signal Types**

**Valve Position Signal Attachment** — Operated by mechanical linkage to movable parts of a valve.

**Water Level Signal Attachment** — Operated by a tank float.

**Pressure Signal Attachment** — Operated by pressure change of air, steam or water.

**Temperature Signal Attachment** — Operated by water or air temperature change.

**RATINGS**

These devices are intended for use over a working pressure range of 20–175 psig (137.9–1207 kPa), in indoor applications, except as otherwise noted in the individual certifications. They have not been investigated for use in potable water systems, systems where sand or other material is

—Continued

present or systems employing other than water as the extinguishing agent, except as otherwise noted in the individual certifications.

The individual certifications contain information with regard to types, sizes, pressure ratings, special intended usages and other details associated with these devices.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term "Extinguishing System Attachment."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

**RELATED PRODUCTS**

Water flow in extinguishing systems may also be detected by alarm pressure switches or alarm valves, which are covered under Switches, Pressure Certified for Canada (VOXZ7) and Valves, Alarm Certified for Canada (VPLX7), respectively.

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S548, "Devices and Accessories for Water Type Extinguishing Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

**Type Codes:**

F - Fire Alarm Equipment  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**FIRE ALARM DEVICES, SINGLE AND  
MULTIPLE STATION, AND ACCESSORIES  
CERTIFIED FOR CANADA (UTER7)**

The following Listings cover heat actuated type single station fire alarm devices which are normally intended to be employed in ordinary indoor locations.

The levels of toxicity produced by combustibles at which single- and multiple-station fire alarm devices are actuated have not been investigated by UL.

The devices are self-contained units incorporating means for both fire detection and alarm sounding.

A heat sensitive element of eutectic alloy or bimetallic metal is generally employed in the detection mechanism. Energy for sounding the alarm may be obtained from a wound spring or compressed gas.

These heat actuated fire alarm devices are normally employed as separate units in which case they are known as single station devices. However, the units operated by compressed gas may also be connected by tubing with other and similar units. These units are known as multiple station devices. When connected in this manner, the detection of a fire by one unit results in the sounding of an alarm by all units. The spring wound units are not capable of being linked together in this way.

For description of the applicable Listing Mark, refer to the sub-category Single- and Multiple-Station Heat Detectors (UTFS7).

## Single- and Multiple-station Heat Detectors Certified for Canada (UTFS7)

### USE AND INSTALLATION

This category covers single- and multiple-station heat detectors intended for locations where normal ceiling temperatures prevail (below 38°C). For ceiling temperatures not exceeding 38°C, devices having a temperature rating of 58°C are recommended. For ceiling temperatures exceeding 38°C but not 66°C, devices having a temperature rating of 79°C are recommended.

In order to minimize false alarms from premature operation, the operating temperature rating of heat-actuated devices should be appropriate for the maximum ambient temperature expected. Locations where the temperatures at the ceiling level are likely to be unduly high from sources of heat other than fire conditions, such as boiler rooms, require special considerations.

Under these conditions, alarm devices operating normally at higher temperatures and capable of withstanding higher than normal ambient temperatures for long periods of time may be required. Care should be exercised to select alarm devices having the appropriate temperature rating to guard against false alarms from premature operation.

The response sensitivity of heat-actuated fire alarm devices to standard test fires is indicated in the spacing rating assigned to the device. The spacing rating is the maximum distance between adjacent devices installed in a symmetrical layout with the maximum right-angle distance to any wall or partition one-half the distance between the devices.

The spacings specified in the individual certifications are for flat, smooth ceiling construction of ordinary height, generally regarded as the most favorable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling construction, reduced spacing of alarm devices may be required.

The placement and spacing of alarm devices should be based on consideration of the normal ceiling temperatures, possible exposure of the devices to abnormal heat and to the draft conditions likely to be encountered at the time of a fire. Refer to Chapter 2 of ANSI/NFPA 72, "National Fire Alarm Code," for typical locations.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Multiple-station Heat Detector
- Single- and/or Multiple-station Heat Detector
- Single- and/or Multiple-station Heat Detector Accessory
- Single-station Heat Detector

### ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories Certified for Canada (UTER7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C539- (1973), "Guide for the Investigation of Fire Alarm Devices, Single and Multiple Station, Mechanically-Operated Type."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate: "Single Station Heat Detector," "Multiple-Station Heat Detector," "Single- and/or Multiple-Station Heat Detector" or "Single- and/or Multiple-Station Heat Detector Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## Single- and Multiple-station Smoke Alarms Certified for Canada (UTGT7)

USE

—Continued

This category covers single- and multiple-station smoke alarms intended to be employed in ordinary indoor locations. These units are intended only for locations where normal ceiling temperatures between 4.4°C (40°F) and 37.8°C (100°F) prevail.

This category also covers single- and multiple-station smoke alarms that have been performance tested to a minimum 10-year extended battery life under normal ambient conditions.

Smoke alarms are not intended for use in fire alarm systems. In addition, the acceptability of smoke alarms equipped with ancillary features, such as relays, automatic dialers, radio transmitters or interconnections, is subject to approval by the Authority Having Jurisdiction.

### ALARM TYPES

**Single Station** — Self-contained units that incorporate a smoke chamber, an optional heat detector, and related electrical components to initiate an audible alarm signal from the unit when abnormal smoke or heat (when a supplementary heat detector is provided) actuates the unit. These devices may be energized from a commercial power-supply source by means of permanent wiring, flexible power-supply cord, use of limited-energy cable or equivalent wiring connected to the output of a suitable Class 2 power supply, or by one or more batteries.

Where a battery is employed as the main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal which persists for at least seven days.

**Multiple Station** — Similar to single-station units but provided with leads or terminals (or integral RF transmitter/receiver units) to permit the interconnection of single-station so that actuation of any one unit results in actuation of the audible alarms of all units. The installation instructions (manual) indicate the maximum number of units that can be interconnected.

**Travel Alarm** — Consists of a battery-operated smoke alarm provided with a mounting bracket for top of door mounting only. May also consist of a battery-operated single-station smoke alarm with the addition of a mounting bracket. The difference is indicated on the UL Listing Mark.

**Alarm for Recreational Vehicles** — More stringent environmental tests are conducted.

### PRODUCT IDENTITY

One or more of the following product identities appears on the product:

- Multiple-station Smoke Alarm
- Multiple-station Smoke Alarm — Also Suitable as a Commercial Residential Multiple-station Smoke Alarm
- Multiple-station Smoke Alarm — Also Suitable as a Multiple-station Carbon Monoxide Alarm
- Single- and/or Multiple-station Smoke Alarm
- Single- and/or Multiple-station Smoke Alarm — Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm
- Single- and/or Multiple-station Smoke Alarm Accessory
- Single- and/or Multiple-station Smoke Alarm Accessory — Also Suitable for Use as a Household Burglar Warning System Control Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single- and/or Multiple-station Smoke Alarm Accessory — Also Suitable for Use as a Household Burglar Warning System Control Unit, Home Health Care Control Unit, and Signal Appliance Control Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single- and/or Multiple-station Smoke Alarm Accessory — Also Suitable for Use as a Household Burglar Warning System Control Unit Accessory, Personal Call Unit, and Signal Appliance Environment Transmitter (for products where the word "SECURITY" is included in the Certification Mark)
- Single-station Smoke Alarm
- Single-station Smoke Alarm — Also Suitable as a Commercial Residential Smoke Alarm
- Single-station Smoke Alarm — Also Suitable as a Single-station Carbon Monoxide Alarm
- Single-station Smoke Alarm — Also Suitable as a Travel Smoke Alarm
- Single-station Smoke Alarm — Also Suitable for Use in Recreational Vehicles
- Single-station Smoke Alarm Accessory — Also Suitable for Use as a Home Health Care Control Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single-station Smoke Alarm Accessory — Also Suitable for Use as a Household Burglar Alarm Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single-station Smoke Alarm and Household Burglar Alarm Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Single-station Smoke and/or Carbon Monoxide Alarm Accessory — Also Suitable for Use as a Home Health Care Control Unit (for products where the word "SECURITY" is included in the Certification Mark)
- Travel Smoke Alarm

–Continued

Any of the preceding product names may include “for the Hearing Impaired” for products so identified in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S531, “Smoke Alarms.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word “SECURITY” is included in the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate:

- “Single-station Smoke Alarm”
- “Multiple-station Smoke Alarm”
- “Single- and/or Multiple-station Smoke Alarm”
- “Single- and/or Multiple-station Smoke Alarm Accessory”
- “Travel Smoke Alarm”
- “Single-station Smoke Alarm – Also Suitable as a Travel Smoke Alarm”
- “Single-station Smoke Alarm – Also Suitable for Use in Recreational Vehicles”
- “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit”
- “Single-station Smoke Alarm – Also Suitable as a Single-station Carbon Monoxide Alarm”
- “Multiple-station Smoke Alarm – Also Suitable as a Multiple-station Carbon Monoxide Alarm”
- “Single- and/or Multiple-station Smoke Alarm – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm”
- “Single-station Smoke Alarm – Also Suitable as a Commercial Residential Smoke Alarm”
- “Multiple-station Smoke Alarm – Also Suitable as a Commercial Residential Multiple-station Smoke Alarm”

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is one of the following:

- “Single-station Smoke Alarm and Household Burglar Alarm Unit”
- “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit”
- “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit, Home Health Care Control Unit, and Signal Appliance Control Unit”
- “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit Accessory, Personal Call Unit, and Signal Appliance Environment Transmitter”
- “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit”
- “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit”
- “Single-station Smoke and/or Carbon Monoxide Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit”

Any of the preceding product names may include “for the Hearing Impaired” for products so identified in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION CERTIFIED FOR CANADA (UTHV7)**

**USE AND INSTALLATION**

This category covers fixed-temperature, heat-actuated-type detectors employing a special construction different from conventional thermostats and designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with the Authority Having Jurisdiction and CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating device circuits of certified control units that provide audible alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Heat Actuated Device for Special Application,” “Control Unit for Special Application” or “Control Unit Accessory for Special Application.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S530 (1991), “Heat Actuated Fire Detectors for Fire Alarm Systems.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

F – Fire Alarm Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOUSEHOLD FIRE-WARNING SYSTEM UNITS CERTIFIED FOR CANADA (UTLQ7)**

This category covers the individual units that are interconnected to form an electrically-operated household fire-warning system. These units include a main control unit (with integral or separate power supply) and related accessories intended for connection to the control unit.

Additional equipment and materials, such as bells, horns, heat detectors, smoke detectors, and limited-energy fire detector circuit wiring, may be required in various applications to complete a system. Such products are covered under Audible-signal Appliances Certified for Canada (ULSZ7), Smoke-automatic Fire Detectors Certified for Canada (UROX7), Heat-automatic Fire Detectors Certified for Canada (UQGS7) and Fire Alarm Devices, Single and Multiple Station, and Accessories Certified for Canada (UTER7).

At least one smoke detector is required to be provided in a household fire-warning system. The smoke detector can be either electrically wired to

Household Fire-warning System Units Certified for Canada  
(UTLQ7)–Continued

and operated from the control unit, or be a separately-operated device, such as an electrically-operated single-station fire alarm device.

An installation drawing and/or detailed instructions are employed as the controlling factor to assure proper installation and interconnection among units. This material may be attached to the control unit, provided detached, or included as part of an instruction booklet.

An instruction booklet illustrating typical installation layouts, operation, maintenance, servicing and test procedures is supplied with the main control unit. Printed information for a household emergency evacuation plan may be separate or included as part of the booklet.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Control Units and Accessories, Household System Type Certified for Canada (UTOU7)**

**USE AND INSTALLATION**

This category covers control units and accessories intended to be used as part of a household fire-warning system.

**Control Unit** — Consists of a unit assembly of electrical parts having provision for connection of a power supply, signal-actuating devices (heat detectors, smoke detectors, switches, etc.), and signal-indicating devices (bells, horns, strobes, etc.).

**Combination Control Unit** — A control unit may additionally include circuit facilities for connection to burglar-alarm devices to form a combination fire-burglary control unit. In such a combination unit the fire-alarm signal takes precedence over the burglar-alarm signal and a distinction between alarm signals is required. A common trouble signal may be employed for both.

**Modular Control or Combination Unit** — A control unit may be pre-wired at the factory or assembled from readily installed modules. A certified burglary module can be added after the unit is installed to expand the system capability. The installation diagram indicates the type and number of modules that can be employed in a control unit.

The units comprising a system are intended to be installed in accordance with the applicable requirements of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," or CAN/ULC-S540, "Residential Fire and Life Safety Warning Systems: Installation, Inspection, Testing and Maintenance."

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term "Household" or "Residential" and the specific use description as indicated in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

Fire Alarm and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)

Fire Alarm and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)

Fire Alarm Equipment

Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Information Technology or Telephone categories. When applicable, the product identity may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

Type E (for Emergency Signaling Equipment)

Type E Subassembly (for Emergency Signaling Equipment Subassembly)

Type F (for Fire Alarm Equipment)

Type F Subassembly (for Fire Alarm Equipment Subassembly)

Type G (for General Signaling Equipment)

Type G Subassembly (for General Signaling Equipment Subassembly)

Type IT (for Information Technology Equipment)

Type IT Subassembly (for Information Technology Equipment Subassembly)

Type S (for Security Equipment)

Type S Subassembly (for Security Equipment Subassembly)

Type T (for Telephone Equipment)

Type T Subassembly (for Telephone Equipment Subassembly)

Where model numbers are indicated in the individual certifications, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

**ADDITIONAL INFORMATION**

–Continued

For additional information, see Household Fire-warning System Units Certified for Canada (UTLQ7), Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC-S545, "Residential Fire Warning System Control Units."

Where indicated in the individual certifications, the requirements of Clause 8.4.2, "Enclosure Strength and Integrity," and Clause 8.16, "Spacings," in CAN/ULC-S527, "Control Units for Fire Alarm Systems," were used in lieu of the requirements of Clause 5.19, "Spacings," in ULC-S545.

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

**Alternate UL Mark**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Information Technology or Telephone categories. When applicable, the product name may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type," followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

**Type Codes:**

S – Security Equipment

F – Fire Alarm Equipment

G – General Signaling Equipment

E – Emergency Signaling Equipment

IT – Information Technology Equipment

T – Telephone Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER-SUPPLY UNITS CERTIFIED FOR CANADA (UTRZ7)**

**GENERAL**

This category covers power-supply units intended for application as components of fire-protective signaling systems.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

Fire Alarm and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)

Fire Alarm and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)

Fire Alarm Equipment

Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories.

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES  
CERTIFIED FOR CANADA (SYKJ7)**

672

—Continued

When applicable, the product identity may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type EM (for Enclosed Energy Management Equipment)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)

- Type S Subassembly (for Security Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

Where model numbers are indicated in the individual certifications, 100% of the manufacturer’s production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

**REQUIREMENTS**

The basic standards used to investigate products in this category are ULC-S527, “Control Units for Fire Alarm Systems,” and ULC-S318 (1996), “Power Supplies for Burglar Alarm Systems.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

The Certification Mark for fire alarm equipment may include the designation “\_\_\_ of \_\_\_.” The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

For products additionally investigated with respect to security applications, the word “SECURITY” is included in the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is “Fire Alarm and Security Equipment” or “Fire Alarm and Security Subassembly.”

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., “Fire Alarm and Telephone Equipment”).

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**

- S – Security Equipment
- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment

**SMOKE-CONTROL-SYSTEM EQUIPMENT  
CERTIFIED FOR CANADA (UUKL7)**

**GENERAL**

This category covers products intended to be installed in conjunction with heating-ventilating-air conditioning (HVAC) equipment to form a system for controlling the flow of smoke in a building during a fire condition. They are intended to perform specific functions related to a smoke-control system. This function and the interconnection to other smoke-control equipment, as well as HVAC equipment, are described in an installation document attached to the product or referenced in the marking on the product.

As indicated in the individual certifications, smoke-control equipment is assigned one or more of the following attributes:

**OPERATION**

**Manual** — Activation of the smoke-control system occurs as a result of the intervention of an authorized person.

**Automatic** — Activation of the smoke-control system occurs as a result of an alarm condition from a fire-detection device, such as a smoke detector or heat detector, or from a fire-alarm control unit.

**TYPE**

**Nondedicated** — A system that provides the building HVAC function under normal conditions and provides a smoke-control objective during a fire-alarm condition.

**Dedicated** — A system which is normally inactive and is used exclusively for the purpose of smoke control.

**USE**

**Stairtower** — A configuration of equipment that provides pressurizing of stairtowers to maintain a tenable environment for building egress.

**Zoned Smoke Control** — A configuration of equipment that provides exhausting of the smoke area and pressurizing of all other contiguous areas within a building.

Equipment investigated for mounting in air-handling spaces is specifically identified by markings on the product and in the individual certifications. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

Smoke-control systems are engineered systems specifically designed to meet the needs of the individual building and its occupants. While the products covered under this category have been investigated for reliability of operation and functionality, they have not been investigated as being suitable for any specific building design, nor has the effectiveness of the overall system in controlling the flow of smoke been determined. Authorities Having Jurisdiction should be consulted prior to installation.

This category does not cover motors, fans, dampers, ducts, etc., that provide the HVAC function.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Smoke Control System” and the specific use description as indicated in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

Fire Alarm and Security Equipment (for products where the word “SECURITY” is included in the Certification Mark)

Fire Alarm and Security Equipment Subassembly (for products where the word “SECURITY” is included in the Certification Mark)

Fire Alarm Equipment

Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include “and Hospital Signaling and Nurse Call,” “and General Signaling,” “and Emergency Signaling,” “and Enclosed Energy Management,” “and Information Technology” or “and Telephone,” as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)

–Continued

- Type EM (for Enclosed Energy Management Equipment)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)
- Type HN (for Hospital Signaling and Nurse Call Equipment)
- Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)
- Type IT (for Information Technology Equipment)
- Type IT Subassembly (for Information Technology Equipment Subassembly)
- Type S (for Security Equipment)
- Type S Subassembly (for Security Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C100 (1992), "Smoke Control System Equipment."

The basic standard used to investigate products suitable for use in air-handling spaces in this category is UL 2043, "Fire Tests for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Emergency Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

**Type Codes:**

- S – Security Equipment
- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment
- EM – Enclosed Energy Management Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPEAKERS FOR FIRE-PROTECTIVE  
SIGNALING SYSTEMS CERTIFIED FOR  
CANADA (UUMW7)**

**USE AND INSTALLATION**

This category covers speakers and their accessories investigated for use in fire alarm and/or emergency communication systems.

Speakers have been investigated for audible output of 85dBA or greater measured at 3 m, when powered from a source of pink noise over a range of 600 – 4000 Hz. The units are marked with a minimum audibility rating.

Accessories, such as enclosures, have been investigated with respect to both mechanical and acoustical consideration when used with speakers specified in the individual certifications.

Where a certified product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual certifications and each part bears a separate Certification Mark. The marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual certifications.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term "Speaker" or "Speaker Enclosure."

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling categories. When applicable, the product identity may include "and General Signaling," as appropriate (e.g., Fire Alarm and General Signaling Equipment).

The product identities may be abbreviated as follows:

- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S541, "Speakers for Fire Alarm Systems, Including Accessories."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling," as appropriate (e.g., "Fire Alarm and General Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

**Type Codes:**

- F – Fire Alarm Equipment
- G – General Signaling Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## VISUAL-SIGNAL APPLIANCES FOR FIRE-PROTECTIVE SIGNALING SYSTEMS CERTIFIED FOR CANADA (UVAV7)

### USE AND INSTALLATION

This category covers visual-signal appliances and accessories investigated for use in fire-protective signaling applications, and are intended for use with Listed compatible fire alarm control units or control unit accessories.

Accessories, such as enclosures and back boxes, and the products with which they are compatible are identified in the individual Listings.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual Listings. The marking on each part references installation instructions which show assembly and installation of the parts to form a Listed product.

All products covered under this category are intended for indoor use only unless otherwise specifically marked.

Visual-signal appliances have been investigated for light output measured at a distance of 10 ft. on-axis. The units are marked with a range of light output and flash rate.

### PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Visual Signaling Appliance" or "Visual Signaling Appliance Accessory."

### ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/ULC-S526-M87, "Visual Signal Devices for Fire Alarm Systems, Including Accessories."

### UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling," as appropriate (e.g., "Fire Alarm and General Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

#### Type Codes:

- F – Fire Alarm Equipment
- G – General Signaling Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## MISCELLANEOUS DEVICES FOR FIRE-PROTECTIVE SIGNALING SERVICE CERTIFIED FOR CANADA (UXKV7)

### GENERAL

This category covers miscellaneous equipment for fire-protective signaling service.

Products are typically investigated for use in an ordinary indoor environment with a prevailing ambient no greater than 25°C. Products investigated for ordinary outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

Authorities Having Jurisdiction should be consulted before installation.

### PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

### PRODUCT IDENTITY

One or more of the following product identities appears on the product: Fire Alarm and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)

Fire Alarm and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)

–Continued

Fire Alarm Equipment

Fire Alarm Equipment Subassembly

Some of these products are also certified under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., Fire Alarm and Telephone Equipment).

The product identities may be abbreviated as follows:

Type E (for Emergency Signaling Equipment)

Type E Subassembly (for Emergency Signaling Equipment Subassembly)

Type EM (for Enclosed Energy Management Equipment)

Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)

Type F (for Fire Alarm Equipment)

Type F Subassembly (for Fire Alarm Equipment Subassembly)

Type G (for General Signaling Equipment)

Type G Subassembly (for General Signaling Equipment Subassembly)

Type HN (for Hospital Signaling and Nurse Call Equipment)

Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)

Type IT (for Information Technology Equipment)

Type IT Subassembly (for Information Technology Equipment Subassembly)

Type S (for Security Equipment)

Type S Subassembly (for Security Equipment Subassembly)

Type T (for Telephone Equipment)

Type T Subassembly (for Telephone Equipment Subassembly)

### ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7) and Fire Protection Equipment Certified for Canada (AAFP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC-S527, "Control Units for Fire Alarm Systems."

### UL MARK

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SIGNALING," the geographic identifier(s), and a file number.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

### Alternate UL Mark

### UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

#### Type Codes:

S – Security Equipment

F – Fire Alarm Equipment

HN – Hospital Signaling and Nurse Call Equipment

G – General Signaling Equipment

E – Emergency Signaling Equipment

EM – Enclosed Energy Management Equipment

IT – Information Technology Equipment

T – Telephone Equipment

\*\*\*\*\*

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES  
CERTIFIED FOR CANADA (SYKJ7)**

—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELEASING DEVICE EQUIPMENT  
FOR USE IN HAZARDOUS  
LOCATIONS CERTIFIED FOR  
CANADA (TBCX7)**

Releasing Devices with accessory equipment are designed to release operating weights or air or water under pressure in the functioning of fire protection and fire alarm equipment.

They are available in both heat responsive (automatic) and manual types. The heat responsive types may be had in either fixed temperature or rate-of-rise types or a combination of these two.

The heat responsive portions of releasing devices are integral parts of some patterns. In other patterns they are separate parts, such as air chambers which are mounted in the fire area and connected by small-bore tubing to the releasing device; or thermostatically operated electric switches (thermostats) mounted in the fire area and connected by an electric wiring circuit to the releasing device. Devices which have normally open contacts are listed as "Heat-Automatic Fire Detectors" and those which have normally closed contacts are listed as "Heat Detectors for Releasing Device Service."

Proper location and spacing of the auxiliary heat responsive devices (heat detectors, air chambers, tubing, etc.) involve consideration of service conditions throughout the area to be protected - such as ceiling construction, subdivisions of areas (including closets, small rooms, etc.) normal temperatures, high temperatures (if existent), resulting from manufacturing processes or other causes and draft conditions. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations. Individual Listings should be consulted for details of spacing and locations of the heat responsive devices.

Authorities Having Jurisdiction should be consulted in all cases before installation of systems or devices.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELEASING DEVICES FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR  
CANADA (TBJW7)**

**GENERAL**

This category covers releasing devices intended for use in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual certifications.

This category also covers releasing devices intended for use as a means of releasing air or water under pressure from a piping system confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

A releasing device and its associated detection system may be adjusted to compensate for more or less severe ambient temperature changes by different settings of the release, or by varying the size of the compensating vents in the system to increase or decrease the rate of built-up pressure caused by exposure to some given temperature rise. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Releasing Device for Use in Hazardous Locations

**RELATED PRODUCTS**

**RELEASING DEVICE EQUIPMENT FOR USE IN HAZARDOUS  
LOCATIONS CERTIFIED FOR CANADA (TBCX7)**

—Continued

See Heat Detectors for Releasing Device Service for Use in Hazardous Locations Certified for Canada (TBGR7) and Heat-automatic Fire Detectors for Use in Hazardous Locations Certified for Canada (UIRV7).

**ADDITIONAL INFORMATION**

For additional information, see Releasing Device Equipment for Use in Hazardous Locations Certified for Canada (TBCX7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is ULC-S527, "Control Units for Fire-Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Releasing Devices for Hazardous Locations."

**REPACKAGED ELECTRICAL  
APPLIANCE AND UTILIZATION  
EQUIPMENT CERTIFIED FOR  
CANADA (TEOY7)**

**GENERAL**

This category covers repackaged certified electrical appliance and utilization equipment.

Required user instructions and ratings are marked on or packed with the smallest unit container in which the product is packaged. The repackaged product type or category name appears on the packaging.

Products under UL's Listed by Report Service may require special descriptions and recommended methods of installation and are not covered under this category.

**PRODUCT IDENTITY**

The appropriate product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are referenced in Repackaged Product Program Requirements at [www.ul.com](http://www.ul.com)

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

Where applicable, these products are marked with information pertaining to the scope of the certification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL HAZARDS ONLY," "IEC 60601-1").

**Alternate UL Mark**

The Listing or Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing or Classification and Follow-Up Service.

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name.

The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illus-

**REPACKAGED ELECTRICAL APPLIANCE AND UTILIZATION EQUIPMENT CERTIFIED FOR CANADA (TEOY7)**  
676

trated in the Introduction of this Directory), a control number, the appropriate product name, and information pertaining to the scope of the Classification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL INJURY," "IN ACCORDANCE WITH IEEE C37.59").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**REPACKAGED ELECTRICAL CONSTRUCTION EQUIPMENT CERTIFIED FOR CANADA (TEOZ7)**

**GENERAL**

This category covers repackaged certified electrical construction equipment.

Required user instructions and ratings are marked on or packed with the smallest unit container in which the product is packaged. The repackaged product type or category name appears on the packaging.

Certified wire or cable that has been subjected to processing or respooling subsequent to its manufacture is covered under Processed Wire Certified for Canada (ZKLU7).

Lightning conductors, air terminals and fittings (see OVTZ7) are intended for installation in certified lightning protection systems and are not eligible for repackaging.

Products under UL's Listed by Report Service may require special descriptions and recommended methods of installation and are not covered under this category.

**PRODUCT IDENTITY**

The appropriate product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are referenced in Repackaged Product Program Requirements at www.ul.com

**ROBOTS AND ROBOTIC EQUIPMENT CERTIFIED FOR CANADA (TETZ7)**

**GENERAL**

This category covers robots, integrated work cells, programmable production equipment, remote sensing equipment, robotic servo power supplies, and similar equipment.

This equipment has been investigated with respect to risks of electric shock, fire and injury to persons.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Robot

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-Z434 (2003), "Industrial Robots and Robot Systems - General Safety Requirement," and CSA-C22.2 No. 73, "Construction and Test of Electrically Equipped Machine Tools."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ROOF-COVERING MATERIALS CERTIFIED FOR CANADA (TEVT7)**

**GENERAL**

This category covers roof-covering materials, which consist of two basic types: (1) roofing systems, generally involving the assembly of several components and may require special equipment to apply the materials involved, and (2) prepared materials, which can be applied directly to a roof deck in accordance with the manufacturer's instructions provided with the product. These coverings are intended for the protection of roof decks from external fire exposure and have not been investigated for performance when exposed to a fire from an internal source, i.e., directed onto the underside of the roof deck assembly.

Roofing systems are composed of the materials shown under the various generic system types referenced under Roofing Systems Certified for Canada (TGFU7) and as described under Roofing Systems (TGFU), to provide Class A, B or C for resistant coverings.

Where indicated in the individual Listings, the wind resistance of prepared roof coverings has been investigated to CAN/CSA-A123.5-M90, "Asphalt Shingles Made From Organic Felt and Surfaced With Mineral Granules/Asphalt Shingles Made From Glass Felt and Surfaced With Mineral Granules."

The weatherability of these roof-covering materials has not been investigated.

Authorities Having Jurisdiction should be consulted as to which class of roof coverings will be acceptable in each location.

**CLASSES**

**Class A** includes roof coverings which are effective against severe fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not carry or communicate fire, afford a fairly high degree of fire protection to the roof deck, do not slip from position, possess no flying brand hazard, and do not require frequent repairs in order to maintain their fire resisting properties.

**Class B** includes roof coverings which are effective against moderate fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not readily carry or communicate fire, afford a moderate degree of fire protection to the roof deck, do not slip from position, and possess no flying brand hazard, but may require infrequent repairs in order to maintain their fire resisting properties.

**Class C** includes roof coverings which are effective against light fire exposure. Under such exposure, roof coverings of this class are not readily flammable and do not readily carry or communicate fire, afford some degree of fire protection to the roof deck, do not slip from position, possess no flying brand hazard, and may require occasional repairs or renewals in order to maintain their fire resisting properties.

**ROOF-COVERING MATERIALS CERTIFIED FOR CANADA  
(TEVT7)**

Roofing systems provide Class A, B or C coverings over combustible and/or noncombustible (steel, concrete or poured gypsum) decks. Prepared roof-covering materials provide class A, B or C coverings over combustible decks. Combustible decks consist of the following types:

- (A) Minimum 3/4 in. thick sheathing boards.
- (B) Minimum 3/8 in. (for Prepared) or 15/32 in. for (Roofing Systems) thick plywood.
- (C) Minimum 3/8 in. (for Prepared) or 7/16 in. (for Roofing Systems) thick nonveneer sheathing (oriented strand board panels or waferboard panels).

**RELATED PRODUCTS**

Prepared roof coverings shown in Prepared Roof-covering Materials Certified for Canada (TFWZ7) and applied in accordance with detailed instructions included in the packages of materials provide Class A, B or C fire resistant coverings and wind resistant coverings as indicated on the Listing Mark for Canada applied to each package.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PREPARED ROOF-COVERING MATERIALS  
CERTIFIED FOR CANADA (TFWZ7)**

**GENERAL**

This category covers materials intended to provide Classes A, B and C coverings on combustible (wood, 3/4-in. thick sheathing boards or 3/4-in. thick plywood unless otherwise indicated) decks when applied in accordance with detailed instructions included with the packages.

The use of 15/32-in. thick (minimum) plywood is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications.

The use of 3/8-in. thick (minimum) nonveneer sheathing panels (composite panels or waferboard panels) is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications when a UL-certified underlayment is utilized between the sheathing and the prepared roof covering.

Certifications are applicable either for new work or for recovering purposes.

Flashings and trimmings are intended to be the same as or not less than the equivalent of the roof coverings in each class, or of 16 oz or heavier copper, No. 26 USS gauge or heavier galvanized steel, or 0.019 in. thick or heavier aluminum.

This category also covers shingles with factory-applied adhesives or integral locking features. The certification markings for such shingles may, in addition to fire-resistance information, include wind-resistance information.

**PREPARED ROOF COVERINGS**

**Asphalt Organic-Felt Shingle Coverings** are composed of asphalt organic-felt (previously identified as rag-felt) grit-surfaced shingles, one or more thickness, laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage.

**Asphalt Glass-Fiber Mat Shingle Coverings** are composed of asphalt glass-fiber mat, grit-surfaced shingles, laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage.

**Modified Asphalt Glass-Fiber Mat, Asphalt Organic-Felt or Glass-Fiber/Polyester Composite Shingle Coverings** are composed of modified asphalt-coated glass-fiber mat or glass-fiber/polyester composite, grit-surfaced shingles, laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage.

**Wind-resistant Asphalt Glass-Fiber Mat Shingles** are provided with field-applied or factory-applied adhesive or integral locking tabs. Some shingles with factory-applied adhesive utilize bands or spots of a heat-sensitive adhesive located either on the surface of the shingles or on the back side of each tab. Adhesives of this type must be activated by solar heat of intensity generally attained on warm, sunny days. Other shingles with factory-applied adhesive utilize a combination pressure-sensitive and heat-sensitive adhesive. Due to the nature of adhesives of this type, sealing is induced by application of pressure and/or heat.

**Wind-resistant Asphalt Organic-Felt Shingles** are provided with factory-applied adhesive or integral locking tabs. Some shingles with factory-applied adhesive utilize bands or spots of a heat-sensitive adhesive located either on the surface of the shingles or on the back side of each tab. Adhesives of this type must be activated by solar heat of intensity generally attained on warm, sunny days. Other shingles with factory-applied adhesive utilize a combination pressure-sensitive and heat-

sensitive adhesive. Due to the nature of adhesives of this type, sealing is induced by application of pressure and/or heat.

**Wind-resistant Modified Asphalt Glass-Fiber Mat Shingles** are provided with factory-applied adhesive. Some shingles with factory-applied adhesive utilize bands or spots of a heat-sensitive adhesive located either on the surface of the shingles or on the back of each tab. Adhesives of this type must be activated by solar heat of intensity generally attained on warm, sunny days. Other shingles with factory-applied adhesive utilize a combination pressure-sensitive and heat-sensitive adhesive. Due to the nature of adhesives of this type, sealing is induced by application of pressure and/or heat.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Prepared Roof-covering Material

**RELATED PRODUCTS**

Accessory components utilized in the prepared roof-covering system are covered under Prepared Roofing Accessories Certified for Canada (TGDY7). Ridge vents utilized in the prepared roof-covering system are covered under Ridge Vents Certified for Canada (TGEW7). Type 15 and Type 30 asphalt felts, used as underlayments, are covered under Roofing Systems Certified for Canada (TGFU7). Underlayments, ridge vents and accessory components, when utilized, are intended to be certified materials.

Other types of prepared roof-covering materials are covered under Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire Retardant -treated Wood Certified for Canada (TFXX7).

**ADDITIONAL INFORMATION**

For additional information, see Roof-covering Materials Certified for Canada (TEVT7) and Roofing Materials and Systems Certified for Canada (AARM7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S107, "Method of Fire Tests for Roof Coverings."

Where indicated in the individual certifications, specific products have also been investigated to ASTM D3462, "Standard Specifications for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules," or CSA-A123.5 (1998), "Asphalt Shingles Made from Organic Felt and Surfaced with Mineral Granules/Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

[PRODUCT TYPE]

CLASS +

**AS TO DEGREE OF RESISTANCE TO EXTERNAL FIRE  
AND FLAMMABILITY LIMITS TO CAN/ULC-S107**

+ A, B or C

For those products which are also certified by UL to CSA-A123.5, the statement "ALSO CERTIFIED FOR DEGREE OF WIND RESISTANCE TO CSA-A123.5" may be included on the product.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," and the following additional information:

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PREPARED ROOF-COVERING MATERIALS,  
FORMED OR MOLDED METAL, FIBER-  
CEMENT, PLASTIC OR FIRE-RETARDANT-  
TREATED WOOD CERTIFIED FOR CANADA  
(TFXX7)**

**GENERAL**

This category covers materials intended to provide Classes A, B and C coverings on combustible (wood, 3/4-in. thick sheathing boards or 1/2-in. thick plywood unless otherwise indicated) decks when applied in accordance with detailed instructions included with the packages.

The use of 15/32-in. thick (minimum) plywood is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications.

The use of 3/8-in. thick (minimum) non-veneer APA Rated Series Sheathing (oriented strandboard panels, structural particleboard panels, composite panels or waferboard panels) is a suitable alternate to 1/2-in. thick (minimum) plywood specified in the individual certifications for when a UL-certified underlayment is utilized between the sheathing and the prepared roof covering.

Certifications are applicable either for new work or for recovering purposes.

Flashings and trimmings are intended to be the same as or not less than the equivalent of the roof coverings in each class, or of 16 oz. or heavier copper, No. 26 USS gauge or heavier galvanized steel, or 0.019-in. thick or heavier aluminum.

**PREPARED ROOF-COVERING MATERIALS**

**Fiber-Cement Shingle Coverings** are composed of non-asbestos fiber-cement shingles laid to provide two or more thicknesses in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines exceeding 3 in. to the horizontal foot.

**Fire Retardant-treated Red Cedar Shakes and Shingles** are composed of red cedar shakes and shingles pressure impregnated with a fire-retardant treating solution.

**Formed Metal Shingle, Shake or Panel Coverings** are composed of plain or painted aluminum sheet alloy, painted or coated steel or copper laid in accordance with the instruction sheets accompanying the packages. These coverings are limited to roof decks capable of receiving and retaining nails and to inclines sufficient to permit drainage. These coverings have been investigated only for fire resistance.

**Formed or Molded Plastic Shingles** are composed of various plastic materials formed into various shapes in various colors. These coverings are limited to inclines sufficient to permit drainage.

**Photovoltaic (Solar) Modules/Shingles** are composed of flat-plate photovoltaic module/panels fabricated in sheets that resemble three-tab composite shingles when installed in accordance with the manufacturer's installation instructions. These coverings are limited to nominal 15/32-in. thick (minimum) plywood decks and to inclines sufficient to permit drainage. These coverings have also been investigated in accordance with ULC/ORD-C1703, "Flat-Plate Photovoltaic Modules and Panels" [see Photovoltaic Modules and Panels Certified for Canada (QIGU7)].

**Reinforced Cast Stone Shingles** are composed primarily of stone dust and a small amount of resin reinforced with glass fiber. These shingles are limited to 15/32-in. thick (minimum) plywood decks and to inclines sufficient to permit drainage.

**PRODUCT IDENTITY**

The following product identity appears on the product:

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ROOFING SYSTEMS CERTIFIED FOR  
CANADA (TGFU7)**

**GENERAL**

This category covers materials intended for roofing systems that provide Class A, B or C coverings on combustible (wood – 3/4-in.-thick sheathing boards or plywood, unless otherwise indicated) and noncombustible (steel, concrete or poured gypsum) decks, unless otherwise indicated in the individual certifications. Minimum 2-in.-thick unfaced structural cement-fiber units, formed into slabs or boards and covered under Structural Cement-Fiber Units Certified for Canada (CIYT7), are suitable alternates as roof decks for all certified roofing systems intended for use over noncombustible decks.

The use of 7/16-in. (minimum) thick nonveneer sheathing (oriented strand board panels, structural particleboard panel, composite panels or waferboard panels) is a suitable alternate to 15/32-in. (minimum) thick plywood specified in the Class A, B or C certifications for the individual manufacturers. Certifications are applicable to roofing systems used over insulated decks when so indicated in the individual certifications.

Certified gypsum wallboard, any thickness, may be included in any roofing system without adversely effecting the certification. Insulations may be attached to the deck with fasteners, hot mopping asphalt or certified adhesive.

Certifications are applicable either for new construction, recovering or replacement purposes. (Recovering is the process of covering an existing roofing system with a new roofing system. Replacement is the process of removing an existing roof system and replacing it with a new system.) For recovering situations, certified uninsulated new construction assemblies are not intended for installation over existing certified insulated assemblies unless specifically certified in **MAINTENANCE AND REPAIR SYSTEMS** under Roofing Systems (TGFU).

Certified insulated systems may be installed over existing certified insulated systems when:

- 1) the new system is certified for use with the existing roof insulation type (glass fiber, perlite, wood fiber, foamed plastic, etc.), and
- 2) the total thickness of insulation in both systems does not exceed the maximum specified for the new system being supplied.

For installation over noncombustible decks, any certified insulated system utilizing minimum 1-in.-thick insulation (glass fiber, polyisocyanurate or perlite) may be used over any existing insulated system regardless of the type if its insulation in both systems does not exceed the maximum specified for the new system being applied. Certification is determined by the new construction system.

The above classifications apply only to coverings composed of certified materials assembled as described in the individual manufacturer certifications; flashings and trimmings being the same as or not less than the equivalent of the roofing systems in each class, or of 16 oz or heavier copper, No. 26 gauge or heavier galvanized steel, or 0.019 in. thick or heavier aluminum.

This category covers the following roofing systems, which are composed of varying types of components:

1. Asphalt Felt Systems (Organic, Asbestos or Glass Fiber) with Hot Roofing Asphalt
2. Coal Tar Felt Systems (Organic, Asbestos or Glass Fiber) with Hot Roofing Coal Tar Pitch
3. Cold Application Systems (Asphalt Felts or Ply Sheets with Cold Cements and Coatings)

**ROOF-COVERING MATERIALS CERTIFIED FOR CANADA  
(TEVT7)**

–Continued

4. Combination Hot and Cold Systems
5. Fluid-applied Coating Systems
6. Maintenance and Repair Systems
7. Single-ply Membrane Systems (Includes Modified Bitumen Membranes)
8. Spray-applied Foam and Coating Systems
9. Other systems

The composition of each of these system types is described in the UL Online Certifications Directory.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Base/Ply Sheet for Roofing Systems
- Building Units for Roofing Systems
- Cements and Coatings for Roofing Systems
- Flashing Material for Roofing Systems
- Foamed Plastic for Roofing Systems
- Foamed Plastic Ingredient for Roofing Systems
- Hold-down Device for Roofing Systems
- Insulation Adhesive for Roofing Systems

**RIDGE VENTS CERTIFIED FOR  
CANADA (TGEW7)**

**USE AND INSTALLATION**

This category covers ridge vents intended for use with Prepared Roof-covering Materials (TFWZ7).

These ridge vents have been investigated for resistance to external fire exposure only when installed in accordance with the manufacturer's installation instructions provided with the ridge vents.

Authorities Having Jurisdiction should be consulted as to which class of ridge vent will be acceptable in each location.

**FACTORS NOT INVESTIGATED**

The corrosion resistance of metal ridge vents has not been investigated.

The ability of these products to provide attic ventilation in accordance with requirements of nationally recognized codes and standards has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Ridge Vent – Class A
- Ridge Vent – Class B
- Ridge Vent – Class C

**ADDITIONAL INFORMATION**

For additional information, see Roof-covering Materials Certified for Canada (TEVT7).

