STANDARDS BULLETIN 2018-06

NEW EDITION OF STANDARD

Fourth Edition of CAN/ULC-S102.3:2018

STANDARD METHOD OF FIRE TEST OF LIGHT DIFFUSERS AND LENSES

ULC Standards is pleased to announce the publication of the Fourth Edition of CAN/ULC-S102.3:2018, Standard Method of Fire Test of Light Diffusers and Lenses. This Standard has been approved by the ULC Standards Committee on Fire Tests and has been published under the date of June 2018.

This new edition includes an update to the Referenced Standards and moved this section within the normative body of the standard; additional requirements to determine when the test is to be terminated; and added a new Condition of Acceptance section to provide clarity.

This test method is applicable to materials employed in light diffusers and lenses.

The testing procedure described in this Standard is intended to assess the propensity of material employed in light diffusers and lenses to fall from its installed position before igniting when subjected to test fire exposure conditions in CAN/ULC-S102, Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies, as required in the National Building Code of Canada.

For any additional information, please contact Mary Huras at 613 755-2729 ext. 61425 or by email at Mary.Huras@ul.com.

This Standard can be ordered for \$200.00 CAD (Hardcopy) or \$150.00 CAD (PDF) from the ULC Standards website at <http://canada.ul.com/ulcstandards/>. Click on *Sales of ULC Standards Materials* for more information.

Yours truly,

ULC Standards