**ROOF DECK CONSTRUCTIONS  
CERTIFIED FOR CANADA (TGKX7)**

Roof deck constructions are illustrated and described in the Roofing Materials and Systems Directory and are identified by a construction number and evaluated as to the spread of fire on the underside.

UL's tunnel furnace normally used to develop Surface Burning Characteristics of individual building materials has been adapted to tests of these assemblies. The limits of flame spread applicable to constructions described in this category were established by analysis of results of tunnel furnace tests of other constructions, which by large scale fire tests and by experience in actual installations were known to have contributed extensively to flame spread or, conversely, were regarded as being eligible for Classification from this standpoint.

The primary construction considered for the purpose of establishing limits was a steel roof deck, without vapor retarder or adhesives, insulated with 1-in. thick plain vegetable fiberboard mechanically attached and covered with a 4-ply built-up roof covering with gravel surfacing. As one requisite of Classification under this category, roof deck constructions shall not develop flame spread on the underside in excess of the limits established in tests of the above assembly. Fire Classified assemblies may be evaluated by either large scale fire testing or using procedures described in CAN/ULC-S126, "Standard Method of Test for Fire Spread under Roof Deck Assemblies."

These Classifications should not be confused with those appearing under either the Surface Burning Characteristics or the Fire Resistance Classification. The Surface Burning Characteristics is a comparative evaluation of materials (occasionally with facings or backing) with respect to flame spread and smoke developed. The Fire Resistance Classification is the time rating of an assembly with respect to resistance to flame passage, heat transfer and maintenance of structural integrity.

Roof deck constructions which are Classified as to fire are various assemblies of materials as illustrated and described in the Roofing Materials and Systems Directory. The assemblies are Classified on the basis of specific requirements for maximum flame spread on the underside of the assembly within definite time limits. These constructions differ from materials Classified with respect to Surface Burning Characteristics in that in the latter, materials are assigned comparative numerical values. They also differ from assemblies Classified with respect to Fire Resistance since temperature transmission through roof deck constructions and structural performance under load are not measured nor are time ratings assigned.

A fire investigation of a roof deck construction primarily determines whether the contribution to an igniting fire by any or all of the materials in the assembly is at a sufficient rate to cause propagation of flame on the underside, in excess of the established limits.

Authorities Having Jurisdiction should be consulted as to which type of deck construction is acceptable for any given location before installation.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ROOF DECK CONSTRUCTION MATERIALS  
CERTIFIED FOR CANADA (TGYV7)**

**Building Units Certified for Canada (TIAR7)**

**GENERAL**

This category covers building units for use in roof deck constructions. The applicable Construction Numbers for these materials are indicated in the individual certifications.

Building units, consisting of proprietary mixes of organic and/or inorganic materials formed into blocks, boards, planks, slabs, or sheets fabricated into various sizes, thicknesses, and shapes, are certified for use in constructions as shown in the individual certifications. The insulating, acoustical, structural, and other properties have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

**FACTORS NOT INVESTIGATED**

Properties of the building units other than those relating to their capacity to contribute to the spread of flame on the underside of the construction have not been investigated.

**AUTOMATED TELLER SYSTEMS  
CERTIFIED FOR CANADA (TPEU7)**

**GENERAL**

This category covers automated teller systems, which are generally unattended units designed to dispense currency and may also perform other functions usually handled by a bank teller. They may be accessible 24 hours a day or only during business hours.

The system consists of a customer access panel and a security container combined to provide the intended services and designed to protect against theft of its contents.

A teller's cash dispenser is intended to dispense currency directly to the bank teller only.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Automated Teller Machine (or ATM)  
Automated Teller System  
Teller's Cash Dispenser

The product identity is followed by "Business Hour Service," "24 Hour Service - Level 1" or "24 Hour Service - Level 2."

Accessory units bear the product identity "Automated Teller System Accessory," "Automated Teller Machine Accessory" or "Teller's Cash Dispenser Accessory."

When components are assembled at the point of installation, they bear the product identity "Automated Teller System or Teller's Cash Dispenser When Used with [Company name] Certified Automated Teller or Teller's Cash Dispenser Enclosure Parts [part or model no(s).] and Automated Teller or Teller's Cash Dispenser Modules [part or model no(s).]" followed by "Business Hour Service," "24 Hour Service - Level 1" or "24 Hour Service - Level 2." The enclosure parts and modules bear the product identity "Automated Teller or Teller's Cash Dispenser Enclosure Part [part or model no.]" and "Automated Teller or Teller's Cash Dispenser Module [part or model no.]," respectively.

**ADDITIONAL INFORMATION**

For additional information, see Security Equipment Certified for Canada (ALOV7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 950 (1989), "Safety of Information Technology Equipment Including Electrical Business Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "SECURITY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and the following product names: "Automated Teller System", "Automated Teller Machine", "ATM", or "Teller's Cash Dispenser" followed by "Business Hour Service" or "24-Hour Service-Level 1" or "24-Hour Service-Level 2". Accessory units include the following product names: "Automated Teller System Accessory" or "Automated Teller Machine Accessory" or "Teller's Cash Dispenser Accessory".

When components are assembled at the point of installation the following shall be used: "Automated Teller System or Teller's Cash Dispenser When Used With (Company Name) Listed Automated Teller or Teller's Cash Dispenser Enclosure Parts (Part or Model Nos.) and Automated Teller or Teller's Cash Dispenser Modules (Part or Model Nos.)" followed by: "Business Hour Service" or "24-Hour Service-Level 1" or "24-Hour Service-Level 2". The enclosure parts and modules shall use: "Automated Teller or Teller's Cash Dispenser Enclosure Part (Part or Model No.)" and "Automated Teller or Teller's Cash Dispenser Module (Part or Model No.)".

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SAW CHAIN CERTIFIED FOR CANADA (TSZQ7)

### USE

This category covers saw chain intended for use on gasoline-powered chain saws. Two types of saw chain are covered:

**Type A reduced-kickback saw chain** — For kickback performance requirements of CSA-Z62.3, Clause 4.1.3.1.

**Type C low-kickback saw chain** — For kickback performance requirements of CSA-Z62.3, Clause 4.1.3.2.

**Replacement saw chain** — For kickback performance requirements of CSA-Z62.3, Clause 4.1.2.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Reduced-kickback Saw Chain
- Replacement Saw Chain
- Low-kickback Saw Chain

### RELATED PRODUCTS

Gasoline-powered chain saws are covered under Chain Saws Certified for Canada (JOOW7).

### ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

### REQUIREMENTS

These products are investigated to the applicable paragraphs of CSA-Z62.3, "Chain Saw Kickback."

### UL MARK

The Certification Mark of UL on the chain reel or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**CERTIFIED IN ACCORDANCE WITH CSA-Z62.3**

Alternate UL Mark  
UL MARK

The Classification Mark of UL on the chain reel or the smallest unit container is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY\*]

IN ACCORDANCE WITH CSA STANDARD Z62.3

\* REDUCED-KICKBACK SAW CHAIN, LOW-KICKBACK SAW CHAIN or REPLACEMENT SAW CHAIN

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SCAFFOLDING CERTIFIED FOR CANADA (TTDZ7)

## DEVICES, SCAFFOLDING CERTIFIED FOR CANADA (TTRX7)

### USE AND INSTALLATION

This category covers fabricated assemblies, such as (a) decorators' planks usually employed with ladders, (b) scaffold planks for use with scaffolding, (c) stage platforms for suspended scaffolds and (d) modular stage platforms for suspended scaffolds. The devices have been investigated only for their load-carrying capacity.

These devices are intended to be used with other scaffolding components to form a scaffolding system. Other components used in the system, such as hoists, stirrups and end frames are covered under Scaffolding Equipment Certified for Canada (TUFV7).

The installation of these devices is intended to be in accordance with the requirements of Authorities Having Jurisdiction and the manufacturer's instructions.

The investigation of these devices consists of strength tests to determine the ability of the device to carry rated load with a factor of four. The load-capacity rating is as indicated in the individual certifications and is marked on each device.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Decorator Plank
- Modular Platform
- Scaffold Plank
- Stage Platform
- Work Cage

### ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-Z271-1998, "Safety Code for Suspended Elevating Platforms."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**AS TO LOAD CAPACITY ONLY**

Alternate UL Mark  
UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELEVATING WORK PLATFORMS CERTIFIED FOR CANADA (TTYW7)**

**USE**

This category covers self-propelled integral chassis aerial platforms having a platform that either rises directly above the base (CAN/CSA-B354.4), or that can move beyond the perimeter of the base (CAN/CSA-B354.2). Aerial platforms are power operated with primary functions, including drive, controlled from the platforms and are used to position personnel, along with their necessary tools and materials, at work locations.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-B354.4 (2002), "Self-Propelled Boom-Supported Elevating Work Platforms," or CAN/CSA-B354.2 (2001), "Self-Propelled Elevating Work Platforms."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**BOOM-SUPPORTED ELEVATED WORK PLATFORM**

**CAN/CSA-B354.2**

or

**SELF-PROPELLED ELEVATED WORK PLATFORM**

**CAN/CSA-B354.4**

Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**EQUIPMENT, SCAFFOLDING CERTIFIED FOR CANADA (TUFV7)**

**USE AND INSTALLATION**

This category covers hoists intended for use with suspended scaffolds, accessories for use with suspended scaffolds, such as stirrups, work planks, etc., and components, such as end frames, braces, brackets, screw jacks, work planks, etc., which are intended to be used in the erection of a self-supporting scaffold system.

The investigation of these devices consists of strength tests to determine the ability of the device to carry a rated load. The load-capacity rating is as indicated in the individual certifications and is marked on each device. Electric hoists have also been certified as to electrical fire and shock hazards.

These devices are intended to be used with other scaffolding components to form a scaffolding system. Hoists and stirrups are intended for use with modular stage platforms and stage platforms, which are covered under Scaffolding Devices Certified for Canada (TTRX7).

The assembly and erection of a scaffolding system is not inspected by UL, and is intended to be in accordance with the requirements of the Authority Having Jurisdiction and the manufacturer's instructions.

**ADDITIONAL INFORMATION**

For additional information, see Mechanical Equipment and Associated Products Certified for Canada (AAME7).

**REQUIREMENTS**

–Continued

The basic standard used to investigate products in this category is CAN/CSA-Z271, "Safety Code for Suspended Elevating Platforms."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

\* Applies only to electric hoists

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SCALES AND ACCESSORIES, ELECTRONIC CERTIFIED FOR CANADA (TUTT7)**

**GENERAL**

This category covers equipment, appliances and systems rated 600 V or less normally found in computer/data processing rooms, offices, other business establishments, educational facilities, residences, and other similar environments.

Equipment may be electromechanical or electronic in design or any combination thereof.

This equipment includes counter- and computer-type scales, weighing machines in all capacities, with or without label printers, lighting or remote controls, devices for use with platform scales, and other types of weighing equipment and accessories. This equipment may be cord-and-plug connected or permanently connected. Accessories intended for use with one another or with individual scales are marked to indicate the appropriate combination of use.

The individual units comprising a system installation are designed to be interconnected and installed by one of the wiring methods outlined in CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 950 (1989), "Safety of Information Technology Equipment, Including Electrical Business Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Scales" or "Scale Accessories," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SEALING, WRAPPING AND MARKING  
EQUIPMENT CERTIFIED FOR  
CANADA (TVOR7)**

**USE AND INSTALLATION**

This category covers sealing machines, wrapping machines, marking machines and accessories, as well as combinations of the preceding products, rated 600 V or less, intended for use in the packaging of foods and other articles in commercial or industrial establishments and in homes. This equipment may be portable, stationary, or permanently installed.

Suitable cautionary or warning markings are provided as indicated in the individual certifications and on the equipment itself to inform the user of a potential risk of fire, electric shock and injury to persons, including equipment that:

- is intended to be used with flammable liquids,
- is not intended for immersion (or only intended for partial immersion) for cleaning in water,
- requires a stabilizing means to be engaged before operation,
- requires disassembly by means of a tool for user servicing resulting in the exposure of live parts that are normally enclosed or protected,
- attains high surface temperatures during normal use, and
- has provisions for permanent connection to multiple power supplies.

The marking informs the user of the specific actions to take to mitigate the potential risk of fire, electrical shock or injury to persons involved.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Household Curling Iron
- Household Facial Care Unit
- Household Facial Steamer
- Household Hair Dryer
- Household Hair Straightener
- Household Wax Depilator

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA C22.2 No. 64 (1991), "Household Cooking and Liquid-Heating Appliances," CAN/CSA C22.2 No. 68 (1992), "Motor-Operated Appliances (Household and Commercial)," C22.2 No. 88 (1958), "Construction and Test of Industrial Heating Equipment," and C22.2 No. 122 (1989), "Hand-Held Electrically Heated Tools."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sealing Equipment," "Wrapping Equipment" or "Marking Equipment," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SEWING AND CUTTING MACHINES  
CERTIFIED FOR CANADA (UBCZ7)**

**USE**

This category covers electric sewing machines, sewing machine appliances, vibrator-powered scissors, and cloth-cutting machines for household and commercial use. This category also covers textile equipment for use in unclassified locations, but does not cover equipment intended for use in hazardous (classified) locations, such as certain textile-processing equipment and yarn-handling equipment.

These products may be provided with attachments, such as a foot controller, presser feet, bobbins, etc., not involving moving or cutting parts. Attachments that perform functions other than intended by the basic design have not been investigated unless specifically noted in the individual certifications and covered in the installation and use instructions.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sewing Machine" or "Cutting Machine," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SHIPBOARD CABLE, MARINE  
CERTIFIED FOR CANADA (UBVZ7)**

**USE**

This category covers distribution (power), control and signal cable for use aboard commercial ships and mobile offshore drilling units (MODUs), in single or multiconductor construction, with or without metal armor and with or without an overall jacket.

The cable covered under this category is distribution cable rated 600 V, 1 kV, 2 kV, 5 kV or 8 kV, control cable rated 600 V, and signal cable rated 300 V.

**CABLE MARKINGS**

The cable is marked "-35C" and "FT4."  
Cable that is considered equivalent but has a continuous corrugated aluminum armor is identified by the marking "CWC/MC" in addition to the manufacturer's catalog designation for the cable.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Shipboard Cable

**ADDITIONAL INFORMATION**

For additional information, see Marine Products Certified for Canada (AAMP7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 245, "Marine Shipboard Cable."

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the attached tag, coil, reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Shipboard Cable."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SHIPBOARD CABLE FITTINGS, MARINE CERTIFIED FOR CANADA (UBWE7)**

**USE AND INSTALLATION**

This category covers fittings intended for use with marine shipboard cable, with and without metal wire armor and with and without nonmetallic jacket over the metal wire armor. No splices of conductors are intended to be made in the fittings. Restrictions on application, position, and/or location of the fittings are indicated in the manufacturer's instructions.

All male threaded fittings have only been investigated for use with lock-nuts.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. Investigations of these fittings include an evaluation for conformity to the installation.

**Reusability** — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Shipboard Cable Fitting

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Shipboard Cable, Marine Certified for Canada (UBVZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Marine Products Certified for Canada (AAMP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 18.3 (2004 and/or 2012), "Conduit, Tubing, and Cable Fittings."

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The UL symbol on the product and the Marine Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shipboard Cable Fitting," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SHORE-POWER CABLE SETS, MARINE CERTIFIED FOR CANADA (UBWW7)**

**USE**

This category covers shore-power cable sets rated less than 300 V used in supplying ac shore power to boats which are moored to a dock.

They are intended to be stored aboard the boat, where not exposed to sunlight and/or weather while not in use.

Shore-power cable sets comply with the applicable requirements for outdoor-use cord sets and additional requirements to determine their acceptability for supplying power to a boat moored to a dock.

The male and female end fittings of a shore-power cable set are intended to be connected to suitable shore-power outlet and shore-power inlet devices, respectively. The connections to the power inlet and outlet devices are to provide a seal against water.

Shore-power cable sets are commonly furnished in coiled form. If used in this condition, excessive heating may occur. Therefore, when placed into service, all wrappings should be removed and the cord extended for its entire length.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Shore-power Cable Set

**RELATED PRODUCTS**

See Cord Sets and Power-supply Cords Certified for Canada (ELBZ7).

**ADDITIONAL INFORMATION**

For additional information, see Marine Products Certified for Canada (AAMP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 21 (1990), "Cord Sets and Power Supply Cords."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Shore Power Cable Set."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SHORE-POWER INLETS, MARINE CERTIFIED FOR CANADA (UBXR7)**

**GENERAL**

The category covers shore-power inlets rated less than 300 V ac. They are intended for installation on boats to provide connection for shore-power-cable sets. These sets are used by boats which are moored to the dock. They are of the grounding type with a terminal provided for the grounding (green or green with yellow strip) conductor. The inlets are supplied with a rain-tight cover.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Shore-power Inlet

**RELATED PRODUCTS**

Shore-power inlets are also covered under Attachment Plugs, Fuseless Certified for Canada (AXUT7).

**ADDITIONAL INFORMATION**

For additional information, see Marine Products Certified for Canada (AAMP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL Mark for Canada symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Shore Power Inlet."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGNAL ALARM EQUIPMENT,  
MARINE CERTIFIED FOR CANADA  
(UBXW7)**

**USE AND INSTALLATION**

This category covers signal alarm equipment, including combinations of equipment making up a system, intended for use aboard boats to visually and/or audibly indicate an operating condition or malfunction.

These devices are intended for installation and operation in accordance with the manufacturer's instructions and the applicable requirements of the Canadian Coast Guard's "Ship Safety Electrical Standards" (TP 127 E), and the applicable requirements of CSA-C22.2 No. 183.2 (1983), "DC Electrical Installations on Boats," or CSA-C22.2 No. 183.1 (1982), "Alternating-Current (AC) Electrical Installations on Boats," as it applies to the product.

Only those products and components which have been investigated for ignition protection and comply with the requirements are so marked.

**PRODUCT MARKINGS**

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Signal Alarm Equipment

**ADDITIONAL INFORMATION**

For additional information, see Marine Products Certified for Canada (AAMP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/NFPA 302, "Fire Protection Standard for Pleasure and Commercial Motor Craft."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED," "SAFETY" and "MARINE," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Signal Alarm Equipment."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGNAL APPLIANCES CERTIFIED  
FOR CANADA (UCEV7)**

**AUDIBLE-SIGNAL APPLIANCES, GENERAL  
SIGNAL CERTIFIED FOR CANADA (UCST7)**

**GENERAL**

This category covers electrically operated bells, buzzers, horns and similar signal-sounding appliances intended for general signaling only. These devices may differ from audible-signal appliances intended for fire-protective signaling service in construction, and are not required to be marked with an audibility rating.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term "Audible Signal Appliance for General Signaling (Nonfire-Alarm Use)" or "Audible Signal Appliance Subassembly for General Signaling (Nonfire-Alarm) Use."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
General Signaling Equipment  
General Signaling Equipment Subassembly  
Type G (for General Signaling Equipment)  
Type G Subassembly (for General Signaling Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (1983), "Signal Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

**Type Codes:**

G - General Signaling Equipment  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGNAL SYSTEM UNITS CERTIFIED FOR  
CANADA (UDTZ7)**

**USE**

This category covers units intended to be used in combinations with related certified equipment to form installed systems for general-utility signaling purposes.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:  
General Signaling Equipment  
General Signaling Equipment Subassembly

Some of these products are also certified under other Signaling categories. When applicable, the product identity may include "and Hospital Signaling and Nurse Call," "and Emergency Signaling" or "and Fire Alarm," as appropriate (e.g., General Signaling and Fire Alarm Equipment).

Some of these products are also certified under Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include "and Enclosed Energy Management," "and

—Continued

Temperature-indicating,” “and Temperature-regulating,” “and Information Technology” or “and Telephone,” as appropriate (e.g., General Signaling and Telephone Equipment).

The product identities may be abbreviated as follows:

- Type E (for Emergency Signaling Equipment)
- Type E Subassembly (for Emergency Signaling Equipment Subassembly)
- Type EM (for Enclosed Energy Management Equipment)
- Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)
- Type HN (for Hospital Signaling and Nurse Call Equipment)
- Type HN Subassembly (for Hospital Signaling and Nurse Call Equipment Subassembly)
- Type IT (for Information Technology Equipment)
- Type IT Subassembly (for Information Technology Equipment Subassembly)
- Type T (for Telephone Equipment)
- Type T Subassembly (for Telephone Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (1983), “Signal Equipment.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “General Signaling Equipment” or “General Signaling Subassembly.”

Some of these products are also Listed under other Signaling categories. When applicable, the Signaling Mark is also included. The Signaling Mark consists of the Listing Mark elements detailed above, with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol. When applicable, the product name may include “and Hospital Signaling and Nurse Call,” “and Emergency Signaling” or “and Fire Alarm,” as appropriate (e.g., “General Signaling and Fire Alarm Equipment”).

Some of these products are also Listed under Energy Management, Information Technology or Telephone categories. When applicable, the product name may include “and Enclosed Energy Management,” “and Temperature-indicating,” “and Temperature-regulating,” “and Information Technology” or “and Telephone,” as appropriate (e.g., “General Signaling and Telephone Equipment”).

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**

- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment
- EM – Enclosed Energy Management Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPEAKERS CERTIFIED FOR CANADA (UEAY7)**

**USE AND INSTALLATION**

This category covers speakers investigated for use in general-utility signaling applications with respect to risk of fire and electric shock.

Where a certified product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual certifications, and each part bears a separate Certification Mark. Marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual certifications.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Signaling Speaker,” “Signaling Speaker Enclosure” or “Signaling Speaker Accessory.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- General Signaling Equipment
- General Signaling Equipment Subassembly
- Type G (for General Signaling Equipment)
- Type G Subassembly (for General Signaling Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 205, “Signal Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “General Signaling Equipment” or “General Signaling Subassembly.”

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**

- G – General Signaling Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VISUAL-SIGNAL APPLIANCES CERTIFIED FOR CANADA (UEES7)**

**USE AND INSTALLATION**

This category covers visual-signal appliances and accessories intended for use in general-signaling applications. These devices have been investigated with respect to risk of fire and shock.

Accessories, such as enclosures and back boxes, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. The marking on each part references installation instructions which show assembly and installation of the parts to form a certified product.

These products are intended for indoor use only unless otherwise specifically marked.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Visual Signaling Appliance” or “Visual Signaling Appliance Accessory.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- General Signaling Equipment

—Continued

General Signaling Equipment Subassembly  
 Type G (for General Signaling Equipment)  
 Type G Subassembly (for General Signaling Equipment Subassembly)

**RELATED PRODUCTS**

Devices intended for use in fire alarm and/or emergency-protective signaling applications are covered under Visual-signal Appliances for Fire Protective Signaling Systems Certified for Canada (UVAV7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S526 (1987), "Visible Signal Devices for Fire Alarm Systems, Including Accessories."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**SIGNAL APPLIANCES, MISCELLANEOUS CERTIFIED FOR CANADA (UEHX7)**

**GENERAL**

This category covers miscellaneous signaling appliance units that have been investigated only for hazard of fire and electric shock and are not associated with property protection and/or life safety. The general-purpose signaling nature of each product is categorized as Type NM (Nonmonitored).

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the phrase "Type NM" and a the specific use description as indicated in the individual certifications.

**PRODUCT IDENTITY**

One or more of the following product identities appears on the product:  
 General Signaling and Security Equipment (for products where the word "SECURITY" is included in the Certification Mark)

General Signaling and Security Equipment Subassembly (for products where the word "SECURITY" is included in the Certification Mark)

General Signaling Equipment

General Signaling Equipment Subassembly

Some of these products are also certified under other Signaling categories. For products where the word "SIGNALING" is included in the Certification Mark, the product identity may include "and Hospital Signaling and Nurse Call," "and Emergency Signaling" or "and Fire Alarm," as appropriate (e.g., General Signaling and Fire Alarm Equipment).

Some of these products are also certified under other Energy Management, Information Technology or Telephone categories. When applicable, the product identity may include "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., General Signaling and Telephone Equipment).

The product identities may be abbreviated as follows:

Type E (for Emergency Signaling Equipment)

Type E Subassembly (for Emergency Signaling Equipment Subassembly)

Type EM (for Enclosed Energy Management Equipment)

Type EM Subassembly (for Enclosed Energy Management Equipment Subassembly)

Type IT Subassembly (for Information Technology Equipment Subassembly)

Type S (for Security Equipment)

Type S Subassembly (for Security Equipment Subassembly)

Type T (for Telephone Equipment)

Type T Subassembly (for Telephone Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 205, "Signal Equipment."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For products additionally investigated with respect to signaling applications, the word "SIGNALING" is included in the Certification Mark.

For products additionally investigated with respect to security applications, the word "SECURITY" is included in the Certification Mark.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the Signaling Mark is also included. The Signaling Mark consists of the Listing Mark elements detailed above, with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and Emergency Signaling" or "and Fire Alarm," as appropriate (e.g., "General Signaling and Fire Alarm Equipment").

Some of these products are also Listed under Security categories. When applicable, the Security Mark is also included. The Security Mark consists of the Listing Mark elements detailed above, with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol. When applicable, the product name may include "and Security" (e.g., "General Signaling and Security Equipment").

Some of these products are also Listed under Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "General Signaling and Telephone Equipment").

For products also bearing the Signaling Mark, the product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

**Type Codes:**

S – Security Equipment

F – Fire Alarm Equipment

HN – Hospital Signaling and Nurse Call Equipment

G – General Signaling Equipment

E – Emergency Signaling Equipment

EM – Enclosed Energy Management Equipment

IT – Information Technology Equipment

T – Telephone Equipment

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. ## SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UFXR7)

Equipment for use in hazardous locations investigated for fire-protective signaling service also appears under Signal and Fire Alarm Equipment and Services Certified for Canada (SYKJ7).

## AUDIBLE-SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UGKZ7)

### GENERAL

This category covers audible-signal appliances, such as bells, sirens and horns.

Audible-signal appliances certified for use in any of the groups under Class I hazardous locations have been investigated with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. Those for use in any of the groups under Class II hazardous locations have been investigated for dust-tightness and have been subjected to operation tests to establish safety of operation in the presence of the specific combustible dusts, and also to establish that they will function as intended with dust accumulated on external parts.

### PRODUCT IDENTITY

The following product identity appears on the product:

Audible-signal Appliance for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Audible Signal Appliance for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## EXTINGUISHING SYSTEM ATTACHMENTS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UGYX7)

### GENERAL

This category covers devices having electrical signaling contacts that are designed for attachment to extinguishing system equipment so as to provide (1) alarm signals indicating discharge of extinguishing means, and (2) supervisory signals indicating abnormal conditions of extinguishing system equipment and restoration to normal.

The signal contacts of these attachments may be of the noncoded or coded type.

Devices classed as noncoded types have contacts that perform a switching function and are intended for connection to actuating circuits of a separate electrically operated transmitter or to the signaling line circuit of a separate electrical control unit by which their action is indicated.

Devices classed as coded types have contacts that perform a coded signaling impulse function resulting from the operation of a transmitting

—Continued

mechanism, which is a part of the attachment, and are intended for connection to the signaling line circuit of a separate electrical control unit by which their action is indicated.

### ATTACHMENT TYPES

Attachments for automatic sprinkler systems are classed as follows:

#### Waterflow Alarm Signal Types

**Alarm Dry-pipe Valve Attachment** — Mechanically operated on lifting of alarm valve clapper or pressure operated by suitable connection to alarm or dry-pipe valve piping trim.

**Waterflow Indicator** — Paddle operated.

**Special Attachment** — Type not included by above class.

#### Supervisory Signal Types

**Valve Position Signal Attachment** — Operated by mechanical linkage to movable parts of valve.

**Water Level Signal Attachment** — Operated by tank float.

**Pressure Signal Attachment** — Operated by pressure change of air, steam or water.

**Temperature Signal Attachment** — Operated by water or air temperature change.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Extinguishing System Attachment for Use in Hazardous Locations  
Water Flow Indicator for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Extinguishing System Attachment for Use in Hazardous Locations" or "Water Flow Indicator for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## FIRE ALARM DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UHMV7)

### USE AND INSTALLATION

This category covers coded and noncoded fire alarm boxes and fire and watch boxes for use with private fire alarm systems.

Authorities Having Jurisdiction should be consulted before installation.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Fire Alarm Box for Use in Hazardous Locations

Fire and Watch Box for Use in Hazardous Locations

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

–Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Fire Alarm Box for Use in Hazardous Locations” or “Fire and Watch Box for Use in Hazardous Locations.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**FLAME-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIAZ7)**

**USE AND INSTALLATION**

This category covers fire detectors designed to detect flames, either in infrared or ultraviolet regions.

Each detector provides signaling contacts for connection to a signal-indicating appliance, electrically actuated transmitters, or a system control unit to form a fire alarm system as indicated by the installation wiring diagram supplied with the unit.

Each unit is intended to be installed in accordance with the manufacturer’s control drawing, the Authority Having Jurisdiction, ANSI/NFPA 72, “National Fire Alarm Code,” or other NFPA standards that may apply, and CAN/ULC-S524 (1991), “Installation of Fire Alarm Systems.”

**Detector Location**

The location of flame detectors should be based on an engineering survey of the conditions to be anticipated in service and the principle of operation. Detectors should be installed only after a thorough study has been made of the area or premises to be protected (whether in planning or construction stage) and of the life and property values involved. Prior to engineering, a layout of an installation and a copy of the manufacturer’s technical bulletin should be obtained and reviewed to determine recommended detector locations. Consideration should be given to all features which could have a bearing on the location and sensitivity of the detectors, including such pertinent factors as coverage in partitioned sections, ceiling heights, and overlapping of areas of cone coverage to provide maximum protection. Test flames should be employed to check proper detector location.

**Environmental Considerations**

Where indicated in the individual certifications, detectors are intended for indoor and/or outdoor use. For indoor use, detectors should be located in areas where normal ceiling temperatures prevail. For outdoor use, detectors should be located such that an accumulation of snow, dirt, or road film is not likely to occur on the lens. Accordingly, detectors should be located under a building overhang or positioned on a downward angle to minimize the occurrence of such conditions.

Detectors should not be installed where unwanted false alarms are likely to occur, such as other sources of ultraviolet or infrared radiation.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Flame-automatic Fire Detector for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standards used to investigate products in this category are ULC/ORD-C386 (1990), “Flame Detectors,” and CAN/ULC-S529 (1987), “Smoke Detectors for Fire Alarm Systems.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

–Continued

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flame-automatic Fire Detector for Use in Hazardous Locations.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**GROUND INDICATORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIOR7)**

**GENERAL**

This category covers electronic-type ground indicators, the ratings of which are given on the individual product. These devices indicate by audible or visible signals whether an adequate connection to gasoline tank trucks, tank cars, or drums has been established for dissipation of static electricity.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Ground Indicator for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Ground Indicator for Use in Hazardous Locations.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIPV7)**

**USE AND INSTALLATION**

This category covers fixed-temperature, heat-actuated-type detectors employing a special construction different from conventional thermostats and designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with the Authority Having Jurisdiction and CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating-device circuits of certified control units that provide audible-alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

**SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UFXR7)**

**Heat-actuated Devices for Special Application for Use in Hazardous Locations Certified for Canada (UIPV7)—Continued**

The following product identity appears on the product:  
Heat-actuated Device for Special Application for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic ordinary locations standard used to investigate products in this category is CAN/ULC-S530 (1991), "Heat Actuated Fire Detectors for Fire Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEAT-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UIRV7)**

**USE AND INSTALLATION**

This category covers thermostat-type automatic fire detectors (known as thermostats), which are integral assemblies of heat-responsive elements and noncoded electrical contacts that function automatically under conditions of increase in air temperature. These thermostats consist of detection heads intended for mounting to compatible component bases having electrical functions, or self-contained units for mounting to standard electrical utility boxes.

Thermostats are of the fixed temperature (F), combination fixed temperature and rate-of-rise (C), or rate compensation (R) type. There are basically two types: (1) A spot-pattern-type thermostat is one in which the thermally sensitive element is a compact unit of small area; (2) a line-pattern-type thermostat is one in which the thermally sensitive element is continuous along a line.

The possible contact configurations of these thermostats are as follows: One-pole, normally open-circuit type (1PNO); one-pole, normally closed-circuit type (1PNC); two-pole open-circuit type (2PNO); two-pole, normally closed-circuit type (2PNC); two-pole, normally open-circuit and closed-circuit type (2PNO/NC). Thermostats with normally open contacts are suitable for use as initiating devices of a fire-protective signaling system. Thermostats with normally closed contacts are suitable for use as the heat-responsive portion of a releasing device system.

These thermostats have been investigated for indoor use only unless otherwise indicated in the individual certifications. Ordinarily, thermostats are intended for locations where normal ceiling temperatures prevail (below 38°C). Locations where temperatures at ceiling are likely to be unduly high (from sources of heat other than fire conditions, such as boiler rooms, dry kilns, etc.) demand special consideration and selection of thermostats operating normally at higher temperatures, and which are capable of withstanding high temperatures for long periods of time. Care should be exercised to select thermostats having the proper temperature rating to guard against false alarms from premature operation:

- For ceiling temperatures not exceeding 38°C, install 71°C or equivalent (ordinary) rating thermostats
- For ceiling temperatures exceeding 38°C, but not 66°C, install 100°C or equivalent (intermediate) rating thermostats
- For ceiling temperatures exceeding 66°C, but not 107°C, install 141°C

**SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UFXR7)**

—Continued

or equivalent (high) rating thermostats  
For ceiling temperatures exceeding 107°C, but not 149°C, install 182°C or equivalent (extra high) rating thermostats

The response sensitivity of thermostats to standard test fires is indicated by the "spacing" rating. The spacing rating is the maximum distance between adjacent thermostats installed on a symmetrical layout with the maximum right-angle distance to any wall or partition one-half the distance between thermostats. The fire tests conducted on thermostats are based on only one set of conditions, typically a 5-m high smooth ceiling, no air movement, and no physical obstructions between the fire source and the thermostat. Under other conditions and forms of ceiling construction, reduced spacing may be required to obtain equivalent performance.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room space area, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment, and to draft conditions likely to be encountered at the time of the fire.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Fire Detection Heat Detector for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CAN/ULC-S530 (1991), "Standard for Heat Actuated Fire Detectors for Fire Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Detection Heat Detector for Use in Hazardous Locations."

\*\*\*\*\*

**VISUAL-SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UJTK7)**

**GENERAL**

This category covers visual-signal appliances, such as rotating beacons and strobe lights, intended for use in general-signal applications, and subassemblies of visual-signal appliances intended for final assembly into visual-signal appliances.

Subassemblies, such as mounting bodies, globes and guards, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. Marking on each part references installation instructions which show assembly and installation of the parts to form a certified product.

Visual-signal appliances certified for use in any of the groups under Class I hazardous locations have been tested with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. Those for use in any of the groups under Class II hazardous locations have been tested for dust-tightness and have been subjected to operation tests to establish safety of operation in the presence of the specific combustible dusts and also to establish that they will function as intended with dust accumulated on external parts.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Visual-signal Appliance for Use in Hazardous Locations  
Visual-signal Appliance Subassembly for Use in Hazardous Locations  
Other product identities may be used as shown in the individual certifications.

**SIGNALING APPLIANCES AND EQUIPMENT FOR THE HEARING IMPAIRED FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (UXWC7)**

**GENERAL**

This category covers visual-signaling appliances, vibrators or other sensory apparatus and associated equipment investigated for fire-protective-signaling services to alert hearing-impaired persons, and subassemblies of signaling appliances intended for final assembly into signaling appliances.

Subassemblies, such as mounting bodies, globes and guards, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. Marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

These signaling appliances are intended to be used in conjunction with certified compatible fire-alarm-control units, alarm-initiating devices and the like. The interconnection, use and installation requirements of the products are intended to be in accordance with CAN/ULC-S540 (1986), "Installation of Residential Fire Warning Systems," or CAN/ULC-S524 (2001), "Installation of Fire Alarm Systems."

The signaling appliances in this category have been investigated as to their ability to alert most hearing-impaired persons. However, since the ability of signal recognition varies among individuals, the effectiveness of alerting a person can only be ensured by actual testing of that person with the installed signaling appliance.

This category does not cover signaling devices for the hearing impaired that are an integral part of other alarm-initiating or alarm-indicating devices. When such a combination exists, suitability as a signaling appliance for the hearing impaired will be noted in the individual certifications of the primary product.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Signaling Appliance Accessory for the Hearing Impaired for Use in Hazardous Locations
- Signaling Appliance for the Hearing Impaired for Use in Hazardous Locations
- Signaling Appliance Subassembly for the Hearing Impaired for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CAN/ULC-S526 (2002), "Visible Signal Devices for Fire Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Signaling Appliance for the Hearing Impaired for Use in Hazardous Locations," "Signaling Appliance Accessory for the Hearing Impaired for Use in Hazardous Locations" or "Signaling Appliance Subassembly for the Hearing Impaired for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGNS CERTIFIED FOR CANADA  
(UXYT7)**

**USE AND INSTALLATION**

This category covers electric portable and stationary signs and displays employing incandescent lamps, LEDs (light emitting diodes), electroluminescent panels, neon tubing, fluorescent lamps, high intensity discharge lamps or combinations thereof for installation in accordance with the "Canadian Electrical Code, Part I."

Signs or sections of a sign forming a complete enclosure intended for permanent connection to a source of supply are provided with permanent means for attachment to a building, to a support or to a hanging rig. The

mounting hardware, poles and other structural components of a sign have not been evaluated with respect to local variable conditions such as wind and snow loading or soil conditions.

Electric signs, of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each major subassembly bears an "Electric Sign Section" Certification Mark. Sign faces, trim and mounting hardware are not considered major subassemblies. Each sign will have suitable installation instructions describing or illustrating the proper assembly, mounting and connection of the numbered sign sections. The acceptability of the assembled sections in the field rests with the Authority Having Jurisdiction.

**PRODUCT MARKINGS**

Signs intended for permanent installation and which have been investigated for indoor use only are so marked. Cord-connected signs investigated for outdoor use are marked "Outdoor." Signs for outline lighting are marked "Outdoor Sign for Outline Lighting."

**REBUILT PRODUCTS**

This category also covers signs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt signs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt signs are subject to the same requirements as new signs.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Sign
- Electric Sign Section
- Indoor Electric Sign

For rebuilt products, the word "Rebuilt" precedes the product identity.

**RELATED PRODUCTS**

Accessories intended for use in certified signs are covered under Sign Accessories Certified for Canada (UYMR7).

Retrofit conversions intended to be field installed in certified electric signs are covered under Sign Conversions, Retrofit Certified for Canada (UYWU7).

Changing message center signs may contain integral controllers or may be intended for use with externally connected controllers. Externally connected controllers are covered under Sign Controllers, Message Centers Certified for Canada (UYTQ7).

This category does not cover billboard illumination, exit lights, skeletal neon tubing for show windows, or illuminated clocks rated 600 V or less.

Field-assembled neon systems used in display windows, outline lighting, or skeletal neon signs are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled Certified for Canada (UZBL7).

Field-assembled cold cathode electric discharge lighting systems that provide general illumination are covered under Electric Discharge Lighting Systems, Cold Cathode Certified for Canada (IFAY7).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field-installed Neon Outline Lighting Systems Certified for Canada (UYAM7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), "Portable and Stationary Electric Signs and Displays."

Electric signs that comply with the requirements in CAN/CSA-C22.2 No. 12, "Portable Luminaires," may also be certified as Portable Luminaires Certified for Canada (QOWZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Indoor Electric Sign," "Electric Sign" or "Electric Sign Section."

For rebuilt signs the word "Rebuilt" precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## FIELD-INSTALLED NEON OUTLINE LIGHTING SYSTEMS CERTIFIED FOR CANADA (UYAM7)

### GENERAL

This category covers neon outline lighting systems that incorporate neon tubing with ferrule-type end caps which are electrically connected to the output of a transformer, power supply or ballast by ferrule-type lampholders. Each transformer or power supply in the system has a maximum output current rating of 300 mA. These systems are for installation in accordance with Section 34 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These lighting systems outline or call attention to architectural details of a room or building.

Neon outline lighting systems are provided as a system of parts that are field installed. These systems are installed using tools and techniques available only to an electrician. The systems are provided with installation instructions that define the scope of the system and method for installation. It is intended that the system installation instructions be retained with the installation to which they apply.

The certification of an outline lighting system does not constitute approval of the design, which is the responsibility of the manufacturer and the Authority Having Jurisdiction, nor approval of the installation. The final acceptance of the field-installed neon outline lighting system is the responsibility of the Authority Having Jurisdiction.

These systems are intended for permanent installation indoors unless marked "Suitable for Outdoor Locations."

### PRODUCT IDENTITY

The following product identity appears on the product:

Field-installed Neon Outline Lighting System Part  
RELATED PRODUCTS

This category does not cover neon tubing for display windows or signs; see Signs Certified for Canada (UXYT7).

This category does not cover field-assembled neon systems in display windows, outline lighting, or skeletal neon signs; see Skeletal Neon Sign and Outline Lighting Systems, Field Assembled Certified for Canada (UZBL7)

This category does not cover cold cathode electric-discharge lighting systems for general illumination; see Electric-discharge Lighting Systems, Cold Cathode Certified for Canada (IFAY7).

Outline lighting of the incandescent, HID or fluorescent type fabricated in factory-built sections is covered under Signs Certified for Canada (UXYT7).

Lighting systems operating at 1000 V or less are covered under Fluorescent Surface-mounted Luminaires Certified for Canada (IEUZ7), High-intensity-discharge Surface-mounted Luminaires Certified for Canada (IEXT7) and Incandescent Surface-mounted Luminaires Certified for Canada (IEZR7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), "Portable and Stationary Signs and Displays."

### UL MARK

The Certification Mark of UL on each transformer and transformer enclosure, and the containers in which the remaining neon outline lighting system parts are packaged, or on the remaining neon outline lighting system parts themselves, referencing a specific field-installed neon outline system number is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these systems includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

**The certification of this neon outline lighting system is contingent upon installation according to the specifications of [Listee's Name], System No. \_\_\_\_ and the Canadian Electrical Code.**

### Alternate UL Mark

The Listing Mark of UL on each transformer and transformer enclosure, and the containers in which the remaining neon outline lighting system parts are packaged, or on the remaining neon outline lighting system parts themselves, referencing a specific field-installed neon outline system number is the only method provided by UL to identify neon outline lighting systems manufactured under its Listing and Follow-Up Service. The Listing Mark for these systems includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Field Installed Neon Outline Lighting System Part," and the statement "The Listing of this neon

—Continued

outline lighting system is contingent upon installation according to the specifications of [Listee's Name], System No. \_\_\_\_ and the Canadian Electrical Code."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SIGNS, CHANGING MESSAGE CERTIFIED FOR CANADA (UYFS7)

### GENERAL

This category covers illuminated and nonilluminated changing-message signs intended to be installed and connected to an electrical supply source in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Illuminated changing-message signs include incandescent, fluorescent, HID (high intensity discharge), electric discharge tubing (including neon) LED (light emitting diode), and other sources of illumination.

Nonilluminated changing-message signs include scrolling, flipper, LCD (liquid crystal display), and similar types that are generally motor operated or electronically controlled.

**Sign Section** — The changing-message signs may be divided into sections. Each section of the sign bears a "Changing Message Sign Section" Certification Mark that states in combination with the Certification Mark "Section \_\_\_\_ of \_\_\_\_." The first blank space identifies the number of the section, and the second blank space identifies the total number of sections required to constitute a complete changing-message sign. Suitable installation instructions describing or illustrating the proper assembly, mounting, and connection of the numbered sign sections are provided.

### SIGN INSTALLATION MARKINGS

**Indoor/Outdoor Use** — Permanently connected changing-message signs are investigated and intended for use outdoors unless marked "For Indoor Use Only." Cord-connected changing-message signs are investigated and intended for use indoors unless marked "Portable Outdoor Changing Message Sign."

**Trailer Mounted** — Changing-message signs intended to be trailer mounted are marked "Trailer On Which Sign May Be Mounted Has Not Been Investigated."

**Orientation Marking** — A changing-message sign intended for outdoor use that is not provided with construction features to ensure proper orientation is marked to indicate the proper mounting position.

**Wall Mounted** — A changing-message sign for outdoor use, wall mounting and provided with drain holes along the bottom edge of the back of the sign, and marked "Maintain 1/2 Inch Clearance Between All Drain Openings And The Mounting Surface" is intended to be installed so that the drain holes are not covered by the building surface.

### REBUILT PRODUCTS

This category also covers rebuilt changing-message signs which have been reconditioned or rebuilt. Such changing-message signs have been factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Reconditioned or rebuilt changing-message signs are subject to the same requirements as new changing-message signs.

### RELATED PRODUCTS

Components and parts intended for use on or with changing-message signs are covered under Sign Accessories Certified for Canada (UYMR7).

Changing-message signs may also be covered under Signs Certified for Canada (UXYT7).

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Changing-message Sign  
Changing-message-sign Section  
Indoor Changing-message Sign

For rebuilt products, the word "Rebuilt" precedes the product identity.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), "Portable and Stationary Electric Signs and Displays."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

—Continued

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products include the UL Mark for Canada Symbol (as illustrated in the introduction of this directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Indoor Changing Message Sign," "Changing Message Sign" or "Changing Message Sign Section."

For rebuilt products, the word "Rebuilt" precedes the product name.

**SIGN ACCESSORIES CERTIFIED FOR CANADA (UYMR7)**

**USE**

This category covers sign components such as combinations of frame plastic panels with metal or plastic characters; sign-rotating equipment and sign-lift mechanisms for use in electric signs where weather protection and electrical enclosure are provided by the sign; ballast lead covers or enclosures intended to provide weather and mechanical protection to leads of outdoor ballasts; fluorescent U-tube and lampholder assemblies consisting of lampholders in sheet-metal brackets with spring and loaded rod and hook assemblies with or without ballast; insulating caps for use on electrode receptacles to provide electrical insulation; low-voltage power supplies consisting of assemblies of Class 2 transformers, an enclosure and a power-supply cord; and kickback bases intended for indoor use and provided with a receptacle for connection of a related display and provided with a power-supply cord.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Sign Accessory

**RELATED PRODUCTS**

Lampholders and electrode receptacles are covered under Lampholders, Electric Discharge, More Than 1000 Volts Certified for Canada (OJOV7).

**ADDITIONAL INFORMATION**

For additional information, see Signs Certified for Canada (UXYT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), "Portable and Stationary Electric Signs and Displays."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sign Accessory."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGN CONTROLLERS, MESSAGE CENTERS CERTIFIED FOR CANADA (UYTQ7)**

**GENERAL**

This category covers control panels or units for changing-message signs.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Sign Controller

**Sign Controllers, Message Centers Certified for Canada (UYTQ7)—Continued**

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207 (1989), "Portable and Stationary Electric Signs and Displays."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sign Controller," or other appropriate product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGN CONVERSIONS, RETROFIT CERTIFIED FOR CANADA (UYWU7)**

**USE AND INSTALLATION**

This category covers retrofit sign conversions consisting of subassemblies or kits intended for field installation in certified signs. There are several types of sign conversions as specified below.

Scrolling units (motor-operated message assemblies), devices to change the type of illumination (such as from incandescent to fluorescent), or combinations thereof consist of subassemblies intended for field installation in specific certified permanently connected electric signs. The conversion identifies the catalog number (or other description) and company name of the sign in which it is intended to be used.

Light-emitting-diode (LED) kits consist of the power source, the LEDs and the LED mounting means necessary to change the type of illumination originally contained in the sign to LED illumination. The kit installation instructions specify the type of sign in which the kit is intended to be installed.

These conversions have been investigated to determine that, when used in accordance with the manufacturer's instructions provided with the retrofit device, they do not adversely affect the operation of the complete electric sign.

**ADDITIONAL INFORMATION**

For additional information, see Signs Certified for Canada (UXYT7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207, "Portable and Stationary Electric Signs and Displays."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**RETROFIT SIGN CONVERSION**

**FOR USE ONLY WITH SIGN**

MODEL \_\_\_\_ MANUFACTURED BY \_\_\_\_

or

**RETROFIT SIGN CONVERSION LED KIT**

**FOR USE ONLY IN ACCORDANCE WITH KIT INSTRUCTIONS**

**Alternate UL Mark**

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification

–Continued

and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**RETROFIT SIGN CONVERSION  
FOR USE ONLY WITH SIGN  
MODEL \_\_\_\_ MANUFACTURED BY \_\_\_\_  
Control No.**

or

**RETROFIT SIGN CONVERSION LED KIT

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SIGN FLASHERS CERTIFIED FOR CANADA (UYZZ7)

### USE AND INSTALLATION

This category covers flashing devices intended to control incandescent lamps or gas-tube-sign transformers.

The installation of open-type flashing devices in electric signs is intended to be in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” as follows: (a) within a standard cutout box or cabinet, or (b) within an enclosed compartment, accessible and weatherproof, of metal at least as thick as that of the sign itself and located in or on the body or structure of the sign.

Flashing devices of the thermostatic type are intended to control incandescent lamps and are for indoor use only.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Blinker
- Flasher
- Sign Flasher
- Winker

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207, “Portable and Stationary Electric Signs and Displays.”

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number and one of the following product names as appropriate: “Sign Flasher,” “Blinker,” “Winker,” “Flasher,” or other appropriate product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SKELETAL NEON SIGN AND OUTLINE LIGHTING SYSTEMS, FIELD ASSEMBLED CERTIFIED FOR CANADA (UZBL7)

GENERAL

–Continued

This category covers field-assembled skeletal neon sign and outline lighting systems intended for permanent installation in accordance with Section 34 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” These systems are intended for outdoor use unless marked for indoor use.

The presence of the UL Certification Mark is evidence that the installation of the skeletal neon sign or outline lighting system (1) has been assembled and installed by an installer who is authorized by UL to apply the UL Certification Mark and who subscribes to UL Follow-Up Service; (2) employs materials and components certified for Canada; and (3) is subject to a field inspection program covering proper installation of the system.

The certification of a system does not constitute approval of the completed assembly and installation which is the responsibility of the installer and the Authority Having Jurisdiction.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Field-installed Skeletal Neon Outline Lighting System
- Field-assembled Skeletal Neon Sign System

### RELATED PRODUCTS

Field-assembled cold cathode electric-discharge lighting systems that provide general illumination are covered under Electric-discharge Lighting Systems, Cold Cathode, Certified for Canada (IFAY7).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field-installed Neon Outline Lighting Systems Certified for Canada (UYAM7).

Factory-assembled neon signs and outline lighting or sectional signs that require some field assembly are covered under Signs Certified for Canada (UXYT7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 207, “Portable and Stationary Electric Signs and Displays.”

### UL MARK

The Certification Mark of UL on the transformer or power-supply enclosure is the only method provided by UL to identify that a field-assembled skeletal neon sign or outline lighting system is covered under its Certification and Follow-Up Service. The Certification Mark for these systems includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

[Installing company name or logo]

[Date of installation]

[Location]

### Alternate UL Mark

The Listing Mark on the transformer or power-supply enclosure is the only method provided by UL to identify that a field-assembled skeletal neon sign or outline lighting system is covered under its Listing and Follow-Up Service. The Listing Mark for these systems includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, the product identity “Field Assembled Skeletal Neon Sign System” or “Field Assembled Skeletal Neon Outline Lighting System,” the installing company name or logo, date of installation, and location.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SNOW MOVERS CERTIFIED FOR CANADA (UZX7)

### USE

This category covers battery-powered snow movers and motor-operated portable snow movers intended for outdoor use on nominal system voltages of 250 V or less, designed to be used in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

### SPECIAL CONSIDERATIONS

These products have been investigated from the standpoint of risk of personal injury, electric shock and fire.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to

698 SNOW MOVERS CERTIFIED FOR CANADA (UZNX7)

employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for snow movers marked "Double Insulated," all snow movers are provided with means for grounding. Double-insulated appliances require normal care in handling.

**FACTORS NOT INVESTIGATED**

Any potential health effects that may be associated with the use of snow movers, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 147 (1990), "Motor-Operated Gardening Appliances."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Snow Mover."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SOLAR ENERGY SYSTEMS EQUIPMENT CERTIFIED FOR CANADA (UZST7)**

The products covered in this category are intended for use in systems involving direct utilization of solar energy. The type of product and limitations of use, if any, are indicated in the individual Listings and/or by the marking on the product. Unless outdoor use is evident by the type of product, or unless marked "outdoor use" or "rain tight," products Listed in this category are for indoor use only.

Conventional products which may be used in solar systems but which are not specifically designed for such applications are not covered under this category.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CONTROLLERS, ELECTRICAL, SOLAR CERTIFIED FOR CANADA (UZVY7)**

**GENERAL**

This category covers electrical controllers intended for use as components of solar energy systems. They are responsive to change in temperature or differential temperature and are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Solar Electrical Controller

**RELATED PRODUCTS**

Electrical temperature controllers covered under Temperature-indicating and Regulating Equipment, Electrical Certified for Canada (XATJ7) may also be suitable for use in solar systems but are not specifically investigated for such use.

**SOLAR ENERGY SYSTEMS EQUIPMENT CERTIFIED FOR CANADA (UZST7)**

—Continued

**ADDITIONAL INFORMATION**

For additional information, see Solar Energy Systems Equipment Certified for Canada (UZST7) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-F378 (1987), "Solar Collectors."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solar Electrical Controller."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SOLENOIDS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VAMH7)**

**USE**

This category covers solenoids for installation on valves. The solenoids are incomplete devices inasmuch as the plungers or pistons are intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Solenoid for Use in Hazardous Locations  
Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 139, "Electrically Operated Valves."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solenoid for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SOLENOIDS FOR USE IN HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (VAPT7)**

**SOLENOIDS FOR USE IN  
HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (VAPT7)**

**USE**

This category covers solenoids intended for connection to threaded rigid conduit. These solenoids may include the plungers or pistons intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Solenoid for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 139, "Electrically Operated Valves."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. **SOUND-METERING EQUIPMENT FOR  
USE IN HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (VBYC7)**

**GENERAL**

This category covers equipment that measures and stores the ambient noise levels in industrial areas.

**RELATED PRODUCTS**

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Noise Dosimeter
- Sound Level Meter

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. \*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SOUND-METERING EQUIPMENT FOR  
USE IN ZONE CLASSIFIED  
HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (VBYX7)**

**USE AND INSTALLATION**

This category covers sound-metering equipment that measures and stores the ambient noise levels in industrial areas.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuits as indicated on the product, for extension into a hazardous (classified) location.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Noise Dosimeter for Use in Hazardous Locations
- Sound Level Meter for Use in Hazardous Locations
- Sound Level Meter (Associated Apparatus)

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic hazardous (classified) locations standards used to investigate products in this category are identified in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES CERTIFIED FOR CANADA (VDGT7)**

The following Standards of the National Fire Protection Association relate to the devices and equipment covered under this category: NFPA 13, "Standard for the Installation of Sprinkler Systems," NFPA 15, "Standard for Water Spray Fixed Systems for Fire Protection" and NFPA 16, "Standard for the Installation of Foam-Water Sprinkler and Foam-Water Spray Systems."

Authorities Having Jurisdiction should be consulted regarding use of these devices and equipment before installation.

**AIR COMPRESSORS, SPECIAL TYPE CERTIFIED FOR CANADA (VDUR7)**

**USE**

This category covers air compressors that are special units intended for use with sprinkler equipment of special designs.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Air Compressor – Special Type

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 68, "Motor-Operated Appliances (Household and Commercial)."

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES CERTIFIED FOR CANADA (VDGT7)**

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Compressor, Special Type."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**DRAIN FITTINGS, SPECIAL TYPE CERTIFIED FOR CANADA (VEHZ7)**

**USE AND INSTALLATION**

This category covers special-type drain fittings that may consist of a (1) sight glass; (2) ball-, angle-, plug- or globe-type shutoff valve in combination with either a sight glass or simulated sprinklers orifice; or (3) combination of a sight glass, drain valve and simulated sprinkler orifice as indicated in the individual certifications. These fittings may also be equipped with a relief valve intended for use in gridded wet-pipe sprinkler systems as indicated in the individual certifications.

These special-type fittings are intended for use in the drain piping or as a system test connection in sprinkler systems in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," or ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes." These devices are rated for a maximum pressure of 1210 kPa unless otherwise indicated in the individual certifications.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Drain Fitting, Special Type

**RELATED SERVICES**

Special-type drain fittings certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Special-type drain fittings certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler Systems and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C258 (2003), "Shutoff Valves for Trim and Drain Purposes for Fire Protection Service".

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drain Fitting, Special Type."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## FLEXIBLE SPRINKLER HOSE WITH FITTINGS CERTIFIED FOR CANADA (VENF7)

### USE AND INSTALLATION

This category covers devices flexible sprinkler hose with fittings intended for use in sprinkler systems between the branch line and sprinkler when installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," or ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes," and the manufacturer's installation instructions.

As indicated in the individual certifications, these products may have high flexibility or limited flexibility. Products having high flexibility are intended for use in applications where frequent movement between the two ends of the hose is expected after installation. Products having limited flexibility are intended for use in applications where little or no movement between the two ends is expected after installation.

A flexible sprinkler hose assembly consists of a flexible hose, inlet fitting for connection to the branch line, and an outlet fitting for connection to the sprinkler. These flexible hose with fittings are intended to be installed using the anchoring devices referenced in the manufacturer's installation instructions. Flexible sprinkler hose length is limited to a maximum of 1828.8 mm (6 ft) to minimize the potential for hose kinking and undesirable movement of a sprinkler after installation. The manufacturer's installation instructions include additional information relative to proper use, such as anchoring device installation, allowable number of bends, minimum bend radii, pressure loss, sprinklers to be attached to the hose, flexibility and maximum temperature rating. Bending of the flexible hose to a radius less than the minimum value referenced in the manufacturer's installation instructions may cause structural damage that could adversely impact the pressure retention and hydraulic performance.

These products are intended for use in hydraulically designed sprinkler systems. The hydraulic pressure loss associated with these devices needs to be included in the hydraulic design calculations. Pressure loss is published in equivalent length, in meters of 1-in. diameter Schedule 40 steel pipe (where the Hazen-Williams coefficient of friction is C equals 120).

Authorities Having Jurisdiction should be consulted before installation.

### FACTORS NOT INVESTIGATED

Unless certified for such use, the impact of a flexible sprinkler hose assembly on a ceiling-grid system used to provide fire-resistance performance in a floor-ceiling or roof-ceiling assembly has not been investigated.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Flexible Sprinkler Hose Fitting

### RELATED SERVICES

Flexible sprinkler hose fittings certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Flexible sprinkler hose fittings certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

### ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C1474 (2003), "Adjustable Drop Nipples for Sprinkler Systems."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Sprinkler Hose Fitting."

–Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## GAUGES, PRESSURE CERTIFIED FOR CANADA (VEVX7)

### USE AND INSTALLATION

This category covers nonrecording, indicating pressure gauges of the elastic-element type. These gauges are intended for installation and use in accordance with applicable NFPA standards, such as ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

### PRODUCT IDENTITY

The following product identity appears on the product:  
Pressure Gauge for Fire-protection Service

### ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C393, "Indicating Pressure Gauges for Fire Protection Service."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pressure Gauge for Fire Protection Service."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## GUARDS FOR SPRINKLERS CERTIFIED FOR CANADA (VFJV7)

### USE

This category covers guards intended for use with pendent, upright, sidewall, or intermediate-level sprinklers when installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height," or ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes," and the manufacturer's installation instructions.

The guards are intended for installation on sprinklers that may be subject to mechanical damage. The use of the guards is intended to be limited to the specific sprinklers indicated in the individual certifications.

### PRODUCT IDENTITY

The following product identity appears on the product:  
Guard for Sprinkler

### ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

### REQUIREMENTS

The basic standard used to investigate products in this category is ULC/ORD-C199D (2003), "Guards for Sprinklers."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**HANGERS, PIPE CERTIFIED FOR CANADA  
(VFXT7)**

**USE AND INSTALLATION**

This category covers pipe-hanger equipment intended for supporting piping in sprinkler systems, water-spray systems and other piping systems used for fire-protection service.

A pipe hanger consists of a unit assembly used singly or in combination with other assemblies for supporting or hanging pipe. This may include equipment which (1) partially or totally encompasses the pipe, (2) attaches to an element of the building, and (3) is interconnected by threaded steel rod with, or without couplings.

Pipe-hanger equipment that partially or totally encompasses the pipe includes solid, split, or swivel rings, clevis hangers, band hangers or the like as described in the individual certifications.

Pipe-hanger equipment that attaches to the elements of the building includes beam, purlin and C-clamps, side-beam attachments, brackets and eyelets, concrete inserts, ceiling flanges, post-installed anchors, or the like as described in the individual certifications.

For pipe hangers that use threaded steel rod, the rod sizes are specified in the individual certifications.

Requirements for the installation and use of these hangers are included in ANSI/NFPA 13, "Installation of Sprinkler Systems."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Pipe Hanger

**RELATED PRODUCTS**

See Fasteners for Pipe Hangers, Powder Driven Certified for Canada (VGLR7) and Sway Brace Devices, Rigid Type for Sprinkler Systems Certified for Canada (VGM7).

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C203, "Pipe Hanger Equipment for Fire Protection Service."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pipe Hanger."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Fasteners for Pipe Hangers, Powder Driven  
Certified for Canada (VGLR7)**

**USE AND INSTALLATION**

This category covers fasteners driven into concrete or steel that are intended for the attachment of pipe hangers. This category also covers threaded couplings intended for use with these fasteners. The fasteners and corresponding threaded couplings are tested to determine their suitability for supporting the loads associated with the pipe sizes indicated in the individual certifications. Unless otherwise stated, these fasteners are intended for vertical installation to support the pipe sizes indicated.

Application of these fasteners requires use of the Listee's powder-operated tools, releasing an explosive charge to drive the shank of the fasteners into the receiving material.

Authorities Having Jurisdiction should be consulted regarding use. As a preliminary step to installation of this product in concrete, test of the acceptability of the concrete for the purpose should be made by driving a number of test pins into the concrete and then measuring the load to extract them as outlined in ANSI/NFPA 13, "Installation of Sprinkler Systems." The minimum thickness of steel of building members into which studs may be driven for support of sprinkler piping should be based on the ability of the steel to support the load without deformation. From corrosion and holding-power standpoints, a minimum steel thickness of 4.7 mm is recommended.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Fastener for Pipe Hanger

**ADDITIONAL INFORMATION**

For additional information, see Hangers, Pipe Certified for Canada (VFXT7), Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C203, "Pipe Hanger Equipment for Fire Protection Service."

**UL MARK**

The Certification Mark of UL on the product, or on the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Sway-brace Devices, Rigid Type for Sprinkler  
Systems Certified for Canada (VGM7)**

**USE AND INSTALLATION**

This category covers rigid-type sway-brace devices intended to be installed as part of a sprinkler system to resist horizontal lateral or longitudinal movement of sprinkler piping. These devices are intended to resist forces in tension and compression. Requirements for the installation and use of sway-brace assemblies are described in ANSI/NFPA 13, "Installation of Sprinkler Systems," and the manufacturer's installation and design manual.

These devices are intended to be used in addition to the required pipe hangers specified in ANSI/NFPA 13, and include the following:

1. Sway-brace fittings used to attach the sprinkler system piping to a sway brace.
2. Sway-brace attachment fittings used to attach the sway brace to a building structure.

This category does not cover the sway brace, which is a rigid structural member intended to be attached to the building structure with a structure attachment fitting at one end, and attached to the sprinkler system piping

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM  
DEVICES CERTIFIED FOR CANADA (VDGT7)**

–Continued

with a sway-brace fitting at the other end. The sway braces intended to be used with these devices are specified in the manufacturer’s installation instructions.

The maximum rated load indicated in the individual certifications is referenced for those situations when the use of other horizontal loads is required or permitted by the Authority Having Jurisdiction. These maximum rated loads should be reduced as specified in ANSI/NFPA 13 for loads that are less than 90 degrees from the vertical. The maximum sway-brace spacing specified in ANSI/NFPA 13 should not be exceeded. A sway-brace assembly is not intended to be installed to sustain a load greater than the load rating for any individual element of the assembly.

Authorities Having Jurisdiction should be consulted before installation of these devices.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- SA Fitting
- SB Fitting
- Structure-attachment Fitting
- Sway-brace Fitting

**ADDITIONAL INFORMATION**

For additional information, see Hangers, Pipe Certified for Canada (VFXT7), Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C203A (1998), “Sway Brace Devices for Sprinkler System Piping.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Sway Brace Fitting” (or “SB Fitting”) or “Structure Attachment Fitting” (or “SA Fitting”).

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**NOZZLES, SPRAY TYPE, FIXED CERTIFIED  
FOR CANADA (VGYZ7)**

**USE AND INSTALLATION**

This category covers spray nozzles that discharge water in a specific spray pattern as defined by the manufacturer. Spray nozzles consist of the automatic or nonautomatic (open) type, and are intended for installation in fixed piping systems as specified in ANSI/NFPA 13, “Installation of Sprinkler Systems,” and ANSI/NFPA 15, “Water Spray Fixed Systems for Fire Protection.”

**Automatic Type**

Automatic-type spray nozzles are intended to operate when the temperature of the heat-responsive element exceeds its thermal-response temperature.

Standard temperature ratings of automatic spray nozzles, the maximum ambient temperatures, and frame and glass heat-responsive element (glass bulb) color coding are as follows:

Temperature Class	Temperature Rating, °C	Frame Color Code+	Glass Bulb Color	Max Temp at Point of Installation, °C
Ordinary	57 to 77	Uncolored++	Orange or Red	38
Intermediate	79 to 107	White	Yellow or Green	66
High	121 to 149	Blue	Black	107
Extra High	163 to 191	Red	Purple	149

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES  
CERTIFIED FOR CANADA (VDGT7)**

–Continued

Temperature Class	Temperature Rating, °C	Frame Color Code+	Glass Bulb Color	Max Temp at Point of Installation, °C
Very Extra High	207 to 246	Green	Black	191
Ultra High	260 to 302	Orange	Black	246

+ Corrosion-resistant spray nozzles are marked with either a dot on top of the deflector, color of the coating, or colored frame arms  
++ The 57°C spray nozzles may be color coded black

**Nonautomatic (Open) Type**

Nonautomatic (open) type nozzles do not incorporate heat-responsive elements or operating parts and are intended to be installed in water-spray systems when water flow is controlled by devices other than the spray nozzle.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Automatic Fixed Nozzle
- Nonautomatic Fixed Nozzle

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C2351 (2003), “Spray Nozzles for Fire-Protection Service.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Automatic Fixed Nozzle” or “Nonautomatic Fixed Nozzle.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**NOZZLES, FIXED SPRAY, FOAM CERTIFIED  
FOR CANADA (VIHU7)**

**GENERAL**

This category covers nozzles that produce and distribute foam when foam solution is discharged through them, and will distribute over the same area in the absence of foam concentrate. Foam solution-nozzle combinations will produce foam blankets which provide burnback resistance and protection from reflash under standard test conditions.

These nozzles are of the nonautomatic (open) type and do not incorporate heat-responsive elements or operating parts and are intended to be installed in water spray systems when water flow is controlled by devices other than the spray nozzle.

Fixed foam-spray nozzles are intended to be installed in accordance with the applicable requirements of ANSI/NFPA 16, “Installation of Foam-Water Sprinkler and Foam-Water Spray Systems.”

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:

- Fixed Foam Nozzle

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ULC-S564 (2006), “Standard for Categories 1 and 2 Foam Liquid Concentrates,” and ULC/ORD-C199 (2003), “Automatic Sprinklers for Fire-Protection Service.”

**UL MARK**

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM  
DEVICES CERTIFIED FOR CANADA (VDGT7)**

704

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fixed Foam Nozzle."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**AIR-PRESSURE-MAINTENANCE DEVICES,  
AUTOMATIC CERTIFIED FOR CANADA  
(VIOT7)**

**USE AND INSTALLATION**

This category covers automatically controlled air- or nitrogen-supply valves intended to maintain desired pressure in dry-pipe sprinkler systems and in special sprinkler systems needing supervising air or nitrogen pressure, by feeding air or nitrogen as needed from a pressure source. These products are intended for installation in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Air-pressure-maintenance Device

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C260, "Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Pressure Maintenance Device."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PIPING, SPRINKLER SYSTEM CERTIFIED  
FOR CANADA (VIVS7)**

**Chlorinated Polyvinyl Chloride Sprinkler Pipe  
and Fittings Certified for Canada (VIWT7)**

**USE AND INSTALLATION**

This category covers chlorinated polyvinyl chloride (CPVC) pipe and fittings intended for use in sprinkler systems in the following types of occupancies:

1. Light Hazard occupancies as defined in ANSI/NFPA 13, "Installation of Sprinkler Systems."

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES  
CERTIFIED FOR CANADA (VDGT7)**

—Continued

2. Residential occupancies as defined in ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."
3. Residential occupancies as defined in ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

CPVC pipe and fittings are intended to be installed in accordance with the requirements specified in the manufacturer's installation instructions, ANSI/NFPA 13, 13R or 13D, and the "National Building Code of Canada." Special installation and design criteria relative to pipe hanger spacings, piping and sprinkler restraint, sprinkler temperature rating, piping location, testing procedures and friction loss characteristics are specified in the manufacturer's installation instructions provided with the pipe.

As the performance of plastic pipe and fittings can be adversely affected by elevated temperatures, it is important that they not be installed where ambient temperatures normally exceed the maximum temperature ratings specified in the individual certifications. These pipe and fittings are not intended to be installed in outdoor applications.

The CPVC pipe and fittings are intended for use in wet-pipe systems only and have not been investigated for use in dry-pipe systems. Their use in ceiling spaces above nonsprinklered areas has not been investigated.

The manufacturer's installation instructions should be reviewed and authorities having jurisdiction consulted before installation.

**PROTECTION**

When used with standard response sprinklers, protection is intended to be provided for CPVC pipe and fittings by ceilings, walls or soffits consisting of, at a minimum, lath and plaster, 9.5 mm thick gypsum board, 13 mm thick plywood or a suspended membrane ceiling with lay-in panels or tiles, classified with respect to surface burning characteristics having a mass of not less than 1.7 kg/sq m and installed in steel suspension grids. The effectiveness of this protection can be impaired if penetrated by openings such as ventilation grills, exhaust fans connected to metal ducts serving washrooms excepted. Where such penetration is present, individual openings exceeding 0.03 sq m but not exceeding 0.71 sq m in area should be located so that the distance from the edge of the opening to the nearest sprinkler does not exceed 300 mm. This piping is not intended to be used where such openings exceed 0.71 sq m in area.

The effect of the presence of nonrated recessed lighting fixtures, public address speakers, and other interruptions of the protective membrane has not been investigated.

As an alternative to the protection requirements, CPVC pipe and fittings may be installed without protection (exposed) when subject to the following additional limitations:

1. Exposed piping is to be installed below a smooth, flat, horizontal, fixed ceiling construction.
2. Certified quick-response or certified residential sprinklers with a maximum temperature rating of 77°C.

During remodeling or ceiling repair, appropriate precautions should be implemented to properly shield the piping from the protected occupancy.

**FACTORS NOT INVESTIGATED**

Compatibility for this pipe material with other components in fire sprinkler systems has not been investigated. Information obtained from field installations of this piping indicates certain materials or chemicals that come into contact with either the internal or external sprinkler system piping may cause the piping to degrade. The pipe manufacturer should be consulted to obtain any information available relating to material or chemical compatibility.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
CPVC Sprinkler Fitting  
CPVC Sprinkler Pipe  
Sprinkler Pipe  
Sprinkler-pipe Fitting

**RELATED SERVICES**

CPVC sprinkler pipe and fittings certified to NSF/ANSI 61, "Drinking Water System Components - Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

CPVC sprinkler pipe and fittings certified to NSF/ANSI 372, "Drinking Water System Components - Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C199P (2002), "Combustible Piping for Sprinkler Systems."

**UL MARK**

–Continued

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “CPVC Sprinkler Pipe” or “Sprinkler Pipe,” “CPVC Sprinkler Fitting” or “Sprinkler Pipe Fitting.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Support Devices for Thermoplastic Sprinkler Piping  
Certified for Canada (VIXH7)**

**USE AND INSTALLATION**

This category covers devices intended for use with certified thermoplastic piping installed in sprinkler systems in the types of occupancies specified in Chlorinated Polyvinyl Chloride Sprinkler Pipe and Fittings Certified for Canada (VIWT7).

These support devices are intended to be installed in accordance with ANSI/NFPA 13, “Installation of Sprinkler Systems,” ANSI/NFPA 13D, “Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes,” or ANSI/NFPA 13R, “Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height.”

Unless otherwise indicated in the individual certifications, these support devices have not been investigated for use in air-handling spaces.

**INSTALLATION INSTRUCTIONS**

Special installation and design criteria relative to pipe-support spacings, piping restraint and piping location are specified in the manufacturer’s installation instructions provided with the pipe.

The manufacturer’s installation instructions should be reviewed and Authorities Having Jurisdiction consulted before installation.

**PROTECTION**

An optional decorative cover may be provided with the support devices as indicated in the individual certifications. The decorative cover is not an acceptable means of providing protection for CPVC piping when a protective membrane is required in accordance with the certification of the CPVC pipe and the installation instructions.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Pipe Hanger for CPVC Piping  
Support-system Part for CPVC Piping  
Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Chlorinated Polyvinyl Chloride Sprinkler Pipe and Fittings Certified for Canada (VIWT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C199P, “Combustible Piping for Sprinkler Systems.”

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Support System Part for CPVC Piping” or “Pipe Hanger for CPVC Piping,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Cross-linked Polyethylene Sprinkler Pipe and  
Fittings Certified for Canada (VIXR7)**

**USE AND INSTALLATION**

This category covers cross-linked polyethylene (PEX) pipe and fittings intended for use in multi-purpose piping systems of residential occupancies as defined in ANSI/NFPA 13D, “Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes.”

PEX pipe and fittings are intended to be installed in accordance with the requirements specified in the manufacturer’s installation instructions, ANSI/NFPA 13D, and the “National Building Code of Canada.” Special installation and design criteria relative to pipe-hanger spacing, piping and sprinkler restraint, sprinkler temperature rating, piping location, testing procedures and friction loss characteristics are specified in the manufacturer’s installation instructions provided with the pipe.

PEX pipe and fittings are not intended to be installed in combustible concealed spaces where sprinklers are required by ANSI/NFPA 13D.

PEX pipe and fittings are intended for use in areas where the maximum ambient temperature does not exceed 48°C. If the ambient temperature is expected to exceed this limitation, refer to the manufacturer’s installation instructions for additional information on methods to reduce the pipe exposure temperatures. These pipe and fittings are not intended to be installed in outdoor applications.

PEX pipe and fittings are intended for use in wet-pipe systems only and have not been investigated for use in dry-pipe systems.

The manufacturer’s installation instructions should be reviewed and Authorities Having Jurisdiction consulted before installation.

**PROTECTION**

Protection is intended to be provided for PEX pipe and fittings unless otherwise indicated in the individual certifications. The minimum protection should consist of either (1) one layer of 9.5-mm gypsum wallboard, (2) a suspended membrane ceiling with lay-in panels or tiles having a weight of not less than 1.7 kg/sq m when installed with metallic support grids, (3) 13-mm plywood soffits, or (4) one layer of 13-mm plywood.

During remodeling or ceiling repair, appropriate precautions should be implemented to properly shield the piping from the protected occupancy.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
PEX Sprinkler Fitting  
PEX Sprinkler Pipe

**RELATED SERVICES**

PEX sprinkler pipe and fittings certified to NSF/ANSI 61, “Drinking Water System Components – Health Effects,” have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

PEX sprinkler pipe and fittings certified to NSF/ANSI 372, “Drinking Water System Components – Lead Content,” have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C199P (2002), “Combustible Piping for Sprinkler Systems.”

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “PEX Sprinkler Pipe” or “PEX Sprinkler Fitting.”

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Sprinkler Pipe Fittings Certified for Canada  
(VIYW7)**

**Fittings, Accessory Certified for Canada (VIYY7)**

**USE AND INSTALLATION**

This category covers flexible joint fittings, union arm fittings, steel flanges and other accessory fittings intended for aboveground water-supply piping systems and fire-suppression systems.

These fittings are intended to be installed in accordance with the manufacturer's installation instructions. Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Union Arm Fitting

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C213, "Preliminary Standard for Rubber Gasketed Fittings for Fire Protection Service."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Fittings, Grooved and Plain End Certified for  
Canada (VIZA7)**

**USE AND INSTALLATION**

This category covers fittings consisting of cast, ductile or malleable iron or steel material intended for use with certified rubber-gasketed fittings in fire-service systems.

Unless otherwise indicated in the individual certifications, grooved-end and plain-end fittings are for use with rubber-gasketed fittings covered under Fittings, Rubber Gasketed Certified for Canada (VIZM7), and are intended to be installed in accordance with the individual rubber-gasketed fitting manufacturer's installation instructions.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Grooved Fitting  
Plain-end Fitting

**RELATED SERVICES**

Grooved and plain-end fittings certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Grooved and plain-end fittings certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**Fittings, Malleable Iron Certified for Canada (VIZI7)**

**USE AND INSTALLATION**

This category covers malleable-iron threaded fittings intended for use in fire-service systems and connections to such systems where the working pressure does not exceed the maximum rated pressure indicated on the fitting. These fittings comply with the dimensional requirements specified in ANSI/ASME B16.3 (1998), "Malleable Iron Threaded Fittings Classes 150 and 300," unless otherwise indicated in the individual certifications.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Malleable-iron Fitting  
MI Fitting

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/ASME B16.3 (1998), "Malleable Iron Threaded Fittings Classes 150 and 300."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Malleable-Iron Fitting" (or "MI").

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. **Fittings, Rubber Gasketed Certified for Canada  
(VIZM7)**

**USE AND INSTALLATION**

This category covers fittings consisting of couplings and fittings having various configurations such as elbows, tees and outlets containing rubber

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM  
DEVICES CERTIFIED FOR CANADA (VDGT7)**

–Continued

gaskets, intended for joining sections of metallic pipe, including steel, ductile iron, and copper piping or other piping indicated in the individual certifications. Fittings have grooved or plain ends for use in fire-service systems located aboveground and underground, unless otherwise indicated in the individual certifications.

The pipe joints formed with these fittings may or may not need to be restrained, depending on the design and construction of the fitting. Grooved-type rubber-gasketed fittings are intended for use only with pipe, fittings and valves that have been grooved to the specifications of the rubber-gasketed fitting.

Fittings intended for installation with cut grooved steel pipe should be used with pipe having a minimum wall thickness in accordance with Schedule 20 (in sizes greater than 16 in.), Schedule 30 (in sizes 8 in. to 16 in.) or Schedule 40 (in sizes less than 8 in.) pipe.

Fittings intended for installation with rolled grooved steel pipe should be used with pipe having a minimum wall thickness in accordance with Schedule 10, unless otherwise indicated in the individual certifications. When Schedule 5 or 10 pipe is referenced in the individual certifications, the wall thickness should be as specified in ASTM A53, "Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless," or ASTM A795, "Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use."

Fittings intended for installation with cut grooved iron pipe shall be used with certified ductile-iron pipe (AWWA C151/A21.51, "Ductile-Iron Pipe, Centrifugally Cast, for Water").

Fittings intended for installation with plain-end pipe should be used with the type of pipe material and minimum wall thickness specified in the manufacturer's instructions. All bolts should be tightened to torque values or the bolt-tightening specifications contained in the manufacturer's installation instructions.

The size and position of the cut or rolled grooves should be as specified by the manufacturer's installation instructions.

The rolled grooves located at pipe ends should be formed by the grooving machine specified by the individual manufacturer's installation instructions.

The rated pressures for the fittings are indicated in the individual certifications. The fittings are not intended to be used for pressures exceeding the pressure rating of the adjoining pipe or the allowable pressure of the adjoining pipe as specified in the applicable installation standard, such as ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," and ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection."

These fittings are intended for use with a maximum ambient temperature of 49°C (120°F) unless otherwise indicated in the individual certifications.

Unless otherwise indicated in the individual certifications, rubber-gasketed fittings are unsuitable for use in dry-pipe systems.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Rubber-gasketed Pipe Fitting

**RELATED SERVICES**

Rubber-gasketed fittings certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Rubber-gasketed fittings certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C213, "Rubber Gasketed Fittings for Fire Protection Service."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. **Fittings, Welded Outlet Certified for Canada  
(VIZU7)**

**USE AND INSTALLATION**

This category covers fittings consisting of steel outlets intended to be welded to Schedule 5, 10, 30, 40 and certified steel sprinkler pipe having the same outside diameter as Schedule 40 pipe with the outlet pipe having wall thickness the same as or less than the run pipe. These fittings are also suitable for use with Schedule 10 as the run pipe and Schedules 40 as the branch pipe. Other combinations of run and outlet pipes are indicated in the individual certifications. Fitting outlets less than 1-in. diameter are intended for direct connection to sprinklers only. These welded outlets are intended for use with piping for fire-service systems when installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Welded Fitting  
Welded Outlet  
Welded Outlet Fitting

**RELATED SERVICES**

Welded outlet fittings certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Welded outlet fittings certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C213B, "Welded Outlet Fittings."

**UL MARK**

The Certification Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welded Fitting," "Welded Outlet" or "Welded Outlet Fitting."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Steel Sprinkler Pipe Certified for Canada  
(VIZY7)**

**USE AND INSTALLATION**

This category covers steel sprinkler pipe intended for use in water-based fire-protection systems for water-distribution or trim applications. This pipe may be used in wet, preaction, deluge or dry-pipe-type sprinkler systems when installed in accordance with the following:

- ANSI/NFPA 13, "Installation of Sprinkler Systems"
- ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes"
- ANSI/NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height"

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM  
DEVICES CERTIFIED FOR CANADA (VDGT7)**

708

–Continued

In accordance with the referenced NFPA Standards, the size of steel pipe installed to distribute water to the sprinklers shall be not less than 2.54 cm (1 in.) nominal.

As indicated in the individual certifications, Schedule 10, Schedule 40 and other steel pipe having lesser wall thicknesses than unthreaded Schedule 40 pipe is covered under this category. Cut grooved, roll grooved and plain-end pipe is intended to be joined by certified rubber-gasketed fittings (see VIZM7) or welded outlet fittings (see VIZU7), which have been investigated for compatibility with the specific pipe. Plain-end pipe may also be joined by welding end-to-end or welding to flanges.

Schedule 10 and 40 pipe incorporates dimensions and materials specified in ASTM A53, “Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless,” ASTM A135, “Standard Specification for Electric-Resistance-Welded Steel Pipe,” or ASTM A795, “Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use.” Schedule 40 pipe ends are intended to be threaded, roll grooved, cut grooved, or plain. Schedule 10 pipe ends are intended to be roll grooved or plain.

Steel pipe having lesser wall thicknesses than unthreaded Schedule 40 pipe may be threaded, roll grooved, or plain end as indicated in the individual certifications. Threading requires the use of thread gauges conforming to the dimensions of ASME B1.20.1. “Pipe Threads, General Purpose.” This pipe has been investigated for both mechanical strength and relative corrosion resistance expressed in terms of a corrosion resistance ratio (CRR). This ratio for each size pipe is defined as follows:

$$CRR = \left( \frac{X}{X_{40}} \right)^3$$

Where:  $X_{40}$  = Thickness of Schedule 40 pipe under the first exposed thread. The “first exposed thread” is the minimum pipe thickness exposed to both interior and exterior corrosion and occurs at the threaded joint assembly at a line defined by the thread width, just before the pipe engages the fitting.

X = Thickness of the certified pipe measured either under the first exposed thread for threaded pipe or at the thinnest wall section for unthreaded pipe.

The CRR will be greater than 1.00 when the wall thickness of the certified pipe is greater than the wall thickness of Schedule 40 pipe under the first exposed thread, and less than 1.00 when the certified pipe wall is thinner than the wall thickness of Schedule 40 pipe under the first exposed thread.

The corrosion performance of steel pipe can vary depending on the composition of the steel of which it is formed, the composition of the water(s) to which it is exposed and related service conditions.

Authorities Having Jurisdiction should be consulted before installation.

**FACTORS NOT INVESTIGATED**

Pipe materials have not been investigated for potability unless indicated in the individual certifications.

Coatings, platings or other surface treatments on the interior or exterior of the pipe have not been investigated for the ability to protect the pipe from corrosion, potability, or the effects of the coatings, platings or other surface treatments on components of the water-distribution system.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Sprinkler Pipe for Fire Service
- Steel Sprinkler Pipe

**RELATED SERVICES**

Steel sprinkler pipe certified to NSF/ANSI 61, “Drinking Water System Components – Health Effects,” have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Steel sprinkler pipe certified to NSF/ANSI 372, “Drinking Water System Components – Lead Content,” have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C199S, “Light Wall Steel Pipes for Sprinkler Systems for Fire Protection Service.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**QUICK-OPENING DEVICES,  
ACCELERATORS AND EXHAUSTERS  
CERTIFIED FOR CANADA (VJPZ7)**

**USE AND INSTALLATION**

This category covers auxiliary attachments and associated accessories intended for installation on dry-pipe valves designed to reduce time delay in operation of the valve after the opening of one or more sprinklers. These devices are intended for use on sprinkler systems having a capacity not greater than 750 gal unless indicated otherwise in the individual certifications.

These devices are intended for installation in accordance with ANSI/NFPA 13, “Installation of Sprinkler Systems.”

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Accelerator
- Accessory for Quick-opening Devices
- Exhauster
- Quick-opening Device

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C260 (1975), “Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. \*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RESIDENTIAL AUTOMATIC SPRINKLERS  
CERTIFIED FOR CANADA (VKKW7)**

**GENERAL**

This category covers residential automatic sprinklers that have been investigated for installation in fire protection systems in accordance with the manufacturer’s installation instructions and ANSI/NFPA 13D, “Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manu-

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES CERTIFIED FOR CANADA (VDGT7)**

–Continued

factured Homes.” ANSI/NFPA 13R, “Installation of Sprinkler Systems in Low-Rise Residential Occupancies,” and ANSI/NFPA 13, “Installation of Sprinkler Systems” where residential sprinklers are permitted. These sprinklers are intended to be inspected, tested and maintained in accordance with ANSI/NFPA 25, “Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems,” or ANSI/NFPA 13D, as applicable.

Residential sprinklers are intended for use at the minimum design densities specified in ANSI/NFPA 13D, 13R or 13, as applicable, but in no case are the minimum flow rates to be less than those indicated in the individual certifications. The temperature ratings of residential sprinklers and the maximum ceiling temperatures are as follows:

Temp Rating, °C	Max Ceiling Temp, °C
57-77	38
79-107	66

Sprinklers have been investigated for maximum system working pressures of 1200, 1725 or 2068 kPa. Sprinklers are limited to 1200 kPa maximum system working pressure unless otherwise indicated in the individual certifications.

Sprinkler orifice sizes are described below are in terms of “k” in metric units of l/min/kPa<sup>0.5</sup> unless specifically noted.

A four- to six-character Sprinkler Identification Number (SIN) is marked on each sprinkler to assist in identifying the sprinkler manufacturer, k-factor, deflector characteristic, pressure rating and thermal sensitivity.

These sprinklers have been investigated using a smooth, flat, horizontal ceiling. System design and installation requirements for other ceiling configurations are described in ANSI/NFPA 13D, 13R or 13, as applicable.

Recessed and concealed sprinklers having provisions for venting through the escutcheon have not been investigated for installation in ceilings below positive-pressure plenums which may prevent sprinkler operation. In addition, the intended air flow through vented escutcheons should not be blocked since this may adversely impact sprinkler sensitivity and performance.

Authorities Having Jurisdiction should be consulted regarding installation, temperature rating, and approval of plans.

- The following abbreviations are used in the individual certifications:
- Conc. – Concealed
  - HSW – Horizontal Sidewall
  - Rec. – Recessed

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Res Spkr
- Residential Sprinkler
- Sprinkler Part (for ceiling-type residential sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer)

The SIN may be used in lieu of the product identity “Sprinkler Part.”

**RELATED SERVICES**

Residential automatic sprinklers certified to NSF/ANSI 61, “Drinking Water System Components – Health Effects,” have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Residential automatic sprinklers certified to NSF/ANSI 372, “Drinking Water System Components – Lead Content,” have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C1626 (2003), “Residential Sprinklers for Fire Protection Service.”

**UL MARK**

For sprinklers:

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

For sprinkler parts (ceiling-type residential sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer):

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Residential Sprinkler” (or “Res Spkr”).

For ceiling-type residential sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer, the Listing Mark of UL on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory), together with the word “LISTED,” a control number, and the product name “Sprinkler Part.” If the first three elements of the Listing Mark appear on a label that also clearly identifies the SIN of sprinklers for which the escutcheon is to be used, the product name can be omitted from the Listing Mark.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPECIAL SYSTEM WATER CONTROL VALVES AND SYSTEM ACCESSORIES CERTIFIED FOR CANADA (VKRV7)**

The Special System Water Control Devices listed herein are intended for installation in accordance with the National Fire Protection Association Standards for the Installation of Sprinkler Systems, NFPA 13; Deluge Foam - Water Sprinkler and Spray Systems, NFPA 16; and Water Spray Fixed Systems, NFPA 15.

**Residential Automatic Domestic Water Shutoff Valves Certified for Canada (VKVI7)**

**USE AND INSTALLATION**

This category covers automatic domestic water shutoff valves, which provide a means to isolate the domestic water supply during sprinkler operation and devote all incoming water to the residential sprinkler system.

These valves are intended for installation in residential fire sprinkler systems in one- and two-family dwellings and mobile homes in accordance with ANSI/NFPA 13D, “Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes,” or in residential occupancies up to four stories in height in accordance with ANSI/NFPA 13R, “Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height,” as indicated in the individual certifications, and intended for working pressures not exceeding 1206 kPa.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Domestic Shutoff Valve

**RELATED SERVICES**

Automatic domestic water shutoff valves certified to NSF/ANSI 61, “Drinking Water System Components – Health Effects,” have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Automatic domestic water shutoff valves certified to NSF/ANSI 372, “Drinking Water System Components – Lead Content,” have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C260, “Dry Pipe and Deluge Valves for Fire-Protection Service.”

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The

**Special System Water Control Valves, Assembled Units Certified for Canada (VKYL7)**

**GENERAL**

This category covers units comprised of electronic control and signaling equipment, fire main control valve, water-flow control valve (deluge type), electrically operated solenoid valves, check valve, trim and drain valves, gauges, supervisory devices and special system accessories as indicated in the individual certifications, which are provided from the factory as an assembled unit.

These units are rated for a maximum pressure of 1207 kPa unless otherwise indicated in the individual certifications.

In addition to other certified products indicated in the individual certifications, these units may incorporate products covered under:

- Check Valves Certified for Canada (HMER7)
- Extinguishing System Attachments Certified for Canada (USQT7)
- Gauges, Pressure Certified for Canada (VEVX7)
- Special System Water Control Valves, Deluge Type Certified for Canada (VLFT7)
- Accessories for Special Systems Certified for Canada (VLTR7)
- Switches, Pressure Certified for Canada (VOXZ7)
- Valves, Trim and Drain Certified for Canada (VQGU7)

These units are intended to be installed with the cabinet in the upright position for connection to wet-pipe, dry-pipe, preaction or double-interlock automatic sprinkler systems as indicated in the individual certifications.

These units are intended to be installed in accordance with the manufacturer’s installation instructions and the applicable requirements of ANSI/NFPA 13, “Installation of Sprinkler Systems,” and ANSI/NFPA 15, “Water Spray Fixed Systems for Fire Protection.”

Authorities Having Jurisdiction should be consulted regarding installation, operational programming and approval of working plans before installation of the units.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Special System Water Control Valve – Assembled Unit

**ADDITIONAL INFORMATION**

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Special System Water Control Valves, Deluge Type Certified for Canada (VLFT7)**

**USE AND INSTALLATION**

This category covers valves intended for use in controlling water flow to deluge, pre-action, and foam-water sprinkler systems and water-spray systems.

Deluge valves are intended to be installed in the vertical position only, unless otherwise indicated in the individual certifications.

These valves are provided by the manufacturer with all the necessary trim accessories (e.g., shutoff valves, drains, fittings) and assembly drawings. The valves are required to be installed as specified by the individual manufacturer’s installation instructions.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Deluge Valve
- Flooding Valve
- Water-control Valve

**RELATED SERVICES**

Deluge valves certified to NSF/ANSI 61, “Drinking Water System Components – Health Effects,” have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Deluge valves certified to NSF/ANSI 372, “Drinking Water System Components – Lead Content,” have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**RELATED PRODUCTS**

See Accessories for Special Systems Certified for Canada (VLTR7).

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Special System Water Control Valves, Double-Interlock Type Certified for Canada (VLJH7)**

**USE AND INSTALLATION**

This category covers special double-interlock, preaction-type sprinkler system water-control valves. These valves include special features to prevent unintentional valve operation that would fill system piping with water. They are intended for use in areas requiring special consideration relative to unintentional valve operation which may cause pipe damage due to freezing conditions or water damage. Valve operation requires the actuation of two separate devices: (1) a certified fire detection device which is interconnected to the valve, and (2) a minimum of one automatic sprinkler.

Authorities Having Jurisdiction should be consulted before installation. The installation of these valves will result in a delay in the discharge of

–Continued

water. Special consideration should be provided regarding the need to increase system design area similar to the guidance provided in ANSI/NFPA 13, "Installation of Sprinkler Systems," or dry-pipe systems.

These valves are intended to be installed in the vertical position only, unless otherwise indicated in the individual certifications.

These valves are provided by the manufacturer with all the necessary trim accessories (e.g., shutoff valves, drains, fittings) and assembly drawings. The valves are required to be installed as specified by the individual manufacturer's installation instructions.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Water-control Valve, Double-interlock Type

**RELATED PRODUCTS**

See Accessories for Special Systems Certified for Canada (VLTR7).

**ADDITIONAL INFORMATION**

**REQUIREMENTS**

The basic requirements used to investigate products in this category are contained in ULC Subject C260, "Dry Pipe, Deluge and Pre-Action Valves for Fire-Protection Service."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged or the Listing Mark on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Water Control Valve – Double Interlock Type."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Special System Water Control Valves, Pressure-reducing and Pressure-control Type Certified for Canada (VLMT7)**

**USE AND INSTALLATION**

This category covers valves intended for use as wet-pipe pressure reducing, pressure control, water-flow control, or combination pressure and water-flow control valves in water-based fire-suppression systems, including sprinkler and standpipe systems.

Valves suitable for use as indicating valves are noted in the individual certifications.

These valves are intended to be installed and maintained in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," ANSI/NFPA 25, "Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems," and the manufacturer's installation instructions.

The manufacturer's installation instructions include a description of the performance characteristics of these valves for both flowing and nonflowing (static) conditions.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Pilot-operated Pressure-control Valve
- Pressure-control Valve
- Pressure-reducing Valve

**RELATED SERVICES**

Pressure-reducing and pressure-control valves certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Pressure-reducing and pressure-control valves certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Accessories for Special Systems Certified for Canada (VLTR7)**

**USE AND INSTALLATION**

This category covers accessory units intended for use with special system water-control valves (VLFT7 or VLMT7), including electrically operated valves and thermostatic releases. Heat-responsive devices and their accessories used with these special systems are covered under Accessories, Releasing Device Certified for Canada (SYSW7), Control Units, Releasing Device Certified for Canada (SYZV7) and Releasing Devices Certified for Canada (SZNT7). These devices are intended to be installed in accordance with the manufacturer's installation instructions for special system water-control valves.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Actuating Valve
- Dry Pilot-line Actuator
- Remote-control Valve

Other product identities may be used as shown in the individual certifications.

**RELATED SERVICES**

Accessories for special systems certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Accessories for special systems certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

**SPRINKLERS, AUTOMATIC AND OPEN  
CERTIFIED FOR CANADA (VNIV7)**

**GENERAL**

This category covers automatic and open sprinklers that have been investigated for their ability to control fires when installed in accordance with ANSI/NFPA 13, “Installation of Sprinkler Systems,” and ANSI/NFPA 13R, “Installation of Sprinkler Systems in Low-Rise Residential Occupancies.” These sprinklers are intended to be inspected, tested and maintained in accordance with ANSI/NFPA 25, “Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.”

Sprinklers investigated for special service conditions are indicated in the individual certifications. In addition, extended coverage, ceiling, sidewall, high temperature wax coated, flow control, specific application, and dry-type sprinklers have been investigated for installation in accordance with the manufacturer’s installation and design parameter instructions.

Automatic sprinklers are intended to operate when the temperature of the heat-responsive element exceeds its thermal-response temperature. Sprinkler response characteristics, either Standard Response (SR) or Quick Response (QR), are specified in the individual certifications.

The standard temperature ratings of automatic sprinklers and the maximum ceiling temperatures and color-coding are as follows:

Temperature Class	Temperature Rating, °C	Frame Color Code +	Color Code for Glass Bulb Sprinklers	Max Ceiling Temp, °C
Ordinary	57 to 77	No Color ++	Orange - 57°C	38
Intermediate	79 to 107	White	Red - 68°C Yellow - 79°C Green - 93°C	66
High	121 to 149	Blue	Blue	107
Extra High	163 to 191	Red	Purple	149
Very Extra High	204 to 246	Green	Black	191
Ultra High	260 to 302	Orange	Black	246
Ultra High	343	Orange	Black	329

+ The color code for nondecorative sprinklers is on the frame arms except for corrosion-resistant sprinklers. Corrosion-resistant sprinklers are marked with either a dot on top of the deflector, color of coating, or colored frame arms.

++ The 57°C sprinklers may be color-coded black.

Open sprinklers are automatic sprinklers without heat-responsive operating parts.

Sprinklers have been investigated for system working pressures of 48 to 1200, 48 to 1725, or 48 to 2400 kPa. Sprinklers are limited to 48 to 1200 kPa system working pressure unless otherwise indicated in the individual certifications. Sprinklers intended for use with foam liquid concentrates are indicated in the individual certifications under Foam Liquid Concentrates Certified for Canada (GFGV7).

Sprinkler orifice sizes are described below are in terms of a discharge coefficient, “k,” in metric units of l/min./kPa<sup>1/2</sup> unless specifically noted.

A four- to six-character Sprinkler Identification Number (SIN) is marked on each sprinkler to assist in identifying the sprinkler manufacturer, k-factor, deflector characteristic, pressure rating and thermal sensitivity.

Authorities Having Jurisdiction should be consulted regarding installation, temperature rating, and approval of working plans before sprinklers are installed.

The following abbreviations are used in the individual certifications:

- Conc. - Concealed
- HSW - Horizontal Sidewall

**SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES  
CERTIFIED FOR CANADA (VDGT7)**

—Continued

- QR - Quick Response
- Rec. - Recessed
- SR - Standard Response
- VSW - Vertical Sidewall

**SPRINKLER TYPES**

Automatic and open sprinklers consist of the following types:

**Upright and Pendent Standard Spray Sprinklers**

**Nominal 8 k-factor**

These sprinklers have a nominal 80 k-factor (nominal 12.7-mm size orifice) and their deflectors are designed to discharge water in a parabolic pattern 4.9 m in diameter, measured 1.22 m below the plane of the deflector at a flow rate of 57 lpm, with little or no water discharged upward to wet the ceiling. These sprinklers have 1/2-in. NPT inlet threads unless noted in the individual certifications.

**Nominal 2 to 6 k-factors**

These sprinklers have nominal k-factors of 2, 2.7, 4 or 6 (nominal orifice sizes 6.4, 7.9, 9.5 and 11.1 mm, respectively) and they discharge 75, 67, 50 and 25% less water, respectively, at the same inlet pressure than nominal 8 k-factor (nominal 12.7-mm orifice) sprinkler.

These sprinklers have been investigated for installation in light hazard occupancies only. These sprinklers have 1/2-in. NPT inlet threads unless noted in the individual certifications.

**Nominal 11.5 k-factor**

These sprinklers discharge approximately 40% more water, at the same inlet pressure, than nominal 8 k-factor sprinklers. These sprinklers have 3/4-in. NPT inlet threads unless noted in the individual certifications.

**Standard Sidewall Spray Sprinklers**

Sidewall spray sprinklers have been investigated for installation near a wall and near the ceiling. They consist of the horizontal and vertical types and are intended to discharge water on the back wall and outward in a quarter-spherical pattern. Sidewall sprinklers have been investigated for installation in either the upright, pendent or horizontal positions as indicated in the individual certifications. Sidewall sprinklers have been investigated for installation in light hazard occupancies unless otherwise indicated in the individual certifications that they have also been investigated for use in ordinary hazard occupancies. Sidewall sprinklers with nominal k-factors of 2, 2.7, 4 or 6 (nominal orifice sizes 6.4, 7.9, 9.5 and 11.1 mm, respectively) have been investigated for installation in light hazard occupancies only.

Horizontal and vertical sidewall sprinklers are intended for installation at minimum distances between sprinklers of 1.8 m or as specified in the manufacturer’s installation and design parameter instructions.

**Flush, Recessed and Concealed Types**

These decorative-type sprinklers are intended for use with a concealed piping system and have been investigated for installation in a pendent or horizontal sidewall orientation (HSW). Flush types are constructed with an operating element, which extends a short distance from the ceiling or wall. Upon actuation, the sprinkler deflector extends beyond the plane of the ceiling or wall.

Recessed types consist of a pendent or sidewall sprinkler installed in a decorative escutcheon, which minimizes protrusion of the sprinkler into the room without adversely affecting water distribution. Concealed types incorporate a cover plate, which is released prior to sprinkler operation. Recessed concealed sprinklers having provisions for venting through the escutcheon have not been investigated for installation in ceilings below positive-pressure plenums which may prevent sprinkler operation. In addition, the intended air flow through vented escutcheons should not be blocked since this may adversely impact sprinkler sensitivity and performance.

Concealed-type sprinklers with cover plates are intended to be installed in accordance with the temperature rating of the sprinkler and not the rating of the cover plate. Concealed-type sprinklers are available with nominal k-factors ranging from 2 through 16.1. The SIN is located in a visible location when the cover plate is removed.

**Dry-type Sprinklers**

Dry sprinklers have been investigated for installation on dry-pipe systems or wet systems where the sprinkler may be subject to freezing temperatures. As noted in the individual certifications, these sprinklers are intended for installation in the pendent, upright, or horizontal sidewall orientation.

Dry-type sprinklers consist of a sprinkler permanently secured to an extension nipple, which has a seal at the inlet end to prevent water from entering the nipple, until the sprinkler operates. The inlet end of the nipple is intended to be installed into the fittings referenced in the manufacturer’s installation instructions. Dry-type sprinklers may be of the flush, recessed and concealed type.

Certifications are for dry pendent types only unless otherwise indicated in the individual certifications.

**Conventional (Old Style) Sprinklers**

SPRINKLER SYSTEM AND WATER SPRAY SYSTEM  
DEVICES CERTIFIED FOR CANADA (VDG7T)

—Continued

Conventional sprinklers may be installed in either the upright or pendent positions. They are designed to direct 40% to 60% of the total water initially discharged in a downward direction.

These sprinklers have 1/2-in. NPT inlet threads unless noted in the individual certifications.

**Flow-control (On-Off) Sprinklers**

These sprinklers are designed to control water flow by automatically cycling on and off within a specified temperature range.

**Standard Response (SR)-Extended-coverage Sprinklers – Light Hazard**

Extended-coverage (EC) sprinklers are intended for installation in light hazard occupancies having ceiling constructions as specified in ANSI/NFPA 13, unless other ceiling constructions are indicated in the individual certifications.

EC sidewall sprinklers have been investigated for installation with their deflectors located from 10.1 to 15.2, 15.2 to 30.5, or 30.5 to 45.7 cm (or any combination) below the ceiling as indicated in the individual certifications. EC upright and pendent sprinklers have been investigated for installation with their deflectors located 2.5 to 30.5 cm below the ceiling unless otherwise indicated in the individual certifications. EC sprinklers have been investigated for installation in accordance with the information indicated in the individual certifications and the manufacturer's installation and design parameter instructions. The maximum installation width and length dimensions, minimum flow rate and nominal k-factor are specified in the individual certifications.

**Quick Response (QR)-Extended-coverage Sprinklers – Light Hazard**

These are EC sprinklers that have demonstrated quick response characteristics at the specified coverage areas. QR-EC upright and pendent sprinklers have been investigated for installation with their deflectors located 2.5 to 30.5 cm below the ceiling unless otherwise indicated in the individual certifications. QR-EC sidewall sprinklers have been investigated for installation with their deflectors located from 10.1 to 15.2, 15.2 to 30.5, or 30.5 to 45.7 cm (or any combination) below the ceiling. QR-EC sprinklers have been investigated for installation in light hazard occupancies having smooth, flat, horizontal ceilings unless otherwise indicated in the individual certifications. The maximum installation width and length dimensions, minimum flow rate and nominal k-factor are specified in the individual certifications.

**Standard Response (SR)-Extended-coverage Sprinklers – Ordinary Hazard**

These extended-coverage ordinary hazard occupancy (ECO) sprinklers are intended for installation in Ordinary Hazard Groups 1 and 2 occupancies.

These sprinklers are intended for installation in occupancies having ceiling constructions referenced for extended-coverage sprinklers specified in ANSI/NFPA 13 unless additional ceiling constructions are indicated in the individual certifications. The maximum installation width and length dimensions, minimum flow rate for each occupancy and nominal k-factor are specified in the individual certifications.

**Quick Response (QR)-Extended-coverage Sprinklers – Ordinary Hazard**

These are ECO sprinklers that have demonstrated quick response characteristics at the specified coverage areas. These sprinklers are intended for installation in Ordinary Hazard Groups 1 and 2 occupancies.

These sprinklers are intended for installation in occupancies having ceiling constructions referenced for extended-coverage sprinklers specified in ANSI/NFPA 13 unless additional ceiling constructions are indicated in the individual certifications. The maximum installation width and length dimensions, minimum flow rate for each occupancy and nominal k-factor are specified in the individual certifications.

**Corrosion-resistant Sprinklers**

Corrosion-resistant sprinklers have been investigated for installation in corrosive atmospheres.

These sprinklers are protected from the corrosive atmosphere by coating the entire sprinkler or operating parts with protective coatings such as wax, lead, wax over lead, enamel, or by fabricating the sprinklers from corrosion-resistant parts.

**High-temperature, Wax-coated Sprinklers**

These sprinklers have been investigated for installation where corrosion-resistant, high-temperature-rated sprinklers are required and the maximum ambient temperature does not exceed 66°C. The maximum ambient temperature is based on the thermal exposure limitations of the wax coating.

**Intermediate-level Sprinklers (Water Shielded)**

These sprinklers are equipped with a disc or canopy mounted above the heat-responsive element to protect it from retarded operation due to water discharge from sprinklers at higher elevations. These sprinklers have been investigated for installation in the upright or pendent positions as indicated in the individual certifications.

**Sprinklers for Storage Protection (Control Mode Density Area)**

These upright and pendent sprinklers have nominal k-factors of 16.1 and larger. They are intended for protection of stored commodities using the

SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES  
CERTIFIED FOR CANADA (VDG7T)

713

—Continued

design requirements for area and density as specified in ANSI/NFPA 13. In addition, upright and pendent spray sprinklers having nominal k-factor of 11.2 may be used for storage applications where the design density does not exceed 14 mm/min.

**Extended-coverage Sprinklers for Storage Protection (Control Mode Density Area)**

These upright and pendent extended-coverage sprinklers for storage applications have nominal k-factors of 16.1 and larger. They are intended for protection of stored commodities using design requirements for area and density as specified in ANSI/NFPA 13 for coverage areas having maximum width and length dimensions of 3.7 x 3.7 m or 4.3 x 4.3 m. Unless otherwise indicated in the manufacturer's installation and design parameter instructions, the clearance between the top of the stored commodity and the sprinkler deflector is intended to be at least 91 cm.

The sprinkler coverage area dimensions are specified in the individual certifications.

**Sprinklers for Storage Protection (Control Mode Specific Application)**

These upright and pendent sprinklers have nominal k-factors of 16.1 and larger. They are intended for protection of stored commodities using design discharge pressures and areas as specified in the manufacturer's installation and design parameter instructions and ANSI/NFPA 13 if referenced therein. Unless otherwise indicated in the manufacturer's installation and design parameter instructions, the clearance between the top of the stored commodity and the sprinkler deflector is intended to be at least 91 cm.

**Specific-application Sprinklers**

These sprinklers have been investigated for protection of specific fire risks, (except for storage applications) as described in the certification information and the manufacturer's installation and design parameter instructions.

Automatic Sprinkler

Open Sprinkler

Sprinkler Part (for ceiling-type sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer)

The SIN may be used in lieu of the product identity "Sprinkler Part."

**RELATED SERVICES**

Automatic and open sprinklers certified to NSF/ANSI 61, "Drinking Water System Components – Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNPF).

Automatic and open sprinklers certified to NSF/ANSI 372, "Drinking Water System Components – Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C199 (2003), "Automatic Sprinklers for Fire Protection Service."

**UL MARK**

For sprinklers:

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

For sprinkler parts (ceiling-type sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer):

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Sprinkler" or "Open Sprinkler."

For ceiling-type sprinkler escutcheons not shipped with the sprinkler by the sprinkler manufacturer, the Listing Mark of UL on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these prod-

714 **SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES CERTIFIED FOR CANADA (VDGT7)**

–Continued

ucts includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Sprinkler Part.” If the first three elements of the Listing Mark appear on a label that also clearly identifies the SIN of sprinklers for which the escutcheon is to be used, the product name can be omitted from the Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPRINKLERS, EARLY SUPPRESSION FAST RESPONSE CERTIFIED FOR CANADA (VNWH7)**

**GENERAL**

This category covers early suppression fast response (ESFR) sprinklers that have been investigated for installation in accordance with ANSI/NFPA 13, “Installation of Sprinkler Systems.” ESFR sprinklers incorporate a fast-actuating heat-responsive element and are intended to be inspected, tested and maintained in accordance with ANSI/NFPA 25, “Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems.”

Sprinkler orifice sizes are described in terms of “k” in metric units of l/min/kPa<sup>1/2</sup> unless specifically noted. ESFR sprinklers have an orifice with minimum nominal “k” factors as indicated in the individual certifications.

The standard temperature ratings, maximum ceiling temperatures, and color coding of ESFR sprinklers are as follows:

Temperature Class	Temperature Rating, °C	Frame Color Code +	Color Code for Glass Bulb Sprinklers	Maximum Ceiling Temp, °C
Ordinary	57-74	No Color++	Orange or Red	38
Intermediate	93-104	White	Yellow or Green	66
High	121-149	Blue	Blue	107

+ The color code for ESFR sprinklers is on the frame arms except for corrosion-resistant sprinklers. Corrosion-resistant sprinklers are marked with either a dot on top of the deflector, color of coating, or colored frame arms.

++ The 57°C sprinklers may be color-coded black.

High-temperature-rated sprinklers are intended for installation in close proximity to heat sources only, as referenced in ANSI/NFPA 13.

A four- to six-character Sprinkler Identification Number (SIN) is marked on each sprinkler to assist in identifying the sprinkler manufacturer, k-factor, deflector characteristic, pressure rating and thermal sensitivity.

Specific-application ESFR sprinklers have been investigated for specific service pressures, fire risks, building and commodity heights, and installation criteria which may differ from those referenced in ANSI/NFPA 13.

Authorities Having Jurisdiction should be consulted regarding installation, spacing, temperature rating and approval of working plans before sprinklers are installed.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Early Suppression Fast Response Sprinkler
- ESFR Spkr
- SPEC APP ESFR

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C1767 (2003), “Early-Suppression Fast-Response Sprinklers.”

**UL MARK**

The UL symbol on the product and the Certification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Direc-

tory) together with the word “LISTED,” a control number, and the product name “Early Suppression Fast Response Sprinkler” (or “ESFR Spkr” or “SPEC APP ESFR”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHES, PRESSURE CERTIFIED FOR CANADA (VOXZ7)**

**USE**

This category covers pressure-operated electric switches intended for use in connection with sprinkler equipment, water spray systems, and like protection systems, as a means of initiating electrical alarms upon flow of water in the equipment or for actuation of other auxiliary equipment.

Water flow may also be detected by alarm valves and water-flow indicators, which are covered under Valves, Alarm Certified for Canada (VPLX7) and Extinguishing System Attachments Certified for Canada (USQT7), respectively.

**PRODUCT MARKINGS**

Each product is marked to indicate its intended use. This consists of the term “Alarm Pressure Switch for Sprinkler Systems” or “Supervisory Pressure Switch for Sprinkler Systems.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fire Alarm Equipment
- Fire Alarm Equipment Subassembly
- Type F (for Fire Alarm Equipment)
- Type F Subassembly (for Fire Alarm Equipment Subassembly)

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC-S548, “Alarm Initiating and Supervisory Devices for Water Type Extinguishing Systems.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED,” “SAFETY” and “SIGNALING,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL Mark for Canada symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

**Type Codes:**

- F – Fire Alarm Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VALVES, ALARM CERTIFIED FOR CANADA (VPLX7)**

**USE AND INSTALLATION**

This category covers automatic alarm valves intended for use in automatic wet-pipe sprinkler systems. Valves may be installed without a retarding chamber when steady pressures exist and with a retarding chamber when variable supply pressures exist. Unless otherwise indicated in the individual Listings, these alarm valves may be installed either verti-

DEVICES CERTIFIED FOR CANADA (VDGT7)**

–Continued

cally or horizontally. These valves are provided with either a pressure switch (electric circuit closer) for initiating electrical alarms, or water motor and gong for mechanical alarms, or both.

These valves are provided by the manufacturer with all the necessary trim accessories (e.g., shutoff valves, drains, fittings) and assembly drawings. The valves are required to be installed as specified by the individual manufacturer's installation instructions.

Requirements for the installation and use of these valves are included in ANSI/NFPA 13, "Installation of Sprinkler Systems."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Alarm Valve
- Retarding Chamber
- Water Motor and Gong

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ULC/ORD-C193, "Guide for the Investigation of Alarm Valves for Fire-Protection Service," and ULC/ORD-C753, "Guide for the Investigation of Alarm Accessories for Automatic Water-Supply Control Valves for Fire-Protection Service."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Alarm Valve," "Retarding Chamber" or "Water Motor and Gong."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VALVES, DRY PIPE CERTIFIED FOR  
CANADA (VPZV7)**

**GENERAL**

This category covers dry-pipe valves intended for use as an automatic means of controlling water flow to automatic dry-pipe sprinkler systems. These valves range in size from 1 in to 12 in.

This category also covers valves known as cold-weather valves and air-check valves, which are small-size dry-pipe valves for special uses.

The manufacturer provides the necessary trim accessories (e.g., shutoff valves, drains, fittings) and installation instructions. Accessories used in the trim, such as gate and check valves, are not specifically tested unless they have a specific effect on the operation of the valve. Accessories such as alarm devices, alarm-line strainers, etc., which are of importance to proper operation may be investigated as part of an alarm valve. See Valves, Alarm Certified for Canada (VPLX7).

The valves are required to be installed as specified by the manufacturer's installation instructions. Requirements for the installation and use of these valves are included in ANSI/NFPA 13, "Installation of Sprinkler Systems."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Dry-pipe Valve

**RELATED SERVICES**

Dry-pipe valves certified to NSF/ANSI 61, "Drinking Water System Components - Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Dry-pipe valves certified to NSF/ANSI 372, "Drinking Water System Components - Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C260, "Guide for the Investigation of Dry Pipe, Deluge, and Pre-Action Valves for Fire-Protection Service."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dry Pipe Valve."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VALVES, TRIM AND DRAIN CERTIFIED FOR  
CANADA (VQGU7)**

**USE AND INSTALLATION**

This category covers trim and drain valves, which consist of ball-, plug-, angle- or globe-type shutoff valves for use in air- or water-supply piping in conjunction with dry pipe, deluge or alarm valves on sprinkler systems. These valves are rated for a maximum pressure of 1200 kPa unless otherwise indicated in the individual certifications. These products are intended to be installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Drain Valve  
Trim and Drain Valve  
Trim Valve

**RELATED SERVICES**

Trim and drain valves certified to NSF/ANSI 61, "Drinking Water System Components - Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Trim and drain valves certified to NSF/ANSI 372, "Drinking Water System Components - Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices Certified for Canada (VDGT7) and Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C258 (2003), "Shutoff Valves for Trim and Drain Purposes for Fire Protection Service."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drain Valve," "Trim Valve" or "Trim and Drain Valve."

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOSE VALVES CERTIFIED FOR CANADA (VTSR7)**

**GENERAL**

This category covers hose valves for working pressures not exceeding 1210 or 2075 kPa. They consist of angle-pattern and straightway-pattern valves intended for use on standpipes, fire pumps, and hydrants supplying water for fire-protection service.

Hose valves include the following patterns and sizes:

**Angle (90 Degree) Patterns** — For standpipes with inlet and outlet openings of the same size or with the inlet larger than the outlet. Openings have nominal diameters of 1 in. (25 mm), 1-1/2 in. (38 mm), 2-1/2 in. (63 mm) or 3 in. (76 mm).

**Angle (90 and 120 Degree) Patterns** — For wet-pipe sprinkler equipment with 1-in. inlets (25 mm) and 1-1/2-in. (38 mm) outlets.

**Straightway Patterns** — For fire pumps and hydrants with inlet and outlet openings of the same size, having nominal diameters of 2-1/2 in. (63 mm).

**Straightway Patterns** — For standpipes with inlet and outlet openings of the same size or with the inlet larger than the outlet. Openings have nominal diameters of 1 in. (25 mm), 1-1/2 in. (38 mm), 2-1/2 in. (63 mm) or 3 in. (76 mm).

Requirements for the installation and use of these valves are included in ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection," and ANSI/NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Fire Hose Valve

**RELATED SERVICES**

Fire hose valves certified to NSF/ANSI 61, "Drinking Water System Components - Health Effects," have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Fire hose valves certified to NSF/ANSI 372, "Drinking Water System Components - Lead Content," have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C668, "Guide for the Investigation of Hose Valves for Fire-Protection Service."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Hose Valve."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPRINKLER SYSTEM AND WATER SYSTEM DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VQNT7)**

**USE AND INSTALLATION**

**SPRINKLER SYSTEM AND WATER SYSTEM DEVICES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VQNT7)**

This category covers devices and equipment for use in sprinkler systems and water spray systems.

These devices and equipment are intended to be installed in compliance with NFPA 13, "Sprinkler Systems," NFPA 15, "Water Spray Systems for Fire Protection" and NFPA 16, "Foam-Water Sprinkler and Spray Systems." Authorities Having Jurisdiction should be consulted regarding use of these Listed devices and equipment before installation.

**SWITCHES, PRESSURE FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (VRBR7)**

**USE**

This category covers pressure-operated switches intended for connection with sprinkler equipment, water-spray systems and like protection systems, as a means of initiating electrical alarms upon flow of water in the equipment or the actuation of other auxiliary equipment.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Pressure Switch for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Sprinkler System and Water Spray System Devices for Use in Hazardous Locations Certified for Canada (VQNT7) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pressure Switch for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**STANDPIPE EQUIPMENT CERTIFIED FOR CANADA (VROZ7)**

**PRESSURE-REDUCING AND -RESTRICTING DEVICES CERTIFIED FOR CANADA (VUTX7)**

**USE AND INSTALLATION**

This category covers devices intended for use in wet-pipe systems and intended to be installed in the supply piping of standpipe systems or at the hose outlets as a means of reducing existing high pressure in the piping system to a level that the fire hose nozzle can be managed by an operator.

Pressure-restricting devices are designed to reduce outlet pressures under flowing (residual) conditions only and are intended to be used in situations where the inlet pressure does not exceed 1200 kPa. Pressure-reducing devices are designed to reduce outlet pressures under both flowing (residual) and nonflowing (static) conditions. The type of device is indicated in the individual certifications.

These devices are intended to be installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," and ANSI/NFPA 14, "Installation of Standpipe and Hose Systems," and maintained in accordance with ANSI/NFPA 25, "Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems," and the manufacturer's installation instructions. The manufacturer's instructions include a description of the performance characteristics of these devices under flowing (residual) and nonflowing (static) conditions.

**STANDPIPE EQUIPMENT CERTIFIED FOR CANADA  
(VROZ7)**

–Continued

Pressure-reducing or -restricting devices having a 1-1/2 NPS outlet are intended to be used in Class II standpipe systems, and devices having a 2-1/2 NPS outlet are intended for use in Class I or III standpipe systems. Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Pressure-reducing Device
- Pressure-reducing Valve
- Pressure-restricting Device
- Pressure-restricting Valve

**RELATED SERVICES**

Pressure-reducing and -restricting devices certified to NSF/ANSI 61, “Drinking Water System Components – Health Effects,” have been investigated for contact with drinking (potable) water and are covered under Drinking Water System Components Certified for Canada (FDNP7).

Pressure-reducing and -restricting devices certified to NSF/ANSI 372, “Drinking Water System Components – Lead Content,” have been investigated for lead (Pb) content and are covered under Lead Content Verification of Products in Contact with Potable Water Certified for Canada (QNVB7).

**RELATED PRODUCTS**

Valves intended for use in sprinkler systems are covered under Special System Water-control Valves, Pressure-reducing and Pressure-control Type Certified for Canada (VLMT7).

**ADDITIONAL INFORMATION**

For additional information, see Fire Protection Equipment Certified for Canada (AAFP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are ULC/ORD-C668, “Guide for the Investigation of Hose Valves for Fire Protection Service,” and ANSI/UL 1468, “Direct Acting Pressure Reducing and Pressure Restricting Valves.”

The following requirements from ANSI/UL 1468 supersede or are added to the applicable requirements in ULC/ORD-C668: ANSI/UL 1468 section or paragraph reference, 7.2, 8.1, 8.2, 9, 9A, 10.2, 17, 19, 20, 21, 22, 23, 27, 28, 30.1 e), f), 30.4, 30.5, 31.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Pressure Reducing Device,” “Pressure Reducing Valve,” “Pressure Restricting Device” or “Pressure Restricting Valve.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**STATIC NEUTRALIZING EQUIPMENT  
CERTIFIED FOR CANADA (VWWZ7)**

**USE AND INSTALLATION**

This category covers high-voltage power-supply units with or without static discharge bars, high-voltage ionizers and related products. This type of equipment is designed for individual installation on equipment where static charges are generated during operation, or as stand-alone units for direct installation in the field.

Due to the nature of these installations, high-voltage parts are necessarily exposed and cannot be completely shielded from contact.

Care should be taken to follow the instructions provided with the equipment regarding the installation of the static neutralizers, including proper grounding of the equipment, and operating personnel should be carefully instructed regarding its correct operation and maintenance.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Static Eliminator

- Static Eliminator Bar
- Static Neutralizing Bar
- Static Neutralizing Equipment

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate stand-alone products and products intended to be used with equipment other than Information Technology Equipment (ITE) are CAN/CSA-C22.2 No. 0.4, “Bonding and Grounding of Electrical Equipment,” and CAN/CSA-C22.2 No. 187, “Electrostatic Air Cleaners.” These products are identified for “general” use in the individual certifications.

The basic standard used to investigate products intended to be used with Information Technology Equipment (ITE) is CAN/CSA-C22.2 No. 950 / CAN/CSA-C22.2 No. 60950, “Safety of Information Technology Equipment.” High-voltage parts that may be accessible after installation have been found to comply with requirements of LIMITED CURRENT CIRCUITS. High-voltage components are investigated using the applicable requirements in CAN/CSA-C22.2 No. 0.4, “Bonding and Grounding of Electrical Equipment,” and CAN/CSA-C22.2 No. 187, “Electrostatic Air Cleaners.” These products may be marked “ITE” and are identified for “ITE” use in the individual certifications. They are also suitable for general use.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Static Neutralizing Equipment,” “Static Neutralizing Bar,” “Static Eliminator” or “Static Eliminator Bar,” or the name of the specific type of product as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**STATIC NEUTRALIZING EQUIPMENT  
FOR USE IN HAZARDOUS  
LOCATIONS CERTIFIED FOR  
CANADA (VXDY7)**

**USE AND INSTALLATION**

This category covers high-voltage power units and discharge bars designed for individual installation on equipment in hazardous locations where static charges are generated during operation.

Due to the nature of these installations, high-voltage parts are necessarily exposed and cannot be completely shielded from contact.

Certain products in this category are associated apparatus and intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous location.

Care should be taken to follow the instructions provided with the equipment regarding the installation of the static neutralizers, including proper grounding of the equipment. Operating personnel should be carefully instructed regarding its correct operation and maintenance.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Antistatic Bar for Use in Hazardous Locations
- Static Neutralizing Equipment for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Static Neutralizing Equipment for Use in Hazardous Locations" or "Antistatic Bar for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## STATION OUTLETS CERTIFIED FOR CANADA (VXHT7)

**USE AND INSTALLATION**

This category covers station outlets intended for use in health care facilities for distribution of nonflammable medical gas in rigid piping systems or manufactured assemblies.

Each outlet is equipped with a female quick-coupler of the noninter-changeable type for the specified gas. Where the back body of a station outlet is shipped separately from the front body, the back body is marked with the statement "Assembly Consisting of Back Body [No.] Only For Use With [Listee's Name] Front Body [No.]"

**RATINGS**

The gas and working pressure of these station outlets are specified in the individual Listings.

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-Z305.5 (1986), "Medical Gas Terminal Units," and/or CAN/CSA-Z9170-1 (2011), "Terminal Units for Medical Gas Pipeline Systems - Part 1: Terminal Units for Use with Compressed Medical Gases, Vacuum, and Anaesthetic Gas Scavenging Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Station Outlet" or "Station Outlet for \*."

\* indicates the gas service

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPILL CONTAINMENT FOR STATIONARY LEAD-ACID BATTERY SYSTEMS CERTIFIED FOR CANADA (VXMB7)**

## SPILL CONTAINMENT FOR STATIONARY LEAD-ACID BATTERY SYSTEMS CERTIFIED FOR CANADA (VXMB7)

**GENERAL**

This category covers spill containment for stationary lead-acid battery systems used in telecommunications battery rooms and similar locations. These systems are intended to provide a reliable means of containment for hazardous-material liquids in the event of electrolyte leakage from stationary lead-acid or similar battery systems.

**INSTALLATION**

These systems are field assembled and require complete written installation instructions to ensure proper assembly.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Spill Containment for Stationary Lead-Acid Battery Systems

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Building Materials Certified for Canada (AABM7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are the containment requirements for electrolyte spill as outlined in 4.3.8 of CAN/CSA-C22.2 No. 60950-1 (2007), "Information Technology Equipment - Safety - Part 1: General Requirements."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spill Containment for Stationary Lead-Acid Battery Systems," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## STRAINERS CERTIFIED FOR CANADA (VXYV7)

**USE**

This category covers strainers for use in the assembly of appliances or in piping handling the gases or liquids and at the pressures indicated in the individual certifications.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Strainer for Anhydrous Ammonia, \* kPa max
- Strainer for Anhydrous Ammonia and LP-Gas, \* kPa max
- Strainer for Gasoline, \* kPa max
- Strainer for Kerosene, \* kPa max
- Strainer for LP-Gas, \* kPa max

Other flammable fluid and pressure designations may be used as shown in the individual certifications.

\* The pressure rating is not required if marked elsewhere on the strainer.

**RELATED PRODUCTS**

Strainers for use only by manufacturers in the assembly of oil burners are covered under Heating and Heating-Cooling Appliance Accessories Certified for Canada (LZZX7).

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is ULC/ORD-C331, "Strainers for Flammable Fluids and Anhydrous Ammonia."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which

**STRAINERS CERTIFIED FOR CANADA (VXYV7)**

the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

The statement "For Use Only at Outlet of Flammable Liquid Dispensing Device Hose" is marked on the strainer if the strainer is so restricted.

**Alternate UL Mark  
UL MARK**

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged or the Listing Mark on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Strainer," and the statement "For Gasoline, \* kPa max," "For Kerosene, \* kPa max," "For Anhydrous Ammonia, \* kPa max," "For LP-Gas, \* kPa max," "For Anhydrous Ammonia and LP-Gas, \* kPa max," or other flammable fluid and pressure designation as identified in the individual Listings. The statement "For Use only at Outlet of Flammable Liquid Dispensing Device Hose" is also included if the strainer is so restricted.

\* Pressure rating not required if marked elsewhere on the strainer.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SURGE-PROTECTIVE DEVICES  
CERTIFIED FOR CANADA (VZCA7)**

**GENERAL**

This category covers surge-protective devices (SPDs) designed for repeated limiting of transient-voltage surges power circuits not exceeding 750 V ac or 1060 V dc. SPDs are designated as follows:

**Type 1** — Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including meter sockets and intended to be installed without an external overcurrent-protective device.

**Type 2** — Permanently connected SPDs intended for installation on the load side of the service equipment overcurrent device, including SPDs located at the branch panel.

**Type 3** — Point-of-utilization SPDs, installed at a minimum conductor length of 10 m (approximately 30 ft) from the electrical service panel to the point of utilization, e.g., cord-connected, direct-plug-in, receptacle-type and SPDs installed at the utilization equipment being protected. The distance (10 m) is exclusive of conductors provided with or used to attach SPDs.

**PRODUCT MARKINGS**

SPDs are marked with the following:

**SPD Type designation**, 1, 2 or 3.

**Electrical ratings**, including the operating voltage rating (volts), ac power frequency (Hz) and number of phases. For a two-port SPD, the ratings include the load current rating (amperes).

**Voltage Protection Rating (VPR)** in volts.

**Nominal Discharge Current (I<sub>n</sub>) Rating** in amps or kA (for Type 1 and 2 SPDs).

**Maximum Continuous Operating Voltage Rating (MCOV)** in volts (for Type 1 and 2 SPDs).

**Short-circuit Current Rating (SCCR)** in amps or kA (for Type 1 and 2 SPDs).

PV SPDs are marked, "For Use in Photovoltaic Systems Only," or the equivalent.

SPDs investigated for general dc applications may also be marked, "Suitable for Use in Photovoltaic Systems."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- SPD
- Surge-protective Device

**FACTORS NOT INVESTIGATED**

The effect of the surge protector on connected loads, the effect of the surge protector on harmonic distortion of the supply voltage, and the adequacy of the suppression level to protect connected equipment from damage due to transient-voltage surges has not been investigated.

**RELATED PRODUCTS**

Cord-connected SPDs employing ground-fault circuit interrupters are covered under Ground-fault Circuit Interrupters Certified for Canada (KCXS7).

Cord-connected and direct-plug-in SPDs are not intended for use with medical, dental or health care facilities equipment.

Component SPDs, including discrete components as well as component assemblies, are covered under Surge-protective Devices Certified for Canada (VZCA8).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate Type 2 and 3 SPDs in this category is CSA-C22.2 No. 8 (2013), "Electromagnetic Interference (EMI) Filters," in addition to the requirements contained in CSA Electrical Notice No. 516, "Surge/Transient Voltage Suppressors" (dated 9-2-1986).

Where indicated in the individual certifications, Type 2 SPDs have been investigated to CSA-C22.2 No. 269.2.13 (2013), "Surge Protective Devices – Type 2 – Permanently Connected."

The basic standard used to investigate Type 1 SPDs intended for installation in accordance with Article 26-500 (Use and Location of Lightning Arresters) of CAN/CSA-C22.1, "Canadian Electrical Code, Part I," is CAN/CSA-C233.1, "Gapless Metal Oxide Surge Arresters for Alternating Current Systems," or IEEE C62.1 (1989), "IEEE Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protective Device" (or "SPD").

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SURGE PROTECTORS AND  
ISOLATORS FOR USE ON  
CATHODICALLY PROTECTED  
SYSTEMS FOR USE IN HAZARDOUS  
LOCATIONS CERTIFIED FOR  
CANADA (VZQO7)**

**GENERAL**

This category covers surge protectors and isolators used to provide ac grounding and dc blocking for cathodic protection of underground pipelines and similar installations. They may also be used to minimize galvanic corrosion between structures of dissimilar metals.

These devices have been investigated for providing effective grounding-path characteristics and also for providing isolation of objectionable dc ground currents.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Overvoltage Protector for Use in Hazardous Locations
- Polarization Cell Replacement Unit for Use in Hazardous Locations
- Surge Protector for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protector for Use in Hazardous Locations," "Overvoltage Protector for Use in Hazardous Locations" or "Polarization Cell Replacement Unit for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWIMMING POOL AND SPA  
EQUIPMENT CERTIFIED FOR  
CANADA (WABX7)**

**BLOWERS CERTIFIED FOR CANADA  
(WAGN7)**

**USE AND INSTALLATION**

This category covers equipment intended to introduce pressurized air into spas and hot tubs to create a hydromassage effect. They are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These products are marked to indicate their suitability for use either indoors or outdoors (Type 3) or indoors only (Type 2). They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

To avoid water contacting live electrical parts, these products are intended to be installed in accordance with the manufacturer's instructions and permanently mounted at least 304.8 mm (12 in.) above the overflow level of the spa or hot tub.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Hot Tub Blower
- Spa Blower
- Spa/Hot Tub Blower

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 113 (1984), "Fans and Ventilators."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Blower," "Hot Tub Blower" or "Spa/Hot Tub Blower."

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CONTROLS CERTIFIED FOR CANADA  
(WAWU7)**

**USE**

This category covers controllers incorporating timers, temperature-regulating equipment, etc., for control of equipment intended for use with swimming pools, hot tubs and spas. This category also covers control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools.

These products are marked to indicate their suitability for use either indoors or outdoors (type 3) or indoors only (type 2).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Spa Controller
- Swimming Pool Controller

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1, "Spas, Hot Tubs and Associated Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Controller" or "Swimming Pool Controller," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**LUMINAIRES AND FORMING SHELLS  
CERTIFIED FOR CANADA (WBDT7)**

**USE**

This category covers luminaires and forming shells for installation in accordance with Section 68 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

**ACCESSORIES**

This category also covers accessory devices and kits intended to be field installed for the purpose of modernizing a luminaire, such as to convert the luminaire from incandescent to LED technology. These accessories include instructions that identify the specific luminaire(s) for which the accessory is intended and that do not require special knowledge or skills beyond that normally required for user maintenance activities, such as lamp replacement. After installation of a certified accessory, the installed luminaire is expected to comply with the same requirements and perform in a comparable manner as a new luminaire, relative to safety risks.

**REBUILT PRODUCTS**

This category also covers dry-niche and wet-niche underwater luminaires for swimming pools that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt dry-niche and wet-niche underwater luminaires for swimming pools are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt dry-niche

—Continued

and wet-niche underwater luminaires for swimming pools are subject to the same requirements as new dry-niche and wet-niche underwater luminaires for swimming pools.

**PRODUCT MARKINGS**

Luminaires investigated for operation only in contact with water are marked “SUBMERSE BEFORE LIGHTING” or the equivalent, and such marking is visible after installation. Additional markings for specific types of luminaires are described below.

**PRODUCT TYPES AND INSTALLATION**

**Dry-niche Underwater Luminaires for Swimming Pools and Spas** —

These luminaires have been investigated for permanent installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the center of the lens not more than 600 mm (23.6 in.) below the normal water level unless otherwise marked. These luminaires are designed for servicing from the rear in a passageway behind the pool or spa wall or, if mounted in the bottom of a pool or spa, in a tunnel underneath the pool or spa. The luminaire may include (1) a factory-installed length of flexible cord terminating in an attachment plug, and (2) an attachment-plug receptacle for connection of the branch-circuit conductors.

**Wet-niche Underwater Luminaires for Swimming Pools and Spas** —

These luminaires have been investigated for installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the center of the lens not more than 600 mm (23.6 in.) below the normal water level unless otherwise marked. These luminaires have been investigated for installation in a permanently installed forming shell (luminaire housing) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper forming shells with which they have been investigated for use. These luminaires are provided with a factory installed, permanently attached flexible cord with an exposed length of not less than 2.4 m (8 ft). The flexible cord is confined in the forming shell by the luminaire and permits the luminaire to be removed from the forming shell and to be lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 2.4 m (8 ft) long cord will not permit luminaire removal from the forming shell and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the forming shell.

**Forming Shells (Housing) for Wet-niche Underwater Luminaires for Swimming Pools and Spas** — These are structures designed to support a mating wet-niche luminaire, for mounting in a pool structure. Forming shells are marked to indicate the luminaires with which the forming shells have been investigated for use.

**Underwater Luminaires for Aboveground Storable Swimming Pools** —

These luminaires have been investigated for temporary installation only through or on the wall of an above ground storable pool (a pool constructed in such a manner that it may be readily disassembled for storage and reassembled to its original integrity). They include all three of the following factory-provided parts:

1. Lamp assembly for temporary installation on or through the wall of an above ground pool
2. An isolating-type power supply provided with a 0.9 m – 1.8 m (3-6 ft) power-supply cord for connection to a source of supply and for temporary mounting away from the pool (the remote assembly)
3. Jacketed flexible cord of not less than 7.6 m (25 ft) in length connecting the lamp assembly and the remote assembly

If not an integral part of the remote assembly, the power supply is intended to be connected to a receptacle protected by a Class A ground fault circuit interrupter.

These luminaires have been investigated for installation with the top of the lens not less than 200 mm (8 in.) below the top of the pool. A hole through the pool wall may be required for luminaire installation. Unless otherwise indicated in the luminaire’s installation instructions, the luminaire design has been investigated for the lower edge of any hole that a luminaire installer must cut in the pool wall to be no more than 360 mm (14 in.) below the top of the pool wall. The pool wall manufacturer may provide, at a greater depth, a properly sized hole or a reinforced wall section designed for field-cutting a properly sized hole for a luminaire or plumbing fitting. Unless otherwise marked for a greater maximum installation depth, these luminaires have been investigated for installation in such a hole with the center of the lens not more than 600 mm (23.6 inches) below the normal water level and only where the pool installation instructions provide for the deeper hole placement and usage.

**Underwater Luminaires for Aboveground Nonstorable Swimming Pools** — These luminaires have been investigated for permanent installa-

—Continued

tion through or on the wall of an aboveground nonstorable pool. The information provided above for underwater luminaires for aboveground storable swimming pools regarding installation depth and using an existing hole or cutting a new hole for installation also applies to underwater luminaires for aboveground nonstorable swimming pools.

**Convertible Underwater Luminaires for Aboveground Swimming Pools** — These luminaires are initially configured as an underwater luminaire for aboveground storable swimming pool for use as described above. They include provisions for the one-time field conversion of the luminaire to an underwater luminaire for aboveground nonstorable swimming pool for use as described above. Once converted, these luminaires are not suitable for being modified back to their original configuration.

**Fiber Optic Luminaires for Swimming Pools and Spas** — These luminaires consist of a lamp/electrical enclosure that has been investigated for permanent mounting not less than 1.5 m (5 ft) from the pool or spa wall and a fiber optic element and associated fittings to transmit the light to the pool or spa. The lamp/electrical enclosure has been investigated for installation above the level at which water splashed from the pool or spa or from another source may collect.

**SUPPLY-CIRCUIT CURRENT RATING**

An underwater luminaire for aboveground storable swimming pools has been investigated for connection to the branch circuit specified in the CEC for receptacles having a blade configuration corresponding to the blade configuration of the luminaire attachment plug. For all other luminaires, unless marked to identify a permitted greater or required lower maximum supply-circuit current rating, a luminaire with a voltage and current rating shown in the table below has been investigated for installation on a supply circuit rated not more than as specified in the table. A luminaire with a voltage or current rating not covered by the table is marked to identify the maximum supply-circuit current rating for its installation.

**Maximum Current Rating for Supply Circuit (Except as Specified in Preceding Paragraph)**

Luminaire Voltage Rating	Luminaire Current Rating	Max Current Rating for Luminaire Supply Circuit
15 V ac or less	25 A or less	25 A
110 V ac – 120 V ac	16 A or less	20 A
110 V ac – 120 V ac	More than 16 A, not more than 24 A	30 A

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Convertible Underwater Luminaire for Aboveground Swimming Pool
  - Dry-niche Underwater Luminaire for Swimming Pool
  - Fiber Optic Luminaire for Swimming Pool
  - Forming Shell for Wet-niche Luminaire
  - Housing for Wet-niche Luminaire
  - Underwater Luminaire Accessory
  - Underwater Luminaire for Aboveground Nonstorable Swimming Pool
  - Underwater Luminaire for Aboveground Storable Swimming Pool
  - Wet-niche Underwater Luminaire for Swimming Pool
- For rebuilt products, the word “Rebuilt” precedes the product identity.

**RELATED PRODUCTS**

See Submersible Luminaires Certified for Canada (IFEV7) for underwater luminaires intended for use in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate wet-niche swimming pool luminaires, forming shells and dry-niche swimming pool luminaires in this category is CAN/CSA-C22.2 No. 89, “Swimming-Pool Luminaires, Submersible Luminaires and Accessories.”

The basic standard used to investigate luminaires for aboveground swimming pools and spas is CSA-C22.2 No. 9.0, “General Requirements for Luminaires,” including the requirements contained in CSA Technical Information Letter No. B-44, “Interim Certification Requirements for Permanently Connected, Cord-Connected and Direct Plug-In Lighting Systems Incorporating Nicheless Luminaire Assemblies that Employ Extra-Low Voltage Incandescent Lamps for Use in Pools.”

The basic standards used to investigate fiber optic luminaires for swimming pools and spas are CSA-C22.2 No. 9.0 and CAN/CSA-C22.2 No. 218.1, “Spas, Hot Tubs and Associated Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEATERS CERTIFIED FOR CANADA (WBRR7)**

**USE**

This category covers heaters intended for permanent installation in or adjacent to swimming pools or spas in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

These products have not been investigated for outdoor use unless they are marked “For Outdoor Use,” or equivalent, in which case they are acceptable for both outdoor and indoor use.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Spa Heater
- Swimming Pool Heater

**RELATED PRODUCTS**

Heaters intended for use with hydromassage bathtubs are covered under Hydromassage Bathtubs Certified for Canada (NCHX7).

Heat-pump-type units are covered under Heating and Cooling Equipment Certified for Canada (LZFE7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA B140.12 (1976), “Oil-Burning Equipment: Service Water Heaters for Domestic Hot Water, Space Heating, and Swimming Pools,” and CSA-C22.2 No. 64 (1991), “Household Cooking and Liquid-Heating Appliances.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Swimming Pool Heater” or “Spa Heater.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOT TUB AND SPA EQUIPMENT ASSEMBLIES CERTIFIED FOR CANADA (WBYQ7)**

**USE AND INSTALLATION**

This category covers equipment assemblies intended for use with non-self-contained spas and hot tubs, rated 250 V or less, for household or commercial use. These products are marked to indicate their suitability for use either indoors or outdoors (Type 3) or indoors only (Type 2).

This category also covers equipment assemblies that do not contain a water heater and do not contain a water temperature-regulating control or a water temperature-limiting control. A water heater, a temperature-regulating control and a temperature-limiting control should be provided in the final installation and their adequacy determined by the Authority Having Jurisdiction.

Equipment assemblies are prepackaged combinations of various components, such as pumps, filters, heaters, blowers, lights and controls, and are designed for use with field-supplied tubs. Equipment assemblies are designed for installation and use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Equipment assemblies should be installed at least 1.5 m from the inside walls of a spa or hot tub and be connected by nonmetallic pipe only.

Equipment assemblies have not been investigated for below-grade installation.

Equipment assemblies have not been investigated for use within an outer enclosure or under the skirt of a spa or hot tub unless so marked.

Equipment assemblies that contain a gas-fired water heater have not been investigated for indoor use, for use within an outer enclosure, or for use under the skirt of a spa or hot tub unless so marked.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Equipment Assembly for Spa/Hot Tub
- Hot Tub Equipment Assembly
- Spa Equipment Assembly

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1 (1989), “Spas, Hot Tubs, and Associated Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Equipment Assembly for Spa/Hot Tub,” “Hot Tub Equipment Assembly” or “Spa Equipment Assembly.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**DECK BOXES CERTIFIED FOR CANADA (WCEZ7)**

**USE AND INSTALLATION**

This category covers deck boxes (also known as swimming pool junction boxes) intended for direct conduit connection to the forming shells of wet-niche luminaires for pools as described in Section 68 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).

Rule 68-000 of the CEC considers a pool to be the following:

SWIMMING POOL AND SPA EQUIPMENT CERTIFIED FOR CANADA (WABX7)

–Continued

1. Permanently installed and storable swimming pools
  2. Hydromassage bathtubs
  3. Spas and hot tubs
  4. Wading pools
  5. Baptismal pools
  6. Decorative pools
- Deck boxes have been investigated for indoor and outdoor installation. Deck boxes are intended for installation above the normal water level of the pool, with the top of the deck box at or above the finished level of the pool deck, and located in such a manner that any water on the deck will drain away from the deck box.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Deck Box

**RELATED PRODUCTS**

See Luminaires and Forming Shells Certified for Canada (WBDT7) and Submersible Luminaires Certified for Canada (IFEV7) for wet-niche luminaires intended for use underwater in pools and fountains, respectively.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 89 (1976), "Swimming-Pool Luminaires, Submersible Luminaires and Accessories," and Section 68, "Pools, Tubs, and Spas," of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Deck Box."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OZONE GENERATORS CERTIFIED FOR CANADA (WCKA7)**

**USE AND INSTALLATION**

This category covers ozone generators rated 600 V or less, intended for use in the treatment of nonpotable water in swimming pools, and in spas and hot tubs of other than the self-contained type. They have been investigated with respect to risk of electric shock, fire and mechanical injury only.

These products are marked to indicate their suitability for use either indoors or outdoors (marked with "CSA enclosure 3") or indoors only (marked with "CSA enclosure 2").

Ozone generators involve features of installation and use not ordinarily present in electrical utilization equipment. Such features are covered in the manufacturer's installation instructions. The installation is intended to be in accordance with the manufacturer's instructions furnished with the equipment and the requirements of the Authority Having Jurisdiction.

**FACTORS NOT INVESTIGATED**

Compliance with any applicable Canadian regulations governing the control of ozone emission from ozone generators under conditions of normal and abnormal operation has not been investigated.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Ozone Generator

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 218.1 (1989), "Spas, Hot Tubs, and Associated Equipment."

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PUMPS CERTIFIED FOR CANADA (WCSX7)**

**GENERAL**

This category covers pumps for circulating the water in swimming pools, hot tubs and spas. These products are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These products are marked for outdoor (weatherproof) or indoor (drip-proof) use.

Pumps investigated for permanently installed pools are so identified and are additionally marked "Insulated Wet End Pump." Permanently installed pool pumps are intended to be permanently connected to the water circulation system and are permanently wired. Permanently installed pool pumps are provided with an accessible pressure-wire connector for equipotential bonding.

Cord-and-plug connected poolside pumps (storable pool pumps) are intended to be connected to a water circulation system constructed so that the pump may be readily disassembled from the system for storage and future reassembly to its original integrity. Cord-and-plug-connected poolside pumps (storable pool pumps) are provided with a minimum 25 ft (7.62 m) nondetachable power-supply cord terminating in a grounding-type attachment plug, are double insulated, have no accessible grounded metal parts, have inaccessible noncurrent-carrying metal parts connected to the grounding conductor of the power-supply cord, and do not have an equipotential bonding connector.

These pumps may be provided with integral filters. The suitability of the filters to clean water has not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Spa Pump
- Swimming Pool or Spa Pump
- Swimming Pool Pump

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Pump," "Spa Pump" or "Swimming Pool or Spa Pump," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SELF-CONTAINED SPAS CERTIFIED FOR CANADA (WCZW7)**

**USE AND INSTALLATION**

This category covers self-contained spas for aboveground use and for household or commercial use. These spas are not designed or intended to have the water drained after each use. They are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

A self-contained spa is a continuous-duty appliance in which all control, water-heating and water-circulating equipment is an integral part of the product, located entirely under the spa skirt.

Self-contained spas may be provided with electric or gas heaters. Spas with gas heaters are intended for permanent wiring and permanent installation, and are intended for outdoor use only.

These products are marked to indicate their suitability for use with either indoors or outdoors (type 3) or indoors only (type 2).

Each spa is provided with a marking on the wiring diagram in the field-wiring compartment or in the installation instructions or on a separate configuration sheet, to identify the major components of the spa when manufactured. The configuration sheet and the installation instructions are intended to be available during installation and inspection.

Self-contained spas may be shipped completely assembled or in knock-down form.

Knockdown spas are packaged by major component in multiple cartons to aid in shipping. They consist of a completely assembled and plumbed tub and an equipment package. The skirt may be attached to the tub or it may be provided in prefabricated sections for assembly in the field. The equipment package is completely assembled, pre-wired and plumbed. Connections are made by union fittings or similar quick-disconnect plumbing that does not require tools or special materials. All cartons used to ship a knockdown spa are marked to indicate the contents, the spa model, and the total number of required cartons.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Self-contained Spa

**RELATED PRODUCTS**

Hydromassage bathtubs are covered under Hydromassage Bathtubs Certified for Canada (NCHX7).

Factory-made assemblies of pumps, heaters, blowers, lights and controls intended for use with field-supplied hot tubs and spas are covered under Hot Tub and Spa Equipment Assemblies Certified for Canada (WBVQ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**SWIMMING POOL AND SPA COVER OPERATORS, ELECTRIC CERTIFIED FOR CANADA (WDDJ7)**

**USE AND INSTALLATION**

This category covers electrically driven cover operators intended for use with swimming pools and spas, together with controls for use with such operators. The cover operators generally consist of a motor-driven apparatus used to move the covering material. These operators are intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." These products are marked to indicate their suitability for both indoor and outdoor (type 3) use.

**PRODUCT IDENTITY**

**SWIMMING POOL AND SPA TRANSFORMERS CERTIFIED FOR CANADA (WDGV7)**

**USE**

This category covers enclosed transformers intended for use in residential or commercial spas, hydromassage bathtubs, swimming pools, or other products that involve immersed persons. Spas and hydromassage bathtubs are intended for use in unclassified locations. They are intended to be permanently connected to a plumbing system and building structure, and permanently installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," specifically:

- Permanent connection to a single- or three-phase branch circuit rated 150 V or less to ground; or
- Connection by means of a factory-installed power-supply cord having a 15 A 125 V attachment-plug cap.

These transformers provide either one level or two levels of protection (electrical isolation) in accordance with CSA-C22.2 No. 218.1, "Spas, Hot Tubs, and Associated Equipment," and CAN/CSA-C22.2 No. 218.2, "Hydromassage Bathtub Appliances."

These products are provided with a power-supply cord or have provisions for conduit connection to the branch-circuit supply. Transformers not

**SWIMMING POOL AND SPA EQUIPMENT CERTIFIED FOR CANADA (WABX7)**

–Continued

provided with a power-supply cord are provided with leads with a length of 150 mm or more and are not smaller than 18 AWG. Wire connectors for wire terminations comply with the requirements in CAN/CSA-C22.2 No. 65, “Wire Connectors.”

These products have not been investigated for outdoor use, unless marked “For Outdoor Use” or equivalent, in which case they are acceptable for both outdoor and indoor use.

**PRODUCT MARKINGS**

These transformers are marked with:

1. The primary voltage(s), and frequency (if other than 60 Hz)
2. The number of phases, if other than single-phase
3. All secondary voltages
4. The secondary capacity in amperes or volt-amperes

Special-purpose enclosures, such as drip-tight, weatherproof, water-tight or dust-tight, or enclosures suitable for outdoors are marked as required by CAN/CSA-C22.2 No. 94.2, “Enclosures for Electrical Equipment, Environmental Considerations.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fountain, Swimming Pool or Spa Transformer
- Fountain Transformer
- Spa Transformer
- Swimming Pool Transformer

**RELATED PRODUCTS**

See General-purpose Transformers Certified for Canada (XPTQ7) and Transformers, Class 2 Certified for Canada (XOKV7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 218.1 (1989), “Spas, Hot Tubs, and Associated Equipment,” and CAN/CSA-C22.2 No. 218.2 (1993), “Hydromassage Bathtub Appliances.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WATER TREATMENT EQUIPMENT CERTIFIED FOR CANADA (WDLc7)**

**USE AND INSTALLATION**

This category covers chlorinators, brominators, ozone generators, ion generators, and similar equipment intended to sanitize water in pools, spas and hot tubs. This category also covers equipment designed to monitor water chemistry in pools, spas and hot tubs, with or without the capability of adding chemicals to the water to adjust water chemistry. These products are intended for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

These products are marked to indicate their suitability for use either indoors or outdoors (type 3) or indoors only (type 2). They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

**FACTORS NOT INVESTIGATED**

The ability of this equipment to sanitize pool and spa water has not been investigated.

**PRODUCT IDENTITY**

**SWIMMING POOL AND SPA EQUIPMENT CERTIFIED FOR CANADA (WABX7)**

–Continued

One of the following product identities appears on the product:

- Spa Chlorinator
- Swimming Pool and Spa Chlorinator
- Swimming Pool Chlorinator

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 218.1 (2013), “Spas, Hot Tubs, and Associated Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. \*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWIMMING POOL AND SPA EQUIPMENT, MISCELLANEOUS CERTIFIED FOR CANADA (WDUT7)**

**GENERAL**

This category covers accessory equipment for swimming pools, hot tubs and spas, such as valves, pool cover operators, and pool cover drain pumps. It also covers electric cleaners for swimming pools and architectural fountains. These products are intended for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

These products are marked to indicate their suitability for use either indoors or outdoors (weatherproof, Type 3) or indoors only (drip-proof, Type 2).

The electric cleaners consist of a cleaner with a remote power unit. The power units employ transformers or power supplies of the isolated winding type, with an ungrounded secondary that has a grounded metal barrier between primary and secondary windings or is double insulated between primary and secondary windings.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electric Swimming Pool Cleaner
- Pool Cover Operator
- Pool Freeze Protector
- Pool Valve Actuator

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 218.1, “Spas, Hot Tubs, and Associated Equipment,” and the C22.2 (Series) standards applicable to the type of accessory.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

–Continued

together with the word "LISTED," a control number, and the product name "Pool Cover Operator," "Pool Valve Actuator," "Pool Freeze Protector" or "Electric Swimming Pool Cleaner," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SUCTION FITTINGS FOR SWIMMING POOLS, WADING POOLS, SPAS AND HOT TUBS CERTIFIED FOR CANADA (WEBS7)

### USE AND INSTALLATION

This category covers suction fittings intended for use in swimming pool, wading pool, spa, hot tub, and hydromassage (whirlpool) bathtub installations.

These fittings have been investigated for resistance to hair, body, finger and limb entrapment.

Suction fittings have been investigated for both indoor and outdoor use unless marked for indoor use only. They are intended to be installed following the instructions that are packaged with each fitting.

Self-contained spa fittings are intended only for installation in self-contained, factory-produced spas. They are intended for plumbing with at least two fittings per pump.

### RATINGS

Each suction fitting is marked with a waterflow rate in gallons per minute. This rate should equal or exceed the maximum flow rate of the pump(s) used in the water circulating system.

### PRODUCT MARKINGS

These fittings are marked with the intended installation position: "Wall Only," "Floor Only" or "Wall or Floor." They may additionally be marked with the statement, "For Single or Multiple Drain Use," "For Single Drain Use" or "For Multiple Drain Use Only."

Self-contained spa fittings are marked "For Use in Self-Contained Factory Manufactured Spas Only" and "For Multiple Outlet Use Only."

### PRODUCT IDENTITY

One of the following product identities appears on the product:

Sw Pool Sctn Ftn

Swimming Pool Suction Fitting

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7) and Plumbing and Associated Products Certified for Canada (AAPP7).

### REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/APSP-16 (2011), "Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs," CSA B125 (1993), "Plumbing Fittings," and CSA-C22.2 No. 218.2 (1993), "Hydromassage Bathtub Appliances."

**Note:** Fittings complying with ANSI/APSP-16 are also considered to comply with ANSI/ASME A112.19.8b (2009), "Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Suction Fitting" (or "Sw Pool Sctn Ftn").

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SWITCHBOARDS CERTIFIED FOR CANADA (WEIR7) SWITCHBOARDS, DEAD-FRONT CERTIFIED FOR CANADA (WEVZ7)

### GENERAL

This category covers dead-front switchboards rated 600 V or less. Switchboards are large single panels, structural frames or assemblies of panels or structural frames on which may be mounted, on the face or back or both: switches, overcurrent, and other protective devices, buses, and instruments. Switchboards may be accessible from the rear as well as from the front and are not intended to be installed in cabinets.

A **switchboard section** is that portion of a switchboard which is prevented by the structural framework from being physically separated into smaller units. Framework that is welded or joined with steel rivets over 6.4 mm in diameter is considered to constitute a single section.

A **switchboard enclosure** is intended to enclose one or more switchboard sections or switchboard interiors, or is intended to provide auxiliary wiring space for an adjacent switchboard section.

A **switchboard interior** is intended to be field installed in a switchboard enclosure to become the equivalent of a dead-front switchboard section.

### USE, INSTALLATION AND RATINGS

#### Electrical Ratings

Each switchboard section is marked with the current rating of the supply bus. Within a group of sections, a through or splice bus is not required to be marked with its rating. The ampacity of the through bus and supply bus supplying the next section may be reduced but should not be less than the supply rating of the next section. The current rating of the through and splice bus in the last section of a group (which might be used in the future to supply an additional section) is shown in the switchboard section marking if the through or splice bus rating is less than the supply rating of that section. The current rating of the section bus is also included in the marking. The adequacy of the supply, through, splice, or section bus current rating with respect to the calculated load current using the appropriate diversity factors noted in Section 8 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC), can only be determined by the Authority Having Jurisdiction (AHJ) at the final installation.

#### Short-circuit Ratings

Dead-front switchboard sections or interiors are marked with their short-circuit-current rating in rms symmetrical short-circuit current rating in amps. The marking states that short-circuit ratings are limited to the lowest short-circuit rating of (1) any switchboard section connected in series, or (2) the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

#### Service Equipment

The marking "Suitable for Use as Service Equipment" appears on each switchboard section or switchboard interior containing one or more service disconnects optionally intended for use at a service.

A switchboard section or interior marked for use at services as indicated above may also be used to provide the main control and means of cutoff for a separately derived system or a separate building.

Some switchboard sections or interiors incorporate neutrals factory bonded to the enclosure. Such units are marked "Suitable only for Use as Service Equipment."

#### Ground-fault Protection

Some switchboard sections may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking such as on a wiring diagram or on the relaying equipment. Instructions are provided for on-site testing of the ground-fault protection at the time of installation.

#### Overcurrent Protection

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches other than fused power circuit devices should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU7) and fused power circuit devices (see IYSR7) used in switchboards are suitable for continuous use at 100% of their rating.

#### Field-installed Equipment

A switchboard section or interior may have provision for field installation of additional suitable equipment such as branch, splice or through buses, meter socket bases, circuit breakers, switches, panelboards, and terminal connectors. The switchboard section or interior is marked with the

–Continued

name or trademark of the manufacturer and the catalog number or equivalent of such equipment that is intended to be installed in the field. A switchboard section or interior may also have provision for utility-installed current transformers and metering equipment.

**Installation**

A switchboard section or enclosure investigated to determine that it is rainproof is marked “Type 3R” and may also be marked “Rainproof.” A section or enclosure suitable for connection to a busway is marked to indicate the manufacturer and type of busway.

The acceptability of conduit stubs serving unit sections, with respect to wiring space and spacing from live parts, can be determined only by the AHJ at the final installation.

In some cases, field drilling of holes in the ground bus may be needed to add additional grounding terminals.

**Field Terminations**

Dead-front switchboard sections covered under this category are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Aluminum conductors may be used if such marking is independent of any marking on terminal connectors and if it appears on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Tables 2 and 4 of the CEC. Termination provisions are determined based on values provided in Tables 2 and 4, with no adjustment made for correction factors.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Dead-front Switchboard Section
- Switchboard Enclosure
- Switchboard Interior

**RELATED PRODUCTS**

Single panels or groups of panel units designed for assembly in the form of a single panel, including buses and automatic overcurrent devices, and equipped with or without switches for the control of light, heat, or power circuits; designed to be placed in a cabinet or cutout box placed in or against a wall, partition, or other support; and accessible only from the front are covered under Panelboards Certified for Canada (QEUY7).

Theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards are covered under Switchboards, Special Purpose Certified for Canada (WFJX7).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches Certified for Canada (WPTZ7).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels Certified for Canada (NITW7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 244, “Switchboards.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark covers only the section so marked; it does not cover other sections included in the complete switchboard.

**Additional Certification Markings**

Dead-front switchboard sections include the statement “\_\_\_ of \_\_\_.” The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchboard. The second space is stamped with the total number of sections in the switchboard (including sections not bearing a UL Certification Mark).

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dead Front Switchboard Section,” “Switchboard Interior” or “Switchboard Enclosure.” The Listing Mark for dead-front switchboard sections includes the statement “\_\_\_ of \_\_\_.” The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchboard. The second space is

–Continued

stamped with the total number of sections in the switchboard (including sections not bearing a UL Listing Mark).

The Listing Mark covers only the section so marked; it does not cover other sections included in the complete switchboard.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHBOARDS, SPECIAL PURPOSE CERTIFIED FOR CANADA (WFJX7)**

**USE, INSTALLATION AND MARKINGS**

This category covers theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards rated 600 V or less.

These switchboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Tables 2 and 4 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” with no adjustment made for correction factors.

**Short-circuit Rating**

Special purpose switchboards are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In the case of rack-type theater-dimming switchboards with removable modules, the rating may depend on the use of specific dimming modules. These dimming modules are marked on the switchboard. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

**Duty Rating**

Theater-dimming switchboards have been investigated to operate continuously at 100% of their marked input rating.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Incandescent Lighting Switchboard
- Laboratory Switchboard
- Theater Switchboard

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, “Industrial Control Equipment,” and CSA-C22.2 No. 244, “Switchboards.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Laboratory Switchboard,” “Theater Switchboard” or “Incandescent Lighting Switchboard,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SWITCHES CERTIFIED FOR CANADA (WFXV7)

### PULLOUT SWITCHES, DETACHABLE TYPE CERTIFIED FOR CANADA (WGEU7)

#### USE AND INSTALLATION

This category covers enclosed switches having detachable pullout heads, with or without fuseholders, for cartridge fuses. These switches may be enclosed or nonenclosed.

Nonenclosed switches are intended for use in other assemblies, such as panelboards or the like.

Enclosed pullout switches that are rain-tight or rainproof are marked accordingly.

These pullout switches are intended for use with copper conductors unless marked to indicate that certain terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on the terminal connectors and appear on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

#### RATINGS

Ratings of enclosed or nonenclosed pullout switches are limited to 600 V or less, 400 A or less.

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused pullout switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

Pullout switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Pullout switches with amp ratings only are suitable for general use only.

Pullout switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not intended for use as motor controllers.

Motor-circuit pullout switches are intended for use only in motor circuits and are marked “Enclosed Motor-Circuit Pullout Switch.”

Horsepower ratings are associated with particular voltages and number of phases. A horsepower-rated switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some pullout switches have dual horsepower ratings, the larger of which is based on the use of fuses with time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches marked “Suitable For Use On A Circuit Capable of Delivering Not More Than \_\_\_ Amps, RMS, Symmetrical, \_\_\_ Volts Maximum: Use Class \_\_\_ Fuses” have been investigated for the additional rating indicated.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Enclosed Motor-circuit Pullout Switch
- Enclosed Pullout Switch
- Motor-circuit Pullout Switch
- Pullout Switch

#### RELATED PRODUCTS

Products with similar uses are covered under Switches, Enclosed Certified for Canada (WIAX7), Motor Controllers, Manual Certified for Canada (NLRV7), Switches, Dead-front Certified for Canada (WHXS7) and Switches, Open Type Certified for Canada (WHTY7).

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 29, “Panelboards and Enclosed Panelboards.”

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

–Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

#### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Pullout Switch,” “Enclosed Pullout Switch,” “Motor Circuit Pullout Switch” or “Enclosed Motor Circuit Pullout Switch.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## SWITCHES, AUTOMATIC CERTIFIED FOR CANADA (WGLT7)

### Switches, Clock Operated Certified for Canada (WGZR7)

#### GENERAL

This category covers clock-operated switches. They may be marked with the following:

- Manufacturer’s name, trademark or identifier (visible after installation)
- Model number (visible after installation)
- Factory code (if the device is produced at more than one location)
- Electrical ratings, including: volts, hertz, amps, load type (visible after installation)

Lamp load maximum ratings are indicated or is one-tenth of the full amp rating

Electrical loads, when applicable, are indicated as follows:

- “Tungsten ” (or “T”) for tungsten-filament-lamp loads
- “Resistance only” (or “R”) for noninductive resistance loads
- “Inductive” (or “H”) for inductive loads, such as IT equipment and appliances
- “Pilot duty” (or “PD”) for magnet-coil loads

Clock-operated switches marked “Replace with Type HPN cord only” are suitably rated for SP-2 replacement cord

Permanently connected devices may be marked as follows:

Terminals are identified so that it is obvious how to connect the conductors or correspond to the wiring diagram (provided with the device).

“For supply connections, use \_\_\_ AWG or larger wires suitable for at least \_\_\_°C (\_\_\_°F),” or equivalent. If no wire size is provided, 14 AWG was used; if no temperature is provided, 60°C wire was used.

“AL” or “Use aluminum wire only” identifies terminals for aluminum supply wire only.

“CU” or “Use copper wire only” identifies terminals for copper supply wire only.

“CU-AL” or “AL-CU” or “Use copper or aluminum wire” identifies terminals for copper or aluminum supply wire.

“Use copper wire only except at terminals \_\_\_” identifies a specific terminal wired to a conductor other than copper. Identification of specific terminals is required.

#### RATINGS

Clock-operated switches are rated for ac, dc, or both, and may be rated up to 600 V.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Clock-operated Switch
- Timer Switch

#### RELATED PRODUCTS

Appliance switches investigated to CAN/CSA-C22.2 No. 61058-1, “Switches for Appliances – Part 1: General Requirements,” and special-use switches investigated to CSA-C22.2 No. 55, “Special Use Switches,” are covered under Switches, Appliance and Special Use Certified for Canada (WOYR8).

General-use snap switches or flush-mounted switches installed in a wiring system per CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” are covered under Switches, Flush Certified for Canada (WMUZ7).

Manual motor controllers are covered under Motor Controllers, Manual Certified for Canada (NLRV7).

–Continued

Switches for industrial applications are covered under Power Circuit and Motor-mounted Apparatus Certified for Canada (NMTR7).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric Certified for Canada (WJCT7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 14, “Industrial Control Equipment,” and CAN/CSA-C22.2 No. 177, “Clock-Operated Switches.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Clock Operated Switch” or “Timer Switch.”

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHES, OPEN TYPE CERTIFIED FOR CANADA (WHTY7)**

**USE AND INSTALLATION**

This category covers open-type switches without an enclosure that are provided with a handle operator. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are intended for installation in a panelboard, switchboard, motor control center, industrial control panel or the like, or for installation in a certified cabinet or a cutout box in accordance with the switch installation instructions or without an enclosure where acceptable.

These switches are intended to be mounted in enclosures such that they are manually operable by means of an external handle without opening the enclosure. Externally operated handles mounted to the sidewall of an enclosure or through the cover of an enclosure are intended to be installed in accordance with the switch installation instructions.

These switches are intended or use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

**RATINGS**

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

Ratings of certified open-type switches are limited to 4000 A, 500 hp, 600 V. Open-type switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked “For Isolating Use Only – Do Not Open Under Load.”

Open-type switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Open-type switches with ampere ratings only are intended for general use only. Open-type motor circuit switches are intended for use only in motor circuits and are marked “Motor-Circuit Switch.”

–Continued

Open-type switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Ratings of certified open-type motor circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some open-type switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Open-type Motor-circuit Switch

Open-type Switch

**RELATED PRODUCTS**

Products with similar uses are covered under Switches, Enclosed Certified for Canada (WIAX7), Switches, Molded Case Certified for Canada (WJAZ7), Motor Controllers, Manual Certified for Canada (NLRV7), Pull-out Switches, Detachable Type Certified for Canada (WGEU7) and Switches, Dead-front Certified for Canada (WHXS7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 4 (2004), “Enclosed and Dead-Front Switches.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Open Type Switch” or “Open Type Motor-Circuit Switch.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. **SWITCHES, DEAD-FRONT CERTIFIED FOR CANADA (WHXS7)**

**USE AND INSTALLATION**

This category covers dead-front switches having all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are manually operable by means of external handles without opening the enclosure or are hinged pullout switches.

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

These dead-front switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Tables 2 and 4 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

**RATINGS**

Ratings of certified dead-front switches are limited to 4000 A, 500 hp, 600 V. Dead-front switches rated at more than 1200 A at 250 V or less, and

–Continued

switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked “For Isolating Use Only – Do Not Open Under Load.”

Dead-front switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Dead-front switches with ampere ratings only are intended for general use only.

Some hinged pullout switches achieve an “off” position only by leaving the door open. These switches are restricted to use only as a single main in a panelboard or the like and are rated not higher than 200 A and 250 V.

Dead-front switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Enclosed motor-circuit switches are intended for use only in motor circuits and are marked “Motor-circuit Switch.”

Ratings of certified dead-front motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some dead-front switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

**SWITCHES, ENCLOSED CERTIFIED FOR CANADA (WIAX7)**

**USE AND INSTALLATION**

This category covers enclosed switches and enclosed motor-circuit switches that are externally operable without opening the enclosure. These switches may be provided with fuseholders for plug- or cartridge-type fuses and may be electrically tripped.

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in

–Continued

Tables 2 and 4 of CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Termination provisions are determined based on values provided in these tables, with no adjustment made for correction factors.

**RATINGS**

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Enclosed switches identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

Fused enclosed switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

Ratings of certified enclosed switches are limited to 4000 A, 500 hp, 600 V. Enclosed switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 V at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked “For Isolating Use Only – Do Not Open Under Load.”

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use. Enclosed motor-circuit switches are intended for use only in motor circuits and are marked “Motor-Circuit Switch.”

Enclosed switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Ratings of certified enclosed motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some enclosed switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

Enclosed switches may also be suitable for use as service switches. Such switches are marked “Suitable for Use as Service Equipment.”

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Enclosed Motor-circuit Switch
- Enclosed Switch

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHES, LOAD INTERRUPTER AND ISOLATING, OVER 750 VOLTS CERTIFIED FOR CANADA (WIQG7)**

**GENERAL**

This category covers enclosed medium-voltage load-interrupter and isolating (disconnect) switches and switchgear having nominal ac voltage ratings above 750 V through 46 kV. These switches and switchgear are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I." Load-interrupter switches are rated up to 3000 A and may be provided with or without fuses. Switches with no load-current-interrupting rating are isolating only. These switches are available in either stationary or draw-out versions.

These switches are generally three-pole devices; however, some switches may be one- or two-pole.

Enclosures may be either ventilated or nonventilated.

An enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R."

Unless specifically marked otherwise, this equipment is intended for use on three-phase circuits where the nominal voltage to ground is 0.58 times the line-to-line voltage.

Each switch or section containing a switch is marked with the rated maximum voltage, rated impulse withstand voltage, rated low-frequency withstand voltage, rated frequency, rated continuous current, momentary current rating and short-time current rating. A load-interrupter switch is also marked with a load-current-interrupting rating.

Load-interrupter switches are marked with a fault close rating. They should not be used on circuits having available fault currents in excess of the fault close rating. When provided with some fuses it may be necessary for the supply circuit to have an available fault current that is less than the fault close rating of the switch due to the limited interrupting ability of the fuses.

Switches provided with fuseholders are marked to indicate the maximum fuse ratings, and may also be marked to indicate the specific type fuse to be used.

This equipment may consist of a single freestanding vertical section or it may consist of several abutting vertical sections intended for interconnection by a horizontal bus. When provided with a horizontal bus, each vertical section is marked with the ampacity of the horizontal bus in amps. Switches intended to be part of such a line-up are provided with a "\_\_\_ of \_\_\_" marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing a UL Certification Mark) and the first blank indicates the position (reading from left to right) of the vertical section bearing the marking. An enclosure which is part of a line-up may be provided as an enclosure only, without switches or bus. These enclosures are intended for the addition of control equipment in the field and are marked as a metal-enclosed switchgear enclosure.

This equipment is investigated for use with bus or 90°C insulated wire at 90°C ampacity.

**ARC-RESISTANT LOAD-INTERRUPTER SWITCHGEAR**

Switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be certified as arc-resistant switchgear.

Arc-resistant switchgear may be designed to vent overpressure gases either into the surrounding area or through an exhaust duct outside of the building.

Where overpressure gases are vented in the surrounding areas, the arc-resistant switchgear has been investigated for installation in buildings that have sufficient overhead space and minimum distance from adjacent walls to permit venting without reflecting arc products, as specified in the installation instructions provided by the manufacturer.

When provided with an exhaust duct, overhead space and minimum distance from adjacent walls are not specified. Exhaust ducts provided in the installation are intended to be as specified in the installation instructions provided by the manufacturer.

Arc-resistant switchgear is marked with one of the Accessibility Type designations noted below based upon the construction of the switchgear investigated.

**Type 1** designates switchgear with arc-resistant construction at the front only.

**Type 1B** designates switchgear with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

**Type 2** designates switchgear with arc-resistant construction at the front, sides and rear.

**Type 2B** designates switchgear with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Isolating Switch

—Continued

- Load-interrupter Switch
- Load-interrupter Switchgear
- Metal-enclosed Interrupter Switchgear
- Metal-enclosed Interrupter Switchgear Enclosure
- Metal-enclosed Switchgear
- Metal-enclosed Switchgear Enclosure

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 193 (1983), "High Voltage Full-Load Interrupter Switches," CSA-C22.2 No. 58 (1989), "High-Voltage Isolating Switches," and CSA-C22.2 No. 31 (2010), "Switchgear Assemblies."

Metal-enclosed switchgear certified as "arc resistant" has additionally been investigated to CSA-C22.2 No. 0.22 (2011), "Evaluation Methods for Arc Resistance Ratings of Enclosed Electrical Equipment."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

In an assembly of products, the Certification Mark is applied to each vertical section eligible for certification. The Certification Mark covers only the section so marked; it does not cover other sections included in the complete assembly.

The Certification Mark for each vertical section of a line-up of abutting vertical sections is provided with a "\_\_\_ of \_\_\_" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark). Only those sections bearing the Certification Mark are covered under UL's Follow-Up Service.

**Additional Certification Markings**

Switchgear investigated as arc resistant is additionally marked with the following information:

**ARC-RESISTANT SWITCHGEAR  
ALSO CERTIFIED TO CSA-C22.2 NO. 0.22**

Where the Certification Mark includes reference to arc-resistant switchgear, the Certification Mark appears on the front of each vertical section eligible for certification. The Certification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Isolating Switch," "Metal-Enclosed Interrupter Switchgear," "Metal Enclosed Switchgear," "Load Interrupter Switch," "Load Interrupter Switchgear," "Metal Enclosed Interrupter Switchgear Enclosure" or "Metal Enclosed Switchgear Enclosure."

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark covers only the section so marked; it does not cover other sections included in the complete assembly.

The UL Mark for each vertical section of a line-up of abutting vertical sections is provided with a "\_\_\_ of \_\_\_" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark). Only those sections bearing the Certification Mark are covered under UL's Follow-Up Service.

**Classification Mark for Arc-resistant Switchgear**

The Classification Mark of UL on metal-enclosed switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

**ARC-RESISTANT SWITCHGEAR**

**ALSO CLASSIFIED IN ACCORDANCE WITH CSA-C22.2 NO. 0.22**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### SWITCHES, MOLDED CASE CERTIFIED FOR CANADA (WJAZ7)

#### GENERAL

This category covers fused and unfused molded-case switches, with a maximum voltage rating of 750 V. The unfused switches are tested to determine their acceptability for continuous operation at their marked rated load.

Unfused switches are tested under overload conditions at six times amp rating to cover motor circuit applications and are suitable for use as motor circuit disconnects per Section 28-602 of CAN/CSA -C22.1, "Canadian Electrical Code, Part I."

Fused switches are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

#### USE AND INSTALLATION

Unfused two-pole molded-case switches marked to indicate suitability for use on 3-phase circuits have been investigated and found suitable for controlling 3-phase, corner-grounded delta circuits.

These switches are for use with copper conductors, unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any markings on terminal connectors and are readily visible.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire where wire sizes 14-1 AWG are used, and 75°C wire where wire sizes 1/0 AWG and larger are used.

Molded-case switches without enclosures are intended for use in certified circuit breaker enclosures, or as a part of other certified equipment or where open type molded-case switches are acceptable.

Some unfused switches have a release mechanism that causes the switch to open automatically to protect itself in the event of a short-circuit current fault. Such switches are marked to indicate that they may open.

Some enclosed molded-case switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected will be identified by a marking, such as on a wiring diagram.

Molded-case switches may be mounted in any position.

Line-and-load markings on a molded-case switch are intended to limit the connections to those as marked.

Molded-case switches may be equipped with factory-installed accessories, such as alarm and auxiliary switches, remotely energized electrically operated trip mechanisms and electrical operators.

#### PRODUCT MARKINGS

No overcurrent protection is provided by the unfused switches and they are marked with a short-circuit current withstand rating.

The fused switches have one or more replaceable fuses to provide overcurrent protection and they are marked with a short-circuit current interrupting rating.

Fused switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed."

Some enclosed molded-case switches are marked as suitable for use as service equipment.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Fused M.C.S.
- Fused Molded-case Switch
- M.C.S.
- Molded-case Switch

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 5 (2002), "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures."

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

#### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Molded-case Switch" (or "M.C.S.") or "Fused Molded-case Switch" (or "Fused M.C.S.").

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### SWITCHES, PHOTOELECTRIC CERTIFIED FOR CANADA (WJCT7)

#### GENERAL

This category covers photoelectric switches and motion detectors (light-sensitive or presence-sensitive types) intended for use in nonindustrial locations, rated maximum 347 V ac, and protected by branch-circuit protection not to exceed 20 A.

Switches investigated for the control of tungsten-filament-lamp loads are marked "Tungsten." Switches investigated for the control of the applicable ballast loads (such as fluorescent) are marked "Magnetic Ballast" or "Electronic Ballast."

The investigation of devices identified as "Raintight" or "Rainproof" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water. Devices marked "Raintight" or "Rainproof" are also suitable for wet locations. Devices marked "Indoor Use Only" are suitable for indoor dry locations only.

These switches have been tested to determine their acceptability for continuous operation at their marked load rating.

#### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Motion-detector Switch
- Photoelectric Switch

#### RELATED PRODUCTS

Photoelectric switches and motion detectors designed to provide protection for mercantile premises, stock rooms, safes, vaults, etc., are covered under Intrusion-detection Units Certified for Canada (ANSR7).

#### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

#### REQUIREMENTS

The basic standard used to investigate products in this category is CSA-C22.2 No. 205 (1983), "Signal Equipment."

#### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

#### Alternate UL Mark

#### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photoelectric Switch" or "Motion Detector Switch."

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

### Photocontrols, Plug-in, Locking Type Certified for Canada (WJFX7)

#### USE

This category covers plug-in, locking-type photocontrols for use on outdoor-type electric lighting fixtures used for both street lighting and area lighting (lighting of parking lots and similar applications).

SWITCHES CERTIFIED FOR CANADA (WFXV7)

—Continued

Unless marked specifically “Tungsten” or “Ballast,” these products are suitable for use with either type of fixture, at 480 V ac maximum.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
  - Photocontroller
  - Photocontroller Shorting Plug
  - Photocontroller Open-circuit Plug

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

- The basic standards used to investigate products in this category are:
  - CAN/CSA-C22.2 No. 4 (1989), “Enclosed and Dead-Front Switches”
  - CSA-C22.2 No. 21 (1995), “Cord Sets and Power Supply Cords”
  - CSA-C22.2 No. 55 (1986), “Special Use Switches”
  - CAN/CSA-C22.2 No. 94 (1991), “Special Purpose Enclosures”
  - CSA-C22.2 No. 182.2 (1987), “Industrial Locking Type, Special Use Attachment Plugs, Receptacles and Connectors”
  - CAN/CSA-C239 (1994), “Performance Standard for Dusk-to-Dawn Luminaires”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SNAP SWITCHES CERTIFIED FOR CANADA  
(WJQR7)**

**GENERAL**

This category covers general-use snap switches, which are so constructed that they can be installed in flush device boxes or on outlet box covers or otherwise used in connection with wiring systems recognized by CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).

Door switches are investigated for use only in combination with a specific switch, special switch box and cover.

Flush snap switches investigated for use without separate outlet boxes with nonmetallic-sheathed cable, Types NM, NMC, NM-B and NMC-B cable in accordance with the CEC, are so identified by a specific marking on the carton in which they are packed.

Snap switches have not been investigated for switching a load between two alternate sources of supply. Double-throw enclosed switches (see Switches, Enclosed Certified for Canada [WIAX7]) or switches Listed as transfer switches (see Switches, Transfer Certified for Canada [WPTZ7] and Emergency Lighting and Power Equipment Certified for Canada [FTBR7]) should be used for this purpose.

Multi-pole, general-use snap switches have not been investigated for more than single-circuit operation unless marked “2-circuit” or “3-circuit.”

Snap switches without a grounding connection are intended for replacement use only in accordance with the CEC.

General-use snap switches are classified into two categories: AC-DC general use and AC general use. AC general-use switches are marked “AC,”

 or equivalent to limit their use to alternating current circuits. AC-DC general-use switches are not so limited; no such marking is required or generally provided.

**AC-DC GENERAL-USE SNAP SWITCHES**

The standard amp and voltage ratings for an AC-DC general-use snap switch for controlling direct- or alternating-current circuits are given in Table I. While many of these snap switches will operate successfully on circuits that have some reactance, in general, for inductive loads, the switch should have an amp rating of twice the amp rating of the load except for a snap switch that has been tested for the control of an electric discharge lamp load and marked with the letter “F” as part of the electric lamp load rating of 10 A, 125 V. Such a switch may be used without der-

SWITCHES CERTIFIED FOR CANADA (WFXV7)

Snap Switches Certified for Canada (WJQR7)—Continued

ating where the inductive load is AC and the power factor is between 75% and unity. However, some of these snap switches are marked with additional horsepower ratings at one or more voltages, which indicate that the switch has been tested for the control of a motor of the horsepower and voltage rating indicated. An AC-DC general-use snap switch tested for the control of tungsten-filament lamp loads is marked with the letter “T” as part of the suitable tungsten-filament lamp load rating at 125 V.

**Table I**

**Snap Switch Ratings in Amperes Corresponding to Direct-Current Potentials**

125 V	250 V	600 V	125 V	250 V	600 V
—	—	1	—	10	—
3*	1*	—	20	10	—
—	—	2	—	20	10
5*	2*	—	—	—	20
—	—	3	—	20	—
5 or 6	3	—	30	20	—
—	5	3	40	20	—
—	—	5	—	30	20
—	5	—	—	—	30
10	5	—	—	30	—
—	10	5	60	30	—
—	—	10	—	60	—

The above ratings apply equally when these switches are used on alternating-current circuits. For two-circuit and three-circuit switches the amp rating applies to the maximum current carried under any combination of circuits.

\* These dual ratings may be assigned only to three-way, four-way, two-circuit, or three-circuit switches.

**AC GENERAL USE SNAP SWITCHES**

An AC general-use snap switch has a marked current and voltage rating only for alternating current, which is one of the ratings given in Table II, and is intended for installation in a flush device box (flush snap switch), mounting on an outlet box cover, or surface mounting (surface snap switch).

AC general-use snap switches are tested for the control of resistive, inductive (including electric discharge lamp) and tungsten-filament lamp loads at 120 V up to the full current rating of the switch.

**Table II**

**AC Snap Switch Ratings in Amperes Corresponding to Alternating-Current Potentials**

120 V AC	120 - 277 V AC*	277 V AC	347 V AC
15	—	—	—
20	—	—	—
30	—	—	—
—	15	—	—
—	20	—	—
—	30	—	—
20	—	15	—
30	—	15	—
30	—	20	—
—	—	—	15
—	—	—	20
—	—	—	30

\* Switches rated 120 - 277 V AC are acceptable for use on motor circuits up to the amp ratings shown, at any voltage between 120 and 277 V AC.

Snap switches rated 240 or 250 V that are intended for use on circuits involving a nominal potential to ground of 120 or 125 V, respectively, are tested on such circuits and are marked with the voltage rating 240 or 250 (no underlining). Snap switches rated 240 or 250 V that are suitable for use at full potential to ground are marked with the voltage rating

240 or 250 (double underlining). Snap switches having voltage ratings other than 240 or 250 V are tested on circuits involving full rated potential to ground.

Terminals of 15 A and 20 A switches not marked “CO/ALR” are intended for use with copper conductors only. Terminals marked “CO/ALR” are for use with aluminum and copper conductors.

Terminals of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with solid building wires unless otherwise indicated either on the device or in the installation instructions.

Screwless terminal connectors of the conductor push-in type (also known as “push-in terminals”) are restricted to 15 A branch circuits and are intended for connection with 14 AWG solid copper wire only. They are not intended for use with aluminum wire, 14 AWG stranded copper wire, or 12 AWG solid or stranded copper wire.

Terminals of switches rated 30 A and above not marked “AL-CU” are intended for use with copper conductors only. Terminals of switches rated 30 A and above marked “AL-CU” are for use with aluminum and copper conductors.

**Switches, Fixture, Socket and Special Mechanism Types Certified for Canada (WMHR7)**

**USE**

This category covers fixture, socket and special-mechanism-type switches intended for use in appliances, electric fixtures and portable lamps.

**PRODUCT MARKINGS**

The devices are marked as follows:

- a. Listee's name or identification on device.
- b. Catalog number or equivalent on device or carton.
- c. Complete electrical rating on device.
- d. Switches intended for control of tungsten filament lamps on both direct and alternating current are marked with the letter "T," located to indicate that it applies only to the rating at 125 V. AC/DC switches intended for the control of electric discharge lamps are marked with the letter "F." A switch may be marked with both letters to indicate both uses.
- e. Switches intended for appliance use are marked "FOR APPLIANCE USE."

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Fixture Snap Switch
- Fixture Switch
- Switch

**ADDITIONAL INFORMATION**

For additional information, see Snap Switches Certified for Canada (WJQR7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 111, "General-Use Snap Switches."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol stamped or molded into the product and the Certification Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number. In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Certification Mark will appear on the smallest unit packaging.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch," "Fixture Snap Switch" or "Fixture Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Switches, Flush Certified for Canada (WMUZ7)**

**USE**

This category covers switches designed for mounting in outlet boxes or on an outlet box cover and intended for connection to branch-circuit wiring, including combinations of switches on a single yoke.

This category does not cover dimmer switches.

In lieu of the UL symbol stamped or molded into the product, “UNDERWRITERS LABORATORIES INC. LISTED” (or “UND. LAB. INC. LIST.”) may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TRANSFER SWITCHES CERTIFIED FOR CANADA (WPTZ7)**

This category covers automatic and nonautomatic transfer switches, including associated control devices, with maximum ratings of 600 V ac.

Transfer switches and bypass switches which have been investigated without regard to the enclosure in which they are mounted have the Listing Mark applied to the switch panel. When the Listing Mark is applied to the enclosure of an enclosed transfer switch or bypass switch it indicates the Listing of the complete enclosed assembly.

Transfer switches which have been investigated for their suitability for use as service equipment are marked, “SUITABLE FOR USE AS SERVICE EQUIPMENT.”

Transfer switches are required to be designed so that the load cannot remain simultaneously disconnected from both the normal and alternative sources when either or both sources are available, except that transfer switches marked, “SUITABLE FOR USE AS SERVICE EQUIPMENT” are provided with accessible means to independently disconnect both the normal and alternate sources.

Automatic transfer switches transfer a common load from a normal supply to an on site generated supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished.

Additional sensing devices which may initiate or delay transfer have been evaluated in accordance with the manufacturer’s marked operating values.

Automatic transfer switches may have a switching contact to initiate the starting of an engine generator set.

Transfer Switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which in the case of an automatic transfer switch is expected to include scheduled test operations switching full load.

Listed transfer switches without enclosures are for use as part of other equipment or where open type devices are acceptable.

Transfer switches without integral overcurrent protective devices are suitable for continuous use at 100% of rated current. Transfer switches incorporating integral overcurrent protective devices are suitable for continuous use at 100% of rated current unless restricted to use at 80% of rated current as indicated by the marking, “CONTINUOUS LOAD CURRENT NOT TO EXCEED 80 PERCENT OF SWITCH RATING,” on the switch.

Transfer switches are rated in amps and are generally considered to be suitable for total system transfer, which includes control of motors, electric discharge lamps, electric heating loads, and tungsten-filament lamps within the amp rating marked on the nameplate.

Unless marked otherwise, transfer switches rated 100 A or less are suitable for use on circuits having available fault currents not greater than 5000 A rms symmetrical. Transfer switches rated more than 100 A are suitable for use on circuits having an available fault current of 10,000 A rms symmetrical or 20 times the transfer switch rating, whichever is greater.

Transfer switches having manual operators accessible only by opening the enclosure, are not intended to be manually operated under load.

Some transfer switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking such as on a wiring diagram.

Transfer switches without integral overcurrent protection, are marked to indicate the maximum rating of overcurrent protection to be provided ahead of the transfer switch.

Transfer switches as Listed herein are for use with copper conductors unless marked to indicate which terminals are suitable for use with alumi-

Transfer Switches Certified for Canada (WPTZ7)–Continued

num conductors. Such marking is independent of any marking on terminal connectors and is indicated on a wiring diagram or other readily visible location.

Unless the device is marked otherwise, the wiring space and current carrying capacity are based on 60°C wire for switches rated 100 A or less and 75°C for switches rated more than 100 A.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Accessories, Transfer Switch Certified for Canada (WPVQ7)**

**USE**

This category covers accessories intended for use with transfer switches rated 600 V or less, including bypass/isolation switches, enclosed inlets, and other accessories intended solely for use with certified transfer switches. These accessories are intended for use in conjunction with transfer switches, but are not intended to modify the function or construction of the transfer switch itself.

This category covers bypass switches, which permit testing and maintenance of emergency system components that could not be otherwise maintained without disruption of important functions. The bypass switching sequence is manually initiated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Bypass/Isolation Switch
- Bypass/Transfer Switch
- Enclosed Transfer Switch Inlet
- Transfer and Bypass/Isolation Switch
- Transfer Switch Accessory

**ADDITIONAL INFORMATION**

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate enclosed inlets in this category is CSA-C22.2 No. 76 (2014), “Splitters.”

The basic standard used to investigate products other than enclosed inlets in this category is CSA-C22.2 No. 178.1 (2012), “Transfer Switch Equipment.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Transfer Switch Accessory,” “Enclosed Transfer Switch Inlet” “Transfer and By-Pass/Isolation Switch,” “By-Pass/Isolation Switch” or “By-Pass/Transfer Switch.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Automatic Transfer Switches for Use in Emergency Systems Certified for Canada (WPWR7)**

**USE**

This category covers automatic transfer switches, rated 600 V or less, intended for use in emergency systems in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” These switches are also suitable for use in standby systems.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Automatic Transfer Switch for Emergency Systems

–Continued

**ADDITIONAL INFORMATION**

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 178.1 (2007), “Requirements for Transfer Switches.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Automatic Transfer Switch for Emergency Systems.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Automatic Transfer Switches for Use in Optional Standby Systems Certified for Canada (WPXT7)**

**USE**

This category covers automatic transfer switches with a maximum rating of 600 V ac, intended for use in optional standby systems in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

Transfer switches suitable for service equipment use are so marked.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Automatic Transfer Switch for Use in Optional Standby Systems

**ADDITIONAL INFORMATION**

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 178.1 (2007), “Requirements for Transfer Switches.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Automatic Transfer Switch for Use in Optional Standby Systems.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Nonautomatic Transfer Switches Certified for Canada (WPYV7)**

**USE**

This category covers nonautomatic transfer switches rated 600 V or less, intended to transfer a common load from a normal supply to an alternate supply of an equipment system in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

**PRODUCT IDENTITY**

–Continued

The following product identity appears on the product:  
Nonautomatic Transfer Switch

**ADDITIONAL INFORMATION**

For additional information, see Transfer Switches Certified for Canada (WPTZ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 178, “Automatic Transfer Switches.”

The basic standard used to investigate manually operated generator transfer panels having maximum ratings of 250 V, 60 A in this category is CSA-C22.2 No. 178.2, “Requirements for Manually Operated Generator Transfer Panels.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Non-Automatic Transfer Switch.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WQNV7)**

Switches rated in horsepower have been tested with respect to interruption of the maximum operating overload current of motors of the same horsepower and voltage ratings. When rated in amps and volts only the switches have not been investigated with respect to use in motor circuits.

**ENCLOSED SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WRPR7)**

**GENERAL**

This category covers enclosed switches, with or without fuseholders, intended for plug or cartridge fuses. Enclosed switch ratings are limited to 3600 A, 500 hp, 600 V.

Enclosed switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher-amp-rated circuits.

Enclosed motor-circuit switches and enclosed switches with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Enclosed Switch for Use in Hazardous Locations

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CAN/CSA-C22.2 No. 4 (1989), “Enclosed and Dead-Front Switches.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**SWITCHES FOR USE IN HAZARDOUS LOCATIONS  
CERTIFIED FOR CANADA (WQNV7)**

**SNAP SWITCHES FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR  
CANADA (WSQX7)**

**GENERAL**

This category covers snap switches that are limited to 30 A, 600 V, ac; 60 A, 250 V, ac or dc; and not more than 2 hp at 600 V or less, ac, 250 V or less, dc.

Snap switches with horsepower ratings have been tested with respect to interruption of maximum overload currents of motors of the same horsepower and voltage ratings.

Snap switches having a “T” rating are capable of controlling tungsten-filament-lamp loads corresponding to the 125 V rating of the switches.

Snap switches provided with a factory seal of conductors entering the switch enclosure are so identified by a marking on the product.

**PRODUCT IDENTITY**

The following product identity appears on the product:

Snap Switch for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 55-1986, “Special Use Switches.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Snap Switch for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED  
FOR CANADA (WQNV7)**

737

**SWITCHES, MISCELLANEOUS FOR USE IN  
HAZARDOUS LOCATIONS CERTIFIED FOR  
CANADA (WTEV7)**

**GENERAL**

This category covers switches that are not fused. The suitability of miscellaneous switches for use on high-capacity circuits has not been investigated.

Miscellaneous switches with amp ratings are intended for general use. Switches with horsepower ratings are suitable for use in motor circuits.

Miscellaneous switches certified with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for ac ratings, and at four times motor full-load running current for dc ratings.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Flow Switch for Use in Hazardous Locations

Limit Switch for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flow Switch for Use in Hazardous Locations” or “Limit Switch for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

**SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE-POWER CIRCUIT-BREAKER TYPE CERTIFIED FOR CANADA (WUTZ7)**

**GENERAL**

This category covers metal-enclosed, low-voltage-power circuit-breaker switchgear rated up to 750 V ac, nominal.

These switchgear assemblies are completely enclosed on all sides and top with sheet metal (except for ventilation openings and inspection windows) and may contain the following: (1) low-voltage-power circuit breakers, either fused or unfused, (2) bare and/or insulated busbars and connections, (3) instrument and control power transformers, (4) instruments, meters and relays, and (5) control wiring and accessory devices.

The low-voltage-power circuit breakers are contained in individual grounded metal compartments and are controlled either remotely or from the front of the enclosure. The circuit breakers may be stationary or of the draw-out type.

These switchgear assemblies may consist of a single vertical section housing one or more individual low-voltage-power circuit-breaker compartments or auxiliary compartments, along with the associated busbar structure, or may consist of several abutting sections interconnected by horizontal buses.

The auxiliary compartments may house such auxiliary equipment as potential transformers, control power transformers, or other miscellaneous devices.

These switchgear assemblies are marked with the following ratings or with a reference to a drawing which is included with the product and marked with the following ratings: (1) rated maximum voltage, (2) rated frequency, (3) rated insulation level, (4) rated continuous current, (5) rated short-time current, and (6) rated short-circuit current. This information also includes (1) whether the assembly is for indoor or outdoor use, (2) whether accessibility from the rear, side, top or ends is required for installation, and (3) the suitability of the equipment for mounting over combustible surfaces.

Low-voltage-power switching devices used in these switchgear assemblies are suitable for continuous use at 100% of their continuous-current rating.

The marking “Suitable for Use as Service Equipment” appears on each switchgear section or assembly optionally intended for use at a service.

A switchgear section marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Generally this switchgear is shipped without wire connectors and the busbar terminations are provided with standard bolt-hole patterns. The suitability of the wire connectors installed must be determined by Authorities Having Jurisdiction at the time of final inspection.

A switchgear section investigated to determine if it is rainproof is marked “Rainproof.”

The individual power circuit-breaker compartments or adapters are intended to accommodate a low-voltage-power circuit breaker and are marked to indicate the type(s) of circuit breaker that may be installed.

Individual auxiliary compartments are intended to house control components such as meters, instrument and/or control power transformers, and the like.

Low-voltage-power circuit-breaker switchgear assemblies are generally provided with shop drawings or the like that include circuit and connection diagrams of the assembly, continuous-current ratings of the main and section buses, details of control and ground-fault protection (if provided) circuits, etc.

**ARC-RESISTANT SWITCHGEAR**

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended, may additionally be certified as arc-resistant switchgear.

Arc-resistant switchgear has been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant switchgear is marked with an Accessibility Type designation of Type 1 or 2, 1B or 2B, 1C or 2C, or 1D based upon the construction and the standard used for the investigation.

**Type 1** denotes that arcing does not cause holes in the freely accessible front of the enclosure.

**Type 2** denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure.

**Type 1B** denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

**Type 2B** denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

**Type 1C** denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments.

**Type 2C** denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments, except that a fault in the main busbar compartment is allowed to propagate into the main busbar compartment of adjacent vertical sections.

**Type 1D** denotes that arcing does not cause holes in the freely accessible front and any other surface of the enclosure under investigation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Low-voltage-power Circuit-breaker Auxiliary Compartment

Low-voltage-power Circuit-breaker Compartment

Low-voltage-power Circuit-breaker Switchgear Section

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 31, “Switchgear Assemblies.”

The basic standard used to investigate switchgear certified as “arc resistant” is IEEE C37.20.7, “IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

The Certification Mark for each vertical section of a line-up of abutting vertical sections is provided with a “\_\_\_\_\_ of \_\_\_\_\_” marking, where the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark). Only those sections that bear the Certification Mark are covered under UL’s Follow-Up Service.

**Additional Certification Markings**

Switchgear investigated as arc resistant is additionally marked with the following information:

**ARC-RESISTANT SWITCHGEAR  
ALSO CERTIFIED TO IEEE C37.20.7**

Where the Certification Mark includes reference to arc-resistant switchgear, the Certification Mark appears on the front of each vertical section eligible for certification. The Certification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low-Voltage Power Circuit Breaker Switchgear Section," "Low-Voltage Power Circuit Breaker Compartment" or "Low-Voltage Power Circuit Breaker Auxiliary Compartment."

The UL Mark for each vertical section of a line-up of abutting vertical sections is provided with a "\_\_\_\_ of \_\_\_\_" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark). Only those sections that bear the UL Mark are covered under UL's Follow-Up Service.

**Classification Mark for Arc-resistant Switchgear**

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

**ARC-RESISTANT SWITCHGEAR  
ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHGEAR OVER 750 VOLTS  
CERTIFIED FOR CANADA (WVDA7)**

**ARC-RESISTANT SWITCHGEAR**

Switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear may be designed to vent overpressure gases either into the surrounding area or through an exhaust duct outside of the building.

Where overpressure gases are vented in the surrounding areas, the arc-resistant switchgear has been investigated for installation in buildings that have sufficient overhead space and minimum distance from adjacent walls to permit venting without reflecting arc products, as specified in the installation instructions provided by the manufacturer.

When provided with an exhaust duct, overhead space and minimum distance from adjacent walls are not specified. Exhaust ducts provided in the installation are intended to be as specified in the installation instructions provided by the manufacturer.

Arc-resistant switchgear is marked with an Accessibility Type designation based upon the construction and the standard to which the switchgear is investigated.

When investigated in accordance with EEMAC G14-1, "EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault," the Accessibility Types may be A, B or C.

**Type A** designates switchgear with arc-resistant construction at the front only.

**Type B** designates switchgear with arc-resistant construction at the front, sides and rear. None of these Type designations imply that the equipment maintains its intended degree of protection when operated with any door or cover, including low-voltage control or instrument compartment doors or covers open.

**Type C** designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell

or adjacent cells. In Type C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

When investigated in accordance with IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults," the Accessibility Types may be 1, 1B, 1C, 1D-SR, 1D-SL, 1D-R, 2, 2B or 2C.

**Type 1** designates switchgear with arc-resistant construction at the front only.

**Type 1B** designates switchgear with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

**Types 1D-SR, 1D-SL, 1D-R** designate switchgear with arc-resistant construction in the front; and at the right side (SR), left side (SL) or the rear (R), respectively.

**Type 1C** designates switchgear with arc-resistant construction at the front, and between compartments within the same cell or adjacent cells. In Type 1C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

**Type 2** designates switchgear with arc-resistant construction at the front, sides and rear.

**Type 2B** designates switchgear with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

**Type 2C** designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells. In Type 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHGEAR, GAS-INSULATED TYPE,  
OVER 750 VOLTS CERTIFIED FOR CANADA  
(WVEK7)**

**GENERAL**

This category covers indoor medium-voltage switchgear where gas, typically sulfur hexafluoride (SF<sub>6</sub>), is used as the insulating medium. The term "indoor" does not preclude the use of this equipment in outdoor enclosures, but rather defines the class of equipment. This equipment includes circuit breakers specifically intended to provide feeder or branch-circuit overcurrent protection, in nominal voltages of 750 V through 46kV ac. This equipment is not intended for use as service entrance equipment. These devices are intended for installation in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I," in unclassified locations, for controlling and protecting the power from generators and other sources of electrical energy.

**CIRCUIT BREAKERS**

The circuit breakers are three-pole devices, fixed, trip-free. Interruption may take place in a gas-filled chamber or in a vacuum interrupter that is in a gas-filled chamber. Each circuit breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

**Circuit Breaker Ratings**

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amperes that is applicable at the maximum rated voltage. These circuit breakers are also provided with a "K" factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. The circuit breaker may interrupt a current greater than "I" by a factor up to the value of "K," at a voltage reduced from the maximum rated voltage, "V max" by the same factor, or at a lower voltage, as depicted in Illustration 1 of Circuit Breakers and Metal-clad Switchgear Over 750 Volts Certified for Canada (DLAH7).

Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

**GAS-INSULATED SWITCHGEAR**

**SWITCHGEAR OVER 750 VOLTS CERTIFIED FOR CANADA  
(WVDA7)**

740

–Continued

This switchgear may consist of several gas-filled compartments connected together. Gas-filled compartments are isolated from each other by gas seals. The compartments are electrically connected together and grounded. A compartment may house a circuit breaker, a length of bus, or a switch. A dual bus system, with isolating switches, may be provided.

A vertical section may consist of a circuit breaker, a switch, a bus compartment and a control compartment. A vertical section may be a single freestanding section or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a “\_\_\_ of \_\_\_” marking where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Certification Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Certification Mark.

Auxiliary equipment such as potential transformers and current transformers are factory installed. Other auxiliary equipment such as protective relays and the like are separately enclosed within the switchgear. They are not typically in gas-insulated compartments.

The output of these current sensors is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

**Gas-insulated Switchgear Ratings**

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Certification Mark.

**ARC-RESISTANT SWITCHGEAR**

Metal-clad switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be certified as arc-resistant switchgear.

**ENCLOSURES**

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the gas-insulating medium. The enclosures are intended for indoor applications.

An additional enclosure investigated to determine that it is rainproof is marked “Rainproof,” “Outdoor” or “3R.” These enclosures may be either nonventilated or ventilated. Enclosures intended for outdoor use are marked to indicate the exposure Category (A, B or C) for which they are intended. Enclosures marked “Category A” are intended to be installed in areas accessible to the unsupervised general public; enclosures marked “Category B” are intended to be installed in areas accessible to authorized personnel only; enclosures marked “Category C” are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Gas-insulated Switchgear

**ADDITIONAL INFORMATION**

For additional information, see Switchgear Over 750 Volts Certified for Canada (WVDA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), “Switchgear Assemblies.”

The requirements of CSA Technical Information Letter No. D-25, “Interim Requirements for Pressurized Gas Insulated Switchgear,” also apply to products in this category.

Switchgear certified as “arc resistant” has additionally been investigated to EEMAC G14-1, “EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault,” or IEEE C37.20.7, “IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults,” as indicated in the Certification Mark.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

In an assembly of products, the Certification Mark is applied to each vertical section eligible for certification. The Certification Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed circuit breakers; it does not cover other vertical sections included in the assembly or removable circuit breakers.

The Certification Mark for each vertical section of a line-up of abutting vertical sections is provided with a “\_\_\_ of \_\_\_” marking, where the

**SWITCHGEAR OVER 750 VOLTS CERTIFIED FOR CANADA  
(WVDA7)**

–Continued

second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark.

**Additional Certification Markings**

Switchgear investigated as arc resistant is additionally marked with the following information:

**ARC-RESISTANT SWITCHGEAR**

**ALSO CERTIFIED TO [standard designation and date]**

Where the Certification Mark includes reference to arc-resistant switchgear, the Certification Mark appears on the front of each vertical section eligible for certification. The Certification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Gas-insulated Switchgear.”

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed circuit breakers; it does not cover other vertical sections included in the assembly or removable circuit breakers.

**Classification Mark for Arc-resistant Switchgear**

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

**ARC-RESISTANT SWITCHGEAR**

**ALSO CLASSIFIED IN ACCORDANCE WITH**

**[standard designation and date]**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a “\_\_\_ of \_\_\_” marking, where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHGEAR, METAL ENCLOSED, OVER  
750 VOLTS CERTIFIED FOR CANADA  
(WVGN7)**

**GENERAL**

This category covers medium-voltage, metal-enclosed switchgear where air is used as the primary insulating medium. This does not preclude the use of gas within the switching chamber of a switch or circuit breaker used in the switchgear. This equipment may include load-break switches, or circuit breakers that are specifically intended to provide feeder or branch-circuit overcurrent protection. This equipment may also include isolating-type switches that are interlocked with circuit breakers or load-break switches. These devices are intended for installation in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part 1.”

**CIRCUIT BREAKERS**

Circuit breakers are three-pole, stationary or draw-out-type devices. Interruption may take place in a vacuum interrupter, in a gas-filled chamber, or in a vacuum interrupter that is in a gas-filled chamber. Each circuit-breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

**Circuit-breaker Ratings**

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a “close-and-latch” rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. Circuit

–Continued

breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating “I” in rms symmetrical amperes that is applicable at the maximum rated voltage. Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

**SWITCHES**

Switches are three-pole, gang-operated-type devices. Interruption may take place in air, or in a gas-filled chamber. The switches provide either a load break or isolating function, and may also provide a means to ground the load conductors. Switches intended for isolation only are interlocked with a device that has been investigated for switching of loads.

**Switch Ratings**

Each switch is provided with a marking that indicates the switch ratings. This marking includes the rated maximum voltage and continuous current rating of the switch. Switches have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 200, 600, 1200, 2000 or 3000 A. Switches are also marked with a momentary withstand rating, expressed in rms asymmetrical amperes (kA).

Load-break-type switches are marked with a fault-making rating, expressed in rms asymmetrical amperes, which is applicable at the maximum rated voltage. Unless specifically marked otherwise, these switches are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

**METAL-ENCLOSED SWITCHGEAR**

Vertical sections may consist of a circuit breaker, a switch, a bus compartment and a control compartment. Vertical sections may be single free-standing sections or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a “\_\_\_ of \_\_\_” marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

Auxiliary equipment, such as potential transformers and current transformers, are factory installed. Other auxiliary equipment, such as protective relays and the like, are separately enclosed within the switchgear. They are not typically in gas-insulated chambers.

The output of each potential and current transformer is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

**Metal-enclosed Switchgear Ratings**

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Mark.

**ARC-RESISTANT SWITCHGEAR**

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be certified as arc-resistant switchgear.

**ENCLOSURES**

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the switches, circuit breakers, and auxiliary equipment. The enclosures are intended for indoor applications unless marked otherwise.

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked “Category A” are intended to be installed in areas accessible to the unsupervised general public; enclosures marked “Category B” are intended to be installed in areas accessible to authorized personnel only; enclosures marked “Category C” are intended to be installed in areas accessible to qualified personnel only.

When intended for outdoor use, an enclosure is investigated to determine that it is rainproof and is marked “Rainproof” or “Outdoor.” These enclosures may be either nonventilated or ventilated.

The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Metal-enclosed Switchgear Over 600 Volts  
Medium-voltage Metal-enclosed Switchgear

**ADDITIONAL INFORMATION**

For additional information, see Switchgear Over 750 Volts Certified for Canada (WVDA7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 31 (1989), “Switchgear Assemblies.”

–Continued

Switchgear certified as “arc resistant” has additionally been investigated to EEMAC G14-1, “EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault,” or IEEE C37.20.7, “IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults,” as indicated in the Certification Mark.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

In an assembly of products, the Certification Mark is applied to each vertical section eligible for certification. The Certification Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed-mount switches or fixed-mount circuit breakers; it does not cover other vertical sections included in the assembly, or removable switches or circuit breakers.

The Certification Mark for each vertical section of a line-up of abutting vertical sections is provided with a “\_\_\_ of \_\_\_” marking, where the second blank indicates the total number of vertical sections (including sections not bearing the Certification Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the Certification Mark. Only those sections that bear the Certification Mark are covered under UL’s Follow-Up Service.

**Additional Certification Markings**

Switchgear investigated as arc resistant is additionally marked with the following information:

**ARC-RESISTANT SWITCHGEAR**

**ALSO CERTIFIED TO [standard designation and date]**

Where the Certification Mark includes reference to arc-resistant switchgear, the Certification Mark appears on the front of each vertical section eligible for certification. The Certification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Metal-enclosed Switchgear, Over 600 V” or “Medium-voltage Metal-enclosed Switchgear.”

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed-mount switches or fixed-mount circuit breakers; it does not cover other vertical sections included in the assembly, or removable switches or circuit breakers.

**Classification Mark for Arc-resistant Switchgear**

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

**ARC-RESISTANT SWITCHGEAR  
ALSO CLASSIFIED IN ACCORDANCE WITH  
[standard designation and date]**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHGEAR, PAD MOUNTED,  
SUBSURFACE AND VAULT OVER 750  
VOLTS CERTIFIED FOR CANADA (WVHN7)**

**GENERAL**

This category covers medium-voltage, pad-mounted, subsurface and vault switchgear having ac voltage ratings up to 38 kV ac maximum. For purposes of this category, pad-mounted, subsurface and vault switchgear may be designated as distribution switchgear (DSG).

**SWITCHGEAR OVER 750 VOLTS CERTIFIED FOR CANADA  
(WVDA7)**

742

–Continued

Pad-mounted switchgear is an enclosed switchgear assembly in which all energized parts are insulated and completely enclosed within a grounded shield system when separable connectors are in place.

Pad-mounted switchgear is intended for installation in outdoor, above-ground areas accessible to the unsupervised general public in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.” Although intended for outdoor use, this equipment is not precluded from being used indoors.

Subsurface switchgear is a submersible switching assembly suitable for application in a below-grade enclosure and is normally surface operable. Subsurface switchgear may be provided as open equipment.

Vault switchgear is open type (unenclosed), partially enclosed, or enclosed-type switchgear intended to be installed in an electrical vault, in which the switch and accessories are operable from inside a vault.

Each assembly of DSG includes one or more “ways.” A “way” is a three-phase or single-phase circuit connection to the bus, which may contain combinations of switches and protective devices or may be solid bus.

DSG may use oil, air, or another gas (such as SF6) as the insulating medium for the entire assembly, or for portions of the assembly, such as individual switches.

DSG is intended to be cable connected using separable insulated connector systems complying with IEEE 386, “Separable Insulated Connector Systems for Power Distribution Systems Above 600 V.”

**ENCLOSURES**

The enclosures of pad-mounted switchgear are provided with security features such as pentahead securing bolts and padlocking provisions on all access doors.

Pad-mounted switchgear has not been investigated for installation in coastal environments unless so marked. Coastal environments are those land areas within 762 m of the mean high-water line.

Tanks and cabinets of submersible equipment are made of corrosion-resistant materials or provided with impact- and corrosion-resistant finishes. No additional investigation of enclosures for subsurface or vault-type switchgear is included under this category.

**SWITCHES**

Switches may be single- or three-phase, dead-front or live-front, pad-mounted, subsurface or vault. Switches may be provided with or without protective devices, such as fuses or fault interrupters.

**Switch Ratings**

Each switch within DSG has the following ratings: continuous current, load-switching current, loop-switching current, cable-charging switching current, and transformer-magnetizing switching current.

The preferred continuous-current ratings of load-interrupter switches within DSG are 200, 400 and 600 A, but switches may be investigated for ratings other than the preferred ratings.

**PRODUCT MARKINGS**

All DSG is marked with:

- a) Name of the manufacturer and type designation
- b) Model, style number and catalog number (if any)
- c) Unique serial number
- d) Date of manufacture (month and year)
- e) Rated maximum voltage
- f) Rated power frequency
- g) Rated lighting-impulse withstand voltage (BIL)
- h) Rated power-frequency withstand voltage
- i) Rated short-circuit current
- j) Total weight, including insulating medium
- k) Type and quantity of insulating medium
- l) Three-line schematic diagram

The marked rated maximum voltage is no greater than the voltage rating of the lowest rated “way.” The equipment is also marked with a description of the type of equipment, for example, “Pad-mounted Fused Switch” or “Fused Load-break Way.” The nameplate may be located on the exterior of the equipment or within an interior compartment.

Each “way” is marked with the manufacturer and type designation of switch and manufacturer and type designation of fuse mounting. In addition, a “way” may be marked with maximum voltage and short-circuit current. The maximum voltage and short-circuit current ratings are optional since they are part of the overall marking of the DSG.

Three-phase DSG containing one or more “ways” with components rated for phase-to-ground voltage (maximum voltage divided by 1.732), such as fuses, single-phase switches, or fused load-break devices, is marked with the designation “Grd-Y” (grounded-wye) added to the maximum voltage.

Each “switched way,” “fused-switched way,” or “fused load-break way” is marked with the following ratings: continuous current, load-switching current, loop-switching current, cable-charging switching current, and transformer-magnetizing switching current.

Each “fused way” or “tapped way” is marked with the continuous current rating of the “way.”

Each enclosure is marked **DANGER – HIGH VOLTAGE – KEEP OUT.**

**SWITCHGEAR OVER 750 VOLTS CERTIFIED FOR CANADA  
(WVDA7)**

## TANK-MONITORING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WWQS7)

### GENERAL

This category covers tank-monitoring equipment, including control units, indicators, sensors, transmitters, liquid-level probes and auxiliary devices used for tank monitoring or as part of tank-monitoring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuits as indicated on the product, for extension into a hazardous (classified) location.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Tank-monitoring Equipment for Use in Hazardous Locations
- Tank-monitoring Equipment (Associated Apparatus)

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tank Monitoring Equipment for Use in Hazardous Locations" or "Tank Monitoring Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TANK-MONITORING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WWQZ7)

### GENERAL

This category covers tank-monitoring equipment, including control units, indicators, sensors, transmitters, liquid-level probes and auxiliary devices used for tank monitoring or as part of tank-monitoring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

## TANK-MONITORING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WWQZ7)

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Tank-monitoring Equipment for Use in Hazardous Locations
- Tank-monitoring Equipment (Associated Apparatus)

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

### REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tank-monitoring Equipment for Use in Hazardous Locations" or "Tank-monitoring Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TEACHING AND INSTRUCTION EQUIPMENT CERTIFIED FOR CANADA (WYFW7)

### USE

This category covers equipment intended for use in schools and other establishments to aid in instruction.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Instructing Equipment
- Teaching Equipment

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60950-1, "Information Technology Equipment - Safety - Part 1: General Requirements."

New submittals for equipment intended for use in schools and other establishments to aid in instruction are investigated to CAN/CSA-C22.2 No. 60950-1 and are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Teaching Equipment" or "Instructing Equipment," or other appropriate product name as shown in the individual Listings.  
\*\*\*\*\*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TELECOMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (WYIE7)

Listing of the following products appear in this section:

Telephone Appliances and Equipment  
Telephones, Cellular

Telecommunications equipment covered under this category has not been investigated for use in computer/information technology rooms. Computers and related equipment, including telecommunications equipment, that interface with electronic data processing systems and are intended for use in computer/information technology rooms are covered under Data Processing Equipment, Electronic Certified for Canada (EMRT7) or Information Technology Equipment Certified for Canada (NWGQ7).

Telecommunications equipment not marked as suitable for outdoor locations is for indoor use only and the acceptability of such equipment when installed in semi-protected or otherwise shielded locations is determined by the Authority Having Jurisdiction.

Unless marked to indicate special circuit characteristics or a specific function (such as "keyboard"), telecommunications-type output connectors (such as RJ-series modular jacks, 50-pin commercial connectors, and insulation piercing terminals) of telecommunications equipment are limited to telecommunications-circuit levels and are suitable for connection to typical telecommunications networks and distribution wiring.

Certain types of telecommunications equipment are Listed as accessories for use only with other Listed equipment or systems and are identified by the word "Accessory."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## CUSTOM-BUILT TELECOMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (WYKM7)

### GENERAL

This category covers custom-built, modular telecommunications equipment and accessories that include various combinations of cabinets, racks, circuit card assemblies, power supplies, and the like designed for field installation by trained service personnel. They are intended for installation in accordance with Section 60 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This equipment is intended to be installed and maintained by local exchange carriers (LECs), inter-exchange carriers (IXCs), and similar operating telecommunications companies, which provide service to the subscriber's premise and access to the public network.

### INSTALLATION

Custom-built telecommunications equipment is intended to be installed only in restricted access locations, such as equipment rooms or closets, where access is limited to trained service personnel, unless it is installed in a certified rack, cabinet, or similar enclosure identified with the installation code "E."

Some units may have accessible parts (such as the output terminals of a low-power, ring-generator power supply) that operate at Class 3 voltage levels. The location of these units either in the restricted access location or in the final system configuration is intended to be such that unintentional contact with these parts is unlikely.

Unless identified with the installation code "B" or "E," custom-built telecommunications equipment is intended to be installed only over a non-combustible surface or in a certified rack, cabinet, or similar enclosure that is identified with the installation code "B" or "E."

Custom-built telecommunications equipment is intended to be configured in a system and installed in accordance with the manufacturer's installation instructions and the network carrier's installation practices. In order to ensure proper coordination of the individual units in the final installation, letter codes are provided to identify significant input, output, and installation parameters. These are divided into three categories: Power Codes (PC), Telecommunications Codes (TC), and Installation Codes (IC).

### Power Codes (PC)

## TELECOMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (WYIE7)

—Continued

Power codes provide information relating to the type of power required to be supplied to the unit (input) or the type of power supplied by the unit (output).

**C** — As an input code, this designation requires the power inputs to the unit to be limited to normal telecommunications levels. Acceptable sources of power are certified telecommunications power supplies identified as having "Level C" outputs, certified custom-built telecommunications equipment with an output code "C," or communications line powering from certified telephone equipment or the public network.

As an output code, this designation indicates that the outputs are limited to normal telecommunications levels (Level C) and are suitable for connection to typical telecommunications networks and distribution wiring that are installed in accordance with Section 60 of the CEC.

**F** — As an input code, this designation requires the power inputs to the unit to be provided with overcurrent protection or be otherwise power limited. Acceptable sources of power are certified telecommunications power supplies identified as having "Class 2" or "Level C" outputs, a certified Class 2 power source, or certified custom-built telecommunications equipment with an output code of "F" or "C."

As an output code, this designation indicates that the unit provides power-limited outputs that are intended to be used for custom-built telecommunications equipment in the same system. These outputs have not been investigated as Class 2 circuits or communications circuits unless identified as such.

**L** — As an input code, this designation requires that, with overcurrent protection bypassed, the power source supplying the unit be limited to 250 VA and the current source be limited to 1000 V max.

Acceptable types of limited power sources are certified Class 2 power supplies, a certified telecommunications power supply with outputs identified as being source limited, or certified custom-built telecommunications equipment with a power output code "L."

As an output code, this designation indicates that, with overcurrent protection bypassed, the unit provides power outputs that are source limited to 250 VA with the current limited to 1000 V max.

The following table summarizes acceptable power sources for units with input power codes C, F and L.

Power Source	May Supply Unit With An Input Power Code:
Output power code "L"	L
Output power code "F"	F
Output power code "C"	L, F, C
Class 2 power source	L, F
Communications circuits (e.g., public network)	L, F, C
Certified telephone power supplies with identified "Level C" outputs	L, F, C
Certified telephone power supplies with identified "source-limited" outputs	L

### Telecommunications Codes (TC)

Telecommunications codes provide information relating to the characteristics of the telecommunications circuits that may be connected to the unit.

**T** — Provided as an output code, this designation indicates that the equipment provides isolation from "exposed" circuits requiring protection in accordance with Section 60-200 of the CEC.

**X** — As an input code or as an output code, this designation indicates that the input or output telecommunications circuits are suitable for connection to "exposed" circuits requiring protection in accordance with Section 60-200 of the CEC. Absence of this code is an indication that the equipment is intended to be isolated from "exposed" circuits by equipment with an output code designation "T."

### Installation Codes (IC)

Installation codes provide information relating to the location and/or installation of the unit.

**A** — Where provided, this designation indicates that additional information is provided regarding the installation of the unit. Such information may be provided in the form of a permanent tag or information sheet attached to the unit.

**B** — Where provided, this designation indicates that the equipment provides side and bottom enclosures that minimize the risk of spread of fire. Cabinets, racks and similar equipment identified with an installation code "B" are not intended to completely enclose or limit accessibility to certified subassemblies mounted within the enclosure and are, therefore, not intended for use outside of limited access locations.

**E** — Where provided, this designation indicates that the equipment provides a complete enclosure for parts that may present a risk of electric shock, electrical energy/high current levels, or fire and limits accessibility to these parts. Cabinets, racks, and similar equipment

TELECOMMUNICATIONS EQUIPMENT CERTIFIED FOR CANADA (WYIE7)

–Continued

identified with an installation code “E” are intended to enclose and limit accessibility to certified subassemblies mounted within the enclosure and may be used outside of restricted access locations.

**Marking on Units**

The codes are marked in the following format:

	<b>In</b>	<b>Out</b>
Power Code (PC)	F	C
Telecommunications Code (TC)	X	T, X
Installation Code (IC)	A	—

In this example, the “F” Power Code (PC) for the input indicates that the power inputs require overcurrent protection from the equipment that provides power to this unit. The “C” Power Code (PC) for the output indicates that the outputs are limited to levels compatible with communications wiring systems. The “X” input Telecommunications Code (TC) means that the communications-circuit inputs are suitable for connection to exposed circuits. The “T” Telecommunications Code (TC) for the output indicates that the unit provides isolation between the exposed circuits connected at the input and the telecommunications output ports. The “X” Telecommunications Code (TC) for the output indicates that the output circuits are also suitable for connection to exposed circuits. The “A” Installation Code (IC) indicates that additional important installation information is provided on a tag or an attached information sheet. The lack of any other installation codes indicates that the equipment should be installed in limited access areas over a noncombustible surface or mounted in a suitable enclosure with an “E” or “B” installation code.

Power supplies and assemblies containing power supplies or power-distribution components are marked with electrical ratings. Assemblies that present a load on the power system are marked with a load or input rating. The total load ratings for any system should not exceed the power supply/distribution ratings.

Custom-built telecommunications equipment is intended to be installed or situated in a location or position that does not cause excessive heat build-up or interfere with its proper ventilation.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Custom Tel Eq.
- Custom Telecom
- Custom-built Telecommunication Equipment

**RELATED EQUIPMENT**

Complete telephone equipment (e.g., PABXs, telephones, telephone answering machines) is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7) or Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Information technology equipment is covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies, and similar network communications companies is covered under Communications Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunications equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

**ADDITIONAL INFORMATION**

For additional information, see Telecommunications Equipment Certified for Canada (WYIE7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 225 (1990), “Telecommunication Equipment,” or CAN/CSA-C22.2 No. 60950-1 (2003), “Safety of Information Technology Equipment,” and CAN/CSA-C22.2 No. 60950-21 (2003), “Safety of Information Technology Equipment – Remote Power Feeding,” as appropriate.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for

Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Custom-built Telecommunication Equipment” (or “Custom Tel Eq.” or “Custom Telecom”).

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TELEPHONES, CELLULAR CERTIFIED FOR CANADA (WYLR7)**

**USE**

This category covers hand-held cellular telephones, transportable cellular telephones, and cellular telephone voice-dialers that may be used in households or commercial establishments, or on a vehicle, boat or the like, where the telephone interconnects with the telephone network through a radio transmitter and receiver.

**FACTORS NOT INVESTIGATED**

Possible physiological effects of these devices have not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Cellular Telephone
- Telephone, Cellular

Other product identities may be used as shown in the individual certifications.

**RELATED EQUIPMENT**

Cell site equipment and similar equipment that forms the “base station” for a cellular communications network, and incorporates the interface to the wired telecommunications network, controllers, amplifiers, and transmitting/receiving equipment is covered under Telephone Appliances and Equipment Certified for Canada (WYQQ7).

**ADDITIONAL INFORMATION**

For additional information, see Telecommunications Equipment Certified for Canada (WYIE7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 1 (1998), “Audio, Video, and Similar Electronic Equipment,” CAN/CSA-E60065 or CAN/CSA-C22.2 No. 60065, “Audio, Video and Similar Information Technology Equipment – Safety Requirements,” or CAN/CSA-C22.2 No. 60950 or 60950-1, “Information Technology Equipment – Safety Requirements,” as well as the product certification requirements to current Industry Canada Regulations.

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cellular Telephone” (or “Telephone, Cellular”), or the name of the specific type of product as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TELEPHONE APPLIANCES AND EQUIPMENT CERTIFIED FOR CANADA (WYQQ7)

### GENERAL

This category covers appliances and equipment intended to be electrically connected to a telecommunications network that has an operating voltage to ground that does not exceed 200 V peak, 300 V peak-to-peak or 150 V rms.

### EQUIPMENT TYPES

Examples of equipment covered under this category include:

- Telephones, telephone answering devices, and telephone dialers that do not deliver a recorded message.
- Key telephone systems, automatic telephone call sequencers, customer administration panels, four-wire channel terminating units, intelligent switching subsystems, message transmitters, mounting shelves, PABX (private automatic branch exchange) systems, phone line TV interface systems, remote telephone base stations, telecontrollers, terminals, terminal sets, WATS boxes and cordless telephones.

### INSTALLATION

Certain types of telecommunications equipment have been investigated for installation only over a noncombustible surface and are marked as such.

Certain types of telecommunications equipment have been investigated for installation only in restricted access locations, such as equipment rooms or closets, where access is limited to trained service personnel, and are marked as such.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Telecommunication Equipment
- Telephone Appliance
- Telephone Equipment

Other product identities may be used as shown in the individual certifications.

The product identity for field-installed accessories or subassemblies includes the word "Accessory" or "Subassembly."

### RELATED EQUIPMENT

Information technology equipment, including other telecommunications appliances and equipment, is covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWGQ7).

Modular assemblies (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunications Equipment Certified for Canada (WYKMT).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communications companies is covered under Communications Service Equipment Certified for Canada (DUZO7).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool or otherwise support IT or telecommunications equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems Certified for Canada (NWIN7).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment Certified for Canada (QPQY7).

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment Certified for Canada (QQGQ7) and Power Supplies, Telephone Certified for Canada (QQJE7).

### Accessories and Subassemblies

Field-installed accessories and subassemblies (component assemblies) to Listed equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

### ADDITIONAL INFORMATION

For additional information, see Telecommunications Equipment Certified for Canada (WYIE7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 225, "Telecommunication Equipment."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and

—Continued

Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Appliance," "Telephone Equipment" or "Telecommunication Equipment," or other appropriate product name as shown in the individual Listings.

The product name for field-installed accessories or subassemblies is provided with the additional word "Accessory" or "Subassembly."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TELEMETERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WYMG7)

### GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid-flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

The investigation of telemetering equipment marked "Raintight" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Telemetering Equipment for Use in Hazardous Locations
- Section of Telemetering Equipment for Use in Hazardous Locations
- Telemetering Equipment Relating to Hazardous Locations
- Section of Telemetering Equipment Relating to Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Equipment investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

### REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations," "Section of Telemetering Equipment Relating to Hazardous Locations," an appropriate abbreviation, or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TELEMETERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WYMV7)

### GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid-flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Telemetering Equipment for Use in Hazardous Locations
- Telemetering Equipment Relating to Hazardous Locations
- Section of Telemetering Equipment for Use in Hazardous Locations
- Section of Telemetering Equipment Relating to Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment Certified for Canada (EQXX7).

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

### UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations," or "Section of Telemetering Equipment Relating to Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TELEMETERING EQUIPMENT ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WYOS7)

### GENERAL

This category covers retrofit devices and kits consisting of parts and or subassemblies intended for field installation in certified telemetering

## TELEMETERING EQUIPMENT ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WYOS7) 747

equipment. These products have been investigated to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit.

### PRODUCT IDENTITY

One of the following product identities appears on the product:

- Battery Replacement Kit
- Booster Amp Retrofit Kit
- Shielding Tape Retrofit Kit

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Additional Certification Markings

Products covered under this category are additionally marked with the following information:

### FOR USE WITH [specified product]

### Alternate UL Mark

### UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

### [PRODUCT IDENTITY\*]

### FOR USE WITH [specified product]

### Control No.

\* The appropriate product name as shown in the individual Classifications

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TELEPHONES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (WZAT7)

### USE AND INSTALLATION

This category covers telephones, sound-powered telephones, and communication equipment and systems. Unless identified as intrinsically safe or for use in Division 2 locations only, the equipment is of the explosion-proof design.

The handset and cord assembly should be carefully inspected and should be replaced if there is any evidence of damage or deterioration.

The equipment should be installed in accordance with the installation instructions provided with the product and in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Station equipment, power-supply equipment, protectors, and other equipment as detailed in the installation instructions should be located outside the hazardous area.

### PRODUCT IDENTITY

The following product identity appears on the product:

- Telephone for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**AUTOMATIC ELECTRICAL  
CONTROLS FOR HOUSEHOLD AND  
SIMILAR USE CERTIFIED FOR  
CANADA (XAAA7)**

**AUTOMATIC ELECTRICAL PRESSURE-  
SENSING CONTROLS CERTIFIED FOR  
CANADA (XAAK7)**

**GENERAL**

This category covers automatic electrical pressure-sensing controls with a minimum gauge pressure rating of -8.7 psi and a maximum gauge pressure rating of 609.6 psi intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category does not cover pressure-sensing in-line cord controls and automatic electrical pressure-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical pressure-sensing controls incorporate electronic devices. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

**Class 2 output circuit** — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**Ratings** — These automatic electrical controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

**PRODUCT MARKINGS**

Automatic electrical pressure-sensing controls are marked with the company's name or trademark, a distinctive catalog number, electrical ratings (e.g., volts, amps, hertz, kPa, load type), and the manufacture date code. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Automatic Electrical Pressure-sensing Control

**RELATED PRODUCTS**

Automatic electrical pressure-sensing controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety Certified for Canada (MCCZ7), Switches Certified for Canada (MFHX7) and Controls, Limit Certified for Canada (MBPR7).

**AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND  
SIMILAR USE CERTIFIED FOR CANADA (XAAA7)**

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-E60730-1, "Automatic Electrical Controls for Household and Similar Use - Part 1: General Requirements," and CAN/CSA-E730-2-6, "Automatic Electrical Controls for Household and Similar Use - Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark  
UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Electrical Pressure-sensing Control."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELECTRIC ACTUATORS CERTIFIED FOR  
CANADA (XABE7)**

**GENERAL**

This category covers electric actuators intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category does not cover electric actuators intended exclusively for industrial applications.

The individual certifications of electric actuators do not include valves or other connected mechanical loads. Motors used in electric actuators are investigated to the appropriate motor standards.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The electric actuators incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Electric actuators intended for plenum use are investigated for the application and their fire-resistance and low-smoke-producing characteristics in accordance with ULC/ORD-C2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

**Class 2 output circuit** — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**Ratings** — These electric actuators have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

**PRODUCT MARKINGS**

Electric actuators are marked with the company's name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, torque, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:  
Temperature Limiter  
Thermal Cut-out  
Thermostat

**AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND SIMILAR USE CERTIFIED FOR CANADA (XAAA7)**

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat," "Temperature Limiter" or "Thermal Cut-out," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HUMIDITY-SENSING CONTROLS CERTIFIED FOR CANADA (XACI7)**

**GENERAL**

This category covers automatic electric humidity-sensing controls intended for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category does not cover automatic electrical humidity-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The humidity-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

**Class 2 output circuit** — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**Ratings** — These humidity-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

**PRODUCT MARKINGS**

Humidity-sensing controls are marked with the company's name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Humidity-sensing Control
- Room Humidistat

Other product identities may be used as shown in the individual certifications.

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Humidity-sensing Control" or "Room Humidistat," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MISCELLANEOUS CONTROLS CERTIFIED FOR CANADA (XACN7)**

**GENERAL**

This category covers automatic electrical controls for use in, on, or in association with equipment for household and similar use, including controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household, commercial or industrial applications (where no other standard covers the product) in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I" (CEC).

This category does not cover automatic electrical controls intended exclusively for industrial applications unless specifically mentioned in the relevant Part 2 standard. Controls intended for building automation systems are covered under this category.

These controls are mechanically or electrically operated, and are responsive to or control such characteristics as temperature, pressure, passage of time, humidity, light, electrostatic effects, flow or liquid level, current, voltage, acceleration and the like. Automatic controls that do not specifically fall under the scope of other product categories are covered under this category.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

This category also covers the functional safety aspects of programmable integrated chips, software libraries, application-specific integrated circuits, and the like that are intended or relied upon to perform safety-related functions in the control.

**Class 2 Output Circuits**

A Class 2 output circuit is a device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit that is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**Ratings**

These automatic electrical controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing. An input/output circuit that fulfills the requirements for both SELV and limited-energy not exceeding 15 W is considered to address the risk of fire and electric shock. An input/output circuit is marked "Class 2" when the electrical characteristics of the circuits meet the requirements in Section 16 of the CEC, specifically clause 16-200 and Appendix B, under normal and single-component fault operating condition.

—Continued

**Classification**

Controls are classified based on their unique features, intended applications and environment, level of reliability, etc. These classifications are noted in CAN/CSA-E60730-1, “Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements.” Two of the more common classifications are:

**Type 1 action** — Automatic action for which the manufacturing deviation and the drift (calibration) of its operating value, operating time, or operating sequence have not been declared and tested under this standard.

**Type 2 action** — Automatic action for which the manufacturing deviation and the drift (calibration) of its operating value, operating time, or operating sequence have been declared and tested under this standard.

**Type of Disconnection**

**Full disconnection on operation (Type 1.A or 2.A)** — Contact separation in all supply poles other than earth so as to provide the equivalent of basic insulation between the supply mains and those parts intended to be disconnected.

**Micro-disconnection on operation (Type 1.B or 2.B)** — Adequate contact separation in at least one pole so as to provide functional security.

**Micro-interruption on operation (Type 1.C or 2.C)** — Interruption of a circuit by contact separation, by a cycling action, or by a noncycling action which does not provide full disconnection or micro-disconnection.

**Electronic disconnection on operation (Type 1.Y or 2.Y)** — A non-cycling interruption by an electronic device of a circuit for functional disconnection and which provides a disconnection other than by means of an air gap by satisfying certain electrical requirements in at least one pole.

**Type of Control**

**Operating control** — A control that starts or regulates the equipment during normal operation.

*Note: Operating controls usually provide Type 1 action. However, if the control is relied upon to provide functional safety of the equipment during normal operation, such control functions provide Type 2 action.*

**Protective control** — A control, the operation of which is intended to prevent a hazardous situation during abnormal operation of the equipment.

*Note: Protective controls usually provide Type 2 action.*

**Temperature Ratings**

**T<sub>max</sub>** — The declared maximum continuous ambient temperature to which the switch head is intended to be exposed during normal operation. Example: -20T 30 (meaning minus 20°C up to plus 30°C) and T85 (meaning 0°C up to plus 85°C).

**Software Class**

**Software Class A** — Control functions which are not intended to be relied upon for the safety of the equipment. Examples are room thermostats, humidity controls, lighting controls, timers and time switches.

**Software Class B** — Software that includes code intended to prevent hazards if a fault, other than a software fault, occurs in the appliance. Examples of control functions using software class B are protective controls such as thermal cut-outs and door locks for laundry equipment.

**Software Class C** — Software that includes code intended to prevent hazards without the use of other protective devices. Examples of control functions using software class C are automatic burner controls and thermal cut-outs for closed water-heater systems (unvented).

**PRODUCT MARKINGS**

Automatic electrical controls are marked with the company’s name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Electronic Protective Control
- Foot-actuated Control

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Automatic controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety Certified for Canada (MCCZ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products/systems in this category is CAN/CSA-E60730-1, “Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements,” in addition to one or more of the following, as applicable. This category also covers multifunctional controls for which no Part 2 standard exists.

CAN/CSA-E730-2-2, “Automatic Electrical Controls for Household

CAN/CSA-E730-2-6, “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements”

CAN/CSA-E730-2-7, “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Timers and Time Switches”

CAN/CSA-E60730-2-8, “Automatic Electrical Controls for Household and Similar Use – Part 2-8: Particular Requirements for Electrically Operated Water Valves, Including Mechanical Requirements”

CAN/CSA-E60730-2-9, “Automatic Electrical Controls for Household and Similar Use – Part 2-9: Particular Requirements for Temperature Sensing Controls”

CAN/CSA-E730-2-10, “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Motor Starting Relays”

CAN/CSA-E730-2-11, “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Energy Regulators”

CAN/CSA-E730-2-12, “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Electrically Operated Door Locks”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Foot-actuated Control” or “Electronic Protective Control,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TEMPERATURE-SENSING CONTROLS CERTIFIED FOR CANADA (XACX7)**

**GENERAL**

This category covers automatic temperature-sensing controls for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household, commercial or industrial applications (where no other standard covers the product) in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).

This category does not cover automatic temperature-sensing controls intended exclusively for industrial applications. Temperature-sensing controls intended to be part of building automation systems are covered under this category.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic temperature-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

## AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND SIMILAR USE CERTIFIED FOR CANADA (XAAA7)

–Continued

This category also covers the functional safety aspects of programmable integrated chips, software libraries, application-specific integrated circuits, and the like that are intended or relied upon to perform safety-related functions in the control.

**Class 2 Output Circuits**

A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**Equipment Intended for Agricultural Use**

Controls marked to indicate use in agricultural buildings have been investigated to the relevant requirements of the CEC and the “National Farm Building Code of Canada” (1995).

**Ratings**

These temperature-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer’s declarations and verified through testing.

**Classification**

Temperature-sensing controls are classified based on their unique features, intended applications and environment, level of reliability, etc. These classifications are noted in CAN/CSA-E60730-1, “Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements,” and CAN/CSA-E60730-2-9, “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Temperature Sensing Controls.” Two of the more common classifications are:

**Type 1 action** — Automatic action for which the manufacturing deviation and the drift (calibration) of its operating value, operating time, or operating sequence have not been declared and tested under these standards.

**Type 2 action** — Automatic action for which the manufacturing deviation and the drift (calibration) of its operating value, operating time, or operating sequence have been declared and tested under these standards.

**Type of Disconnection**

**Full disconnection on operation (Type 1.A or 2.A)** — Contact separation in all supply poles other than earth so as to provide the equivalent of basic insulation between the supply mains and those parts intended to be disconnected.

**Micro-disconnection on operation (Type 1.B or 2.B)** — Adequate contact separation in at least one pole so as to provide functional security.

**Micro-interruption on operation (Type 1.C or 2.C)** — Interruption of a circuit by contact separation, by a cycling action, or by a noncycling action which does not provide full disconnection or micro-disconnection.

**Electronic disconnection on operation (Type 1.Y or 2.Y)** — A non-cycling interruption by an electronic device of a circuit for functional disconnection and which provides a disconnection other than by means of an air gap by satisfying certain electrical requirements in at least one pole.

**Trip-free Mechanism**

**Type 1.H or 2.H** — A trip-free mechanism in which the contacts cannot be prevented from opening and which may automatically be reset to the “closed” position after normal operation conditions have been restored if the reset means is held in the “reset” position.

**Type 1.J or 2.J** — A trip-free mechanism in which the contacts cannot be prevented from opening and the control is not permitted to function as an automatic reset device if the reset means is held in the “reset” position.

**Type of Control**

**Thermostat** — A cycling temperature-sensing control intended to keep a temperature between two particular values under normal operating conditions and which may have provision for setting by the user.

**Temperature limiter** — A temperature-sensing control intended to keep a temperature below or above one particular value during normal operating conditions and which may have provision for setting by the user.

**Thermal cut-out** — A temperature-sensing control intended to keep a temperature below or above one particular value during abnormal operating conditions and which has no provision for setting by the user.

**Voltage-maintained thermal cut-out (self-hold thermal protector)** — A thermal cut-out maintained in its operated condition by the voltage which appears across it in that condition.

**Temperature Ratings**

**T<sub>max</sub>** — The declared maximum continuous ambient temperature to which the switch head is intended to be exposed during normal operation. Example: -20T 30 (meaning minus 20°C up to plus 30°C) and T85 (meaning 0°C up to plus 85°C).

**Software Class**

**Software Class A** — Control functions which are not intended to be relied upon for the safety of the equipment. Examples are room thermostats, humidity controls, lighting controls, timers and time switches.

**Software Class B** — Software that includes code intended to prevent hazards if a fault, other than a software fault, occurs in the appliance. Examples of control functions using software class B are protective controls such as thermal cut-outs and door locks for laundry equipment.

## AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND SIMILAR USE CERTIFIED FOR CANADA (XAAA7) 751

–Continued

**Software Class C** — Software that includes code intended to prevent hazards without the use of other protective devices. Examples of control functions using software class C are automatic burner controls and thermal cut-outs for closed water-heater systems (unvented).

**PRODUCT MARKINGS**

Automatic temperature-sensing controls are marked with the company’s name or trademark, a distinctive catalog number, electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature), and the manufacture date code. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

Temperature Limiter  
Thermal Cut-out  
Thermostat

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Automatic controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety Certified for Canada (MCCZ7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-E60730-1, “Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements,” and CAN/CSA-E60730-2-9, “Automatic Electrical Controls for Household and Similar Use – Part 2-9: Particular Requirements for Temperature Sensing Controls.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Thermostat,” “Temperature Limiter” or “Thermal Cut-out,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT CERTIFIED FOR CANADA (XAPX7)

**GENERAL**

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).

These devices respond directly or indirectly to changes in temperature, humidity, or pressure to affect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

**Ratings** — Temperature-indicating and -regulating equipment is certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a direct-current (noninductive) rating is specified.

**Manual reset controls** — An “M1” or “M2” marking indicates the following manual reset functions are provided:

- **M1** — Controls that automatically reset to the “closed” position after normal operating conditions have been restored if the reset means is held in the “reset” position.

● **M2** – Controls that do not automatically reset to the “closed” position if the reset means is held in the “reset” position.

**Room thermostats** — Room thermostats intended for the direct control of electric space-heating equipment that are to be permanently connected electrically and are provided with a marked or implied “off” position, disconnect all ungrounded poles of the supply circuit when adjusted to the “off” position.

**Equipment suitable for outdoor use** — Equipment identified with an enclosure type designation or as “Rain tight” or “Rainproof” is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**Class 2 output circuits** — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**Equipment intended for agricultural use** — A control marked to indicate use in agricultural buildings has been tested in agricultural building environmental conditions.

**Motor operators** — The individual certifications of motor operators or actuators do not include valves or other connected mechanical loads.

**PRODUCT MARKINGS**

Temperature-indicating and -regulating equipment is marked with the company’s name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Temp. Ind. and Reg. Equip.
- Temperature-indicating Equipment
- Temperature-indicating and -Regulating Equipment
- Temperature-regulating Equipment

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit Certified for Canada (MBPR7), Controls, Primary Safety Certified for Canada (MCCZ7) or Switches Certified for Canada (MFHX7).

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration Certified for Canada (SDFY7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 24, “Temperature-Indicating and -Regulating Equipment,” or CAN/CSA-E60730-1 (2002), “Automatic Electrical Controls for Household and Similar Use – Part 1: General Requirements,” in addition to one or more of the following:

- CAN/CSA-E730-2-2 (1994), “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Motor Protectors”
- CAN/CSA-E730-2-3 (1994), “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps”
- CAN/CSA-E730-2-4 (1994), “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Thermal Motor Protectors for Motor-Compressors of Hermetic and Semi-Hermetic Type”
- CAN/CSA-E730-2-6 (1994), “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls Including Mechanical Requirements”
- CAN/CSA-E60730-2-9 (2001), “Automatic Electrical Controls for Household and Similar Use – Part 2-9: Particular Requirements for Temperature Sensing Controls”
- CAN/CSA-E730-2-10 (1994), “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Motor Starting Relays”
- CAN/CSA-E730-2-11 (1994), “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Energy Regulators”
- CAN/CSA-E730-2-12 (1994), “Automatic Electrical Controls for Household and Similar Use – Part 2: Particular Requirements for Electrically Operated Door Locks”

Some thermostats for use with individual room electric space-heating devices covered under this category have also been investigated to Clause 4.3 (Thermal Regulation) of CAN/CSA-C828-(+), “Performance Requirements for Thermostats Used with Individual Room Electric Space Heating Devices.” This coverage includes wall-mounted line-voltage thermostats and built-in line-voltage thermostats (up to 1500 W) used as local zone thermostats, rated 120 to 240 V.

(+) Issue date of standard or latest addendum

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Additional Certification Markings**

For those products which are also certified by UL to Clause 4.3 of CAN/CSA-C828, the following information is included on the product:

**ALSO CERTIFIED TO THE THERMAL REGULATION REQUIREMENTS IN CLAUSE 4.3 OF CAN/CSA-C828-(+)**

(+) Issue date of standard or latest addendum

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Temperature Indicating Equipment,” “Temperature Regulating Equipment” or “Temperature-indicating and -Regulating Equipment” (or “Temp. Ind. and Reg. Equip.”), or other appropriate product name as shown in the individual Listings.

**Combination Listing/Classification Mark** — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to Clause 4.3 of CAN/CSA-C828. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: “ALSO CLASSIFIED IN ACCORDANCE WITH THE THERMAL REGULATION REQUIREMENTS IN CLAUSE 4.3 OF CAN/CSA-C828-(+).”

(+) Issue date of standard or latest addendum

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT, ELECTRICAL CERTIFIED FOR CANADA (XATJ7)**

**GENERAL**

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).

These devices respond directly or indirectly to changes in temperature, humidity or pressure to effect temperature control, or equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

**Ratings** — Temperature-indicating and regulating equipment is certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating current ratings unless a direct current (noninductive) rating is specified.

**Manual reset controls** — An “M1” or “M2” marking indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the “closed” position after normal operating conditions have been restored if the reset means is held in the “reset” position.
- **M2** – Controls that do not automatically reset to the “closed” position if the reset means is held in the “reset” position.

**Room thermostats** — Room thermostats intended for the direct control of electric space heating equipment that are to be permanently connected electrically and are provided with a marked or implied “off” position, disconnect all ungrounded poles of the supply circuit when adjusted to the “off” position.

**Equipment suitable for outdoor use** — Equipment identified with an enclosure type designation or as “Rain tight” or “Rainproof” is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7)..

**Class 2 output circuits** — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Section 16 of the CEC for the Class 2 circuit.

**Equipment intended for agricultural use** — A control marked to indicate use in agricultural buildings has been tested in agricultural building environmental conditions.

**Motor operators** — The certifications of motor operators or actuators do not include valves or other connected mechanical loads.

**PRODUCT MARKINGS**

Temperature-indicating and regulating equipment is marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Temperature-indicating Equipment
- Temperature-regulating Equipment

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit Certified for Canada (MBPR7), Controls, Primary Safety Certified for Canada (MCCZ7) or Switches Certified for Canada (MFHX7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-E60730-1, "Automatic Electrical Controls for Household and Similar Use - Part 1: General Requirements," together with the following appropriate Part 2 standards:

- CAN/CSA-E730-2-3, "Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"
- CAN/CSA-E730-2-4, "Particular Requirements for Thermal Motor Protectors for Motor-Compressors of Hermetic and Semi-Hermetic Type"
- CAN/CSA-E730-2-6, "Particular Requirements for Automatic Electrical Pressure Sensing Controls Including Mechanical Requirements"
- CAN/CSA-E60730-2-9, "Particular Requirements for Temperature Sensing Controls"
- CAN/CSA-E730-2-10, "Particular Requirements for Motor Starting Relays"

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Temperature Indicating Equipment" or "Temperature Regulating Equipment," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XBAI7)**

**USE**

This category covers electrical controls for heating and cooling equipment, room temperature or humidity regulation, and industrial uses.

These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control, or equipment or appliance operation, etc.

**RATINGS**

Temperature-indicating and -regulating equipment is certified with a maximum rating of 600 V.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for alternating-current motor ratings and at ten times motor full load running current for direct-current motor ratings.

A switching device rated in "pilot duty" is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically operated valve, and is tested with an appropriate electromagnetic load.

A control rated in is tested with an inductive (75 - 80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

The certifications of motor operators do not include valves or other connected mechanical loads.

The thermostats in the individual certifications can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Temperature-indicating Equipment for Use in Hazardous Locations
- Temperature-indicating Equipment (Associated Apparatus)
- Thermostat for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 24, "Temperature-Indicating and Regulating Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations Certified for Canada (AANZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat for Use in Hazardous Locations," "Temperature-indicating Equipment for Use in Hazardous Locations," or "Temperature-indicating Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XBDV7)**

**GENERAL**

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control, or equipment or appliance operation, etc.

Temperature-indicating and -regulating equipment is Listed with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full-load running current for alternating-current motor ratings, and at ten times motor full-load running current for direct-current motor ratings.

A switching device rated in "pilot duty" is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically operated valve, and is tested with an appropriate electromagnetic load.

A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

The motor operators in this category do not include valves or other connected mechanical loads.

The thermostats in this category can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Temperature-indicating Equipment for Use in Hazardous Locations
- Temperature-indicating Equipment (Associated Apparatus)
- Thermostat for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standard used to investigate products in this category is CSA-C22.2 No. 24, "Temperature-Indicating and -Regulating Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat for Use in Hazardous Locations," "Temperature-indicating Equipment for Use in Hazardous Locations," "Temperature-indicating Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TEMPORARY-LIGHTING STRINGS  
CERTIFIED FOR CANADA (XBRT7)**

**GENERAL**

This category covers temporary-lighting strings rated 1500 W maximum, 125 V, intended for use indoors and outdoors to provide temporary illumination in accordance with Sections 30 and 76 of CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

Temporary-lighting strings consist of a factory assembly of flexible cord or cable incorporating a series of Edison-base lampholders provided with lamp guards. The flexible cord is terminated at one end with an attachment plug, for connection to the source of supply, and may be provided with a cord connector at the opposite end.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Temporary-lighting String

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CSA-C22.2 No. 12, "Portable Luminaires," and CSA Technical Information Letter No. B-31B, "Interim Certification Requirements for Portable Luminaire Lighting Strings."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Temporary Lighting String."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELOCATABLE POWER TAPS  
CERTIFIED FOR CANADA (XBYS7)**

**USE AND INSTALLATION**

This category covers cord-connected multiple-receptacle extension boxes and relocatable power taps intended for indoor use as relocatable multiple-outlet extensions of a branch circuit to supply laboratory equipment, home workshops, home movie lighting controls, musical instrumentation, and to provide outlet receptacles for computers, audio and video equipment, and other equipment. They consist of one attachment plug and a single length of flexible cord terminated in a single enclosure in which are mounted two or more receptacles. They may, in addition, be provided with fuses or other supplementary overcurrent protection, switches, suppression components and/or indicator lights in any combination, or connections for cable, communications, telephone and/or antenna.

Relocatable power taps are intended to be directly connected to a permanently-installed branch circuit receptacle. Relocatable power taps are not intended to be series connected (daisy chained) to other relocatable power taps or to extension cords.

Relocatable power taps are not intended for use at construction sites and similar locations.

Relocatable power taps are not intended to be permanently secured to building structures, tables, work benches or similar structures, nor are they intended to be used as a substitute for fixed wiring. The cords of relocatable power taps are not intended to be routed through walls, windows, ceilings, floors or similar openings.

**PRODUCT IDENTITY**

- One of the following product identities appears on the product:
- Cord-connected Multiple-receptacle Extension Box
  - Outlet Strip
  - Power Tap
  - Relocatable Power Tap

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 21 (1995), "Cord Sets and Power Supply Cords."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

The Certification Mark for this category requires the use of a holographic label.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Cord-connected, Multiple Receptacle Extension Box," "Relocatable Power Tap," "Power Tap" or "Outlet Strip."

The Listing Mark for this category requires the use of a holographic label.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TERMINATION BOXES CERTIFIED FOR CANADA (XCKT7)

### GENERAL

This category covers termination boxes (also known as splitters) that (1) consist of lengths of busbars, terminal strips, terminal plates, or terminal blocks provided with or having provision for wire connectors to accommodate incoming (main) or outgoing (branch) conductors, or both, and (2) are intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

A "splitter box" has a length-to-width ratio not greater than 3 to 1. A "splitter trough" has a length-to-width ratio greater than 3 to 1. The length of the enclosure does not exceed 4900 mm. A splitter with a length greater than 4900 mm is considered a busway (see **RELATED PRODUCTS**).

### RATINGS

Termination boxes have a current rating of 5000 A and less, and a voltage rating of 600 V or less.

### PRODUCT MARKINGS

Termination boxes are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Termination boxes intended for use with field-installed wire connectors or wire connector kits are marked stating which pressure terminal connectors or component terminal assemblies are to be used.

### PRODUCT IDENTITY

The following product identity appears on the product:

Termination Box

Other product identities may be used as shown in the individual certifications.

### RELATED PRODUCTS

Equipment connected only by busbars to both input and output circuits and splitters greater than 4900 mm in length are covered under Busways and Associated Fittings Certified for Canada (CWFT7).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards Certified for Canada (WEIR7), Industrial Control Equipment Certified for Canada (NIMX7) and Panelboards Certified for Canada (QEUY7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 76 (1992), "Splitters."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Termination Box," or the name of the specific type of product as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## JOINT SYSTEMS CERTIFIED FOR CANADA (XHBN7)

### USE AND INSTALLATION

This category covers joint systems, which are specific constructions consisting of a wall or floor assembly and the materials designed to prevent the spread of fire through a linear opening within the wall or floor assembly. The specifications for materials in a joint system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems.

The Classification of joint systems contemplate installation in heated and air-conditioned environments unless stated otherwise in the description of the system.

Materials used in the joint systems are intended to be installed in accordance with the manufacturer's instructions provided with the material. The structural integrity of the floor or wall assembly has not been investigated as a result of the openings.

Unless otherwise indicated in the systems, the ratings for joint systems installed in walls apply when either face of the wall is exposed to fire. The ratings for joint systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire-resistance ratings of the floor and wall assemblies in which, or between which, the joint system is intended to be installed are covered under Fire Resistance Ratings Certified for Canada (BXUV7). Where the individual joint system references back to fire-resistance designs, all construction details of the individual design are intended to be followed. In addition, all details relative to the construction of the wall or floor assembly contained in the individual joint system are intended to be followed. Where the construction details shown in the fire-resistance design and the joint system differ, such as in stud size and spacing, fastener spacing etc., the most restrictive construction details prevail.

The installation contractor and Authority Having Jurisdiction should ensure the specified properties of the packing and/or forming material are satisfied as noted in the individual Classifications. Such properties may include material type (mineral wool, backer rod, fiberglass, etc.), physical properties (size, density, etc.) and installation (depth, orientation, compression, etc.). Attention should also be given to ensure the installed material matches the manufacturer (where applicable) in the individual Classifications. The material and attributes are critical to the performance of the system and the ability of such system to satisfy the conditions of acceptance in CAN/ULC-S115 and the local building code. The fire-resistance rating of the system is dependent upon the use and installation of the materials specified within the respective system.

The joint sealant material thickness published in the fire-resistance designs is measured wet (unless otherwise specified in the individual systems) and may be susceptible to a percentage of shrinkage during the curing process. Joint systems are investigated after the sealant materials are fully cured. Refer to the individual Classifications for the investigated percentage of shrinkage.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

### NUMBERING SYSTEM

The systems are identified by an alphanumeric identification system. The alpha components identify the type of joint system and whether the joint system has movement capabilities. The numeric components identify the nominal joint width. In the case of head-of-wall joint systems, the width of the joint does not include the voids created under the crests of metal deck floor or roof systems.

The first two alpha characters identify the type of joint system as follows:

Alpha Characters	Description of Joint System
FF	Floor-to-floor
WW	Wall-to-wall
FW	Floor-to-wall
HW	Head-of-wall
CG	Wall-to-wall joints intended for use as corner guards

The third alpha character is either S or D. The S signifies joint systems that do not have movement capabilities. This D signifies joint systems that do have movement capabilities.

The numeric component uses sequential numbers to identify the nominal width of the joint systems. The significance of the number used is:

756 JOINT SYSTEMS CERTIFIED FOR CANADA (XHBN7)

No. Range	Nom Joint Width
0000 - 9999	Less than or equal to 2 in.
1000 - 1999	Greater than 2 in. and less than or equal to 6 in.
2000 - 2999	Greater than 6 in. and less than or equal to 12 in.
3000 - 3999	Greater than 12 in. and less than or equal to 24 in.
4000 - 4999	Greater than 24 in.

**ADDITIONAL INFORMATION**

For additional information, see Fire Resistance Ratings Certified for Canada (BXRH7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

All joint systems described herein have been investigated with a minimum positive furnace pressure differential of 2.5 Pa (0.01 in. of water) maintained at a distance of 20 mm (0.78 in.) below horizontal test assemblies and at the mid-height of vertical test assemblies.

CAN/ULC-S115 defines the criteria for hourly F, FT, FH and FTH ratings, and an optional L rating for the joint systems. The F rating criteria prohibits flame passage through the system. The FT rating criteria prohibits flame passage through the system and requires the maximum temperature rise of the unexposed surface of the wall or floor assembly and on the fill material not to exceed 181°C (325°F) above ambient. The FH rating criteria prohibits flame passage through the system and requires acceptable hose stream performance. The FTH rating criteria combines all the requirements for the F, FT and FH ratings. The optional L rating criteria determines the amount of air leakage, in cu feet per linear foot of joint opening (CFM/Lin Ft), through the joint system at ambient and/or 204°C (400°F) air temperature at an air pressure differential of 75 Pa (0.30 in. of water). The L ratings are intended to assist Authorities Having Jurisdiction, and others, in determining the suitability of joint systems for the protection of openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101 (2006), "Life Safety Code."

The surface flammability and smoke development characteristics of Classified materials used in joint systems are measured by the test method in CAN/ULC-S102.2, "Method of Test for Surface Burning Characteristics of Floor Coverings, and Miscellaneous Materials and Assemblies." The flame spread index of these materials is less than 200 and the smoke developed index is less than 450. Surface burning characteristics Classifications are covered under Surface Burning Characteristics Certified for Canada (BIKT7).

Where indicated in the individual Classifications, joint sealant materials have also been investigated to ASTM C1241 (2000), "Standard Test Method for Volume Shrinkage of Latex Sealants During Cure."

**UL MARK**

Those materials identified by an (\*) in the system description text are eligible to be produced under the Follow-Up Service Program of UL. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**THROUGH-PENETRATION FIRESTOP SYSTEMS CERTIFIED FOR CANADA (XHEZ7)**

**GENERAL**

This category covers firestop systems, which are specific constructions consisting of a wall or floor assembly, a penetrating item passing through an opening in the wall or floor assembly, and the materials designed to prevent the spread of fire through the opening. The specifications for materials in a firestop system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems. Additionally, the substitution or elimination of components required in a system should not be made unless specifically permitted in the individual system or in these general guidelines.

The firestop systems covered under this category have been investigated with a minimum positive furnace pressure differential of 2.5 Pa (0.01 in. of water) maintained at a distance of 305 mm (12 in.) below horizontal test assemblies and 20 mm (0.78 in.) below the fill materials surrounding the penetrating items passing through vertical test assemblies.

CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems," defines the criteria for hourly F, FT, FH and FTH ratings, and an optional L rating for the firestop systems. The F rating criteria prohibits flame passage through the system. The FT rating criteria prohibits flame passage through the system and requires the maximum temperature rise on the unexposed surface of the wall or floor assembly, on the penetrating item and on the fill material not to exceed 181°C (325°F) above ambient. The FH rating criteria prohibits flame passage through the system and requires acceptable hose-stream performance. The FTH rating criteria combines all the requirements for the F, FT and FH ratings. The optional L rating criteria determines the amount of air leakage, in cu feet per minute per square foot of opening (CFM/sq ft), through the firestop system at ambient and/or 204°C (400°F) air temperature at an air-pressure differential of 75 Pa (0.30 in. of water). The L ratings are intended to assist Authorities Having Jurisdiction and others in determining the suitability of firestop systems for the protection of penetrations and miscellaneous openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101, "Life Safety Code."

These firestop systems are intended for installation in heated and air-conditioned environments unless stated otherwise in the description of the system.

Materials used in the firestop systems are intended to be installed in accordance with the manufacturer's instructions provided with the materials. The fill, void or cavity material thickness published in the fire-resistance designs is measured wet and may be susceptible to a percentage of shrinkage during the curing process. Firestop systems are investigated after the fill, void or cavity materials are fully cured. Refer to the individual Classifications under Fill, Void or Cavity Materials Certified for Canada (XHHW7) for the investigated percentage of shrinkage.

The minimum and/or maximum annular space referenced in the firestop system must be maintained in order to achieve the hourly rating of the system. The annular space of a penetrating item through a rectangular opening is determined by measuring the distance from the closest point of the penetrating item to a point perpendicular to each of the four sides of the opening. The diagonal dimension is not intended to represent the annular space of a rectangular opening. The annular space between multiple penetrating items within a rectangular opening is determined by measuring the closest point of one penetrating item to the closest point of the adjacent penetrating item.

The structural integrity of the floor or wall assembly should be investigated when providing openings for the penetrating items.

These systems are Classified with respect to (1) installation in a wall only, (2) installation in a floor only, or (3) installation in either a wall or a floor. Unless otherwise indicated in the systems, the rating for firestop systems installed in walls apply when either face of the wall is exposed to fire. The ratings for firestop systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire-endurance rating of the walls and floors incorporating these systems are not indicated. The hourly fire-endurance ratings of wall and floor assemblies are covered under Fire Resistance Ratings - CAN/ULC-S101 Certified for Canada (BXUV7). Firestop systems that specify installation in concrete floors may include installation in floors consisting of fluted or corrugated steel deck topped with structural concrete, provided that (1) the concrete topping thickness measured above the top plane of the steel deck is equal to or greater than the minimum concrete thickness specified in the system, and (2) the firestop system does not require any portion of the forming material or fill material to extend below the bottom plane of the floor.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

**PENETRATING ITEMS**

When the penetrating item is indicated as being pipe, the pipe is intended for the transport of gases, liquids and the like. The maximum diameter, the minimum wall thickness and the specific material for conduit and pipe are specified in each system. All nonmetallic pipe is intended to be of the solid-wall type unless indicated otherwise in the system. For electrical conductors, the maximum conductor size and the maximum number of conductors in the individual cables are specified in each system. All electrical conductors are intended to be copper unless indicated otherwise in the system.

Where the individual system specifies the penetrating item is to be rigidly supported on both sides of the wall or floor, the support system should be designed based upon the premise the firestop system provides no support.

Some systems do not include penetrating items. These firestop systems are intended to be used to seal openings where the penetrating items have been removed or where the penetrating items have not yet been installed.

**FORMING MATERIALS**

Forming materials specified for a firestop system should not be removed after cure of the fill material, unless removal is specified in the description of the system.

The installation contractor and Authority Having Jurisdiction should ensure the specified properties of the packing and/or forming material are satisfied as noted in the individual Classifications. Such properties may include material type (mineral wool, backer rod, fiberglass, etc.), physical properties (size, density, etc.) and installation (depth, orientation, compression, etc.). Attention should also be given to ensure the installed material matches the manufacturer (where applicable) in the individual Classifications. The material and attributes are critical to the performance of the system and the ability of such system to satisfy the conditions of acceptance in CAN/ULC-S115 and the local building code. The fire-resistance rating of the system is dependent upon the use and installation of the materials specified within the respective system.

**NUMBERING SYSTEM**

A complete description of each firestop system tested specifically to Canadian requirements can be found under this category. Systems tested concurrently to U.S. and Canadian requirements are covered under Through-penetration Firestop Systems (XHEZ). In either case, the systems are identified by an alpha-alphanumeric identification system. The alpha components identify the type of assembly being penetrated and the numeric component identifies the type of penetrating item.

The first alpha component is F, W or C. The F signifies a floor is being penetrated, the W signifies a wall is being penetrated, and C signifies either a floor or a wall is being penetrated.

The second alpha component may be any letter. The significance of the letter used is:

Letter	Description
A	Concrete floors with a minimum thickness less than or equal to 127 mm (5 in.)
B	Concrete floors with a minimum thickness greater than 127 mm (5 in.)
C	Framed floors
D	Steel decks in marine vessels
E through I	Not used at present time
J	Concrete or masonry walls with a minimum thickness less than or equal to 203.2 mm (8 in.)
K	Concrete or masonry walls with a minimum thickness greater than 203.2 mm (8 in.)
L	Framed walls
M	Bulkheads in marine vessels
N through Z	Not used at present time

The numeric component uses sequential numbers to identify the penetrating item. The significance of the number used is:

No. Range	Description
0000-0999	No penetrating items
1000-1999	Metallic pipe, conduit or tubing
2000-2999	Nonmetallic pipe, conduit or tubing
3000-3999	Electrical cable
4000-4999	Cable trays with electrical cable
5000-5999	Insulated pipe
6000-6999	Miscellaneous electrical penetrants, such as busducts
7000-7999	Miscellaneous mechanical penetrants, such as air ducts
8000-8999	Groupings of penetrations, including any combination of items listed above
9000-9999	Not used at present time

**ADDITIONAL INFORMATION**

For additional information, see Fire Resistance Ratings Certified for Canada (BXRH7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/ULC-S115, "Standard Method of Fire Tests of Firestop Systems."

Where indicated in the individual Classifications under Joint Systems Certified for Canada (XHBN7) and Fill, Void or Cavity Materials Certified for Canada (XHHW7), fill, void or cavity materials have also been investigated to ASTM C1241 (2000), "Standard Test Method for Volume Shrinkage of Latex Sealants During Cure."

**UL MARK**

Those materials identified by an (\*) in the system description text are eligible to be produced under the Follow-Up Service Program of UL. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CABINETS CERTIFIED FOR CANADA (XH GK7)**

**USE AND INSTALLATION**

This category covers factory-built cabinets that penetrate one surface of a fire-resistive wall or floor assembly.

These cabinets are intended to be installed in accordance with the instructions provided with the product and the instructions specified in the individual through-penetration firestop system. Certification of these products contemplates installation within a controlled environment, unless stated otherwise in the individual certifications.

Properties of the cabinets other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Cabinet

**RELATED PRODUCTS**

For information on related products, see Fire-resistance Ratings - CAN/ULC-S101 (BXUV7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

**ADDITIONAL INFORMATION**

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

**REQUIREMENTS**

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is CAN/ULC-S115 (1995), "Standard Method of Fire Tests of Firestop Systems."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**DUCT-WRAP MATERIALS CERTIFIED FOR CANADA (XHHD7)**

**USE AND INSTALLATION**

This category covers duct-wrap materials manufactured from proprietary materials and processed into faced or unfaced batts or blankets.

Duct-wrap materials are intended to be installed in accordance with the instructions provided with the product and the instructions specified in the individual through-penetration firestop system. Certification of these products contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual certifications.

Properties of the duct-wrap materials other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

**FILL, VOID OR CAVITY MATERIALS  
CERTIFIED FOR CANADA (XHHW7)**

**USE AND INSTALLATION**

This category covers fill, void or cavity materials, which are proprietary materials investigated for use in joint systems and firestop systems. Except as specified below, properties of the fill, void or cavity materials other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are intended for installation at a job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system or through-penetration firestop system.

The fill, void or cavity material thickness published in the fire-resistance designs is measured wet and may be susceptible to a percentage of shrinkage during the curing process. Firestop systems are investigated after the fill, void or cavity materials are fully cured. Refer to the individual certifications for the investigated percentage of shrinkage.

Authorities Having Jurisdiction should be consulted before installation.

**PRODUCT IDENTITY**

The following product identity appears on the product:  
Fill, Void or Cavity Material

**FORMING MATERIALS CERTIFIED FOR CANADA (XHKU7)**

**USE AND INSTALLATION**

This category covers forming materials investigated for use in firestop systems and joint systems. The forming materials are manufactured from proprietary materials, processed into the form of boards or sheets and formed into various sizes and shapes.

Properties of the forming materials other than their capacity to provide a degree of the fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are used as a form and seal to prevent leakage during the installation and curing of some fill, void or cavity materials and should be installed in accordance with the instructions specified in the individual joint system or through-penetration firestop system. After installation, forming materials are left in place and, together with the fill material, provide a degree of fire resistance for the opening.

Authorities Having Jurisdiction should be consulted before installation.

Through-penetrating Product

**RELATED PRODUCTS**

For information on related products, see Fire-resistance Ratings – CAN/ULC-S101 Certified for Canada (BXUV7) and Through-penetration Firestop Systems Certified for Canada (XHEZ7).

**THROUGH-PENETRATING PRODUCTS CERTIFIED FOR CANADA (XHLU7)**

**ADDITIONAL INFORMATION**

For additional information, see Fire-resistance Ratings Certified for Canada (BXRH7).

**REQUIREMENTS**

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is CAN/ULC-S115 (2005), "Standard Method of Fire Tests of Firestop Systems."

**UL MARK**

The Certification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Additional Certification Markings**

Products covered under this category are additionally marked with the following information:

**FOR USE IN THROUGH-PENETRATION FIRESTOP SYSTEMS  
SEE UL ONLINE CERTIFICATIONS DIRECTORY**

**Alternate UL Mark**

**UL MARK**

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL Mark for Canada symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**THROUGH-PENETRATING PRODUCT  
FOR USE IN THROUGH-PENETRATION FIRESTOP SYSTEMS  
SEE UL FIRE RESISTANCE DIRECTORY**

**Control No.**

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TIME-INDICATING AND -RECORDING APPLIANCES CERTIFIED FOR CANADA (XHNR7)**

**USE AND INSTALLATION**

This category covers electrically operated clocks that form parts of a master clock system and similar time-indicating and -recording appliances intended primarily for industrial and commercial installations on circuits of 300 V or less.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Time-indicating Appliance
- Time-recording Equipment

Other product identities may be used as shown in the individual certifications.

**RELATED PRODUCTS**

Clocks intended primarily for household use and installations are covered under Clocks, Household Certified for Canada (DROX7).

Clock-operated switches and timers designed to close and open circuits to a load at predetermined intervals are covered under Switches, Clock Operated Certified for Canada (WGZR7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II."

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory)

together with the word "LISTED," a control number, and the product name "Time Indicating Appliance" or "Time Recording Equipment," or other appropriate product name as shown in the individual Listings.  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TIME-INDICATING AND -RECORDING APPLIANCES FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XIAZ7)

### GENERAL

This category covers intrinsically safe chart drives.

### PRODUCT IDENTITY

The following product identity appears on the product:

Chart Drive for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

### ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Chart Drive for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## TOOLS CERTIFIED FOR CANADA (XJXX7)

### MANUAL AND SEMIAUTOMATIC METAL-SAWING MACHINES CERTIFIED FOR CANADA (XJYQ7)

#### USE AND INSTALLATION

This category covers manual and semiautomatic metal-sawing machines that use a saw blade (tool) to cut off or change the shape of the work piece and are intended for use in industrial or commercial applications. These machines are manually operated or capable of performing one cutting cycle of operation, which is manually actuated.

This equipment is intended to be installed in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I."

These machines are not intended for the handling of hazardous material.

The use of some equipment involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree.

## TOOLS CERTIFIED FOR CANADA (XJXX7)

—Continued

### RELATED EQUIPMENT

Automated equipment designed to perform repetitive manufacturing-related cutting or sawing tasks is covered under Factory Automation Equipment Certified for Canada (GPNY7).

Robotics and associated control equipment are covered under Robots and Robotic Equipment Certified for Canada (TETZ7).

Industrial control panels are covered under Industrial Control Panels Certified for Canada (NITW7).

Saws used in residential applications are covered under Tools, Stationary Certified for Canada (XKJU7).

### ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

### REQUIREMENTS

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," CSA-C22.2 No. 14, "Industrial Control Equipment," and CSA-C22.2 No. 73, "Construction and Test of Electrically Equipped Machine Tools."

### UL MARK

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

### Alternate UL Mark UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-sawing Machine."  
\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

## PORTABLE ELECTRIC TOOLS CERTIFIED FOR CANADA (XJYW7)

### USE

This category covers tools intended for use in accordance with CAN/CSA-C22.1, "Canadian Electrical Code, Part I":

- hand-held motor-operated or magnetically driven electric tools, such as drills, grinders, polishers, sanders, circular saws, shears, reciprocating saws, routers, etc., the rated voltage of the tools being not more than 250 V for single-phase ac or dc tools, and 440 V for three-phase ac tools.

- rechargeable-battery-powered motor-operated or magnetically driven tools and the battery packs for such tools. It covers the tools incorporating detachable, integral and separable battery packs. The maximum rated voltage for tools and battery packs is 75 V dc.

- rechargeable-battery-powered motor-operated or magnetically driven tools and the battery packs for such tools that are also operated and/or charged directly from the mains or a nonisolated source, including tools provided with integral battery chargers. It covers the tools incorporating detachable, integral or separable battery packs. The maximum rated voltages for tools are 250 V single-phase ac or dc mains source and 75 V dc battery source. The maximum rated voltage for battery packs is 75 V dc.

This category also covers:

- tools with an electric heating element
- hand-held electric tools that can be mounted on a support for use as fixed tools without any alteration of the tool itself, and only where the requirements for such support are given in a relevant Part 2 standard
- motors not isolated from the supply, and having basic insulation not designed for the rated voltage of the tools
- rechargeable-battery-powered motor-operated or magnetically driven tools and the battery packs for such tools
- tools that are also operated and/or charged directly from the mains or a nonisolated source

This category does not cover:

–Continued

- hand-held tools intended to be used in the presence of explosive atmosphere (dust, vapor or gas)
- hand-held tools used for preparing and processing food
- hand-held tools for medical purposes
- heating tools
- tools using general-purpose batteries installed by the user

**REBUILT PRODUCTS**

This category also covers portable electric tools that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable electric tools are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable electric tools are subject to the same requirements as new portable electric tools.

**SPECIAL CONSIDERATIONS**

These products are investigated from the standpoint of risk of personal injury, electric shock and fire.

These devices are not intended for the handling of hazardous material. Precautions should be taken during the use of sanding machines to prevent formation of combustible dust-air mixtures with surrounding atmospheres.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for tools that are Class II construction, all tools are provided with means for earthing. Class II tools require normal care in handling. They should not be used under conditions which would be considered hazardous with tools of conventional construction, e.g., with either the tool or user in contact with water.

A “square within a square” symbol  designates a double-insulated Class II tool. Protection against electric shock has been achieved by basic insulation, and additional precautions, such as double or reinforced insulation, are provided. Tools identified as Class II are not provided with a means for earthing (grounding).

**FACTORS NOT INVESTIGATED**

Any potential health hazards that may be associated with the use of portable tools, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Circular Saw
- Drill
- Portable Electric Tool
- Portable Tool
- Tool

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product identity.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 60745-1, “Hand-Held Motor-Operated Electric Tools – Safety – Part 1: General Requirements,” in addition to one or more of the following:

- CAN/CSA-C22.2 No. 60745-2-1, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-1: Particular Requirements for Drills and Impact Drills”
- CAN/CSA-C22.2 No. 60745-2-2, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-2: Particular Requirements for Screwdrivers and Impact Wrenches”
- CAN/CSA-C22.2 No. 60745-2-3, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-3: Particular Requirements for Grinders, Polishers and Disk-Type Sanders”
- CAN/CSA-C22.2 No. 60745-2-4, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-4: Particular Requirements for Sanders and Polishers Other Than Disk Type”
- CAN/CSA-C22.2 No. 60745-2-5, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-5: Particular Requirements for Circular Saws”
- CAN/CSA-C22.2 No. 60745-2-6, “Hand-Held Motor-Operated Electric

–Continued

Tools – Safety – Part 2-6: Particular Requirements for Hammers”  
CAN/CSA-C22.2 No. 60745-2-8, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-8: Particular Requirements for Shears and Nibblers”

CAN/CSA-C22.2 No. 60745-2-9, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-9: Particular Requirements for Tappers”

CAN/CSA-C22.2 No. 60745-2-16 (2009), “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-16: Particular Requirements for Tacklers”

CAN/CSA-C22.2 No. 60745-2-17, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-17: Particular Requirements for Routers and Trimmers”

CAN/CSA-C22.2 No. 60745-2-18, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-18: Particular Requirements for Strapping Tools”

CAN/CSA-C22.2 No. 60745-2-19, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-19: Particular Requirements for Jointers”

CAN/CSA-C22.2 No. 60745-2-20, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-20: Particular Requirements for Band Saws”

CAN/CSA-C22.2 No. 60745-2-21, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-21: Particular Requirements for Drain Cleaners”

CAN/CSA-C22.2 No. 60745-2-22 (2012), “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-22: Particular Requirements for Cut-Off Machines”

CAN/CSA-C22.2 No. 60745-2-23 (2013), “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-23: Particular Requirements for Die Grinders and Small Rotary Tools”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Tool,” “Portable Tool,” “Portable Electric Tool,” “Drill,” “Circular Saw,” or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CHAIN SAWS, ELECTRIC CERTIFIED FOR CANADA (XJZV7)**

**USE**

This category covers cord-connected electric chain saws intended for use on nominal system voltages of 250 V or less, in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I.”

Chain saws are divided into two classes:

**Class 2A** — A professional chain saw, intended for use by trained workers, where the operator is expected to use the chain saw for extended periods of time on a daily basis.

**Class 2C** — A consumer chain saw, intended for general use by homeowners, cottagers, campers, etc., and for general applications, such as cleaning, pruning and cutting firewood.

**SPECIAL CONSIDERATIONS**

These products are investigated from the standpoint of risk of personal injury, electric shock and fire.

—Continued

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for chain saws marked “double insulated,” all saws are provided with means for grounding. Double-insulated chain saws require normal care in handling. They should not be used under conditions which would be considered hazardous with tools of conventional construction, e.g., with either the tool or user in contact with water.

**FACTORS NOT INVESTIGATED**

Any potential health hazards that may be associated with the use of portable tools, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standards used to investigate products in this category are CAN/CSA-C22.2 No. 147 (1990), “Motor-Operated Gardening Appliances,” and CAN/CSA-Z62.1, “Chain Saws.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Chain Saw” or “Electric Chain Saw,” or other appropriate name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TOOLS, PORTABLE CERTIFIED FOR CANADA (XKFR7)**

**GENERAL**

This category covers cord-connected portable tools, such as drills, hand grinders, polishers, sanders, hand circular saws, drain cleaners, pipe benders, etc.

The tools in this category are divided into two broad groups:

**Portable Electric Tools** — Hand tools usually employing motors subject to wide and minor fluctuations of load, such as drills, orbital sanders, saws, hand grinders, nibblers, shears, disc sanders, etc.

**Transportable Tools** — Tools that are not hand held and intended for the tool to be taken to the work piece to perform its function. Such tools include diamond-core drills, drain cleaners and pipe benders.

The load on a portable electric tool varies to the extent that the amp rating marked on such a tool may not be the maximum current that can be drawn by the tool under normal use conditions, but is rather an indication of the thermal capacity of the motor employed. It is indicative of the loading to which the tool may be continuously subjected without causing overheating.

**REBUILT PRODUCTS**

This category also covers rebuilt portable tools that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable tools are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable tools are subject to the same requirements as new portable tools.

**SPECIAL CONSIDERATIONS**

The suitability of the grinding wheels for the peripheral speeds involved has not been investigated.

—Continued

Precautions should be taken during the use of sanding machines to prevent formation of combustible dust-air mixtures with surrounding atmospheres.

The use of some tools involves certain inherent accident hazards that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the certified tools.

Unless specifically mentioned in literature supplied with the tool, the certification of an individual tool is not intended to cover attachments that may be offered by the manufacturer to perform operations other than intended by the design of the basic tool.

Except for tools marked with “double-insulated,” all tools are provided with means for grounding. Double-insulated tools require normal care in handling. They are not intended to be used under conditions that would be considered hazardous with tools of conventional construction, i.e., with either the tool or user in contact with water, unless it’s obvious that the certification intends the tool to be operated under such conditions.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Circular Saw
- Drill
- Portable Electric Tool
- Portable Tool
- Tool

Other product identities may be used as shown in the individual certifications.

For rebuilt products, the word “Rebuilt” precedes the product identity.

**RELATED PRODUCTS**

Tools intended for servicing and repairing automobiles are covered under Garage Equipment Certified for Canada (JGVV7).

Tools intended for use in finishing floors in household and commercial environments are covered under Floor-finishing Machines Certified for Canada (IMSR7).

Tools intended for use in gardening and lawn care are covered under Gardening Appliances Certified for Canada (JHKT7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 71.1 (1989), “Portable Electric Tools.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Tool,” “Portable Tool,” “Portable Electric Tool,” “Drill,” “Circular Saw,” or other appropriate product name, as shown in the individual Listings.

For rebuilt products, the word “Rebuilt” precedes the product name.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SEMI-AUTOMATIC WOODWORKING EQUIPMENT CERTIFIED FOR CANADA (XKHS7)**

**USE AND INSTALLATION**

This category covers production and accessory equipment for attended or unattended fabrication or modification of material used in manufacturing products or subassemblies in industrialized or commercial applications. The equipment has a total connected power of 3.7 kw (5 hp) or greater or is rated three-phase. Equipment in this category is designed to be set up for specific manufacturing applications, such as cutting, drilling, planing, or other modification of materials of wood or plastic laminate. The equipment is intended to be installed in accordance with the Canadian Electrical Code Part 1, Safety for Electrical Installations, C22.1-98.

**SPECIAL CONSIDERATIONS**

**TOOLS CERTIFIED FOR CANADA (XJXX7)**

–Continued

Devices included in this category are not intended for the handling of hazardous material. The use of some equipment involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the Listed equipment.

**RELATED EQUIPMENT**

Self-sustaining production equipment designed to be programmed for the assembly of products or subassemblies in a specific manufacturing application, such as assembly of components, packaging, sorting, or counting of parts, and which only incorporates manufacturing processes involving heating or cooling, drying, or gluing of parts are covered by Factory Automation Equipment Certified for Canada (GPNY7).

Robotics and associated control equipment are covered under Robots and Robotic Equipment Certified for Canada (TETZ7). Industrial Control Panels Certified for Canada are covered under their own category (NITW7).

Equipment that may be used in residential applications is covered under Tools, Stationary Certified for Canada (XKJU7).

**REBUILT EQUIPMENT**

This category also covers rebuilt semi-automatic woodworking equipment that may or may not be rebuilt by the original manufacturer. Rebuilt semi-automatic woodworking equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt semi-automatic woodworking equipment is subject to the same requirements as new semi-automatic woodworking equipment.

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic requirements used to investigate products in this category are C22.2 No. 0, General Requirements, C22.2 No. 14, Industrial Control Equipment, and C22.2 No. 105, Electrical Equipment for Woodworking Machinery.

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Semi-automatic Woodworking Equipment” or other appropriate product name as shown in the individual Listing. For rebuilt semi-automatic woodworking equipment the product name is preceded by the word “Rebuilt,” “Refurbished” or “Remanufactured.”

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TOOLS, STATIONARY CERTIFIED FOR CANADA (XKJU7)**

**USE**

This category covers single-phase electric tools of the bench type intended for use in accordance with CAN/CSA-C22.1, “Canadian Electrical Code, Part I,” when connected to a nominal system voltage of 240 V or less.

This category does not cover:

- a) tools intended for industrial use,
- b) tools covered by CSA-C22.2 No. 73, “Construction and Test of Electrically Equipped Machine Tools,” and CSA-C22.2 No. 105, “Construction and Test of Electrical Equipment for Woodworking Machinery,” or
- c) magnetic drill presses or diamond core drills, which are covered by CAN/CSA-C22.2 No. 71.1, “Portable Electric Tools.”

**SPECIAL CONSIDERATIONS**

These devices are not intended for the handling of hazardous material. These products are investigated from the standpoint of risk of personal injury, electric shock and fire.

Some products in this category have cutting or moving parts, presenting certain inherent hazards related to risk of injury that cannot be wholly eliminated by practical design features. The products are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of injury where consideration has been given to the required utility of the product. Such risks have been reduced to an acceptable degree in the certified equipment.

**TOOLS CERTIFIED FOR CANADA (XJXX7)**

–Continued

Precaution should be taken during the use of sanding machines to prevent formation of combustible dust-air mixtures with surrounding atmospheres.

Attachments that perform functions other than intended by the basic design have not been investigated unless specifically mentioned in the individual certifications and covered in the installation and use instructions.

Except for tools marked “double insulated,” all tools are provided with means for grounding. Double-insulated tools are investigated for residential use only and require normal care in handling. They should not be used under conditions which would be considered hazardous with tools of conventional construction, e.g., with either the tool or user in contact with water.

**PRODUCT MARKINGS**

In some instances, attachments may be certified. In these cases, the attachments are marked “Use only with [specific Listed stationary and fixed tools].” For example, a certified hand attachment may be marked “Use only with Listed power supply Model XX,” or a certified feed control device may be marked “Use only with Listed radial arm saw Model XX.”

**FACTORS NOT INVESTIGATED**

Any potential health hazards that may be associated with the use of portable tools, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

**RELATED PRODUCTS**

Tools intended primarily for use in garages and service stations are covered under Garage Equipment Certified for Canada (JGWW7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CAN/CSA-C22.2 No. 71.2, “Electric Bench Tools.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Tool,” “Stationary Tool,” “Table Saw,” “Wood Working Machine,” “Drill Press,” “Miter Saw,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TOOLS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XKVL7)**

**PORTABLE ELECTRIC TOOLS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XKWH7)**

**USE**

This category covers cord-connected and battery-operated power tools intended for securing fasteners. This category does not cover tools such as drills, grinders, circular saws or other equipment that, under normal operation, may produce arcs, sparks or hot surfaces.

The load on certain tools varies within a wide range. Accordingly, the amp rating marked on such a tool may not be the maximum current that can be drawn by the tool under normal use conditions, but is rather an indication of the thermal capacity of the motor employed. It is indicative of the loading to which the tool may be continuously subjected without causing overheating.

**TOOLS FOR USE IN HAZARDOUS LOCATIONS CERTIFIED FOR CANADA (XKVL7)**

766

–Continued

This category does not cover attachments such as grinding wheels, sanders, polishers or other attachments that may be offered by the manufacturer to perform operations other than intended by the design of the basic tool.

The use of some tools involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the certified tools.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- Portable Electric Tool for Use in Hazardous Locations
- Portable Tool for Use in Hazardous Locations
- Tool for Use in Hazardous Locations

Other product identities may be used as shown in the individual certifications.

**ADDITIONAL INFORMATION**

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**REQUIREMENTS**

The basic unclassified locations standards used to investigate products in this category are CAN/CSA-C22.2 No. 60745-1, "Hand-Held Motor-Operated Electric Tools – Safety – Part 1: General Requirements," and CAN/CSA-C22.2 No. 60745-2-2, "Hand-Held Motor-Operated Electric Tools – Safety – Part 2-2: Particular Requirements for Screwdrivers and Impact Wrenches."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations Certified for Canada (AAIZ7).

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tool for Use in Hazardous Locations," "Portable Tool for Use in Hazardous Locations" or "Portable Electric Tool for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TORCHES CERTIFIED FOR CANADA (XLFX7)**

**FUEL GAS TORCHES CERTIFIED FOR CANADA (XMHT7)**

**GENERAL**

This category covers fuel-gas torches of the air-aspirating type, designed to operate with commercial-grade fuel gases other than acetylene as indicated in the individual certifications. The torches are designated as hand torches or portable torches.

Hand torches are units consisting of a shutoff valve and burner assembly. The fuel for the torches is stored in a separate fuel-gas-container assembly connected to the torch, or in an integral container assembly that may be refillable. Integral containers do not exceed 4.0 fluid oz. capacity.

Portable torches include a handle with a shutoff valve, hose, regulator and a burner assembly, and may also include a fuel container of the Canadian Transportation Commission cylinder type.

Torches for use with LP-gas are intended for use in accordance with ANSI/NFPA 58, "Storage and Handling of Liquefied Petroleum Gases."

**PRODUCT IDENTITY**

**TORCHES CERTIFIED FOR CANADA (XLFX7)**

One of the following product identities appears on the product:

- Butane Torch
- LP-gas Torch
- Propane Torch

**RELATED PRODUCTS**

Oxy-fuel torches are covered under Blowpipes and Torches Certified for Canada (BDCT7).

MPS-fuel-gas torches are covered under Methylacetylene-Propadiene Stabilized Fuel Gas Torches Certified for Canada (XMOS7).

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA/CGA 2.29 (1997), "Hand-Held Torches for Fuel Gases."

**UL MARK**

The Certification Mark of UL on the product, or the UL symbol on the product and the Certification Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words "CERTIFIED" and "SAFETY," the geographic identifier(s), and a file number.

**Alternate UL Mark**

**UL MARK**

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Butane Torch," "LP-gas Torch" or "Propane Torch."

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**METHYLACETYLENE-PROPADIENE STABILIZED FUEL GAS TORCHES CERTIFIED FOR CANADA (XMOS7)**

**USE**

This category covers air-aspirating-type torches designed to operate on methylacetylene-propadiene stabilized (MPS) fuel gas. The torches are designated as hand torches or portable torches.

Hand torches are completely self-contained assemblies consisting of a burner and fuel container. The fuel container is a Canadian Transportation Commission (CTC) cylinder having a water capacity not exceeding 2-1/2 lbs. Unless otherwise indicated in the individual certifications, such containers are of the disposable type and are not refillable.

Portable torches include a burner and a fuel container of the CTC cylinder type. The burner may be integral with the fuel container or may be a separate unit. A separate burner is connected to the fuel container by a length of hose included as part of the torch assembly.

Some of these torches may be qualified for use with LP-gas (liquefied petroleum). Such torches can be identified by a reference to LP-gas appearing in the Certification Mark.

**PRODUCT IDENTITY**

One of the following product identities appears on the product:

- LP/MPS Fuel-gas Torch
- MPS Fuel-gas Torch

**RELATED PRODUCTS**

Oxy-fuel torches are covered under Blowpipes and Torches Certified for Canada (BDCT7).

Fuel-gas torches are covered under Fuel-gas Torches Certified for Canada (XMHT7).

**ADDITIONAL INFORMATION**

For additional information, see Flammable and Combustible Liquids and Gases Equipment Certified for Canada (AAPQ7).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TOYS CERTIFIED FOR CANADA  
(XNIZ7)**

**USE**

This category covers electrically operated toys and simulated miniatures of full-sized appliances in forms that may not necessarily perform the expected function of the copied appliance, including toy phonographs with motor-driven turntables and mechanical sound reproduction. They are intended to be used on nominal 120-volt branch circuits and are for indoor use.

**PRODUCT MARKINGS**

Markings on the product indicate the age level for which the toy or play article is intended. As with all electric products, adult guidance or supervision may be necessary.

**FACTORS NOT INVESTIGATED**

All food products supplied with toys are manufactured in accordance with Canadian requirements. Compliance with these regulations has not been investigated by UL.

**RELATED PRODUCTS**

Transformers for toys are covered under Transformers, Toy Certified for Canada (XRBV7).

Electric hobby and sports equipment is covered under Hobby and Sports Equipment Certified for Canada (MSVW7).

Products intended for use primarily by adults are covered under Hobby and Sports Equipment Certified for Canada (MSVW7).

**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

**REQUIREMENTS**

The basic standard used to investigate products in this category is CSA-C22.2 No. 149 (1972), “Electrically Operated Toys.”

**UL MARK**

The Certification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Certification and Follow-Up Service. The Certification Mark for these products includes the UL symbol, the words “CERTIFIED” and “SAFETY,” the geographic identifier(s), and a file number.

**Alternate UL Mark

The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Toy,” “Electric Toy,” “Toy Oven,” “Toy Popcorn Maker,” or other appropriate product name as shown in the individual Listings.

\*\*\*\*\*

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TRANSFER SWITCHES FOR USE IN  
FIRE PUMP MOTOR CIRCUITS  
CERTIFIED FOR CANADA (XNVE7)**

**GENERAL**

This category covers separately mounted, open and enclosed automatic transfer switches intended for use in fire pump motor circuits, including associated control devices, with a maximum rating of 600 V ac and 4000 A.

These transfer switches are intended for use in fire pump motor circuits covered by CAN/CSA-C22.1, “Canadian Electrical Code, Part I” (CEC).
